Designated Counsel for Ignition Switch Plaintiffs

UNITED STATES BANKRUPTCY COURT
SOUTHERN DISTRICT OF NEW YORK

In re: MOTORS LIQUIDATION COMPANY, et al., f/k/a General Motors Corp., et al., Debtors.	: : : : :	Chapter 11 Case No.: 09-50026 (REG) (Jointly Administered)

APPELLANTS' STATEMENT OF ISSUES ON APPEAL AND AMENDED <u>DESIGNATION OF ITEMS TO BE INCLUDED IN THE RECORD ON APPEAL</u>

Pursuant to Rule 8009 of the Federal Rules of Bankruptcy Procedure, the Appellants-Ignition Switch Plaintiffs (the "**<u>Appellants</u>**"),[1] by and through their undersigned counsel, respectfully submit the following: (i) statement of issues to be presented on appeal from the *Judgment*, dated June 1, 2015 [ECF No. 13177] and *Decision on Motion to Enforce Sale Order*, dated April 15, 2015 [ECF No. 13109]; and (ii) amended designation of items to be included in the record on appeal.

[1] Capitalized terms used but not defined herein shall have the meanings ascribed to them in the Judgment or the Decision. As defined in the Judgment, the term "**<u>Ignition Switch Plaintiffs</u>**" shall mean plaintiffs that have commenced a lawsuit against New GM asserting economic losses based on or arising from the Ignition Switch in the Subject Vehicles (each term as defined in the *Agreed and Disputed Stipulations of Fact Pursuant to the Court's Supplemental Scheduling Order, Dated July 11, 2014*, filed on August 8, 2014 [ECF No. 12826], at 3).

I. <u>Statement Of Issues To Be Presented On Appeal</u>.

The Appellants submit the following statement of issues on appeal:

1. Did the Bankruptcy Court exceed its jurisdictional authority or otherwise err in holding that the Sale Order may be enforced so as to enjoin claims against New GM based on New GM's own independent, post-Closing acts or conduct?

2. Did the Bankruptcy Court err in entering a Judgment providing for enforcement of the Sale Order by enjoining and barring claims asserted against New GM where such claims "concern[] an Old GM vehicle or part," and through the creation of procedures for staying, striking or dismissing such claims?

3. Did the Bankruptcy Court err in holding that the Ignition Switch Plaintiffs must demonstrate prejudice in order to establish a due process violation in connection with the entry or enforcement of the Sale Order?

4. Did the Bankruptcy Court err in holding that the Ignition Switch Plaintiffs failed to demonstrate prejudice in connection with the entry or enforcement of the Sale Order?

5. Did the Bankruptcy Court err in failing to consider the allegations of New GM's improper concealment of the Ignition Switch Defect in connection with the entry or enforcement of the Sale Order?

6. Did the Bankruptcy Court err by not providing the Ignition Switch Plaintiffs the opportunity for further development of the factual record in connection with the enforcement of the Sale Order, including, without limitation, as to the issue of prejudice, upon the Bankruptcy Court's determination that the Ignition Switch Plaintiffs had to demonstrate such prejudice in order to establish a due process violation in connection with the entry or enforcement of the Sale Order?

7. Did the Bankruptcy Court err in applying the doctrine of equitable mootness to the claims of the Ignition Switch Plaintiffs?

8. Did the Bankruptcy Court err in holding that the rulings in the Decision and the Judgment shall apply to any other plaintiffs not represented by Designated Counsel?

II. <u>Designation Of Items To Be Included In The Record On Appeal</u>.

The Appellants submit the following designation of items to be included in the record on appeal (including any exhibit, annex, or addendum thereto):

Item No.	Document	Filing Date	ECF No.
1	Motion for Sale of Property under Section 363(b)/Debtors' Motion Pursuant to 11 U.S.C. §§ 105, 363(b), (f), (k), and (m), and 365 and Fed. R. Bankr. P. 2002, 6004, and 6006, to (I) Approve (A) The Sale Pursuant to The Master Sale and Purchase Agreement with Vehicle Acquisition Holdings LLC, A U.S. Treasury-Sponsored Purchaser, Free and Clear of Liens, Claims, Encumbrances, and Other Interests; (B) The Assumption and Assignment of Certain Executory Contracts and Unexpired Leases; and (C) Other Relief; and (II) Schedule Sale Approval Hearing	6/1/2009	92

P R O C E E D I N G S

THE COURT: Good morning, have seats, please. I know most of you at the counsel table. Mr. Steinberg, with you is whom?

MR. STEINBERG: With me is -- well, you can introduce yourself.

MR. GODREY: Richard Godfrey, Your Honor.

MR. STEINBERG: From Kirkland.

THE COURT: Mr. Godfrey? Okay. Thank you.

MR. GODREY: Good morning, Your Honor.

THE COURT: I know Mr. Weisfelner, Mr. Inselbuch, Mr. Esserman, and Mr. Flaxer. As others want to be heard I'll give them that opportunity as we go along.

Within limits I'm going allow parties to be heard as they see fit, but I have some preliminary comments.

I haven't read all 3,500 pages of the filings that have come in in the last ten days, but I've read New GM's motion, Mr. Flaxer's complaint, Mr. Weisfelner's objection, and have also read all of counsel's letters and the various proposed agenda items.

I think I have a pretty decent handle on the issues that are going to need to be addressed today and the issues that are going to need to be addressed in the upcoming several months, but I'm less clear as to the extent to which all of the issues are already on the table.

Identifying the issues that are going to need to be teed up for judicial determination, or more exactly figuring out how and when they're going to be put on the table, is one of the primary purposes of the conference today.

I think everybody understands or should that today is not the day to argue the merits of any of your respective positions or especially calling either side names. It's instead to, as I said, identify the issues that need to be addressed and to establish a fair means for getting the issues judicially determined.

I appreciate the efforts of Mr. Steinberg and Mr. Weisfelner and Mr. Inselbuch, Esserman, and Flaxer in conferring before we got here to avoid inefficiencies and to set up the orderly process for teeing these issues up. You got pretty far and I'll take care of the rest.

As you'll hear momentarily I have a number of tentatives, as that expression is used in California and elsewhere in the Ninth Circuit, which are my inclinations as to how to proceed, subject to your rights to be heard, but I have some expectations as to an orderly discussion, no histrionics, no repetition. I also have some questions and concerns that I want you to address when it's your turn.

Starting with my questions.

I gather there are now about 60 class actions and a couple of individual actions pending against New GM in various parts of the country with respect to the ignition switches in some way, but I have only a partial understanding of what the claims typically characterized as for economic loss are.

I'd understood, rightly or wrongly, that New GM voluntarily assumed liability for wrongful death, personal injury, and property damage with respect to any "incidents or occurrences," which I understood to be things like wrecks or fires or of course death or injury, that took place after the sale in July of 2009.

I also understood that New GM had undertaken responsibility for satisfying the glove box warranty and for complying with state lemon laws.

But I need to get a handle on what's left. What is left that has engendered 60 class actions across the country? And obviously I'll hear your respective views on that. I got a pretty good sense of the legal theories that were invoked, vis-à-vis that economic loss, but I still don't understand exactly what we're talking about.

Mr. Inselbuch's April 24th letter identifies an issue as to whether claims against New GM, statutory or otherwise, based on post-sale conduct of New GM are subject to my orders. Mr. Esserman's April 23rd letter and Mr. Weinberg's -- I don't see Mr. Weinberg, is he here somewhere? Oh, yeah there is he, okay. April 30 letters raise whey I understand to be the same issue.

To what extent, and I guess this is mainly for you, Mr. Steinberg, is there a dispute on that? Or is the devil in the details turning on the whether the alleged wrongful conduct is wholly past sale or there's some other nuance that would make the question harder than it would appear at first blush? Help me get a better handle on what we're talking about in that regard.

A similar issue exists with respect to the lemon laws as mentioned in Mr. Esserman's April 23rd letter. Please address that as well.

Next, each of the Steinberg and Weisfelner letters talk about getting a sense as to how the majority of the class action plaintiffs are prepared to proceed. I underscore the word majority. When each of you use that term it suggested to me, rightly or wrongly, that the plaintiffs referred to were less than all of them. I think what you were able to accomplish was very, very helpful, but have some difficulty in seeing how that by itself would get me across the goal line.

The fact that all plaintiffs couldn't get behind three law firms -- and on this limited issue I think I can take judicial notice -- have some proven track record in addressing the interface between tort liability and bankruptcy law causes me some concern. Because as I said, I don't want repetition, and that includes making the same point in different ways. I need to hear from anybody who thinks those three firms aren't good enough why that's so, or conversely why they're not raising issues that need to be addressed. That's not to say that anybody who thinks up anything those firms couldn't can't be heard, but I need to know why and what's the problem.

I also want to hear from Mr. Flaxer, since he was the first and he was the only one that brought an adversary, and I don't put him in the category that I put all the others.

Next, Mr. Esserman speaks in his April 23rd letter, paragraph 5, of teeing up procedures for plaintiffs. I don't know if this is the class action plaintiffs he represents or all prospective plaintiffs, to show cause whether they have any claims against New GM not otherwise barred by the sale order and injunction.

You wrote that letter, Mr. Esserman, back on April 23rd and I gather you've had discussions with other folks since that time. I'd like you or Mr. Weisfelner, let me know whether you have any needs and concerns to get rulings on this that haven't been subsequently rolled into what needs to be addressed, and I'd like to ask the same with respect to the item you listed as number 7 in your letter, procedures under which, assuming the sale order stands without modification, under which plaintiffs might seek amendments to it.

Okay, now for my tentatives. I apologize to you all for speaking at such length.

As I said these are California tentatives, which are views I formed on a preliminary basis after reading the briefs and the letters but which are subject to your rights to be heard and which I'll obviously consider in the way of modifications based on whatever you tell me verbally.

First. Now that fraud on the Court has been taken off the list of threshold issues I'm not sure if there's a material difference in views or for that matter any difference in views on the threshold issues that need to be addressed at least insofar as the majority of the plaintiffs are concerned.

I'm inclined to consider as threshold issues the two remaining issues that were shown on Mr. Weisfelner's black line, and I'm also amenable and inclined to allow any other purely legal issues to be raised along with the so-called threshold issues, such as the discrimination argument, that is the argument that creditors with personal injury claims, death claims, property claims would be addressed by New GM whereas those with the so-called economic damage claims would not.

It seems to me, again subject to your rights to be heard, that the more appropriate means of demarcation between claims that can and should be considered as threshold issues and those that can be put and should put to a later time is to separate issues that can be addressed without discovery from those that can only be addressed with discovery and potentially a very burdensome or at least lengthy discovery process.

The principal players as I read the letters, New GM and the class action plaintiff steering committee seem to feel that they can win without discovery, and whether or not either side is right in that regard that seems to me, that is to deal with issues without discovery, to be the logical place to start since even if issues need to be further addressed or refined the early work that's accomplished would set the table for the work, if any, that needs to be considered next.

The corollary of that would seem to be that I need to reject the contentions of a couple of you, and I'm thinking of Mr. Esserman, your first -- your April 23rd letter and Mr. Etkin's April 30 letter, that we should now have discovery, and as I read your early letter, Mr. Esserman, what would seem to be pretty massive discovery early on and that such discovery should proceed on an expedited basis.

Once again I note that you, Mr. Esserman, are a member of the steering committee and your views may have evolved since April 23rd when you wrote that early letter.

Two. My tentative is not to interfere with the MDL's hearing now scheduled for May 29th, I think that's the date, and to permit the judicial panel and multidistrict litigation to rule on where pretrial proceedings with respect to any future litigation should proceed, but that would be under the understanding, at least under my understanding -- that's why I wanted you guys to be heard on it -- that everyone understands that to the extent I hereafter rule in a way that some or more than some of those now pending litigations before the MDL panel need to be put on hold or stopped in some other fashion, that I would be free to do that, including vis-à-vis, the multidistrict panel irrespective of what the MDL panel had accomplished up to that point in time.

Three. I share your view that anyone who's unwilling to agree to a temporary standstill that the majority seems to agree upon should come forward within a time certain either on the date that's already proposed, which I think was May 10, or some alternate date. More likely close to that, but if fairness requires a little more time that to my thinking would be okay.

Reading the submissions so far it's obvious that these are serious issues, and my general view -- call it a tentative or not -- is that rushing by a few days or even a few weeks on issues of this importance isn't in anybody's interest.

Fourth. I think we need to ascertain by a date to be agreed upon or set all of the issues that are on the table or that are to be decided even if they're not addressed as what I call Phrase I issues. I need your recommendation as to the best way to do that, and what deadline I should impose for parties to get their contentions on the table.

That wouldn't necessarily mean that they should all be briefed at that early time, and in fact my expectation would be that they wouldn't be, but I want to get the lay of the land on the issues that I'm going to be asked to rule upon.

Related to that was Mr. Flaxer's suggestion that a date should be set by which any and all interested parties should commence adversaries similar to the one he brought if they were of a mind to. My tentative is to agree with Mr. Flaxer's point in that regard.

Fifth. I want to accomplish as much as we can before we get bogged down in discovery. I like the idea of you guys agreeing on a stipulated record, but I don't like the variant of that, which I think was proposed by

Mr. Weisfelner, which was request for admissions. If things would be admitted they'd be stipulated to, and if they're not admitted they're going to result in disputed issues of fact as to which we're going to have to come up with some other mechanism, and Rule 35 requests for admissions is really nothing more than a cost shifting device any way.

So I want you guys when the time comes to really try to agree on everything you can agree upon consistent with your professional responsibilities and then identify issues as to which you agree to disagree and I'll decide then what to do about it.

Six. We have one adversary proceeding on file and one contested matter. Other adversaries may be filed consistent with the point Mr. Flaxer made, but at this point I have these two, we need to think about the possibility of more.

My tentative to consolidate the contested matter and any adversaries for procedural purposes. Mr. Steinberg, your letter cited decisions by Judge Lifland and Judge Walrath indicating pretty clearly holding that when you're enforcing an earlier court order you don't need to bring an adversary to do that, but many observers might agree with the judgment that Mr. Flaxer presumably made that when he wanted a declaratory judgment and he wanted some of the stuff that he asked for in there an adversary proceeding was appropriate.

I guess the issue is whether others who are looking for things similar to what Mr. Flaxer did would need to either climb onto his adversary or bring their own adversaries. It might be appropriate for separate adversaries to be brought, although my thought would be that they would be procedurally consolidated and jointly administered as well, but I need people to focus on that.

If those adversaries are to be brought -- and many might regard that as a good idea, but I'm not forming a tentative on that -- Mr. Flaxer's point that it should happen by a fairly early date certain seems to me to be pretty persuasive. But again, that's a tentative.

Seven. While these issues mainly involve New GM some also appear to also involve Old GM or the GUC Trust, the general unsecured creditors trust, that's Old GM's successor.

It would seem to me that there's an issue as to whether there might be excusable neglect to file late claims against Old GM to the extent that I ruled that any of the claims being asserting are prepetition claims rather than post-petition claims if the ability to assert those claims wasn't known by the time that the Old GM case bar date expired.

When I was preparing for today I speculated that issues of that character were why Mr. Golden wanted to have the opportunity to be heard.

To the extent any issues involving Old GM or the GUC Trust can be heard as matters of law my tentative is that they should be considered along with the other threshold issues and that anybody who cares about those kinds of issues should have a chance to weigh in on them.

Lastly, eight. In his April 24th letter Mr. Flaxer raised the issue of mediation. Obviously the idea or the prospect of meeting the two sides needs and concerns without this monstrous battle is attractive to me.

When I was a practicing lawyer a district judge in Delaware, Joe Farnan, some of you may know him, made an impression on me and I think a bunch of other lawyers when he said that the guy in the robe would do his job but parties' needs and concerns could be better addressed by negotiation than by forcing a judge to decide issues within the four corners of what judges are allowed to decide.

And frankly it would be great if whatever money is available for injured people could go to them and not to litigation costs and attorneys' fees. I have no tentative on this, but I want people to address it by the time they're done.

So we're ready to continue. Mr. Steinberg, I'm going hear from you first, then Mr. Weisfelner, then from anybody who has any non-repetitive remarks to make after that. Oh, Mr. Flaxer, can I hear from you, please, after I hear from Mr. Weisfelner if you care to be heard.

Mr. Steinberg.

MR. STEINBERG: Thank you very much, Your Honor, and thank you for the careful consideration of the issues that have been presented.

I'd like to be able to address the tentatives and then go back to the questions and then maybe find the script that I had started in connection with this hearing.

Your Honor had identified the demarcation for threshold issues as that which could be done with either no discovery or very little discovery versus something that would lead to much more complex discovery, and we agree that that is a proper formulation.

The one thing that we would ask Your Honor to consider, and I understand the balance here, is that we had suggested as well as I think Mr. Flaxer, that fraud on the Court would be a threshold issue.

Generally we were lumping all the Rule 60 issues together, and many times when someone argues 60(d)(1), which is whether there's an equitable remedy that should be fashioned, or even the 610(b)(4), which is the procedural due process, they usually throw in 60(d)(3), which is the fraud on the court, whether it's proper or not, but that's

-- but they assert those in. And so I understand that fraud on the Court may require some additional discovery, but the issue is how much additional discovery and should it be considered as well as a threshold issue?

THE COURT: You read my mind, Mr. Steinberg, because when I thought about fraud on the Court in trying to put myself in the role of a plaintiff's lawyer then I would have thought that the plaintiff's lawyer would want to get into GM's files or communications to ascertain the extent to which behind the scenes Old GM was thinking about this liability and not making a disclosure to me. You think that's only modest discovery or can be limited in that fashion or were you thinking about a different kind of discovery that might be undertaken, vis-à-vis, that issue?

MR. STEINBERG: Well the issue about whether the Old GM professionals or the people in charge of negotiating the MSPA or the people in charge of presenting evidence to Your Honor, that would be a fairly discreet time period. I mean the bankruptcy was filed on June 1, the order approving the sale was July 5. So we don't think that necessarily the discovery from a time span is as significant. We're also fairly confident what the result would be of that -- of any of that type of discovery.

But, Your Honor, as you outline the issue if the choice that we had was to effectively piecemeal the 60(d)(3) issue and the trade off would be a much more streamline procedure to present the legal issues -- so either there'd be no discovery or very, very little discovery -- that may be something that we're prepared to do, because we understand the logic of that. And though it's piecemealing a Rule 60 issue it may make sense under the circumstances to be able to present as many of the pure legal issues as possible.

I probably would need, and I'm sure this side of the table probably needs the opportunity to talk to their other people as well too to see whether they agree with my formulation, but I certainly understand the logic of it and if there was an agreement that there would be little or no discovery and we would just try to stipulate as much as we could to a stipulated record that may be a good avenue to go forward.

Your Honor, in trying to address one of your other tentatives, because I think it ties into a number of different issues, you'll see that -- that in our agenda letter we had said that the people who brought the adversary proceeding could file an amendment to the complaint by May 14th, provided that it doesn't object to the substance of what we agree to as the procedure going forward today. So if they want to restate what they think their claims are and perhaps try to make sure that it was more inclusive of other people then that's fine.

And you see that in Mr. Weisfelner's letter that he talked about filing an amended complaint in the -- in the MDL action as a procedural issue, which we don't think is a procedural issue, we actually think it's a substantive issue. But both things -- both of those issues evolve around one of the tentative --

THE COURT: Forgive me, Mr. Steinberg, I lost you there. I thought you said filing an amended complaint in the MDL action. I thought that my only connection with the MDL action is I guess I have the power to put it on hold, but what else do I have to do with the MDL action?

MR. STEINBERG: No, Your Honor, I was trying to lead to a point, but I was merely saying that there was a point of disagreement in the letters as to whether the agreement to allow them to go forward on the May 29th hearing and that it wouldn't be stayed and that it would be for purely administrative matters, and we were disagreeing as to whether the filing of an amended complaint in the MDL action would be an administrative matter or a substantive matter.

But the point that I was trying to connect between these things is that -- is that the filing of an amended complaint by Mr. Flaxer or a recitation to file a consolidated complaint to try to get all those theories together is really trying to address Your Honor's tentative ruling about wanting to know what are the bankruptcy-related issues, what is -- what is it that they think that they can go forward on that -- that would not otherwise be foreclosed by the sale order?

All of those things are touching the same thing, and my suggestion in light of your -- the tentatives and in thinking about it and the reviewing the letters is that the issue of whether they should file a complaint in the MDL action or not should be -- should in effect be deferred until the next status conference, and that one of the things that we should be doing between this status conference and the next status conference is to try to decide what we had called in our agenda letter the bankruptcy-related issues that are not the threshold issues, to try to define what it is that we ultimately are going ask Your Honor to set forth, because that's the exercise that's imbedded in doing either the amended complaint to the adversary proceeding or the amended complaint to try to coalesce all of these complaints. Those are the issues that someone will have to decide are bankruptcy-related issues or survive and should go forward without, and that's the exercise that I think should be done, and I don't think we should reach a firm decision as to whether they should be doing anything more than -- on the MDL proceeding to go forward on May 29th, do the things like selection of lead counsel, the things that we can agree are purely administrative, and we should defer consideration of the amended complaint issue until the next status conference.

THE COURT: But matters of the character that the MDL could appropriately determine in your view could include whether the pretrial proceedings take place in say California on the one hand or New York on the other?

MR. STEINBERG: For the MDL I think the MDL should be able to select which forum is going to go forward on generally the MDL action to the extent that the MDL action will ever go forward.

THE COURT: Okay. Continue, please.

MR. STEINBERG: The -- Your Honor, with regard to the -- your tentative ruling on the stipulated record and that we don't do admissions, that is essentially what we have been trying to urge on the plaintiffs.

One of the issues was that we had discussions separately with one group versus another group and they had differing views on certain issues. And even with the group that had a larger issue what we were getting to some extent was the lowest common denominator. When you have 15 people having suggestions sometimes you get 15 suggestions because no one really wants to whittle it down and they leave it up to us to do it.

We urge to do a stipulated record under the theory that it's too early to do admissions, it is a -- really just a cost shifting issue as Your Honor had identified, and it leads to a dialogue. If they -- if they propose that they want us to agree to something instead of me answering as I would answer an admission I'd be sitting there saying I can't do that but I can do something different and then we would have an iterative dialogue to be able to try to present what the issues are and then I wouldn't have to try to do the reflexive issue, which is that if you want admissions then maybe I have admissions that I want to ask of you. Did you know of the bankruptcy proceeding? Did you know of a problem with your car? Those things and try to identify those issues, which may be relevant to certain of the issues whether it's -- that they may tangentially relate to the fraud on the Court issue, which may be off the table now, but -- so I said stay with the stipulation and if we can't agree to it we'll have a status conference in June and we'll tell the judge this is as far as we could get and we couldn't get all the way there, and if we couldn't agree on everything then you could propose what kind of limited discovery you think you need to conclude those facts that are necessary to determine the purely legal issue. We'll be able to evaluate it. And then if we can't agree with that we'd be before Your Honor on something specific and concrete.

And the problem that we were having between now and May 2nd is that there was a lot of general propositions that were asserted and many times the devil is in the detail, and you need to know when someone says it's purely administrative it's not substantive you really need to know what they are talking about. When people say we can agree to some facts and it's not going to be big, it's going to be narrowly tailored you need to know what someone means when they say narrowly tailored, because when actually try to pin it down it becomes a lot more difficult.

So what we were proposing -- and I think there was a lot of receptivity on it from the other side -- was a walk and then run, which is give us a chance to try to do an exchange and we'll see how good we are, and give us a chance if we can't fill in all the gaps to how to complete the discovery and we'll see how good we are, and if we can't do it then I know that you're going to bridge the gap for us and then we'll both live with whatever Your Honor rules. And we're only looking to defer that consideration where we otherwise couldn't agree for like a six or seven-week period.

And the reason why we think that time period going a little longer versus shorter is better -- and I think Your Honor eluded to that as one of your tentative rulings that sometimes things take a little longer and these serious issues -- is that until we know how they've organized -- and it's really their job to organize, but it's our burden to make sure that we're dealing with 2 groups of people, 4 groups of people, or 20 groups of people, because it becomes harder to figure out briefing schedules, potential discovery, stipulation of facts if we don't know who the people are that we're dealing with you may need to have a little more time until they get better organized to be able to do that. That's why we actually suggest in our agenda letter is just tell us if you formed a group. That has the salutary effect of at least we know who we're dealing with and Your Honor will know whether they actually formed the group, and those who decide they want to be outliers well then they will have to stand up and tell Your Honor why they need to be an outlier and the liaison groups couldn't properly be formed.

But that's all we were trying to say on that issue, which is give them an opportunity to get themselves organized and let us know how successful you were, and where you were not fully successful just let us know because we -- we on our side of the table procedurally have to deal if they're not fully organized and then ultimately Your Honor will have that same issue about how things are being presented to Your Honor.

With regard to -- so that's why we thought we needed a little more time. And by the way, the dates that we selected in our letter were given to us by one of the plaintiff groups, and the other plaintiff group actually said, while they shortened our dates, they also said in their letter that they're flexible about the dates. So I don't think ultimately at the end of the day we're going to disagree about dates, about when we're going to be here.

I think the general proposition is that between now and some time in mid to late June when we'll have another status conference we're going to try to accomplish a stipulated record for briefing the threshold issues and to see whether there's any discovery that is it warranted or not with regard to that stipulated record.

And I would suggest also, and this is off my agenda letter, but picking off on the tentative ruling, trying to identify during that period of time the other issues which are not threshold issues, the other bankruptcy-related issues that we'd ask Your Honor to consider, and we'd be doing all of that presentation at the next status conference. And at that next status conference, to the extent that the defendants are not fully organized, that we would try to -- and it wouldn't be me, but it would be Your Honor and the plaintiffs -- try to figure out how they can, you know, get to the end to themselves more fully organized.

The tentative that you had about the GUC Trust, late-filed claims, excusable neglect, we actually think that this is an issue that should be dealt with. It is not our issue, but to the extent that they've raised or some of them have raised a procedural due process issue relating to the bar order, which was after the sale order had taken place and they're saying that they don't have a remedy -- an effective remedy against Old GM, well there is a GUC Trust, there are a number of -- there's a number of values still left in the GUC Trust. Whether they actually are a creditor, where they actually have excusable neglect I'm not trying to prejudge it, but we were urging that they shouldn't just assume that there was nothing there when there is potentially something there and they should be able to and should be almost in fact required to at least explore that as an alternative to try to get a recovery, if they're entitled to a recovery. I wasn't trying to say that they were or not.

As far as the suggestion of mediation, it is always hard to say that you're against mediation. The only thing that I would say, Your Honor, is that New GM has hired Ken Feinberg, who is a very well known person who tries to figure out how to deal with circumstances and to how to adjust situations on a non-legal base, but to try to negotiate a resolution.

Mr. Feinberg is working on the matter but he hasn't -- while studying what to do he hasn't taken it to the next step. And my own feeling about mediation is that we would like to see whether Mr. Feinberg -- what Mr. Feinberg will do and not do and let's see where the legal issues lie, but understand that the overall sentiment that Your Honor expressed, which is that at the end of the day if there's going to be a negotiated resolution you better do it -- you're better off doing and being able to pay the people who claim to have suffered injury, better off paying them than to end up building up a big load star and paying other people.

Your Honor had asked what the -- to confirm what these lawsuits were about. Your Honor was absolutely correct that under the MSPA, the asset purchase agreement upon which New GM took assets, that New GM assumed the liability for the glove box warranty, the lemon law liability, and for accidents, incidents that led to the loss of life, personal injury, or property damage for anything that took place after the sale. So if there was an Old GM vehicle that was -- got into an accident after the sale and that led to an injury issue that was something that New GM assumed the responsibility for.

These lawsuits are not those cases, and we didn't move by the way just so it's clear -- we did not move to enforce Your Honor's injunction for the presale accidents, which were actually retained liabilities under the MSPA. We purposely carved out the accident victims whether it's presale retained liability or post-sale assumed liability, because we wanted to focus in as to what these lawsuits were about. These lawsuits are about a claimed economic loss, the value of a car which is six, seven, eight, nine, ten years old for the loss in value because of the announcement that there was going to be an ignition switch recall and that that car had lost its value until the time that it is being repaired through the recall or not. I'm not sure if I can figure that out.

THE COURT: Pause please. Maybe this question is better directed at your opponents. But is this before or after the cars were fixed?

MR. STEINBERG: This --

THE COURT: I mean the loss in value, because I would assume that if a car hasn't been fixed it would lose value, but I'm not sure what the view of --

MR. STEINBERG: This has --

THE COURT: -- parties would be after it's been fixed.

MR. STEINBERG: This I don't think has anything to do with the cars being fixed or not, because by virtue of the recall New GM is committed to fixing the cars, replacing the ignition switches, and to doing it tentatively now they think they'd be able to complete it by the end of October of this year. So everybody is going to have their car fixed and so the ignition switch is going to be fixed. This is a perceived loss in value of a car that has some history on it for the -- because of the announced recall for whatever that loss of value is.

So frankly in one of the individual cases that was brought in Texas where we were involved in a litigation as to whether all of the cars with the ignition switch issued should be parked. The actual lawsuit was about a 2006 Cobalt -- Chevy Cobalt which had 165,000 miles on it, and the issue was the deterioration in value of that car by virtue of the announcement of the ignition switch recall. That was what that lawsuit was about.

The injunctive relief was whether all cars should be parked because of a perceived defect between now and until it was repaired.

But that was the nature of that lawsuit, and I know that if I'm not properly characterizing how the economic losses are I'm sure that the people who'll follow me at this rostrum will be able to -- be able to do that, but that's my understanding of it.

These are people who have not had any accident, any property damage, or personal injury, this is for the --

and they are going to get compensated for -- they are going to get their -- the repair of the ignition switch by virtue of the recall, and I think that to the extent that they had to do it themselves before the recall has a provision about whether they get compensated for that as well, but this is for the perceived deterioration in the value of their car by virtue of this announcement.

Now just to make it clear too because it deals with the issue, Your Honor, as to what's, you know, the New GM conduct versus the Old GM conduct. I think Your Honor had talked about that. All of the -- all of the cars with an ignition switch issue, all of them were Old GM vehicles. By the time of the sale the ignition switch had been corrected in the cars. The recall --

THE COURT: By that you mean new cars then being constructed?

MR. STEINBERG: Right.

THE COURT: Okay.

MR. STEINBERG: The issue why the recall involves some post-sale cars is a nuance difference.

What happened was someone with a new car, which had a good ignition switch, would go in to have their car repaired and there was a possibility that the person who repaired that car, which may have been a GM dealer or may have been someone totally different, they may have actually put in an old ignition switch part. They may have taken a good part out and put a bad part in. And since New GM didn't know whether -- whether that -- which cars that occurred to it announced the recall for some post-sale cars. But the cars that would ever be impacted by this is a very, very small element, but New GM is repairing all of those ignition switches.

So the issue in our view is that we believe that everything they're talking about relates to Old GM conduct, Old GM manufactured cars, and that -- and that what they're trying to build on is the fact that under the sale order and the MSPA New GM accepted as a covenant, not an assumed liability, but a covenant, to comply with -- with the federal laws relating to recall, and they're saying that that somehow creates claims because New GM didn't recall these vehicles fast enough and that they should have done it faster. And we believe that all of that relates to -- all of those claims whether they could ever assert that as a private right of action, which we don't think is correct, we think all of that is an Old GM retained liability issue.

Now, I don't expect them to agree with my recitation of that, but that is the nuance, right, that is the issue as to why it's not a clear demarcation.

What is clear is that if New GM manufactured and sold the vehicle and anything happen to do that vehicle that is not a retained liability, that is a --

THE COURT: An ordinary liability.

MR. STEINBERG: -- that is an ordinary New GM liability. And if there was an accident that has taken place based on an Old GM vehicle, that is not before Your Honor, that is not part of the list of ignition switch actions that we brought before Your Honor, that's going to go forward in New GM, understands that New GM is defending that. It's not also part of the MDL. So that is -- that is why I think --

THE COURT: Pause please, Mr. Steinberg, I'm trying to keep up with you.

What was the very last thing you said, the nuance you were making on what would still be going forward?

MR. STEINBERG: What is going forward is if there's an accident relating to an Old GM car and if there's an accident relating to a New GM manufactured car.

THE COURT: Any kind of accident.

MR. STEINBERG: Any kind of accidents are going forward.

With regard to just the glove box warranty and the lemon law, just so Your Honor understands the nuance that we put in our papers, is that lemon law is defined in the MSPA, it's defined as that you need to have brought it more than one time to have a repair and it wasn't done. And our argument is that while we did assume lemon laws none of these ignition switch actions that have been pled to date talk about having brought it once to have it repaired and it wasn't repaired and the second time it wasn't repaired to qualify within the definition of what a lemon law means for purposes of our assumption.

So I think it's correct that we did agree to assume lemon laws, but -- a lemon law type claim, but none of what is being asserted here fits within that paradigm.

If I'm wrong and there's a particular nuance out of all the lawsuits that have been brought that was one of the elements that we had asked for in our motion to enforce which is in effect to show cause, tell us why you think you're not otherwise bound, that you fit within the lemon law that we assume because of your particular fact circumstance and then we would evaluate it. Because I can make the general statement, but there may be a specific exception that I haven't accounted for, but the general statement is as far as I'm aware, based on the general pleadings that have been done, is that no one asked to have this being repaired a second time. And as far as the glove box warranty we're -- for all of these vehicles we're -- or almost all these vehicles we're outside of the glove box warranty, it's expired by this point in time.

So I think, Your Honor, with regard to the issue that you had raised about the threshold issues we actually had thought that the issues that had been raised in the adversary proceeding under Rule 60 were all threshold issues. We understand the differences, and if it turns out we can streamline discovery significantly by taking out fraud on the Court that may be a better way to go, and we do agree also that the discrimination issue that was raised by Mr. Weisfelner in his papers is a pure legal issue. I frankly think Your Honor has decided the legal issue before, but it's a pure legal issue and we think it should be taken off the table. And frankly there's a practical reason why it should be taken off the table and we eluded to it in our papers.

One of the things that Mr. Feinberg has been hired to do is to evaluate whether there's something that should be done to these prepetition accident victims, people who have actually had an accident to which are a retained liability should New GM --

THE COURT: That would mean people who were injured in prepetition accidents who were only getting 30 cents on the dollar who had filed claims --

MR. STEINBERG: That's correct.

THE COURT: -- or who had blown the bar date but were actually hurt?

MR. STEINBERG: Right. That's why Mr. -- that was one of the primary reasons why Mr. Feinberg has been hired, to see whether there's something that should be done as a general basis.

If someone is going to say that if we did someone on a voluntary basis for those victims, those people who actually suffered an injury from an accident that we're somehow picking up liabilities for a bunch of people who are worried about the deterioration and the value of their car then I think we need to know that, and so therefore we want to put this as an earlier issue and not a later issue. And if they want to abandon it because they don't think it's a proper issue to raise then that's okay too. We're not trying to litigate something that they're prepared to abandon, but it has been raised.

If you actually read the pleading filed by -- on this issue it makes it seem like it's a very important issue and we're prepared to meet it head on and to -- and I don't think it requires any discovery at all.

If you just bear with me just one second, Your Honor, just to go through the rest of my notes.

I think that Your Honor when we -- when I came into court and I think Your Honor summarized it correctly we had actually agreed in many concepts with the people that we had spoken with, and so there was a general understanding that they would stand down on litigation and that those who didn't -- who weren't prepared to stand down would have to show cause as to why they think they shouldn't stand down.

And there was a recognition on our part that to the extent that we got bogged down for some reason that we couldn't envision on the threshold issues and the other bankruptcy-related issues needed to be brought to attention or that they thought that there were issues that were not bankruptcy-related issues but they had decided to in effect wait on and that they would otherwise be a part of the MDL we had agreed, and I think the date differences were end of July versus beginning of September, we would have an effective grace period but then we thought they had to come to Your Honor. If they wanted to relax the stay because they thought they were otherwise being aggrieved because this process wasn't playing out the way that they had envisioned or that they thought they --

THE COURT: You mean the process before me in terms of --

MR. STEINBERG: That's correct.

THE COURT: -- getting these issues --

MR. STEINBERG: That's right.

THE COURT: -- judicially decided?

MR. STEINBERG: They then could try to make their case before Your Honor, and we thought that that was okay. I mean no one -- no one could quite envision exactly how this is going to go, we wanted to have a breathing spell to make sure that this is going along in the direction that everybody thinks it's going along, but we were not looking to permanently foreclose anybody's rights if they thought an adjustment had to be made. And so if they needed to have that explicit as part of their agreement up front to stay their litigation then we were prepared to do it, and I think there was just a difference in a month, and I think our date was -- probably made more sense because of the inherent delays that we'd have in the system.

I think, Your Honor, we had agreed on most of the threshold issues and Your Honor's tentatives had addressed the rest. We had actually agreed to in effect do this in two steps, and Your Honor has properly identified that while doing it in the two steps we should make progress and try to identify what will be litigated in the second step. And I think Your Honor's tentative addressed the differences we had on stipulations of facts versus admissions and the timing of submissions.

So I think Your Honor's tentatives have bridged the gap where we differed and we were fairly close coming into the courtroom, and I think you for that and I'll turn over the rostrum to other people.

THE COURT: Before you do, please, Mr. Steinberg.

The day after you wrote your letter, I think yours was on April 30th, I got both a letter and a black line from Mr. Weisfelner where he'd massaged what had been one of your paragraphs and he gave me a black line articulating issues that would be decided as threshold issues. Is there any difference between you and Mr. Weisfelner, that is between your thinking and his black line mark up?

MR. STEINBERG: Yes. The --

THE COURT: On that point, how so? I didn't follow that.

MR. STEINBERG: Well our original proposal included fraud on the Court being a threshold issue and they had crossed that out, so that is one difference.

The second difference was that we thought the discrimination argument was a threshold issue and they had said they didn't think it should be a threshold issue.

THE COURT: So he wanted to drop fraud on the Court from the first phase and you leaned in favor, although I thought you -- the way I heard you you didn't think of it as something you felt strongly about, you thought that with limited discovery it could be considered as a Phase I issue and you favored inclusion of the discrimination argument and you understood him to prefer not to deal with that now.

MR. STEINBERG: I think he crossed that out and asked to not deal with that, yes.

THE COURT: Okay.

MR. STEINBERG: So --
THE COURT: Thank you.
MR. STEINBERG: -- and so just to be clear, while I thought fraud on the Court should be a threshold issue because it's a Rule 60 issue, to the extent that we can accomplish something significant on the discovery front in curtailing it then I understand clearly the logic of making that a secondary issue.
THE COURT: Okay. Thank you.
Mr. Weisfelner.
MR. WEISFELNER: Judge, thank you, I don't know what Your Honor's preference is.
Not only have some of our thoughts matured and changed over time but based on Your Honor's tentatives and the questions you asked they may change even further.
I don't know that we can accomplish a lot in a ten-minute recess, but one of my colleagues passed me the note to ask if you thought it would be appropriate. If not I can start and go forward and take a break whenever Your Honor thinks is good.
THE COURT: Well if you think it would be productive I'm not going to stand in the way of that, Mr. Weisfelner. I don't want to use up what is relatively limited time that we have if it drifts, and there are a lot of people both on the phone in this courtroom and presumably

in overflow courtrooms, but if you think you can usefully use ten minutes I think that's a good investment.

MR. WEISFELNER: And, Your Honor, I think ten minutes is the right -- we're either going to make progress in ten minutes or we're not.

THE COURT: Okay.

MR. WEISFELNER: So I wouldn't want anymore than a ten-minute adjournment.

THE COURT: Then let's recess until five to 11:00 on the clock up there.

MR. WEISFELNER: Thank you, Judge.

THE COURT: Thank you.

(Recess at 10:44 a.m.)

THE COURT: Have seats everybody.

MR. WEISFELNER: Your Honor, thank you for the time, I think it was well spent.

Judge, for the record, Edward Weisfelner, Brown Rudnick LLP appearing on behalf of the Robinson Calcagnie firm, and I have Mark Robinson of the firm with us in court today as well as Haigins Berman (ph), and as Your Honor has indicated while they reserve the right obviously to correct me where I go wrong we are working closely together with Sander Esserman of Stutzman, Bromberg, Esserman & Plifka, as well as Elihu Inselbuch of Caplin & Drysdale, and as I think Your Honor knows the collective plaintiff group has also asked the three of us to coordinate our activities as we deem necessary with Ms. Siganowski (ph) of the Otterbourg firm, and we will utilize her services as appropriate and necessary.

Judge, I want to as Mr. Steinberg did address your tentatives, move on to your questions and avoid merits, name calling, and the other no-noes that Your Honor laid out, but I would like to note a couple of factors that I think are relevant and bleed directly interest your tentative ands your questions.

What one may characterize as part of the good news there's lots of information in the public domain regarding the defect that's the subject of the recall. Lots in the public domain about who knew what when.

I characterize that as good news to the extent that, and as Mr. Robinson has indicated to me, in his many, many years of litigating in the auto products field both in terms of Toyota, the Ford Pinto, claims against GM, it's rare that you see this level of information already in the public domain before discovery or formal discovery between the parties necessarily starts. That's part of the good news.

Part of the bad news is, depending on your perspective, but I think it's a relevant factor in understanding how the parties can or can't get together in terms of the timing of the resolution of the issues, the fact of the matter is that New GM, as we understand it, is the subject of a -- it's a term of art -- boatload of regulatory investigations. We are aware of congressional investigations, and maybe there's more than one, at least one attorney general investigation, an SEC investigation. We understand that New GM has commenced its own internal investigation, and I may have run out of fingers to count just how many investigations they're currently the subject of.

I mention those because one could imagine a sensitivity on the part of a corporate entity to necessarily engage in discovery during the pendency and/or before investigations of both civil and potential criminal consequences are concluded. And I can only advise Your Honor that I think it behooves both sides to take the reality of what's going on in the marketplace into consideration with regard to the timing of discovery or the narrowing of issues between the parties. There are other factors that might influence either side of the tables' speed with regard to those issues.

Your Honor, to address the tentatives.

First of all I think from a starting perspective, and I was unavailable for another meeting among plaintiffs that took place yesterday in New York, but I've gotten a download, and I'm not blaming Mr. Steinberg, Your Honor ought to know that with one outlier, and only one outlier that I'm aware of, the plaintiffs as a group are on the same page and intend, unless I or Elihu or Sander slip up, to allow one or the other of us to speak for the group, and I presume that outlier will speak for him or herself at an appropriate time.

And I also understand that the difference of opinion between all of the plaintiffs and this one single plaintiff really comes down to what ought the threshold issues be that the parties work towards preparing and presenting to Your Honor for as efficient resolution as is possible. And it boils down to a distinction between whether or not we focus our collective attention on the what we think is the right threshold issue, whether or not parties impacted by this ignition switch problem were denied due process, and if so what's the appropriate remedy?

They would, the outliers would like to put on the table as part of the threshold issue a determination of whether or not there was fraud on the Court. And, Your Honor, again, for reasons that we can delve into I don't think they're necessarily appropriate for today because there'll be another status conference where I think whatever remaining differences there are between the plaintiffs taken as a group and New GM can and will be resolved down to the details of timing for discovery, briefing, and subsequent hearings.

Your Honor, the next tentative you talked about was the MDL proceedings and I'd like to unpack that just as a matter of fact into two parts, because I think as to part number one there is unanimity in the entirety of the courtroom. All plaintiffs and New GM as to what happens in step one, and as I understand it only a very narrow disagreement on what I'll call step number two.

And, Your Honor, please forgive me because the one thing I'm not is a class action or tort lawyer, I'm just a measly bankruptcy lawyer, but this is what I understand the two parts to be.

Part number one, on May 29th in Chicago before a joint panel on multidistrict litigation, which I understand consists of some seven Article III judges, that panel will determine the venue for any further multidistrict litigation consideration, and I've been told that the panel has under consideration --

THE COURT: Pause. When you put it that way I wasn't clear on whether you were talking about it consistent with my understanding of what would be done by the judicial panel and multidistrict litigation. Is this 28 U.S.C. 1407?

MR. WEISFELNER: Yes, it is, Your Honor.

THE COURT: Which as I understood it addresses the locale for pretrial proceedings in multiple litigation after which when the pretrial proceedings end they're farmed back to whatever districts, venue would otherwise be appropriate?

MR. WEISFELNER: Correct. So --

THE COURT: Now were you meaning -- forgive me. Were you meaning to say something different than my -- what I just said?

MR. WEISFELNER: No, other that where I think we all agree is that nothing is going to interfere with, and none of the parties or the Court, nor will the Court be asked to interfere with the activities of the joint panel on the 29th, which we all understand to mean that they'll pick an ultimate venue for MDL proceedings as between Michigan, California, New York, or some other jurisdiction.

Where we appear to have a difference of view, as I heard Mr. Steinberg discuss the issues before Your Honor, was how far should the MDL go once it receives the case some time after May 29th?

THE COURT: By that you mean the temporary transferee court after it's been transferred by the panel?

MR. WEISFELNER: Correct.

THE COURT: Okay.

MR. WEISFELNER: And as I understand it what that court will do is procedural, it will among other things select lead and/or liaison counsel not for bankruptcy purposes but for purposes of actually trying the case, and as typically happens would require that the many complaints filed against New GM -- and as I understand it they're up to some 60 plus different class action complaints -- be procedurally consolidated into a single complaint, a process that my guess will take a period of time, and certainly a period of time beyond what we anticipate to be the next status conference before Your Honor.

But we wouldn't want the record of this or any other proceeding before Your Honor to be used or cited for the proposition that from Your Honor's perspective getting the complaints narrowed down to a single complaint, doing whatever else it is that the MDL judge typically does, which is figure out which counsel they're going to for lack of a better word lead the fray, there should be nothing that impacts that procedural mechanism from moving forward. It's going to in our view at least get the parties or -- and the issues that may ultimately be tried narrowed and get the disbursed plaintiffs' groups better organized on the merits should they ever get to the merits.

THE COURT: Pause, please, Mr. Weisfelner.

MR. WEISFELNER: Certainly.

THE COURT: Can you envision a scenario under which rulings by me might affect the extent to which claims remain which would then be the subject of gathering up and bundling in that amended complaint?

MR. WEISFELNER: Certainly, and again, this is just my opinion, but when viewed from the perspective of judicial economy if there is a single complaint and Your Honor were then to determine what's kosha (ph) and what's unkosha (ph) about that amended complaint one has an easier vehicle to start making chops to.

As opposed to, and it sort of bleeds into some of your other tentatives and some of your other questions, have a multiplicity of lawsuits and then having to parse each and every one of them to determine what portion of the allegations, the complaints, the prayers for relief does or doesn't violate or do violence to Your Honor's directive as it currently stands or as it may ultimately morph after this procedure currently before you develops.

THE COURT: You said what I had anticipated that you would say. The corollary of that would at least seemingly be that after the panel sends it wherever it's supposed to go, and I'll call it the transferee judge, even though it may eventually go back somewhere or to different places, that there simply be a stop, look, and listen, vis-à-vis, interfering or not interfering with the acts of the transferee judge after determinations have been made in this court and everybody in this room has had his chance to speak his peace.

MR. WEISFELNER: And, Your Honor, I think like many things in life it's all a matter of timing. Because I anticipate the transferee court is never going to get around to the job of figuring out what's the next procedural steps to narrow the issues that may be before him or her. I think we'll be further advanced on the issues that need to be resolved by Your Honor, and the coordination between Your Honor's decision making process and what does or doesn't happen in the MDL will be much further advanced.

So while I'm not sure that it benefits anyone to pursue this in any greater detail, my only point with regard to this is I detected a difference between where we come out, where I thought New GM was coming out on this, and what I heard Mr. Steinberg say earlier this morning, which is we have to leave open the possibility that the MDL proceedings may be put on ice simply because this process is still ongoing without a resolution.

THE COURT: Well stand by. Mr. Steinberg, come on up and take Mr. Weisfelner's place for a second.

Is there a substantive disagreement here? Because I thought I was hearing consensus that we'd let the MDL panel decide who the transferee district should be and then we're going to have stuff that goes on here.

Would you have a substantive or procedural problem with doing a stop, look, and listen in this court to then decide whether I should enjoin the transferee judge from doing anything more, or should not do so?

MR. STEINBERG: Your Honor, I would agree with everything that you say except that I would assume that you would be enjoining the parties not the court from moving forward.

THE COURT: Correct. And I don't think in 13 and a half years I've ever enjoined a court, but I enjoin parties all the time.

MR. STEINBERG: Then other than that, Your Honor, I agree with exactly what you said.

THE COURT: Okay.

All right, Mr. Weisfelner, I think that issue just went away so come on up and let's proceed.

MR. WEISFELNER: Great.

Your Honor, we take your points to heart with regard to tentatives three and four both with regard to the propriety of standstill agreements and your admonition that we don't necessarily -- we shouldn't necessarily be rushing in favor of getting it right.

One area where I think the parties may need some additional time with each other but maybe we could explore in a little bit more detail Your Honor's tentative with regard to new complaints along the lines of what Mr. Flaxer filed.

And I will tell Your Honor frankly that before Mr. Flaxer hit the docket with his complaint I know I and my shop and I venture to guess many other shops were working on similar complaints.

Viewed from our perspective is the right procedural mechanism for bringing the issue before Your Honor; however, once we had the advent of New GM's motion frankly I'm not sure what the procedural advantage is of moving forward with that adversary proceeding complaint much less inviting other parties to replicate it or to file additional or add-on adversary proceeding complaints. It may -- it may involve some interesting work by a bunch of bankruptcy and/or class action firms. I think it's just going to clog the docket here, and I think procedurally we were of the view that rather than lose any of the allegations or procedural advantages that are perceived or actually exist in the adversary proceeding they all ought to be subsumed within the contested matter. Parties ought to be afforded an opportunity to file their own objections to the motion, join in our objection to the motion, or anything in between.

But I'm not sure, nor do my colleagues feel, that there's necessarily a substantive or procedural advantage to separating the adversary proceeding and giving it a life of its own even for the purposes of inviting other people to file new adversary proceedings.

THE COURT: I partly lost you with the negative that was in your last sentence. In other words you're saying the formalities aren't important, put it in a big bundle and just decide it all together or am I --

MR. WEISFELNER: That's exactly --

THE COURT: -- stating it too crudely?

MR. WEISFELNER: No, that's -- well, you couldn't have stated it any cruder than I would have had I thought about it, but that's exactly our sentiment, you know, let's have one bundle and not have separate adversary proceedings and separate contested matters, let along invite people to file new adversary proceedings that address the same issue. And I think the parties did intend on conferring with each other on appropriate procedural mechanisms to allow that ball of wax to form without violating anybody's procedural or substantive rights. And I think we can come up with in very short order, certainly before the next status conference, the procedural mechanism that we think is appropriate. But what we would like to avoid is either the necessity or the thought out there that people better rush to file, you know, identical or new or expanded adversary proceedings.

THE COURT: Now that's a different point than the separate -- at least in your mind from the separate point that I thought I was making that if there are any substantive issues on the table that haven't been potentially to be put on the table that I want to hear what those points are.

MR. WEISFELNER: And I think that can be readily accommodated by virtue of setting a date by which parties will want to respond to the motion that New GM has filed. I mean we obviously filed within, and I think before the expiration of 24 hours. Obviously there may be people out there with further reflection that come up with better, different, more expansive responses and we don't want to preclude that. We just don't want to get into a (indiscernible - 01:19:05) of a separate docket for an adversary proceeding, a separate docket for contested motion practice, and any possibility that, you know, the resolution of those issues shouldn't be at some point joined. And again, I think the parties can work out a proposal for Your Honor's consideration that deals with melding together the adversary proceeding and the contested matter.

Number five, Your Honor, which I guess was the issue between stipulations and admissions. And, Your Honor, I think the answer is we get it and the parties will work as best they can on stipulations and will only elevate the heat intention as we have to both in terms of narrowing discovery and avoiding unnecessary contests that have to be determined by this Court. And again, you know, I'm focusing on all of this from the perspective of the what we've referred to as the gaiting issue.

And this -- and I want to sort of then flip to the questions that Your Honor asked, and either attempt to respond to them or tell you why I'd like to evade them as best I can.

And again, you know, I'm focusing on all of this from the perspective of the what we've referred to as the gaiting issue. And this -- and I want to sort of then flip to the questions that Your Honor asked, and either attempt to respond to them or tell you why I'd like to abade them as best I can.

THE COURT: Before you move on to those, please, Mr. Weisfelner, the one issue that I still see as open between you and Mr. Steinberg is with respect to two issues that might or might not be addressed as part of Phase I, the most classic threshold issues, fraud on the Court and discrimination amongst different kinds of creditors.

My preference would be in terms of meeting my own responsibilities would be to get issues on the table and teed up for judicial determination, and to the extent practical decided sooner rather than later, which would cause me to come to the view that on fraud on the Court, if we could deal with that without having the associated discovery bog us all down, it would be handled sooner rather than later and the same thing with discrimination, which doesn't seem to involve discovery issues.

I sense that you would prefer to defer fraud on the Court, but would you be of the same mind to defer it if just the limited discovery of the type that Mr. Steinberg recommended were undertaken so that issue could be teed up with the others?

MR. WEISFELNER: Your Honor, we would be opposed to it and let me explain why.

First of all we share Your Honor's perspective that issues that could resolve matters from the perspective of either side where discovery can be limited ought to be preferred on issues that potentially don't decide the matter even if they don't require a lot of discovery.

So let me take the easier example first, the discrimination issue, raised in retrospect unfortunately in my papers as opposed to anybody else's. And, Your Honor, it seems to me that we could brief that issue at whatever cost is required. It doesn't require discovery. Your Honor could make a ruling.

And notwithstanding how you rule I don't think it gets the plaintiffs any closer to trying claims against New GM or for that matter New GM any closer to preventing the plaintiffs' claims from moving forward based on their reliance on the injunction and the sale order. It's an interesting issue but it's in no event dispositive of either parties' position on the fundamental issue.

For that reason, even though I was the one who first raised it and frankly raised it before I understood the entire history behind the metamorphous that the final sale order took on the carve out for wrongful death, injury, and property damage, which as I understood it originally what New GM was purporting to assume was wrongful death, personal injury, property damage solely with regard to cars that it sold post-petition or post-sale rather, and it morphed at the direction in part of various attorneys generals and consumer advocates.

THE COURT: In the middle of the trial.

MR. WEISFELNER: Sorry?

THE COURT: In the middle of the sale trial.

MR. WEISFELNER: Right.

THE COURT: Yeah, I remember the history.

MR. WEISFELNER: Okay.

THE COURT: Oh, by the way I'm going to interrupt you. I want each side not to tell me today but to think about the extent to which I'm allowed to use my knowledge of what happened back then in connection with the findings of fact.

MR. WEISFELNER: Well, Your Honor, I could tell you now without even consulting with my colleagues, unless Your Honor were to be willing to undergo a lobotomy I don't know how anyone could take the position that Your Honor cannot, should not, or may not take into account your knowledge and familiarity with what transpired during the bankruptcy proceeding and in fact during post-reorganization or post-restructuring matters that were brought to Your Honor's attention.

But I want to sort of get back to --

THE COURT: Pause.

MR. STEINBERG: I was going to -- without inferring whether there should be a lobotomy or not -- I was going to say that we agree with Mr. Weisfelner as well, that you should be able to take into account your position.

THE COURT: Okay. Fair enough.

Go on then, please, Mr. Weisfelner.

MR. WEISFELNER: Any way, Your Honor, I'm sort of getting back to what we ought to be collectively spending time and attention on.

From the plaintiffs' perspective we ought to be spending time and attention, which converts into money and effort, in dealing with as narrow a set of facts that we have to deal with to determine whether or not the sale order applies to our underlying clients.

The discrimination argument, Your Honor, may be left on the table in the unlikely from my perspective and unfortunate event that we lose the threshold issue. But why it needs to be determined today, even though it's an issue of law and not a matter to discovery, it's not dispositive from either sides' perspective, it doesn't get us closer to where either one of us wants to get to.

And if I could then turn to the fraud on the Court issue.

Your Honor, there are subtleties on top of subtleties on top of details that suggest to us that you could not make a determination with regard to fraud on the Court with anywhere close to the narrow discovery that Mr. Steinberg suggests. And it's sort of all subsumed I think or fear in the whole due process argument, and without in any way trying to argue the merits but just to lay out what the issues are as objectively as I can without tilting them in either direction, remembering again that there's a lot of information in the public record about what GM knew when they knew it with regard to the ignition switch.

I think that New GM would say, well, wait a second, determining GM's -- Old GM's knowledge and for that matter New GM's knowledge isn't necessarily determined -- and I use this very bad analogy but I'll give it to you any way -- by focusing on the guy in the test laboratory who's got grease up to his elbows and is wearing overalls. That person may have knowledge, but it may not necessarily be imputed to someone sitting in a conference room who has the luxury of wearing a suit and tie every day. And I think New GM may ultimately argue that Joe the mechanic's knowledge isn't to be imputed into an executive office let along a board room.

Now frankly we're encouraged by the fact that plenty of people who wore suits and white collars have already put their position on the record or it's otherwise discoverable through things that the National Highway Safety Council has made available or the Congress has made available or what we can read and report on in the press, but to suggest that we can or should pursue fraud on the Court to my mind and gender is a discovery dispute at three different levels by the way. Old GM, New GM, and based on not my intuitions, but my discussions, I think we're going to get into a discussion of what treasury in its role as the intermediary between Old GM and New GM knew or didn't know.

And as much as I like spending time with Matt Feldman and Jim Milstein (ph) and Harry Wilson, I don't know that I necessarily want to get involved in discovery of what any of those people knew or should have known in the context of proving --

THE COURT: You used the word should have known.

Since when is should have known an element of a claim of fraud against the Court?

MR. WEISFELNER: Your Honor, I'm not sure that it is, which is another reason why when I think about this, and maybe I think about it in an overly simplistic fashion, but I have the comfort of knowing that my co-counsel thinks about it the exact same way, in fact all of the plaintiffs think about it exactly the same way with the exception of one possibly outlier, and that is if I start with the proposition, understanding that it's a proposition and not a proven fact, that the consumers of this product were known to have had a defective product and that Old GM did nothing to let those people know that they had a defective product, didn't give them notice of the bankruptcy, didn't give them notice of the sale, and didn't give them notice of the extent to which the sale could affect their rights, if our contentions are accurate isn't it the case that these individuals were deprived of due process?

In that context should the sale order apply to them or should some portion of the sale order apply to them? Not a revocation of the sale order, we're not going cut it up and carve it out and chop it up as it relates to anybody else other than people who prove to you that they were denied due process.

Why we need to then get into at this stage the other elements of fraud on the Court, Your Honor, we respectfully suggest is beyond what we ought to be doing if we want to do something efficient and effective from the perspective of these injured parties.

THE COURT: Do you think that for the purposes solely of my case management discretionary calls, as contrasted to the merits in figuring out how we should tee these things up, it's appropriate for me to assume that there might be a difference between defrauding the driving public on the one hand and defrauding the Court on the other?

MR. WEISFELNER: Yes. And, Your Honor, I'd make the distinction though, we're not defrauding the driving public, that's not our contention. Our contention is that the number of people who bought, leased, or owned these cars, and to my knowledge, the number is something below 3 million, I could be wrong, so it's not the driving public, it's these specific people that were sold cars with this ignition switch problem.

And again, this is not the place or time to get into this, so then I won't, I just want to get back to your issue. I do think that it's a matter of Your Honor's discretion in setting our own calendar in terms of dealing with dispositive issues first.

If Your Honor were to decide that these people were denied due process, and therefore, the injunction that New GM bargained for should not apply to them, case over, from our perspective.

It's only if Your Honor were to decide there was no denial of due process, that we may want to ask Your Honor to tee up and consider other issues. Until that time, I think it's a matter of case management and Your Honor's discretion, that's the right way to go. And I say that because we've thought about it, and we think it's the right way to go, not to be determinative of what Your Honor decides in terms of exercising your own discretion.

But we clearly think it's the easy way to go, and I'm not sure I understand how expanding either the factual issue or the legal issue into fraud on the Court serves the purpose of narrowing the issues and letting the parties and the Court get to the -- a resolution in the most cost-effective manner possible.

Now, Your Honor, I'm happy to sort of move on to the questions that Your Honor had.

THE COURT: Go ahead. And I'm going to do this in such a fashion as I possibly can, so as not to insult the Court. But you asked what's left its engendered so much heat, and with all -- in other words, what are the damages that people could possibly be concerned about here, since wrongful death, personal injury, and property damage are off the table.

And Mr. Steinberg in his opening tried to -- or talked to you about five, six, seven, eight-year old cars driven a lot of miles that have a broken switch that GM's prepared to fix, so what are the damages.

Oh, and I think he mixed in the fact that we're talking about a pretty cheap set of vehicles, Chevy Cobalts and other such cars. And, Your Honor, in the simplest terms, it's our view that the measure of damages that plaintiffs could prove were they permitted to pursue claims against New GM, notwithstanding your injunction, is a matter for determination by a court of competent jurisdiction who doesn't have New GM waving the injunction in front of it.

Once that injunction is gone, Your Honor's question is really within the bailiwick of Court's interpreting state law, federal --

THE COURT: Forgive me, with respect to you, Mr. Weisfelner, that isn't the purpose of my question. The purpose of my question is to ascertain the extent to which claims your guys want to bring, is or is not within the scope of the existing sale order, which is the question which we start with after which we then determine the extent to which the provisions of that sale order are in whole or in part unenforceable against your constituency.

MR. WEISFELNER: Ah.

THE COURT: So please do not restate or misunderstand my question.

MR. WEISFELNER: Thank you, Your Honor. I did -- I misunderstood it completely.

I should call to Your Honor's attention, and I'm hoping that this is in the process of being fixed, because I've been told that's in the process of being fixed, but one would hope that as this process moves forward and the parties reach consensus on how to form and present the issues in the most effective way, that we don't have exacerbation of the problem or the issue.

We were told the story about an individual who in connection with the recall went to his or her dealer to have this ignition switch fixed, and was presented by the dealer with a form that she was being told she had to sign before the work could be done on her car.

And the form, while I haven't seen it, I'm told, either had the individual consenting to arbitration of any issue that may arise in connection with the work that was being done and/or contained a waiver of any claims that could be asserted in connection with any of the work that's being done.

Now, I'm told that these issues were brought to New GM's attention and New GM has or is in the process of ensuring through communication with its dealers that the fixing of the switch is not to be conditioned on parties signing anything that may impact their claims or causes of action going forward, and that to the extent that people have already signed anything as a precondition to having their car dealt with on a recall, that it won't be enforced or sought to be enforced by New GM.

The other thing I want to bring to Your Honor's attention, and again, it's not within my bailiwick, except that I've heard enough about it from underlying plaintiffs' lawyers and have read enough about it is, there is not an agreement between this side of the courtroom, meaning the plaintiff's side --

THE COURT: Pause please, Mr. Weisfelner.

Right after you told me that anecdote, which troubled me, as it would trouble most folks I think, you said that when GM, New GM heard about it, it pulled the plug on that deal -- issue acting that way, and told them, you didn't use these words, you, jerk, you can't do that. So why did you tell me that?

MR. WEISFELNER: I told you that for at least two reasons. Having New GM tell the dealers to stop acting like jerks may or may not cause the new dealers -- the underlying dealers and the fixers, guys who are dealing with the recall, to stop acting like jerks. And I just wanted to let Your Honor know that we are concerned about people acting like jerks on a going forward basis.

The second reason I brought it to Your Honor's attention is, to the extent that people have historically signed the pieces of paper that the jerks gave them to review, I haven't seen anything in the record other than an oral communication that said New GM will not hold those releases or agreements to arbitrate against the plaintiffs, I raise it now only because for all of our benefit, we'd like to see something about this in writing at some point.

I brought it up in the context of Your Honor's concern about presale conduct and post-sale conduct, and Your Honor, the plaintiffs very much agree that to the extent that one could readily distinguish between actions that go to New GM's conduct, that they can't, as Mr. Steinberg indicated, properly be the subject of the injunction.

But the devil is also in the details on this one because we're not --

THE COURT: Pause for a second. Mr. Steinberg, I'm going to give you another chance to be heard, why don't you sit down for now.

MR. WEISFELNER: In terms of what constitutes New GM's actions versus Old GM's actions, you heard at least one example of how it's difficult, and that is New GM does a recall and could arguably be replacing the ignition switch, not with a new ignition switch, but with an old ignition switch, or that parties are concerned that, you know, they went to their dealer, they got a new ignition switch, they don't know now whether it was a recalled ignition switch or an old switch.

But, Your Honor, and again, I just mention this, not because I think it needs to be resolved, or because I have any evidence to prove it's true, but a lot of what we're reading suggests that calling this an ignition switch defect is an impermissible narrowing of what the issues are.

The ignition switch may or may not have been the cause of air bag failure to deploy. The fixing of the ignition switch, given the electronic calibrations between the switch and the air bags may or may not address the air bag problem. I don't know the answer to any of this.

Other than to tell you again, when we parse out or attempt to parse out actions against New GM for New GM conduct, or things that New GM definitively agreed to assume as part of the sale process, versus actions that could arguably or do, in fact, implicate the injunction that's part of the sale order is, for lack of a better term, easier said than done.

Nevertheless, the plaintiffs as a whole do reserve the right if this process gets bogged down or takes too long, to say, you know what, maybe the quickest thing to do is to spend the time and energy that hopefully we won't have to, to parse through whatever's been filed, and to demonstrate to Your Honor that the allegations that are being made, the liability that's being ascribed, and the damages sought to be obtained as they relate to New GM conduct do not implicate Your Honor's injunction.

For now, however, we'd prefer not to get into all of those potentially dicey issues, as to what does and what doesn't constitute a direct claim against New GM that is outside of the injunction, at least until the parties work hard on trying to get to a position where the due process issue gets teed up for Your Honor's consideration.

And if we can do that in an effective vehicle and quickly, then all of the other noise that may be necessary down the road could be avoided. Because whether it's actions against New GM or actions that New GM contends they're not liable for because of the injunction, if the injunction is dissolved as to this group, because of lack of fundamental due process, it doesn't matter.

So I'd prefer, we collectively would prefer to deal with that issue as, when and if it does matter.

I'm going to skip over the lemon law issues, because I don't think we have much difference of view with regard to the answer that you got from Mr. Steinberg. I do want to stress on your question number four, the inability to get together.

The plaintiffs are together, and with the exception of again one outlier on the issue of what ought to be part of the threshold and what not be part of the threshold, there's not a plaintiff group that we're aware of that isn't prepared to have their interests in the first instance, represented by one of the three of us, with consultation with Ms. Cyganowski, subject, of course, their ability to stand up and say, hey, they didn't present my issue. But we have a commonality of position, a commonality of interest, and a desire to work collectively through these three lawyers.

I'm just trying to see if there was anything else. You've heard our views with regard to an adversary proceeding versus motion practice. I didn't touch on the impact on Old GM and the GUC Trust. And I liked Your Honor took comfort in the fact that Mr. Golden is here, as I do take comfort any time Mr. Golden shows up anywhere.

Look, Your Honor, it's obvious, and you get it, that one of the arguments that New GM may make is if these individuals were damaged or deprived of due process, let's not jump to the conclusion that the right remedy is to have the injunction not apply to them.

Instead let's consider the alternative remedy of having them all get shifted into the category of late filed claims, judicially acknowledged late filed claims, will now, as part of a bankruptcy process, go through a procedure for determining what those claims might be worth individually or on some class basis.

And when that process is all over, then we can let the GUC Trust and its beneficiaries know that their expected future dividends may have to be adjusted or wiped out in order to allow these new beneficiaries of the trust to, in effect, catch up on distributions that have already been made, if in fact, that can be done as a matter of practicality.

And I anticipate that holders of the units including Mr. Golden's clients and others may very well have an opinion about that.

Again, it seems to me that before we ever get near that thorny issue, where lots of people are going to be impacted, and it may not be practical, if we resolve the threshold issue of whether, because of lack of due process the injunction ought not to apply, then we never get into this issue. Unless someone were to argue that notwithstanding the denial of due process the right remedy is not let the injunction dissolve, but the right remedy is somehow to treat these people as if they had late filed claims, and will now just dilute all of the other beneficiaries of the GUC Trust.

Your last point was on mediation, and like Mr. Steinberg, I agree that litigation is inherently wasteful, time consuming, and not a very efficient way of resolving matters, and that whenever possible, mediation is the way to go.

I just am concerned that given where I started, which is to identify, as I'm sure Your Honor knows, the multiplicity of investigations that are currently underway. Just what the role of Ken Fineberg is, just how much money Mr. Fineberg may have at his disposal to attempt to resolve issues, while we would collectively prefer to mediate than litigate, I'm not sure that the environment is such today that we're presented with that effective choice.

Should circumstances change, as I think Your Honor knows very well, the plaintiffs are as willing to attempt to resolve issues notwithstanding how prepared they'll be to prove their cases and collect their appropriate damages. Thank you, Judge.

THE COURT: All right. Thank you. Mr. Flaxer.

MR. FLAXER: Thank you, Your Honor. I note that I'm working in conjunction as co-counsel with the firm of Wolf Halthenstein (ph) which is here by counsel.

Perhaps, Your Honor, I should jump right into an issue that was maybe the only area where the plaintiff group wasn't able to come to complete consensus. And Your Honor added some thoughts to it that I think shed a lot of light and were actually extremely helpful in my own thinking about it. Which is in identifying the threshold issues what the sort of philosophical line of demarcation should be and if I heard correctly one notion that Your Honor suggested was things that can be decided on a legal basis, without the necessity for discovery, but that's -- I'm going to sort of pause there, and say discovery, we've talked about a possibility of limited discovery as opposed to more extensive discovery.

So -- and I think that's an important point to keep in mind. Our view has been that the claim of fraud on the Court, which the objection to the motion and which our adversary proceeding both assert, our concern has been that it's difficult to separate it out from the lack of due process point because although superficially I suggest it might be a -- maybe that's not the right word, but it might be -- it may seem that since fraud on the Court is sort of a more broad remedy or has more prongs to it that maybe need to be established that the discovery in establishing that claim would be much broader and take a lot more time.

As I step back from it, and think about it, if there's going to be discovery on a due process violation, I think when the actual discovery process gets going, the discovery on those two claims will be basically the same.

And I think Your Honor got into --

THE COURT: Wait. I was keeping up with you, Mr. Flaxer, until you said basically the same. Obviously under the covers of all this, is that fraud generally is subject to a time limitation, if I recall correctly, it's one of your words, fraud on the Court, it's not, and that's the difference between 60(b) and 60(d).

But I wasn't clear after that what the distinction you were making was.

MR. FLAXER: The distinction I'm making is that if a due process violation is going to be a threshold issue, and we're going to wind up taking discovery on that issue, then as a matter of judicial economy, it may be wiser to include fraud on the Court at that point, because the discovery is likely to be I think extraordinarily similar if not identical.

THE COURT: I'm not inclined to differ with you in that regard, Mr. Flaxer, but I thought the consensus until you spoke was that other folks in the room who spoke before me thought that due process could be addressed at least in major respects without any discovery.

MR. FLAXER: And if -- and my view on that is, I'm -- what I would say is, that may or may not be right. So maybe what we ought to do here to sort of resolve everything for today at least, is let's proceed with the process of developing stipulations of facts, and lawyers from both sides will work together on that. And when we come back for the next time, I think the parties will be able to advise the Court whether or not they think that based on what's stipulated, we should just put the due process issue to the Court, and put fraud on the Court, perhaps to the side for the moment.

But I don't think we ought to decide that one today, nor do I think we need to. So I don't think there's any need for any difference of opinion going forward from today to the next status conference.

I will confess some skepticism about whether stipulations of fact will be sufficient to address the alleged lack of due process issue, but I'm happy to keep an open mind about it, because as events develop, we all have to be prepared to have an open mind and change.

So our view for today is, we don't have to decide whether or not fraud on the Court should be a threshold issue or not. Let's kick that to the next status conference and let's see how the process goes with developing stipulations of fact.

And I would add as Mr. Weisfelner very eloquently observed, there are a number of government investigations ongoing. I understand that GM's internal report is due fairly soon, I think in early June. That may shed a lot of light on a lot of issues, and that's another fact on the ground that may affect our thinking when we get to the next status conference.

Trying to focus on your threshold issues, and trying not to repeat, I don't have anything to add to the MDL, that's all been said.

As to the dates for when events should happen, we agree that, you know, on the one hand we want to get in and out of this court as fast as we can. On the other hand, we don't want to rush or we're going to wind up right back before you asking for more time, so we think the dates that were in Mr. Steinberg's agenda letter are fine, and we're fine with those.

As to a deadline for amending -- I mean, I'm sorry, for filing additional adversary proceedings or joining in ours, it was never our intention to encourage more adversary proceedings, but we did think it was important that there be a time when the Court be able to know that. I now know the universe of what the pleadings are.

THE COURT: What people want to assert.

MR. FLAXER: Yes. So we're fine with picking a date for that, maybe a date in mid to late May would be fine. Mr. Steinberg's agenda letter suggested May 14th as a date for us to amend our complaint. We are considering three amendments, which we don't think would have any effect on the process that's being developed here, but we're okay with that date.

Mr. Weisfelner discussed sort of the interplay between adversary proceedings and the contested matter. I think that there is agreement here that for discovery purposes and for the scheduling we're doing here today, they should be treated as consolidated and run contemporaneously, and there's no need at this point to have any distinction that's meaningful that I can think of.

I mentioned to Mr. Steinberg this morning in the hallway that, you know, because we filed a complaint, a summons has been issued, and there's a date to answer, which backs into a date for a Rule 26(f) conference. But I think those dates can be just sort of rolled into this process so we don't have to have any, you know, separate concerns about other dates that sort of automatically come with a filing of an adversary proceeding.

THE COURT: I think my understanding then might flow from what you just said, but you're also equally amenable to any procedural consolidation, including briefs to cover the field in both.

MR. FLAXER: Correct.

THE COURT: Okay.

MR. FLAXER: And I think the last point that I have to mention since everything's been so, I must say, very efficiently covered is we're the ones who did raise the possibility of mediation. I think I agree with what both counsel have said before me. I would just urge that we don't lose sight of it and as much as we'd like to avoid extensive discovery here, and as much as I'd hope we can avoid it, but I fear it may not be avoidable, the mediation alternative may wind up being much more productive and better for the victims we're all seeking to serve than extensive litigation.

THE COURT: Okay. Thank you.

MR. FLAXER: Thank you, Your Honor.

THE COURT: Is there anybody else who hasn't had a chance to be heard for the first time who would like to be? Come on up, please.

I'm taking someone in the courtroom first, and then I'll ask about the phone.

MR. MARTORANA: Good morning, Your Honor, Keith Martorana of Gibson Dunn & Crutcher on behalf of the GUC Trust.

THE COURT: Did you say Marona?

MR. MARTORANA: Martorana.

THE COURT: Martorana.

MR. MARTORANA: Yes.

THE COURT: I'm sorry.

MR. MARTORANA: Your Honor, I stand because you had suggested at the outset of this hearing the possibility that issues related to the GUC Trust and claims against the GUC Trust might be better addressed as a threshold issue to start.

Based upon what I'm hearing today, it sounds like there's a consensus among the parties here at least, that this is something that should not be addressed as a threshold issue.

THE COURT: Well, that depends on who you're including within that consensus, Mr. Martorana.

MR. MARTORANA: I meant just these parties over here. Don't -- you would like to have it addressed to the threshold issue?

UNIDENTIFIED: I'll address it later.

MR. MARTORANA: Okay. All right. Then I guess there is no consensus on that, but I will tell you that from our perspective, we believe that it should not be addressed as a threshold issue.

We do believe that first off it will require at least some discovery, probably substantial discovery. We also believe, you know, particularly because as it relates to issues of excusable neglect, which are fact sensitive.

We also believe that it's not dispositive of -- as Mr. Weisfelner said the -- you know, the fundamental issue here which is whether or not claims can be asserted against New GM.

Moving off it being a threshold issue, we also don't believe that this is an issue frankly that needs to be addressed at any point during this hearing -- during this proceeding.

No claimants, none of the plaintiffs, no claimants or potential claimants had raised this as a possibility. No one has filed a motion to lift the bar date. The only person that has raised it has been New GM, based upon, you know, some statements of fact in some pleadings. But the only person that has actually moved forward with it is New GM, and frankly, you know, it's our view that this is essentially a way to deflect liability away, and you know, the attention away from New GM and put it on to a third party.

To the extent that Your Honor is inclined to rule against us and have it either be dealt with as a threshold issue or as a -- I guess, a subsequent issue, we would request to participate in any of the discovery that does transpire. And then to the extent that there are any claims against New GM to be resolved, we would also ask to participate in any mediation.

THE COURT: Okay. Thank you.

MR. FLAXER: Thank you.

THE COURT: Let's see, Mr. Golden, Mr. Posner. First you, Mr. Golden, then I'll hear from you, Mr. Posner.

MR. GOLDEN: Thank you, Your Honor, Daniel Golden, Akin Gump Strauss Hauer and Feld, counsel for certain publically traded public -- publically traded unit trust holders.

Your Honor, I do take your admonition not to pile on, although my name was used in vain, so I figured I'd stand for a minute or two, we agree with the position just advocated by counsel for the GUC Trust.

We think it interesting that none of the potential plaintiffs who might have asserted late claims against a GUC Trust have indicated an intention to do so. It's only New GM that has raised that issue.

THE COURT: Well, pause please, Mr. Golden.

MR. GOLDEN: Yes.

THE COURT: You've been around the block a couple of times.

MR. GOLDEN: Too many times.

THE COURT: If you were a plaintiff's lawyer, would you rather collect a hundred cents on the dollar or 30 cents on the dollar? And if I'm allowed to ask a compound question, would you prefer to try to shoot the moon with a claim for punitive damages or would you prefer to assert that punitive damages claim in a bankruptcy where punitive damages come at the expense of the remainder of the creditor community?

MR. GOLDEN: So I'm assuming both of those compound -- both parts of that compound question were rhetorical.

THE COURT: Yes.

MR. GOLDEN: I understand, Your Honor. I understand the strategy involved, but I think Mr. Weisfelner is correct. There is a looming threshold issue here. I'm not here to argue pro or con on that threshold issue, but that issue once resolved will determine whether there needs to be claims asserted or attempted to be asserted against the GUC Trust.

I think Mr. Weisfelner was entirely correct, we actually debated among ourselves whether to either -- whether to even file a letter seeking to participate at this hearing, because none of this hearing had anything to do with the Trust or the beneficial interest holders of the Trust.

I was, however, concerned on April 30th, that somehow some way the GUC Trust was going to be injected into those proceedings, and therefore, we sent the letter asking to participate.

Sure enough, seven hours later, New GM filed their letter. And for the first time injected that issue into these proceedings. We don't think it's appropriate. We're frankly strangers to these proceedings. There may come a time when the plaintiffs and the claims that the plaintiffs represent, seek to assert those claims against the GUC Trust, it's not now. They haven't done so, they haven't indicated an intention to do so.

Furthermore, Your Honor --

THE COURT: Pause please, Mr. Golden. Put yourself -- I made you put yourself in the shoes of the plaintiffs' lawyers, now I want you to put yourself in my shoes.

Can you see how a judge might be uncomfortable with a scenario under which there's no claim against anybody, assuming solely for the purpose of discussion, that the claim otherwise has merit?

MR. GOLDEN: Absolutely, Your Honor. I've said to my colleagues that you must be struggling at night with these issues, whether to proceed, allow these claims to be filed against New GM. If so, then there's no need for the GUC Trust. But if not, does there -- is there another remedy available by going against the GUC Trust. I understand the discomfort of the Court, but that discomfort was caused by actions taken by other parties.

There's often times unfortunate circumstances when people are deprived of their ability. They fail to assert their rights, they fail to a -- timely assert their rights. Unfortunate things happen in bankruptcy, Your Honor is well aware of that, and I understand the discomfort level. But it doesn't change the fact that to adjudicate whether or not these claims should be allowed against the GUC Trust will require a significant amount of discovery.

The Pioneer standards themselves that regulate or determine whether or not there is excusable neglect is ripe with discovery and evidentiary rationales.

So, Your Honor, I think I agree with Mr. Weisfelner's suggestion, hold this off, it won't be permanently held off. If Your Honor is to determine that the plaintiffs can proceed against New GM, that will probably be the end of it as it relates to the GUC Trust. If that's not the Court's ruling, we can revisit the issue if and when it becomes appropriate.

But to do it as a threshold issue, when there are already so many issues on the table, we think is a mistake.

THE COURT: Okay. Thank you.

MR. GOLDEN: Thank you, Your Honor.

THE COURT: All right. Mr. Posner, come on up, please. Now, I understand that you and your partner, Ms. Cyganowski are acting as liaison between Mr. Weisfelner, and Mr. Esserman and Mr. Inselbuch on the one hand, and the other, I guess it's, I don't know, 50 to a hundred other class action lawyers, do you have some points that you need to make that Mr. Weisfelner didn't satisfactorily make?

MR. POSNER: No, Your Honor, just briefly, David -- for the record, David Posner from Otterbourg, and as you pointed out, and as Mr. Weisfelner mentioned I think twice, Ms. Cyganowski, my partner, has -- is working with that group as a consultant and a liaison counsel-type role.

She asked me to convey to the Court that to the extent that she can be helpful in harmonizing any discord in connection with the plaintiffs' group, she stands ready to assist in that regard. And I would be remiss, Your Honor, if I didn't say I'm working with co-counsel, Harley Tropin of the Kozyak Tropin firm who's here today in the court.

THE COURT: Okay.

MR. POSNER: Thank you, Your Honor.

THE COURT: Thank you, Mr. Posner. Mr. Etkin.

MR. ETKIN: Your Honor, Michael Etkin, Lowenstein Sandler for the plaintiffs in two pending class actions.

I rise only to talk about an issue that has been raised and was raised in Mr. Weisfelner's letter of yesterday, just so I have some clarity.

First of all, given the time frame, the number of lawsuits, the number of lawyers, I think it's extraordinary that the plaintiffs' side has been able to achieve this level of cooperation so quickly for purposes of today's hearing. And having dealt in the class action realm for many years, it is not the usual.

Second of all, I have enormous respect for Mr. Inselbuch and his firm, Mr. Esserman, and his firm and Mr. Weisfelner and his firm, that goes without say. However, I just want to quote from the second to last bullet point of Mr. Weisfelner's letter as it related to the question of liaison counsel for plaintiffs. And that's --

THE COURT: The letter of May 1?

MR. ETKIN: His letter of May 1, yes. And that's what I thought and assumed the state of play was as we walked into the courtroom today. And it's short.

Mr. Weisfelner says, "A majority of plaintiffs has designated counsel as lead counsel for the May 2nd conference. Counsel will endeavor to further a continued coordination amongst plaintiffs. The May 2nd conference agenda should not include debate about the appropriate procedures for such coordination, and if necessary, it can be addressed at a later conference."

I agree with that. I think that there's coordination that still needs to be discussed as we move forward. These three esteemed counsel were designated to appear on behalf of a majority of the plaintiffs for purposes of today's hearing, and I just want to make sure that I understand the state of play correctly.

THE COURT: Well, I take it you're not asking me for a ruling on that.

MR. ETKIN: No. I'm not asking you for a ruling at all. It's not something that really was placed on the agenda, and it's really something for the plaintiffs' counsel and their respective bankruptcy counsel to work out, to the extent more coordination is necessary.

THE COURT: Okay. All right. Anybody else -- oh, there was a gentleman on the phone if I'm not mistaken.

MR. BECNEL: Yes, Your Honor, Daniel Becnel of Becnel Law Firm. I have since filed in the Eastern District of Louisiana --

THE COURT: Okay. Pause please. Was it Becnel?

MR. BECNEL: Becnel, B-e-c-n-e-l.

THE COURT: And did you give me a letter, Mr. Becnel? My prep didn't reflect that letter.

MR. BECNEL: No, we did not submit a letter. We've been on all of the conferences though.

THE COURT: I beg your pardon?

MR. BECNEL: We've been with all of the conference calls that all of the lawyers have had together.

THE COURT: Well, forgive me, Mr. Becnel, I asked another attorney to put himself in my shoes, and I'm going to do the same with you. But frankly I'm not looking for your understanding. I'm looking for you to understand my ruling.

I have before me one full courtroom here, and I believe I have two overflow courtrooms. And I issued an order to obviate this exact situation, which every one of the other lawyers in this entire case was fully able to comply with, and when I issue an administrative order to avoid conduct that results in chaos in a case on my watch, I need the legal community to understand that when I issue orders, I mean them.

So respectfully, I am denying you the opportunity to be heard. If you have concerns, I'm sure that Mr. Weisfelner or his colleagues will return your phone calls. And as you've undoubtedly heard, they're fairly capable advocates.

So I think my ruling is clear. I'm denying you the opportunity to be heard for failure to comply with the requirements of my case management order.

Mr. Stein -- is there anybody else on the phone, of course, a person on the phone who has complied with the requirements of the order?

(No response)

THE COURT: Mr. Steinberg, you can reply.

MR. STEINBERG: Your Honor, I'm going to be very brief. One, to the extent there was a discussion about mediation and Ken Feinberg, I want to just make it absolutely clear that Mr. Feinberg has not been retained to examine the economic losses which are inherent in these lawsuits. His focus has been on the accident victims.

Second, that the accident victims, while not a part of our motion to enforce, it does not mean that there -- that our position is not that they are retaining liability at this point in time for the pre-sale accident victims only.

Third, that I agree with Mr. Weisfelner and Mr. Flaxer that I think as far as melding the two procedures and making sure that the adversary proceeding, the contested matter are all dealt with efficiently, I think we'll be able to do that and work with each other to do that.

I did think Mr. Flaxer had actually a very good suggestion on the fraud and the court issue, is that once we go through the stipulated facts and the -- whether there will be discovery and if so, what narrowly tailored discovery there will be, then we will be able to evaluate whether it's still efficient to deal with fraud on the Court or not as a threshold issue.

And so our suggestion would be as Mr. Flaxer has modified it, is to let us go through the process of stipulated facts and if we do want to put on fraud on the Court as a threshold issue because we actually think we can get rid of it based on a legal theory, and whatever facts we stipulated to, we want to reserve the right to do it. We're not asking Your Honor to rule on that now or not, but we would take that up at the next hearing if we're at that stage.

As far as the GUC Trust, the late filed claim, the reality is that the person who raised this issue was not me in my letter. The person who raised the issue was the objector, and I think it was Mr. Weisfelner who claimed a denial of procedural due process for failure to get notice of the bar order, and saying that he had no other remedy, and the only remedy that he could possibly look to is New GM.

The other person who put it on the calendar was Mr. Flaxer's client, because we've agreed that a threshold issue is three -- I'm sorry, 60(d)(1), which is that if there was some kind of a violation, is there -- should there be an equitable remedy that's fashioned against New GM for Old GM's conduct.

So he's put on the issue as to whether -- because there's no other opportunity to get any kind of recovery, that you have to look to New GM.

Now, when I said that I didn't concede that this was a threshold issue or not, it was because it was more nuanced. I'm not trying to suggest that as a threshold issue we brief the Pioneer issues. What I am suggesting is that the plaintiffs here cannot make a legitimate procedural due process argument relating to the bar order if they want to sleep on their rights and not go against Old GM while Old GM is still sitting with securities. And I thought that that needed to be flabbed (ph).

And that if it's inherent in the 60(d)(1) issue that they're going to look to us because they otherwise have no other remedy, then I think that that is an issue that has to be dealt with. Having said that, and I don't say anything more on that issue.

I do think, Your Honor, and I wasn't sure why Mr. Weisfelner went into it, but his concerns with regard to an issue that I think Your Honor dealt with adequately, which is dealers who may have tried to put conditions on fixing an ignition switch, and Your Honor asked essentially, why are you asking me that, I think New GM clarified that. And as far as we know, it was one dealer, and it was immediately dealt with, and when they asked whether there were other dealers involved, we never got a list for anything else.

So I only say that not because it's relevant to anything here, except that there is press that is listening to this issue, and everybody likes to say in a very broad brushed way, New GM is acting irresponsibly. On this particular issue, we did act responsibly, and on all the issues I think we're trying to act responsibly.

And to the extent that Mr. Weisfelner conceded that he wasn't a class action lawyer, or a negligence lawyer, he's probably also not a scientist or an engineer who could decide whether the air bag issue is one thing or another thing.

I only say that again because the people listening here, that it should be absolutely clear that you can say whatever you want to say, but at the end of the day, it ultimately has to be grounded in fact and a probable claim.

Other than that, Your Honor, we appreciate the time you've given us today.

THE COURT: All right. Ladies and gentlemen, I want you to take a lengthy bathroom break, but hopefully no more than that. I would like people who are interested in my resulting directions to be back in 15 minutes. That would be 25 to 1 on the clock up there.

I can't guarantee you that I'll have it buttoned up all then, but I don't want to impose on you to wait any more than you need to. We're in recess.

(Recessed at 12:21 p.m.; reconvened at 1:10 p.m.)

THE COURT: Have seats, please. I apologize for keeping you all waiting. Here's what we're going to do. In most respects, it will be similar to my tentatives, but with some refinements.

One, I want to leave as much time for thoughtful briefing and thought by the Court as possible. But at the same time, I want this to proceed as expeditiously as I can consistent with fairness. So we're going to consider as threshold issues the two remaining issues shown on Mr. Weisfelner's blackline, the discrimination argument, the possibility that the claims now being asserted may be claims against Old GM or the GUC Trust, and subject to what I say momentarily, even the fraud on the Court contentions.

Messrs. Steinberg, Weisfelner, Flaxer, Martorana, and Golden, or their designees, are to confer and to prepare an order then to be settled on three business days' notice or overnight mail, consistent with these determinations that I'm dictating now, but putting meat on the bones, and providing for agreed upon dates.

Two, you're to meet and confer to agree upon facts to the maximum extent possible, consistent with your professional duties to your clients. To the extent you need to agree to disagree, you're to identify the matters that you can't agree upon and jointly present those identified matters to me, after which I'll determine the materiality of what's not agreed on and how it should affect further proceedings, either by way of authorizing limited discovery, or by taking issues off the table for now, and determining them later.

As a general matter, we're going to get as far as we can without discovery. And notwithstanding what my case management order otherwise provides, there will be no discovery in either the adversary proceeding or the contested matter until and unless I order otherwise.

Three, I consider it preferable to consider the fraud on the Court claims as early as possible, and at this juncture, I'm including it as an issue to bring before me as one of the threshold issues.

But I recognize or at least assume that the fraud on the Court claim is likely to require at least some discovery. You're to confer and see if you can agree on limited discovery that will meet your respective needs on this. I hope, but I'm not sure that you'll be successful.

If after good faith discussion, agreeing on limited discovery is impossible, either side will be permitted to take the fraud on the Court issues off the table as threshold matters, and to defer them for consideration until a later time, assuming that you first identified the problem to me and gotten my green light to do so.

Four, I agree with Mr. Martorana and Mr. Golden that the matters involved in compliance with Pioneer are fact intensive, and are not appropriately threshold issues. But any party will be free to assert that claims now being asserted against New GM are prepetition and not postpetition claims.

Before any decision is made on the extent to which the GUC Trust might have to satisfy any of those claims, each of Wilmington Trust and any holders of GUC Trust units will have full opportunity to be heard on any and all issues.

Each of Wilmington Trust and any holders of GUC Trust units, though in the latter case, with the same kinds of coordination that I expect from the plaintiffs' side, will have unlimited standing to be heard on not just GUC Trust related issues, but on any of the issues that we're considering as part of this exercise; either in the adversary proceeding or the contested matter.

Likewise, in the Wilmington Trust and any holders of GUC Trust units, again subject to the coordination requirement, will be free to participate in any discovery I authorize in connection with the remainder of the issues, even though I'm not authorizing any such discovery now.

But related to that, to the extent Wilmington Trust told me in our discussion that it had a desire for discovery, its request for that is denied at this time, without prejudice to renewal at a time when it's more appropriate.

Five, I will not interfere with the MDL panel's hearing now scheduled for May 29 and will permit the judicial panel and multi-district litigation to rule on where pretrial proceedings with respect to any of the underlying actions might proceed.

But this ruling is without prejudice to the rights of any party to ask me to stay further proceedings before the transferee judge based on rulings in this Chapter 11 case, or based on any perceived delay in my issuing rulings in this Chapter 11 case.

Six, anyone who is unwilling to agree to the temporary stand still that the majority seems to agree upon must come forward before me within a time certain, either on the date proposed in the Steinberg and Weisfelner letters, or an alternative date they might agree upon, in consultation with the other parties that I've allowed to participate in the formation of the order, with a motion asking me to rule on whether I should force such a standstill on the dissenter by TRO or preliminary injunction.

Nothing in the scheduling order will, however, change the usual burdens associated with getting a TRO or preliminary injunction relief.

Seven, parties are to identify any and all issues they want me to decide by a date certain to be proposed by that team who I've designated for that purpose, the same one that's preparing the proposed form of order, and to state whether or not their issues to be addressed as threshold issues or not.

They are then to confer with the others as to when any such issues are best decided, whether as threshold issues or as later issues. If any such additional issues are to be presented as threshold issues, briefing on them should be rolled into the briefing, otherwise authorized. But if they're not perceived to be threshold issues, they can be deferred with a full reservation of rights.

Eight, matters in the adversary proceeding and in the contested matter will be jointly administered. For the avoidance of doubt, this will include joint briefing and joint discovery, if and when any discovery is authorized.

Parties should agree upon a preferred place for a single docket to file all of the documents in connection with this controversy, and to provide for that in the proposed order. As far as I'm concerned, either the adversary or the contested matter will be equally satisfactory.

Nine, other than as I stated, I don't think that I intended to disapprove anything that had been agreed upon between Mr. Steinberg and the class action plaintiff steering committee. But for the avoidance of doubt, if you think I left something out, or was inconsistent in my rulings, I would ask that you tell me that now.

Ten, the matter of mediation is deferred without prejudice to anyone's right to raise the issue at a later time.

So, folks, you can take the weekend off, but after that, please get together as soon as practical to get me an agreed upon form of order, at least agreed upon between the people I mentioned, then to be settled. That order should take care of details, such as proposed dates, which I've intentionally left out of the rulings I just announced. I think you can and should meet your needs and concerns on that.

Now, not by way of reargument, I suspect that there may be some details I failed to address or some loose ends, and I'll allow people to be heard on that.

Mr. Steinberg?

MR. STEINBERG: Your Honor, I think I can deal with everything you said. The only thing is, do we talk to your chambers about the next status conference date, or do you want to give us the date and we'll try to back into to the sum of the requirements before then?

THE COURT: My preference, I think, Mr. Steinberg, is that we do it as an iterative process. You guys, after you've figured out the time you need, tell me what you would recommend as far as a date within a zone. Thereupon my courtroom deputy, Ms. Calderone will see how it fits into the schedule. She'll advise you what we're in a position to do, and then you can either massage your dates, or plug the date we give you into the order that you settle.

MR. STEINBERG: That's acceptable, thank you.

THE COURT: Okay. Anything else? Mr. Esserman, were you rising to be heard in any way?

MR. ESSERMAN: No, thank you, Your Honor.

THE COURT: Oh, okay. All right. Does anybody have anything else?

(No response)

THE COURT: No. Okay. Thank you very much. We're adjourned.

(Proceedings concluded at 1:22 PM)

P R O C E E D I N G S

THE COURT: Good morning. Have seats, please. Well, I know everybody who's likely to speak. So, let me just get appearances of those who will be heard for the transcript. And then I want you all to sit down, because I'm going to have some preliminary comments.

MR. STEINBERG: Arthur Steinberg, from King & Spalding, on behalf of New General Motors.

THE COURT: All right, Mr. Steinberg. Could everybody hear me? I'm not sure if I have the same volume in my mic that I normally do. Can you hear me, Mr. Flaxer?

MR. FLAXER: (indiscernible)

THE COURT: Okay. Thank you.

MR. WEISFELNER: Good morning, Judge. Edward Weisfelner, Brown Rudnick, on behalf of the designated counsel.

THE COURT: Thank you, Mr. Weisfelner.

MR. WEINTRAUB: So, good morning, your Honor. William Weintraub with Goodwin Procter, also designated counsel.

THE COURT: Right, Mr. Weintraub.

MS. RUBIN: Morning, your Honor. I'm Lisa Rubin with Gibbs & Dunn on behalf of the GUC Trust.

THE COURT: Okay. She was kind of far from the mic; that was Ms. Rubin introducing herself for the GUC

Trust. I got it this time, Ms. Rubin.

MS. NEWMAN: Good morning, your Honor. Deborah Newman from Akin Gump on behalf of the participating note holders.

THE COURT: All right, Ms. Newman.

MR. ESSERMAN: Good morning, your Honor. Sander Esserman, Stutzman, Bromberg, Esserman & Plifka on behalf of designated counsel.

THE COURT: All right. And I see Mr. Flaxer right next to you, Mr. Esserman.

MR. FLAXER: Yes, your Honor, only to the extent that we feel that it's necessary to speak for -- it could be a minute or two would be it.

THE COURT: All right, very good. Thank you. All right, folks. With one exception, I want you to make your presentations as you see fit. But before you're done, I'd like you to address a fair number of questions that had occurred to me when I was reading the briefs. These questions (indiscernible) one or another of you, or, in many cases, both.

But first, the exception, mainly Mr. Weisfelner and Mr. Weintraub: you folks spend many, many pages in your briefs talking about the underlying failures of Old GM and New GM to institute the necessary recalls on the cars and the 24 or 25 people at Old GM who knew enough to justify much, much larger recalls. I get it. But that's not what's before me now.

I'm prepared to assume, for the purposes of this controversy, unless Mr. Steinberg really wants to dispute it, that there was enough to require a recall well before June 2009, and that each of Old GM and New GM acted very badly in connection with the delay. But I want to focus on the legal issues. So, let's turn to them.

Starting with due process, Mr. Steinberg, one would assume, I think, that a company's books and records, if they're to determine whether a claim is known or unknown, have to be much more broadly construed than in the financial statement sense. And I take it that you're not arguing that whether or not a creditor is known or unknown turns on whether the company has booked the liability.

So, before you're done, I'd like you to tell me: how would you articulate the standard? I wonder whether the standard should be more than foreseeable but less than probable. But I would like you to put forward your view as to how I should construe that. It's debatable whether potential liabilities associated with the ignition switches were wholly (indiscernible) claims, even if Fritz Henderson and Mary Barra didn't know about them.

But I take it you'll agree that Old GM knew enough to send out recall notices back in 2009. Their people would have known that there was something potentially wrong with their cars. And those who weren't in wrecks could have filed claims or objected, as they're doing now, at the time of the 363 sale. If recall notices had been issued, wouldn't the publication notice that was given then be more justifiable?

Number two: by the same token, Mr. Weisfelner, would you clarify your position on what notice should have been given? I gather the parties have stipulated that there were 70 million GM cars then on the road. I gather also that there were approximately 27 million whose cars, we're learning, later became the subject of pending recalls.

It'd be helpful if you would tell me how many of those 27 million cars were then subject to announced recalls and how many would have been subject to recalls if GM, which was then Old GM, of course, had announced them as it should have. Seemingly, the number would be very, very large.

Now, again, Mr. Weisfelner, is it your argument that mailings should have gone out to each owner, each of those 70 million, in the period between the June 1st, 2009, filing of the bankruptcy and the June 30, 2009, date for the start of the sale lien? Or, for that matter, the June 19 date, which was the deadline for objections in the 363 sale? Or are you saying it should have gone out by mail only to cars with the poorly designed ignition switches?

Both sides: what information do I have in the record on how much it would cost to send out mailing notices to all 70 million of the GM cars on the road at the time, or even 27 million cars? And what information do I have in the record on how much time it would take to send out 27 or 70 million notices?

Mr. Weisfelner, I made a factual finding back at the hearing on the same issue, that the continued availability of the financing Old GM was using to survive at the time was conditioned on approval of the 363 sale motion by July 10. And I also rejected an argument that was made by bondholders at the time that the government's July 10 deadline was just posturing and that I should have argued -- I should have found back then, or assumed back then, that the U.S. government cared so much about GM's survival that the U.S. government would never let GM die.

Well, that seems to have a lot of similarities to (indiscernible) you make now. On that, I know your clients weren't present back then to argue to the contrary, but to challenge -- or to challenge those findings. But others did. Are you challenging those findings now? Do you think there are some facts now to suggest that I should now find that the government was posturing, while you'd rejected that contention back in 2009?

I don't know if I'm going to hear from the GUC

Trust in the first phase of the arguments. But, at some point, Ms. Rubin, when you do get the chance to be heard, which you will sooner or later, I'd like you to help me with this: the cost of administration of the Chapter 11 case, which would at least seemingly include the cost of mailing, would come directly out of the pockets of your folks, the unsecured creditor constituency.

How do you think a judge should decide what's reasonable in sending out notice of a 363 sale to a universe of potential creditors when it comes out of the pockets of those who you know are creditors for absolutely, positively sure, like your bondholders, like your vendors in the supply chain, and victims of car wrecks, people who were actually in accidents who got injured or killed when cars didn't perform the way they were supposed to?

Back to you, Mr. Weisfelner: what would the notice have said, if GM were to do it right, and you say that GM didn't do it right? As I think it was Judge Bernstein said in Chrysler -- I think by then it had been named New Car Co., or maybe Old Car Co., "Things can go wrong with cars all the time. And, while design defects that can cause a loss in cars' value don't happen all the time, or all that often, I don't know if anybody could really say they're infrequent." So, what do you think would have been reasonable under the circumstances?

Both sides: is it appropriate to be making distinctions, when we're talking about honoring claims -- and I'm offering you a view now as to whether there are -- these are unknown claims as a (indiscernible) or not -- between liquidating 11s and 11s where there is a surviving entity, we all know that there's no discharge in a liquidating 11. There is, of course, a discharge in the 11 where a company survives.

A lot, and maybe most, of the case law (indiscernible) you rely on is in the context of expunging claims, either because they're late or because they've been discharged. But it's a lot easier to say that a claim isn't discharged when we have a debtor that's surviving and you can still go after that debtor by ignoring or blowing away the order that protected the debtor upon the confirmation of the case or otherwise.

Both sides: shouldn't we focus on the distinctions between the notice that's appropriate in a 363 sale on the one hand and the notice that's required to give parties a chance to file claims on the other? Or, to the extent that it's different, the notice that needs to be given before a judge discharges a creditor's claim? And isn't it necessary or appropriate to take into account the time exigencies inherent in many, perhaps most, 363 sales, especially those, like most of them, where the debtor only has the cash to survive for only days or weeks?

If reasonableness depends on the facts and circumstances, as the Supreme Court said in (indiscernible), wouldn't it be appropriate to take into account that, in the 363 context, you have to hold a hearing on a sale in four weeks, because you're bleeding so badly that you can't survive any longer?

Mr. Steinberg: you point out that New GM didn't yet exist when notice was given, and that it was Old GM that was responsible for the failure to give the creditor community a notice. But does that matter? Or should a judge simply focus on whether or not the creditor was given appropriate notice, no matter who's responsible for it or for the failure to provide it, and then the extent to which the outcome would have been different if appropriate notice had been given?

Both Mr. Steinberg and Ms. Rubin, back to you. I haven't forgotten about you, Ms. Rubin. Let's assume that I agree with Mr. Steinberg that it wasn't practical to send out mailed notice to the 70 million or even 27 million car owners for the 19 days that they'd have to object to the 363 sale. But isn't it inexcusable for Old GM to have denied people whose cars were subject to recalls notice of the bar date for filing claims?

And even if Old GM thereto -- that is, in the bar date context as in the 363 context -- wasn't going to give the 70 million or 27 million people mailed notice, I have some trouble seeing how they could have responded to the bar date notice and filed claims when Old GM still hadn't sent out the recall notices as of the bar date, when at least seemingly, if not apparently, there wasn't the same degree of urgency.

Now, both sides -- and here I mean Mr. Weisfelner and Mr. Steinberg -- on remedy, assuming I find violations of due process, I have problems with aspects of each of your positions. Mr. Weisfelner, let's turn first to what you're asking for. I gather -- and I think you said it expressly -- that you're not asking me to vacate the entire sale order. In fact, I gather that you aren't even asking me to vacate it, even in part.

It seems to me that you're saying, "Fine, enforce it against everyone else. Just don't enforce it against me, or me and my guys." Is that an unfair characterization of your position?

Both sides: finding a due process violation may not by itself require a showing of prejudice. But isn't the prejudice critical to determining whether there's a remedy for it? I'm inclined to agree with Mr. Weisfelner that finding a due process violation does not by itself turn on prejudice, but it seems to me that the remedy for it necessarily must. The issue, it seems to me, is: what should a Court do about the situation when it finds that there's been a violation of due process?

And here, I'm going to ask you guys to address when the standards are the same when you have a bipolar dispute, or a modestly polar dispute, which is typical in a (indiscernible) litigation, and when you have a case where hundreds, thousands, or millions of creditors are affected by an order, and a very small subset of the universe of people who were affected by the order want that order blown away or ignored.

Mr. Weisfelner, you said in your brief that due process involves the right to be heard, not the right to win. And because you were denied the right to be heard, it seems to me that you're saying you (indiscernible) the right to win. Let's go with that for a minute.

If you (indiscernible) the right to be heard, wouldn't the appropriate remedy be a do-over, to give you a chance to make the arguments that you didn't get to make the first time, and then to look at the matter ab initio to see whether the result should be the same or should be different? Because it seems to me that what you're asking for, assuming that you're (indiscernible) due process and you've heard my questions that suggest that -- and I have concerns as to whether you guys were denied due process --

you're asking to simply win.

Is it speculation or is it totally obvious for me to say now that I wouldn't have denied permission for GM to survive and to conduct its 363 sale so that one group of litigants could get a leg up over another group of litigants? Or I guess I should say one group of creditors should -- could get a leg up on other creditors.

And why in the world would I decide the successive liability issue differently today than I did after talking about it for five or 10 or 15 pages in my first opinion, when I considered the arguments made by people like Mr. Jack (indiscernible), who argued the exact same things that you're arguing now after they had (indiscernible) given the appropriate notice?

So, what I need you to do, Mr. Weisfelner, is tell me that, if you had been given notice and an opportunity to be heard back in 2009, how would things be different? Are you arguing to me that I would have denied permission for the sale, or that I would have granted a free-and-clear order generally but I would have denied it for your favored group?

Or do I properly read from your brief that you would have wanted me to give the sale some kind of conditional approval for your benefit, saying I'd approve it if, but only if, New GM were required to assume your claims?

And then, if that's your position, would you please tell me whether there would be some reason for me to grant that protection for people who were claiming that their cars were worthless or that they were inconvenienced, when I denied that relief for people who were injured or killed in actual wrecks?

Also, Mr. Weisfelner, let's talk about the exact context of 363 sales, and recognize, as I think we need to, that 363 sales are an extraordinarily important part of the bankruptcy (indiscernible), not just in this case but winning in the other 11s, and that whatever I do, for better or worse, is likely to have precedential effect.

How can a judge force a buyer of assets in a 363 sale to assume liabilities that it doesn't want to assume? Isn't the only real remedy to deny authority for the sale totally, or to say, were I the judge back in 2009, that, "Yeah, the sale can take place, but I, the judge, won't grant a free-and-clear order at all"?

And, if that is the choice that's provided to the judge, how helpful is that to the remainder of the creditor community, the thousands of people that Ms. Rubin represents? And do we want to impose a principle of law that requires judges to frag everyone else with the same grenade?

Mr. Steinberg, despite the reservations that I just had expressed, I have some in your direction as well. Before I read the briefs and the underlying cases, I'd started with (indiscernible) stint in bankruptcy, orders and agreements rise and fall as a whole, and that you can't enforce them in part and disregard them in part, or cherry-pick the parts that you like and those that you don't, or, as here, say they're enforceable against most of the world but not against this or that favored class.

But your opponents have cited five cases that seem to do exactly that. Three, while they come out of lower courts, one Bankruptcy, two District, involve 363 sales. The other two don't involve 363 sales, but they come from the Second Circuit. And, while one of the Second Circuit cases is only a summary order, which therefore isn't a binding precedent, it's still a Circuit -- Second Circuit opinion. And, frankly, I don't like to disregard anything that comes out of the Second Circuit, that the Second Circuit tells me.

So, Mr. Steinberg, I need you to talk about Metzger, the 2006 decision by Arthur Weissbrodt, a bankruptcy judge in San Jose; (indiscernible), the 2007 decision by District Judge Mary Cooper in Trenton; and (indiscernible), the 2009 decision by Senior District Judge John Grady in Chicago.

And I need you to talk about the Circuit's 2010 decision in Johns Manville, Travelers v. Chubb, which I think is sometimes referred to -- I believe this is Manville 4; and its 2014 decision in Koepp, K-O-E-P-P, the summary order from a panel that included Judge -- Chief Judge Katzmann and Judges Livingston and Hall.

Finally, while it may be trumped by the holdings of those five cases that I talked about, I still need some help on whether I should be looking at this in (indiscernible) of 9024 and 60(b) terms, or whether I should just bypass what those rules say and get to the "You're excused from the order or not" kind of (indiscernible) those other decisions did.

But I still want both sides to address whether a judge has to look at it in traditional 60(b) terms and either knock it out or live with it, or the third option, which may or may not be permissible under 60(b) doctrine, of living with it in part and validating it in part.

Mr. Weisfelner, you can help me by confirming, if it's true, that you're saying I shouldn't be thinking about invalidating the (indiscernible) or validating the rule but simply refusing to enforce it. But, if that is in fact your position, then help me understand how I can be deciding this without regard to a (indiscernible) bankruptcy procedure in lieu of federal civil procedure. And that would at least seemingly be telling me how I'm supposed to do my job.

Finally, folks, in many ways this is the most important of all the things that I want you to talk about, because I think it's the closest question, in an environment where there are already a bunch of close questions. If we had a do-over, and it's my instinct that, when somebody is denied due process, he or she is entitled to a do-over, the result of part of what you guys are arguing would be pretty clear. But part would be highly debatable. And, in each of those two sides, or prongs, one side would have the stronger side and one would have the weaker.

If we had a do-over, I think it's quite clear that I'd still grant a free-and-clear order, especially since I heard the same arguments before and I rejected them. And I gave them a lot of thought before I did. But if we had a do-over, I'd likely have to consider whether a free-and-clear order in the form that I just issued it was over-broad. And, in this respect, the economic loss plaintiffs, though not Mr. Weintraub's guys, would have the upper hand.

This order, as I read it, not only blocks successor liability, but also blocks claims based on wholly post-sale events that involved Old GM or Old GM parts. This is one of the issues, if not the issue, that bothers me the most. And the issue is whether what I should have done, or would have done if the argument had been made to me then, was to add a new order that was narrower and said that people couldn't sue based on anything Old GM had done, but they could sue if it was based on what New GM had done, so long as Old -- as New GM wasn't blamed for Old GM's acts.

And if, as I'm inclined to rule, I find that, if there was a due process violation, the economic loss plaintiffs would be entitled to a do-over, and if I also concluded, as I'm inclined to do, that, if they got a do-over on successor liability, the result would be the same, the issue or the conclusion I'd reach would have been different, given New GM protection for events that it did that were not premised on anything old GM had done. And I need both sides to address that scenario.

I have only one real question in (indiscernible), so, even though we may not get to it this afternoon, I'm going to get it out anyway. Mr. Weisfelner, is there a reason that you didn't ask me to stay further distributions to Ms. Rubin's guys, the Old GM creditors, until the issues before me now were sorted out? Am I right in assuming, since you're a pretty competent lawyer, that you didn't overlook that possibility?

And can I properly assume that you did it for tactical reasons, because you'd rather get $100 in a recovery against New GM, as contrasted to the $0.25 or so that you'd get on the dollar if you had to go against Old GM (indiscernible)?

Now, with all of that, let's get to work. And (indiscernible) we hear first from you, Mr. Steinberg?

MR. STEINBERG: Yes, your Honor.

THE COURT: Come up to the main lectern, please.

MR. STEINBERG: Your Honor, good morning. I'm Arthur Steinberg, for the record. I'm here with my colleague, Scott Davidson, and my co-counsel from Kirkland & Ellis, Richard Godfrey and Andrew Bloomer. I want to thank your Honor first of all for accommodating all the lawyers for the rescheduling of this conference.

And I'm sure, like my other counsel who will be addressing you today, they're all -- they have a lot of thoughts swirling in their mind as they try to address the multitude of questions that your Honor just went through. But I think I will be able to do it, and I will do it in the order where it was presented itself in the outline.

About a year ago, New GM announced a recall with respect to ignition switches in Old GM vehicles. And shortly thereafter, that started a wave of lawsuits that were commenced against New General Motors, seeking purported economic losses regarding vehicles that were subject to the recall.

In the early complaints that were filed, which sought primarily monetary compensation for the alleged decrease in value of the vehicles based on the ignition switch that was being repaired, these complaints referred to Old GM and New GM interchangeably. They used the words "successor liability," and they pled causes of action which, under the sale agreement, were specifically identified as retained liabilities.

And once we filed a motion to enforce, the later filed complaints tried to sidestep the sale order by, among other things, avoiding phrases such as "successor liability." But even these more carefully crafted complaints could not alter the underlying act that their claims related to Old GM vehicles and parts sold and old GM conduct. And their pled causes of action were the same retained liabilities of Old GM.

And during the summer of 2014, there were other recalls that New GM announced that were unrelated to the ignition switch recall, and that led to additional economic loss complaints being filed against New General Motors, which caused New GM to file a separate motion to enforce for these actions.

And eventually, most of these causes of actions relating to economic loss, and even the accident cases, were consolidated before in an MDL before Judge Furman. And lead counsel was selected in the MDL, and they filed two complaints, which were intended to subsume the economic loss complaints that had been filed against New General Motors.

And the parties referred to that as the presale consolidated complaint and the post-sale consolidated complaint.

And while these events were taking place, certain presale accident plaintiffs also brought lawsuits against New GM. And New GM retained Ken Feinberg to develop a program to compensate, on a voluntary basis, both the presale and the post-sale action and plaintiffs who had the recalled ignition switch in their vehicle and had met the eligibility criteria of the Feinberg program.

And, for those who could not or chose not to participate in the Feinberg program, New GM believed that the actions violated the sale order, since claims based on presale accidents were retained liabilities under Section 2.3(b)9 of the sale agreement. So, a separate motion to enforce was brought to bar those claims as well.

And, in response to these motions to enforce, your Honor held periodic status conferences where the plaintiffs raised, among other thing, the Rule 60 due -- 60(b) due process issues relating to the notice of the sale motion.

Then, in an effort to efficiently try to resolve these issues, the parties, at the Court's urgings, agreed to factual stipulations. And then they identified certain threshold issues that the Court might summarily decide. And substantially all of the plaintiffs entered into stay stipulations so that your Honor could decide those threshold issues.

And so, in the first phase of the oral argument, I'll deal with the three threshold issues that we've identified, which are the due process issues, the remedies issue, and the Old GM claim threshold issue. And then the other threshold issue that had been identified, the equitable mootness issue, will be discussed at a later point this afternoon.

Now, the central event that underlies all of these motions to enforce is the 2009 purchase by New General Motors of substantially all the assets of Old General Motors in a bankruptcy-approved 363 sale. And the sale was structured so that New GM, at the time a U.S. government-sponsored entity, would not be liable for most of Old GM's liabilities, except for specifically defined assumed liabilities.

Importantly, the liabilities that are the subject of the motions to enforce are not assumed liabilities. They're all retained liabilities of Old General Motors. The three -- and the assumed liabilities are the glove box warranty, the lemon law claim, and the post-sale accident (indiscernible) claims.

THE COURT: Pause, please, Mr. Steinberg, because I'll let you talk about that if you want. But maybe I should have said this more explicitly: I'm quite comfortable with the fact that all or substantially all of the claims that had been brought against New GM were not assumed liabilities and are blocked or proscribed by the sale order.

But it seems to me that your opponent's position is more like what we called in Freshman Civil Procedure "confession and avoidance." They say, "Yeah, we know that they're blocked by the sale order. But you should be ignoring the sale order."

So, if you want to -- I also think this is largely relevant to the third of the threshold issues, because I think -- I'll hear from Mr. Weisfelner if he feels differently -- they've conceded that they're covered by the civil letter, but they say I shouldn't be enforcing it. So, if you want to keep talking about what the sale order and the underlying sale agreements say, go ahead and do that. But I think we're probably beyond that at this point.

MR. STEINBERG: Appreciate that, your Honor. And I agree that we are beyond it. I just wanted to make the general point that we are now talking about what is defined as the assumed liabilities under the sale agreement. I recognize that they have an issue with what we call the used car purchases, which are in their post-sale consolidated complaint. And I'll talk about that when I talk about the Old GM claim threshold issue.

And, as your Honor had said, and obviously that you know, the 363 sale was approved after extensive notice was given, pursuant to the Court-approved procedures. A multitude of objections were filed based on the sale notice given and the widespread media coverage that related to the sale. And then your Honor conducted a three-day trial. And the Court then rendered a very extensive sale decision and a lengthy and fully-vetted sale order.

Now, your -- as one of your questions that your Honor answered, which was, "How do you sort of calculate the direct mail notice given? Where is the thing in the record that says that?" the Garden City Company filed a fee application -- a retention application. The retention application actually described what it would cost for each mail notice that it would send out, the cost of the assembling of the package and the cost of the postage.

So, when we extrapolated as to what the cost was for sending out four million notices by direct mail, which we said was $3 million, we then extrapolated, using the same formula in the Garden City Company application, and said that, if you had to send out direct mail notice for 70 million people, it would cost $43 million. So, that's the point in the record that talks about that.

In the sale order, among other things, New GM was --

THE COURT: Pause, please. Is that 43 million bucks for all GM car owners? Or is that for the lower -- somewhat lower number subject to the ignition switches, the 27 million or thereabouts?

MR. STEINBERG: The $43 million number is predicated off of 70 million domestic cars in the United States.

In the sale order, your Honor found that New GM was a good-faith purchaser for value, and it would not have any successor liability for Old GM's debt. And, importantly, the no-successor-liability finding that your Honor gave reserved condition for the sale going forward, that New General Motors would not have gone forward without the successor liability finding. And that's in, I think, paragraph DD of the -- of sale order.

The primary purpose of the 363 sale hearing -- and I think a lot of your Honor's questions were directed at this -- it was not to quantify the amount of the retained liabilities. It was to determine what was the highest and best bid for the assets.

That issue, the allocation of the sale proceeds and the quantification of the liabilities, were for later phases of the bankruptcy case: the filing of the schedules, the setting of the bar date, the filing of a disclosure statement, the filing of a plan. All of those actions were post-sale. They were done by Old General Motors. And they had nothing to do with New General Motors and they had nothing to do with the Section 363 sale.

The -- and I think that that's significant because so much of the briefing that was done in this case by my opponents is directed on the fact -- and the cases that they rely on are bar date cases, where you have the extinguishment of a claim if you don't timely file it. And therefore, a lot of the cases there talk about sort of the "all or nothing" proposition.

Also, the person who is giving the bar date notice is the person suffering the consequences if they didn't give the notice properly, so that, if the Old GM estate should have given a broader notice than they did, then someone who comes in and says, "I should have gotten broader notice, and therefore I should be able to participate in the estate," well, the person who created the problem by not giving the proper notice is the person who has to incur the remedy. That's a totally different situation than a Section 363 transaction, especially because you're dealing with the third party here, the third party being the good faith purchaser for value.

And, in the Edwards case, which we cite in our papers, it is --

THE COURT: That's the Posner opinion, then, of the Second Circuit?

MR. STEINBERG: That's correct. The -- and I know it engendered some criticism on certain facts from my opponents as they try to distinguish it. But the central issue there that I think is critical for your Honor to consider, and underlies some of your questions that you asked, was that they said that due process issues need to dovetail with the concepts of a bona fide purchaser for value, that there are times when there could have been a due process issue that was involved. But when you're dealing with a bona fide purchaser for value, the question is whether that remedy should be asserted against that party.

And the same issue is involved when Courts look at Rule 60(b) and upsetting a sale order by virtue of the fact that there wasn't due process given. The test that they offer is a three-prong test: exceptional circumstances that the party has to show; timeliness, timeliness of the application; and undue prejudice to -- whether there was undue prejudice to the -- any party. If there was an undue prejudice to a party, then you would not be able to get Rule 60(b) relief. That is an essential element to be able to try to get it in order to establish a basis to vacate an order on due process.

And when you're dealing with a sale agreement, and the party -- one of the parties is a bona fide purchaser for value who would not have closed the transaction without a finding that there was no successor liability, you can't vacate that order. You can't partially revoke the order; you can't ignore the order without ignore -- without finding, at the same time, that there was an undue prejudice to the party, an undue prejudice to be exposed to potentially what they've asserted to be billions of dollars of claims.

So, all of that ties in together as to why a 363 order is much different than a bar date circumstance. And I'll get to dealing with the cases that your Honor asked for me to comment about relating to sale agreements, because there the situation was that the sale agreement itself was either overly broad because the debtor could not have sold the asset or didn't provide for selling of the asset, and that's why the Court was carving out the sale remedy. It wasn't because of a due process concern where they're trying to allow one person to avoid what was a foundational element of the sale order itself.

So, when your Honor had your finding and dealt with the sale order issues, you were looking at things that related to whether this was -- whether the assets should have been sold and whether this was the best price under the circumstances.

And your Honor's questions were exactly correct about the differences between a sale agreement and a claims bar order position, in that, when you're moving for a 363 sale, many times you're dealing with a melting ice cube situation. You're dealing with a circumstance where the assets are eroding. Delays are potentially destroying value. And, in this particular case, your Honor had to deal with deadlines that had been set by the purchaser, New General Motors, as to when the sale order had to be issued. And, if the sale order wasn't issued --

THE COURT: But back at that time, were we really talking about the order to enforce?

MR. STEINBERG: That was correct, your Honor.

THE COURT: And Auto Task Force, at some point before the closing, caused New GM to be formed, if I'm not mistaken.

MR. STEINBERG: That's correct, your Honor.

THE COURT: Yeah.

MR. STEINBERG: This is the -- when we talk about New General Motors at the time you're dealing with the sale, we're dealing with the -- essentially the Auto Task Force, the people from the U.S. Treasury. Those were the people making those type of decisions. Those were the people who testified before your Honor at the sale hearing.

Those were the people who said, when asked at the sale hearing, "Why don't you just do assume the presale accident claims; they're not that much; it won't destroy the enterprise if you do that," and they drew their line in the sand. They said, "I'm only going to take what's commercially necessary. I'm not taking this." And that was it. That was it. That was the choice that your Honor had to make: either accept this deal based on how the purchaser had formulated it, or reject the deal.

And your Honor recognized that in the sale decision, when you said that it was for the purchaser to decide which of the prepetition liabilities it was prepared to assume. It was their business judgment of what they wanted to do or not do. And you would either accept the deal or not accept the deal. But you couldn't tell the purchaser, "You have to take these liabilities in addition."

So, with regard to the presale accident claims, they actually tried to show at the sale hearing that they weren't that much. They went through Aon report to try to show that, if you back out the post-sale accident claims that are part of the reserves, then it may be not that much.

And I think Mr. Miller, on behalf of Old GM, when he was the proponent, started to say, "A little here, a little here, a little here, a little here, and all of a sudden you have a purchaser saddled with the same type of issues that Old GM had and that the government wasn't prepared to, in effect, start an enterprise with those --

that kind of burden."

So, you have a situation when you have a bar date where you have a melting ice cube. You clearly have more time to deal with the claim issue. And you have the additional circumstances that, if the person who is moving for the bar date blew it, then that's the party who should suffer the consequences. It's different than when you have a 363 sale.

And I will talk shortly about why that I don't think there was a due process violation at all --

THE COURT: Pause, please. That's the second time you can say that. But can you understand, from a judge's point of view, that he or she, if somebody blew it, as you put it, cares more about that which is necessary to fix the problem than who was responsible for the problem in the first place?

MR. STEINBERG: I understand that, your Honor. But if I was to -- if you had taken my comments to say that I thought that they blew it, I don't think that they did blow it. I think that the publication notice was appropriate.

THE COURT: Of the bar date as well?

MR. STEINBERG: Yes, your Honor. But that's not my fight. That's someone else's fight. I do think that that was the situation. And I think that's consistent with the case law. And I'll talk about that.

But I do think that the issue of who is impacted on the remedy is relevant if there's a due process violation. And your Honor has the Edwards situation that they talked abut, which is that -- assume for the moment that you had two innocents here, you had the person who should have gotten notice who didn't get notice, and you have the bona fide purchaser for value who actually closed the transaction predicated on the facts that your Honor approved.

In the battle between a bona fide purchaser and that person who claims not to have had -- gotten proper notice, the Edwards case said that you side on behalf of the bona fide purchaser. That is the person who wins. And then you're circumscribed as to what the remedy might be, but the remedy will be based on that circumstance, because of the bankruptcy policy objectives of a 363 sale of achieving finality, of achieving certainty, and achieving the best price for the estate. And those items don't override due process, but they help shape due process.

And those objectives, those things that you're talking about now, about those bankruptcy policy objectives, they're actually the elements of Rule 60(b) test, and they're actually the elements of the 363(m) test. In a Section 363(m) test, they say that, if you're dealing with a good faith purchaser for value, and there's no stay of the sale order, then the purchaser takes free of that circumstance. And you --

THE COURT: Pause, please, here, Mr. Steinberg, because, on this one, I wonder whether you're on weaker ground. Mr. Weisfelner, in his brief -- maybe other people said it too -- said 363(m) applies to appeals. We live in an environment where the Supreme Court believes sometimes, or in the view of some, even to an extreme -- you know, we live in a world of plain meaning and textual analysis. Do I have the right to apply 363(m) to a situation other than an appeal?

MR. STEINBERG: No. No, but I don't think you -- I think the point that I was trying to make is that the policy objectives of Section 363(m), what they're trying to accomplish, the policy objectives of the Rule 60(b) test, about an undue prejudice to a third party, they're all relevant of those policy objectives as to how your Honor should approach the problem.

All I was trying to do was saying that the rationale for 363(m) is consistent with what I'm saying before, not that you should be applying a 363(m) test. The rationale of 363(m) is the bona fide purchaser concept, which I that, if you close the transaction and you were a good faith purchaser, and you were not otherwise stayed, then you take, free and clear, whatever comes up after that. You're protected.

Rule 60(b), on the -- vacating a Rule 60(b) order on due process grounds has the same thing. It's done not in the language of 363(m). It's done in the context of that third prong, undue prejudice to a third party. When you have an undue prejudice to a third party, by taking away the asset after you've just paid for the asset, or undermining the fundamental aspect of the deal, the Court is saying you can't do that. You should be able to address due process grounds, but there are constraints of what you should be able to do and not be able to do.

And that takes me back to the Edwards case, which is where Judge Posner was actually saying the same thing again in different words, which is that, when dealing with a sale and dealing with the fact that you have someone raising issues, when you have a bona fide purchaser, the bona fide purchasers are, in effect -- are the thing that you need to focus on. And they actually win in a battle of that type of dispute because of those bankruptcy policy objectives.

The Court -- all of these issues are sort of tied together on the same concept, which is that a 363 sale has certain fundamental objectives, and that, once a sale closes to a good faith purchaser, then we're going to protect the purchaser. And whether you do it under 363(m), whether you're doing it under 60(b), whether you're doing it just as straight as Judge Posner had done it in the Edwards case, it's the same concept.

And I think that affects the remedies issue and it actually affects whether there was a due process violation. And I do want to talk a little about why I believe that there was no due process violation, not because of the notice circumstance, but because I don't think that there was a property right that was extinguished by the sale. And there's five reasons why that's the case.

The first one is endemic to a 363 sale. 363 sales do not, in most cases, extinguish rights. They say, "I'm selling, free and clear, liens, encumbrances, and interest," which the case law includes claims, and say that it attaches to the proceeds of sale. So, there's no extinguishment of a claim.

Now, there are cases where there actually is an extinguished, where, if I'm selling it free and clear of a covenant that runs with the land, then there's not a great remedy that you can have by saying you should attach to the proceeds of sale. And that's some of the cases that the designated counsel cites in their papers.

But when the lawsuit is monetary damages, which is what their lawsuits are, then, whatever their claims are, it attaches to the proceeds of sale. There is no extinguishment. It's another fundamental reason why this is different than the bar date, because of that.

So, the first thing you have is that there's no extinguishment in a 363 sale, whatever rights they have, whatever they think they had, that attach to the proceeds of sale. And they had the right, right after the sale, to assert whatever claim they had in the case. The bar date hadn't been set; the schedules hadn't been set. Whatever it was, they had the ability to do that.

And the Macarthur v. Manville case, which we cite in our paper, says that the underlying principle of preserving a debtor's estate for the creditors and funneling claims into one proceeding in the Bankruptcy Court is a fundamental part of the bankruptcy law.

They actually have the same concept in the adequate protection sections of the Bankruptcy Code, which is you're selling free and clear of someone's property interest, but you're giving them replacement collateral; you're giving them the proceeds of the collateral; you're not destroying a property interest. You're shifting it. And that's fundamentally what happens in a 363(f) sale.

And this point was made at the sale hearing. It was made by Old GM's counsel at the closing argument. It was actually made by Wilmington Trust counsel as well, at the closing argument, as well, too. And your Honor actually had echoed this theme in your decision, when you said, "The sale agreement does not dictate the terms of a plan of reorganization, and it does not attempt to dictate or restructure the rights of the creditors of the estate. It merely brings in value. Creditors will thereafter share in that value pursuant to a Chapter 11 plan of reorganization."

And that same point was made by Judge Gonzalez in the Wolff case. I think it was Judge Gonzalez. And we cite that in our papers as well, too, the Wolff opinion, which is a contested matter that came up after the Chrysler decision and sale order was entered. And there, Judge said, "The purpose of the sale was not to effect a plan of reorganization and set distributions to classes of claimants, but to maximize the value of the estate and support the best possible recoveries under a separately confirmed plan."

So, the first fundamental point is that there was no property right that was extinguished. It's not like a bar date case where, if you don't file your claim timely. It's not like a plan case where you have a discharge. In a sale, the claim shifts to the proceeds of sale.

Second point is to why there was no property right that was extinguished as part of it. And this really relates to the Third Circuit decision in Emoral. And --

THE COURT: Which Third Circuit decision?

MR. STEINBERG: The Third Circuit decision in Emoral, E-M-O-R-A-L. There, the Bankruptcy Court said that, in the context of the successor liability claim -- and here we are talking about they claimed that the sale was free and clear of their successor liability rights. There's no other property right that they were asserting, other than the right that they think they have under successor liability.

Court says that, once a bankruptcy occurs, the ability to assert a successful liability claim is an estate cause of action under Section 544 of the Bankruptcy Code. It's the same right that every creditor could have asserted, and therefore the estate fiduciary is the one who could bring that claim, not any individual.

THE COURT: I have a little problem with that, Mr. Steinberg, because, when we give the estate rights that are owned by creditors before the bankruptcy, we do it by express statutory means such as Section 544 of the Code. The ability to assert a successor liability claim, when it's permissible, is to add a class of defendants that the creditor can sue beyond the original assignor of the property. It gives the creditor a second target, if you will. Isn't that a benefit of the creditor rather than the original target?

MR. STEINBERG: I don't think so, your Honor, for the following reasons. One is that the creditors didn't have a successor liability claim until the sale actually consummated. There was no claim they had against New General Motors. They had no claim if the 363 sale didn't go through. As of the time of the bankruptcy case, they had no successor liability claim against anybody. They had no property right as against anybody.

I mean, successor liability is not the same thing as a property right. It's a claim that someone acquires as a sort of an equitable remedy because there's nobody that you -- because either of the structure of the transaction or because there's nobody else that you could sue. Neither of those circumstances apply in these circumstances. The --

THE COURT: Stick with me for a second, because there is something related to what I just said but that's slightly different as well. Creditor wants to assert a successor liability claim. It wants to go after an entity with the potential to go after 100-cent dollars instead of baby bankruptcy dollars.

That has the effect, for that subclass of the creditor community who can sue for 100-cent dollars, of giving that creditor group a leg up over the poor suckers in the creditor community who can only get baby bankruptcy dollars. Once again, that seems to me a benefit for a favored creditor rather than a right of the estate.

MR. STEINBERG: Yes, but I think, your Honor --

and I think I understand what is troubling you about that, and I think I could isolate it for you. The general concepts of successor liability are generally (indiscernible). There's legal successor, which is a claim that everybody shares. Transaction is structured (indiscernible), and so that the purchaser is the new legal successor of the seller.

De facto merger, continuation of business, or fraudulent purpose in connection with doing the transaction altogether: those are the four general prongs or successor liability. In the product area, in certain states, there's a product line exception. And I think your Honor is thinking a little about the product line exception. And I'll separately address the product line exception.

But, with respect to the four prongs, de facto merger, legal successor, continuation of business, and fraudulent purpose, all of those things are something that every creditor has, not one creditor, every creditor. The plaintiffs here are in no better position than the bondholder or anybody else to have been able to assert those claims.

And that is why Emoral, I think, was correctly decided. And that is why Emoral relied on the Keene Corporation case, which was 164 B.R. 844, a Bankruptcy Court case in the Southern District of New York. And it basically said that successor liability claims are estate causes of action.

And that is why Judge Lifland's decision in Alper Holdings, which is 386 B.R. 441, said the same thing. Those type of successor liability claims, based on the structure of the transaction, those are things that are estate causes of action. The estate representative is the one in charge to bring it. And, in the context of the 363 sale, the estate representative is the one who could release it.

Third reason why I don't think there was a property interest -- and this is actually in your Honor's decision, and it doesn't say it explicitly, and I don't want to put words that says that you tried to say something explicitly, but you clearly had the concept in your mind. In Footnote 99 of your decision, you said that, in discussing successor liability, you said, "The Court notes that, as a matter of federal bankruptcy law, Section 363(f) of the Bankruptcy Code trumps state law and requires a different result."

And so, it would have been nicer if you'd said federal preemption. You didn't use those words, and I don't mean to try to say that that's exactly what you tried to say. But those are -- that is the concept, which is that, when you're -- because of the bankruptcy policy objectives, and the federal bankruptcy law, of trying to achieve returns on assets, that that has a tendency to trump state law.

And, in the White Motor case, the Bankruptcy Court for the Northern District of Ohio, they said that effects of successor liability in the context of a corporate reorganization preclude its imposition. The negative effect on sales would only benefit product liability claimants, thereby subverting the specific statutory priorities established by the Bankruptcy Code.

So, there, he was more -- the judge was more specific in saying that there was a federal preemption concept. But even if you don't want to go that far, your Honor was recognizing in your sale decision, in trying to justify why you were making your ruling on successor liability, that there were concepts about the Bankruptcy Code, Section 363 sales, that trump state law in connection with successor liability. And I think that that is true. And I think that the case law recognizes that. And some judges have said it more explicitly than what your Honor was alluding to.

The fourth reason why I don't think that there was a property right that was extinguished here is that your Honor decided, as a matter of fact and law, that there was no successor liability claim. The four-prong test, the most important factor on the four-prong test -- and this is undisputed -- is that there was no continuity of ownership between the purchaser and the seller. New General Motors was going to be owned primarily by the government. The shareholders of the seller were going to be wiped out. There's no continuity of ownership.

If you don't have continuity of ownership, you don't have de facto merger as a matter of law, you don't have legal successor. Your Honor found, as a matter of law, that this sale was not of a fraudulent purpose. That wipes out the other element.

And, on the continuity of the business section, in the Second Circuit decision of Douglas v. Stamco, which is a 2010 Second Circuit opinion, they actually talked about that provision. And they said, if the seller survives, even in the context of a liquidating trust, if it survives, then you -- then the continuity of ownership factor is not established. You don't have successor liability on that basis.

And that's what happened here. I mean, Old GM survived. Old GM is still -- well, we argue; GUC Trust can disagree -- its successor is the GUC Trust. But certainly it survived until almost -- until two years after the transaction. So, there is no of those four elements, as a matter of fact, that would have established successor liability, which then takes me to the fifth point, which is the product line exception, which is true in only certain states.

And, if it wasn't federally preempted, and if it wasn't in an estate cause of action, and if you were concerned about the claim was going to be extinguished because of the 363(f) concept, even though I don't think that that's true, then you have to see -- do an economic loss plaintiff, do they have any claim under the product line exception? And the answer is no. We have not been able to find a case; they have not cited a case. The product line exception doesn't apply to them.

Whatever the state law was, whatever rights these state laws are trying to protect, it's not protecting economic loss plaintiffs. It's also not protecting presale accident plaintiffs. The purpose of the product line exception is that, after you have a sale, and you've had an accident, and there's nobody to go after, the Court is saying, "I'm going to make the successor potentially liable," in certain states, not a lot of states, a minority of states.

That's not what happened here. Because the post-sale accident paradigm was actually assumed by New General Motors, it took away the successor liability issue on the product line exception.

And that is why, when someone asks me, "Why did your Honor carve out in your decision about successor liability to the extent Constitutionally permissible for the asbestos plaintiffs -- why weren't you broader? Why did you limit to the asbestos plaintiffs only?" and I wasn't sure what the answer was. But I did know that, vis-à-vis the product people, that exception didn't apply anymore. That concern of future creditors didn't apply anymore, because the sale agreement had that as an assumed liability of New General Motors.

So, the threshold issue of the threshold issue of due process was: was there a property right extinguished? And I've told you why, your Honor, there were the five separate reasons why there was no property right extinguished, and therefore you don't have to get to all the other issues that are embedded here.

The next thing I'd like to talk about is the burden of proof. I think, when this case started, I kept on hearing Rule 60(b). And, when you read the briefs that were filed in this case in response to our brief, there's no real mention of Rule 60(b) anymore. They want to make -- they want to say that I'm entitled to this relief but I'm not working under Rule 60(b).

And I think the reason why is what I articulated before, which is that they don't have a case under Rule 60(b), because Rule 60(b) requires them to show that there would not be an undue hardship on a party. And you can't do that with a bona fide purchaser for value.

And that concept of how 363 sales, burden of proof, bankruptcy policy objectives -- I think Judge Peck was trying to deal with that in the Lehman case, when he said that there was something about it that he thought that the burden of proof, in connection with 363 sales, is even higher than in other circumstances, because of that.

And in the Lehman case, he was looking at whether the actual fundamental aspect of the sale -- whether an asset had been properly disclosed to him was appropriate. And even there, he said that he was not going to upset the sale, even if he thought there should have been better disclosure on the actual assets that were being transferred.

That's a much harder case than what's been presented to your Honor, where there's no issue about what the assets were that were being sold. The issue is whether there was a proper description of retained liabilities in the context of a sale which was not trying to extinguish retained liabilities. A hearing where the purpose was not to deal with retained liabilities; those issues were for another day. And therefore, I think that's what the judge was trying to deal with Lehman.

The issue that your Honor had raised in one of your questions, which is, "Can I just carve them out of the sale order, and leave the sale order in place, but just carve them out?" I know your Honor has written and spoken many times, and sometimes I'm on the right end of this and sometimes I'm on the wrong end of this, but your Honor talks about stare decisis, the ability -- the need to follow the law of the circuit, and that that guides how you render these decisions.

And I would just point out to your Honor that the argument about "carve me out of the sale order" was actually made on appeal of your Honor's decision. It was in the Campbell case. And it was actually the presale --

THE COURT: That's the one before Judge Buchwald.

MR. STEINBERG: Yes. It was actually the presale plaintiffs. They said, basically, to the judge, "I want you to apply the sale order to everyone but me. And then you could approve the order." And then the judge used terms like "elective surgery," "knock the props out from the transaction," and said, "I can't do that. And even the Bankruptcy Court couldn't do that. The bankruptcy order talked about this was an integrated transaction. Every term is dependent on every other term. I can't blue-line the order."

And even if there was a peripheral thing that you could blue-line and ignore the provision of the order, successor liability was not a small item here. That was a fundamental, foundational point that you just can't ignore.

THE COURT: Pause, please, Mr. Steinberg. You're ahead on successor liability. But your opponents' stronger position is on matters that were not raised by Campbell. Campbell is Mr. Jakubowski's guys, if I recall.

MR. STEINBERG: Right.

THE COURT: There were 12 litigants who were in real, genuine car wrecks who wanted to sue New GM, along with Old GM. Judge Buchwald, like me, didn't address the more debatable aspect of the sale order, which was protecting New GM from its own wrongful conduct. Now, should I regard her principles as a pawn to an argument that was never made before either her or to me?

MR. STEINBERG: No, but, your Honor, I think -- I'm glad that you raised that point again, because I will try to now answer your question, because, fundamentally, underlying your question is something that I disagree with.

Let me start with the proposition that I agree with you. I think, if New GM had an independent duty in conduct vis-à-vis anything -- and clearly it assumed liabilities, right? So, it assumed the glove box warranty; it assumed the lemon law; it assumed the obligation to conform with federal law on the recall; it assumed the obligation on the post-sale accidents. I think, if those things are involved, then that's New GM's obligation.

And the New GM obligation actually related to Old

GM vehicles. Why? Old GM -- New GM assumed the glove box warranty with regard to Old GM vehicles. New GM assumed the lemon law responsibility as defined in the sale agreement with regard to Old GM vehicles. New GM agreed to assume post-sale accidents with regard to Old GM vehicles. And New GM agreed that, if there was going to be a recall that was necessary on an Old GM vehicle, it will do the necessary repair for an Old GM vehicle. So, New GM did have independent conduct that your Honor was not insulating as part of a sale order relating to Old GM vehicles.

But that was it. If there was nothing that New GM specifically assumed relating to an Old GM vehicle other than those things, then everything else relating to an Old GM vehicle was a retained liability. And it had no independent duty for anything related to that. That was the purpose of the no-successor-liability finding.

THE COURT: Yeah, I understand that. But if Mr. Weisfelner had shown up back in 2009 and made the same arguments he's making now, he would have said, in words or substance, that you can't protect New GM from its own wrongful conduct so long as it's independent of the Old GM conduct, whether or not it involved Old GM or New GM parts or cars.

MR. STEINBERG: If it doesn't involve an Old GM vehicle, or an Old GM part sold by Old GM, or Old GM conduct, he would be right.

THE COURT: Well, let me tell you an example. Suppose I don't think New GM actually fixed its cars. And I don't know whether it ships the parts to mechanics that do. But suppose New GM knowingly -- and I understand this is a wholly fictitious hypothetical. But suppose New GM knowingly put a defective Old GM ignition switch into either a New GM or Old GM vehicle.

If it knew that the switch was crummy, it wouldn't be liable for having designed the switch wrong, but it would -- arguably, I'm not going to get into stuff that's Judge (indiscernible)'s issues -- but it could arguably be liable for knowingly putting the crummy part into an Old GM vehicle.

MR. STEINBERG: I agree.

THE COURT: Or New GM vehicle. And, as I read the sale order, it gets a "get out of jail free" card in that kind of conduct. The sale order and the sale agreement.

MR. STEINBERG: I don't think so.

THE COURT: Okay. Then if you're contending that that wouldn't be an issue, maybe that issue would go away. But that is a matter of concern to me because of the breadth of the documents in which you've read so much.

MR. STEINBERG: No, no. But, your Honor, I think that, if it relates to an Old GM vehicle, and somehow, when it was sold, New GM took on a contractual obligation independently, took on a contractual obligation to warranty some aspect of that vehicle going forward, I think New GM has that contractual obligation. I wasn't looking a-- and I know it's a catchy phrase to say, "get out of jail free"; I don't think that's --

THE COURT: I tend to get a little colloquial, but you know where I'm coming from.

MR. STEINBERG: I do. I do, your Honor. I just feel that there's probably people at the company listening to what I have to say, so I wanted to at least say something in response to that, because I don't think "get out of jail free" is the right way of doing it.

But no one was looking to absolve New General Motors for independent duties that it voluntarily took on after the sale. But it purposefully did not take on responsibilities with regard to Old GM vehicles that were not assumed liabilities. And what they've articulated -- and this is dealing with the Old GM claim threshold issue -- what they've articulated is something that has nothing to do with New General Motors.

And I'll give you an example. There was -- and I think we gave a couple of these in the -- in our briefing. There is a plaintiff named Rafael Lewis who brought -- who's in the post-sale consolidated complaint. They recognize that the presale consolidated complaint, if you're not going to upset successor liability, the presale consolidated complaint falls. The presale accident plaintiffs also recognize the same thing, that, if you -- successor liability is going to be upheld, they lose.

The reason why the lead counsel broke up the complaints between the presale and the post-sale was they were trying to isolate those issues that they think survive even if your Honor upheld the successor liability. So, this is in the post-sale complaint, not the pre-sale, the post-sale.

Rafael Lewis bought a 2006 Chevrolet Cobalt after the 363 sale at an auction for $2800 with no warranty. His claim is that, years after he made his $2800 auction purchase, the value of his now eight-year-old vehicle had gone down, because a recall was announced that was going to fix the ignition switch problem in his car that he was otherwise not aware of.

New GM did not manufacture that car in 2006. New GM did not sell him the car in -- after 2009. Yet somehow, according to the economic loss plaintiffs, New GM is required to protect the value of that car purchased by Plaintiff Lewis with no warranties from unrelated third party. You don't get there unless you have successor liability. That claim is predicated on successor liability.

There's no independent duty that they had on a transaction that they weren't involved with. And the GUC Trust jumps on the misguided bandwagon and says that, and they're equally wrong as well.

We pointed out Plaintiff Barbara Hill. She bought a 2007 Chevrolet Cobalt after the 363 sale from a Nissan dealer. New GM did not manufacture her car in 2007 and they didn't sell her a used car after the 363 sale. Yet, according to the economic loss plaintiffs, on their post-sale consolidated complaint, New GM is liable for the alleged loss in the value of her seven-year-old car after the 363 sale by a Nissan dealer.

You don't get there unless you're asserting successor liability. There is no independent duty. And you can clearly see that by understanding what their post-sale consolidated complaint tries to do.

It says that the people who are -- that New GM is liable to is not the people who just are -- had vehicles that were recalled in 2014. That's the 27 million people. It's not just them. It's everybody that New GM sold a car to since 2009, even if they had no subject to a recall. Why? Because the magnitude of the quantum of the recalls tarnished the GM brand as a whole. And, by New GM profited from selling all of those vehicles. And that's why they should be liable for the tarnishing of the brand.

Well, how does that theory make any sense at all when you're dealing with a used car sale? New GM didn't sell that car. New GM didn't profit from that car. New GM didn't make any representations about that car. That's the -- that's a critical element of their post-sale consolidated complaint; it has nothing to do with an independent duty that New General Motors assumed or not. That's the successor liability claim, nothing more than that.

When the complaint deals with what is in essence successor liability, that is what we say should be proscribed. We're not looking to try to take an independent duty. The reality is, though, they have asserted an independent duty.

The -- Judge Bernstein had this issue in the Burton case. There, they talked about the duty --

THE COURT: Burton being one of the Chrysler cases?

MR. STEINBERG: Yes. There, they talked about a duty to warn. And that was a case brought by economic loss plaintiffs. And Judge Bernstein said, "Duty to warn deals with accidents. You're not asserting an accident claim. There is no duty to warn. It's not an independent duty." He said, "What you're doing is nothing more than a successor liability claim, and I'm going to deny your ability to assert that."

That's the essence of what we're talking about here. And you also get to the concept that these are really successor liability claims when you look at the sale agreement and the sale order. The sale agreement talks about what are assumed liabilities and what are retained liabilities. If you're not an assumed liability in the carefully defined provisions of Section 2.3, then by definition everything else is a retained liability.

Liability is defined in the sale agreement as any liability that occurs or accrues even after the closing date. So, people understood --

THE COURT: Can you -- were you quoting or paraphrasing from the sale order, from the sale agreement, or --

MR. STEINBERG: I'm quoting from the definition of liability under the sale agreement.

THE COURT: Can you give me the cite to that, please?

MR. STEINBERG: It's Section -- it's in the definitions section.

THE COURT: In the definitions of the sale agreement?

MR. STEINBERG: Right.

THE COURT: And that's of retained liability?

MR. STEINBERG: The definition --

THE COURT: Or assumed liability?

MR. STEINBERG: No, the definition of liabilities is in the sale agreement, and that's what I was referring to. Assumed liability versus retained liability is in Section 2.3 of the agreement.

THE COURT: The matter being 2.4?

MR. STEINBERG: 2.3, I believe.

THE COURT: 2.3?

MR. STEINBERG: 2.3. The sale order provision is in Paragraph 46. Paragraph 46 confirms the point, when you're dealing with Old GM vehicles. It provides that, except for assumed liabilities -- again, we're not talking about assumed liabilities -- New GM shall not have any liability for any claim that, A, relates to the production of vehicles prior to the closing date, or, B, is otherwise assertable against Old GM.

Every one of their claims, the economic loss plaintiffs' claims, is a claim that's assertable against Old GM as it relates to an Old GM vehicle. The sale order proscribed that from being asserted against New GM.

And that's why we say in our brief that, if you're dealing with an Old GM vehicle, there wasn't anything that was left to chance. It was a binary choice. We assumed certain specific things -- glove box, lemon law, accidents. We didn't assume anything else. Anything else, they were on their own.

And it's not like this argument wasn't raised at the sale hearing. It was raised by the -- at the sale hearing. This was raised not only by the consumer advocacy groups, it was raised by the states' attorney generals and they actually said things like you know, your Honor, there are people here who may not even know they have a claim and you're in effect eliminating their claim. And the answer is yes. The answer is yes.

And that makes perfect sense as well too because it wasn't like Old GM had stopped manufacturing cars two years before the sale. They were manufacturing cars throughout. There was going to be a circumstance where a car that was manufactured two months before the sale or sold six weeks before the sale that there may be an issue that related to that car and that is going to come up post-sale. And if it wasn't covered by the expressed warranty and if it wasn't an accident and if it wasn't something by the Lemon Law that person was not going to have a claim against new General Motors unless New General motors decided to voluntarily take that claim on. That was the firm cutoff.

But when you look at the sale, the sale order specifically contemplated that these claims, claims relating to latent design defects, that they could be asserted post-bankruptcy and that if they do it is not going to be something that switches the dichotomy between what new GM agreed to and what Old GM agreed to do.

I'm trying to think. I still have a half hour I think. Your Honor --

THE COURT: I know I asked a lot of questions. I'll cut you a little bit of slack on my taking up so much of your time and of course I'll do my --

MR. STEINBERG: Your Honor, I appreciate that. It so happens that I'm so far off my outline about where I am now I probably will need the rebuttal time to figure out how to get back to where I need to be.

I want to talk about five cases that you raised as to why they're not the situation here. The first is --

THE COURT: Before you're done I also want you to help me with the similarities and the differences between Judge Bernstein's opinions that come to opposite results, Grumman Olson on the one hand and Chrysler, I think it may be Burton on the other.

MR. STEINBERG: Well, let me take that because I think Grumman Olson is actually an easy case.

Grumman Olson was a case where there was a post-sale accident and the person who was the plaintiff here had no connection, no relationship at all with Chrysler. It was a person that was driving a car that had a manufactured part that was defective, but wouldn't have known that at all.

Judge, in the Burton case, the argument was that they're a future creditor and you can't cut off their right because they had no connection at all with the debtor.

That's not in any why the situation here.

THE COURT: First, to what extent was either related to whether a claim could be asserted notwithstanding a seeming discharge on the one hand or a 363 free and clear provision on the other.

MR. STEINBERG: I think in Burton, I'm sorry, in Grumman Olson, the judge said this issue wouldn't have come up in like the GM situation because that claim, the post-sale accident claim, is assumed by new General Motors. So, we're not going to have this due process issue. We're not going to have this future creditor issue and Judge Bernstein in Burton said economic loss plaintiffs are different from the Grumman plaintiff. The Grumman plaintiff is at minimum a future type creditor and that's not what the Burton plaintiffs were. They were economic loss plaintiffs. They held contingent claims. They were unknown creditors. They would be bound by the sale order.

So, in one circumstance here you have claims that are assertable against Old GM that they are economic loss claims. They are at worst unknown creditors. I know your Honor wants me to address unknown versus known, but they're clearly not future creditors and plaintiffs don't argue that they're future creditors.

They may like the words of Grumman, but they know that they're not Grumman. They're not the Grumman plaintiffs. They specifically said that they're the opposite of Grumman.

Grumman they said there is no way you could have notified us because we had no connection with the estate. These plaintiffs said you should have notified us and they obviously know their connection with the Old GM estate, they bought a car from Old GM. So, Grumman is not in any way related to the issues that your Honor has to tackle.

If new GM hadn't amended the sale agreement to account for post-sale accidents you would have had to face the Grumman issue in this case now. But that changed.

The Burton case is actually on point -- latent defect discovered after the sale, economic loss claim. The judge recognized that what they were really asserting a successful liability, uses the quote, "Anybody who owns a car now is not going to have a problem with the car."

This case is Burton. To that matter, your Honor, although it doesn't come up in the same exact context, this case is very similar to I think your Morgenstein decision as well too. In Morgenstein the issue that was raised was by a product person claiming that in effect that that there was a fraud on the Court, not a due process violation. They went even further. They went to the fraud on a court section and they said when Old GM presented its plan, when Old GM presented its bar date they didn't send us the notice that they should have. They knew that there was a defect in the product that we bought. There are 400,000 cars that are affected. We should have had notice. We shouldn’t be subject to the bar date. We shouldn't be subject to the injunction under the plan.

The remedies that they asked for were a little unusual. They asked for a partial revocation of the plan which there are specific sections in the Bankruptcy Code which talk about revocation of the plan and your Honor did a strict statutory analysis, but it is in my view similar to the partial revocation remedy that the plaintiffs are trying to assert here. And then your Honor said that they didn't plead fraud with the particularity, Rule 9B in the Morgenstein decision.

But fundamentally what they were arguing about was I should have gotten notice, I didn't get notice and now I'm barred because you knew, you Old GM, knew that there was a defect in my car and you didn't tell me. And their ultimate remedy was you don't have a remedy and that I think is similar to the circumstance that you Honor has here.

The five decisions, let me see if I can get this right, the Metzger decision. There was -- the county had a covenant to the land development and they were a known creditor. People knew that they had a covenant with the land, it was a public record, and you couldn't then sell the land and then try to preserve the covenant. So, the court had to deal with that singular circumstance and the purchaser was arguing that the covenant was wiped out by the sale and that there was no way that the sale proceeds could satisfy that. So there you were dealing with a circumstance where there wasn't a monetary damage claim and the 363 sale actually reflected an extinguishment of a known property right. That's not I think what you have here.

THE COURT: But one of the reasons that I was troubled or at least, not troubled, but was worried or of the view, perhaps is the best of all the words, that those five cases could be very significant here, is that I think if that's -- you're talking Metzger by Arthur Weissbrodt?

MR. STEINBERG: Mm hmm.

THE COURT: He declined to blow away the free and clear nature of that covenant without invoking 60(b), didn't he? Was he just wrong when he did that? And I'm going to ask the same question with respect to the other four. If I think the bankruptcy judge or a district judge gets it wrong I'm free to say that. I'm much less free to say that -- I can't say that if it's a decision by the Second Circuit.

MR. STEINBERG: Well, your Honor, I think that you've asked a very interesting broad question and I think you obviously can decide it on the narrow grounds which is the facts presented to you are not the Metzger type circumstance and therefore however the judge approached the problem in Metzger is not the same as you.

But if you're asking me on the most broad concept, which is that are there cases where you don't need to get the 60(b) in order to deal with a circumstance, there probably are, but they probably have unique circumstances as well that are not here. For example, Fuentes v. Shevin. It's whether you could --

THE COURT: (indiscernible) detachment?

MR. STEINBERG: You can have a (indiscernible) without notice to somebody. There the Supreme Court was arguing about the Constitutionality of a statute and in that circumstance the Court said that I'm going to invalidate the statute as violating the due process clause. It's not a matter of moving to Rule 60(b) because no due process was given in effect of the procedural due process, it's a sort of a substantive due process which was that the statute itself was improper.

I would say there are five cases that plaintiff's counsel have cited that fit within that paradigm which is that what actually was being done was the Constitutionality of the statute itself and a court was saying I'm not enforcing the statute. The statute doesn't give people their elementary due process rights, that if you have a circumstance where the statute says I give publication notice for the potential extinguishment of a lien when it's a lien of public record, the Court is saying in those circumstances you'd better give direct mail notice. It's easy to give that individual lienholder credit notice and there's something wrong with the statute altogether. I'm invalidating the sale and I'm invalidating -- I'm saying they didn't get their due process rights. And they're not doing it on Rule 60(b) grounds, they're doing it based on the fundamental element of the statute itself.

So, if you're asking me whether I think in this particular case Judge Metzger got it right when he said that a covenant with the land was a situation where you're dealing with a known creditor and the direct mail notice was not provided, I think Metzger was a situation where courts have to struggle with the notion that if you're a known creditor and you didn't get notice you'd better have a good reason why and that if you knew -- if it's the type of covenant -- if it's the type of thing that's a matter of public record then there's an element that the purchaser kind of knew that as well too and therefore it's not as clean as a circumstance that we have here. So that's Metzger.

Polycel, there I think there's an easy answer to that question. In Polycel, I think you called it Polycal so either I have a typo in my outline or I got it wrong, but I think I'm talking about The 2006 WL 4452982 bankruptcy New Jersey case in 2006.

THE COURT: It's from a district judge out of Trenton if I'm not mistaken.

MR. STEINBERG: Yes. I don't know if it was the District Court or a bankruptcy court, but I have it as a New Jersey case. There the issue was can you sell molds that were used by the objector to the sale and there the Court said that the debtor didn't own the molds. So this was an issue that as a matter of Section 363 the debtor had no right to sell, that the molds were not owned by the debtor, therefore a sale of a right, title and interest where the debtor doesn't own anything didn't transfer anything.

Important to know that also in Polycel that the purchaser agreed to take the assets subject to whatever the debtor's interest was. So they took a quit claim on the molds. So when the Court carved out the situation, they weren't carving it out on due process grounds, they were simply saying that the objector is entitled to its property interest because the debtor had no right to sell it and the debtor didn't actually sell it.

That's -- then court said you couldn't say take the sale proceeds to compensate you for the loss of your molds because the guy needed the molds for his business. They were essential to the integration of his business, that it was an irreplaceable items. That's how Polycel is a different circumstance from your Honor.

Compak. Compak was a case where a creditor did not receive the notice and he held a license to a patent owned by the debtor and the argument was that the sale order extinguished the license itself and the Court said the creditor had no remedy because of the loss of its license. It was critical for its business and that the Bankruptcy Code had special protections for patent licensees and therefore the Court wasn't going to enforce that order vis-à-vis the licensee.

And the Court also said, I think it was this case, that license didn't seem to be so critical for the --

THE COURT: I beg your pardon?

MR. STEINBERG: The license didn't seem to be so critical to the purchaser, but there was a specific property right and that the debtor had no right to sell it free and clear and was a known contractual right and therefore they were a known creditor.

We think first it starts off that they were unknown creditors and therefore the notice was proper. But in the known creditor situation when dealing with a license, the Court said there are special protections for licensees and you can't compensate that person monetarily by saying your lien attaches to the proceeds of sale, how to deal with it in different circumstance.

So, I keep on going back to the same point, when someone sues for monetary damages then not a license, not molds used for their business, the remedy that you can afford to use is something other than -- attaching to the sales proceeds doesn’t protect the objector who was deprived of due process.

Different circumstance here. When you're suing for monetary damages clearly sale proceeds can accomplish that goal.

Koepp, that's not a Bankruptcy Code case. That's a railroad reorganization case under Section 77 of the Bankruptcy Act. The creditor held an easement of the record, but got no notice of a plan which attempted to extinguish the easement.

In that railroad reorganization case they entered something called the consummation order. Under the consummation order it said you could not extinguish this encumbrance because it runs with the land and it was only going to extinguish rights if you were a claimant or a stockholder and the consummation would only apply to those people and the person who held the easement was neither a creditor nor a stockholder.

So the Court said that the consummation order didn't govern what -- it didn't cut off this person's rights anyway because you're an easement holder, you weren't the creditor or stockholder and the only thing I was covering in my consummation order were the rights of the creditors and the stockholders.

So again, it was interpreting its order to say it didn't apply, not that they were carving out something that clearly applied for due process reasons.

THE COURT: Didn't the circuit in that case say that they found a violation of due process and didn't they blow away the extinguishment of the complaining creditor's interest without every talking about 60(b)?

Now summary opinions are called summary for a reason because they're not drafted with the precision that plenary opinions are. With that said, and I don't want to be critical of the circuit, but seemingly the circuit didn't think 60(b) was that important.

MR. STEINBERG: Well, your Honor, I think to defend the circuit, if I'm presented with an order --

THE COURT: If the circuit didn't think 60(b) is important, that tells guys like me we're not supposed to think that 60(b) is that important. I'm not allowed to think that the circuit was wrong.

MR. STEINBERG: No, no. I actually think that 60(b) is important, but I think Koepp is a case where the Court was interpreting the order that was entered and saying the order didn't apply to the objective. The order was the consummation order. The consummation order only affected rights of creditors and stockholders and they were saying that an easement person, any person who held an easement, was not a creditor nor a stockholder and therefore its rights were not extinguished and therefore I didn't have to deal with 60(b), I was interpreting the order and saying it didn't apply to them.

It was the same thing as the -- I'm sorry, which talked about the molds. You know, you cn only sell what you own. You didn't own the molds and therefore I'm interpreting the order to say that those rights in the molds weren't extinguished. It doesn't involve 60(b), it involves an interpretation of the actual order itself. And so I do think 60(b) is important except you didn't need to reach it in that case because you were interpreting the order and you were trying to decide whether the order covered the circumstance that was being complained about.

And then I think the last one is Manville IV and there I think Manville IV fits within the same paradigm. Manville IV was a circumstance where there was an injunction that was entered as part of the Manville case and the focus of that injunction was that entities like Travelers would be protected from lawsuits and that they would be protected from lawsuits because if they didn't that would erode the insurance that otherwise was being given to the Manville estate.

So, the insurance agreement was the res that was part of the bankruptcy estate. In Manville IV the litigation was between Chubb and the insurance company and it didn't relate to the insurance. It related to whether the insurance industry had defrauded as a whole the asbestos industry and that they should have been protecting the industry as a whole and the claim that was being asserted was a contribution claim which was a prepetition direct claim that one insurance company had to another insurance company. And there the Court was saying that wasn't what this injunction was dealing with. That wasn't what the court had jurisdiction to issue an injunction. It wasn't going to prevent a direct claim against another direct claim that was unrelated to the insurance res which was what the Bankruptcy Court had to deal with and therefore it carved out and said that this didn't apply.

And then in Manville V it said that there wasn't a failure to meet a condition precedent because the injunction didn't apply to it in the first place.

Now, Manville has gone through lots of litigation.

It has gone through up and down the circuit a number of different times. That is what was involved in Manville IV. The most telling distinction between Manville IV and the case at bar is that Manville IV was a future creditor case or not even a claim at all case. They're arguing that, the Chubb is arguing it never could have been contemplated at the time of the channeling injunction under the plan that you would have this type of claim -- someone claiming that the insurance industry as a whole was defrauding the asbestos industry and therefore it wasn't contemplated, no one could have expected that type of claim and therefore it shouldn't be barred by any kind of channeling injunction.

That's not their situation, right? Their situation is that they're a known creditor, that they should have gotten notice as to the time of the sale and we cite in our papers a case which talks about, while there are similarities between a channeling injunction and a 363 sale where there's an injunction to protect the purchaser, in the Campbell case the court says while there are similarities and there are similar rationales for the protection, it's not the same and there are bankruptcy policy objectives relating to a 363 sale which are independent of the channeling injunction that's part of the plan.

So, I think, your Honor, those are the five cases that you've asked me to address. I'd like to talk a little about the claim-specific notice issue.

The 363 notice approved by the court did not identify any specific liabilities retained by Old GM because it wasn't the purpose of the sale hearing and it actually didn't have to. The sale notice itself said it was free and clear of all liabilities and it was other than assumed liabilities. And when you say all, there's no need to break down that further into its component parts.

Importantly, the creditors committee, the states' attorneys generals, the consumer advocates and the vehicle owner attorneys never challenged the sale procedure order and the specificity of the sale notice and that was never appealed at all by any of them.

And as noted, the sale notice told parties what they needed. They told them that the sale would be free and clear liens and it gave access to the sale agreement and the sale agreement said that -- defined what were retained liabilities and said it's going to be free of successor liability claims. And this picks up on one of the questions that your Honor had asked. A more detailed claim notice would've been extremely costly and it would have delayed the sale and the value --

THE COURT: They're not really attacking the specificity of the sale notice to my understanding. They're saying that if mailed notice of the type that was sent with

-- I think they said first class mail, but maybe by hyperbole they said by registered mail, that by not having sent out the recall notices Old GM was hiding the cards. And maybe it's Mr. Weintraub's brief, maybe it's Mr. Weisfelner's or both, but one of them says even if you had mailed us the notice it wouldn't have been good enough because the recall notices haven't gone out. Could you address that contention?

MR. STEINBERG: I think --

THE COURT: Or am I imagining that they said that?

MR. STEINBERG: I don't think that they say it like that. I think they say it slightly differently. I think they say that the notice had to specifically say there was a defect and that you may have rights that are extinguished if you don't file a claim. So, they were putting the burden on the proponent in the sale context to identify all the liabilities that would be potentially extinguished by a no successful liability finding and to have it said with explicitness. That's what I think they said. I don't think they tied at all to the recall notice.

And by the way, if the recall was done in 2008, then what? If the recall was done six months before --

THE COURT: Well, if the recall had been done in 2008 I'm not quite of a mind to say you would win this in a heartbeat, but if the recall had been sent out in 2008 I think that that coupled with the publication notice would put you in a very strong position.

MR. STEINBERG: The recall -- the element of a recall, this -- to put it in context, is that there was a defect of a safety nature that needed to be remedied. Old GM had been sued by lots of people prior to its bankruptcy based on failures to design the car properly, breaches of implied warranty of merchantability, fraudulent concealment in the context of selling the car. Those claims existed throughout.

Your Honor had to deal with those circumstances in Castillo. Your Honor, approved the settlement in (indiscernible) and (indiscernible). All of those were in effect economic loss claims. They were breach of warranty actions where there had been class actions that had been certified, but not approved as of the time of the settlement. All of those claims are Old GM claims. All of them had been paid as Old GM claims.

The recall of when you send out a notice or not is -- I don't want to minimize it, but it is not relevant to the issue that I think your Honor, has to address. The issue is whether warranty claims, design defect claims will retain liabilities and if they were then the issue is whether the sale notice was proper.

And your Honor has asked the question well, what is the objective, what is the test that I should look at? You know, they use language like reasonably, reasonably ascertainable, but that's not reasonably foreseeable. What does it mean by looking at the books and records? Is it the same as a financial statement?

THE COURT: I take it -- that's easy. You agree that it's not the financial statements.

MR. STEINBERG: I agree it's not the financial statements. And I think that the Drexel case actually illustrated that because there you had a contractual guarantee. Guarantees don't necessarily have to be on a financial statement. It didn't mean that if you had contractual guarantee you shouldn't be noticing that creditor if it was in the context of a bar date situation. Not a sale, but a bar date. So I agree that the financial statement is not the end all be all.

But when we say books and records we're not talking about, you know, we're not talking about the financial statement. We're talking about the general ledger of the enterprise, what is listed as the creditors of the company on the company's books and records. We're looking at what the litigation calendar is. People who had sued the company. People who have made a claim against the company and that's the issue that I think your Honor has to tackle which is that if it's not a contractual claim, if it's not, you know, the cases they cited if there's an easement, if there's a mortgage you should give notice to the mortgagee. If I have a contractual claim that I know about I should be giving notice as if I'm trying to sell or if I'm going to try to do a bar date. Those are known creditors.

But what is the objective test when you have an unasserted tort claim where the tort claimant has never made a claim for that at all? In this particular case, look at the circumstance here, you have, you know, the ignition switch recall went back as far as 2004-2005. So you have people who drove their car for five years. One of the arguments on the claim-specific notice is that they didn't know they had a problem. So they drove their car for five years. They didn't know they have a problem. It's only the announcement that we're going to cure the problem that you weren't aware of that they say creates the economic loss claim.

But if they haven't unasserted a claim and it's a stipulated fact that none of the named plaintiffs in the ignition switch action actually asserted a claim against Old GM as of the sale. So none of them asserted a claim and Old GM didn't have it on their books and records and didn't have a claim that's being asserted.

One of the things that I think this is clear also is that you can get caught up in this due process argument, and I don't mean to minimize the importance of due process, but the reality was is that they generally knew that there was a sale hearing anyway. They've never argued, they've never put in one affidavit to your Honor that they weren't aware of the sale hearing. Whether they got the direct mail notice, the publication notice or they read one of the 1,250 newspaper articles or they watch television, you know, this was what Judge Kaplan said. No sentient American was unaware of the travails of Old GM.

And the cases that they cited which talk about Old GM's awareness of the bankruptcy filing is not the same as the awareness of the particular bankruptcy event. Well those are cases which deal with the bar date. Every case that they cite dealt with the bar date and there the courts were saying I may know that there's a sale, I'm sorry, I may know there's a bankruptcy, but I don't know in a Chapter 11 when the bar date was set. I could have my rights extinguished if the bar date is entered and I don't know about it and it's a matter of who has the burden of telling somebody about the setting of the bar date when it's not set in Chapter 11 by statute, but it's set by court order. And there those cases are saying the burden is on the proponent asking for the bar date to send out the notice and merely the knowledge of the bankruptcy filing will not obviate the necessity of giving the notice of the bar date where their claim would otherwise be extinguished. That's not the circumstance here. But the reality is that they know. The named plaintiffs. The people that they control. The people they could talk to on a daily basis, they know if they were aware of a sale hearing or not and there's not one piece of paper that they've issued that says they were unaware of the sale hearing and the magnitude of what happened in 2009 was that everybody was aware that this was happening. This was not something that happened just on June 1. The foreshadowing of the potential bankruptcy of Old General Motors and the fact that the government was going to be the sponsor to buy the assets of the enterprise and whether that was a legitimate use of government funds was widely debated, widely publicized and widely known by everybody that was involved.

So, the issue of notice here is to some extent irrelevant and your Honor, asked the issue about prejudice and prejudice is also the same thing because it's not should I have been able to argue my issue about proving my warranty claim. That's not the issue. The real issue is would I have been able to come into court and argue successor liability any differently than anybody else argued successor liability?

THE COURT: That's the easy half. The sale order had been circulated in proposed form June 1st or June 2nd substantially immediately the proposed sale order after the

363 motion was filed. But a reasonable tort litigant may have said I'll never in a thousand years win on successor liability, but I can argue vis-à-vis the form of the order and (indiscernible).

Your problem is (indiscernible) enough to convince me that I would have not issued a free and clear. Your problem is to convince me that I would have issued a sale order with the exact (indiscernible) and language that the one that was entered ultimately turned out to be.

MR. STEINBERG: Well, your Honor, they have not articulated what it is in your sale order that they would have been able to argue was overbroad. I mean, that's a question that you legitimately have asked.

THE COURT: I thought they did. I'll certainly hear from Mr. Weisfelner and you'll have a chance to reply.

MR. STEINBERG: All right. But again, just to be clear, if there was an independent duty that New GM had after the sale, then I don't think your sale order protects them of that independent duty that Old GM had. But vis-à-vis old GM vehicles, that duty had already been parsed out and that -- nothing was going to change by that and that the timing of when you're raising the issue is irrelevant.

That issue relating to Old GM vehicles had been parsed out and there were only certain things that New GM was going to do and everything else it wasn't going to do.

The bar date toxic tort cases cited by the plaintiffs are readily distinguishable for exactly the reasons why I think your Honor highlighted in your questions and which I tried to argue before and it relates to the differences between the 363 sale and a bar date notice. The timing of when something is issued and what is accomplished by the extinguishment of a claim and that in a toxic tort situation the person actually doesn't know that they have a claim. They have to be told they have a claim. While in a sale situation here the plaintiffs knew they had a car, they knew their relevant with General Motors.

I know that I'm past my time. I just want to be able to briefly say in five minutes something about the prejudice point and then I'll say whatever else that your Honor has for my rebuttal.

The no prejudice point we've articulated as saying that when you're dealing with a bona fide purchaser the remedy can't be asserted against that entity and we also said that the sale notice attracted many objectors who argued the exact same position that plaintiffs are trying to argue now. They argued that the sale agreement should be broader to protect warranty claims, all consumer claims.

Your Honor heard the argument that if the bond exchange had been approved, everybody else would've written through the bankruptcy case other than the bondholders. They would have converted. But now we have a sale where other people are more broadly affected including the car loans and that's why you had a number of the agencies there. You had over 40 states' attorney generals and you had the creditor's committee, the fiduciary for all creditors raising the issue about successor liability and whether these claimants should have realized that their rights were being cut off.

And the answer was that the argument was raised and their rights were being cut off. And the importance to be heard in a bankruptcy case is true, but that doesn't mean anything if you otherwise got notice of it in another way and it doesn't mean anything that if you stood up in court you wouldn't have anything new to say on the successor liability issue at all.

So, your Honor, I know we have a hard deadline and so I'm going to stop at this point in time and I'll address whatever else I need to on my rebuttal time. Thank you.

THE COURT: Okay. We'll take a 10 minute recess. I'll hear next from you Mr. Weisfelner. What is hard is the approximately 3:15 time that I need to get out of here. The rest we have some flexibility on. Refresh my recollection on what was agreed on when we return Mr. Weisfelner. Can we get you done before lunch?

MR. WEISFELNER: Your Honor, I think --

THE COURT: If we do lunch late enough?

MR. WEISFELNER: I think you can. I think between the three designated counsel in the last letter submitted to your Honor we had asked for an hour and 35 minutes. We're going to keep to the hour and 35 minutes, although as between Mr. Esserman and Mr. Weintraub I think we're going to switch their order because it makes more sense in terms of keeping the due process arguments in the same vein. But we will keep to the same timeframe that we had originally contemplated. Your Honor, we can start. You can break us for lunch or keep us here before lunch. It's really up to your Honor.

THE COURT: Well, if you can do it in an hour and a half what I think I'd like to do is give you guys to do your thing and break after that.

MR. WEISFELNER: I think that's fine.

THE COURT: There was a request by somebody for a caucus room. I said I would approve it assuming that everybody had the same ability. I mean all three of the main constituencies. I think that has been done. That will be clarified perhaps during the break. All right, we're in recess, 10 minutes.

MR. WEISFELNER: Thank you, judge.

CLERK: All rise.

THE COURT: Have seats please. Okay Mr. Weisfelner, whenever you're ready.

MR. WEISFELNER: Thank you, judge. Your Honor, by my count you had asked about eight or nine questions that were directed to me or other designated counsel and I intend during the course of my presentation to respond to each and every one of them. But I do want as a highlight and before I get into my prepared outline, I basically think that your questions were all of one variety or another of the same theme.

First, was there indeed a due process violation in this case? I think a subset of that question, what was the nature of that due process violation because your Honor also asked a number of questions that went to the question of how might that due process violation have been avoided back in 2009. And then you also asked a number of questions about what's the appropriate remedy were the Court to determine ultimately that there was a due process violation.

And one of the things that your Honor indicated that frankly troubled me and I want to address it right up front, your Honor, seemed to suggest that the appropriate remedy for a due process violation would be some semblance of a do over. I think that was the phrase that your Honor used, the do over. I must tell your Honor from the outset that I am concerned about how one would effectuate a do over.

In 2009 the ignition switch defect that we contend

GM knew about but failed to disclose, your Honor's phrase failed to do a recall, but I think it goes deeper than that and I'll get to that, was again something that had been pending for seven full years. And if we're going to do a do over how do we deal with the fact that in 2009 our new purchaser, New GM, was going to maintain that silence, was going to keep the ignition switch defect, which now we know is a pervasive safety defect, was going to keep that secret for another five full years? How in the context of a do over do we deal with that 12-year history, seven years before the sale, five years after the sale where there was a known safety defect that GM failed to disclose? I don't know how you'd do a do over in that context. If you did a do over, would it impact your Honor's ability to give them a 363(m) finding?

We also heard a lot about remedy and in the context of remedy we heard a whole long discussion about successor liability and does it apply and does it apply in the general context and does it apply in the context of, and this is critical, a car manufacturer. You didn't hear very much about the fact that GM is a car manufacturer and how to affects the law that ought to be applied in the case, but I'll get to it.

Your Honor, if the order isn't enforceable, and that's what we're here on, New GM's motion to enforce your

Honor's 2009 sale order, well if the order is not enforceable for reasons I'll explain, then your Honor' determination with regard to successor liability is likewise not enforceable and it will be up to, not this court with all due respect, but Judge Furman in the MDL or other courts that have jurisdiction throughout the country to determine what if any remedy is available to the plaintiffs if GM's motion to stop them from prosecuting those complaints is unsuccessful.

It'll be Judge Furman who decides if successor liability applies. It'll be Judge Furman who decides that that's between economic loss plaintiffs and people who were involved in fatalities or serious in injuries there's a difference qualitatively or quantitatively in terms of what they're entitlements are.

And your Honor, I've got to start with one of the last quotes that Mr. Steinberg gave you or statements that he gave you here at the lectern because quite frankly I found it astonishing.

In trying to convince your Honor that this is much ado about nothing, these are economic loss plaintiffs, what are we concerned about and it goes back to the whole notion of a due process violation and what was known when, he said that people drove for five years without filing a complaint. People drove for five years without filing a complaint and it brought to mind the Powledge case. I don't know if your Honor remembers Powledge. That's the individual who with his five children died in a car accident and GM's defense in that lawsuit was the man committed murder/suicide.

Well that 2005 accident we now know was a consequence of an ignition switch defect and a resulting airbag non-deployment. Yeah, the family of the murder/suicide victims didn't' appreciate that they had a claim against GM.

THE COURT: Mr. Weisfelner, this is exactly the argument that I told you at the outset was inappropriate and it's particularly inappropriate because this is a personal injury or death case for which if it happened post-petition New GM is already on the hook for it and if it happened pre-petition I have said, unless you're going to tune me in wrong, that the courts have allowed the claims that could have been filed then to do it.

I want to hear arguments on the law. Forgive me, I don't want to hear theatrics.

MR. WEISFELNER: Alright. Your Honor, let's start then with the first and most important issue for due process purposes and that's that GM contends throughout its papers and throughout its argument that all of the plaintiffs were unknown creditors.

Now the second point is as a consequence of being an unknown creditor, the publication notice that was affected in this matter was sufficient. The third point they raise is even if there was a failure of a notice and deprivation of the right to be heard there was no prejudice hence no due process violation or no appropriate remedy. Their fourth point is if the asserted liability isn't assumed within the terms of the sale agreement its (indiscernible) retained and therefore enjoined and finally New GM argues a default and therefore the remedy lies against Old GM's residual estate and not against it.

Your Honor, we've had 160 pages of briefing and we had the oral argument and aside from conclusory denials I'd ask your Honor to ask yourself the question what record evidence does New GM point to to support its contention that the pre-sale plaintiffs were indeed unknown? There's precious little in their pleadings I think that go to the record.

In their opening brief they say that plaintiffs point to the fact that a certain number of Old GM personnel were aware that there were some reported incidents prior to the 363 sale where the ignition switch malfunctioned. But then they go on to argue that the mere possibility of purported claims based on engineering issues being investigated prior to the 363 sale does not make such purported claims known.

In their reply brief they argue that Old GM had not determined that there was a pervasive ignition switch safety problem and that claims would inevitably be brought against it. Now again, your Honor, I'm not going to go through the numbers because I don't want to incur your Honor's wrath again in terms of the number of fatalities and serious injuries in the presale context which are all a matter of record in the Feinberg protocol and reported on the victim website. But we know today as New GM has acknowledged that the ignition switch defect was indeed a safety defect which necessitated a massive recall and an admission by the head of New GM that some 15 as yet unidentified employees were being fired for misconduct because they, and this is a quote, "Simply didn't do enough. They didn't take responsibility. They didn't act with a sense of urgency. Something went wrong with our process and terrible things happened." And still GM contends that the plaintiffs were unknown.

What again GM has studiously avoided throughout the course of these proceedings is the record evidence and the applicable law that mandates a much different conclusion as to what Old GM knew or as a matter of law what Old GM is charged with having known about the ignition switch defect at the time of the 363 sale. And I want to put all this into context because there's one critical point that has to be made and, your Honor, it serves in our view to distinguish every single case relied on by New GM on the issue of what they knew for purposes of due process.

In trying to determine what GM knew or is charged with knowing as a matter of law it's critically important to remember we're talking here about a car manufacturer, not a financial services firm like Drexel or the department stores like Caldor or an oil company like Enron or whatever business in Virodyne or Agway or New Century was in.

Car companies, unlike all of those other businesses, are mandated under federal law and a very comprehensive regulatory scheme under the Safety Act and the Tread Act to maintain certain books and records regarding safety or potential safety issues. And it's those federal mandated records that GM was required to consult.

Your Honor, asked a bunch of questions of Mr. Steinberg. Are we just talking about the ledger? Are we talking about the balance sheet? And Mr. Steinberg wasn't prepared to go beyond the ledger, the balance sheet or a listing of lawsuits that were filed. Your Honor, I want to paraphrase Drexel because we're talking about a car company and in a car company case arguments about all I need to do is look at my ledger, my balance sheet, my list of lawsuits, well that's even worse than pennies on the floor not worth picking up, the quote from Drexel.

With that distinction in mind I think it's important to catalog some of the evidence that constitutes the record for these proceedings and since your Honor started at the outset by telling us that in effect you think that there was enough to require a recall by 2009, I'm not going to go through all of it, but I do want instead to turn to the conclusion. Not even the conclusion, I'm sorry, the introduction of the Valukas Report. And just so the record is crystal clear, your Honor knows we didn't get to take any discovery in this action and as the Berman affidavit that was submitted as part of our papers tells you discovery in front of Judge Furman on the MDL, while it's been laid out in connection with bellwether trials, that discovery doesn't in effect even begin until some time in the future, isn't schedule to reach any kind of conclusions until I think phase one discovery runs through May. Phase two discovery runs through October and depositions of former and current employees, including those that were terminated because of misconduct and because they didn't do enough and didn't act with a sense of urgency, those depositions don't even begin until after the phase one discovery is over.

So, what record do you have? Well, as your Honor indicated in your prior order, the record in this matter would include such information as would otherwise be available in a Rule 7056 context. You got Mr. Berman's affidavit. You got my affidavit and there are only two things in my affidavit I want to highlight today. One is Exhibit C, which was an August 2005 email from Laura Andress, a GM engineer, to James Zito, another GM engineer. And again, I'll paraphrase. She was talking about one of the subject cars and the design of the ignition switch and what she wrote in that email is, and I'm quoting, "I think this is a serious safety problem, especially if the switch is on multiple programs which this switch was. I'm thinking big recall. I was driving 45 miles an hour when I hit a pothole and the car shut off and a car driving behind me that swerved around me. I don't like to imagine the customer driving with their kids in the backseat on I-75 and hitting a pothole in rush hour traffic. I think you should seriously consider changing this part to a switch with a stronger detent."

Now, your Honor, I'm going to turn to Exhibit B, the May 29, 2014 report of Anton Valukas and what Valukas tells us is that as a car manufacturer there were several processes used by GM consistent with its obligations under federal law to identify safety issues including what's referred to as the TREAD Database and the PRTS or Problem Resolution Tracking System database. And those databases are supposed to contain all sorts of different information including without limitation customer service requests, repair orders from dealers, internal and external surveys, field reports from employees who bought to test drove GM vehicles and then captured information on what's referred to as the CTF or Captured Test Fleet reports, complaints from their OnStar center, which by the way had 365 cases of air bag non-deployment reported in the 2005-2006 timeframe, and a database maintained by GM's legal department to track complaints in court or out of court.

What does a review of those databases tell us? And again, I'm not going to go through the report in detail. Your Honor has it as part of the record.

THE COURT: Yes and apropos to that, is your point that Old GM should have issued recall notices before June of 2009, which as you properly observed, I already agree with or is it a different point?

MR. WEISFELNER: It's a different point. It' related, but it's different and I'll get to the point and then I'll move on.

THE COURT: Get to the point and then put the meat on it so I know the relevance of this other than to again show me that New GM was bad, which you're already ahead on.

MR. WEISFELNER: Okay. Your Honor, my point is this, that as a matter of bankruptcy law and as a matter of due process concerns, what the cases tell us is that what you're entitled to by way of due process is a function of whether or not you are a known creditor or an unknown creditor. My opponents take the position in trying to enforce the 2009 order that due process wasn’t violated because the plaintiffs were all of them are unknown creditors and for bankruptcy purposes and in terms of asserting or determining whether or not you had a claim and you were entitled to a certain level of due process, our contention is that we were known creditors and it's not a test of being forced to demonstrate what GM knew, rather it's a matter of law in terms of what GM is charged with knowing.

And GM as a car manufacturer is charged with constructive notice the cases tell us -- constructive notice of what's in their databases, what's in the TREAD database, what's in the PRTS database. And your Honor I will tell you that I think that there is a terribly important series of cases that are cited in the Valukas report and they were referred to in our papers and they are the report -- they are the cases that are listed in Appendix A to the Valukas Report.

And what those cases stand for is the proposition that if there's a known safety defect a car manufacturer has to report that to NHTSA and notify the owners. And by statute we know that a defect is one that creates unreasonable risk of an accident or a risk of injury or death as a result of an accident. And we have a string of cases there are cited to us in the Valukas Report starting with U.S. v. General Motors, a district of DC case in '97, and I can give you they cite. It's 565 F.2d 754, the jump page is 760.

And in that case the court rejected the argument that very few incidents were likely to occur in the future. Like GM tells us that the ignition switch defect operated properly for a majority of the owners. That argument was rejected by the Court. It required GM to do a recall and its argument was that from the beginning the part at issue there didn't meet manufacturer's own standards for proper assembly and absent notification will in the future cause at least some operators and passengers to be confronted with a clear danger. To the same effect as Dole v. Ford, the Porsche case and the two other GM cases that are cited by Valukas.

But then we have to go on to look at two other cases and in particular U.S. v. General Motors, an '83 case which stands for the proposition that a car manufacturer incurs a reporting obligation when it actually determined or should have determined that a safety-related defect exists. That's 574 F. Supp. 1047, the jump site is 1050.

THE COURT: Incurs an obligation to undertake a recall.

MR. WEISFELNER: Yeah, whether it actually determined or should have determined that there was a safety defect and to the same effect is U.S. v. General Motors 656 F. Supp. 1555 out of the same court, a manufacturer can't avoid its reporting requirements by intentionally failing to reach a determination that a defect is a safety-related defect.

THE COURT: So are you repeating all of this because you're asking me to retreat from my tentatives that I already agree with you?

MR. WEISFELNER: No, your Honor, again it's because I'm trying to underscore the fact that if there were a due process violation, and we contend there was because we were known creditors, it gets us to the next issue and the next issue is what manner of notice would have been required as a consequence in order to avoid the due process issue? And our point is if GM knew it had a safety defect then it was required to give notice and since it and only it knew it, it had to give notice of a type sufficient to advise the claimant, not only that there's a bankruptcy proceeding and a bankruptcy hearing at which your rights are going to be affected, but here's the nature of your claim. Absent telling people that there was a defective ignition switch in their cars that was a safety defect by definition and could cause the air bag non-deployment, making any accident you were in even that much more severe, they could have visited every single plaintiff and told them in person there's bankruptcy hearing, there's a sale hearing going on and that sale hearing may affect your rights.

Well, if I don't know what my claim is, how do I know what my rights are that I need to protect? No form of notice, either mailed, in person or by publication, is sufficient to advise a creditor, who all these people were at the time, and known creditors from GM's perspective, but unknown from their own perspective that they had a claim that was worthy of protection.

Nowhere does GM even attempt to address our imputation cases. You didn't hear any of that in connection with today's dissertation. Our imputation cases stand for the proposition that imputation is proper, even if knowledge was never communicated to senior management. Employees' position within the corporate hierarchy is irrelevant for imputation purposes as long as they obtained their knowledge while acting within the scope of their employment and Old Gm is charged with the collective knowledge of all of its employees even if no single employee possessed all the relevant knowledge or was individually responsible for acting on it.

Now the best that can be said for the failure to disclose what was a known safety defect and the fact that it was a known safety defect is imputed to GM as a matter of automobile law and general due process law in the bankruptcy context, the best that can be said is that it was related to the tremendous pressure that GM was under. And your Honor asked the question about whether or not due process concerns can change given the exigencies of the situation, the melting ice cube, the need to conduct the sale before money runs out.

Well, I think the cost issues infected GM's decision. As the record reflects they were cutting costs dramatically. That is part of the reason why the TREAD database personnel were cut. The group charged with running that database was paired down in the timeframe leading up to the petition. But we think more insidious than the cost issues was the cultural issues at play here. The record is clear that personnel who tried to raise safety concerns regarding the ignition switch defect got push back. There was a fear of retaliation. You don't write reports using the word stall, safety or defect and that comes from the quality brand manager for the Cobalt cases themselves, cars themselves.

Were these owners reasonably ascertainable? Based on the record and based on the law the answer is yes. There was no semblance of a diligent examination of GM's records and database which they were required under federal law to maintain which would have readily disclosed these creditors and the nature of their claim. And there can't be any question about GM's ability to identify the owners. Their own stipulation of fact number 18 acknowledges that its contract with R.L. Polk provided it with the ability to obtain the names and addresses of vehicle owners.

And, your Honor, I couldn't do the math as quickly as (indiscernible) could, but in their papers they told you that direct mail notice would have cost $42 million, but that's for the 70 million cars. I don't know what direct mail notice would have cost to 27 million people that may have been impacted by the ignition switch, but the point is they could've gotten away with and they could have cured the due process violation whether it was direct mail or publication by letting people know what the nature of their claims were, by telling people that were involved in accidents or stall situations that we know why your car was involved in those situations. We have a known safety defect associated with out ignition switch. But they didn't.

There are two leading cases on the question of whether or not these were known creditors don't help them. Morganstern wasn't a due process case at all. The plaintiff contended there was an undisclosed design defect that gave rise to a fraud on the court and your Honor concluded that the pleading requirements of Rule 9(b) had not been met. Allegations that GM knew of the design defect were conclusory, not supported by the evidence. Quite different from our case.

Burton again is not really a due process case. The Court didn't deal with our question, were claimants known or unknown. The Court assumed the successor liability shield was in place and the decision therefore is one of contract interpretation -- what claims were assumed versus retained.

Your Honor, quite frankly, the content of your Honor's sale order is irrelevant to parties to whom due process was denied -- all of it including whatever your Honor may have said or found or determined with regard to successor liability. That's ultimately, if your Honor agrees that our rights were impacted such that the order should not be a bar to our pursuit of claims, are to be determined by a court of competent jurisdiction.

Your Honor, Drexel tells us --

THE COURT: Which you're saying I'm not.

MR. WEISFELNER: Your Honor is not with regard to the remedy that the plaintiffs seek in either of their two consolidated complaints. Your Honor's role, I would suggest, is to determine whether or not your Honor's sale order in 2009 serves as a bar to the prosecution of those litigations which is obviously a core function of your Honor. It's your order. It's yours to interpret. But I do think that because there was a violation of due process, these were known creditors who weren't given any semblance of notice that would satisfy due process, those orders cannot be used to bar prosecution of their claims.

Now, Mr. Esserman and Mr. Weintraub will talk about something other than the presale plaintiffs and especially those involved in the economic loss scenario. Even those plaintiffs involved in the economic loss scenario do have direct claims against New GM that, I respectfully submit, were not intended to be and could not have been in effect precluded by virtue of the sale order. This is an effort by New GM to get a get out of jail free card. There were direct obligations.

THE COURT: Well, forgive me Mr. Weisfelner, but aren't both sides looking for a get out of jail free card? You're looking for a get of jail free card on successful liability provisions that were argued by different guys and the GUC Trust says there are eight people in Mr. Weintraub's. I don't know if it's that limited or not. But all of the other people who were in car wrecks have prepetition claims and the folks in Mr. Weintraub's group who are asserting the same prepetition claims are saying that they get a get of jail free card from a ruling that I issued on exactly the same arguments were made back in 2009. That's (indiscernible) and (indiscernible) Philadelphia (indiscernible) and a bunch of others.

MR. WEISFELNER: And --

THE COURT: So let's try to be fully attentive to the fact that it may be both sides in this case that are overreaching.

MR. WEISFELNER: Well, your Honor, let me try my best to address that because I understand your Honor's issue with regard to the arguments that were made on successor liability and, your Honor, all I'm suggesting is that were your Honor to determine that the 2009 order does not bar these plaintiffs from pursuing claims in courts of competent jurisdiction on whatever theory they may ultimately espouse it will be up to Judge Furman to decide whether or not successor liability standards are met.

For all of the reasons Mr. Steinberg indicated, he may very well conclude that the plaintiffs don't meet or exceed the threshold pleading standards on successor liability. I think they do. But beyond successor liability theories, the plaintiffs in the presale cases have recognizable claims that run directly against New GM.

Let's not forget, and this sort of goes back to my thesis that you can't do a do over, for five years following the sale, New GM failed to disclose what it knew, what it's charged by law of knowing and that is that the ignition switch defect in the presale cars was dangerous. That failure to disclose is separately and independently actionable and your Honor's sale order could not have, should not have, and in our view did not as a matter of law extend to provide New GM with a cleansing of liability for whatever theory the plaintiffs may be able to assert that a court of competent jurisdiction will ultimately determine is valid or invalid.

And it's not just successor liability type claims that the pre-sale plaintiffs would rely on. But because there was a due process violation here the only effective remedy, the only remedy that the case law tells us is applicable, is that the order can't be enforced against them. And the notion that we'd have to prove that we would have a different result is first of all, not what the case law provides. It's not what Fuentes provides and it's not what the other cases we cited in our brief provides. There's no such thing as a no harm no foul due process violation.

Beyond that, and the cases are legion that talk about the impropriety of using hindsight or speculation to determine what would have happened had we rolled back the clock. What would have happened had treasury determined that there was a five-year long cover up of a dangerous situation involving a line of cars that had caused fatalities, that have caused serious injuries, and I know your Honor doesn't like to hear it, but it had an individual convicted of manslaughter for killing her fiancé and other egregious situations, had treasury that that was the fact and had treasury been aware that the cover up would go on for another five years, do I know whether or not playing chicken with treasury at that point to get him to change their line in the sand on what was commercially necessary for New GM to survive, what sort of public firestorm, congressional inquiries, attorney general investigations would we all have been treated to in 2009 that we were treated to in 2014 that may have impacted whether or not treasury, who again is a functionality of taxpayer base and its taxpayers implicated and affected by this cover up, what they would've done to preserve GM and to avoid a liquidation.

It's just as reasonable to expect that they would have changed the line in the sand they drew to include the claims and only those claims that were impacted by the five year known ignition switch defect safety defect that was undisclosed by GM in violation of their obligations under federal law.

I don't know what would have happened had those facts been raised. With all due respect, I don't know what your Honor knows for a fact what would have happened. That's why the case that tells us don't speculate. Don't take a hindsight view. It's enough if due process was violated. We're not going to go through the process of attempting to do a do over, especially in this case because I think a do over would require us to in effect go back to the future again to figure out whether or not they'd be entitled to a 363(m) order if we know in advance they're going to maintain the cover up for another five years.

Your Honor again, I don't need to remind your Honor what the briefs say on whether a creditor who is notified of the bankruptcy or is aware of the bankruptcy is in the same position with regard to their claim if they're never told about the claim as a creditor who has notice of the claim, but not of the bankruptcy. That's Waterman, that's Tillman and they haven't told you any cases that stand for any different proposition.

Again, as the Second Circuit in Chateaugay teaches, to expect claims to be filed by those who have not yet had any contact whatsoever, what the tort fees are, has been characterized as absurd. Mr. Steinberg argued that well, but you did have contact with GM -- you bought the car. Well, but no one told me that the car I bought had a hidden, known but undisclosed safety defect so how did I know I was supposed to file a claim?

And your Honor, I will tell you that I don't think it's necessary to spend a lot of time on the contention asserted by GM that somehow 363 sales provide some sort of due process exception. A proposition of claims is supported by the Edwards case. I think Mr. Steinberg made reference to

Edwards by my count seven times during his oral argument out of the Seventh Circuit and his brief they also cite to the Paris case out of the District Court of I think it was Maine.

Well, your Honor, obviously neither Edwards nor Paris is controlling. Both have been criticized if not overruled in the case of Paris, and Edwards was criticized in a number of cases including Excel Concrete, Savage Industries and the Second Circuit has only recently reconfirmed the applicability of due process concerns in bankruptcy proceedings in the Colt case.

And your Honor, our brief had a laundry list of due process cases in the 363 context, five of which your Honor pointed out. But in addition to those five, you have National Type, Folger, Excel, Savage Industry, Reiner in addition to the Metzger case that your Honor pointed out, Compak and the others. There's also Schwinn Cycling and Ninth Avenue v. Remedial Group -- all of which stand for the proposition that due process pertains in a 363 sale notwithstanding the need for finality, notwithstanding the circumstances that generally surround the 363 sale. And of course, your Honor, you then have Grumman. And lest there be any confusion, we collectively represent not only plaintiffs in the presale complaint, but plaintiffs in the post-sale complaint and the point that was made in our papers and in particular in the GUC Trust papers that at least as to people that didn't buy a car until after the 2009 order was entered, no way to give those people notice. They weren't contingent creditors. They were the future creditors that Grumman spoke to and they couldn't have gotten adequate notice and as a consequence as a matter of due process the 2009 were cannot be read against them.

What remedies they may ultimately have for the injuries they complain of will be determined by a court of competent jurisdiction. And, your Honor, you did cite the Lane Hollow in your opening questions. We think Lane Hollow and Fuentes are the cases on you don't look for prejudice. There's a, in effect to ask a question about whether or not in that particular case due process would have led to a different result is not the issue that we're supposed to be focusing on. We're supposed to avoid hindsight and pure speculation.

Your Honor, as I think about it the prejudice, if one wants to focus on it, in this particular case is very acute. Not only didn't we have the opportunity in effect to convince treasury that under the egregious and special circumstances of this case their line should have been moved, but so much has been written about and so much talked about cases in 363 where listen, understand that what we're doing is we're converting your claims against the debtor into a pot of proceeds that came to use from the sale and when you think about it, if your claims get to attach to the proceeds and otherwise in the absence of the sale there would have been a liquidation and proceeds to realize, how you really prejudice.

Well, the amazing thing about this case that no one seems to focus on, or at least New GM doesn't in its papers, is the bar date followed the sale by a period of time. By the time the bar date showed up no one at Old GM and nobody at New GM who is now in possession of all of the books and records, the same books and records that is the matter of federal law, mandated the conclusion that they knew there was a safety defect with regard to the ignition switch defect, told any of the plaintiffs listen, now we're down to the bar date, this is real serious stuff. 363 we could, your Honor, not pay that much attention to because there are exigencies and we've got melting ice cubes and we've got to sell fast, but here's the bar date. So now we're really going to make sure that you know about your claims so that you have the right to attach yourself to the proceeds. That didn't happen in this case, judge. And if we're going to do a do over, I would assume part of the do over is we get a record that would make sure that claimants knew the nature of the defect, knew what their claims were, had an opportunity to assert a claim.

The barn door has been open for an awfully long time. The amount of value in the GUC Trust has been substantially dissipated. Our opportunity to get back into the fold and realize the same pro rata distribution as other affected general unsecured creditors doesn't exist through no fault of our own.

THE COURT: Well, when you say no fault of your own, this is a good time for you to answer the question I asked at the outset which is that when Ms. Rubin and her clients made it pretty clear that there was going to be an upcoming distribution you didn't act.

First of all, I assume that you're not disclaiming notice or of the fact that there's court where you could have made an application to me to block that distribution and most likely gotten it in a heartbeat.

MR. WEISFELNER: And most likely have --

THE COURT: Got me to tell Ms. Rubin to wait before making further distributions in a heartbeat.

MR. WEISFELNER: It wasn't an easy decision and not one that was decided by me or my office. In point of fact the fact of the impending distribution was first brought to us, if I recall, by New GM's counsel and New GM's counsel suggested that we may want to seek to hold up that distribution and our reaction was well don't you have an obligation as well since you're saying that the remedy that the Court ought to fashion is against New GUC Trust, why isn't it your obligation to seek the Court's intervention to hold it up and in fact there was correspondence that was crafted and sent to Ms. Rubin and her clients which suggested that it would be inappropriate for her to make that distribution.

And, your Honor, there was a consideration of what the standards were for injunctive relief and I appreciate after-the-fact your Honor telling us that we would got it in a heartbeat, but there was concern about the cost and expense associated with meeting the preliminary injunction standards.

Now, I will also tell your Honor, lest you continue to look at me like I have two heads, yes there was a strategic element to the decision that was taken on our side. That's my point of view. It's kind of disingenuous, one would have argued within the confines of the attorney client privilege, but you can assume that the argument went something like we're taking the position that we're not required, to pursue to the exclusion of every other remedy, our claims against the GUC Trust. So now to prevent the GUC Trust to making what amounts to a diminimous distribution in light of the totality of the consideration that they ever had and we had a very short window of time after they told us that they weren't going to voluntarily stop, yes your

Honor, the decision was made not to pursue it.

THE COURT: You're not seriously suggesting to me that in your fairly illustrious career you've never been able to get out a TRO request in this kind of time.

MR. WEISFELNER: Your Honor, again, it wasn't a function of whether we could get out a TRO request, it was a function of whether or not we'd prevail. And, your Honor again, hindsight is 20/20 and there were many people on our side of the table that thought that a TRO was appropriate. There were people at New GM that at one point thought a TRO was appropriate and for better or for worse for strategic reasons or otherwise the fact of the matter is that we did not attempt to prevent the GUC Trust from making a distribution.

That doesn't change the fact that by the time of the recalls, by the time the plaintiffs got organized and began their litigation, by the time we were retained in this case, a substantial majority of the funds originally in the GUC Trust had been dispersed to GUC Trust beneficiaries and it would have been impossible or very close to impossible to put the ignition switch defect plaintiffs back in the same position they would have been in had they been given enough information to file a claim before the bar date.

And, your Honor, all of that says nothing about the contention, with which we disagree, that the GUC Trust has raised with regard to equitable movements. Your Honor, again, we are not seeking a reversal or a modification of your Honor's order or the 363(m) finding, although once again if we were doing a do over and we were to know in 2009 everything we know today, I don't know how you'd take into account the fact that New GM would for a period of another five years fail to disclose what by law it was charged with knowing constructively or actually about the ignition switch defect and how that may have impacted your Honor's determination.

The lack of notice and an opportunity to be heard is what makes the plaintiffs not bound by the sale order and free to pursue their state law claims against New GM. Now, I also have to point out that the claims regarding cars manufactured and sold by new GM, I think new GM concedes are not subject to this sale order, and claims regarding cars --

THE COURT: Say that slower, because it’s a matter of considerable importance.

MR. WEISFELNER: All right.

THE COURT: Which claims are not subject to the sale order?

MR. WEISFELNER: Claims regarding cars that were manufactured and sold by new GM.

THE COURT: Oh. I think that’s right. Mr. Steinberg can confirm that, but I thought that has never been an issue.

MR. WEISFELNER: Well, I think I heard him say that, to the extent that new GM sold a car, but it contained a part designed or manufactured by old GM --

THE COURT: That's a different issue because the order said cars or parts, and that is what I was asking both sides to focus on.

MR. WEISFELNER: Yeah, and again, Your Honor, again, by way of demonstration of prejudice, I think, that had the Plaintiffs known about the ignition switch defect, known it had been around for five years, known that it was a safety defect, known that it caused airbag non-deployment, known that the part may be continued to be installed in cars that were going to be sold by new GM, we would have pressed for an appropriate carve out in the sale order to insure that a known safety defect not be replicated and continue to be incorporated into cars that are about to be sold. Using a switch with a known safety defect was new GM's choice, and new GM bears liability for that decision.

THE COURT: To what extent to I have evidence in record telling me the extent to which old GM ignition switches were stuck in new GM cars, or installed in new GM cars? That was one of the things I was trying to grope at in my earlier questions.

MR. WEISFELNER: Your Honor, to be frank with you, I don't know what the record is about new GM cars that had old GM ignition switches, which is either purposefully or accidentally installed in them. They were switched out at a third-party repair place. And frankly, I would think that that sort of inquiry, that kind of discovery, would take place at the MDL and would ultimately be determined as a matter of fact by Judge Furman. But sitting here today, I'm afraid I can't tell you because I don't know any part of the record that tells us how many new GM vehicles had old GM parts. The other point to make, I think, Your Honor, is that these Plaintiffs hold the claims under state --

THE COURT: Which Plaintiffs?

MR. WEISFELNER: Primarily, the Plaintiffs in the post-sale complaint, hold claims under state consumer protection laws, arising out of new GM's failure to comply with its obligations under the Safety Act. Doesn't require us to be private Attorney Generals under the Tread Act or the Safety Act. Rather, as is contended in the complaint, and in some of the complaints filed, for example, in Arizona and California by various Attorneys General, it is the violation of Federal law, which is a predicate for the contention that there has been a violation of State consumer laws, and I don't think that new GM got, saw to get or, Your Honor, intended to give them a pass on their post-sale alleged violations of consumer protection laws in the various states.

Your Honor, my bottom line point is, and I think, again, this sort of gets down to a policy question, and Your Honor, I agree that we need to be concerned about what gets said and done about 363 sales, especially 363 sales that are done in emergent situations, for Debtors that are on the verge of dissolution in the absence of the only deal that's being made available to them. But I do think that this is a very, very narrow carve out. We are looking for a situation where we have a Debtor, a car manufacturer, who knows and is charged with constructive knowledge, that it has put into the marketplace, and on the highways and byways of this country, cars with a known safety defect. And in that context, in order to have the 363 sale happen, with parties being able to protect their rights, they've got to give adequate notice of the existence of the claims that arose as a consequence of having sold those cars with a known safety defect, and the failure to give that notice, whether it be by publication or direct mail, is an unremedial violation of due process. The notion that you have to show prejudice, it's not in the case law. Talk about being bound by Second Circuit authority, it's not in the Supreme Court authority. You don't have to show prejudice. The prejudice cases they talk to you about are all cases that say, "You can glom onto the proceeds of the sale."

That's chutzpah in this case, Judge, with all due respect, because roll forward to the bar date. These Plaintiffs were in no better position to file a claim based on what GM knew and failed to disclose. So how can you say, "No harm, no foul, you just attach to the proceeds" when I couldn't attach to the proceeds because I didn't know I had a claim. And the same can be said, by the way, for the discharge of the case, or the discharge of the company, when the case confirmed.

THE COURT: Well, time out. I take it we agree that there's no discharge in a liquidating 11.

MR. WEISFELNER: We agree that there's no discharge on a liquidating 11.

THE COURT: So what discharge are you making reference to?

MR. WEISFELNER: Your Honor, I'm just talking about from a policy perspective, to have a Debtor who sells assets and continues on in business, not our -- not this case. So I won't focus on it. I'll just focus on the fact that the prejudice that befell our clients was multifold, and can't be remedied. First of all, to the extent that you followed the cases, and I think you have to, that says that a due process violation doesn't require a demonstration of prejudice. You don't have to show that you would have won. Couple that with the fact that it's our position that, had the firestorm that we saw happen in 2014, because of the 12-year non-disclosure of the safety defect, been on the record as of the time of the sale hearing, I believe it's just as reasonable to suspect that the line drawn in the sand by the Treasury would have changed. And the last form of prejudice, I think, that we can't overlook is the fact that, come the bar date, new GM or old GM continued to fail to give us any indication that we had claims based on a known safety defect that existed in all of the cars, that they refused to give anybody notice of, and they were charged with knowing it as a matter of law. Your Honor, I want to reserve enough time for both rebuttal and for my co-counsel.

THE COURT: Well, let me hear from Mr. Esserman and Mr. Weintraub next.

MR. WEINTRAUB: Good morning, Your Honor. Between Your Honor's questions and Mr. Weisfelner's presentation, I've been taken way off of my outline, so I'm going to try to address some of the things that Mr. Weisfelner --

THE COURT: All right, let me interrupt you for a second --

MR. WEINTRAUB: Sure.

THE COURT: -- Mr. Weintraub, and to help guide you. I would like you to help me understand what are the things you're talking about, also what categories they're in. Are they people who never got to get any kind of claims in against old GM, or were they those, like, a separate pleading that I got after most of all of the briefing was done, are looking for the opportunity to re-negotiate settlements because their cases may have been stronger than they thought they were, or are they in some further category? I think you're ahead, subject to Ms. Rubin's ability to be heard on the fact that you might be entitled to some kind of (indiscernible) style relief, and the opportunity to file claims if you didn't get to do that, but you're still behind on your ability to go after new GM because other people very similarly situated made these same arguments you're making about successor liability and they lost. So, argue accordingly.

MR. WEINTRAUB: Sure. Well, let me start with what I think was the first question, Your Honor. We think the number is at least 150 people. I don't know where they four or eight people came from. One of the actions filed in front of Judge Furman is an action that was filed by Robert Hilliard that covers 140 people and that's just --

THE COURT: Okay. And those are 140 people joined rather than a class action?

MR. WEINTRAUB: I think that was filed as a class action, actually, Your Honor.

THE COURT: Okay, a class action to get into adjudication on the common issues, and then to deal with their individual specific ones thereafter?

MR. WEINTRAUB: That's what I think, Your Honor. There's an exhibit to that complaint. The complaint alleges they're all pre-sale accident victims. Some of them are fatalities, some of them are injuries, all of them, as I said, occurred before the sale hearing.

THE COURT: And pause once again, my apologies.

MR. WEINTRAUB: I'm sorry?

THE COURT: I assume that under Reading Vs. Brown, a narrow subset of your group, if any are in that category, if they were hurt after the filing on June 1st, 2009, but before the sale, they'd have admin claims against old GM, but they'd still be claims against old GM.

MR. WEINTRAUB: Your Honor, our position is that we don't think we should be barred by the successful liability shield, with respect to the legal point you're making, that may be correct. I don't represent any of those parties, so I don't have the particulars of those cases to know whether or not anybody fell within that, that --

THE COURT: That window, so to speak.

MR. WEINTRAUB: Right. But, Your Honor, with respect to what Mr. -- if I'm pronouncing his name incorrectly, I apologize - Jakubowski argued, Mr. Jakubowski argued lack of subject matter jurisdiction, and he argued that, as an academic issue, not as a -- based upon what was actually going on, or the undisclosed issues in the case. So what Mr. Jakubowski was arguing was, this Court did not have subject matter jurisdiction. You had ruled, in your sale order, that you did have subject matter jurisdiction because you could sell free and clear of in personam claims under Section 363(f), you relied on Chrysler, which in turn relied on TWA, and the District Court on appeal, even though that appeal was dismissed as being moot because Mr. Jakubowski did not try to get a stay pending appeal, did go to the merits and say, “We’ve looked at this issue, and we think that there was subject matter jurisdiction.” We are not questioning subject matter jurisdiction. That ship has sailed.

Our issue is completely and solely the due process issue of whether or not we should be bound by the successor liability shield, and the reason that we don’t think we should be bound by the successor liability shield is because we were unaware of the ignition switch defect that had a seven-year history within old General Motors. And I won’t repeat everything that Mr. Weisfelner said, but there are internal reports, there was as we noted in our brief, the Wisconsin State Trooper report which actually figured out the connection between the airbags not deploying and the low torque in the ignition switch, and that was all in old GM’s files. We think that everyone who had that -- the affected vehicle, had an ignition switch defect, because that defect was in the DNA of every one of those manufactured vehicles.

So, as Mr. Weisfelner said, you've got this group of potential Plaintiffs that all had that ignition switch defect, and they all had a right to have that car repaired. We're in a special subgroup of that. Not only did we have that defect, but that defect manifested itself in the form of an accident. And clearly, because we had an accident, we were aware that we had a claim. What we were not aware of, Your Honor, was that causation was due to the ignition switch defect, that the ignition switch defect was the fault of General Motors. Causation and fault --

THE COURT: Pause, please. In substance, you're saying you knew you had a claim, but you didn't know how strong your claim was.

MR. WEINTRAUB: I knew -- let me amend that. I knew I had an accident. I didn't know why I had it. It could have been my fault, it could have been an act of God. What GM knew, what we contend GM knew, was it was the result of the ignition switch defect, which it knew was in the vehicle, and which it knew was in the vehicle before I had the accident. Not only did they not tell me about the ignition switch defect before I had the accident, they didn't tell me about that defect after I had the accident. Had I known about that ignition switch defect, that sale hearing would have been a very different hearing, and as Mr. Weisfelner said, you can't get in your time machine and see what would have happened and that's why the Court shouldn't speculate.

We had a different analogy in our complaint, and we said imagine the firestorm that would have occurred had a whistleblower on the eve of the sale hearing come forth with all of the information in the DeLuca report. And that's why we contend that it's unknowable what would have happened at the sale hearing, it's unknowable what the Federal government would have done. Would the Federal government have continued to try to ram through a sale free and clear of successor liability, knowing that this ignition switch defect had been withheld from the public and from vehicle owners for seven years? That's speculative, but I think we should get the benefit of the doubt on that, and the inference on that.

Why? It's very clear, Your Honor, that any sale, notices are a very important issue for the due process reasons. Notice was that, the timing of the sale, the form of the sale motion, the form and content of the notice, were all controlled by both new GM and old GM. This case wouldn't have filed when it filed unless the government said, "We're ready to file." This sale motion was set on the government's timetable. In any sale, notice is important, not just to the seller because the seller has the information, but because the notice is critical to the buyer. It's the buyer that wants to bind people with the results of the sale hearings, and either new GM or Treasury or whoever was lackadaisical, lazy, negligent or didn't care, but they should have been, just like any other commercial buyer is, in any other sale that I've ever been involved in, very involved in making sure that that form of notice and the scope of the notice is adequate.

What should have the notice said here? The notice should have said, there's an ignition switch defect in these vehicles. This ignition switch defect causes unexpected stalling, which would result in loss of power to the steering, loss of power brakes and the inability of the airbags to deploy. With that information, people would have been able to come to Court and make an effective argument against successor liability. What kind of arguments would people have made against successor liability? Clearly, unclean hands would have been an issue. Clearly, whether or not it would be equitable to sell free and clear of successor liability claims in circumstances like this one, where the buyer had -- I'm sorry, the seller had withheld the information for seven years before the sale. This would have been a maelstrom of a hearing, even much more contentious than the hearing that we actually had. And by saying that new GM gets to hide behind the sale order, let's think who was involved in putting together the notice in the first place. The notice was put together by old GM. What old GM knew was a nanosecond after the sale closed, it was going to be come new GM. It wanted nothing more than to leave these liabilities behind, so it didn't disclose. Not only did it not disclose, it wasn't disclosed for another five years after that.

So you would be rewarding the conduct of old GM as it morphed into new GM by saying that new GM is not subject to these successor liability claims. You've got the very same people that populated old GM and were investigating the ignition switch defect, are now populating new GM. It's efficient to say that they're separate companies and that there's no connection between old and new GM. There's a very close connection between old and new GM, and to reward new GM, which is just old GM in a new bottle, for the lack of disclosure, would be inappropriate, in our view. Which again, is one of the reasons why, if you're going to go and look at prejudice, which, as Mr. Weisfelner says, and we agree, is not something that the Court weighs when you're looking at a due process violation, I think the due process violation is just being deprived of the opportunity to be heard in a meaningful way when it matters. That was the violation. Not that we would have won anyway or we would have lost anyway. We were deprived of the opportunity to make our best arguments when they really mattered. But the reason that it's not prejudicial to new GM is, like I said, new GM could have been more involved in the notice and it wasn't, and new GM is populated by the same people as old GM. So, when you weigh the equities here, we think the equities weigh in our favor. In terms of the Manville remedy, this is not a Rule 60(b) proceeding. My clients didn't make a motion. I didn't file a motion. Mr. Weisfelner didn't file a motion. GM filed a motion to enforce --

THE COURT: Yeah, pause, please, Mr. Weintraub. If we were looking only at the face of the order that Mr. --

MR. WEINTRAUB: Steinberg?

THE COURT: No -- but I was thinking of somebody else, but it is Mr. Steinberg.

MR. WEINTRAUB: That's (indiscernible), Your Honor.

THE COURT: But Mr. Steinberg is trying to enforce. Mr. Steinberg wins. Your point and Mr. Weisfelner's point, and I suspect it will be Mr. Esserman's point, is that I can't limit the analysis to what the sale order says, that it may be the start, but it's not the end of the discussion. So then, I have to see, at least focus on the extent to which Mr. Steinberg should lose not the standing -- what his sale order says, and then the issue is, not so much a matter of constitutional law, but Federal civil procedure and its bankruptcy procedure counterpart, as to whether the second phase of that enquiry, blowing away the order, requires attention to 60(b), and its bankruptcy cousin, 9024. So, I'm not persuaded that your failure to invoke 60(b), or Mr. Weisfelner's or Mr. Esserman's, is conclusive. What Mr. Steinberg is saying in substance is, "Hey, you guys, once you're asking me to look at the pha -- asking the Judge to look at the phase II part of the inquiry, you've got to turn to 60(b) doctrine." Help me with that.

MR. WEINTRAUB: Sure. Let me start with the first thing you said, which, if you apply the terms of the sale order, we lose. The sale order was based on an incomplete, deficient record. You can't look at the sale order, you can't look at the findings that were made in July of 2009 and ignore what was going on and not disclosed to the Court from 2002 to 2009. You just can't. The DeLuca report tells you that there was a whole lot of stuff that you didn't know, that may have changed your mind in July of 2009. So, saying that the order should be applied in accordance with its terms without regard to all of the undisclosed information really, to me, Your Honor, doesn't make sense and it's not equitable. And in terms of Rule 60(b), we are not required to pursue a particular remedy. The remedy that we have pursued is the remedy that the Second Circuit has given to us in Manville, and the remedy in Manville, didn't require Rule 60(b). It didn't require a Rule 60(b) analysis, it didn't require a showing of prejudice. It just said, "If you didn't get constitutionally sufficient notice of the order. You're not bound by the order."

THE COURT: Well, let's talk about that --

MR. WEINTRAUB: If I could just --

THE COURT: Pause for a second. It didn't say whether or not you had prejudice, but Chubb in that situation was plainly prejudiced. That was a no-brainer, wasn't it?

MR. WEINTRAUB: And Your Honor, I know you're going to disagree with me, I was plainly prejudiced too, because but for that successor liability shield, I had a successor liability claim that I could have asserted against new GM. Maybe I would win, maybe I would lose. Mr. Steinberg says there is no merit to those claims because he's focusing on mere continuation. There are other theories of successor liability, including product line cases which would apply to my clients because they were injured, and there is a fraud exemption, and there are all kinds of penumbras to fraud, and one of the penumbras may be the non-disclosure of the ignition switch defect for seven years, so it's putting the cart before the horse to say I'd lose on successor liability. My point is that I was never given the chance to, number one, oppose the successor liability shield at a time when my opposition would have mattered, before the transaction closed, and I was -- and because of the sale order, I am now precluded from ever bringing that successor liability claim. So what I lost, as you said earlier, was a collateral source. And we were talking about the successor liability cases being -- and Amaro in particular, which I can get to in a minute. When you were talking about Amaro, you said you disagreed with the underlying premise that those claims belong to the Debtor, and in fact, probably did belong to the individual claimants. When this sale closed, I would have had a successor liability claim, but for that shield. And another important point, because this is kind of stream-of-consciousness at this point, when you get to Section 363(m), what Section 363(m) -- and I know this is not appeal, but Mr. Steinberg argued the policy of 363(m). When you get to Section 363(m), Section 363(m) does not bar appeals. What Section 363(m) says is, reversal or modification on appeal does not affect the validity of a sale. What happened in this sale was much more than the mere transfer of title. This sale had another very shiny Christmas tree ornament sitting on it, and that Christmas tree ornament was the successor liability shield. So, even if this was an appeal and a Section 363(m) situation, I don't think anybody is arguing that no matter what you throw into a sale order, it can't be reversed on appeal. The language of 363(m) itself anticipates a reversal or modification on appeal, because it says a reversal or modification on appeal does not upset the validity of the sale. So, my point is, Your Honor, that there are lots of things that happen in a sale that are not part of the transfer of title. I don't disagree that it was not a condition set up by the Treasury that it be free and -- that the sale be free and clear of successor liability, but you can't trump someone's due process rights by putting conditions into a contract by making the agreement convoluted, by saying that it's too expensive to give 70 million people first class mail notice. From our perspective, they could have done a lot of things to give us notice. Even though we were known Creditors and entitled to first class mail notice, publication notice, which identified the nature of the defect and the effect of the successor liability shield on injured people would have been sufficient, we think, and that's the difference between what happened in the Waterman case, because in Waterman, what the Court held was that people who had not yet exhibited symptoms could not be bound by a sale -- published sale notice that didn't even mention asbestos. What this Court did in Chemtura in order to bind people who had not yet developed symptoms but had been exposed to the chemical was, this Court required very targeted notice that was explicit --

THE COURT: Yeah, but as you know, when you're talking about this Court, Mr. Weintraub, that wasn't just the Southern District of New York, that was Gerber.

MR. WEINTRAUB: Well, that's what I meant by this Court, Your Honor.

THE COURT: And if a Judge tries to implement what some, in other environs, call best practices, that doesn't necessarily provide the yardstick by which constitutional due process is measured.

MR. WEINTRAUB: Your Honor --

THE COURT: Now, Chemtura was a reorganized Debtor case and was also an objection to claim case, and I wonder, for those reasons, whether what I thought was a good idea in Chemtura, and I later learned that my good idea was good enough to measure what was satisfactory due process provides the yard stick.

MR. WEINTRAUB: So did Judge Furman, Your Honor.

THE COURT: I'm sorry?

MR. WEINTRAUB: So did Judge Furman.

THE COURT: Yeah, I think he was the guy who referred me on it.

MR. WEINTRAUB: He did. He liked what you did.

THE COURT: Okay. But how much does that help us here?

MR. WEINTRAUB: I think it helps us here, Your Honor, because it informs a kind of notice that we think should have been given, either by first class mail or by publication notice, and you know, we're knocking ourselves out with hypotheticals. Let me give you a hypothetical. What if --

THE COURT: Time out. You can ask yourself the hypothetical, but part of the rules that we go under is that you can't give me a hypothetical.

MR. WEINTRAUB: Okay. I'll give myself a hypothetical.

THE COURT: Okay.

MR. WEINTRAUB: If I were the Judge in the General Motors case and GM had filed a notice of sale with me, and a motion to approve the form and content of notice and said, "Oh, by the way, we've got this little ignition defect -- switch defect problem. We've been working on it for seven years. 30, 40 people have been killed, been a bunch of accidents, we want to sell free and clear of that and we want to bar successor liability claims. We don't want to say in our sale notice there's an ignition switch defect that causes unexpected stalling and loss of power steering and power breaks and airbag disengagement. That's just too much information. You know, those four or five sentences, that could add maybe $1000 dollars to our mailing. So Your Honor, Mr. Weintraub, Judge Weintraub, would you approve this form of notice as being good and sufficient, even though we don't mention the ignition switch defect?" I don't think I would have done that, Your Honor. But unfortunately, I think that's the equivalent of what happened here. We think that's a violation of due process, and we think it's unfair. Can I address Amaro for a moment?

THE COURT: Oh, sure.

MR. WEINTRAUB: Unless you have other questions for me. I was thrown off by --

THE COURT: No, that -- I -- I think, based on what I said before, if we're talking about the same case, you may be ahead on it, but if you want to talk about it, go ahead.

MR. WEINTRAUB: Well, the only point I want to make on Amaro, because if I'm ahead, I should quit, but the only point I want to make on Amaro is Amaro and the other two cases cited in particular, I think it was the -- in the Alper case, which was Judge Lifland and Judge Bernstein's case, which was --

MAN: Keene.

MR. WEINTRAUB: Keene. In all three of those cases, the activity that was being complained of in Keene and in Alper, was really inappropriate transactions between corporate -- related corporate companies that related to looting and in Amaro, it was a pre-bankruptcy sale that was going to be challenged as a fraudulent transfer for inadequate price. All three of those Courts said, on the filing date, those claims already existed, and therefore, they became property of the Estate. I don't agree that those claims should have become property of the Estate, but the rationale of those cases were, the cause of action existed on the filing date, and therefore, they became property of the Estate. That's not what happened here, as Mr. Steinberg pointed out, because the sale happened -- it was a sale done by the Debtor in possession post-bankruptcy. So, you don't have these claims ever becoming property of the Estate. The other very important point to make is, Judge Bernstein was the Judge in Keene, and he was also the Judge in Grumman/Olsen. And in Grumman/Olsen --

THE COURT: And in Burton.

MR. WEINTRAUB: And in Burton, which Mr. Weisfelner handled, ably so, I won't go back to that. When confronted with the successor liability issue in Grumman/Olsen, Judge Bernstein did not say, "Oh, remember what I did in the Keene case? That was property of the Estate, so that was released when I did the sale." He didn't do that. What he did was the same analysis that Your Honor did in this case. He relied on Chrysler and he relied on TWA, and said that these claims are in personam claims and they can be solved free and clear of, in Section 363(f). I know this Court is probably not going to go there, but there's nothing in the record that said back in July of 2009 that there was a 9019 motion to settle a successful liability claim. That was not something that was stated on the record, which would, of course, be another potential due process violation if the result was going to be, "Oh, those were released back in 2009 because they belong to the Debtor." Unless you've got questions for me, Your Honor, I think I have about exhausted what was in my outline when I left the house this morning.

THE COURT: Okay, very good. Mr. Esserman?

MR. WEINTRAUB: Thank you.

MR. ESSERMAN: Sandy Esserman. Your Honor, I realize that time is running short, so I'm just going to hit a couple of hot points, if that's okay.

THE COURT: Sure.

MR. ESSERMAN: One thing that we have to be cognizant of here is that we're not just looking at retained liabilities versus assumed liabilities. We also have to remember that we're also talking about new liabilities, and new liabilities of new GM, and why is that important?

THE COURT: I understand instantly why that's important. I think it would be helpful if you would explain to me what kinds of claims you think are in that category.

MR. ESSERMAN: Well, we think a lot of the complaints talk about new GM's liability as new GM, not as an ignition switch. Let me give you some examples and some counts, and how the factual allegations are weaved into those complaints, because the complaints definitely talk about, in substantial portion, new GM's post-sale conduct. That is, the claims that would arise, for which people could not file proof of claim, for which they had no liability, old GM may have no liability. For instance there is a -- assertion of a violation of Deceptive Trade and Consumer Protection statutes. Some examples of the conduct forming the basis of these claims include the fact that new GM touted its commitment to safety, product quality, putting customers first, purporting to be a company that was focused on the consumer and pushing accountability deeper into the organization. The factual allegations go further that GM knew about the defects plaguing the GM-branded vehicles. They failed to take action, thereby causing consumers to associate the GM brand with safety and reliability, and causing Plaintiffs to overpay for or retain unsafe GM-branded vehicles. The relevation of new GM's extensive deceptions tarnished the brand further. There have been complaints brought by the Orange County DA, the Arizona Attorney General, which are a similar basis to these complaints. There's also complaints for fraudulent concealment, which talks about independent, new GM violation of its independent duties, not old GM. Not those facts at all. They allege that new GM concealed and suppressed material facts about the quality of its vehicle and the GM brand. The company's systematic devaluation of safety issues, the ignition switch defect, many other defects plaguing GM-branded vehicles. The consolidated complaints also allege that new GM's duty to disclose orders from new GM's superior, if not exclusive knowledge of the many serious defects, and that it valued cost-cutting over safety, took steps to insure its employees did not reveal known safety defects to regulators or customers, and it goes on from there.

There's one other count to highlight, and that's sort of the unjust enrichment claim, also all based on new GM's conduct, not conduct that occurred in 2009, before the sale order or whatever, and how new GM benefitted from its failure to make timely disclosure of the initial switch defect in old GM cars as it is required to do. Plaintiffs therefore overpaid, they suffered increased insurance premiums, cost for alternative transportation, a few more facts. New GM benefit was unjustly retained in light of the fact that new GM was only able to reap this through a campaign of deception, et cetera, et cetera. So, all of this conduct occurred post-sale, and that is what is being sought in the complaints, and that is what Your Honor is sort of being asked --

THE COURT: Occurred post-sale, but dealing with the value of vehicles manufactured by old GM.

MR. ESSERMAN: In part yes, in part no. There's some of the -- there is a portion of the complaint that deals with new GM vehicles, so --

THE COURT: Well, that, of course, is the much easier part, Mr. Esserman.

MR. ESSERMAN: Of course.

THE COURT: Now, in the complaint, and I must say that I've read everybody's briefs and cases more carefully than I looked at that complaint. Does it slice and dice? Does it set forth in different claims which involve old GM vehicles and which involve new, or is that a task that's imposed on me or Judge Furman or somebody, once I lay out the rules to try to figure out whether it's prescribed by such portions of the sale order that I'm prepared to keep enforcing?

MR. ESSERMAN: I think it lays it out, and I think you'll be able to imprint your order onto the complaint and see. Of course, we think all of it will survive, but if you

--

THE COURT: Yeah, well, don't rule out the possibility that any final opinion might not agree with both sides in full.

MR. ESSERMAN: Well, and I understand that. You know, which sort of also brings me to the order, and I know what Your Honor -- well, I don't know anything, but what I perceive is, to use Mr. Weintraub's analogy, if it was Judge Esserman, I'd be struggling with how to reconcile some of these provisions, how to reconcile the order, how to reconcile the rights of people. And one section of the order that has been overlooked, and I'm just going to suggest it's worth some thought anyway, is that in the sale decision on page 17 --

THE COURT: Of the slip opinion or -- but not in the published opinion?

MR. ESSERMAN: Yeah, it's --

THE COURT: Well, I mean by published, I mean the way it appears in the BR?

MR. ESSERMAN: You know, I don't have the BR site here. It's the decision on Debtor's motion for approval of its sale of assets to Vehicle Acquisition Holdings, LLC, assumption and assignment of related executory contracts, and entry into the UAW retiree settlement.

THE COURT: Yeah, we're talking about the same opinion.

MR. ESSERMAN: Yeah, it's --

THE COURT: All I'm talking about is the way it appears on ECF, you're saying, rather than in the BR.

MR. ESSERMAN: Yes.

THE COURT: Okay.

MR. ESSERMAN: And these are the findings of fact in your decisions, which I'm going to quote to you, and they're adopted in the sale order, which, of course, takes precedence, but there's one statement in there, and when you're wrestling with this, you can wrestle with this, what you meant by this, that "Old GM will retain all liabilities, except those defined in the MPA as assumed liabilities." The assumed liabilities, that is, what new GM's going to take, include, and I'm quoting, "product liability claims arising out of products delivered at, or after the sale transaction closes, paren the closing, close paren, and two, the warranty and recall obligations of both old GM and new GM." And I just sort of throw that out for something to be massaged, I guess, but perhaps the sale order isn't all so one-sided as new GM might have you believe, and perhaps it -- I'm not sure what exactly was meant by that because there are other, more specific issues dealing with those findings, but that is a finding of this Court, which was adopted in the sale order, which takes precedence. So, there may be some room in there to manipulate something, should Your Honor decide to do so, on the basis of the order --

THE COURT: Well, you don't exactly mean manipulate it, as much as you mean, as to draw conclusions from.

MR. ESSERMAN: Exactly. I withdraw that word.

THE COURT: Okay.

MR. ESSERMAN: And I probably already exceeded my time, thank you.

THE COURT: All right, thank you very much. All right, folks. Can you get in and out? Oh, Mr. Flaxer?

MR. FLAXER: Hi, Judge.

THE COURT: Okay, come on up, please. I thought your principal concern was on (indiscernible) on the Court, though.

MR. FLAXER: Yes, Your Honor, but your order stated that that issue would not be addressed, which was fine, but if we wanted to address, I would dispute it. I will dispute the --

THE COURT: Okay, I'll just rely on your good faith. Go ahead.

MR. FLAXER: Yes, Your Honor. I just wanted to, very briefly, focusing particularly on the remedy issues. We continue to believe that some discovery, as highlighted by our disputed facts and our prior pleadings before the

Court may still be appropriate. We think that Your Honor's determination on a remedy issue is inherently an equitable decision. We also think, in this respect, that it's likely that discovery would reveal, and I'll mention two primary factual areas: one is actual knowledge of the ignition switch defect at very high levels of GM's management, the other is that GM deceived NHTSA in connection with its responses to the so-called "death inquiries". We think that if the Court had that factual record developed, as opposed to, and what I still agree with designated counsel is a very strong factual record based primarily on the DeLuca report, but, as we've highlighted, the DeLuca report only goes so far, and it seems to us, consciously avoids going after the next level of senior level management knowledge. We think if you had those facts before you, it would weigh very heavily in favor of granting a remedy sought by designated counsel for reasons including deterrence of future concealments in connection with 363 sales.

THE COURT: And by that knowledge that you talked about in the last sentence, you're talking about knowledge by old GM management more senior than the 24 or 25 people who were the subject of this (indiscernible)?

MR. FLAXER: Yes, Your Honor.

THE COURT: Okay.

MR. FLAXER: For example, we think it's likely --

we think it's very likely that the knowledge would go up to the level of general counsel of North America and perhaps higher, but you know, obviously that would take some discovery to establish that, and we understand the concern about delay, but in our estimation, in balancing the -- how crucial it is that the remedy sought by designated counsel be granted, that perhaps what Your Honor could do is rule in favor of our side of the table on the due process issue and authorize some discovery so Your Honor has a full, factual record in order to make a fully informed decision, bearing in mind that this is an equitable determination about remedy, that Your Honor have a fully developed factual record.

THE COURT: All right, thank you.

MR. FLAXER: Thank you, Your Honor.

THE COURT: Okay. By yelling out from the audience, I guess, can you guys get back in an hour, or do you need more time?

MAN: An hour would work.

MAN 2: An hour is fine with us, Your Honor.

THE COURT: Okay, then I show five after one on my watch, it's a minute or two after that on that big clock on the wall, see you guys back here in an hour.

MR. STEINBERG: Your Honor, I assume that when we come back, it's the GUC Trust that will start?

THE COURT: I assume you're going to reply next, or --

MR. STEINBERG: The GUC Trust hasn't spoken yet. I'm not --

THE COURT: Oh, yeah. Is GUC Trust going to be -- Ms. Rubin, are you going to be weighing in on what I've heard this morning?

MS. RUBIN: I fully expect to, Your Honor.

THE COURT: Okay. Then Ms. Rubin next, and then you can reply after that, Mr. Steinberg. Now, especially with the extent to which I've interrupted you guys, I'm not going to prevent you from arguing anything, even if it's beyond the original time limits, assuming you're not filibustering or otherwise taxing my patience, but we still have to quit at 3:15 today. If we're not done at that point -- and of course, the resumption is going to be at 2:05, if we're not done, then we're going to have to pick up tomorrow morning. We're in recess.

MR. STEINBERG: Thanks.

(Court in recess at 1:05 PM)

THE CLERK: All rise.

THE COURT: Have seats, please. Okay, are we up to Ms. Rubin?

MS. RUBIN: We are, Your Honor, and if I can help it, I don't intend to take the full balance of my time today.

THE COURT: Okay.

MS. RUBIN: But I do want to address a number of the issues that you talked about with others today, and hope that I can address some of the questions that you posed to all of us as a group, as well.

THE COURT: Okay.

MS. RUBIN: Your Honor, I want to start from the proposition that you started from this morning, which is that you have been convinced, or at least you assume, where we are right now, that there was enough knowledge at old GM to have warranted a recall in 2009, prior to the sale. Your Honor is clearly aware that the briefing that my client and the participating unit holder submitted, took a different tack, and the reason that we did that is because we wanted to illustrate that even if everything that Mr. Steinberg and his colleagues said was true, there was still a due process violation here, or would be a due process violation here, with respect to the groups of Plaintiffs that Mr. Weisfelner, Mr. Esserman and Mr. Weintraub represent.

That having been said, let’s start from the proposition that Your Honor began with this morning and move from there. The first, and most important reason we believe that that the Plaintiff should be able to proceed against new GM is because, as Mr. Weisfelner and others capably told you, they have independent claims in both the pre-sale and the post-sale complaint against new GM, that are predicated on conduct of new GM, and for some reason, in their reply, new GM seems to suggest that that's not true of the pre-sale complaint, and I just want to illustrate one example of why that is, in fact, the case. In paragraphs 1063 to 1079 of the pre-sale complaint, the pre-sale Plaintiffs make a claim under California's Unfair Competition law, and that claim is predicated, in part but not in full, on the violation of GM, sorry, new GM, on their violation to comply with the Safety Act, and Your Honor, I want to underscore that that was a knowing violation, by consenting to the order with NITSA. What new GM essentially acknowledged is that they didn't comply with that law, they did not provide NITSA with knowledge within five days of determining there needed to be a recall.

And from what I understand, Mr. Weisfelner's clients' claim, for violation of the Unfair Competition law, could be predicated on that in and of itself alone. Now, there's another reason that these claims -- we discussed whether or not these independent claims against new GM are subject to the sale order, and Mr. Esserman pointed out to you this morning a reason why they are not, based on the findings of fact in the sale decision, and their incorporation in full into the sale order.

Let me suggest to you another reason why, that I think has eluded our discussion so far, and I'll refer Your Honor to Section 2.3(b) of the Master Sale and Purchase Agreement. That is the definition of retained liabilities, and I'll just read it, in part. The definition of retained liabilities starts with, "each seller acknowledges and agrees that, pursuant to the terms and provisions of this agreement, Purchaser shall not assume or become liable to pay, perform or discharge, any liability of any Seller," and let me pause there, Your Honor, because when we're talking about retained liabilities, it pertains to the liability of a Seller. Now, Mr. Steinberg wants to suggest that any liabilities that have to do with private rights of action for failures, for example, to comply with recall obligations, are not assumed liabilities, and therefore, by definition, must be retained. Respectfully, I'll disagree, and agree with the Plaintiffs that it's not a binary universe of assumed, retained and nothing else. New GM covenanted, under Section 6.15(a), that it would comply with all of the Federal recall-related laws and regulations applicable to old GM-manufactured, designed or sold vehicles.

THE COURT: That's in the sale agreement?

MS. RUBIN: That is in the sale agreement, Your Honor.

THE COURT: What section is that, by the way?

MS. RUBIN: It's 6.15(a) and it's addressed in our briefing as well, Your Honor.

THE COURT: I'm well aware of the point, I would just -- wanted to see the citation, too.

MS. RUBIN: So, Your Honor, it would be our position that, having undertaken that covenant, that is the independent duty that Mr. Steinberg insists that his client does not have, irrespective of the wording of the sale order, they agreed to comply with those recall laws in respect of old vehicles. Whether or not the sale order goes beyond that in other respects, and maybe goes too far, is another issue entirely, but at least in terms of the sale agreement itself, the retained liabilities are liabilities of any Seller. I don't hear anybody suggesting, or they shouldn't suggest, that old GM, or the old GM bankrupt estate through the GUC Trust, should somehow be liable for the knowingness conduct of new GM and its failure to disclose to NITSA, disclose to the driving public, to disclose to this Court, and to disclose to anyone at all, that these cars were subject to a safety defect that rose to the level that it warranted a recall.

The other thing that -- one other thing that we would say, Your Honor, is, in terms of why the Plaintiff's claims should be allowed to go forward, let me identify another group of the Plaintiffs. I believe Mr. Weisfelner is the one who spoke to you at length about the used car purchasers here, and whether or not their claims are subject to the sale order. It's hard for us to see, under the Grumman case, which as Your Honor knows, interprets Chateaugay, how the used car purchasers here could ever have been subject to the sale order and injunction. None of those people had any pre-sale relationship or contact with old GM. Suddenly, they were not aware at the point in time of their sale that their cars were subject to the serious safety defect of which we're all now aware, and it's hard for us to see how the analysis in the Grumman case is any different than that which should be applied to used car purchasers, who are a class of Plaintiffs implicated by the post-sale consolidated complaint.

Now, there was some discussion this morning about the Burton decision, which Your Honor referred to as the Chrysler decision by Judge Bernstein, and to the extent that Your Honor has questions about why these used car purchasers in this situation should be treated any differently than the Burton Plaintiffs, let me try to address that, if I may.

First and foremost, the Burton case involved a recurring fuel spit-back problem that had already resulted in two to three recalls prior to Plaintiffs bringing forth claims in that instance. Here, we have a warranty in the sale agreement by old GM, that there had been no material recalls since 2007. We're not dealing with a factual situation in which anybody who drove one of the vehicles, we'll call them the subject vehicles, that are the subject of this proceeding, nobody is suggesting that drivers should have been on notice of the ignition switch defect by virtue of anything that happened before, as was the case in Burton.

Now, new GM is very fond of quoting to Your Honor a particular sentence from the Burton decision in which Judge Bernstein, and I'm sure I'll mangle this somehow, says that anyone who drives a car should reasonably contemplate that their car will need to be repaired. Again, the end of that sentence, which new GM doesn't quote for you is, "especially whereas here there have already been two to three recalls involving the same problem, and involving some of the same vehicles," but be that as it may, there's another distinction here that I think is a more fundamental and important one.

The claims at issue here are not fundamentally about repairs. The Burton case is one in which the Plaintiffs, who characterized themselves as future claimants and with which Judge Bernstein disagreed, their claims were Duty to Warn claims and failures to honor warranties. Fundamentally, they were upset that their cars weren't being repaired. That's not really the gravamen of the Plaintiff's complaints and the consolidated complaints here. What are they really talking about, Your Honor? They're saying, there has been such a widespread erosion of GM's reputation for quality, such that all of their vehicles have suffered economic loss, and to the extent that they are also alleging damages for economic losses associated with repairs, again, I would submit that those are not the sort of repair-related claims that a driver of these vehicles could have or should have anticipated. They are claims for things like childcare expenses associated with all of the time necessary to get their cars repaired, their lost wages, their rental car expenses. Your Honor is well aware that there are a number of people who said, "Until GM is able to repair my car consistent with the ignition switch recall, I'm not driving that car, because I know, based on the information that's come out through Feinberg Compensation Fund, that GM has at least admitted that 50+ people died, and has awarded awards under the Feinberg Compensation protocol, to at least 128 people." That being the case, there are people that Mr. Weisfelner and Mr. Esserman represent who say, "I'm not going to drive my car and GM should be liable for the cost of my rental car expenses during that period of time, until my car is 100 percent safe to drive."

Now, Your Honor, putting aside the question of whether these Plaintiffs have independent claims against new

GM, or whether there are future claims on behalf of the used car purchasers that are more akin to the claims in the Grumman/Olsen case, the biggest issue here is obviously whether or not the pre-sale economic loss Plaintiffs suffered a due process violation. And you see in the briefing that there are starkly different visions of the notice that should have been afforded to those claimants.

Let me submit this. If Your Honor can accept that old GM knew enough that they should have recalled the subject vehicles, the notice that was given was never enough, even for the folks that Mr. Weintraub represents, and here's why. Last year, in the DPWN case that went up to the Second Circuit, the Court set forth the standard for evaluating the claims of those who otherwise would be barred by a bankruptcy order. And the Court essentially said, it's a two-part test. The first thing you have to do is look at what the claimants knew or should have known with reasonable diligence, and if the claimant gets across that threshold, the second part of the inquiry is to ask what "the Debtor knew or should have known of the potential liability, such that it should have provided the claimant with notice of his or her potential claim."

Whether or not the folks that Mr. Weisfelner and Mr. Esserman and Mr. Weintraub represent are known Creditors, it is indisputable that old GM knew enough that it should have afforded them more notice under the DPWN test. And Your Honor shouldn't take my word for the fact that the DPWN test now guides evaluations of due process not just in a post-discharge context, but across all bankruptcy contexts, Your Honor may be aware that Judge Gropper issued an opinion in the Direct Access bankruptcy last month on January 6th, the Westlaw site is 2015 WL 94556, and in doing so, Judge Gropper was asked to pass on whether or not a claimant could file a late Proof of Claim after a confirmation order. Judge Gropper writes as follows, Your Honor: "In DPWN holdings, the Second Circuit recently set forth the showing that a party must make, in order to obtain the right to pursue a claim that otherwise would be barred by virtue of a Debtor's bankruptcy" It wasn't conditioned on what kind of case we were talking about or what stage in the bankruptcy we were at. Judge Gropper interpreted the DPWN case to be the guiding analysis for any time someone comes before this Court or a District Court and says, "I have a claim," and the Defendant says, "No, no, no, you're barred by a sale order and an injunction," or, "You're barred by some other order in bankruptcy."

So under that analysis, Your Honor, the DPWN analysis, we would respectfully submit that old GM knew or should have known of the potential claims that folks like Mr. Weisfelner's clients would have had, even if they didn't have a bunch of lawsuits before them, even if they didn't make the list of Creditors, even if they didn't appear on the general ledger. The had sufficient knowledge within the company, based on their books and records, construed more broadly, that they should have provided notice of the potential liability before the sale.

Now, Your Honor asked an inform question earlier today, which was, "What should that notice have looked like?" And I think you've heard from Mr. Weintraub and others about what that might have looked like. Let me underscore Mr. Weintraub's presentation and say, we believe that the right notice here would have looked like the Chemtura situation, and respectfully, while Your Honor identifies that as a situation in which Your Honor approved best practices, and certainly, I'll agree that Judge Furman in affirming that, agreed that maybe that wasn't what was constitutionally mandated under the facts of that case, I think the type of notice provided there is constitutionally mandated in this case. You have a situation where on the factual record, Mr. Weisfelner has already convinced Your Honor that old GM knew enough that it should have issued a recall in respect of the subject vehicles. On those facts, why it's not the case that the publication notice should have said, "There is a safety defect of a serious dimension in these makes and models of vehicles, and if you believe you have been injured by that, now is the time to come forward. There will be a hearing about the sale." That is essentially what was provided in the Chemtura case where the manufacturer understood that a chemical that it produced --

THE COURT: Chemtura was a claims case, that the people worked in factories where diacetyl was used.

MS. RUBIN: Yes, Your Honor.

THE COURT: It wasn't a 363 case.

MS. RUBIN: Well, that's true, Your Honor, it wasn't a 363 case, but respectfully, Your Honor, courts in this District and Circuit and others, borrow, with respect to what notice is constitutionally mandated, from context to context all the time.

THE COURT: Yes, but you would agree, I take it that, Mullaney talks baby talk about the need to look at the facts and circumstances.

MS. RUBIN: Sure, and Your Honor, I'd also agree that the facts --

THE COURT: As do the other cases, the Second Circuit cases such as Drexel Burnham implementing the Mullaney.

MS. RUBIN: Sure, but Your Honor, I would also say, that in talking about 363 cases or otherwise, the fundamentals of notice, the cornerstones of notice, or not only notice of one's claim, but the opportunity to be heard, and that doesn't change from context to context, and if we are going to follow the dictates of Mullaney and talk about the facts and circumstances of this case, I think if Your Honor is willing to find that old GM knew enough that it should have recalled the vehicles, certainly it knew enough in those circumstances that it should have incorporated in a publication notice, enough information to put people like Mr. Weisfelner's clients, that if they believed they had a claim, now was the time to come forward. They didn't have to necessarily say, "If you believe you've suffered an economic loss or diminution of value in your car or lost wages," or any of that, that's not the claim-specific notice that we're talking about. But they should have apprised people in the Plaintiffs' position of the facts and circumstances that underlie their case, that there was a serious ignition switch defect that ran throughout the subject vehicles, that was serious enough to warrant a recall, and therefore, anyone who believes that they have been injured thereby, should come forth and file a claim.

Now, Your Honor, there has been a lot made out of the fact that 363 is sort of a separate situation, and I think Your Honor just alluded to it, that in discharge cases or confirmation cases, maybe notice doesn't mean what it should mean in a 363 case. But I'll have your -- I'll say for Your Honor's sake, DPWN, at the District Court level, which was a known Creditor case, right, DHL didn't know that it has an antitrust claim against United Airlines. They certainly knew that they were a Creditor, they were certainly apprised of the bankruptcy, and deciding what notice is due to DHL, what did the Eastern District -- how did the Eastern District make that decision? Well, they borrowed from the Grumman case, which is, in fact, a 363 case.

Similarly, in the Schwinn case in the Northern District of Illinois, a 363 case involving a purchaser of an exercise bike in 1979, whose grandson is not injured until well after the bankruptcy in the 90s, what does that case do? It borrows from the Chemtron case in the Third Circuit, which again, is a discharge case. So, I would submit to Your Honor that what is fundamentally required for notice before depriving someone of a property interest, the facts and circumstances of the cases might change in terms of dictating what form of notice is required, but the content has to be informed by a larger body of case law that is transferrable from one context to the other.

It's also true that the idea that none of the Plaintiff's property interests here were affected is sort of a preposterous one, right? And to the extent that new GM tries to distinguish some of the 363 cases outside this Circuit by saying, "Well, those cases involve property interests that were unique and couldn't have been reduced to money," that's actually not true. First of all, those cases were all decided on grounds other than the type of interest invoked, and Rule 60(b) was considered in all of them.

I'll talk about the poly --

THE COURT: Wait, time out. You said 60(b) was considered?

MS. RUBIN: It was considered, and in each of those cases, Polycel, Metzger, and Compak, after referring to Rule 60(b), each of the courts nonetheless held that the claimant before it should be exempt from the sale order, on the basis that the due process rights were violated. I'll quote to you, Your Honor from the Metzger case, where, after considering Rule 60(b), for example, the Court said, "The Court has some flexibility in creating a remedy here, and need not and will not find the entire sale void." But nonetheless, the Court held that it would find that the sale was void as to the claimant before it.

THE COURT: Well, there was no question that Arthur Weissbrodt said that, but I don't have a memory of him discussing the criteria for granting 60(b) relief, and if you say that he mentioned it, and I'm not (indiscernible) to Ms. Rubin, but there was not a material discussion of 60(b), was there?

MS. RUBIN: Your Honor, I don't have the case right in front of me and I'm unable to answer that question directly, but my recollection is that in at least two of these three cases, there is a discussion by the Defendant that 60(b) only allows for voiding the entire sale order or providing no relief, and in each of those cases, there's a rejection, either implicitly or explicitly, of that theory. So, for example, in the Compaq case -- you know, the other thing I would say, Your Honor, is that certain of these Courts say that notwithstanding Rule 60(b), Rule 60(b) is only one way of getting there. So, for example, in the Compaq case, the Court says, "There's not a Rule 60(b) motion before me, but sua sponte, I can characterize the relief that this claimant is asking for as a 60(b) motion, or alternatively, I can see this as a motion for relief from the sale order." That's an implicit recognition that 60(b) is not the only vehicle by which you can remediate a due process violation. So, respectfully, GM's assertion that the Plaintiffs here have to conform and shoehorn their arguments into a 60(b) analysis in order to prevail is simply not the case. You have an implicit recognition in the Compaq case that that's true, and more importantly, in this District, let me refer Your Honor to the Lehman Brothers decision that new GM cites in its brief at 2014 WL 7229473. Now, Judge Buchwald in that situation determined that the Creditor, who was making arguments before her, in fact didn't qualify as a Creditor at all, but in clarifying the narrowness of her holdings, she said as follows, Your Honor: "We do not decide to question whether a person with a cognizable property interest may attack a final free and clear sale order in the absence of notice," and then, following that immediately with this sentence: "Nor do we decide whether the lack of notice could be grounds…" there is an ellipses here, "for relief from a sale order under Rule 60(b)." So, you have a District Court Judge in this District, implicitly recognizing that a due process claim, meaning, I didn't get notice of the way in which my property interests would be affected here, could be different from a Rule 60(b) motion.

THE COURT: I'm not sure if I heard you right. I thought you preceded each of those two sentences by "We do not decide that."

MS. RUBIN: And I did, Your Honor, but I still see the case as standing for a recognition, as a District Court Judge in this District, recognizing that these are two alternative ways of getting to the same place. I'll recognize that that's dicta. Judge Buchwald didn't reach those issues in her decision, and she's very clear about that, but notwithstanding that, in clarifying to the larger community reading her decision what she is and is not deciding, she is saying expressly, "I see these things as possibly two different avenues for relief," and I think it just underscores the fact that in the Compaq decision, for example, the Court says the same thing. "I don't have a Rule 60(b) motion before me. I can sua sponte interpret the arguments that are being made before me as a 60(b) motion, or alternatively, I can grant relief from the sale order." That doesn't sound to me like the musings of a Judge who believes that 60(b) is the only vehicle by which someone who has a due process argument can seek relief from the sale order.

Your Honor, I'll move on to talk about remedy, and I'll note that the primary cases on which new GM depends are the Edwards case, and they also place a lot of emphasis on the Paris case, which hasn't been discussed directly by name, but the general principle has been alluded to a lot here, that's the case --

THE COURT: Paris?

MS. RUBIN: Yes.

THE COURT: Mr. Weisfelner had mentioned Paris.

MS. RUBIN: Well, I apologize to Mr. Weisfelner for not hearing that. To the extent that the Court in Paris is saying, "Your interests are not affected here because you have a bunch of assets that can be converted and all Creditors will have access to that." Your Honor, that may be fine and well if we were here four years ago, or five years ago, but that's not where we are now, and I think to not appreciate the realities of where the GUC Trust finds itself would be a disservice to everyone, right? We have a situation here where the GUC Trust has distributed 90 plus percent of distributable assets. We are three plus years post-confirmation. All of the remaining resources of the GUC Trust have been reserved for express purposes as Your Honor knows, we filed a quarterly GUC Trust report last week. There is literally nothing left right now for the Plaintiffs here, and so to not -- if we're going to consider who would be prejudiced by a remedy here or consider a larger context of prejudice with respect to the remedy, I think that has to be considered, too.

The final thing that I'll say, Your Honor, is the notion that prejudice is somehow a required element of a due process violation is creative, but not sustained by the case law. To the extent that old GM siphoned numbers --

THE COURT: Time out. Before you go too far, Ms. Rubin --

MS. RUBIN: Sure.

THE COURT: -- I need to dust off with you the colloquy I had with Mr. Weisfelner, because I would agree in a heartbeat that you didn't make the supplemental distribution to your constituency last year in the dead of night, but you're saying -- you're talking about hardship, presumably to the economic loss Plaintiffs, or maybe Mr. Weintraub's people or both. At the same time that your folks were the beneficiaries of Mr. Weisfelner's guys decision for admitted strategic reasons, not to try to tap those funds. So you're trying to exploit the very situation for which your guys were the beneficiary.

MS. RUBIN: I don't believe that it's an attempted exploitation at all, Your Honor.

THE COURT: Well, I'm not accusing you of evil --

MS. RUBIN: I respectfully disagree, if I can.

THE COURT: I'm accusing you of representing a client --

MS. RUBIN: No.

THE COURT: -- but isn't that the bottom line?

MS. RUBIN: No, Your Honor, it's not, and here's why. Your Honor engaged in a colloquy earlier with Mr. Weisfelner, well first of all, to the extent that you engaged in the colloquy earlier with Mr. Weisfelner also about the efficacy of the bar date notice, correct? It may be that the bar date notice was not effective as to certain of these Plaintiffs, but the sale notice wasn't effective as to them either, and they had a choice to make at the outset. It's undisputed that they didn't know about the defect in the subject vehicles until around February of 2014, but at that point in time, they made a choice, and they made a choice to go after new GM. They never once filed a claim or sought to file a late proof of claim against the GUC Trust.

When there were the initial motions to enforce a few months later, and we came before this Court, the Plaintiffs filed an objection, they filed an adversary proceeding complaint, those issues were not raised there either, and when we first came before Your Honor, let's rehash how the GUC Trust came to be a party here. It wasn't on motion or any suggestion by the Plaintiffs. It was on suggestion by new GM, who said the Plaintiffs should be forced and shoehorned into going after the GUC Trust. But we don't believe that the Plaintiffs should have to do that. We believe that the Plaintiffs' due process rights were violated, and so in making that distribution, I wouldn't characterize it as an exploitation at all. I would say that my client was well within its rights to distribute assets to its existing beneficiaries, consistent with its fiduciary duties and the documents that govern it.

Your Honor, if I can return to prejudice?

THE COURT: Yeah, go ahead.

MS. RUBIN: The notion that prejudice is a required element of a due process violation here, I think, is a fiction, and in advancing that argument, new GM relies on two different strands of cases: one are cases in which, despite a notice defect, the claimants still have an opportunity to be heard, and that's particularly true of the cases that they cite within this District. The Parker case, I think, is a paradigmatic example of that. The Plaintiff in that case came forward and said they were deprived of their due process rights, but Your Honor found that, notwithstanding that, the guy cross-examined two of the three witnesses during the sale hearing, received ample discovery. There was no due process violation because he had an opportunity to be heard. That certainly was not the case with respect to any of the Plaintiffs here, against whom the notice couldn't have possibly been effective, because to just get the notice without notice of their claim is, as Mr. Weisfelner recognized in the Waterman case, no different than being apprised of your claim and not being apprised of the bankruptcy.

The other cases that they cite are entirely far of field from bankruptcy altogether. Most of them involve procedural irregularities, like failure to enter a substitution of counsel order, and notwithstanding that, the new counsel still gets to be heard, or listing the wrong statute in an administrative proceeding on the cover, where everybody knows what's really at issue. That's certainly not the case in which we found ourselves, so it takes a lot of creativity to cleave onto the due process standard in this Circuit, some prejudice standard. The Manville case and the Cope case that Your Honor referred to earlier, we understand and appreciate those aren't 363 cases. But to conclude, Your Honor, we would suggest that those should be your guiding principles. Those are recognitions by the Second Circuit that in a bankruptcy situation, no party can be deprived of a property interest without adequate notice of their claim.

Everybody understands, here, that that's not what happened, and to the extent that Your Honor is willing to find on this stipulated factual record, that old GM had sufficient knowledge that it should have recalled the vehicles, it should also be the case that they had sufficient knowledge to put into a publication notice, if not actual mailed notice to all of the people that Mr. Weisfelner and Mr. Esserman and Mr. Weintraub represent. It should have put into that notice greater content to afford people a better and more complete, and consistent with due process, a constitutional understanding of what their claims are. And with that, Your Honor, I'll rest.

THE COURT: All right, thank you. Okay, Mr. Steinberg?

MR. STEINBERG: Your Honor, do we have a stop at a quarter after three today?

THE COURT: Yes.

MR. STEINBERG: I'm not sure if I'll finish with my reply, but I've spoken to the other counsel and I think they all want to reply as well too, and I'm wondering whether we should do all of our replies tomorrow morning. We could potentially do equitable mootness today, if you wanted to take it out of order if everybody else was prepared to do that, but I'm not sure whether I'll finish, and I don't necessarily think it's fair that they will have overnight to prepare for my replies.

THE COURT: Well, I certainly see the merit of your suggestion of having the remainder, this topic, done at the start tomorrow. How much equitable mootness is mainly between Ms. Rubin and you?

MR. STEINBERG: No, Your Honor, I think the entire equitable mootness argument is a half hour and I think I have five minutes, I think Mr. Weisfelner has five minutes --

THE COURT: Yeah, of course, it's mainly Ms. Rubin's issue.

MR. STEINBERG: Oh.

MS. NEWMAN: Actually, Your Honor, it's not, it's --

MR. STEINBERG: It's the unit holder.

THE COURT: Yes, but with Akin Gump.

MS. NEWMAN: Yes.

THE COURT: You're her ally.

MS. NEWMAN: I am. I (indiscernible).

THE COURT: Okay, you're playing the role of Mr. Golden?

MS. NEWMAN: Yes, Your Honor.

THE COURT: All right. Can we really, really get this done in 35 minutes?

MS. NEWMAN: Your Honor, I think we would prefer to start that tomorrow, keep the order that's contemplated in the schedule and start that tomorrow because we're concerned that, to the extent that Your Honor has questions, we may need more time.

THE COURT: Are you guys available early tomorrow as you were today?

MR. STEINBERG: Yes.

MS. NEWMAN: Yes.

THE COURT: All right, let's do this starting at 9:00am tomorrow.

MR. STEINBERG: Thank you.

MS. NEWMAN: Thank you, Your Honor.

THE COURT: But therefore, what I want to do is back to the principle arguments, which is what you (indiscernible), Mr. Steinberg, and Mr. Weisfelner, you're looking for a brief (indiscernible)?

MR. WEISFELNER: Correct, Your Honor.

MS. RUBIN: And Your Honor, I have also reserved five minutes if Your Honor can (indiscernible) reserve (indiscernible).

THE COURT: Okay. In which case, the (indiscernible) Plaintiffs, of course, have to be limited to new stuff that Mr. Steinberg says tomorrow morning, but with that said, we'll pick up at 9:00 tomorrow. Let's notify the marshals accordingly. And CourtCall if you are listening in, get yourself down there before 9:00. Okay, we'll recess until 9:00.

MR. WEISFELNER: Your Honor, do you know whether or not it would be safe to leave our binders and --

THE COURT: I'll tell you what I always tell people in these circumstances, Mr. Weisfelner. You've got my permission to --

(Whereupon these proceedings were concluded at 2:44 PM)

14-MC-2543 (JMF)

ORDER NO. 13
(Organization of Plaintiffs' Counsel, Protocols for Common Benefit Work and Expenses)

JESSE M. FURMAN, United States District Court Judge:

The Court believes that it is prudent to define the authority, duties, and responsibilities of Lead Counsel, Plaintiff Liaison Counsel, Federal/State Liaison Counsel, and members of the Plaintiffs' Executive Committee. The Court also wishes to set specific guidelines and rules for staffing, fees, expenses, and billing records. Nothing in this Order shall be interpreted to affect any proceedings other than those involving the authorities, duties, responsibilities, guidelines, and rules of and for plaintiffs' counsel, as discussed herein.

I. <u>AUTHORITY, DUTIES, AND RESPONSIBILITIES OF PLAINTIFFS' COUNSEL</u>

The specific duties to be undertaken by Plaintiffs' Lead Counsel, Plaintiff Liaison Counsel, Federal/State Liaison Counsel, and members of the Plaintiffs' Executive Committee are as follows:

A. <u>Co-Lead Counsel</u>

In Order No. 8 (14-MD-2543, Docket No. 249), the Court appointed the following counsel as Plaintiffs' Co-Lead Counsel ("Lead Counsel"): Steve W. Berman, Elizabeth J. Cabraser, and Robert C. Hilliard.

Lead Counsel will be responsible for prosecuting any potential common benefit claims, as well as coordinating the pretrial proceedings conducted by counsel for the individual

Plaintiffs. With respect to the common benefit claims and coordinated pretrial proceedings, Lead Counsel must:

(1) determine (after such consultation with members of the Executive Committee and other co-counsel as may be appropriate) and present (in briefs, oral argument, or such other fashion as may be appropriate, personally or by a designee) to the Court and opposing parties the position of the Plaintiffs on matters arising during the coordinated pretrial proceedings;

(2) coordinate the initiation and conduct of discovery on behalf of the Plaintiffs consistent with the requirements of Fed. R. Civ. P. 26, including the preparation of joint interrogatories and requests for production of documents and the examination of witnesses in depositions, except that discovery and motions initiated by the Defendants directed to or regarding named individual Plaintiffs will be handled by the attorney(s) for those individuals;

(3) delegate specific tasks to other counsel in a manner to ensure that pretrial preparation for the Plaintiffs is conducted effectively, efficiently and economically;

(4) enter into stipulations with opposing counsel necessary for the conduct of the multi-district litigation ("MDL");

(5) convene meetings of the Executive Committee for the purpose of proposing joint action and discussing and resolving matters of common concern;

(6) organize themselves and agree on a plan for conducting the MDL on behalf of all Plaintiffs;

(7) assess members of the Executive Committee, Liaison Counsel, Federal/State Liaison Counsel, and other counsel performing authorized common benefit work common benefit payments into a Common Benefit "Shared Cost" Fund ("shared cost" being defined below), in amounts and at times they determine to be necessary and appropriate in consultation with the Executive Committee, collect payments, maintain an account, pay generic expenses in accordance with this order, and account to the Executive Committee and the Court upon request as to the collection and use of such funds;

(8) brief and argue motions for the Plaintiffs and file opposing briefs and argue motions and proceedings initiated by other parties (except as to matters specifically directed to individual Plaintiffs and their counsel);

(9) consult with and employ expert witnesses;

(10) maintain time and expense records for work performed, costs incurred and other disbursements made for any potential common benefit claim, proof of potential common benefit claims, and related matters on behalf of the Executive Committee, and report with reasonable regularity, in writing, to the Executive Committee, Liaison Counsel, and Federal/State Liaison Counsel concerning expenses, disbursements, and receipts;

(11) monitor work performed by the Executive Committee, Liaison Counsel, and Federal/State Liaison Counsel and those whose work it has specifically authorized;

(12) perform all tasks necessary to carry out the functions of Lead Counsel and to properly coordinate Plaintiffs' pretrial activities;

(13) form task-specific subcommittees of counsel as appropriate;

(14) authorize Plaintiffs' counsel to initiate case-specific motions and discovery;

(15) designate Plaintiffs' counsel authorized to attend hearings and depositions;

(16) negotiate settlements subject to Court approval on behalf of Plaintiffs;

(17) if there is a settlement, propose a plan of allocation;

(18) prepare and distribute to the parties periodic status reports; and

(19) coordinate and communicate with Defendants' counsel with respect to the matters addressed in this paragraph.

No generic discovery or other common action or work in this litigation will be undertaken on behalf of the Executive Committee except at the direction or with permission of

Lead Counsel; provided, however, that any attorney aggrieved by any refusal of permission may seek Court review of the refusal. In performing these duties as Lead Counsel, Mr. Berman and Ms. Cabraser will focus on economic class claims and Mr. Hilliard will focus on individual Plaintiffs.

B. <u>Plaintiff Liaison Counsel</u>

In Order No. 8, the Court appointed Robin L. Greenwald as Plaintiff Liaison Counsel. Plaintiff Liaison Counsel shall maintain an up-to-date service list of all Plaintiffs' attorneys involved in this MDL. Liaison Counsel shall ensure that all Orders entered by this Court and all papers filed by the Defendants are timely distributed to all Plaintiffs' counsel in the MDL. Liaison Counsel shall coordinate activities and information exchange between the MDL proceedings and the bankruptcy proceedings, including meeting and conferring with New GM to provide the Court joint written updates of the Bankruptcy proceedings as ordered by the Court about matters of significance, including hearings, schedules, and deadlines. In addition, Liaison Counsel shall work with Lead Counsel in scheduling leadership meetings, keeping minutes of these meetings, appearing at Court noticed status conferences, and performing other necessary administrative or logistic functions for the effective and efficient functioning of the MDL, work with State/Federal Liaison Counsel and Defendants' counsel to create a single electronic document depository that will be used in both this MDL and related state and federal cases, coordinate with government agency investigations on behalf of Plaintiffs, and assume any other duties delegated by Lead Counsel.

C. <u>Federal/State Liaison Counsel</u>

In Order No. 8, the Court appointed Dawn M. Barrios as Federal/State Liaison Counsel. Federal/State Liaison Counsel shall be the point of contact between the Court and other counsel with similar actions pending in state courts, advise such parties of developments, and otherwise assist in the coordination of federal/state activities, as recommended in Section 20.313 of the Manual for Complex Litigation, Fourth (the "MCL"). In addition, Federal/State Liaison Counsel shall assume any other duties delegated by Lead Counsel.

D. <u>Executive Committee</u>

Order No. 8 appointed the following counsel to the Plaintiffs' Executive Committee: David Boies, Lance A. Cooper, Melanie L. Cyganowski, Adam J. Levitt, Dianne M. Nast, Peter Prieto, Frank M. Pitre, Joseph F. Rice, Mark P. Robinson, Jr., and Marc M. Seltzer.

The duties and responsibilities of the Executive Committee are as follows. The Executive Committee shall, subject to the prior approval of Lead Counsel:

(1) from time to time consult with Lead Counsel in conducting the Plaintiffs' coordinated pretrial activities and in planning for trial;

(2) establish procedures for documenting and monitoring costs and the computing of potential common benefit time;

(3) consult the MCL to consider recommendations and formation of internal committees *(e.g.,* Law, Discovery, Science, Briefing, Experts, and Trial) on which attorneys who are not designated as Executive Committee members will have the opportunity to serve and have input in the litigation through the committee. Consistent with section 10.22 of the MCL, counsel appointed to leadership positions assume "an obligation to act fairly, efficiently, and economically" and "committees of counsel ... should try to avoid unnecessary duplication of effort";

(4) contribute to the Common Benefit Fund for "shared costs" (as defined below); and

(5) otherwise assist Lead Counsel in their discharge of the following duties and responsibilities:

a. determining and presenting (in briefs, oral argument, or such other fashion as may be appropriate) to the Court and opposing parties the Plaintiffs' position on matters arising during coordinated pretrial proceedings;

b. coordinating the initiation and conduct of discovery on behalf of the Plaintiffs consistent with the requirements of Fed. R. Civ. P. 26, including the preparation of joint interrogatories and requests for production of documents and the examination of witnesses in depositions, except that discovery and motions initiated by Defendants directed to or regarding named individual plaintiffs will be handled by the attorney for those individuals;

c. delegating specific tasks to other counsel in a manner to ensure that coordinated pretrial preparation for the Plaintiffs is conducted effectively, efficiently and economically;

d. entering into stipulations with opposing counsel necessary for the conduct of the MDL;

e. organizing themselves and agreeing on a plan for conducting the MDL on behalf of all Plaintiffs;

f. briefing and arguing motions for the Plaintiffs and filing opposing briefs and arguing motions and proceedings initiated by other parties (except as to matters specifically directed to individual plaintiffs and their counsel);

g. consulting with and employing expert witnesses;

h. convening meetings of Plaintiffs' counsel to consult on matters of common concern;

i. maintaining time and expense records for work performed, costs incurred, and other disbursements made for any potential common benefit claim, proof of potential common benefit claims, and related matters on behalf of the Executive Committee;

j. monitoring work performed by Executive Committee members and those whose work the Executive Committee has specifically authorized;

k. properly coordinating Plaintiffs' pretrial activities;

l. authorizing Plaintiffs' counsel to initiate case specific motions and discovery;

m. negotiating settlements subject to court approval on behalf of Plaintiffs;

n. if there is a settlement, proposing a plan of allocation;

o. preparing and distributing to the parties periodic status reports; and

p. coordinating and communicating with Defendants' counsel with respect to the aforementioned matters.

II. ADOPTION OF CASE MANAGEMENT PROTOCOLS

The Court hereby adopts the following guidelines for the management of case-staffing, timekeeping, cost reimbursement, and related common benefit issues. The recovery of common benefit attorneys' fees and cost reimbursements will be limited to "Participating Counsel." "Participating Counsel" shall be defined as the Lead Counsel, Liaison Counsel, and State/Federal Liaison Counsel, the members of the Executive Committee (along with members and staff of their respective firms), any other counsel authorized by Lead Counsel who desire to be considered for common benefit compensation, or counsel who have been specifically approved by this Court as Participating Counsel prior to incurring any such cost or expense. Counsel are forewarned that no application for approval to incur common benefit fees, costs, or expenses will be considered by this Court unless counsel have first obtained approval from Lead Counsel.

Participating Counsel shall be eligible to receive common benefit attorneys' fees and reimbursement of costs and expenses only if the time expended, costs incurred, and activity in question were (a) for the common benefit of Plaintiffs; (b) appropriately authorized by Lead Counsel; (c) timely submitted; (d) reasonable; and (e) approved by this Court. As detailed below in Parts II.A & II.B, Participating Counsel who seek to recover Court-awarded common benefit attorneys' fees, costs, and expenses in connection with this litigation shall keep a daily, contemporaneous record of their time and expenses, noting with specificity the amount of time, billing rate, and particular activity, along with a brief note indicating the source of authorization for the activity in question.

Participating Counsel, as defined above, shall agree to the terms and conditions herein, including submitting to this Court's jurisdiction and agreeing that this Court has plenary authority regarding the award and allocation of common benefit attorneys' fees and awards for cost and expense reimbursements in this matter.

A. <u>Common Benefit Work</u>

1. <u>Authorization for Compensable Common Benefit Work</u>

Authorized "Common Benefit Work" includes assignments made by Lead Counsel as set forth above. Unless specifically and explicitly authorized in writing, no time spent on developing or processing individual issues in any case for an individual client (claimant), and no time spent on any unauthorized work, will be considered or should be submitted.

Examples of authorized and unauthorized work include, but are not limited to:

(a) **<u>Depositions</u>:** While it is impracticable to impose inflexible rules to cover every conceivable situation, Lead Counsel shall exercise discretion, judgment, and prudence to designate only that number of attorneys to participate in any given deposition that is commensurate with the nature of that deposition so as to avoid over-staffing. Thus, for example, the deposition of a causation expert proffered by Defendants would typically justify the assignment of more attorneys than would the defense of the deposition of one of Plaintiffs' fact witnesses. Time and expenses for Participating Counsel not designated as one of the authorized questioners or otherwise authorized to attend the deposition by Lead Counsel shall not be considered Common Benefit Work but, rather, considered as attending on behalf of such counsel's individual clients. Unnecessary attendance by counsel may not be compensated in any fee application to the Court.

(b) **<u>Periodic Executive Committee Conference Calls and Liaison Counsel Meetings</u>:** Conference calls are held so that individual attorneys are kept up-to-date on the status of the litigation, and participation by listening to such calls is not common benefit work. All attorneys have an obligation to keep themselves informed about the litigation so that they can best represent their respective clients, and that is a reason to listen in on those calls. The attorneys designated by Lead Counsel to run or participate in those calls are working for the common benefit by keeping other attorneys educated about the litigation and their time will be considered for common benefit. During such telephone or conference calls and meetings, there is a presumption that only the authorized active participants' time will qualify for common benefit time.

(c) **<u>Periodic MDL Status Conferences</u>:** Status conferences will be held so that the litigation moves forward and legal issues are resolved with the Court. Individual attorneys are free to attend any status conference held in open court in order to stay up to date on the status of the litigation, but attending and listening to such conferences is not Common Benefit Work. All attorneys have an obligation to keep themselves informed about the litigation so that they can best represent their respective clients. Mere attendance at a status conference will not be considered common benefit time, and expenses incurred in relation thereto will not be considered common benefit expenses. The attorneys designated by Lead Counsel to address issues that will be raised at a given status conference or requested by Lead Counsel to be present at a status conference are working for the common benefit, and their time will be considered for the common benefit. Similarly, any attorney whose attendance at a status conference is specifically requested by the undersigned (or by any other judge presiding over this matter or Court-appointed Special Master) to address a common issue may submit his or her time for evaluation as common benefit time.

(d) **<u>Identification and Work-Up of Experts</u>:** If a Participating Counsel retains an expert without the knowledge and approval of Lead Counsel, time and expenses attributable to the same may not be approved as Common Benefit Work, or the expenses pertaining thereto as Common Benefit Expenses.

(e) **<u>Attendance at Seminars</u>:** Attendance at seminars (e.g., American Association for Justice Section Meetings, Mass Torts Made Perfect, Harris Martin, and similar seminars and Continuing Legal Education programs) shall not qualify as Common Benefit Work, or the expenses pertaining thereto as Common Benefit Expenses.

(f) **<u>Document Review</u>:** Only document review specifically authorized by Lead Counsel and assigned to an attorney will be considered Common Benefit Work. If an attorney elects to review documents that have not been assigned to that attorney by Lead Counsel, that review is not considered common benefit. Unless approved in writing by Lead Counsel, only licensed attorneys may conduct common benefit document review. Descriptions associated with "document review" must contain sufficient detail to allow those reviewing the time entry to generally ascertain what was reviewed. For example, indicating the custodian, search query, or number of document folders reviewed is the kind of description needed.

(g) **<u>Review of Filings and Orders</u>:** All attorneys have an obligation to keep themselves informed about the litigation so that they can best represent their respective clients, and review of briefs and filings made and Orders entered in this litigation is part of that obligation. Only Court-appointed Counsel and those attorneys working on assignments by Lead Counsel that require them to review, analyze, or summarize those filings or Orders in connection with their assignments are doing so for the common benefit. All other counsel are reviewing those filings and Orders for their own benefit and that of their respective clients and such review will not be considered Common Benefit Work.

(h) **<u>Emails and Correspondence</u>:** Except for the Counsel appointed in I. A-D. of this Order, and their assigned attorneys and staff working on this MDL, time recorded for reviewing emails and other correspondence is not compensable unless germane to a specific task being performed by the receiving or sending attorney or party that is directly related to that email or other correspondence and that is for the common benefit of plaintiffs. Thus, for example, review of an email or other correspondence sent to dozens of attorneys to keep them informed on a matter on which they are not specifically working would not be compensable as Common Benefit Work. All attorneys have an obligation to keep themselves informed about the litigation so that they can best represent their clients and that is a reason to review emails and correspondence to a larger group, which involves a matter on which the recipient is not directly and immediately working.

Case 1:14-cv-08247-JMF Document 17 Filed 09/16/14 Page 15 of 21

(i) **Review of Discovery:** All attorneys have an obligation to keep themselves informed about the litigation so that they can best represent their respective clients, and that is a reason to review discovery served in this litigation. Only those attorneys designated by Lead Counsel to review discovery are working for the common benefit and their time accordingly considered Common Benefit Work. All other counsel are reviewing those discovery responses for their own benefit and the benefit of their own clients, and such review will not be considered Common Benefit Work.

(j) **Travel Time:** Travel Time will not be compensable as Common Benefit Work, except to the extent work otherwise compensable as such is performed while in transit.

In the event that Participating Counsel are unsure if the action they are about to undertake is considered Common Benefit Work, they shall ask Lead Counsel in advance as to whether such time may be compensable.

2. Timekeeping and Submission of Time Records

All time must be accurately and contemporaneously maintained. Participating Counsel shall keep contemporaneous billing records of the time spent in connection with Common Benefit Work on this MDL, indicating with specificity the hours and billing rate, along with a brief note indicating the source of authorization for the activity in question and a brief description of the particular activity (such as "conducted deposition of John Doe as authorized by [name of Lead Counsel]"). Time submissions shall be made to Lead Counsel on a monthly basis, by deadlines to be set by Lead Counsel, in accordance with the guidelines set forth herein and using the Monthly Time Report and Expense Report to be distributed by Lead Counsel and which are annexed hereto as Addenda A and B, respectively, so that Lead Counsel may retain those forms for later submission to this Court if and when necessary. The first submission is due on October 15, 2014 and should include all time and expense through September 30, 2014. Thereafter, all time and expense records shall be submitted on the 15th of each month and shall cover the time period through the end of the preceding month. Time entries that are not sufficiently detailed will not be considered for payment of Common Benefit fees. All time for Common Benefit Work by each firm shall be recorded and maintained in tenth-of-an-hour increments. The failure to secure authorization from Lead Counsel to incur Common Benefit time and expenses, or to maintain and timely provide such records or to provide a sufficient description of the activity, will be grounds for denying the recovery of attorneys' fees or expenses in whole or in part. Lead Counsel must maintain all time submissions in a format so that the Court may review any application for fees not only by lawyer but also by task *(e.g.,* all time spent by anyone on responding to a particular motion or attending or preparing for a particular deposition).

B. <u>Common Benefit Expenses</u>

1. <u>Shared Costs</u>

"Shared Costs" are costs that will be paid out of the Executive Committee Fund administered by Plaintiffs' Lead Counsel. Each Executive Committee member, Liaison Counsel and Federal/State Liaison Counsel shall contribute to the Executive Committee Fund at times and in amounts sufficient to cover plaintiffs' expenses for the administration of this MDL. The timing and amount of each assessment will be determined by Plaintiffs' Lead Counsel, in consultation with the Executive Committee, and each assessment will be paid within 30 days as instructed by Plaintiffs' Lead Counsel. Failure to pay assessments will be grounds for the removal from the appointments made in this Order or other common benefit assignments. Shared Costs are costs incurred for the common benefit of Plaintiffs in this MDL as a whole. No client-related costs, save certain costs relating to future cases selected as bellwether cases that will be for the common benefit *(e.g.,* related to liability and causation), shall be considered

Case 1:14-cv-03279-JMF Document 17 Filed 09/16/14 Page 13 of 21

Shared Costs, unless exceptional circumstances exist and are approved by later order of this Court. All Shared Costs must be approved by Lead Counsel prior to payment.

All costs that meet these requirements and fall under the following categories shall be considered Shared Costs and qualify for submission and payment directly from the Executive Committee Fund:

a. court, filing and service costs related to common issues;

b. deposition and court reporter costs for depositions (excluding those that are client-specific);

c. document depository creation, operation, staffing, equipment and administration;

d. Lead Counsel, Liaison Counsel, or Executive Committee administration matters *(e.g.,* expenses for equipment, technology, courier services, long distance, telecopier, electronic service, photocopy and printing, secretarial/temporary staff, etc.);

e. Executive Committee administration matters, such as meetings and conference calls;

f. legal and accountant fees relating to the Executive Committee Fund;

g. expert witness and consultant fees and expenses for experts whose opinions and testimony would be generic and for the common benefit of a substantial number of cases. There shall be no reimbursement for case specific experts, except for liability and causation experts in bellwether cases, at the discretion of the Executive Committee;

h. printing, copying, coding, scanning related to the above (out-of-house or extraordinary firm costs);

i. research by outside third-party vendors/consultants/attorneys, approved by Lead Counsel;

j. translation costs related to the above;

k. bank or financial institution charges;

l. investigative services, approved by Lead Counsel; and

m. any assessment paid by any member firm of the Executive Committee, including particularly funds used for the creation of the common document depository platform and for retaining generic expert witnesses.

Lead Counsel shall prepare and be responsible for distributing reimbursement procedures and the forms associated therewith. Requests for payments from the Executive Committee Fund for Common Benefit expenses shall include sufficient information to permit Lead Counsel and a Certified Public Accountant ("CPA") to account properly for costs and to provide adequate detail to the Court.

2. <u>Held Costs</u>

"Held Costs" are those that will be carried by each attorney in this MDL and reimbursed as and when Lead Counsel and the Executive Committee determines to do so. Held Costs are those that do not fall into the above Shared Costs categories but are incurred for the common benefit of all plaintiffs in this MDL. No client-specific costs can be considered Held Costs, other than certain Common Benefit costs relating to future bellwether cases at the discretion of Lead Counsel and the Executive Committee. Held Costs shall be recorded in accordance with the guidelines set forth herein and on the form provided as Addendum B hereto. They shall be subject to the following limitations:

a. <u>Travel Limitations</u>

Only reasonable expenses will be reimbursed. Except in extraordinary circumstances approved by Lead Counsel, all travel reimbursements are subject to the following limitations:

i. **<u>Airfare</u>:** Ordinarily, only the price of the lowest available, convenient coach fare seat will be reimbursed. Business/First Class Airfare will not be reimbursed. In the event that non-coach air travel is utilized, the attorney shall be reimbursed only to the extent of the lowest available, convenient coach fare, which must be contemporaneously documented. If non-coach, private or charter travel is elected, the applicant is required to document what the lowest available, convenient coach fare in effect at that time was, and that is all that can be reimbursed.

ii. **Hotel:** Hotel room charges for the average available room rate of a business hotel, such as the Hyatt, Hilton, Sheraton, Westin, and Marriott hotels, in the city in which the stay occurred, will be reimbursed. Luxury hotels will not be fully reimbursed but, rather, will be reimbursed at the average available rate of a business hotel.

iii. **Meals:** Meal expenses must be reasonable. Expenses that significantly exceed the meal allowances for federal employees may not be approved for reimbursement. There will be no reimbursement for alcoholic beverages, room service, mini-bar items, or movies.

iv. **Cash Expenses:** Miscellaneous cash expenses for which receipts generally are not available *(e.g.*, tips, luggage handling) will be reimbursed up to $50.00 per trip, as long as the expenses are properly itemized.

v. **Automobile Rental:** Luxury automobile rentals will not be fully reimbursed, unless only luxury automobiles are available. Counsel must submit evidence of the unavailability of non-luxury vehicles. If luxury automobiles are selected when non-luxury vehicles are available, then the difference between the luxury and non-luxury vehicle rates must be shown on the travel reimbursement form and only the non-luxury rate may be claimed.

vi. **Mileage:** Mileage claims must be documented by stating origination point, destination, and total actual miles for each trip. The rate will be the maximum rate allowed by the Internal Revenue Service.

b. Non-Travel Limitations

i. **Long Distance, Conference Call, and Cellular Telephone Charges:** Common Benefit long distance, conference call, and cellular telephone charges must be documented as individual call expenses in order to be compensable. Copies of the telephone bills must be submitted with notations as to which charges relate to

Case 1:14-cv-08277-JMF Document 17 Filed 09/04/14 Page 16 of 21

the MDL. Such charges are to be reported at actual cost.

ii. **Shipping, Overnight, Courier, and Delivery Charges:** All claimed Common Benefit shipping, overnight, courier, or delivery expenses must be documented with bills showing the sender, origin of the package, recipient, and destination of the package. Such charges are to be reported at actual cost.

iii. **Postage Charges:** A contemporaneous postage log or other supporting documentation must be maintained and submitted for Common Benefit postage charges. Such charges are to be reported at actual cost.

iv. **Telefax Charges:** Contemporaneous records should be maintained and submitted showing faxes sent and received. The per-fax charge shall not exceed $0.50 per page.

v. **In-House Photocopy:** A contemporaneous photocopy log or other supporting documentation must be maintained and submitted. The maximum copy charge is $0.15 per page.

vi. **Computerized Research- Lexis, Westlaw, or Bloomberg:** Claims for Lexis, Westlaw, Bloomberg, or other computerized legal research expenses should be in the exact amount charged to the firm and appropriately allocated for these research services.

c. Verification

The forms detailing expenses shall be certified by an attorney with authority in each firm attesting to the accuracy of the submissions. Attorneys shall provide receipts for all expenses. Credit card receipts (not the monthly statements) are an appropriate form of verification so long as accompanied by a declaration from counsel that the charge was incurred for the common benefit. Hotel costs must be proven with the full hotel invoice. The description of unclaimed expenses on the invoice may be redacted.

III. RESERVATION OF RIGHTS

Nothing in this order imposes any obligations on defendants or prejudices any rights defendants have and may assert. Defendants reserve all of their rights to object to all motions, stipulations, discovery, filings, or other proceedings filed, served, or proposed by any plaintiffs. Nothing in this order shall be construed as requiring particular motions, stipulations, discovery, filings, or any other action by a party, nor shall this order be interpreted as requiring any particular pre-trial or trial proceedings.

SO ORDERED.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK

IN RE: GENERAL MOTORS LLC IGNITION SWITCH LITIGATION *This Document Relates to All Actions*	INDEX NO. 14-MD-2543 (JMF); 14-MC-2543 **NOTICE OF ERRATA AND CORRECTION TO THE CONSOLIDATED CLASS ACTION COMPLAINT AGAINST NEW GM FOR RECALLED VEHICLES MANUFACTURED BY OLD GM AND PURCHASED BEFORE JULY 11, 2009** **JURY TRIAL DEMANDED**

On October 14, 2014, Plaintiffs filed their Consolidated Class Action Complaint against New GM for Recalled Vehicles Manufactured by Old GM and Purchased Before July 11, 2009 [Dkt. 347]. Plaintiffs hereby make the following corrections to that complaint:

Class Definitions

1. On page 253, in paragraph 828 ("The Nationwide Class"), the text "2006-2009 Chevrolet Impala" is replaced with "2000-2009 Chevrolet Impala".

2. On page 253, in paragraph 829 (The State Classes"), the text "2006-2009 Chevrolet Impala" is replaced with "2000-2009 Chevrolet Impala".

Other Errata

3. On page 1, paragraph 3, the text "Complaint is bought on behalf" is replaced with "Complaint is brought on behalf".

4. On page 15, the text "On or about August 7, 2013, Mr. Malaga purchased" is replaced with "On or about December 8, 2006, Mr. Malaga purchased".

5. On page 20, the text "Turner Clifford" is replaced with "Clifford Turner".

6. On page 20, the text “Mr. Clifford” is replaced with “Mr. Turner”.

7. On page 87, in paragraph 239, the text “Both Old and N that” is replaced with “Both Old GM and later New GM knew that”.

8. On page 91, in paragraph 248, the text “demonstrates that N that” is replaced with “demonstrates that Old GM and later New GM knew that”.

9. On page 100, in paragraph 283, the text “engineers at N that” is replaced with “engineers at New GM knew that”.

10. On page 110, in paragraph 308, on page 110, the text “Old GM and later N that” is replaced with “Old GM and later New GM knew that”.

11. On page 189, in paragraph 553, the text “Once again, N of the dangerous airbag” is replaced with “Once again, Old GM and later New GM knew of the dangerous airbag”.

12. On page 204, in paragraph 623, the text “Once again, N of the dangerous brake” is replaced with “Old GM and later New GM knew of the dangerous brake”.

13. On page 217, in paragraph 698, the text “Yet again, N of the shift cable defect” is replaced with “Yet again, Old GM and later New GM knew of the shift cable defect”.

14. On page 261, in paragraph 857, the text “Old and N that the Defective Vehicles” is replaced with “Old GM and later New GM knew that the Defective Vehicles”.

15. On page 279, in paragraph 936, the text “Plaintiffs also seek” is replaced with “The Alaska Class also seeks”.

16. On page 365, in paragraph 1386, the text “Old GM and N or should have known that their conduct” is replaced with “Old GM and later New GM knew or should have known that their conduct”.

17. On page 466, paragraphs 1918 and 1919 should be combined into one paragraph that reads "In the event the Court declines to certify a nationwide Class under Michigan law, Plaintiffs bring this claim on behalf the Missouri Class."

18. On page 569, in paragraph 2465, the text "Old GM was provided notice" is replaced with "Old GM and New GM were provided notice".

19. On page 569, in paragraph 2466, the text "result of Old GM's breach" is replaced with "result of Old GM and New GM's breach".

20. A corrected version of the "Consolidated Class Action Complaint against New GM for Recalled Vehicles Manufactured by Old GM and Purchased Before July 11, 2009" is attached hereto as Exhibit A.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 20 of 387

INTRODUCTION

1. This Consolidated Complaint ("Complaint") is filed as a civil action under the authority and direction of the Court as set forth in Section III of its August 15, 2014 Order No. 8. It is intended to serve as the Plaintiffs' Master Class Action Complaint for purposes of discovery, pre-trial motions and rulings (including for choice of law rulings relevant to Rule 23 of the Federal Rules of Civil Procedure, and class certification itself), and the determination and trial of certified claims or common questions in these multi-district litigation ("MDL") proceedings with respect to millions of vehicles recalled by New GM, that were originally sold by Old GM.

2. Plaintiffs bring this action for a Nationwide Class of all persons in the United States who either bought or leased a vehicle with one of the ignition switch related defects, as defined herein ("Defective Vehicle") prior to the Bankruptcy Sale Order and: (i) still own or lease the vehicle, or (ii) sold the vehicle on or after February 14, 2014; or (iii) owned or leased a Defective Vehicle that was declared a total loss after an accident on or after February 14, 2104 and, as set forth in the CLASS ACTION ALLEGATIONS section of this Complaint, State Classes of such purchasers (collectively, the "Classes").

3. This case involves New GM's egregious and ongoing failure to disclose and affirmative concealment of a known safety defect in Old GM-manufactured vehicles. This Complaint is brought on behalf of the Classes for recovery of damages, statutory penalties, and injunctive relief/equitable relief against New GM as the sole Defendant. This Complaint asserts each of the Classes' claims for relief on two distinct and separate bases of liability against New GM: First, this Complaint asserts each of the claims for relief herein based on New GM's own wrongful conduct and breaches of its own independent, non-derivative duties

toward the Classes. Second, this Complaint alternatively asserts claims on behalf of the Classes against New GM for its liability as a successor and mere continuation of Old GM.

4. This Complaint, consistent with Fed. R. Civ. P. 1's directive to secure the "just, speedy and inexpensive determinations of every action and proceeding," sets forth those facts relating to the unprecedented abnegation by New GM of basic standards of safety, truthfulness, and accountability, to the detriment of millions of consumers and the public at large, that are capable of determination in this MDL. It draws upon an array of sources, including but not limited to documents GM recently produced to the National Highway Traffic Safety Administration ("NHTSA"), the House Energy & Commerce Committee, and the results of an internal investigation overseen by Anton R. Valukas ("Valukas Report").[1] These documents include tens of thousands of pages of unheeded consumer complaints.

5. This Complaint neither waives nor dismisses any claims for relief against any defendant not included in this pleading that are asserted by any other plaintiffs in actions that have been or will be made part of this MDL proceeding, except by operation of the class notice and any opt-out provisions on claims or common questions asserted in this Complaint and certified by this Court. Certain claims for certain parties may, consistent with 28 U.S.C. § 1407 and the caselaw thereunder, be matters for determination on remand by transferor courts.

6. An auto manufacturer should never make profits more important than safety and should never conceal defects that exist in its vehicles from customers or the public. New GM Vehicle Safety Chief Jeff Boyer acknowledged that: "Nothing is more important than the safety of our customers in the vehicles they drive."

[1] These sources are referred to as "GMNHTSA," "GMHEC," and the "Valukas Report." Other sources are described herein

7. The first priority of a car manufacturer should be to ensure that the vehicles who bear its brands are safe, and particularly that its vehicles have operable ignition systems, airbags, power steering, power brakes, seatbelt pretensioners, and other safety features that can prevent or minimize the threat of death or serious bodily harm to the vehicle's occupants.

8. The Transportation Recall Enhancement, Accountability and Documentation Act ("TREAD Act")[2], its accompanying regulations, and state statutory and common law require prompt disclosure of serious safety defects known to a manufacturer.[3] If it is determined that the vehicle is defective, the manufacturer may be required to notify vehicle owners, purchasers, and dealers of the defect, and may be required to remedy the defect.[4]

9. Millions of vehicles designed, manufactured, and sold by Old GM have a safety defect such that the vehicle's ignition switch inadvertently moves from the "run" position to the "accessory" or "off" position during ordinary driving conditions, resulting in a loss of power, vehicle speed control, and braking, as well as a failure of the vehicle's airbags to deploy. These vehicles are referred to in this Complaint as "Defective Vehicles."

10. In February and March of 2014, New GM, which has assumed the liabilities of Old GM for the conduct at issue in this Complaint, and which has independent and non-derivative duties of candor and care based upon its own knowledge and conduct, issued its first set of recalls of various models due to the defective ignition switch. The recalls encompassed 2.19 million vehicles in the United States and included the following models of cars manufactured by Old GM: 2005-2009 Cobalts; 2007-2009 Pontiac G5s; 2006-2009 Chevrolet HHRs and Pontiac Solstices; 2005-2006 Pontiac Pursuits; 2003-2007 Saturn Ions; and 2007-2009 Saturn Skys.

[2] 49 U.S.C. §§ 30101-30170.
[3] 49 U.S.C. § 30118(c)(1) & (2).
[4] 49 U.S.C. § 30118(b)(2)(A) & (B).

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 23 of 387

11. The ignition switch systems in these vehicles are defective for several reasons, including (a) the ignition switch is too weak to hold the key in place in the "run" position; (b) the low position of the switches in the Defective Vehicles, as exacerbated by the use of a "slotted" key; and (c) they cause the airbags to become inoperable when the ignition switch is in the "accessory" or "off" position. As NHTSA's Acting Administrator testified in recent Congressional hearings, a vehicle's airbags should deploy whenever the car is moving—even if the ignition switch moves out of the "run" position.

12. On June 23, 2014, New GM notified NHTSA and consumers that it was issuing a second recall for Defective Vehicles (the "June recall"). Here, New GM recalled 3.14 million vehicles. New GM characterized the June recall as relating to the design of the ignition key with a slot (rather than a hole), which allows the key and the key fob to hang lower down in the vehicle where it is vulnerable to being hit by the driver's knee. Despite this delineation, this "key slot defect" is substantially identical to the ignition switch defect that gave rise to the earlier recall and creates the same safety risks and dangers.

13. According to documents on NHTSA's website, 2,349,095 of the vehicles subject to the June recall were made by Old GM. 792,636 vehicles were made and sold by New GM. The Defective Vehicles made by Old GM with the ignition key slot defect include:

- 2005-2009 Buick Lacrosse
- 2006-2009 Buick Lucerne
- 2004-2005 Buick Regal LS & GS
- 2000-2005 Cadillac Deville
- 2007-2009 Cadillac DTS
- 2006-2009 Chevrolet Impala
- 2006-2007 Chevrolet Monte Carlo

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 24 of 387

14. Like the ignition switch defect that is the subject of the February/March recall, the ignition key slot defect poses a serious and dangerous safety risk because the key in the ignition switch can rotate and consequently cause the ignition to switch from the "on" or "run" position to "off" or "accessory" position. This, in turn, may result in a loss of engine power, stalling, loss of speed control, loss of power steering, loss of power braking, and increase the risk of a crash. Moreover, as with the ignition switch defect, because of this defect, if a crash occurs, the airbags are unlikely to deploy.

15. New GM has tried to characterize the recall of these 3.14 million vehicles as being different than the ignition switch defect in the February/March recall when in reality it is for exactly the same defect, posing the same safety risks. New GM has attempted to distinguish the ignition key slot defect from the ignition switch defect to provide it with cover and an explanation for why it did not recall these 3.14 million vehicles much earlier, and allow New GM to provide a more limited, cheap and ineffective "fix" in the form of a key with hole (as opposed to a slot).

16. On July 2-3, 2014 New GM announced it was recalling 7.29 million Defective Vehicles due to "unintended key rotation" (the "July recall"). The vehicles with the unintended key rotation defect were built on the same platform and with defective ignition switches, likely due to weak detent plungers just like the other Defective Vehicles. The Old GM vehicles implicated in the July recall are: 2000-2005 Chevrolet Impalas and Monte Carlos; 1997-2005 Chevrolet Malibus; 1999-2004 Oldsmobile Aleros; 1999-2005 Pontiac Grand Ams and 2004-2008 Pontiac Grand Prixs; certain 2003-2009 Cadillac CTSs; and certain 2004-2006 Cadillac SRX vehicles.

17. As with the vehicles subject to the June recall, New GM has downplayed the severity of the "unintended key rotation" defect, and its recall offers a similarly cheap and ineffective "fix" in the form of new keys. New GM is *not* upgrading the ignition switches in these vehicles, altering the placement of the ignition so that it is not placed low on the steering column and is not correcting the algorithm that immediately disables the airbags as soon as the Defective Vehicle's ignition switch leaves the "run" position.

18. Collectively these three groups of recalls (as well as a yet another very recent recall first posted on the NHTSA website on September 9, 2014 involving unintended ignition key rotation defects and another nearly 47,000 vehicles, including 2008-2009 Pontiac G8s) all relate to defects in the ignition switch system that New GM could and should have remedied years ago. The vehicles in these recalls are the "Defective Vehicles."

19. From at least 2005 to the present, both Old GM and New GM received reports of crashes and injuries that put Old GM and New GM on notice of the serious safety issues presented by its ignition switch system. Given the continuity of engineers, general counsel, and other key personnel from Old GM to New GM, to say nothing of the access to Old GM's documents, New GM was aware of the ignition switch defects *from the very date of its inception* pursuant to the July 5, 2009 bankruptcy Sale Order, which became effective on July 11, 2009.

20. Despite the dangerous, life-threatening nature of the ignition switch defects, including how the defects affect critical safety systems, New GM concealed the existence of the defects and failed to remedy the problem.

21. The systematic concealment of known defects was deliberate, as both Old and New GM followed a consistent pattern of endless "investigation" and delay each time they

became aware (or aware yet again) of a given defect. In fact, recently revealed documents show that both Old and New GM valued cost-cutting over safety, trained their personnel to *never* use the word "defect," "stall," or other words suggesting that any GM-branded vehicles are defective, routinely chose the cheapest part supplier without regard to safety, and discouraged employees from acting to address safety issues.

22. According to the administrator of NHTSA, Old and New GM worked to hide documents from the government regulator and to keep people within the Companies from "connecting the dots" to keep information secret.

23. New GM's CEO, Mary Barra, has admitted in a video message that: "Something went wrong with our process in this instance, and terrible things happened." But that admission, and New GM's attempt to foist the blame on its parts supplier and engineers, lawyers and others whom it has now terminated, are cold comfort for Plaintiffs and the Class.

24. As a result of the disclosure of these defects and Old and New GM's independent roles in concealing their existence, the value of Defective Vehicles has diminished. For example, a 2007 Saturn Ion sedan is estimated to have diminished in value by $251 in March 2014 as a direct result of these disclosures of unlawful conduct. A 2007 Saturn Sky was down $238.

25. But there is more. In the first eight months of 2014, New GM announced at least 60 additional recalls, bringing the total number of recalled vehicles up to more than *27 million*. The unprecedented scope of these recalls has completely belied the Companies' claims that they made reliable and safe cars. As a result of these further revelations the Defective Vehicles suffered additional diminished value. For example, the 2007 Saturn Ion sedan's estimated diminution was $472 in September 2014 and the 2007 Saturn Sky had $686

in diminished value. From its very inception, New GM had the knowledge, the choice, the opportunity, and the responsibility to prevent personal and economic harm by timely and properly recalling the Defective Vehicles and timely and properly correcting the other safety defects. The economic harm to millions of customers that manifested upon the long-delayed recalls and revelation of New GM's ongoing concealment of these defects could have been prevented by timely discharge of its duties. This Complaint seeks the redress now available at law and in equity for New GM's failure to do so.

JURISDICTION AND VENUE

26. This Court has diversity jurisdiction over this action under 28 U.S.C. §§ 1332(a) and (d) because the amount in controversy for the Class exceeds $5,000,000, and Plaintiffs and other Class members are citizens of a different state than Defendant.

27. This Court has personal jurisdiction over Plaintiffs because Plaintiffs submit to the Court's jurisdiction. This Court has personal jurisdiction over New GM because it conducts substantial business in this District, and some of the actions giving rise to the complaint took place in this District.

28. Venue is proper in this District under 28 U.S.C. § 1391 because New GM, as a corporate entity, is deemed to reside in any judicial district in which it is subject to personal jurisdiction. Additionally, New GM transacts business within this District, and some of the events establishing the claims arose in this District. Additionally, New GM requested that the Judicial Panel on Multi-District litigation transfer and centralize the ignition defect class actions filed by Plaintiffs to this District and the Judicial Panel has done so.

29. Pursuant to this Court's direction that new plaintiffs can file directly in the MDL without first filing in the district in which they reside, new plaintiffs file this action as if it had been filed in the judicial district in which they reside.

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/14/15 Page 28 of 387

PARTIES

I. Plaintiffs

30. Unless otherwise indicated, all Plaintiffs below purchased their GM-branded vehicles primarily for personal, family, and household use.

31. Unless otherwise indicated, all Plaintiffs' vehicles described below were manufactured, sold, distributed, advertised, marketed, and warranted by GM.

Debra Forbes—Alabama: Plaintiff and proposed Nationwide and Alabama State Class Representative Debra Forbes is a resident and citizen of Geneva, Alabama. Ms. Forbes purchased a new 2007 Chevrolet Cobalt in 2007 in Fort Walton Beach, Florida for $16,000. Her vehicle is covered by a seven-year warranty that expires at the end of 2014. Among other incidents consistent with ignition switch shutdown, Ms. Forbes' steering locked up on three or four occasions, in May or June 2010, fall 2010, and spring 2011, all on normal road conditions and while she was driving approximately 25-30 miles per hour. Each time she had to slam on her brakes and manipulate the ignition switch to unlock the steering. Although the ignition switch on Ms. Forbes's car has been repaired, other repairs are incomplete, pending the arrival of parts. The book value of Ms. Forbes' vehicle is presently only approximately $6,000. She would not have purchased her vehicle if she knew of the problems with the ignition switch.

Aaron Henderson—Alabama: Plaintiff and proposed Nationwide and Alabama State Class Representative Aaron Henderson is a resident and citizen of Buhl, Alabama. Mr. Henderson purchased a new 2007 Saturn Ion 3 in September, 2006, in Madison, Wisconsin for approximately $17,500. At the time Mr. Henderson purchased his new Saturn it was under warranty. Mr. Henderson has experienced two accidents in this car—one on December 7, 2012, and the other on February 23, 2014. The airbags failed to deploy in both accidents, and

Mr. Henderson suffered minor injuries as a result. Mr. Henderson has spent approximately $9,000 to repair his vehicle following these accidents. Mr. Henderson did not learn of the ignition switch defects until March of 2014. In May of 2014, the ignition switch recall repair work was performed on his vehicle. Mr. Henderson would not have purchased the vehicle if he had known of the problems with the ignition switch.

Marion Smoke—Alabama: Plaintiff and proposed Nationwide and Alabama State Class Representative Marion Smoke is a resident and citizen of Elmore, Alabama. Ms. Smoke purchased a new 2005 Chevy Cobalt the week of May 5, 2005 in Montgomery, Alabama, for $19,000. At the time Ms. Smoke purchased her new Cobalt, she also purchased the manufacturer’s warranty. Ms. Smoke’s Cobalt unexpectedly shut off on at least seven separate occasions, all of them while she was driving on highways. She has also had trouble with the steering wheel being hard to turn making it difficult to drive. As a result of the issues with her vehicle and ignition switch recall and associated risks, she fears driving her vehicle despite having the recall work performed on her vehicle in April of 2014. She believes the value of her vehicle has been diminished as a result of the defects. Ms. Smoke feels that the safety of the vehicle was misrepresented, and she would not have purchased this car if GM had been honest about the safety defects.

Grace Belford—Arizona: Plaintiff and proposed Nationwide and Arizona State Class Representative Grace Belford is a resident and citizen of Phoenix, Arizona. Ms. Belford purchased a new 2005 Chevrolet Cobalt in October 2005, in Phoenix, Arizona for $18,900. Ms. Belford also purchased the warranty for her Cobalt. On two separate occasions, Ms. Belford’s ignition has unexpectedly shut off after her vehicle went over a bump in the road. Ms. Belford did not learn of the ignition switch defects until March of 2014. She immediately requested a loaner vehicle, but she had no choice despite her concerns to continue to drive the Cobalt to work, as it was her only form of transportation. It took about three months for the recall repair work to be completed on Ms. Belford's vehicle. Ms. Belford had planned to use her Cobalt as a down payment on a new vehicle, but the resale value of her Cobalt was diminished due to the ignition switch defect. Ms. Belford traded in her Cobalt in August of 2014. She was only offered $3,000 for the vehicle - $2,000 less than current Kelley Blue Book value. Ms. Belford would never have purchased the 2005 Chevrolet Cobalt had she known about the defects and GM's indifference with regard to the safety and reliability of its vehicles.

Camille Burns—Arkansas: Plaintiff and proposed Nationwide and Arkansas State Class Representative Camille Burns is a resident and citizen of Pine Bluff, Arkansas. Ms. Burns purchased a used 2006 Chevrolet Cobalt on or about November 1, 2006, from Smart Chevrolet in White Hall, Arkansas, for over $16,000. At the time of purchase, the car was still covered under warranty. Ms. Burns recalls reading that GM and Chevrolet-branded vehicles were great cars with reliable parts. Ms. Burns' Cobalt shutdown "too many times to count"—approximately two to three times per week between June 2014 and the time she traded the vehicle in around July 14, 2014. These unexpected shutdowns occurred when Ms. Burns was pulling out into traffic, backing up, or turning her car. Each time she would be forced to restart the car. The last time it shut off suddenly, it almost caused an accident. She also experienced a loss of power steering while backing out of her driveway. Ms. Burns had her car checked by an independent repair shop, but they could not diagnose the problem. Upon calling a GM dealership about the ignition recall, the dealership refused to provide her a loaner car. But when she called GM directly, they advised her that she should get out of the car immediately. Although her Cobalt had been paid off, based on the repeated shutdowns,

Case 1:14-md-02543-JMF Document 1579-1 Filed 12/03/15 Page 31 of 837

GM's advice, and GM's inability to fix it, Ms. Burns felt compelled to trade in the Cobalt for a safer vehicle. On or about July 14, 2014, she traded it to Smart Hyundai and received only $2,500. The new car payment was a financial hardship. Ms. Burns asserts that the Cobalt suffered a diminution of value due to the ignition switch defects, the recalls, and the surrounding publicity. Ms. Burns would not have purchased the Cobalt, or she would have paid less for it, had she known about its defects.

Patricia Barker—California: Plaintiff and proposed Nationwide and California Class Representative Patricia Barker is a resident and citizen of Wilmington, California. Ms. Barker purchased a new 2005 Saturn Ion in Torrance, California in March 2005 for approximately $18,000. The car was covered under the standard manufacturer's warranty, and she also purchased an extended warranty. She chose the Saturn, in part, because she wanted a safely-designed and manufactured vehicle. She saw advertisements for Old GM Vehicles before she purchased the Saturn and, although she does not recall the specifics of the advertisements, she does recall that safety and quality were consistent themes across the advertisements she saw. These representations about safety and quality influenced Ms. Barker's decision to purchase the Saturn. She has experienced power steering failure in her car on at least two separate occasions. In both instances she was able to reboot the power steering after restarting the car. Ms. Barker did not learn of the ignition switch defects until about February 2014 when she received an undated recall notice in the mail. She then saw a commercial notifying affected GM drivers that they could receive a loaner car while waiting for backordered recall parts to arrive. When she went to a local GM dealership they gave her a 2014 Chevy Impala. She drove this car for forty-five days until her car was repaired in April 2014. Only after she returned the loaner did she find out that it was under recall for the same ignition issue as her

Case 1:14-md-02543-JMF Document 579-1 Filed 01/13/15 Page 32 of 387

own vehicle. Ever since the recall repair has been completed on her car she has some difficulty turning the key in her ignition. Ms. Barker would not have purchased this car had she known about the defects in her GM vehicle.

Michael and Sylvia Benton—California: Plaintiffs and proposed Nationwide and California State Class Representatives Michael and Sylvia Benton are residents and citizens of Barstow, California. Mr. and Mrs. Benton purchased a used 2005 Chevrolet Cobalt on January 10, 2009, in Barstow, California, for $12,789.76. The Bentons chose the Cobalt, in part, because they wanted a safely designed and manufactured vehicle. They saw advertisements for vehicles before they purchased the Cobalt, and, although they do not recall the specifics of the advertisements, they do recall that safety and quality were consistent themes across the advertisements they saw, which influenced their purchase decision. The vehicle was not covered under warranty when they purchased it. Mr. and Mrs. Benton purchased gap warranty for the Cobalt for a term of 48 months. The Bentons' vehicle has shutdown at least 20 times. Mr. and Mrs. Benton did not learn of the ignition switch defects until March 2014. In April 2014, they took their Cobalt to the dealership in their area to have the recall work performed. They were provided a loaner vehicle. The Bentons still fear driving their vehicle due to the ignition switch recall and the risk posed by the ignition switch defects. They would not have purchased this car, or would have paid less than they did, if GM was honest about the safety defects.

Melvin Cohen—California: Plaintiff and proposed Nationwide and California State Class Representative Melvin Cohen is a resident and citizen of California City, California. Mr. Cohen purchased a new 2006 Chevrolet Cobalt on January 13, 2006, from Rally Auto Group in Palmdale, California, for $22,799.80. He does not believe his vehicle was covered by written warranties. Mr. Cohen had a general impression that GM was a quality brand and that the vehicle was safe and reliable. In October of 2008, Mr. Cohen's wife, Karin was driving the vehicle when it suddenly shut off while making a left turn into a gas station in California City, California. Ms. Cohen was unable to control the vehicle once it shut off, and it was hit by another vehicle when it strayed out of its lane. The airbags did not deploy even though the impact was significant enough to total the vehicle. Mr. Cohen would not have purchased the vehicle had he known of the defects.

Esperanza Ramirez—California: Plaintiff and proposed Nationwide and California State Class Representative Esperanza Ramirez is a resident and citizen of Los Angeles, California. Ms. Ramirez purchased new 2007 Saturn Ion on March 13, 2007, at a dealership in California for $27, 215. Her vehicle was covered by a warranty at the time of purchase. Ms. Ramirez has experienced several incidents consistent with the ignition defects, and is unable to drive the car on freeways or for long distances. She had seen commercials about Saturns featuring families that trusted Saturns. Had she known of the problems with her GM car, she would not have purchased it.

Kimberly Brown—California: Plaintiff and proposed Nationwide and California State Class Representative Kimberly Brown is a resident and citizen of Palmdale, California. Ms. Brown purchased a new 2006 Chevrolet HHR on January 7, 2007, at Rally Auto Group in Palmdale, California, for $30,084. Her car was under a 48-month or 100,000 mile warranty at the time she purchased it. She and her husband relied on the advertising posted at the GM dealership where they purchased the vehicle, as well as the GM brand name and its purported reputation for safety and quality, which were consistent with the representations at the GM dealership. Between 2007 and 2011, Ms. Brown's vehicle inadvertently shutdown four or five

Case 1:14-md-02543-JMF Document 1579-1 Filed 01/06/16 Page 34 of 837

times a year, and on several other occasions she had to use heavy force to turn the wheel. Between 2012 and 2014, her vehicle inadvertently shutdown eight or nine times a year, and on several other occasions she had to use heavy force to turn the wheel. Her vehicle typically shuts down while going over bumpy roads, speed bumps, or railroad tracks. It will shutdown while the gear is in drive and the key is in the "on" position. To remedy the problem she puts the gear into neutral and restarts the car. Although the GM dealership indicated that it fixed the ignition switch defect during a post-recall repair in May of 2014, Ms. Brown and her husband have experienced their ignition shutting down at least five times since then. In September 2014, she returned to the dealer to try to have the ongoing shutdowns remedied, and she had to pay out of pocket for a loaner vehicle. Ms. Brown would not have paid the purchase price she paid if she had known GM was manufacturing and selling vehicles plagued with defects, and was not committed to the safety and reliability of its vehicles.

Javier Malaga—California: Plaintiff and proposed Nationwide and California State Class Representative Javier F. Malaga is a resident and citizen of in Playa Del Rey, California. On or about December 8, 2006, Mr. Malaga purchased a used 2006 Cobalt LS, which he still owns, for $15,979.08. When Mr. Malaga purchased the 2006 Cobalt LS, it was not covered by a written warranty. On two occasions Mr. Malaga was unable to turn on the engine with his ignition key. Mr. Malaga returned the car to a dealer for repairs on or about February 15, 2008, and March 25, 2010. One of GM's main selling points has been the efficiency, cost effectiveness, and safety of its vehicles. Mr. Malaga's purchase was based, in significant part, on these representations and assertions by GM. If GM had disclosed the nature and extent of its problems, Mr. Malaga would not have purchased a GM vehicle, or would not have purchased the vehicle for the price paid.

William Rukeyser—California: Plaintiff and proposed Nationwide and California State Class Representative William Rukeyser is a resident and citizen of Davis, California. After researching vehicles on the GM website, Mr. Rukeyser purchased a new 2008 Chevrolet Cobalt on September 4, 2008, in Lodi, California, for $16,215.54. Mr. Rukeyser purchased the manufacturer's warranty at the same time. Mr. Rukeyser had the ignition switch replaced on August 8, 2014. He was provided a loaner vehicle during the two months it took to complete the recall repair work. Mr. Rukeyser would not have purchased this car if GM had been honest about the safety defects.

Yvonne Elaine Rodriguez—Colorado: Plaintiff and proposed Nationwide and Colorado State Class Representative Yvonne Elaine Rodriguez is a resident and citizen of Lakewood, Colorado. She purchased a new 2007 Chevrolet HHR on December 5, 2006, at EMICH Chevrolet in Lakewood, Colorado, for $20,735.87. At the time of purchase, the HHR was covered by Chevrolet's standard warranty. Ms. Rodriguez did not find out about the ignition defect and the safety risk it posed until she received a recall notice in March 2014. After that point, Ms. Rodriguez stopped using her HHR for any long trips or highway driving, for fear of the safety of her family and herself. As soon as she received the recall notice, Ms. Rodriguez attempted to have the recall repair performed on her vehicle, but was informed that the parts were not available. Ms. Rodriguez continued to try to schedule the repair, but because of a lack of parts, she was not able to get her HHR repaired until June 2014. Even after the recall repair, however, Ms. Rodriguez does not feel her HHR is safe, and she and her family continue to avoid long trips and highway driving with the HHR. Ms. Rodriguez would not have purchased her vehicle if she had known that GM cars were plagued by defects and produced by a company that is not committed to safety.

Case 1:14-md-02543-JMF Document 1579-1 Filed 12/03/15 Page 36 of 337

Dawn Orona—Colorado: Plaintiff and proposed Nationwide and Colorado State Class Representative Dawn Orona is a resident and citizen of Limon, Colorado. Ms. Orona purchased a new 2005 Chevrolet Cobalt on August 6, 2005, from Century 1 Chevrolet in Broomfield, Colorado, for a total sale price of $35,053.92. She financed a portion of the sales price, paid a portion of the sales price by trading in an older Chevrolet vehicle, and paid the balance of the purchase in cash. Ms. Orona's vehicle was covered by a warranty and the warranty had not expired at the time the vehicle was totaled in an accident. In the years prior to her purchase and around the time of her purchase, Ms. Orona viewed multiple commercials in which GM touted the safety of its vehicles, and she believed she was purchasing a vehicle that was safe and defect-free. Ms. Orona's vehicle spontaneously shut off a number of times within the first several months of purchasing it. Approximately six months after purchasing the 2006 Chevrolet Cobalt, Ms. Orona and her husband experienced a power loss while attempting to complete a turn on a curve. Although her husband applied both feet on the brakes, the car jumped the curb and plowed into a brick wall. The impact of the crash was severe enough to break the front axle, totaling the vehicle, but the air bags never deployed. Ms. Orona would not have purchased the vehicle had she known of the defects.

Michael Pesce—Connecticut: Plaintiff and proposed Nationwide and Connecticut State Class Representative Michael Pesce is a resident and citizen of Waterbury, Connecticut. Mr. Pesce purchased a used 2006 Chevrolet Cobalt on May 29, 2008, in Waterbury, Connecticut, for approximately $12,000. When Mr. Pesce bought the car it was still covered under a three-year, 36,000-mile warranty. Mr. Pesce was a repeat GM customer and trusted the GM brand when he decided to purchase his Cobalt. This was Mr. Pesce's fifth time owning a GM vehicle. In August 2011, Mr. Pesce's 18 year-old son was driving the car on a major highway in Connecticut when the vehicle lost all power. His son was able to pull over and restart the car, but after another few minutes it died again. Mr. Pesce paid to have the vehicle looked over and repaired, but he now believes the problem was related to the ignition switch defects. Mr. Pesce did not learn about the ignition switch defects until March 2014. The recall repair work was not performed until September 2014, more than six months later. While he waited for the repair work, Mr. Pesce only drove the vehicle if there was an emergency because he was afraid to drive the car. Mr. Pesce does not feel this car is worth what he paid for it and will not buy another GM vehicle.

Lisa Teicher—Connecticut: Plaintiff and proposed Nationwide and Connecticut State Class Representative Lisa Teicher is a resident and citizen of Manchester, Connecticut. Ms. Teicher purchased a used 2005 Chevrolet Cobalt on January 24, 2008, from Gengras Chevrolet in Hartford, Connecticut, for $7,769.22. Her vehicle was covered by written warranty that has now expired. Ms. Teicher received a direct mailing from Gengras Chevrolet advertising the vehicle she purchased. These and other consistent representations at the dealership left her with the impression that the vehicle was safe and reliable. She believed her vehicle was safe and defect free when she purchased it. Ms. Teicher's vehicle has spontaneously turned off on two occasions. In June 2008, her vehicle locked up and shut off while she was driving on an exit ramp on Route 2 in Connecticut. She was unable to control the vehicle and ended up hitting a barrier on the road. She hit her head on the dash and was injured, but hospitalization was not required. The airbags did not deploy during this collision. In May of 2009, Ms. Teicher's vehicle again shut off while she was driving to work on I-84 in Connecticut just before Exit 64. She was able to bring the vehicle to a stop and re-start the vehicle again. On June 25, 2014, she had her ignition switch replaced by Carter Chevrolet,

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 38 of 337

located in Manchester, Connecticut, in connection with the recalls GM initiated in response to the ignition switch defects. Ms. Teicher would not have purchased the vehicle had she known of the defects.

Steven Diana—Florida: Plaintiff and proposed Nationwide and Florida State Class Representative Steven Diana is a resident and citizen of Sebastian, Florida. Mr. Diana purchased a used 2002 Chevrolet Impala in July 2007 from Champion Motors in Mansfield, Connecticut, for $12,500. Mr. Diana did not purchase an extended warranty and does not believe his vehicle is currently covered by any written warranties. Mr. Diana expressly recalls seeing advertisements on television and in the newspaper about the 2002 Chevrolet Impala, including advertisements touting its safety. He considered and was influenced by the advertisements emphasizing the safety of the vehicle when making his purchase. Mr. Diana believed his vehicle was safe and defect-free when he purchased it. Mr. Diana's vehicle spontaneously shut off in January 2009, July 2012, and August 2012. On each occasion Mr. Diana was driving on or around I-95 near his home in Sebastian, Florida, and the road was bumpy. On each occasion, Mr. Diana had to put the vehicle in neutral to get it to restart. Mr. Diana would not have purchased the vehicle had he known of the defects.

Maria E. Santiago—Florida: Plaintiff and proposed Nationwide and Florida State Class Representative Maria Santiago is a resident and citizen of Cutler Bay, Florida. Ms. Santiago purchased a new 2007 Saturn Ion Coupe in late 2006 at a Saturn Dealership at Dadeland South in Miami, Florida, for approximately $20,000. Ms. Santiago also purchased an extended warranty for the vehicle that is still active. Ms. Santiago purchased her Ion because she understood and believed that GM vehicles were durable and reliable. Sometime in 2009, as Ms. Santiago was leaving a friend's house and driving onto an expressway ramp, her Ion turned suddenly turned off. Since Ms. Santiago had just entered the expressway ramp and was driving at only 25 miles per hour, she was able to pull her vehicle over to the side of the ramp. She soon noticed the ignition key was in the off position, for no apparent reason. Ms. Santiago was able to restart the car and continue driving. Plaintiff Santiago would not have purchased her Ion had she known of the car's ignition switch defect.

Clifford Turner—Georgia: Plaintiff and proposed Nationwide and Georgia State Class Representative Clifford Turner is a resident and citizen of Palmetto, Georgia. He purchased a used 2004 Saturn Ion in September 2005 in Marietta, Georgia, for $15,000. Mr. Turner purchased a standard three-year warranty on his vehicle. Mr. Turner experienced safety issues while driving his vehicle, including periodic shut-offs, usually when driving the interstate, and the key falling out of the ignition on occasion while driving. Mr. Turner stopped driving his vehicle as soon as he learned about the safety recall. In April 2014, he brought his vehicle to the dealership to have his ignition switch replaced, but the repair did not occur until late June/early July. During that time, Mr. Turner incurred considerable additional fuel costs because the rental vehicle he was given consumed more fuel than his Saturn had. In August 2014, Mr. Turner traded in his Saturn Ion. He believes he received less in trade in value as a result of the GM recalls, but he no longer wanted to own the Saturn. When he traded in his vehicle, the dealership informed him that it would have to sell the Saturns at wholesale because of the safety recalls. Knowing what he now knows about the safety defects in the Saturn Ion, Mr. Turner would not have purchased the vehicle.

Jennifer Gearin—Georgia: Plaintiff and proposed Nationwide and Georgia State Class Representative Jennifer Gearin is a resident and citizen of Clermont, Georgia. Ms. Gearin purchased a new 2006 Chevrolet Cobalt in 2006 in Gainesville, Georgia, for

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 50 of 337

$18,499.52. Her Cobalt was covered under the manufacturer's warranty when she purchased it. Ms. Gearin has owned GM products before and she and her family were loyal customers. Ms. Gearin was advised at the dealership that the Cobalt was most dependable car for the lowest price. Although Ms. Gearin has not experienced her vehicle shutting down while driving, she is very afraid for her safety as a result of the ignition switch defects and she must drive a long distance to work on a daily basis. Ms. Gearin did not learn about the ignition switch defects until March 2014. She had the recall repair work completed this summer and was provided a loaner vehicle. She would not have purchased this car if GM had been honest about the safety defects.

Winifred Mattos—Hawaii: Plaintiff and proposed Nationwide and Hawaii State Class Representative Winifred Mattos is a resident and citizen of Honolulu, Hawaii. Ms. Mattos purchased a new Pontiac G5 in April 2007 in Culver City, California, for $20,000. She also had a three-year warranty on her vehicle. When she first learned about the recall, Ms. Mattos stopped driving her vehicle on highways or long distances and then decided it was unsafe to drive any distance at all. She requested and obtained a rental vehicle while awaiting replacement of her ignition switch pursuant to the recall. Her vehicle's ignition switch was replaced in April 2014. Ms. Mattos is still concerned about driving her vehicle. She would like to sell it, but she doubts she will be able to sell it and, even if she could, she doubts she would receive what she would have received before the recall. She would need full, pre-recall notice value for her vehicle in order to purchase another vehicle. Knowing what she now knows about the safety defects in many GM-manufactured vehicles, she would not have purchased her vehicle.

Dennis Walther—Hawaii: Plaintiff and proposed Nationwide and Hawaii State Class Representative Dennis Walther is a resident and citizen of Honolulu, Hawaii. Mr. Walther purchased a new 2006 Saturn Ion in 2006 in Hawaii for approximately $16,400. His car had a three-year warranty when he purchased it. The vehicle's ignition switch has been replaced under the recall. He bought the car because he trusted GM. If Mr. Walther had known about the Ion's defects, he would never have purchased it. He will never purchase another GM product.

Donna Harris—Illinois: Plaintiff and proposed Nationwide and Illinois State Class Representative Donna Harris is a resident and citizen of Herrin, Illinois. Ms. Harris purchased a used 2006 Chevrolet Cobalt in Herrin, Illinois, in 2007 for approximately $13,000. She purchased the vehicle with a standard three-year manufacturer's warranty. Ms. Harris bought the vehicle because her father was a "GM person" and she believed the vehicle was safe and reliable. Safety is the feature Ms. Harris finds most important feature in a vehicle. Ms. Harris started experiencing shutdowns in her Cobalt in 2009. The first time she was backing out of parking lot and the vehicle shutdown; as a result, she collided with a parked truck. In another incident, the vehicle stalled while Ms. Harris was backing out of a hospital parking lot space and she hit a cement barrier. The second shutdown cost Ms. Harris $1,700 in repairs. She also has experienced problems with her vehicle not locking. She has had her ignition switch replaced, but she still experiences problems turning the key in the ignition. Ms. Harris no longer feels safe driving her car, but she has no other means of transportation. Had she known about the problems with her GM vehicle, she would not have purchased the car, and she will never again purchase a GM vehicle.

Heather Holleman—Indiana: Plaintiff and proposed Nationwide and Indiana State Class Representative Heather Holleman is a resident and citizen of South Bend, Indiana. Ms. Holleman purchased a new 2007 Pontiac G5 in May 2007 from Don Meadows in South Bend, Indiana, for $17,500. Ms. Holleman has experienced numerous issues with the ignition of her Pontiac G5. The GM dealership where she purchased her vehicle has told her that the parts to fix the vehicle are unavailable, and she should simply "be careful." Ms. Holleman would not have purchased the vehicle had she known of the defects.

James Dooley—Iowa: Plaintiff and proposed Nationwide and Iowa State Class Representative James Dooley is a resident and citizen of Waterloo, Iowa. Mr. Dooley purchased a new 2006 Pontiac Solstice from Dan Deery Chevrolet in Cedar Falls, Iowa, in June 2006 for $28,000. Mr. Dooley purchased an extended seven-year warranty on the vehicle. Mr. Dooley did not experience a power failure during normal operation of his vehicle, but he stopped driving his vehicle in March 2014 when he learned about the safety recall because he was afraid for his safety. Because Mr. Dooley was unaware that GM was offering loaner vehicles to individuals afraid to drive their defective vehicles, he did not drive the vehicle again until August 2014 when the ignition switch was replaced. Knowing what he now knows about the safety defects in many GM-manufactured vehicles, he believes GM mislead him about the Solstice's safety and he would not have purchased the vehicle had he known the truth.

Philip Zivnuska, D.D.S.—Kansas: Plaintiff and proposed Nationwide and Kansas State Class Representative Philip Zivnuska, D.D.S., is a resident and citizen of Valley Center, Kansas. Mr. Zivnuska purchased a new 2006 Chevrolet Cobalt from Conklin Cars dealership in Newton, Kansas, in 2006 for approximately $25,000. His vehicle was covered by

Case 1:14-md-02543-JMF Document 1579-1 Filed 01/13/15 Page 53 of 287

Chevrolet's standard new car warranty at the time it was purchased. Throughout the course of his ownership of the Cobalt, Dr. Zivnuska and his family members experienced numerous issues consistent with the ignition switch defect, including frequent total power failure and loss of power steering, and an accident. Dr. Zivnuska brought the Cobalt into Conklin Cars dealership multiple times to address the issues, and became so concerned that he eventually filed a complaint with NHTSA in 2007 to document the problems he was experiencing. He never received information from GM following this complaint, although he was lead to understand GM obtained information about his car, which was subsequently totaled in a later accident. Dr. Zivnuska is appalled by the number of people who have also experienced ignition switch issues and is very upset that GM has not been forthcoming to vehicle owners, mechanics, and dealerships. Dr. Zivnuska reviewed internet websites before purchasing his car, particularly because good handling was important to him. Had he known of the problems with his GM car, he would not have purchased it.

Dawn Talbot—Kentucky: Plaintiff and proposed Nationwide and Kentucky State Class Representative Dawn Talbot is a resident and citizen of Glasgow, Kentucky. Ms. Talbot purchased a used 2006 Chevrolet Cobalt in May 2009 from Goodman Automotive in Glasgow, Kentucky. Ms. Talbot's vehicle has regularly lost power during driving. She would not have purchased the vehicle had she known of the defects.

Jennifer Crowder—Louisiana: Plaintiff and proposed Nationwide and Louisiana State Class Representative Jennifer Crowder is a resident and citizen of Shreveport, Louisiana. She purchased a used 2006 Chevrolet Cobalt in 2008 in Shreveport, Louisiana, for $14,000. Her car was not under warranty at the time of purchase. Ms. Crowder experienced many instances of stalling in her Cobalt. Her vehicle stalled on many occasions while driving to

Case 1:14-md-02543-JMF Document 1579-1 Filed 12/03/15 Page 54 of 357

work. She was late to work so often due to the stalling that she was dismissed from her employment for arriving late to work. On another occasion, Ms. Crowder's vehicle shut off in the middle of the road while she was making a turn. She was fortunately able to start the vehicle on the second try and avoided an accident. Knowing what she now knows about the safety defects in many GM-manufactured vehicles, and the Cobalt in particular, she would not have purchased the vehicle nor even visited the dealership to look at the Cobalt.

Alysha Peabody—Maine: Plaintiff and proposed Nationwide and Maine State Class Representative Alysha Peabody is a resident and citizen of Kenduskeag, Maine. Ms. Peabody purchased a used 2005 Chevrolet Cobalt in 2006 in Maine for $14,000. Her car was under warranty at the time of purchase. Although she did not have ignition switch issues before the recall, since having the repair done her vehicle does not always start on the first try. She has tried to sell her car on Craigslist since news of the ignition switch defect went public, but has not received a single inquiry about the vehicle. Ms. Peabody would have never purchased a GM vehicle if she had known about the defects.

Robert Wyman—Maryland: Plaintiff and proposed Nationwide and Maryland State Class Representative Robert Wyman is a resident and citizen of Baltimore, Maryland. Mr. Wyman purchased a new 2007 Saturn Sky from the Owings Mills, Maryland, Heritage Group in 2007 for $32,000. His vehicle came with a three-year warranty. Although he has not experienced an inadvertent power failure while driving his vehicle, on multiple occasions Mr. Wyman had difficulty removing and/or inserting his ignition key into the ignition cylinder or starting his vehicle. Mr. Wyman's vehicle had the recall repair done on May 31, 2014. Had he known that the Saturn Sky contained a defective ignition switch, Mr. Wyman would not have

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/14/15 Page 45 of 287

purchased the vehicle because it is a "death car," and he worries what might have happened had he "hit a bump a certain way."

George Mathis—Maryland: Plaintiff and proposed Nationwide and Maryland State Class Representative George Mathis is a resident and citizen of Parkville, Maryland. Mr. Mathis purchased a new 2007 Chevrolet Cobalt on April 1, 2007, in York, Pennsylvania, for $12,000. The vehicle was covered under warranty when he purchased it. Mr. Mathis has experienced his ignition shutting down while driving on three separate occasions, with one instance resulting in a minor accident, and the other two nearly resulting in an accident. Mr. Mathis did not learn about the ignition switch defects until March 2014. In August 2014, he took his Cobalt to the dealership in his area to have the recall work performed. Mr. Mathis would not have purchased this car, or would have paid less than he did, if GM had been honest about the safety defects.

Mary Dias—Massachusetts: Plaintiff and proposed Nationwide and Massachusetts State Class Representative Mary Dias is a resident and citizen of Taunton, Massachusetts. Ms. Dias purchased a used 2007 Chevrolet HHR on February 28, 2008, in Woonsocket, Rhode Island, for approximately $13,000. The vehicle was under warranty when she purchased it. Because of the ignition switch defects, Ms. Dias is very concerned for her safety every time she drives her vehicle. Ms. Dias did not learn of the ignition switch defects until March 2014. When she inquired about her safety, GM told her that her vehicle had not been recalled and not to worry. On April 11, 2014, after receiving notice that her HHR was in fact recalled, Ms. Diaz took her HHR in for the recall repair work and was provided a loaner vehicle. She would not have purchased this vehicle if she had known of the safety defects.

Colin Elliott—Massachusetts: Plaintiff and proposed Nationwide and Massachusetts State Class Representative Colin Elliott is a resident and citizen of Buzzards Bay, Massachusetts. Mr. Elliot purchased a new 2008 Saturn Sky in Hyannis, Massachusetts, in July of 2007 for $23,000. His vehicle was covered by a standard 100,000-mile warranty at the time of purchase. At the time of purchase, Mr. Elliott was choosing between a Saturn Sky and Pontiac Solstice. To avoid defects that he believed plagued early production models, however, Mr. Elliott waited two years before ordering his Saturn in the hopes that any early production defects would be discovered and fixed. Although he has not experienced an inadvertent power failure while operating the vehicle, Mr. Elliott has not driven his Sky since learning of the recall several months ago. He has contacted his dealership to inquire about the timing of repairs, but his dealership has indicated that it does not have parts available. Because he will no longer drive his Sky, Mr. Elliott and his wife have been sharing her Kia since March. This has caused significant inconvenience, as they drive each other to work and are dependent on one another's schedule.

Diana Cnossen—Michigan: Plaintiff and proposed Nationwide and Michigan State Class Representative Diana Cnossen is a resident and citizen of Grand Rapids, Michigan. Ms. Cnossen purchased a new 2007 Saturn Ion on November 27, 2006, in Michigan for $18,250. Her vehicle was covered under warranty when she purchased it. She purchased the vehicle because she was attracted to its compact size when she viewed it in the showroom. Ms. Cnossen did not experience a power failure during normal operation of her vehicle, though she often experienced difficulty turning the steering wheel. Ms. Cnossen's ignition switch was replaced under the recall on June 4, 2014. While she awaited a replacement part, Ms. Cnossen continued to use her vehicle because she was not aware that GM had offered to provide loaner vehicles to those too afraid to continue operating their defective vehicles. Ms. Cnossen did not learn of the ignition switch defect until it was announced in March of 2014, and she would not have purchased her Saturn Ion had she known it continued a defective ignition switch. Ms. Cnossen will "never buy another car from GM."

David Cleland—Minnesota: Plaintiff and proposed Nationwide and Minnesota Class Representative David Cleland is a resident and citizen of Northfield, Minnesota. He purchased a used 2004 Saturn Ion in 2005 in Northfield, Minnesota, for $10,000. Mr. Cleland's Saturn Ion was covered under the standard manufacturer's warranty at the time he purchased it. Mr. Cleland read GM promotional material about the vehicle's safety and reliability, including the vehicle's airbags, prior to purchasing the vehicle. This spring, after the recall announcement, Mr. Cleland's children had a frontal collision while driving his vehicle. The airbags did not deploy, even though they should have under the circumstances of the collision. Knowing what he now knows about the safety defects in many GM-manufactured vehicles, and particularly his Saturn Ion, Mr. Cleland would not have paid the amount of money he paid, or even purchased, the vehicle.

Frances Howard—Mississippi: Plaintiff and proposed Nationwide and Mississippi State Class Representative Frances Howard is a resident and citizen of Jackson, Mississippi. Ms. Howard leased and then purchased a new 2006 Saturn Ion in April 2006 at a Saturn dealership in Jackson, Mississippi, for approximately $11,000. The vehicle was covered by a warranty at the time of purchase. She recalls seeing television ads touting the Saturn brand as outstanding with dependable vehicles and high-rated customer service. In 2009, Ms. Howard's key got stuck in the ignition and she could not turn the vehicle off. She drove it to the dealership and they replaced the ignition switch on September 8, 2009, at Ms. Howard's expense. One week later the key got stuck in the ignition again. This time the GM dealership told her it was because her car's battery was dead. Their service was unhelpful and contradictory. Ms. Howard's car has also inadvertently shutdown on two occasions. The first time happened approximately four months ago when she accidentally bumped the key while it was in the ignition. The second time, on September 2, 2014, it shut off while she was at a red light. Both times the car restarted after she turned the key off and then on again. Ms. Howard was never contacted about the ignition switch recall, and only found out about it by reading news on the internet. After contacting her GM dealership about the repairs, it took eight weeks for the parts to come in. She also asked for a loaner vehicle, but they declined, telling her there were none available and it would be only two weeks until the parts arrived. Ms. Howard would have never purchased this vehicle if she had known about these defects

Michelle Washington—Missouri: Plaintiff and proposed Nationwide and Missouri State Class Representative Michelle Washington is a resident and citizen of Florissant, Missouri. Ms. Washington purchased a new 2008 Chevrolet Impala in July 2007 at a GM dealership in Missouri for approximately $27,000. She also purchased a new 2014 Chevrolet Impala on May 9, 2014, at a GM dealership for approximately $37,000. The 2008 Impala was covered under warranty at the time of sale and she also purchased an extended warranty. The 2014 Impala is currently covered under warranty. In purchasing the 2008 Impala, Ms. Washington was convinced of the safety and reliability of her GM product based upon their warranties and representations. The ignition switch defect manifested in her 2008 Impala on approximately four separate occasions. In one instance the car shutdown on the highway and she had to pull to the side of the road and restart it. Before purchasing her new 2014 Impala, Washington took her 2008 Impala to two different GM dealerships to get an estimated trade-in value. At the first GM dealership, during their test drive of her 2008 Impala, the vehicle ignition switch defect manifested and the car shutdown. The dealership informed her that they would have to dock her money on the trade-in amount being offered because of the problem. Based upon the vehicle shutting down during the examination, the dealership offered her a quote of $1,500 for a trade-in amount. Just days later, she took it to another GM dealership who gave her $2,900 for a trade-in amount. Ms. Washington received the ignition switch recall notice on her 2008 Impala after she had already traded it in for the 2014 Impala. Her 2014 Impala has not yet been repaired under the recall. Ms. Washington is adamant that had she known of the defects, she would have never considered the 2008 Impala or, later, the 2014 Impala when she was looking to trade-in her vehicle.

Patrice Witherspoon—Missouri: Plaintiff and proposed Nationwide and Missouri State Class Representative Patrice Witherspoon is a resident and citizen of Lee's Summit, Missouri. Ms. Witherspoon purchased a new 2006 Saturn Ion in 2005 from a Missouri vehicle dealer for approximately $16,828. Ms. Witherspoon reviewed GM's webpage and other internet websites discussing the Saturn Ion prior to her purchases and believed that the vehicle was safe and reliable based on her review. Ms. Witherspoon believed her vehicle was safe and defect-free when she purchased it. Ms. Witherspoon's 2006 Saturn Ion spontaneously shut off on at least five occasions while driving the vehicle. On one such occasion, she was on the highway, but was able to avoid an accident by pulling over to the shoulder. On another occasion, her vehicle shut off while on the exit ramp to a highway, but she was fortunately again able to avoid an accident. On each occasion, the vehicle gearshift was in "drive" or "reverse" and the ignition key was in the "run" position. Ms. Witherspoon had difficulty controlling and safely stopping the vehicle on these occasions. The value of Ms.

Witherspoon's vehicle is less than she bargained for when she purchased the vehicle and has diminished as a result of the defect.

Laurie Holzwarth—Montana: Plaintiff and proposed Nationwide and Minnesota Class Representative Laurie Holzwarth is a resident and citizen of Billings, Montana. Ms. Holzwarth purchased a used 2005 Chevrolet Cobalt in 2008 in Billings, Montana, for approximately $7,000. Her daughter Christine has experienced countless shutdowns in the vehicle. Christine is the primary driver of the vehicle and will not let anyone else drive it, because she is concerned about the number of shutdowns that she has experienced. They have occurred on highways, in the main street of her town, pulling into parking spaces, and everything in between. The worst incident that she can remember was a definite power failure. Ms. Holzwarth witnessed this event. They were driving on the highway in August of 2010 from Billings to Bozeman, where Christine would be attending college. At a point where they had to make a sharp turn, traveling at 75-80 miles per hour, the car just quit. Christine was able to get the car to a stop without hitting the concrete wall, cycle the key, and continue. They drove another 40 miles, and the car shut off twice more on the straightaway, and once more in the town. Christine had experienced both power steering failure and power failure incidences before this, but had not done much highway driving because she mainly drove to and from high school. The ignition switch was supposedly repaired as part of the ignition switch recall on July 29, 2014. But Ms. Holzwarth's daughter is still experiencing power failures in the car. Since the vehicle was repaired, Christine experienced two shutdowns and/or power steering failures on September 3, 2014, and September 8, 2014. Ms. Holzwarth and her daughter would like to get rid of the car, but they are not financially capable of doing so—Christine is working full time to pay off her college loans and needs a vehicle to get to

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 51 of 387

work. Furthermore, they do not believe that they could sell this vehicle to anyone else in good conscience. Even if they were to say that the car was repaired, they do not believe it is true, and they don't want to put anyone else at risk in the car. Ms. Holzwarth would not have purchased this vehicle if she had known about its serious and dangerous defects.

Michael Amezquita—New Jersey: Plaintiff and proposed Nationwide and New Jersey State Class Representative Michael Amezquita is a resident and citizen of Hamilton, New Jersey. Mr. Amezquita purchased a new 2006 Chevrolet Cobalt on June 30, 2006, in East Windsor, New Jersey, for $14,000. At the time he purchased the vehicle it was covered under warranty, but the warranty has since expired. Mr. Amezquita did not learn of the ignition switch defects until March 2014. His car was not repaired under the recall until April 23, 2014. Mr. Amezquita had to demand a loaner vehicle before GM would agree to provide one. He used the loaner vehicle for approximately seven weeks, from March 19, 2014, to April 23, 2014, while he waited for the repair parts to arrive. Mr. Amezquita would not have purchased this vehicle if he had known about these defects.

Anthony Juraitis—New Jersey: Plaintiff and proposed Nationwide and New Jersey State Representative Anthony Juraitis is a resident and citizen of Freehold, New Jersey. He purchased a new 2004 Saturn Ion in or around the winter of 2003. Mr. Juraitis purchased the vehicle with a standard warranty. Mr. Juraitis was considering other vehicles as well, but he decided on the Ion in part because he believed the vehicle to be safe and reliable. Mr. Juraitis experienced several shutdowns/stalls while driving his Ion. The first occurred on the highway, when his vehicle "locked" while driving. Other drivers stopped to help him push his vehicle to the side of the road, where after several attempts he was able to restart his vehicle. Mr. Juraitis took the vehicle to the dealership, which replaced the ignition switch and charged Mr. Juraitis

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 52 of 387

for parts and labor. Following this supposed repair, Mr. Juraitis continued to have stalls and shutdowns with his vehicle; he estimates approximately three dozen times with about eight or ten of them being in very dangerous situations. On July 31, 2014, the ignition switch was replaced again, this time pursuant to the recall. Following this replacement, Mr. Juraitis has continued to experience safety problems with the vehicle, including in early September 2014 when his vehicle shutdown again and he was unable to immediately restart the vehicle. Mr. Juraitis would like to sell or trade in his vehicle, but he does not want another person to experience the dangerous events he has experienced or have a vehicle with an obvious safety defect. Mr. Juraitis believes the vehicle is not worth anything if it means you have to gamble with your life to drive it. Knowing what he now knows about the safety defects in many GM-manufactured vehicles, he would not have purchased the vehicle and will never again purchase a General Motors vehicle.

Bernadette Romero—New Mexico: Plaintiff and proposed Nationwide and New Mexico State Class Representative Bernadette Romero is a resident and citizen of Santa Fe, New Mexico. Ms. Romero purchased a new 2007 Chevrolet Cobalt on July 3, 2007, at Casa Chevrolet in Albuquerque, New Mexico, for $14,645. Her car was covered by a warranty at the time of purchase. Her vehicle had the recall repair performed in May 2014, but she went without her vehicle for five weeks while it was repaired. She drove a loaner car during that time. Ms. Romero traded in her Cobalt for $5,500 on June 20, 2014. She would never have bought this vehicle had she known about the ignition switch defects.

Sandra Levine—New York: Plaintiff and proposed Nationwide and New York State Class Representative Sandra Levine is a resident and citizen of Babylon, New York. Ms. Levine purchased a used 2005 Chevrolet Cobalt on May 27, 2006, from Babylon Honda in

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/03/14 Page 53 of 337

Babylon, New York, for $16,627.96. Ms. Levine's vehicle was covered by a warranty that expired 90 days after her purchase. She does not recall any specific advertising that influenced her decision to buy the vehicle, but she had a general impression that GM was a quality brand and that the vehicle was safe and reliable. Plaintiff Levine believed her vehicle was safe and defect-free when she purchased it. Ms. Levine's vehicle spontaneously shut off on two occasions. Although she does not recall precise dates, the shut-off incidents occurred in 2011 and 2012. The shut-off incidents both took place when she was driving on Deer Park Avenue in Suffolk County, New York. There was no apparent reason for the shutdown in either case. The road was not bumpy, and Ms. Levine does not believe her knee hit the ignition switch. In both instances, Ms. Levine was able to navigate the vehicle to the shoulder of the road. Ms. Levine's ignition switch was replaced on May 22, 2014, by Chevrolet of Huntington in connection with the recall GM initiated in response to the ignition switch defects. Ms. Levine would not have purchased the vehicle had she known of the defects.

Michael Rooney—New York: Plaintiff and proposed Nationwide and New York State Representative Michael Rooney is a resident and citizen of Ronkonkoma, New York. She purchased a used 2005 Chevrolet Cobalt in November 2006. Ms. Rooney purchased an extended warranty for the vehicle. She purchased the Cobalt after reading several advertisements about the Cobalt and other vehicles as well; she believed the Cobalt to be a safe and reliable vehicle to drive. Further, the dealership confirmed with Ms. Rooney that the Cobalt was a safe, reliable vehicle. Ms. Rooney experienced several shutdowns in her vehicle while driving. Upon learning about the safety recall on her vehicle, she stopped driving it. The dealership later informed her of her right to a loaner vehicle while awaiting replacement of her ignition switch, and she received a loaner vehicle soon thereafter. Her ignition switch was

Case 1:14-md-02543-JMF Document 1579-1 Filed 01/13/15 Page 54 of 337

replaced in the summer of 2014. Following that replacement, her automatic starter no longer worked in her vehicle, which she had to have repaired. Knowing what she now knows about the safety defects in many GM-manufactured vehicles, she would not have purchased the vehicle.

William Ross—New York: Plaintiff and proposed Nationwide and New York State Class Representative William Ross is a resident and citizen of Bellmore, New York. Mr. Ross purchased a new 2005 Chevrolet Cobalt in 2005, in Hicksville, New York, for approximately $25,000. At the time of purchase, his vehicle was under the original manufacturer's warranty, and he did not purchase any additional warranties. Mr. Ross does not recall when the warranty expired or its terms. Mr. Ross recalls at least one incident where the car became hard to steer. He took it to a repair shop thinking added power steering fluid would fix the problem, but the repair shop told him the vehicle did not need power steering fluid. On June 23, 2012, Mr. Ross was driving his Cobalt in Nassau County, New York, at approximately 55 miles per hour when the ignition was inadvertently switched into the accessory position, causing the engine to lose power. The car's power steering, power braking, and airbag systems were disabled. Mr. Ross lost control and the car crashed into a divider lined with rubber pylons. The airbag did not deploy. Mr. Ross suffered cuts and a separation of the muscle from his tendon in his arm. It could not be surgically repaired by the time he was able to go to the VA hospital. This accident cost Mr. Ross $6,279.97 in car repairs. On March 30, 2014, Mr. Ross was again driving his Chevrolet Cobalt in Nassau County, New York, at approximately 55 miles per hour when the ignition again suddenly switched into the accessory position, causing the vehicle to lose power to the engine. Again the power steering, power braking system, and airbags were disabled. Mr. Ross lost control of the car and it hit a divider, knocking the rear wheels out of alignment. This accident cost Mr. Ross approximately $175 in repairs. In both accidents, the road was not bumpy and Mr. Ross does not recall hitting anything with his knee to cause the key to turn. When Mr. Ross learned of the recalls he called his GM dealership to see if his vehicle was involved in the recall. GM told him it was not. Then in early March 2014, he received a recall notice. When he called about getting the recall repairs done he was told the parts to repair it were not available. Mr. Ross stopped driving the vehicle and, in April 2014, he sold it to a junkyard to scrap for approximately $4,000. He is a retired, disabled veteran. Since selling the Cobalt he now relies on veterans' transportation to go to his medical appointments and walks everywhere else. Mr. Ross would not have bought the car if he had known beforehand about the ignition switch defect.

Donald Cameron—North Carolina: Plaintiff and proposed Nationwide and North Carolina State Class Representative Donald Cameron is a resident and citizen of Durham, North Carolina. He purchased a new 2006 Saturn Ion in 2006 in Durham, North Carolina, for $14,000. Mr. Cameron purchased the vehicle with a five-year, 120,000-mile warranty. On several occasions, Mr. Cameron's vehicle shutdown while he was driving. Knowing what he now knows about the safety defects in many GM-manufactured vehicles, and in the Ion specifically, he would not have purchased the vehicle or, at a minimum, would not have been willing to pay the amount of money he paid for the car.

Leland Tilson—North Carolina: Plaintiff and proposed Nationwide and North Carolina State Representative Leland Tilson is a resident and citizen of Gastonia, North Carolina. He purchased a new 2009 Chevrolet Cobalt in February 2009. Mr. Tilson has a five-year/100,000-mile warranty on the vehicle. Mr. Tilson experienced at least one shutdown in the vehicle, while driving on a highway at highway speed. It happened when the vehicle went

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/08/15 Page 56 of 387

over a break in the asphalt, and the vehicle shutdown. Mr. Tilson, with an 18-wheeler bearing down on him, was able to maneuver the vehicle to the side of the road to avoid an accident. During this power failure, the power steering also failed. Mr. Tilson has had his ignition replaced twice. The first time was in June 2013, not pursuant to the recall, because he was unable to shut off his vehicle. The second time was in July 2014 pursuant to the recall. Knowing what he now knows about the safety defects in many GM-manufactured vehicles, he would not have purchased a vehicle with a safety defect.

Jayn Roush—Ohio: Plaintiff and proposed Nationwide and Ohio State Class Representative Jayn Roush is a resident and citizen of Worthington, Ohio. Ms. Roush purchased a used 2005 Saturn Ion on May 5, 2008, from Saturn West in Hilliard, Ohio, for $14,984.59. Ms. Roush's vehicle was covered by a standard warranty that expired on August 3, 2008. Ms. Roush purchased an extended warranty, but this warranty only covers the vehicle's powertrain. She recalls advertisements for the Saturn running frequently around the time of her purchase. She had a general impression that GM was a quality brand and that Saturn vehicles were safe and reliable. Ms. Roush believed her vehicle was safe and defect-free when she purchased it. Ms. Roush's vehicle has spontaneously lost power with some regularity. She recalls a number of discrete incidents. Her vehicle suddenly lost power three different times on November 25, 2010, when she was driving in and around Columbus, Ohio. The vehicle also experienced several power-loss incidents driving in and around Columbus, Ohio, in 2013. She was able to pull over and get the vehicle to the side of the road. The vehicle most recently shut off on Highway 315 S in Ohio on January 9, 2014. Each of Ms. Roush's incidents involved a sudden loss of power accompanied by a "TRAC OFF" light. Ms. Roush had her ignition switch replaced at an out-of-pocket cost of $187.50 on June 11, 2013,

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/14/15 Page 57 of 387

in an attempt to address the power-loss problems the vehicle was experiencing, but the replacement did not fix the problem. Indeed, the car experienced a loss of power again in January of 2014. Ms. Roush attempted to participate in GM's 2014 recall of the vehicle, initiated in response to the ignition switch defects, but her ignition switch was not replaced in connection with this recall because the parts have not been available. Ms. Roush would not have purchased the vehicle had she known of the defects.

Bonnie Taylor—Ohio: Plaintiff and proposed Nationwide and Ohio State Class Representative Bonnie Taylor is a resident and citizen of Laura, Ohio. Ms. Taylor purchased a new 2007 Chevrolet Cobalt on December 23, 2006, from Joe Johnson Chevrolet in Troy, Ohio, for $14,417.42. At the time Ms. Taylor purchased her new Cobalt she also purchased a warranty which expired in December 2011. This was Ms. Taylor's fourth time purchasing a vehicle from Joe Johnson Chevrolet and she trusted them to provide her with a safe and reliable vehicle. Ms. Taylor did not learn of the ignition switch defects until March 2014. She scheduled the recall work on her vehicle right away and was provided a loaner vehicle. The repair work was completed on April 21, 2014. Although Ms. Taylor has not experienced the ignition shutdown while driving her Cobalt, she believes the Cobalt has too many serious safety defects for her to ever feel safe driving it again. She also feels that the value of her vehicle is severely diminished as a result of the recall. She would not have purchased this vehicle if she had known of the safety defects.

Sharon Dorsey—Ohio: Plaintiff and proposed Nationwide and Ohio State Class Representative Sharon Dorsey is a resident and citizen of Dayton, Ohio. Ms. Dorsey purchased a used 2004 Chevrolet Malibu in June 2007 at Reichard dealership in Dayton, Ohio, for $12,040. At the time of purchase, Plaintiff Dorsey also secured an extended warranty which expired in 2011. Plaintiff Dorsey has experienced no less than four engine shut-offs while driving her vehicle. In one such instance, her Malibu stalled in the middle of heavy traffic with her five-year-old grandson in the vehicle. Upon returning the vehicle to Reichard on September 10, 2014, she was informed by a GM technician that he had, in fact, been able to duplicate the engine stall event she experienced. Ms. Dorsey's sister was a former GM employee and owned a Chevrolet Impala, which influenced Ms. Dorsey's desire to own a GM vehicle. However, if she had known of the defects plaguing her Chevrolet Malibu prior to purchasing the vehicle, she would not have purchased it. Ms. Dorsey relied upon the GM Malibu brand to be a safe and reliable vehicle. As a result of the vehicle defect and subsequent recalls, Ms. Dorsey has been unable to enjoy the use of her Chevrolet Malibu since June 2014, has been unable to work regularly, and has not been provided a loaner or rental vehicle while repairs are being made on her vehicle despite repeated requests. In addition, Ms. Dorsey continues to incur significant expense, inconvenience, and economic damage as a result.

Paulette Hand—Oklahoma: Plaintiff and proposed Nationwide and Oklahoma State Class Representative Paulette Hand is a resident and citizen of Blanchard, Oklahoma. She purchased a new 2006 Chevrolet HHR in 2006 from Frost Chevrolet, a dealership owned by her sister, in Hennessy, Oklahoma, for $24,625. She believed that GM made safe and reliable cars. Ms. Hand experienced multiple events in which her vehicle's steering locked up and the power failed. She would not have purchased or paid as much for the vehicle if she had known the truth about GM's commitment to safety and its concealment of the defects.

William Bernick—Oregon: Plaintiff and proposed Nationwide and Oregon State Class Representative William Bernick is a resident and citizen of Grants Pass, Oregon. Mr. Bernick purchased a used 2005 Chevrolet Cobalt on December 29, 2006, from a dealership in

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 59 of 287

Oregon for $10,750. He also purchased a vehicle service contract, and his warranty is continuing. During the time he has owned the vehicle, Mr. Bernick has experienced power outages and difficulties with the ignition, such as keys becoming stuck in the ignition, inability to shift gears, inability to start the ignition, and transmission default. Mr. Bernick is very concerned about the ignition defect and is disappointed in the way GM has handled the recalls. He wants to see GM held accountable for putting lives at risk for so long. Had Mr. Bernick known of the problems with his GM car, he would not have purchased it.

Shawn Doucette—Pennsylvania: Plaintiff and proposed Nationwide and Pennsylvania State Class Representative Shawn Doucette is a resident and citizen of Hamburg, Pennsylvania. Mr. Doucette purchased a new 2007 Chevrolet Cobalt SS in September 2007 from Outten Chevrolet of Hamburg in Hamburg, Pennsylvania, for $28,000. GM should have disclosed the ignition switch defects when Mr. Doucette purchased the vehicle. Mr. Doucette has experienced numerous shutdowns and power loss events while driving. He would not have purchased the vehicle had he known of the defects.

Shirley Gilbert—Pennsylvania: Plaintiff and proposed Nationwide and Pennsylvania State Class Representative Shirley Gilbert is a resident and citizen of Frackville, Pennsylvania. She purchased a new 2008 Chevrolet Cobalt in Pennsylvania in June 2008 for $16,000. Her vehicle was covered by a warranty when she purchased it. The warranty expired in June 2013. She purchased the car, in part, because the dealership highlighted the safety features, namely the car’s eight airbags. On two or three occasions she has experienced her vehicle shutting down immediately after it started. She would not have purchased her vehicle, or she would have paid less for it, had she known about its defects.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 50 of 287

Garrett Mancieri—Rhode Island: Plaintiff and proposed Nationwide and Rhode Island State Class Representative Garrett Mancieri is a resident and citizen of Woonsocket, Rhode Island. Mr. Mancieri purchased a new 2007 Pontiac G5 on November 24, 2006 in Woonsocket, Rhode Island, for $16,138. Mr. Mancieri received a safety recall notice pertaining to his vehicle in March 2014. He promptly requested that the dealership perform the recall repair, but was told that he would be put on a waiting list because the dealership was waiting on the parts from GM. The dealership did not provide Mr. Mancieri with a loaner car, so he had to continue driving the vehicle. The recall notice received by Mr. Mancieri did not inform him of the right to a loaner vehicle, nor did the GM dealership volunteer such information. His vehicle was not scheduled to be repaired until September 18, 2014. Mr. Mancieri believes he has been damaged by the diminution of value in his vehicle due to the ignition switch defect. Mr. Mancieri also believes he has been damaged in the amount of the reasonable value of the rental car he should have received from March 2014 through the time his vehicle is finally repaired by GM.

Annette Hopkins—South Carolina: Plaintiff and proposed Nationwide and South Carolina State Class Representative Annette Hopkins is a resident and citizen of Bishopville, South Carolina. Ms. Hopkins purchased a used 2003 Chevrolet Impala LS on December 31, 2004, at Newsome Automotive in Florence, South Carolina, for $12,749.32. Ms. Hopkins first learned of a recall affecting her vehicle when she received a recall notice in September 2014. Although she has not yet experienced any incidents of sudden power loss with her vehicle, now that she knows about the defects and the recalls, Ms. Belford asserts that she would never have purchased the Chevrolet Impala had she known about the defects and GM's indifference with regard to the safety and reliability of its vehicles.

Case 1:14-md-02543-JMF Document 1579-1 Filed 12/03/15 Page 91 of 837

Norma Lee Nelson—South Dakota: Plaintiff and proposed Nationwide and South Dakota State Class Representative Norma Lee Nelson is a resident and citizen of Huron, South Dakota. Ms. Nelson purchased a used 2007 Chevrolet Cobalt in September 2007 from a dealership in Watertown, South Dakota, for $14,000. Her vehicle came with a standard warranty at the time of purchase that expired in 2010. She has experienced numerous ignition problems with the vehicle, and at times it requires significant force to turn the steering wheel. Ms. Nelson has removed all of the keys from her keychain, but remains nervous about driving the car. Ms. Nelson has had difficulty starting the vehicle on numerous occasions. Had she known that the Cobalt contained a defective ignition switch, Ms. Nelson would not have purchased the vehicle.

Helen A. Brown—Tennessee: Plaintiff and proposed Nationwide and Tennessee State Class Representative Helen A. Brown is a resident and citizen of Franklin, Tennessee. She purchased a new 2006 Chevrolet Cobalt from a GM dealer, with an extended warranty, on February 1, 2006, for approximately $10,000. Ms. Brown's vehicle lost power at least three times, twice in 2007 and once in 2014. She does not trust her car and would not have purchased the vehicle or would have paid less if the truth had been disclosed about the quality and safety of GM vehicles.

Lisa William—Texas: Plaintiff and proposed Nationwide and Texas State Class Representative Lisa William is a resident and citizen of Amarillo, Texas. Ms. William purchased a new 2007 Saturn Ion in 2007 in Amarillo, Texas, for approximately $16,000. Her vehicle had a standard warranty, which she believes was for five years. Ms. William purchased a Saturn because she had owned one in the past and believed the brand to be one she could trust. She has experienced problems with her airbag light turning on unexpectedly and difficulty turning on her vehicle. These problems have caused her concern and she does not feel safe driving her vehicle. She is a college student and provides rides from time to time for certain students. She is now concerned about having other students or anyone else in her vehicle because of the safety defect. She also frequently drives out of town and is afraid of her vehicle shutting down. Ms. William had her ignition switch replaced on September 23, 2014. She wonders if she can trust the "repair." Had she known about the problems with her GM vehicle, she would not have purchased the car.

Blair Tomlinson, D.D.S.—Utah: Plaintiff and proposed Nationwide and Utah State Class Representative Blair Tomlinson, D.D.S., is a resident and citizen of Kaysville, Utah. Dr. Tomlinson purchased a new 2005 Chevrolet Cobalt from Murdock Chevrolet in Bountiful, Utah, in August 2005 for approximately $15,000. Throughout the course of his ownership of the Cobalt, Dr. Tomlinson and his family members have experienced various issues consistent with the ignition switch defect, including unexpected shutdowns. In one particular incident, Dr. Tomlinson's daughter was driving on the highway in Logan, Utah, when she accidentally bumped the ignition switch with her knee and the vehicle lost power. She was able to get the vehicle safely to the side of the road, but was terrified by the incident. After hearing about the recall in the news in March 2014, Dr. Tomlinson attempted to reach GM, but he had great difficulty before eventually being informed he would receive a letter if his car was recalled. He also immediately took his Cobalt to Young Chevrolet in Layton, Utah, to address the issue. However, the dealership informed him they did not have the recall parts available to fix the defect. Mr. Tomlinson continues to be concerned about the defects in his Cobalt and the safety of his family. Had he known of the problems with his GM car, he would not have purchased it or would have paid less.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 53 of 237

Erinn Salinas—Virginia: Plaintiff and proposed Nationwide and Virginia State Representative Erinn Salinas is a resident and citizen of Virginia Beach, Virginia. She purchased a new 2008 Chevrolet Cobalt in April 2008. The vehicle was purchased with the standard manufacturer's warranty. Ms. Salinas purchased her vehicle after seeing television advertisements about the vehicle and also about a GM rebate. The salesperson at the dealership also told Ms. Salinas that the Cobalt was a very safe vehicle. Ms. Salinas experienced at least one shutdown while driving the vehicle. She was able to steer the vehicle to the side of the road and then to turn it back on. Once she learned about the safety recall in March or April of 2014, she stopped driving her vehicle because she believed it was not safe to drive. She was not given a rental vehicle to use and had to depend on her sister or father for transportation. On July 18, 2014, the ignition switch was replaced in her vehicle pursuant to the recall. Knowing what she now knows about the safety defects in many GM-manufactured vehicles, she would not have purchased the vehicle.

Stephanie Renee Carden—West Virginia: Plaintiff and proposed Nationwide and West Virginia Class Representative Stephanie Renee Carden is a resident and citizen of Huntington, West Virginia. Ms. Carden purchased a new 2004 Saturn Ion 2 on July 22, 2004, at Saturn of Hurricane in Hurricane, West Virginia, for $22,181. Ms. Carden's vehicle came with the standard manufacturer's warranty. Ms. Carden has experienced manifestation of the defect on more than one occasion. She has twice experienced loss of power due to the ignition switch defect. Shortly after the second power-loss incident, Ms. Carden's vehicle had an issue where it would not restart, causing here to have to have the vehicle towed to a service station. If she had known what she now knows about the safety defects in many GM-manufactured vehicles, Ms. Carden would not have purchased the vehicle.

Case 1:14-md-02543-JMF Document 1579-1 Filed 01/08/15 Page 54 of 387

Les Rouse—Wisconsin: Plaintiff and proposed Nationwide and Wisconsin Class Representative Les Rouse is a resident and citizen of LaCrosse, Wisconsin. Mr. Rouse purchased a new 2004 Saturn Ion 2 in October 2004 in LaCrosse, Wisconsin, for approximately $16,000. His car was covered under the manufacturer's standard warranty at the time of purchase, and Mr. Rouse also believes he purchased some kind of extended warranty. At the time of purchase, Mr. Rouse and his wife visited the dealer to learn more about the Ion. There, the dealership had Ions on display to demonstrate the safety and reliability of the vehicle. The safety and reliability of the Ion had a large impact on Mr. Rouse's decision to buy the car. Mr. Rouse experienced a loss of electrical power in his vehicle while driving and he is concerned about driving it due to the safety risks it poses. He also believes the value of his car has diminished as a result of the ignition switch defects. Mr. Rouse learned of the ignition switch defects in March 2014, but it took until May 2014 for the parts to arrive and to repair his car under the recall. Mr. Rouse would not have purchased his vehicle had he known about the ignition switch defects in his GM vehicle.

II. <u>Defendant</u>

Defendant General Motors LLC ("New GM") is a foreign limited liability company formed under the laws of Delaware with its principal place of business located at 300 Renaissance Center, Detroit, Michigan. The sole member and owner of General Motors LLC is General Motors Holding LLC. General Motors Holdings LLC is a Delaware limited liability company with its principal place of business in the State of Michigan. The sole member and owner of General Motors Holdings LLC is General Motors Company. General Motors Company is a Delaware Corporation, which has its principal place of business in the State of Michigan, and is a citizen of the States of Delaware and Michigan. New GM was incorporated in 2009 and, effective on July 10, 2009, acquired substantially all assets and assumed certain liabilities of General Motors Corporation through a Section 363 sale under Chapter 11 of the U.S. Bankruptcy Code.

Among the liabilities and obligations expressly assumed by New GM are the following:

> From and after the Closing, Purchaser [New GM] shall comply with the certification, reporting and recall requirements of the National Traffic and Motor Vehicle Act, the Transportation Recall Enhancement, Accountability and Documentation Act, the Clean Air Act, the California Health and Safety Code, and similar laws, in each case, to the extent applicable in respect of vehicles and vehicle parts manufactured or distributed by [Old GM].

New GM also expressly assumed:

> [A]ll Liabilities arising under express written warranties of [Old GM] that are specifically identified as warranties and delivered in connection with the sale of new, certified used or pre-owned vehicles or new or remanufactured motor vehicle parts and equipment (including service parts, accessories, engines and transmissions) manufactured or sold by [Old GM] or Purchaser prior to or after the Closing and (B) all obligations under Lemon Laws

Finally, New GM also expressly assumed "all Liabilities arising out of, relating to, in respect of, or in connection with the use, ownership or sale of the Purchased Assets after the closing." Those assets included all contracts of Old GM, including its contracts with dealers and service centers.

FACTUAL ALLEGATIONS

I. There Are Serious Safety Defects in Millions of Old GM Vehicles that New GM Has Continued to Conceal from Consumers.

97. So far, in 2014, New GM has announced over 60 recalls affecting over 27 million GM-branded vehicles from model years 1997-2014. These recalls include millions of vehicles originally made and sold by Old GM. The numbers of recalls and serious safety defects are unprecedented, and lead to only one conclusion: Old GM and New GM have been

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/08/15 Page 56 of 287

incapable of building safe, defect-free vehicles, and they have systematically refused to remedy (and instead have fraudulently concealed) defects once the vehicles were on the road.

98. The available evidence shows a common pattern: Old GM knew about an ever-growing list of serious safety defects in millions of its vehicles, but concealed those defects from consumers and regulators in order to cut costs, boost sales, and avoid the cost and publicity of recalls.

99. The company New GM inherited from Old GM in 2009 valued cost-cutting over safety, actively discouraged its personnel from taking a "hard line" on safety issues, avoided using "hot" words like "stall" that might attract the attention of NHTSA, and trained its employees to avoid the use of words such as "defect" or "problem" that might flag the existence of a safety issue. New GM affirmatively and independently continued and ratified these practices.

100. The Center for Auto Safety recently stated that it has identified 2,004 death and injury reports filed by New GM with federal regulators in connection with vehicles that have recently been recalled. Most or all of these deaths and injuries would have been avoided had Old GM complied with its TREAD Act obligations instead of concealing the truth.

101. The many defects concealed by Old GM affected key safety systems in its vehicles, including the ignition, power steering, and airbag systems.

102. The available evidence shows a consistent pattern: Old GM learned about a particular defect and, often at the prodding of regulatory authorities, "investigated" the defect and decided upon a "root cause." Old GM then took minimal action – such as issuing a carefully worded "Technical Service Bulletin" to its dealers, or even recalling a very small number of the vehicles with the defect. All the while, the true nature and scope of the defects

were kept under wraps, defective vehicles remained on the road, and Old GM enticed Class members to purchase its vehicles by touting their safety, quality, and reliability.

103. After July 11, 2009, New GM would continue this very same pattern of conduct and concealment, for over five more years.

A. <u>The Ignition Switch Defects</u>

104. The Defective Vehicles all contain substantially similar ignition switch and cylinders, with the key position of the lock module located low on the steering column, in close proximity to a driver's knee. The ignition switch systems on these vehicles are prone to fail during ordinary and foreseeable driving situations.

105. Specifically, the ignition switches can inadvertently move from the "run" to the "accessory" or "off" position at any time during normal and proper operation of the Defective Vehicles. The ignition switch is most likely to move when the vehicle is jarred or travels across a bumpy road; if the key chain is heavy; if a driver inadvertently touches the ignition key with his or her knee; or for a host of additional reasons. When the ignition switch fails, the vehicle suddenly and unexpectedly loses engine power, power steering, and power brakes, and certain safety features are disabled, including the vehicle's airbags. This leaves occupants vulnerable to crashes, serious injuries, and death.

106. The ignition switch systems at issue are defective in at least three major respects. First, the switches are weak; due to a faulty "detent plunger," the switch can inadvertently move from the "run" to the "accessory" position. Second, because the ignition switch is placed low on the steering column, the driver's knee can easily bump the key (or the hanging fob below the key) and cause the switch to inadvertently move from the "run" to the "accessory" or "off" position. Third, when the ignition switch moves from the "run" to the "accessory" or "off" position, the vehicle's power is disabled. This also immediately disables

Case 1:14-md-02543-JMF Document 1579-1 Filed 01/13/15 Page 58 of 337

the airbags. Thus, when power is lost during ordinary operation of the vehicle, a driver is left without the protection of the airbag system even if he or she is traveling at high speeds.

107. Vehicles with defective ignition switches are therefore unreasonably prone to be involved in accidents, and those accidents are unreasonably likely to result in serious bodily harm or death to the drivers and passengers of the vehicles.

108. Indeed, New GM itself has acknowledged that the defective ignition switches pose an "increas[ed] risk of injury or fatality" and has linked the ignition defect to at least thirteen deaths and over fifty crashes in the vehicles subject to the February recall alone. Ken Feinberg, who was hired by New GM to settle wrongful death claims arising from the ignition switch defects, has already linked the defect to twenty-seven deaths, and has over 1300 death and injury claims still to review. The Center for Auto Safety studied collisions in just two vehicle makes, and linked the defect to over 300 accidents. There is every reason to believe that as more information is made public, these numbers will continue to grow.

109. Alarmingly, Old GM knew of the deadly ignition switch defects and their dangerous consequences from at least 2001, but concealed its knowledge from consumers and regulators. New GM did the same, and, incredibly, it was not until 2014 – more than a decade later – that the ignition switch recalls were first announced.

II. Old GM's Fraudulent Conduct with Respect to the 2.19 Million Defective Vehicles Subject to the February/March Recall.

A. Old GM Knew That There Were Failures With The Ignition Switch Design In 2001, And Concealed These Material Facts, Putting The Safety Of The Class At Serious Risk Of Harm.

110. Old GM knew that the ignition switches to be used in its vehicles were defective well before the vehicles were ever sold to the public. In the late 1990s and early 2000s, Old GM and one of its suppliers, Eaton Mechatronics, finalized the specifications for

the ignition switch for the Saturn Ion. Eaton Corporation sold its Vehicle Switch/Electronic Division to Delphi Automotive Systems ("Delphi") on March 31, 2001. Delphi went on to manufacture the defective ignition switch for Old GM.

111. In 2001, years *before* the vehicles were ever sold and available to customers, Old GM privately acknowledged in a pre-production report for the Saturn Ion that there were serious problems, including engineering test failures, with the ignition switch. During the pre-production development of the 2003 Saturn Ion, Old GM engineers learned that the ignition switch could inadvertently move from the "Run" position to the "Accessory" or "Off" position. In a section of an internal report titled "Root Cause Summary," Old GM engineers identified two "causes of failure" namely, "[l]ow contact force and low detent plunger force." The "detent" is part of the ignition switch's inner workings that keeps the switch from rotating from one setting to another unless the driver turns the key.

112. The Old GM Design Release Engineer assigned to the ignition switch was Ray DeGiorgio. DeGiorgio had worked at Old GM since 1991, and spent his career focused on vehicle switches. During early testing of the ignition switch, DeGiorgio noticed problems with the prototypes provided by Delphi. In September 2001, DeGiorgio corresponded with representatives of Koyo, the supplier of the Ion steering column into which Delphi's switch was installed. In his correspondence, DeGiorgio stated he learned that 10 of 12 prototype switches from Delphi "[f]ailed to meet engineering requirements," and the "failure is significant," adding that Old GM "must ensure this new design meets engineering requirements." This significant failure of the ignition switch design was not corrected by Old GM; moreover, it was suppressed and concealed by the failure to remedy and disclose.

B. Old GM Approved Production Of Ignition Switches In 2002 Despite Knowing That They Had Failed In Pre-Production Testing And Did Not Meet Old GM's Internal Design Specifications.

113. Old GM approved production of the ignition switches despite knowing that they did not meet Old GM's own engineering design specifications.

114. Validation testing conducted by Delphi in late 2001 and early 2002 revealed that the ignition switch consistently failed to meet the torque values in the internal specification. These tests, conducted on various dates in the fall of 2001, included a test to determine whether the torque required to rotate the switch from Run to Accessory complied with the specification. The January 2002 test report denoted the design failure by stating "Not OK" next to each result.

115. In February 2002, Delphi, Old GM's ignition switch supplier for the recalled vehicles, asked Old GM to approve production for the ignition switch and submitted a Production Part Approval Process ("PPAP") request. Even though testing of the ignition switch revealed that it did not meet the original specifications set by Old GM and that internal testing showed the switch would fail, Old GM approved it. The defective switch was put into Old GM vehicles unbeknownst to the Class.

C. Old GM Received Complaints And Reports On The Stalling Of Vehicles Due To The Defective Ignition Switch Turning Off And Causing Moving Stalls, And Concealed That Material Information From The Class.

116. In 2003, almost immediately after the first Old GM vehicles with the defective ignition switches were sold to the public, GM started receiving complaints regarding loss of power while driving with no Diagnostic Trouble Codes ("DTC") being recorded in 2003 Saturn Ions involving the same ignition switch and steering column. In 2003, an internal report documented an instance in which the service technician observed a stall while driving.

The service technician noted that the weight of several keys on the key ring had worn out the ignition switch. The ignition switch was replaced and the matter closed.

117. Old GM employees were also having problems with their own model year ("MY") 2003 and 2004 Ions that contained the switch. In a January 9, 2004 report received from Old GM employee, Gerald A. Young, concerning his MY 2003 Saturn Ion, he informed Old GM, "[t]he ignition switch is too low. All other keys and the key fob hit on the driver's right knee. The switch should be raised at least one inch toward the wiper stalk," characterizing it as "a basic design flaw [that] should be corrected if we want repeat sales."

118. In a February 19, 2004 report concerning his MY 2004 Saturn Ion, Old GM employee, Onassis Matthews, stated: "The location of the ignition key was in the general location where my knee would rest (I am 6' 3" tall, not many places to put my knee). On several occasions, I inadvertently turn [sic] the ignition key off with my knee while *driving down the road*. For a tall person, the location of the ignition key should be moved to a place that will not be inadvertently switched to the off position."

119. In an April 15, 2004 report concerning his MY 2004 Saturn Ion, Old GM employee, Raymond P. Smith, reported experiencing an inadvertent shut-off: "I thought that my knee had inadvertently turned the key to the off position."

120. Old GM concealed these and other similar manifestations of the defective ignition switch.

D. Old GM Engineers Understood The Need To Correct The Ignition Switch Defect In 2004 But Failed To Act To Disclose Or Correct The Defect.

121. In 2004, Old GM knew that the ignition switch posed a safety concern that needed to be fixed. For example, in October 2004, Old GM internally documented incidents in which Old GM engineers verified that the ignition switch was turned to the off position as a

Case 1:14-md-02543-JMF Document 1579-1 Filed 01/04/15 Page 72 of 387

result of being grazed by the driver's knee. The cause of the problem was found to be the "low key cylinder torque/effort."

122. In 2004, Old GM was finalizing plans to begin production and sale of the Chevrolet Cobalt. The Chevrolet Cobalt was designed using the same ignition switch that was used in the Saturn Ion. As the Chevrolet Cobalt moved into production, it too—like its Saturn Ion predecessor— experienced inadvertent ignition switch shut-offs that resulted in moving stalls. Old GM already knew that when the ignition switch was inadvertently turned to off or accessory—by design—the airbags would not deploy. Instead of implementing a solution to the safety problem, the engineers debated partial solutions, short-term fixes, and cost.

123. Around the time of the Cobalt launch, more reports surfaced of moving stalls caused by a driver bumping the key fob or chain with his knee. At a 2004 press event associated with the launch of the Cobalt in Santa Barbara, California, a journalist informed Doug Parks, the Cobalt Chief Engineer, that while adjusting his seat in the Cobalt he was test driving, the journalist had inadvertently turned off the car by hitting his knee against the key fob or chain. Old GM's Doug Parks asked Gary Altman, the Program Engineering Manager, to follow up on the complaint by trying to replicate the incident and to determine a fix.

124. Old GM engineers independently encountered the ignition switch defect in early test drives of the Chevy Cobalt, before it went to market. The Old GM engineers pinpointed the problem of engine shut-off in the Cobalt and were "able to replicate this phenomenon during test drives." Despite this knowledge, Old GM told no one.

125. According to Old GM, its engineers "believed that low key cylinder torque effort was an issue and considered a number of potential solutions." But after considering the

cost and amount of time it would take to develop a fix, Old GM did not implement a fix, and the defective vehicles went to market.

126. As soon as the Chevrolet Cobalt hit the market in late 2004, Old GM immediately started getting similar complaints about sudden loss of power incidents, "including instances in which the key moved out of the 'run' position when a driver inadvertently contacted the key or steering column." Old GM engineers determined that the low torque in the ignition switch could cause the key to move from the "run" to the "accessory" or "off" position under ordinary driving conditions with normal key chains because "detent efforts on ignition switch are too low, allowing [the] key to be cycled to [the] off position inadvertently." Specifically, in February 2005, GM engineers concluded that "there are two main reasons that we believe can cause a lower effort in turning the key: a lower torque detent in the ignition switch … [and a] low position of the lock module [on] the [steering] column."

127. From the outset, Old GM employees, customers, and members of the automotive press found repeatedly that they would hit the key fob or keychain with their knee, and the car would turn off. As noted, Old GM received some of these reports before the Cobalt's launch, and others afterwards. Despite the many complaints describing the moving stalls and customers' safety concerns, Old GM covered up the defect and made safety assurances to the driving public, its customers, and the Class, upon which they reasonably relied. Old GM received reports from dealers documenting this problem and advised dealers to tell customers to modify their key chains. For example, in response to a customer complaint in December 2004, GM internally noted:

> <u>RECOMMENDATION/INSTRUCTIONS</u>:
>
> There is potential for the driver to inadvertently turn off the ignition due to low key ignition cylinder torque/effort. The concern

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/03/14 Page 59 of 237

> is more likely to occur if the driver is short and has a large heavy key chain.
>
> In the cases this condition was documented, the driver's knee would contact the key chain while the vehicle was to ruing the steering column was adjusted all the way down. This is more likely to happen to a person that is short as they will have the seat positioned closer to the steering column.
>
> In cases that fit this profile, question the customer thoroughly to determine if this may the cause. The customer should be advised of this potential and to take steps, such as removing unessential items from their key chain, to prevent it.

GM then closed the complaint file and kept this "potential" problem secret.

128. Old GM's Manager of Product Safety Communications publicly announced and reassured customers that there was no safety issue with Cobalt moving stalls: "When this happens, the Cobalt is still controllable. The engine can be restarted after shifting to neutral."

129. DeGiorgio learned about the Cobalt press event moving stall and was approached by an Old GM engineer who suggested that DeGiorgio could "beef up" the ignition switch and increase the torque.

130. On May 17, 2004, during a NHTSA visit to the GM Milford Proving Grounds, Old GM gave a presentation titled "Engine Stall & Loss of Assist Demonstration." At a June 3, 2004, meeting with NHTSA, GM represented to NHTSA that in assessing a given stall, it considered severity, incident rate, and warning to the driver. But drivers had no such warning, certainly not from Old GM. NHTSA told Old GM that where number of stalls were high, the factors should be considered, but did not immunize Old GM from a safety recall.

131. On November 22, 2004, engineers in Old GM's High Performance Vehicle Operations group wrote DeGiorgio and informed him that their group had repeatedly experienced a moving stall during a track test of the Cobalt SS (the high-performance version of the Cobalt) when the driver's knee "slightly graze[d]" the key fob. An Old GM engineer

forwarded this complaint to DeGiorgio, and explicitly asked DeGiorgio whether there was "a specification on the force/torque required to keep that switch in the RUN position." He also asked DeGiorgio: "If so, is the switch meeting that spec? If not, what are the options for implementing a stronger spring?"

E. <u>Old GM Closed Its First Internal Investigation With No Action Because Of Cost.</u>

132. Despite the serious safety problem posed by the ignition switch defect, Old GM took no action to correct the defect and instead covered it up. As set forth above, in the summer and fall of 2004, as the Chevrolet Cobalt moved into the production stage, engineers observed a number of moving stalls caused by the ignition switch defect.

133. On November 19, 2004, Old GM personnel opened an engineering inquiry known as a Problem Resolution Tracking System (PRTS) to address the complaint that the Cobalt could be "keyed off with knee while driving." At this time, PRTS issues were analyzed by a Current Production Improvement Team (CPIT). The CPIT that examined the Cobalt issue beginning in late 2004 included a cross-section of business people and engineers, including Parks, Old GM engineer Gary Altman and Lori Queen, Vehicle Line Executive for the Cobalt.

134. In early 2005, and as part of the PRTS, Parks sent an email with the subject, "Inadvertent Ign turn-off." In the email, Parks wrote, "For service, can we come up with a 'plug' to go into the key that centers the ring through the middle of the key and not the edge/slot? This appears to me to be the only real, quick solution."

135. After considering this and a number of other solutions (including changes to the key position and measures to increase the torque in the ignition switch), the CPIT examining the issue decided to do nothing. Indeed, by March 2005, the GM Cobalt Program

Case 1:14-md-02543-JMF Document 1579-1 Filed 01/04/16 Page 96 of 337

Engineering Manager ("PEM") issued a "directive" to close the 2004 PRTS "with no action."[5] According to Old GM's internal documents, the design change was refused because of time, i.e., because the "lead-time for all solutions is too long," and money, i.e., because the "tooling cost and piece price are too high…".[6]

136. The 2004 PRTS was closed because "none of the solutions represents an acceptable business case"—a standard phrase used by GM personnel for closing a PRTS without action because of cost.[7] In deciding to do nothing to correct the serious safety defect that existed in its vehicles, Old GM simply shrugged off the issue entirely. What is more, Old GM downplayed the severity of the safety threat, rating the specter of a moving stall (even at highway speeds) with a severity level of 3—on a scale of 1 (most severe) to 4 (least severe). Old GM did not explain what, if any, criteria exist for an "acceptable business case" or otherwise justify its decision to do nothing. David Trush, the DRE for the ignition cylinder, explained that to present an "acceptable business case," a solution should solve the issue, be cost effective, and have an acceptable lead time to implement the change.[8] But one of the very solutions proposed by Thrush—changing the key from a slot to a hole configuration—would have cost less than one dollar per vehicle.

137. Here, as elsewhere in the story of the ignition switch defect, the structure within Old GM was one in which no one was held responsible and no one took responsibility.[9]

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/08/15 Page 97 of 837

F. Complaints Continued And Serious Accidents Came To Old GM's Attention In 2005, While NHTSA Began To Investigate Death Cases Involving Chevy Cobalts.

138. After the Cobalt program team closed the November 19, 2004, PRTS with no action taken, additional complaints of Cobalt stalls and inadvertent ignition switch shut-offs continued to come into GM's Brand Quality Group.[10]

139. In March 2005, Jack Weber, a GM engineer, reported that during "heel-toe downshifting" in a Cobalt SS with a manual transmission (a high-performance Cobalt model), his knee contacted the key fob and key ring, which caused "pulling on the key to move it to the 'Off' position."[11]

140. In May 2005, a customer demanded that Old GM repurchase his Cobalt. The complaint was that the ignition switch shut off during normal driving conditions with no apparent contact between the driver's knee and the key chain or fob.[12] Old GM Brand Quality Manager Steven Oakley forwarded this information internally at Old GM, stating that the ignition switch "goes to the off position too easily shutting the car off."[13] DeGiorgio was one of the Old GM personnel who received this e-mail chain, which effectively stated that the customer's car, as well as others at the dealership, had ignition switches with insufficient

torque and cause the car to shut off while driving.[14] This e-mail specifically included a request to DeGiorgio for an ignition switch "at the high end of the tolerance spec."[15]

141. By May 2005, Old GM personnel thus had multiple reports of moving stalls and were receiving buyback requests for Cobalts following complaints that consumers made to dealers.[16]

142. The problem of moving stalls and the ignition switch turning off in Old GM vehicles continued throughout 2005, and was described both within Old GM and in the media. In May and June 2005, reviewers from two newspapers, including the New York Times, wrote articles detailing how they or a family member had inadvertently turned a Cobalt off with their knees.[17] On May 26, 2005, a writer for the Sunbury Daily Item in Pennsylvania reviewed the Cobalt and reported that "[u]nplanned engine shutdowns happened four times during a hard-driving test last week. . . . I never encountered anything like this in 37 years of driving and I hope I never do again." In furtherance of covering up a material safety hazard, one of Old GM's in-house vehicle safety lawyers e-mailed a colleague to marshal evidence for the press that the risk of moving stalls was "remote" and "inconsequential." He wrote that he did not want to be criticized for failing to "defend a brand new launch."[18]

[18] Valukas Report at 86.

143. In June 2005, a Senior Delphi Project Engineer stated in an "e-mail that the "Cobalt is blowing up in [GM's] face in regards to the car turning off with the driver's knee."[19]

144. An Old GM customer filed the following complaint about a 2005 Cobalt prone to moving stalls on June 29, 2005:

> Dear Customer Service:
>
> This is a safety/recall issue if ever there was one.… The problem is the ignition turn switch is poorly installed. Even with the slightest touch, the car will shut off while in motion. I don't have to list to you the safety problems that may happen, besides an accident or death, a car turning off while doing a high speed …[20]

145. In July 2005, a 2005 Chevrolet Cobalt crashed in Maryland, killing the teenage driver, Amber Rose.[21] Calspan Crash Data Research Center was assigned by the NHTSA Special Crash Investigation Program to conduct a Special Crash Investigation (or "SCI"), which found "that the frontal airbag system did not deploy" and the "[Sensing Diagnostic Module (or "SDM")] data indicated that the 'vehicle power mode status' was in 'Accessory.'"[22] The August 15, 2005, SCI report found that the vehicles' SDM data recorded the "vehicle power mode status" of the ignition switch had shifted from "run" to "accessory" just before the crash. NHTSA continued the SCI and Old GM failed to report the crash to

NHTSA until the third quarter of 2005.[23] Upon information and belief, Old GM subsequently entered into a confidential settlement agreement with the victim's mother.

146. Inside Old GM, the defect was raised with the Product Investigations ("PI") unit. The PI unit was charged with solving significant engineering problems, including safety problems; it was the primary unit charged with investigating and resolving potential safety defects.[24] Old GM Product Investigations Manager Doug Wachtel assigned PI employee Elizabeth Kiihr to investigate the Cobalt ignition switch shut-off. Wachtel's team looked at early data from the field and found 14 incidents related to the ignition switch. The PI group also tried to recreate the problem themselves. Doug Wachtel and Gay Kent drove a Cobalt around Old GM's property in Warren, Michigan. Gay Kent had a long and heavy key chain, and was able to knock the ignition from Run to Accessory simply by moving her leg so that her jeans caused friction against the fob.[25] Wachtel also reproduced the stall in the Cobalt test drive by contact with the key chain.[26]

147. Notwithstanding the media reporting, the customer complaints, and its replication of moving stalls in the field, the PI team did not recommend a safety recall on vehicles with the ignition switch defect.[27] Old GM knew that a defect existed in its vehicles, but did nothing to disclose the truth or warn consumers or the Class, nor did Old GM correct the defect in vehicles that it had already sold, or in vehicles it continued to manufacture, sell, warrant, and represent as safe.

G. Old GM Engineers Proposed Design Modifications To The Ignition Switch In 2005 That Were Rejected By Old GM Management On The Basis Of Cost.

148. Old GM's knowledge of the serious safety problem grew, but still there was no disclosure. In February 2005, as part of the 2004 PRTS that avoided the word "stall," Old GM engineers met to analyze how to address the ignition switch defect.[28] Indeed, between February 2005 and December 2005, Old GM opened multiple PRTS inquiries regarding reports of power failure and/or engine shutdown in the affected vehicles.

149. Old GM engineers internally recognized that there was a need to do something in order to address the ignition switch defect. For example, Old GM engineers were directed to investigate a possible key slot change as "containment" of the defect, including development cost and time estimates.[29]

150. In May 2005, PRTS N182276 (the "2005 PRTS") was opened by Old GM to analyze the ignition switch in the 2005 Chevrolet Cobalt following continued customer complaints that the "vehicle ignition will turn off while driving."[30] Old GM acknowledged in the 2005 PRTS that it had previously been faced with the same issue in the 2004 PRTS and "[d]ue to the level of buyback activity that is developing in the field, Brand Quality requests that the issue be reopened."[31] In other words, customers were asking Old GM to take back the defective cars while Old GM said nothing to customers or the Class about the safety risks. Old GM continued to market and warrant the vehicles as safe. The 2005 PRTS proposed that Old

[31] GMHEC000001743.

GM re-design the key head from a "slotted" to a "hole" configuration. After initially approving the proposed fix, Old GM reversed course and again declined to implement it.[32].

151. As part of one of the myriad PRTS inquiries opened in 2005, Quality Brand Manager Steve Oakley asked William Chase, an Old GM warranty engineer, to estimate the warranty impact of the ignition switch defect in Cobalt vehicles. Chase estimated that for Cobalt and G5 vehicles on the road for 26 months, 12.40 out of every 1,000 vehicles would experience inadvertent power failure while driving. Still, Old GM did nothing.

152. At a June 7, 2005, Vehicle And Process Integration Review ("VAPIR") meeting at Old GM, the Cobalt VAPIR team discussed potential solutions to the inadvertent shut-off issue. Around this same time, DeGiorgio was asked to propose a change to the ignition switch that would double the torque required to turn the switch.[33] DeGiorgio identified two possibilities. First, he proposed using a switch under development for the Saturn Vue and the Chevrolet Equinox (the "GMT 191"). Because the GMT 191 switch was superior to the current ignition switch both electrically and mechanically, DeGiorgio referred to it as the "gold standard of ignition switches."[34] Second, DeGiorgio proposed redesigning the ignition switch already in Delta platform vehicles. Part of DeGiorgio's redesign plan included adding a second detent plunger.[35]

153. At the VAPIR meeting on June 14, 2005, additional proposed fixes were presented – categorized as either "short-term" or "long-term" solutions. The short- term solution was to use a smaller key ring and to change the key going forward with a new key

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 93 of 237

head design that used a hole instead of a slot—the same idea that David Thrush had proposed during the November 2004 PRTS inquiry.[36] The "long-term" solutions included DeGiorgio's idea of replacing the ignition switch with the GMT 191, or gold standard switch, which would double the torque needed to shut off the ignition. The implementation of the new switch was targeted for MY 2007 or MY 2008 vehicles, at a cost of just $1.00/vehicle, plus tooling costs which were not known at that time.[37]

154. The presentation for this VAPIR meeting also included discussion of press coverage that described the very defect in this case that the Old GM engineers were addressing earlier in 2005: inadvertent shut-off of the ignition switch and moving stalls. The presentation included GM's official public relations statement regarding the issue reassuring the public and the Class that the vehicle was "still controllable."[38]

155. Also on June 14, 2005, similar complaints surfaced of "inadvertent ignition shut-offs" in the Solstice, which used the same defective ignition switch as the Cobalt and the Ion. A GM engineer emailed DeGiorgio and other Old GM personnel involved in evaluating short-term and long-term fixes for the ignition switch, informing them that Solstice testing showed the "ignition inadvertently turns off when hit." The engineer noted that the complaint was "very similar to the ones on the Cobalt [sic]" and suggested that the same "preventative measures" under discussion for the Cobalt should be taken for the Solstice.[39]

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 94 of 337

156. On June 17, 2005, Old GM engineer Al Manzor conducted testing on the ignition switch, and the proposed GMT 191 ignition switch, at Old GM's Milford Proving Ground[40] to evaluate how the switches performed in the Cobalt using a key with a slotted key head versus a key head with a hole.[41]

157. Manzor's testing demonstrated that the rotational torque required to move the key out of Run was 10 N-cm, below the Specification of 15 to 25 N-cm. However, neither Manzor, nor anyone else interviewed, compared the test results to the actual specification.[42]

158. Later in June 2005, the VAPIR approved a fix for existing customers – a plug that could be inserted into keys when customers came to the dealer reporting problems – and a change to the key for production in the future (a change that was not implemented). On July 12, 2005, Old GM also issued another Preliminary Information to dealers, this time explaining (only for the 2005 Cobalt and 2005 Pontiac Pursuit) that a fix was available (the key insert). The key change (and the insert) did not, however, address the core problem of inadequate torque performance in the ignition switch or the low placement of the ignition switch on the steering cylinder; indeed, the engineers still regarded the key head design change as only a temporary solution – or, as one Old GM engineer described it, a "band-aid."[43]

---

[40] The Milford Proving Ground is a GM engineering facility designed for vehicle research, development, and testing in Milford, Michigan. It has extensive test tracks for vehicle testing under a range of road conditions. Valukas Report at 81, n. 337.

[43] Valukas Report at 82-83.

159. Manzor said he discussed his safety concerns about the Cobalt, including the potential for airbag non-deployment, with Parks, Altman, and a safety engineer, Naveen Ramachandrappa Nagapola.[44]

160. Ignoring the ignition defect did not make the problem or reported incidents go away.

H. Rather Than Implementing A Safety Recall And Fixing The Known Defect, Old GM Sent An Inadequate Technical Service Bulletin To GM Dealers In Late 2005, Advising Dealers On Taking Heavy Items Off Key Rings.

161. Throughout 2005, various committees within Old GM considered proposed fixes, but rejected them as too costly. In December of 2005, rather than issuing a safety recall on the ignition switch defects, Old GM sent a Technical Service Bulletin ("TSB") 05-02-35-007 to GM dealers, titled "Information on Inadvertent Turning Off of Key Cylinder, Loss of Electrical System and No DTCs" for the Chevy Cobalt and HHR, Saturn Ion, and Pontiac Solstice vehicles.[45] The TSB explained that "[t]here is potential for the driver to inadvertently turn off the ignition due to low ignition key cylinder/torque."

162. When Old GM issued this TSB, the prior Preliminary Information provided to its dealers on July 12, 2005 (which had accurately used the word "stall"), was removed from the dealer database as obsolete. This TSB also did not accurately describe the danger posed by the ignition switch defect and went only to Old GM dealers, not to the public or the Class.[46] There was no mention in the TSB of the possibility of airbag non-deployment, engine stalls, loss of power steering or power brakes.

[44] J&B Interview of Alberto Manzor, May l, 2014. Valukas Report at 83, n. 347.
[45] TSB 05-02-35-007, "Information on Inadvertent Turning Off of Key Cylinder, Loss of Electrical System and No DTCs," (Oct. 2006), at GMHEC000329773.

Case 1:14-md-02543-JMF Document 1379-1 Filed 10/13/15 Page 96 of 237

163. As evidence of the international and fraudulent concealment by Old GM, multiple Old GM employees confirmed that Old GM intentionally avoided using the word "stall" in the TSB to dealers.[47]

164. Old GM Quality Brand Manager, Steve Oakley, who drafted the December 2005 TSB, stated the term "stall" is a "hot" word that Old GM did not use in TSBs because *it may raise a concern about vehicle safety*, *which "suggests Old GM should recall the vehicle*, *not issue a bulletin."*[48] In addition, Old GM personnel stated that "there was concern about the use of 'stall' in a TSB because such language might draw the attention of NHTSA."[49] The December 2005 TSB was intentionally misleading and incomplete. Rather than spend the money on a part with sufficient torque or recall the defective vehicles, Old GM came up with a self-described band-aid.

165. Rather than disclose the true nature of the defects and correct them, pursuant to the December 2005 TSB, Old GM, through its dealers, instead gave some customers who brought in their vehicle complaining about stalling "an insert for the key ring so that it goes from a 'slot' design to a hole design" to prevent the key rings from moving up and down in the slot. "[T]he previous key ring" was "replaced with a smaller" one; this change was intended to keep the keys from hanging as low as they had in the past.[50] Old GM created over 10,000 key plug inserts as the defect's cheaper fix.[51] According to GM's records, Old GM dealers provided key inserts to only 474 customers who brought their vehicles into dealers for service.[52] But the band-aid failed because Old GM abandoned the key redesign effort.[53]

---

[52] February GM Chronology at 2.

Furthermore, while Old GM made the key insert available to consumers of previously purchased vehicles, it did not, at the same time, change the key for cars that were rolling off the assembly line and those yet to be produced. Thus, even the "band-aid" that Old GM engineers proposed was not implemented for new cars.[54]

166. Still there was no recall and Old GM continued to receive complaints of fatalities and injuries that put it squarely on notice of the defect. Rather than issue the necessary safety recall, inside Old GM, the cover-up continued.

I. Old GM Knew About And Authorized A Design Change To The Ignition Switch In 2006, But Masked The Existence Of The Change By Keeping The Part Number The Same.

167. Old GM covertly authorized a design change for the defective ignition switch in 2006.

168. In late 2005 and early 2006, DeGiorgio discussed with Delphi a proposal to put a stronger spring and plunger into the ignition switch.[55] An internal Delphi document indicates that this switch design—with a longer detent spring-plunger—was the same as the longer detent spring-plunger design originally drafted by Delphi in 2001.[56] In other words, this option was available when the ignition switch was first designed[57]

169. In April 2006, DeGiorgio authorized Delphi to implement changes to fix the ignition switch defect.[58] The design change "was implemented to increase torque performance

58 General Motors Commodity Validation Sign-Off (April 26, 2006, GMHEC000003201).

in the switch."[59] On April 26, 2006, DeGiorgio approved an ignition switch with a longer detent plunger by signing what is called a Form 3660, giving Delphi permission to begin manufacturing the longer parts for the switch.[60] The Form 3660 stated, "[n]ew detent plunger (Catera spring/plunger) was implemented to increase torque force in switch."[61] Each Form 3660 has to link back to a master work order, and this one did as well. But the work order to which it was linked was only for the electrical improvements to the ignition switch; the work order did not mention the change to the spring and plunger.[62] Old GM fraudulently concealed and acted to suppress and cover up this material fact.

170. Delphi documents suggest that the new ignition switch went into production sometime after June 26, 2006.[63] Although the design of the ignition switch changed, *the part number remained the same*.[64]

171. Meanwhile, consumers, NHTSA, the driving public, and the Class were not told of this change, because Old GM "*concealed the fact*" of the design change and "*failed to disclose this critical information*," with devastating consequences.[65]

172. In congressional testimony in 2014, GM CEO Mary Barra acknowledged that GM should have changed the part number when it redesigned the ignition switch, and that its failure to do so did not meet industry standard behavior. Former New GM engineers term GM's failure to change the part number a "cardinal sin" and "an extraordinary violation of internal processes."

J. <u>The Fatalities Resulting From The Defects And Cover-Up Came To Old GM's Attention As Early As 2004.</u>

173. Customer complaints and reports of injuries and fatalities continued.

174. GM's legal department received notice of the first Ion airbag non-deployment claim in January 2004 in a 2004 Saturn Ion. The first Cobalt crash came to Old GM's attention in September 2005.[66]

175. On November 17, 2005—immediately before Old GM issued the December Bulletin—a Cobalt went off the road and hit a tree in Baldwin, Louisiana. The front airbags did not deploy in this accident. Old GM received notice of the accident, opened a file, and referred to it as the "Colbert" incident.

176. In January 2006, a 2005 Chevy Cobalt, driven by an unsuspecting Old GM customer struck several trees and its driver died en route to the hospital.[67] The vehicle's power mode status was in "accessory" at the time of the crash and the airbag did not deploy when it should have.[68]

177. On February 10, 2006, in Lanexa, Virginia – shortly after Old GM issued the TSB – a 2005 Cobalt flew off of the road and hit a light pole. As with the Colbert incident (above), the frontal airbags failed to deploy in this incident. The download of the SDM (the vehicle's "black box") showed the key was in the "accessory/off" position at the time of the crash. Old GM received notice of this accident, opened a file, and referred to it as the "Carroll" incident.

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 90 of 237

178. On March 14, 2006, in Frederick, Maryland, a 2005 Cobalt traveled off the road and struck a utility pole. The frontal airbags did not deploy in this incident. The download of the SDM showed the key was in the "accessory/off" position at the time of the crash. Old GM received notice of this incident, opened a file, and referred to it as the "Oakley" incident.

179. In September 2006, GM became aware of an incident in which a 2004 Saturn Ion left the road and struck a utility pole head on. The airbag did not deploy and the driver was wearing her seatbelt, but was pronounced dead at the scene. Old GM identified this crash as one in which the airbag should have deployed, and the airbag likely would have saved her life.[69] Old GM engineers agreed that "1) the airbags … should have deployed; 2) the SDM did not record the crash event, for unknown reasons;… and 4) it is reasonably likely that deployment of the driver airbag would have prevented [] death in this accident."[70] Still, Old GM admitted nothing and represented its cars were non-defective and safe.

180. On October 24, 2006, a crash occurred in which a 2005 Cobalt left the road and struck a telephone box and two trees. There were fatalities and severe injuries and the airbag did not deploy. Alan Adler e-mailed Dwayne Davidson, Senior Manager for TREAD Reporting at Old GM, and others, copying Gay Kent, Jaclyn Palmer, Brian Everest, and Doug Wachtel, with the subject line "2005 Cobalt Air Bags—Fatal Crash; Alleged Non-Deployment."[71]

181. In October 2006, a 2005 Chevy Cobalt was involved in a crash in Wisconsin which resulted in the deaths of the front right and rear right passengers. NHTSA assigned Indiana University Transportation Research Center to investigate the crash. The vehicle was

[70] Valukas Report at 113, n. 474.
[71] Valukas Report at 113-114.

Case 1:14-md-02543-JMF Document 1579 Filed 12/03/15 Page 91 of 837

inspected on November 6, 2006.[72] Old GM reported the crash later in 2006 in its EWR filing.[73] NHTSA requested additional information from GM in May of 2007, and GM responded a month later.[74]

182. In 2007, two analyses of the fatalities in the Wisconsin Cobalt crash, one by Wisconsin State Trooper Keith Young and another by Indiana University researchers, both independently concluded that the movement of the ignition switch from "run" into "accessory" caused the 2006 accident, the airbag non-deployment and the tragic deaths. Officer Young was able to reach this accurate conclusion by examining GM's own engineering documents.

183. Internal Old GM documents show that the company has received at least 248 reports of air bag non-deployment in 2005 MY vehicles.[75] Internal documents also showed that Old GM received at least 134 reports of air bag non-deployment in 2006 MY vehicles.[76]

K. <u>Old GM Responded To Growing Evidence Of Fatalities By Updating The Technical Service Bulletin To Dealers About Heavy Key Chains.</u>

184. In October 2006, Old GM updated the prior December 2005 Service Bulletin to include additional make and MY vehicles, namely: the 2007 Saturn Ion and Sky, 2007 Chevrolet HHR, and 2007 Pontiac Solstice and G5.[77] As it had previously done, in its statement to dealers, Old GM avoided acknowledging the ignition switch defect and this time blamed the problem on height and weight of its customers, short people and heavy key rings, stating:

[76] GM Internal Summary Points on Airbag Non-Deployment for Cobalt, G5 and Pursuit (Aug. 2013).
[77] (Service Bulletin 05-02-35-007, "Information on Inadvertent Turning Off of Key Cylinder, Loss of Electrical System and No DTCs," (Oct. 2006 revised), at GMHEC000000002).

> There is potential for the driver to inadvertently turn off the ignition due to low ignition key cylinder torque/effort. The concern is more likely to occur if the driver is short and has a large and/or heavy key chain. In these cases, this condition was documented and the driver's knee would contact the key chain while the vehicle was turning and the steering column was adjusted all the way down. This is more likely to happen to a person who is short, as they will have the seat positioned closer to the steering column. In cases that fit this profile, question the customer thoroughly to determine if this may be the cause. The customer should be advised of this potential and should take steps to prevent it—such as removing unessential items from their key chain.[78]

185. Despite the TSB to dealers, millions of the defective vehicles remained on the road endangering the lives and livelihoods of the Class and the public.

L. Old GM Knew Of And Tracked Multiple Accidents Involving The Ignition Switch Defect By 2007 And Avoided Scrutiny By Misleading The Class, The Public, And Regulators.

186. Old GM knew that people were being killed and seriously injured because of the ignition switch defect in its vehicles and the resulting loss of power and airbag non-deployment.

187. In March 2007, Old GM met with NHTSA and discussed the July 29, 2005, fatal crash involving Amber Rose.[79] At this meeting, Old GM was told by NHTSA the airbags in the Cobalt did not deploy, causing the Ms. Rose's death, and that data retrieved from the crashed vehicle's diagnostic system indicated that the ignition was in the "accessory" position. This was no surprise to Old GM; it had been secretly tracking ignition switch related accidents since well before this time. By the end of 2007, Old GM identified ten (10) other accidents, including four (4) where the ignition switch had moved into the "accessory" position.[80]

---

[78] GMHEC000143093; GM Technical Service Bulletin, "Information on Inadvertent Turning Off of Key Cylinder, Loss of Electrical System and no DTCs," (Oct. 25, 2006), at GMHEC000138614.
[79] GM Feb. 24, 2014, Letter to NHTSA, GM February Chronology.
[80] GM Feb. 24, 2014, Letter to NHTSA, GM February chronology.

188. Thus, by the end of 2007, Old GM knew of at least 10 frontal collisions in which the airbag did not deploy.[81] Old GM actually knew of but kept secret many other similar fatal accidents involving the ignition switch defects.

189. For the next two years, Old GM continued to receive complaints and continued to investigate frontal crashes in which the airbags did not deploy in Defective Vehicles, but did not disclose the crucial safety information to the Class of unsuspecting drivers of Old GM vehicles.

190. In April 2007, having continued its investigation into the July 2005 Maryland Cobalt crash, NHTSA received a 2006 SCI report stating that the "crash is of special interest because the vehicle was equipped with … dual stage air bags that did not deploy."[82] The SCI Report concluded that the air bags did not deploy "as a result of the impact with the clump of trees, possibly due to the yielding nature of the tree impact or power loss due to the movement of the ignition switch just prior to impact."[83] The Electronic Data Recorder ("EDR") for the vehicle indicated that the ignition switch was in "Accessory" mode at the time of impact.[84] The SCI Report also found that the investigation demonstrated that contact with the ignition switch could result in "engine shutdown and loss of power."[85]

191. In August 2007, Old GM met with its airbag supplier, Continental, to review SDM data from a 2005 Chevrolet Cobalt crash where the airbags failed to deploy.[86]

Case 1:14-md-02543-JMF Document 1379-1 Filed 07/10/15 Page 94 of 837

192. The next month, in September of 2007, the Chief of the Defects Assessment Division ("DAD") within NHTSA's Office of Defects Investigation ("ODI") proposed an investigation of "frontal airbag non-deployment in the 2003-2006 Chevrolet Cobalt/Saturn Ion" vehicles.[87] The Chief of DAD within ODI noted that the "issue was prompted by a pattern of reported non-deployments in VOQ [Vehicle Owner Questionnaire] complaints that was first observed in early 2005."[88] The email stated that NHTSA had "discussed the matter with GM," but that Old GM had assured NHTSA that "they see no specific problem pattern."[89] NHTSA's Greg Magno stated:

> Notwithstanding GM's indications that they see no specific problem, DAD perceives a pattern of non-deployment in these vehicles that does not exist in their peers and that their circumstances are such that, in our engineering judgment, merited a deployment, and that such a deployment would have reduced injury levels or saved lives.[90]

193. In November 2007, NHTSA's ODI considered a proposal to investigate the non-deployment of airbags in 2003-2006 model/year Chevy Cobalt and Saturn Ion vehicles.[91] The review was prompted by twenty-nine (29) complaints, four (4) fatal crashes, and fourteen (14) field reports that NHTSA knew about.[92] Again, Old GM not only failed to act, it worked to thwart the agency's efforts, in furtherance of its fraud and concealment to the detriment of the Class.

194. As part of the cover-up, Old GM tried to avoid full regulatory investigation and disclosure by claiming that it was unaware of any problem in its vehicles. Furthermore, Old GM knew that the airbag system in the Defective Vehicles would be disabled when the

[91] DAD Panel (Nov. 17, 2007), at NHTSA-HECC-004462-4483.
[92] DAD Panel (Nov. 17, 2007), at NHTSA-HECC-004462-4483.

ignition switch to a vehicle moved from the "run" to the "accessory" position. The airbag system, in other words, was disabled when the vehicle lost power. Old GM knew, however, that NHTSA believed that in most, if not all, vehicles, the airbag systems were operable for several seconds following a power loss. Although Old GM knew that NHTSA was mistaken, it did not correct NHTSA's mistaken belief.

M. Old GM Instructed Its Personnel On Judgment Words To Be Avoided.

195. In a 2008 internal presentation at Old GM, it instructed its employees to avoid using the following judgment words:[93]

Always	detonate	maniacal
Annihilate	disemboweling	mutilating
Apocalyptic	enfeebling	Never
Asphyxiating	Evil	potentially-disfiguring
Bad	evicscerated [*sic*]	power [*sic*] keg
Band-Aid	explode	Problem
big time	Failed	Safety
brakes like an "X" car	Flawed	safety related
Cataclysmic	genocide	Serious
Catastrophic	Ghastly	spontaneous combustion
Challenger	grenadelike	startling
Chaotic	Grisly	suffocating
Cobain	gruesome	Suicidal
Condemns	Hindenburg	terrifying
Corvair-like	Hobbling	Titanic
Crippling	Horrific	tomblike
Critical	impaling	unstable
Dangerous	Inferno	widow-maker rolling sarcophagus (tomb or coffin)
Deathtrap	Kevorkianesque	Words or phrases with biblical connotation
Debilitating	lacerating	
Decapitating	life-threatening	
Defect	maiming	
Defective	mangling	

[93] NHTSA Consent Order at Exhibit B, 2008 Q1 Interior Technical Learning Symposium.

196. Instead of using their common sense judgment, Old GM employees were advised in Orwellian fashion to use specific words to avoid disclosure of the material safety risks, and in so doing furthered the cover-up and fraud through intentional word substitutions such as:

- "Issue, Condition [or] Matter" instead of "**Problem**"
- "Has Potential Safety Implications" instead of "**Safety**"
- "Does not perform to design" instead of "**Defect/Defective**"[94]

197. Old GM knew its defective vehicles were killing and maiming its customers, while instructing its employees to avoid the words "defect" or "safety." Instead of publicly admitting the dangerous safety defects in its vehicles, Old GM repeatedly blamed accidents on driver error.

198. From 2001 until July 10, 2009, Old GM was repeatedly put on notice of the defect internally and received reports of deaths and injuries in Chevy Cobalts and other GM vehicles involving airbag failures and/or steering, yet acted at every turn to fraudulently conceal the danger from the Class. Examples include, but are not limited to:

- 2005: 26 Cobalt Death and Injury Incidents, including 1 death citing "airbag" as the component involved.
- 2006: 69 Cobalt Death and Injury Incidents, including 2 deaths citing "airbag" as the component involved and 4 deaths listing the component involved as "unknown."
- 2007: 87 Cobalt Death and Injury Incidents, including 3 deaths citing "airbag" as the component involved.
- 2008: 106 Cobalt Death and Injury Incidents, including 1 death citing "airbag" as the component involved and 2 deaths listing the component involved as "unknown."[95]

[94] NHTSA Consent Order at Exhibit B (emphasis added).

N. By 2009, As Injuries And Deaths Continued To Mount, Old GM Opened Yet Another Internal Investigation, But Continued To Withhold Information From Its Customers And The Class About The Defects.

199. In February 2009, Old GM initiated yet another internal investigation of the ignition switch defect which resulted in a redesign of the ignition key for the 2010 model/year Cobalt.[96] However, Old GM took no remedial action in response to the investigation and continued to conceal the facts. Consequently, deaths, injuries, and incidents continued to occur related to the ignition switch defect. As one Old GM employee put it when the ignition defect was raised again internally at Old GM:

> "Gentleman! This issue has been around since man first lumbered out of sea and stood on two feet. In fact, I think Darwin wrote the first PRTS on this and included as an attachment as part of his Theory of Evolution."[97]

200. Some within Old GM were not mincing words. Yet Old GM chose to conceal the truth from the Class, and the death and injury toll mounted.

201. Again, in April 2009, a 2005 Chevy Cobalt was involved in a crash in Pennsylvania which resulted in the deaths of the driver and front passenger.[98] The crash was investigated by NHTSA.[99] The 2009 SCI Report noted that data from the Cobalt's SDM indicated that the ignition switch was in "accessory" mode at the time of the crash.[100] Still, Old GM refused to issue a recall or notify the Class of the danger.

O. <u>The Spreadsheet Of Accidents Involving The Cobalt Ignition Switch Within Old GM Continued To Grow, But Was Never Disclosed.</u>

202. Beginning in 2007, Old GM Field Performance Assessment engineer, John Sprague, maintained a spreadsheet of accidents involving Cobalt non-airbag deployments, along with the vehicle power mode status. To gather the data for the spreadsheet, Sprague sent SDMs from crash vehicles to Continental (the SDM manufacturer) so that it could access information that Old GM could not.[101] After receiving the data from Continental, Sprague collected information regarding the Cobalt crashes and power mode status, added it to the spreadsheet, and discovered that, in fact, the power mode status was recorded as "off" or "accessory" in many accidents..[102]

203. Sprague continued to maintain his spreadsheet until July 10, 2009 (and beyond). In doing so, Sprague noticed a pattern—the problem of non-deployment of airbags did not appear as frequently in MY 2008 and later Cobalts. That led him to question whether there had been some change in the Cobalt from MY 2007 to MY 2008.[103]

204. Sprague brought his spreadsheet on the ignition switches and vehicles losing power while driving to a meeting with DeGiorgio in 2009 and the two of them reviewed it together.[104] Still no action was taken. Instead, there were more non-productive meetings.

205. In May 2009, Old GM again met with its SDM supplier, Continental, and asked for data in connection with another crash involving a 2006 Chevy Cobalt where the airbags failed to deploy.[105] In a report dated May 11, 2009, Continental analyzed the SDM data and concluded that the SDM ignition state changed from "run" to "off" during the

[105] Continental Automotive Sys. US, Inc., Field Event Analysis Report GMHEC00003129-3142.

accident. According to Continental, this, in turn, disabled the airbags. Old GM did not disclose this finding to NHTSA, despite its knowledge that NHTSA was interested in non-deployment incidents in Chevrolet Cobalt vehicles. Yet again, in the face of mounting death tolls, Old GM did not correct the ignition switch defect, take the vehicles off the road, or warn its consumers or the Class. Sprague's secret spreadsheet of accidents simply grew.

206. The next month, in June 2009, Old GM filed a Chapter 11 petition. The bankruptcy sale to New GM became effective on July 10, 2009.

207. At that point, New GM assumed Old GM's obligation to report any known, dangerous defects in GM vehicles, including the Defective Vehicles.

III. Meet The New GM, Same As The Old GM: With Knowledge of the Defects, New GM "Investigates" Further-And Continues To Conceal The Defects.

208. In 2009, Old GM declared bankruptcy, and, weeks later, it emerged from bankruptcy as New GM. Both before and after GM's bankruptcy, the ignition switches in the Defective Vehicles continued to fail and GM, in both its incarnations, continued to conceal the truth.

209. On March 10, 2010, many months after the birth of New GM, Brooke Melton was driving her 2005 Cobalt on a two-lane highway in Paulding County, Georgia. While she was driving, her key turned from the "run" to the "accessory/off" position causing her engine to shut off. After her engine shut off, she lost control of her Cobalt, which traveled into an oncoming traffic lane, where it collided with an oncoming car. Brooke was killed in the crash.

210. On March 22, 2011, Ryan Jahr, a GM engineer, downloaded the SDM from Brooke's Cobalt. The information from the SDM download showed that the key in Brooke's Cobalt turned from the "run" to the "accessory/off" position 3-4 seconds before the crash. On June 24, 2011, Brooke Melton's parents, Ken and Beth Melton, filed a lawsuit against GM.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 90 of 337

211. On December 31, 2010, in Rutherford County Tennessee, a 2006 Cobalt traveled off the road and struck a tree. Despite there being a frontal impact in this incident, the frontal airbags failed to deploy. The download of the SDM showed the key was in the "accessory/off" position. New GM received notice of this incident, opened a file, and referred to it as the "Chansuthus" incident.

212. On December 31, 2010, in Harlingen, Texas, another 2006 Cobalt traveled off the road and struck a curb. Despite there being a frontal impact in this incident, the frontal airbags failed to deploy. New GM received notice of this incident, opened a file, and referred to it as the "Najera" incident.

213. These incidents are not limited to vehicles of model year 2007 and before. According to New GM's own investigation, there have been over 250 crashes involving 2008-2010 Chevrolet Cobalts in which the airbags failed to deploy.

214. In 2010, New GM began a formal investigation of the frontal airbag non-deployment incidents in Chevrolet Cobalts and Pontiac G5s. New GM subsequently elevated the investigation to a Field Performance Evaluation ("FPE").

215. In August 2011, New GM assigned Engineering Group Manager, Brian Stouffer as the Field Performance Assessment Engineer ("FPAE") to assist with the FPE investigation.

216. On December 18, 2011, in Parksville, South Carolina, a 2007 Cobalt traveled off the road and struck a tree. Despite there being a frontal impact in this incident, the frontal airbags failed to deploy. The download of the SDM showed the key was in the "accessory/off" position. GM received notice of this incident, opened a file, and referred to it as the "Sullivan" incident.

217. In spring 2012, Stouffer asked Jim Federico, a high level executive and chief engineer at Old and New GM who recently retired, to oversee the FPE investigation. Federico was the "executive champion" for the investigation to help coordinate resources for the FPE investigation.

218. In May 2012, New GM engineers tested the torque on the ignition switches for 2005-2009 Cobalt, 2007, 2009 Pontiac G5, 2006-2009 HHR, and 2003-2007 Ion vehicles in a junkyard. The results of these tests showed that the torque required to turn the ignition switches in most of these vehicles from the "run" to the "accessory/off" position did not meet Old GM's minimum torque specification requirements, including the 2008-2009 vehicles. These results were reported to Stouffer and other members of the FPE.

219. Indeed, airbag non-deployment incidents are not limited to vehicles of model year 2007 and before. According to New GM's own investigation, there have been over 250 crashes involving 2008-2010 Chevrolet Cobalts in which the airbags failed to deploy.

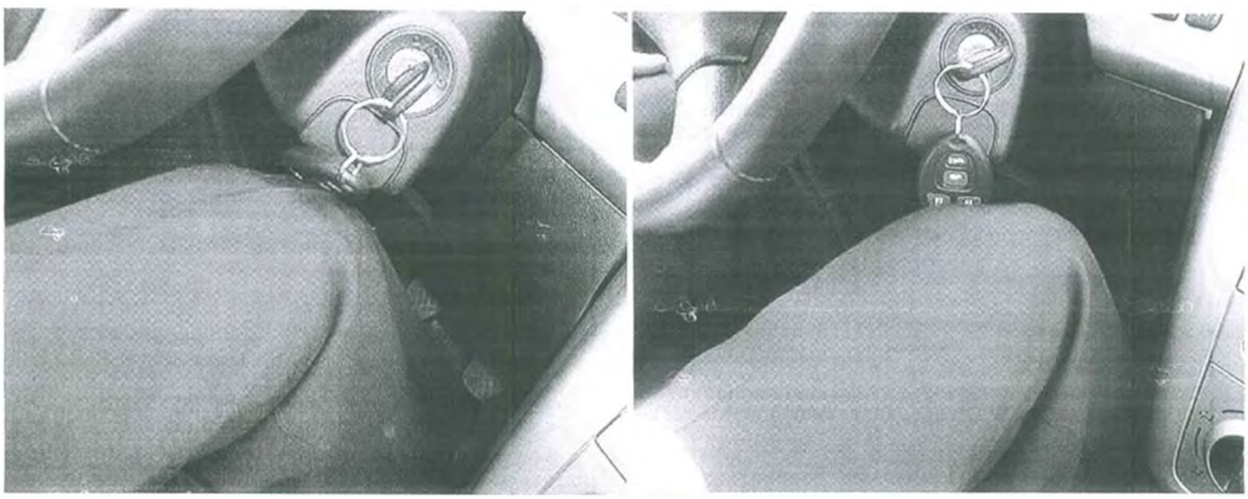
220. In September 2012, Stouffer requested assistance from a "Red X Team" as part of the FPE investigation. The Red X Team was a group of engineers within GM assigned to find the root cause of the airbag non-deployments in frontal accidents involving Chevrolet Cobalts and Pontiac G5s. By that time, however, it was clear that the root cause of the airbag non-deployments in a majority of the frontal accidents was the defective ignition switch system. The Red X Team became involved in the investigation shortly after Mr. Stouffer's request.

221. During the field-performance-evaluation process, New GM determined that, although increasing the detent in the ignition switch would reduce the chance that the key

would inadvertently move from the "run" to the "accessory/off" position, it would not be a total solution to the problem.

222. Indeed, the New GM engineers identified several additional ways to actually fix the problem. These ideas included adding a shroud to prevent a driver's knee from contacting the key, modifying the key and lock cylinder to orient the key in an upward facing orientation when in the run position, and adding a push button to the lock cylinder to prevent it from slipping out of run. New GM rejected each of these ideas.

223. The photographs below are of a New GM engineer in the driver's seat of a Cobalt during the investigation of Cobalt engine stalling incidents:



224. These photographs show the dangerous condition of the position of the key in the lock module on the steering column, as well as the key with the slot, which allow the key fob to hang too low off of the steering column. New GM engineers understood that the key fob may be impacted and pinched between the driver's knee and the steering column which causes the key to be inadvertently turned from the run to accessory/off position. The photographs show why the New GM engineers understood that increasing the detent in the ignition switch would not be a total solution to the problem. It also shows why GM engineers

believe that the additional changes to the ignition switch system (such as the shroud) were necessary to fix the defects.

225. The New GM engineers clearly understood that increasing the detent in the ignition switch alone was not a solution to the ignition switch problem but New GM concealed—and continues to conceal—from the public, the nature and extent of the defects.

226. By 2012, Federico, Stouffer, and the remaining members of the Red X Team knew that the Key System in the Ion, the Cobalt, and the G5 vehicles had safety-related defects that would cause the key to move from the “run” to the “accessory/off” position while driving these vehicles. They also knew that when this happened the airbags would no longer work in frontal crashes.

227. On October 4, 2012, there was a meeting of the Red X Team during which Federico gave an update of the Cobalt airbag non-deploy investigation. According to an email from Stouffer on the same date, the “primary discussion was on what it would take to keep the SDM active if the ignition key was turned to the accessory mode.” Despite this recognition by New GM engineers that the SDM should remain active if the key is turned to the accessory/off mode, New GM has done nothing to remedy this safety defect and has fraudulently concealed, and continue to fraudulently conceal it, from the public.

228. During the October 4, 2012 meeting, Stouffer, and the other members of the Red X Team also discussed “revising the ignition switch to increase the effort to turn the key from Run to Accessory.”

229. On October 4, 2012, at 9:07 p.m., Stouffer emailed DeGiorgio and asked him to “develop a high level proposal on what it would take to create a new switch for service with higher efforts.”

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 104 of 337

230. On October 5, 2012, at 7:39 a.m., DeGiorgio responded:

Brian,

In order to provide you with a HIGH level proposal, I need to understand what my requirements are. what is the TORQUE value that you desire?

Without this information I cannot develop a proposal.

231. At 9:05 a.m. on that same day, Stouffer in responding to DeGiorgio's email, stated:

Ray,

As I said in my original statement, I currently don't know what the torque value needs to be. Significant work is required to determine the torque. What is requested is a high level understanding of what it would take to create a new switch.

232. DeGiorgio responded back to Stouffer at 9:33 a.m. that same morning:

Brian,

Not knowing what my requirements are I will take a SWAG at the Torque required for a new switch. Here is my high level proposal:

Assumption is 100 N cm Torque.

- New switch design = Engineering Cost Estimate approx. $300,000

- Lead Time = 18-24 months from issuance of GM Purchase Order and supplier selection.

Let me know if you have any additional questions.

233. Stouffer admitted during his deposition that DeGiorgio's reference to SWAG was an acronym for Silly Wild-Ass Guess.

234. DeGiorgio's cavalier attitude exemplifies the decade-long approach to the safety-related defects that existed in the ignition switch systems in Defective Vehicles. Rather than seriously addressing the safety defects, DeGiorgio's emails show he understood the ignition switches were contributing to the crashes and fatalities and he could not care less.

235. It is also obvious from this email exchange that Stouffer, who was a leader of the Red X Team, had no problem with DeGiorgio's cavalier and condescending response to the request that he evaluate the redesign of the ignition switches.

236. Federico, Stouffer, and the other members of the Red X Team also understood that these safety-related defects had caused or contributed to numerous accidents and multiple fatalities. Despite this knowledge, New GM chose to conceal this information from the public, including the Class.

237. In December 2012, in Pensacola, Florida, Ebram Handy, a New GM engineer, participated in an inspection of components from Brooke Melton's Cobalt, including the ignition switch. At that inspection, Handy, along with Mark Hood, a mechanical engineer retained by the Meltons, conducted testing on the ignition switch from Brooke Melton's vehicle, as well as a replacement ignition switch for the 2005 Cobalt.

238. At that inspection, Handy observed that the results of the testing showed that the torque performance on the ignition switch from Brooke Melton's Cobalt was well below Old GM's minimum torque performance specifications. Handy also observed that the torque performance on the replacement ignition switch was higher than the torque performance on the ignition switch in Brooke Melton's Cobalt.

239. In January 2013, Handy, in preparation for his Rule 30(b)(6) deposition in the Melton case, spoke with several people who were engineers at both Old and New GM,

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 96 of 337

including DeGiorgio and Stouffer. At that time, Handy knew that, based on the testing he had observed, the original ignition switch in the 2005 Cobalt failed to meet Old GM's minimum torque performance specifications and that Old GM had redesigned the ignition switches that were being sold as replacement switches. Both Old GM and later New GM knew that an ignition switch that did not meet its minimum torque performance requirements was a safety defect.

240. Old and New GM engineers integrally involved with this situation have admitted that Old GM never should have sold the Defective Vehicles with ignition switches that did not meet the Company's minimum torque performance requirements.

241. In 2013, Ray DeGiorgio, the chief design engineer for the ignition switches in millions of the Defective Vehicles was deposed. At his deposition, DeGiorgio was shown photographs of the differences between the ignition switch in Brooke Melton's Cobalt and the ignition switch in the 2008 Cobalt or replacement ignition switch. After looking at the photographs of the different ignition switches, DeGiorgio testified as follows:

Q. The one on the right, Exhibit 13 is an '05 or an '06, and the one on the left, Exhibit 14, is either an '08 or replacement. Do you see the difference?

A. Yes.

Q. Have you noticed that before today, Mr. DeGiorgio?

A. No sir.

Q. Were you aware of this before today, Mr. DeGiorgio?

MR. HOLLADAY: Object to the form. You can answer.

THE WITNESS: No sir.

Q. It appears to be pretty clear that the plunger and the cap is taller on Exhibit 14 compared to Exhibit 13, isn't it?

A. That's correct.

Q. How is a taller cap going to affect the rotational resistance?

A. It's hard to determine from these pictures exactly if it is a taller cap or is it recessed inside the housing or not. It's hard for me to assess, really, what I'm looking at.

Q. You've taken apart a number of switches and you're telling the jury you've never noticed the difference in the plunger between the '05 and '06 versus the new resistor or switch?

MR. HOLLADAY: Object to the form.

THE WITNESS: I did not notice, no.

(DeGiorgio Deposition, pp. 149-150.)

242. DeGiorgio was then further questioned about his knowledge of any differences in the ignition switches:

Q. And I'll ask the same question. You were not aware before today that GM had changed the spring—the spring on the ignition switch had been changed from '05 to the replacement switch?

MR. HOLLADAY: Object to the form. Lack of predicate and foundation. You can answer.

THE WITNESS: I was not aware of a detent plunger switch change. We certainly did not approve a detent plunger design change.

Q. Well, suppliers aren't supposed to make changes such as this without GM's approval, correct?

A. That is correct.

Q. And you are saying that no one at GM, as far as you know, was aware of this before today?

MR. HOLLADAY: Object. Lack of predicate and foundation. You can answer.

THE WITNESS: I am not aware about this change.

(DeGiorgio Deposition, pp. 151-152.)

243. DeGiorgio clearly testified that he had absolutely no knowledge of any change in the ignition switch in 2005-2010 Cobalts.

244. DeGiorgio also provided the following testimony about the ignition switch supplier, Delphi:

Q. And there weren't any changes made—or were there changes made to the switch between '05 and 2010 that would have affected the torque values to move the key from the various positions in the cylinder?

A. There was one change made to the resistor in '08, but that should not have affected the torque or the displacement of the switch.

I can restate this way: There was an electrical change made in '08, but not a mechanical change—at least there were no official changes, mechanical changes, made to the switch that I know of.

Q. When you say no official, could there be unofficial changes made?

A. I'm not saying that there was, I'm just saying if there was something changed at the supplier side, we were not aware of it and we did not approve it, okay?

(DeGiorgio Deposition, pp. 57-58.)

Q. Did you ask Mary Fitz or anyone from Delphi whether there, in fact, had been any changes made to the ignition switch?

A. Yes, yes I did. And they came back, said there's been no changes made to the switch since the introduction to production.

Q. Who told you that?

A. Mary Fitz.

Q. Where is she located?

A. She's located in, I want to say, Delphi headquarters here in Michigan.

(DeGiorgio Deposition, pp. 117-118.)

245. DeGiorgio clearly testified that he had spoken with Delphi employees and that they confirmed there were no changes made to the ignition switch in 2005-2010 Cobalts.

246. DeGiorgio signed his errata sheet on May 23, 2013. In the signed errata sheet, DeGiorgio did not change any testimony referenced in this Complaint.

247. On June 12, 2013, Gary Altman, the Cobalt program engineering manager, testified as follows during his deposition in Melton v. GM:

Q. And the vehicle never should have been sold if it didn't meet GM's minimum torque specific—performance requirements, should it?

MR. FRANKLIN: Object to form.

THE WITNESS: That's correct.

Q. And the reason is because that could be dangerous under certain situations, because the key can move from run to accessory?

MR. FRANKLIN: Object to form.

THE WITNESS: Yes.

(Gary Altman Dep., pp. 23-24)

248. Altman's admission simply demonstrates that Old GM and later New GM knew that the Defective Vehicles were dangerous but chose to do nothing about it.

IV. New GM Issues A Recall—Ten Years Too Late.

249. On February 7, 2014, New GM informed NHTSA that it was conducting Recall No. 14V-047 for certain 2005-2007 model year Chevrolet Cobalts and 2007 model year Pontiac G5 vehicles.

250. In its February 7, 2014, letter to NHTSA, New GM represented that as replacement ignition switches became available, New GM would replace the ignition switches on the Defective Vehicles with ignition switches with greater torque to prevent the unintended movement from the "run" to "accessory" position..

251. On February 19, 2014, a request for timeliness query was sent to NHTSA in connection with Recall No. 14V-047 ("timeliness query"). The timeliness query pointed out that New GM had failed to recall all of the vehicles with the defective ignition switches.

252. The February 19, 2014 timeliness query also asked NHTSA to investigate New GM's failure to fulfill its legal obligation to report the safety defects in the Defective Vehicles to NHTSA within five days of discovering the defect.

253. On February 24, 2014, New GM sent a letter informing NHTSA it was expanding the recall to include 2006-2007 model year (MY) Chevrolet HHR and Pontiac Solstice, 2003-2007 MY Saturn Ion, and 2007 MY Saturn Sky vehicles.

254. New GM included an Attachment to the February 24, 2014, letter. In the Attachment New GM, *for the first time,* admitted that Old GM had authorized a change in the ignition switch in 2006. Specifically, New GM stated:

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 91 of 337

> On April 26, 2006, the GM design engineer responsible for the Cobalt's ignition switch signed a document approving changes to the ignition switch proposed by the supplier, Delphi Mechatronics. The approved changes included, among other things, the use of a new detent plunger and spring that increased torque force in the ignition switch. This change to the ignition switch was not reflected in a corresponding change in the part number for the ignition switch. GM believes that the supplier began providing the re-designed ignition switch to GM at some point during the 2007 model year.

255. New GM then produced documents in response to Congressional requests leading up to hearings on April 1 and 2, 2014. Among the documents produced by New GM is a document titled, "GENERAL MOTORS COMMODITY VALIDATION SIGN-OFF," dated April 26, 2006. According to this document, Delphi had met all of the sign-off requirements in order to provide a new ignition switch for certain Old GM vehicles. New GM has acknowledged that the ignition switch in the Cobalt was included in this design change.

256. The design change included a new detent plunger "to increase torque force in the switch." DeGiorgio's signature is on this page as the Old GM authorized engineer who signed off on this change to the ignition switch.

257. This Commodity Validation Sign-Off shows that DeGiorgio repeatedly perjured himself during his deposition on April 29, 2013. DeGiorgio perjured himself in order to fraudulently conceal evidence from the Meltons that Old GM had signed off on the change in the ignition switch so that the Meltons, and ultimately a jury, would never know that Old GM had changed the switches in 2007 and later model year Cobalts and concealed these changes from Brooke Melton.

258. DeGiorgio perjured himself when he signed the errata sheet confirming that all the testimony was true and accurate.

259. On March 17, 2014, Mary T. Barra, General Motors' chief executive issued an internal video, which was broadcast to employees.[106] In the video, Ms. Barra admits:

> Scrutiny of the recall has expanded beyond the review by the federal regulators at NHTSA, the National Highway Traffic Safety Administration. As of now, two congressional committees have announced that they will examine the issue. And it's been reported that the Department of Justice is looking into this matter.… *These are serious developments that shouldn't surprise anyone*. After all, *something went wrong with our process in this instance and terrible things happened*.… The bottom line is, *we will be better because of this tragic situation*, if we seize the opportunity.… I ask everyone to stay focused on making today's GM the best it can be.

260. On March 28, 2014, New GM again expanded the first ignition switch recall to cover all model years of the Chevrolet Cobalt and HHR, the Pontiac G5 and Solstice and the Saturn Ion and Sky in the United States. This third expansion of the ignition switch recall covered an additional 824,000 vehicles in the U.S., bringing the number of recalled vehicles to 2,191,146.

V. New GM's Recall Fails to Correct the Defect.

261. Not only was New GM's recall ten years too late, it is completely insufficient to correct the safety-related defects in the Defective Vehicles.

262. The supposed fix implemented by New GM as part of the recall—replacing the ignition switch—is insufficient and does not adequately address the safety risks posed by the defect. The ignition key and switch remains prone to inadvertently move from "run" to "accessory." Replacing the ignition switch does not address the problem posed by the low position of the ignition on the steering cylinder. Even with New GM's alleged "fix," drivers of ordinary height can hit the ignition key with their knees during ordinary driving situations.

---

[106] *See* http://media.gm.com/media/us/en/gm/news.detail.html./content/ Pages/news/us/en/2014/mar/0317-video.html. (last visited March 21, 2014) (emphasis added).

Case 1:14-md-02543-JMF Document 179-1 Filed 07/31/14 Page 113 of 337

Such an impact may cause the ignition to move from the "run" to the "accessory" or "off" position while the vehicle is in operation, causing the vehicle to stall, the power brakes and power steeling to fail, and the airbags not to deploy in a collision.

263. Since at least the November 2004 PRTS inquiry, first Old and then New GM has known that simply replacing the ignition switches on the Defective Vehicles is not a solution to the potential for the key to inadvertently turn from the "run" to the "accessory/off" position in these vehicles.

264. New GM's recall fails to address the design defect that causes the key fob/chain to hang too low on the steering column.

265. Thus, even when the ignition switches are replaced, this defective condition will still exist in the Defective Vehicles and there continues to be the potential for a driver to contact the key chain and inadvertently turn the key from the "run" to the "accessory/off" position.

266. The recall is additionally insufficient because New GM is not replacing all of the keys in the Defective Vehicles with the redesigned key with a hole instead of a slot. Yet New GM's engineers have determined that the redesigned key would reduce the chance that the key could be inadvertently turned from the "run" to the "accessory/off" position.

267. The recall also fails to address the design defects in the Defective Vehicles which disables the airbag immediately upon the engine shutting off.

268. Although New GM began installing DeGiorgio's redesigned ignition switch in MY 2008 Defective Vehicles, later model year Defective Vehicles continue to experience non-deployment collision events. Undermining New GM's position is its own investigation

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 114 of 337

into the non-deployment events in Cobalts that identifies over 250 non-deploy crashes involving 2008-2010 Cobalts.

269. New GM's engineers understood that increasing the detent in the ignition switch alone was not a solution to the problem, but New GM concealed—and continues to conceal from the public, including the Class, the nature and extent of the defects, which the current recall will not cure.

VI. New GM Expands the February/March Recall—and Suspends Two Engineers.

270. On Wednesday, April 9, 2014, New GM issued a new recall of all the vehicles covered by the February/March ignition switch recall.

271. New GM's stated purpose for the new recall is to replace "lock cylinder" into which the key is inserted, because the current lock cylinders allow the key to be pulled out while the car is still running.

272. According to New GM, the defective lock cylinder could lead to "a possible roll-away, crash and occupant or pedestrian injuries."

273. The next day, April 10, 2014, New GM announced that it was suspending Ray DeGiorgio, the lead design engineer for the Cobalt and Ion ignition switch, and Gary Altman, GM's program-engineering manager for the Cobalt, for their respective roles in GM's safety failure. (The two have since been terminated in the wake of the Valukas Report.)

274. The April 10 announcement came after Ms. Barra, New GM's chief executive, was briefed on the results of former United States Attorney Anton R. Valukas internal investigation of the company, which was conducted in response to growing concerns regarding the safety of the Defective Vehicles.

275. Additionally, New GM also announced a new program entitled "Speak Up for Safety," which is intended to encourage New GM employees to report potential customer

safety issues. According to Ms. Barra, this program is being adopted because New "GM must embrace a culture where safety and quality come first." Unfortunately, these actions are too little, too late.

VII. The June 2014 Recall For The "Ignition Key Slot" Defect Further Reveals New GM's Fraudulent Concealment of Known Serious Safety Problems.

276. New GM sent further shockwaves through the automotive world when it announced, on June 23, 2014, that it was recalling 3,141,731 vehicles in the United States for ignition switch, or so-called "ignition key slot" defects (NHTSA Recall Number 14V- 355).

277. According to information on NHTSA's website, 2,349,095 of the vehicles subject to this recall were made by Old GM. 792,636 vehicles were made and/or sold by New GM.

278. The following Old GM vehicles were included in the June 23, 2014 recall: 2005-2009 Buick Lacrosse, 2006-2009 Chevrolet Impala, 2000-2005 Cadillac Deville, 2004-2009 Cadillac DTS, 2006-2011 Buick Lucerne, 2004-2005 Buick Regal LS and RS, and 2006-20009 Chevrolet Monte Carlo.

279. The recall notice states, "In the affected vehicles, the weight on the key ring and/or road conditions or some other jarring event may cause the ignition switch to move out of the run position, turning off the engine."

280. Further, "[i]f the key is not in the run position, the air bags may not deploy if the vehicle is involved in a crash, increasing the risk of injury. Additionally, a key knocked out of the run position could cause loss of engine power, power steering, and power braking, increasing the risk of a vehicle crash."

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 116 of 337

281. The vehicles included in this recall were built on the same platform and their defective ignition switches are likely due to weak detent plungers, just like the other Defective Vehicles recalled in February and March of 2014.

282. Old GM was long-aware of the ignition switch defect in these vehicles, and New GM was aware of the ignition switch defect in these vehicles from the date of its inception on July 11, 2009, as it acquired on that date all of the knowledge possessed by Old GM given the continuity in personnel, databases and operations from Old GM to New GM. In addition, New GM acquired additional information thereafter. The information, all of which was known to New GM, included the following facts:

i. In January of 2003, Old GM opened an internal investigation after it received complaints from a Michigan GM dealership that a customer had experienced a power failure while operating his model year 2003 Pontiac Grand Am.

ii. During the investigation, Old GM's Brand Quality Manager for the Grand Am visited the dealership and requested that the affected customer demonstrate the problem. The customer was able to recreate the shutdown event by driving over a speed bump at approximately 30-35 mph.

iii. The customer's key ring was allegedly quite heavy. It contained approximately 50 keys and a set of brass knuckles.

iv. In May 2003, Old GM issued a voicemail to dealerships describing the defective ignition condition experienced by the customer in the Grand Am. Old GM identified the relevant population of affected vehicles as the 1999-2003 Chevrolet Malibu, Oldsmobile Alero, and Pontiac Grand Am.

v. Old GM did not recall these vehicles. Nor did it provide owners and/or lessees with notice of the defective condition. Instead, its voicemail directed dealerships to pay attention to the key size and mass of the customer's key ring.

vi. On July 24, 2003, Old GM issued an engineering work order to increase the detent plunger force on the ignition switch for the 1999-2003 Chevrolet Malibu, Oldsmobile Alero, and Pontiac Grand Am vehicles. Old GM engineers allegedly increased the detent plunger force and changed the part number of the ignition switch. The new parts were installed beginning in the model year 2004 Malibu, Alero, and Grand Am vehicles.

vii. Old GM issued a separate engineering work order in March 2004 to increase the detent plunger force on the ignition switch in the Pontiac Grand Prix. Old GM engineers did not change the part number for the new Pontiac Grand Prix ignition switch.

viii. Then-Old GM design engineer Ray DeGiorgio signed the work order in March 2004 authorizing the part change for the Grand Prix ignition switch. DeGiorgio maintained his position as design engineer with New GM.

ix. On or around August 25, 2005, Laura Andres, an Old GM design engineer (who remains employed with New GM), sent an email describing ignition switch issues that she experienced while operating a 2006 Chevrolet Impala on the highway. Ms. Andres' email stated, "While driving home from work on my usual route, I was driving about 45 mph, where the road changes from paved to gravel & then back to paved, some of the gravel had worn away, and the pavement acted as a speed bump when I went over it. The car shut off. I took the car in for repairs. The technician thinks it might be the ignition detent, because in a road test in the parking lot it also shut off."

x. Old GM employee Larry S. Dickinson, Jr. forwarded Ms. Andres' email on August 25, 2005 to four Old GM employees. Mr. Dickinson asked, "Is this a condition we would expect to occur under some impacts?"

xi. On August 29, 2005, Old GM employee Jim Zito forwarded the messages to Ray DeGiorgio and asked, "Do we have any history with the ignition switch and far as it being sensitive to road bumps?"

xii. Mr. DeGiorgio responded the same day, stating, "To date there has never been any issues with the detents being too light."

xiii. On August 30, 2005, Ms. Andres sent an email to Old GM employee Jim Zito and copied ten other Old GM employees, including Ray DeGiorgio. Ms. Andres, in her email, stated, "I picked up the vehicle from repair. No repairs were done. . . . The technician said there is nothing they can do to repair it. He said it is just <u>the design of the switch</u>. He said other switches, like on the trucks, have a stronger detent and don't experience this."

xiv. Ms. Andres' email continued: "I think this is a serious safety problem, especially if this switch is on multiple programs. I'm thinking big recall. I was driving 45 mph when I hit the pothole and the car shut off and I had a car driving behind me that swerved around me. I don't like to imagine a customer driving with their kids in the back seat, on I-75 and hitting a pothole, in rush-hour traffic. I think you should seriously consider changing this part to a switch with a stronger detent."

xv. Ray DeGiorgio, who reportedly designed the ignition switches installed in the 2006 Chevrolet Impala vehicles, replied to Ms. Andres' email, stating that he had recently driven a 2006 Impala and "did not experience this condition."

283. On or after July 11, 2009, senior executives and engineers at New GM knew that some of the information relayed to allay Ms. Andres' concerns was inaccurate. For example, Ray DeGiorgio knew that there had been "issues with detents being too light." Instead of relaying those "issues," Mr. DeGiorgio falsely stated that there were no such "issues."

284. New GM has tried to characterize the recall of these 3.14 million vehicles as being different than the recall for the ignition switch defect in the Cobalts and other Defective Ignition Switch Vehicles when in reality and for all practical purposes it is for exactly the same defect that creates exactly the same safety risks. New GM has attempted to label and describe the ignition key slot defect as being different in order to provide it with cover and an explanation for why it did not recall these 3.14 million vehicles much earlier, and why it is not providing a new ignition switch and other remedies for the 3.14 million vehicles.

285. From 2001 to the present, Old GM and New GM received numerous reports from consumers regarding complaints, crashes, injuries and deaths linked to this safety defect. The following are examples of just a few of the many reports and complaints regarding the defect:

286. For example, on January 23, 2001, Old GM became aware of a complaint filed with NHTSA involving a 2000 Cadillac Deville and an incident that occurred on January 23, 2001, in which the following was reported:

> "COMPLETE ELECTRICAL SYSTEM AND ENGINE SHUTDOWN WHILE DRIVING. HAPPENED THREE DIFFERENT TIMES TO DATE. DEALER IS UNABLE TO DETERMINE CAUSE OF FAILURE. THIS CONDITION DEEMED TO BE EXTREMELY HAZARDOUS BY OWNER." NHTSA ID Number: 739850

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 120 of 337

287. On June 12, 2001, Old GM became aware of a complaint filed with NHTSA involving a 2000 Cadillac Deville and an incident that occurred on June 12, 2001, in which the following was reported:

> "INTEERMITTENTLY AT 60MPH VEHICLE WILL STALL OUT AND DIE. MOST TIMES VEHICLE WILL START UP IMMEDIATELY AFTER. DEALER HAS REPLACED MAIN CONSOLE 3 TIMES, AND ABS BRAKES. BUT, PROBLEM HAS NOT BEEN CORRECTED. MANUFACTURER HAS BEEN NOTIFIED.*AK" NHTSA ID Number: 890227

288. On January 27, 2003, Old GM became aware of a complaint filed with NHTSA involving a 2001 Cadillac Deville and an incident that occurred on January 27, 2003, in which the following was reported:

> "WHILE DRIVING AT HIGHWAY SPEED ENGINE SHUTDOWN, CAUSING AN ACCIDENT. PLEASE PROVIDE ANY ADDITIONAL INFORMATION.*AK" NHTSA ID Number: 10004759

289. On September 18, 2007, Old GM became aware of a complaint filed with NHTSA involving a 2006 Chevrolet Impala and an incident that occurred on September 15, 2006, in which it was reported that:

> "TL*THE CONTACTS SON OWNS A 2006 CHEVROLET IMPALA. WHILE DRIVING APPROXIMATELY 33 MPH AT NIGHT, THE CONTACTS SON CRASHED INTO A STALLED VEHICLE. HE STRUCK THE VEHICLE ON THE DRIVER SIDE DOOR AND NEITHER THE DRIVER NOR THE PASSENGER SIDE AIR BAGS DEPLOYED. THE DRIVER SUSTAINED MINOR INJURIES TO HIS WRIST. THE VEHICLE SUSTAINED MAJOR FRONT END DAMAGE. THE DEALER WAS NOTIFIED AND STATED THAT THE CRASH HAD TO HAVE BEEN A DIRECT HIT ON THE SENSOR. THE CURRENT AND FAILURE MILEAGES WERE 21,600. THE CONSUMER STATED THE AIR BAGS DID NOT DEPLOY. THE CONSUMER PROVIDED PHOTOS OF THE VEHICLE. UPDATED 10/10/07 *TR" NHTSA ID Number: 10203350

290. On April 02, 2009, GM became aware of a complaint filed with NHTSA involving a 2005 Buick LaCrosse and an incident that occurred on April 02, 2009, in which the following was reported:

> "POWER STEERING WENT OUT COMPLETELY, NO WARNING JUST OUT. HAD A VERY HARD TIME STEERING CAR. LUCKY KNOW ONE WAS HURT. *TR" NHTSA ID Number: 10263976

291. The reports regarding the defect continued to be reported to New GM. For example, on February 15, 2010, New GM became aware of a complaint filed with NHTSA involving a 2008 Buick LaCrosse and an incident that occurred on February 13, 2010, in which a driver reported:

> "WHILE DRIVING AT 55MPH I RAN OVER A ROAD BUMP AND MY 2008 BUICK LACROSSE SUPER SHUT OFF(STALLED). I COASTED TO THE BURM, HIT BRAKES TO A STOP. THE CAR STARTED ON THE FIRST TRY. CONTINUED MY TRIP WITH NO INCIDENCES. TOOK TO DEALER AND NO CODES SHOWED IN THEIR COMPUTER. CALLED GM CUSTOMER ASSISTANCE AND THEY GAVE ME A CASE NUMBER. NO BULLETINS. SCARY TO DRIVE. TRAFFIC WAS LIGHT THIS TIME BUT MAY NOT BE THE NEXT TIME. *TR." NHTSA ID Number: 10310692

292. On April 21, 2010, New GM became aware of a complaint filed with NHTSA involving a 2006 Buick Lucerne and an incident that occurred on March 22, 2010, in which the following was reported:

> "06 BUICK LUCERNE PURCHASED 12-3-09, DIES OUT COMPLETELY WHILE DRIVING AT VARIOUS SPEEDS. THE CAR HAS SHUT OFF ON THE HIGHWAY 3 TIMES WITH A CHILD IN THE CAR. IT HAS OCCURRED A TOTAL OF 7 TIMES BETWEEN1-08-10 AND 4-17-10. THE CAR IS UNDER FACTORY WARRANTY AND HAS BEEN SERVICED 7 TIMES BY 3 DIFFERENT BUICK DEALERSHIPS. *TR" NHTSA ID Number: 10326754

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 122 of 337

293. On April 29, 2010, New GM became aware of a complaint filed with NHTSA involving a 2005 Buick LaCrosse and an incident that occurred on March 21, 2010, in which it was reported that:

> "TRAVELING ON INTERSTATE 57 DURING DAYTIME HOURS. WHILE CRUISING AT 73 MILES PER HOUR IN THE RIGHT HAND LANE, THE VEHICLE SPUTTERED AND LOST ALL POWER. I COASTED TO A STOP OFF THE SIDE OF THE ROAD. I RESTARTED THE VEHICLE AND EVERYTHING SEEMED OK, SO I CONTINUED ON. A LITTLE LATER IT SPUTTERED AGAIN AND STARTED LOSING POWER. THE POWER CAME BACK BEFORE IT CAME TO A COMPLETE STOP. I CALLED ON STAR FOR A DIAGNOSTIC CHECK AND THEY TOLD ME I HAD A FUEL SYSTEM PROBLEM AND THAT IF THE CAR WOULD RUN TO CONTINUE THAT IT WAS NOT A SAFETY ISSUE. THEY TOLD ME TO TAKE IT TO A DEALER FOR REPAIRS WHEN I GOT HOME. I TOOK THE CAR WORDEN-MARTEN SERVICE CENTER FOR REPAIRS ON MARCH 23RD. TO REPAIR THE CAR THEY: 1.REPLACED CAT CONVERTER AND OXYGEN SENSOR 125CGMPP- $750.47 A SECOND INCIDENT OCCURRED WHILE TRAVELING ON INTERSTATE 57 DURING DAYTIME HOURS. I WAS PASSING A SEMI TRACTOR TRAILER WITH THREE CARS FOLLOWING ME WHILE CRUISING AT 73 MILES PER HOUR WHEN THE VEHICLE SPUTTERED AND LOST ALL POWER PUTTING ME IN A VERY DANGEROUS SITUATION. THE VEHICLE COASTED DOWN TO ABOUT 60 MILES PER HOUR BEFORE IT KICKED BACK IN. I IN THE MEAN TIME HAD DROPPED BACK BEHIND THE SEMI WITH THE THREE CARS BEHIND ME AND WHEN I COULD I PULLED BACK INTO THE RIGHT HAND LANE. THIS WAS A VERY DANGEROUS SITUATION FOR ME AND MY WIFE. I CALLED ON STAR FOR A DIAGNOSTIC CHECK AND THEY TOLD ME THAT EVERYTHING WAS OK. I TOOK THE CAR WORDEN-MARTEN SERVICE CENTER FOR REPAIRS AGAIN ON APRIL 19TH TO REPAIR THE CAR THEY: 1.REPLACED MASS -AIR FLOW UNIT AND SENSOR $ 131.39 WHO KNOWS IF IT IS FIXED RIGHT THIS TIME? THIS WAS A VERY DANGEROUS SITUATION TO BE IN FOR THE CAR TO FAIL. *TR" NHTSA ID Number: 10328071

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 123 of 337

294. On June 2, 2010, New GM became aware of a complaint filed with NHTSA involving a 2007 Buick LaCrosse and an incident that occurred on March 1, 2010, in which the following was reported:

> "2007 BUICK LACROSSE SEDAN. CONSUMER STATES MAJOR SAFETY DEFECT. CONSUMER REPORTS WHILE DRIVING THE ENGINE SHUTDOWN 3 TIMES FOR NO APPARENT REASON *TGW" NHTSA ID Number: 10334834

295. On February 20, 2014, New GM became aware of a complaint filed with NHTSA involving a 2006 Chevrolet Monte Carlo and an incident that occurred on January 16, 2014, in which the following was reported:

> "I WAS DRIVING GOING APPROXIMATELY 45 MPH, I HIT A POT HOLE AND MY VEHICLE CUT OFF. THIS HAS HAPPENED THREE TIMES SINCE JANUARY. THE SAME THING HAPPENED THE SECOND TIME. THE LAST TIME IT OCCURRED WAS TUESDAY, FEBRUARY 18. THIS TIME I WAS ON THE EXPRESSWAY TRAVELING APPROXIMATELY 75 MPH, HIT A BUMP AND IT CUT OFF. THE CAR STARTS BACK UP WHEN I PUT IT IN NEUTRAL. *TR" NHTSA ID Number: 10565104

296. On March 3, 2014, New GM became aware of a complaint filed with NHTSA involving a 2006 Chevrolet Impala and an incident that occurred on February, 29, 2012, in which the following was reported:

> "I WAS DRIVING MY COMPANY ASSIGNED CAR DOWN A STEEP HILL WHEN THE ENGINE STALLED WITHOUT WARNING. THIS HAS HAPPENED 5 OTHER TIMES WITH THIS VEHICLE. THIS WAS THE FIRST TIME I WAS TRAVELING FAST THOUGH. IT'S LIKE THE ENGINE JUST TURNS OFF. THE LIGHTS ARE STILL ON BUT I LOSE THE POWER STEERING AND BRAKES. IT WAS TERRIFYING AND EXTREMELY DANGEROUS. THIS PROBLEM HAPPENS COMPLETELY RANDOMLY WITH NO WARNING. IT HAS HAPPENED TO OTHERS IN MY COMPANY WITH THEIR IMPALAS. I LOOKED ONLINE AND FOUND NUMEROUS OTHER INSTANCES OF CHEVY IMPALAS OF VARIOUS MODEL YEARS DOING THE SAME THING. IT IS CURRENTLY IN THE REPAIR SHOP AND THE

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 124 of 337

> MECHANIC CAN'T DUPLICATE THE PROBLEM. I TOLD THEM ITS RANDOM AND OCCURS ABOUT EVERY 4 MONTHS OR SO. I AM AFRAID I WILL HAVE TO GET BACK IN THIS DEATH TRAP DUE TO MY EMPLOYER MAKING ME. PLEASE HELP- I DON'T WANT TO DIE BECAUSE CHEVROLET HAS A PROBLEM WITH THEIR ELECTRICAL SYSTEMS IN THEIR CARS. *TR" NHTSA ID Number: 10567458

297. On March 11, 2014, New GM became aware of a complaint filed with NHTSA involving a 2007 Cadillac DTS and an incident that occurred on January 27, 2013, in which the following was reported:

> "ENGINE STOPPED. ALL POWER EQUIPMENT CEASED TO FUNCTION. I WAS ABLE TO GET TO THE SIDE OF THE FREEWAY. PUT THE CAR IN NEUTRAL, TURNED THE KEY AND THE CAR STARTED AND CONTINUED FOR THE DURATION OF THE 200 MILE TRIP. THE SECOND TIME APPROXIMATELY THREE WEEKS AGO MY WIFE WAS DRIVING IN HEAVY CITY TRAFFIC WHEN THE SAME PROBLEM OCCURRED AND SHE LOST THE USE OF ALL POWER EQUIPMENT. SHE WAS ABLE TO PUT THE CAR IN PARK AND GET IT STARTED AGAIN WITHOUT INCIDENT. I CALLED GM COMPLAINT DEPARTMENT. THEY INSTRUCTED ME TO TAKE THE CAR TO A DEALERSHIP AND HAVE A DIAGNOSTIC TEST DONE ON IT. THIS WAS DONE AND NOTHING WAS FOUND TO BE WRONG WITH THE VEHICLE. I AGAIN CALLED CADILLAC COMPLAINT DEPARTMENT AND OPENED A CASE. THIS TIME I WAS TOLD TO TAKE THE CAR BACK TO THE DEALERSHIP AND ASK THE SERVICE DEPARTMENT TO RECHECK IT. I INFORMED THEM I HAVE THE DIAGNOSTIC REPORT SHOWING NOTHING WRONG WAS FOUND. THEY SUGGESTED I TAKE IT BACK AND HAVE THE SERVICE PEOPLE DRIVE THE CAR. THIS DIDN'T MAKE ANY SENSE BECAUSE I DON'T KNOW WHEN AND WHERE THE PROBLEM WILL OCCUR AGAIN. WHAT WAS I TO DO FOR A CAR WHILE THE DEALERSHIP HAD MINE? I INQUIRED OF THE CADILLAC REPRESENTATIVE IF THIS CAR MAY HAVE THE SAME IGNITION AS THE CARS CURRENTLY BEING RECALLED BY GM. THEY WERE UNABLE TO ANSWER THAT QUESTION. THEY FINALLY STATED THE ONLY REMEDY WAS TO TAKE IT BACK TO THE DEALERSHIP. IF THIS PROBLEM OCCURS AGAIN SOMEONE COULD EASILY GET INJURED OR KILLED. I

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 125 of 337

> WOULD APPRECIATE ANY ASSISTANCE YOU CAN GIVE ME ON HOW TO RESOLVE THIS MATTER." NHTSA ID Number: 10568491

298. On March 19, 2014, New GM became aware of a complaint filed with NHTSA involving a 2006 Buick LaCrosse and an incident that occurred on March 15, 2014, in which the following was reported:

> "WHILE DRIVING UP A LONG INCLINE ON I-10 VEHICLE BEHAVED AS IF THE IGNITION HAD BEEN TURNED OFF AND KEY REMOVED. IE: ENGINE OFF, NO LIGHTS OR ACCESSORIES, NO WARNING LIGHTS ON DASH. TRAFFIC WAS HEAVY AND MY WIFE WAS FORTUNATE TO SAFELY COAST INTO SHOULDER. INCIDENT RECORDED WITH BUICK, HAVE REFERENCE NUMBER. *TR" NHTSA ID Number: 10573586

299. On June 20, 2014, New GM became aware of a complaint filed with NHTSA involving a 2008 Buick LaCrosse and an incident that occurred on August 30, 2013, in which the following was reported:

> "THE IGNITION CONTROL MODULE (NOT THE IGNITION SWITCH) FAILED SUDDENLY WHILE DRIVING ON THE HIGHWAY, CAUSING THE ENGINE TO SHUT OFF SUDDENLY AND WITHOUT WARNING. THE CAR WAS TRAVELING DOWNHILL, SO THE INITIAL INDICATION WAS LOSS OF POWER STEERING. I WAS ABLE TO PULL ONTO THE SHOULDER AND THEN REALIZED THAT THE ENGINE HAD DIED AND WOULD NOT RESTART. WHILE NO CRASH OR INJURY OCCURRED, THE POTENTIAL FOR A SERIOUS CRASH WAS QUITE HIGH." NHTSA ID Number: 10604820

300. On July 1, 2014, New GM became aware of a complaint filed with NHTSA involving a 2006 Buick LaCrosse and an incident that occurred on October 25, 2012, in which the following was reported:

> "TRAVELING 40 MPH ON A FOUR LANE ABOUT TO PASS A TRUCK. MOTOR STOPPED, POWER STEERING OUT, POWER BRAKES OUT, MANAGED TO COAST ACROSS THREE LANES TO SHOULDER TO PARK. WALKED 1/4

> MILES TO STORE CALLED A LOCAL GARAGE. CAR STILL WOULD NOT START, TOWED TO HIS GARAGE. CHECKED GAS, FUEL PRESSURE OKAY BUT NO SPARK. MOVED SOME CONNECTORS AROUND THE STARTING MODULE AND CAR STARTED. HAVE NOT HAD ANY PROBLEMS SINCE, HAVE THE FEAR THAT I WILL BE ON A CHICAGO TOLL ROAD AND IT WILL STOP AGAIN." NHTSA ID Number: 10607535

301. On July 12, 2014, New GM became aware of a complaint filed with NHTSA involving a 2009 Chevrolet Impala and an incident that occurred on March 19, 2010, in which the following was reported:

> "I HAD JUST TURNED ONTO THIS ROAD, HAD NOT EVEN GONE A MILE. NO SPEED, NO BLACK MARKS, CAR SHUTDOWN RAN OFF THE ROAD AND HIT A TREE STUMP. TOTAL THE CAR. THE STEERING WHEEL WAS BENT ALMOST IN HALF. I HAVE PICTURES OF THE CAR. I GOT THIS CAR NEW, SO ALL MILES WE'RE PUT ON IT BY ME. I BROKE MY HIP, BACK, KNEE, DISLOCATED MY ELBOW, CRUSHED MY ANKLE AND FOOT. HAD A HEAD INJURY, A DEFLATED LUNG. I WAS IN THE HOSPITAL FOR TWO MONTHS AND A NURSING HOME FOR A MONTH. I HAVE HAD 14 SURGERIES. STILL NOT ABLE TO WORK OR DO A LOT OF THINGS FOR MY SELF. WITH THE RECALLS SHOWING THE ISSUES OF THE ENGINE SHUTTING OFF, I NEED THIS LOOKED INTO." NHTSA ID Number: 10610093

302. On July 24, 2014, New GM became aware of a complaint filed with NHTSA involving a 2008 Buick LaCrosse and an incident that occurred on July 15, 2014, in which the following was reported:

> "WHILE DRIVING NORTH ON ALTERNATE 69 HIGHWAY AT 65 MPH AT 5:00 P.M., MY VEHICLE ABRUPTLY LOSS POWER EVEN THOUGH I TRIED TO ACCELERATE. THE ENGINE SHUT OFF SUDDENLY AND WITHOUT WARNING. VEHICLE SLOWED TO A COMPLETE STOP. I WAS DRIVING IN THE MIDDLE LANE AND WAS UNABLE TO GET IN THE SHOULDER LANE BECAUSE I HAD NO PICKUP (UNABLE TO GIVE GAS TO ACCELERATE) SO MY HUSBAND AND I WERE CAUGHT IN FIVE 5:00 TRAFFIC WITH CARS WHIPPING AROUND US ON BOTH SIDES AND

> MANY EXCEEDING 65 MPH. I PUT ON MY EMERGENCY LIGHTS AND IMMEDIATELY CALLED ON-STAR. I WAS UNABLE TO RESTART THE ENGINE. THANK GOD FOR ON-STAR BECAUSE FROM THAT POINT ON, I WAS IN TERROR WITNESSING CARS COMING UPON US NOT SLOWING UNTIL THEY REALIZED I WAS AT A STAND STILL WITH LIGHTS FLASHING. THE CARS WOULD SWERVE TO KEEP FROM HITTING US. IT TOOK THE HIGHWAY PATROL AND POLICE 15 MINUTES TO GET TO US BUT DURING THAT TIME, I RELIVED VISIONS OF US BEING KILLED ON THE HIGHWAY. I CANÂ€™T DESCRIBE THE HORROR, LOOKING OUT MY REAR VIEW MIRROR, WITNESSING OUR DEMISE TIME AFTER TIME. THOSE 15 MINUTES SEEMED LIKE AN ETERNITY. WHEN THE HIGHWAY PATROL ARRIVED THEY CLOSED LANES AND ASSISTED IN PUSHING CAR OUT OF THE HIGHLY TRAFFIC LANES. IT TOOK MY HUSBAND AND I BOTH TO TURN THE STEERING WHILE IN NEUTRAL. THE CAR WAS TOWED TO CONKLIN FANGMAN KC DEALERSHIP AND I HAD TO REPLACE IGNITION COIL AND MODULE THAT COST ME $933.16. THEY SAID THESE PARTS WERE NOT ON THE RECALL LIST, WHICH I HAVE FOUND OUT SINCE THEN GM HAS PUT DEALERSHIPS ON NOTICE OF THIS PROBLEM. IT HAS SOMETHING TO DO WITH SUPPLYING ENOUGH MANUFACTURED PARTS TO TAKE CARE OF RECALL. IF I COULD AFFORD TO PURCHASE ANOTHER CAR I WOULD BECAUSE I DONÂ€™T FEEL SAFE ANY LONGER IN THIS CAR. EMOTIONALLY I AM STILL SUFFERING FROM THE TRAUMA.” NHTSA ID Number: 10604820

303. Notwithstanding New GM’s recall, the reports and complaints relating to this defect have continued to pour into New GM. Such complaints and reports indicate that New GM’s proffered recall “fix” does not work.

304. For example, on August 2, 2014, New GM became aware of a complaint filed with NHTSA involving a 2006 Buick LaCrosse and an incident that occurred on July 12, 2014, in which the following was reported:

> “WHILE TRAVELING IN THE FAST LANE ON THE GARDEN STATE PARKWAY I HIT A BUMP IN THE ROAD, THE AUTO SHUT OFF.WITH A CONCRETE DIVIDER ALONG SIDE AND AUTOS APPROACHING AT HIGH

> SPEED, MY WIFE AND DAUGHTER SCREEMING I MANAGED TO GET TO THE END OF THE DIVIDER WERE I COULD TURN OFF THE AUTO RESTARTED ON 1ST TRY BUT VERY SCARY." NHTSA ID Number: 10618391

305. On August 18, 2014, New GM became aware of a complaint filed with NHTSA involving a 2007 Buick LaCrosse and an incident that occurred on August 18, 2014, in which the following was reported:

> "TL* THE CONTACT OWNS A 2007 BUICK LACROSSE. THE CONTACT STATED WHILE DRIVING APPROXIMATELY 60 MPH, SHE HIT A POT HOLE AND THE VEHICLE STALLED. THE VEHICLE COASTED TO THE SHOULDER OF THE ROAD. THE VEHICLE WAS RESTARTED AND THE CONTACT WAS ABLE TO DRIVE THE VEHICLE AS NORMAL. THE CONTACT RECEIVED A RECALL NOTICE UNDER NHTSA CAMPAIGN NUMBER: 14V355000 (ELECTRICAL SYSTEM), HOWEVER THE PARTS NEEDED FOR THE REPAIRS WAS UNAVAILABLE. THE VEHICLE WAS NOT REPAIRED. THE MANUFACTURER WAS NOT NOTIFIED OF THE FAILURE. THE APPROXIMATE FAILURE MILEAGE WAS 110,000." NHTSA ID Number: 10626067

306. On August 20, 2014, New GM became aware of complaint filed with NHTSA involving a 2007 Chevrolet Impala and an incident that occurred on August 6, 2014, in which it was reported that:

> "TL* THE CONTACT OWNS A 2007 CHEVROLET IMPALA. THE CONTACT STATED THAT WHILE DRIVING 25 MPH, THE VEHICLE STALLED WITHOUT WARNING. THE CONTACT RECEIVED A NOTIFICATION FOR RECALL NHTSA CAMPAIGN NUMBER: 14V355000 (ELECTRICAL SYSTEM). THE VEHICLE WAS TAKEN TO AN INDEPENDENT MECHANIC WHERE THE TECHNICIAN ADVISED THE CONTACT TO REMOVE THE KEY FOB AND ANY OTHER OBJECTS. THE VEHICLE WAS NOT REPAIRED. THE MANUFACTURER WAS MADE AWARE OF THE FAILURE. THE FAILURE MILEAGE WAS 79,000." NHTSA ID Number: 10626659

307. On August 27, 2014, New GM became aware of the following complaint filed with NHTSA involving a 2008 Chevrolet Impala and an incident that occurred on August 27, 2014, in which it was reported that:

> "TL-THE CONTACT OWNS A 2008 CHEVROLET IMPALA. THE CONTACT STATED WHILE DRIVING APPROXIMATELY 50 MPH, THE VEHICLE LOST POWER AND THE STEERING WHEEL SEIZED WITHOUT WARNING. AS A RESULT, THE CONTACT CRASHED INTO A POLE AND THE AIR BAGS FAILED TO DEPLOY. THE CONTACT SUSTAINED A CONCUSION, SPRAINED NECK, AND WHIPLASH WHICH REQUIRED MEDICAL ATTENTION. THE POLICE WAS NOT FILED. THE VEHICLE WAS TOWED TO A TOWING COMPANY. THE CONTACT RECEIVED NOTIFICATION OF NHTSA CAMPAIGN ID NUMBER: 14V355000 (ELECTRICAL SYSTEM), HOWEVER THE PARTS ARE NOT AVAILABLE TO PERFORM THE REPAIRS. THE VEHICLE WAS NOT REPAIRED. THE MANUFACTURER WAS NOT NOTIFIED OF THE FAILURE. THE APPROXIMATE FAILURE MILEAGE WAS 70,000. MF." NHTSA ID Number: 10628704.

308. Old GM and later New GM knew that this serious safety defect existed for years yet did nothing to warn the public or even attempt to correct the defect in these vehicles until late June of 2014 when New GM finally made the decision to implement a recall.

309. The "fix" that New GM plans as part of the recall is to modify the ignition key from a "slotted" key to "hole" key." This is insufficient and does not adequately address the safety risks posed by the defect. The ignition key and switch remain prone to inadvertently move from the "run" to the "accessory" position. Simply changing the key slot or taking other keys and fobs off of key rings is New GM's attempt to make consumers responsible for the safety of GM-branded vehicles and to divert its own responsibility to make GM-branded vehicles safe. New GM's "fix" does not adequately address the inherent dangers and safety threats posed by the defect in the design. In addition, New GM is not addressing the other design issues that create safety risks in connection with this defect. New GM is not altering

the algorithm that prevents the airbags from deploying when the ignition leaves the "run" position even when the vehicle is moving at high speed. And New GM is not altering the placement of the ignition switch in an area where the driver's knees may inadvertently cause the ignition to move out of the "run" position.

310. Further, as of the date of this filing, New GM has not even begun to implement this "fix," leaving owners and lessees in these vehicles exposed to the serious safety risks posed by moving stalls and the accompanying effects on powering steering, power brakes, and the vehicle's airbags.

VIII. The July 2 and 3, 2014 Recalls Relating to the Unintended Ignition Rotation Defect Further Reveal New GM's Fraudulent Concealment of Known Serious Safety Problems.

311. On July 2, 2014, New GM recalled 554,328 vehicles in the United States for ignition switch defects (Recall Number 14V-394). The July 2 recall applied to the 2003-2014 Cadillac CTS and the 2004-2006 Cadillac SRX.

312. The recall notice explains that the weight on the key ring and/or road conditions or some other jarring event may cause the ignition switch to move out of the "run" position, turning off the engine. Further, if the key is not the in the "run" position, the airbags may not deploy in the event of a collision, increasing the risk of injury.

313. On July 3, 2014, New GM recalled 6,729,742 additional vehicles in the United States for ignition switch defects (Recall No. 14V-400).

314. The following Old GM vehicles were included in this recall: 1997-2005 Chevrolet Malibu, 2000-2005 Chevrolet Impala, 2000-2005 Chevrolet Monte Carlo, 2000-2005 Pontiac Grand Am, 2004-2008 Pontiac Grand Prix, 1998-2002 Oldsmobile Intrigue, and 1999-2004 Oldsmobile Alero.

315. The recall notice states that the weight on the key and/or road conditions or some other jarring event may cause the ignition switch to move out of the "run" position, turning off the engine. If the key is not in the "run" position, the airbags may not deploy if the vehicle is involved in a collision, increasing the risk of injury.

316. In both of these recalls, New GM notified NHTSA and the public that the recall was intended to address a defect involving unintended or "inadvertent key rotation" within the ignition switch of the vehicles. As with the ignition key defect announced June 20, however, the defects for which these vehicles have been recalled is directly related to the ignition switch defect in the Cobalt and other Defective Ignition Switch Vehicles and involves the same safety risks and dangers.

317. Based on information on NHTSA's website, 175,896 of the recalled vehicles were manufactured by Old GM. 108,174 of the vehicles were manufactured and sold by New GM.

318. Once again, the unintended ignition rotation defect is substantially similar to and relates directly to the other ignition switch defects, including the defects that gave rise to the initial recall of 2.1 million Cobalt and other vehicles in February and March of 2014. Like the other ignition switch defects, the unintended ignition key rotation defect poses a serious and dangerous safety risk because it can cause a vehicle to stall while in motion by causing the key in the ignition to inadvertently move from the "on" or "run" position to "off" or "accessory position." Like the other ignition switch defects, the unintended ignition key rotation defect can result in a loss of power steering, power braking and increase the risk of a crash. And as with the other ignition switch defects, if a crash occurs, the airbags will not deploy because of the unintended ignition key rotation defect.

319. The unintended ignition key rotation defect involves several problems, and they are identical to the problems in the other Defective Vehicles: a weak detent plunger, the low positioning of the ignition on the steering column, and the algorithm that renders the airbags inoperable when the vehicle leaves the "run" position.

320. The 2003-2006 Cadillac CTS and the 2004-2006 Cadillac SRX use the same Delphi switch and have inadequate torque for the "run"-"accessory" direction of the key rotation. This was known to Old and New GM, and was the basis for a change that was made to a stronger detent plunger for the 2007 and later model years of the SRX model. The 2007 and later CTS vehicles used a switch manufactured by Dalian Alps.

321. In 2010, New GM changed the CTS key from a "slot" to a "hole" design to "reduce an observed nuisance" of the key fob contacting the driver's leg. But in 2012, a New GM employee reported two running stalls of a 2012 CTS that had a "hole" key and the stronger detent plunger switch. When New GM did testing in 2014 of the "slot" versus "hole" keys, it confirmed that the weaker detent plunger-equipped switches used in the older CTS and SRX could inadvertently move from "run" to "accessory" or "off" when the "vehicle goes off road or experience some other jarring event."

322. GM has tried to characterize the recall of these 7.3 million vehicles as being different than the other ignition switch defects ***even though*** these recalls are aimed at addressing the same defects and safety risks as those that that gave rise to the other ignition switch defect recalls. New GM has attempted to portray the unintended ignition key rotation defect as being different from the ignition switch defect in order to deflect attention from the severity and pervasiveness of the ignition switch defect and to try to provide a story and

plausible explanation for why it did not recall these 7.3 million vehicles much earlier, and to avoid providing new, stronger ignition switches as a remedy.

323. From 2002 to the present, Old GM and New GM received numerous reports from consumers regarding complaints, crashes, injuries and deaths linked to this safety defect. The following are just a handful of examples of some of the reports known to Old GM and New GM:

324. On September 16, 2002, Old GM became aware of a complaint filed with NHTSA regarding a 2002 Oldsmobile Intrigue involving an incident that occurred on March 16, 2002, in which the following was reported:

> "WHILE DRIVING AT 30 MPH CONSUMER RAN HEAD ON INTO A STEEL GATE, AND THEN HIT THREE TREES. UPON IMPACT, NONE OF THE AIR BAGS DEPLOYED. CONTACTED DEALER. PLEASE PROVIDE FURTHER INFORMATION. *AK" **NHTSA ID Number:** 8018687.

325. On November 22, 2002, Old GM became aware of complaint filed with NHTSA involving a 2003 Cadillac CTS involving an incident that occurred on July 1, 2002, in which it was reported that:

> "THE CAR STALLS AT 25 MPH TO 45 MPH, OVER 20 OCCURANCES, DEALER ATTEMPTED 3 REPAIRS. DT" NHTSA ID Number: 770030.

326. On January 21, 2003, Old GM became aware of a complaint filed with NHTSA involving a 2003 Cadillac CTS, in which the following was reported:

> "WHILE DRIVING AT ANY SPEED,THE VEHICLE WILL SUDDENLY SHUT OFF. THE STEERING WHEEL AND THE BRAKE PEDAL BECOMES VERY STIFF. CONSUMER FEELS ITS VERY UNSAFE TO DRIVE. PLEASE PROVIDE ANY FURTHER INFORMATION." NHTSA ID Number: 10004288.

327. On June 30, 2003, Old GM became aware of a complaint with NHTSA regarding a 2001 Oldsmobile Intrigue which involved the following report:

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 134 of 337

> "CONSUMER NOTICED THAT WHILE TRAVELING DOWN HILL AT 40-45 MPH BRAKES FAILED, CAUSING CONSUMER TO RUN INTO THREES AND A POLE. UPON IMPACT, AIR BAGS DID NOT DEPLOY. *AK" **NHTSA ID Number:** 10026252.

328. On March 11, 2004, Old GM became aware of a complaint filed with NHTSA involving a 2004 Cadillac CTS involving an incident occurred on March 11, 2004, in which the following was reported:

> "CONSUMER STATED WHILE DRIVING AT 55-MPH VEHICLE STALLED, CAUSING CONSUMER TO PULL OFF THE ROAD. DEALER INSPECTED VEHICLE SEVERAL TIMES, BUT COULD NOT DUPLICATE OR CORRECT THE PROBLEM. *AK" NHTSA ID Number: 10062993.

329. On March 11, 2004, Old GM became aware of a complaint with NHTSA regarding a 2003 Oldsmobile Alero incident that occurred on July 26, 2003, in which the following was reported:

> "THE VEHICLE DIES. WHILE CRUISING AT ANY SPEED, THE HYDRAULIC BRAKES & STEERING FAILED DUE TO THE ENGINE DYING. THERE IS NO SET PATTERN, IT MIGHT STALL 6 TIMES IN ONE DAY, THEN TWICE THE NEXT DAY. THEN GO 4 DAYS WITH NO OCURRENCE, THEN IT WILL STALL ONCE A DAY FOR 3 DAYS. THEN GO A WEEK WITH NO OCURRENCE, THEN STALL 4 TIMES A DAY FOR 5 DAYS, ETC., ETC. IN EVERY OCURRENCE, IT TAKES APPROXIMATELY 10 MINUTES BEFORE IT WILL START BACK UP. AT HIGH SPEEDS, IT IS EXTREMELY TOO DANGEROUS TO DRIVE. WE'VE TAKEN IT TO THE DEALER, UNDER EXTENDED WARRANTY, THE REQUIRED 4 TIMES UNDER THE LEMON LAW PROCESS. THE DEALER CANNOT ASCERTAIN, NOR FIX THE PROBLEM. IT HAPPENED TO THE DEALER AT LEAST ONCE WHEN WE TOOK IT IN. I DOUBT THEY WILL ADMIT IT, HOWEVER, MY WIFE WAS WITNESS. THE CAR IS A 2003. EVEN THOUGH I BOUGHT IT IN JULY 2003, IT WAS CONSIDERED A USED CAR. GM HAS DENIED OUR CLAIM SINCE THE LEMON LAW DOES NOT APPLY TO USED CARS. THE CAR HAS BEEN PERMANENTLY PARKED SINCE NOVEMBER 2003. WE WERE FORCED TO BUY ANOTHER CAR. THE DEALER WOULD NOT TRADE.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 135 of 337

> THIS HAS RESULTED IN A BADLUCK SITUATION FOR US. WE CANNOT AFFORD 2 CAR PAYMENTS / 2 INSURANCE PREMIUMS, NOR CAN WE AFFORD $300.00 PER HOUR TO SUE GM. I STOPPED MAKING PAYMENTS IN DECEMBER 2003. I HAVE KEPT THE FINANCE COMPANY ABREAST OF THE SITUATION. THEY HAVE NOT REPOSSED AS OF YET. THEY WANT ME TO TRY TO SELL IT. CAN YOU HELP ?*AK" **NHTSA ID Number:** 10061898.

330. On July 20, 2004, Old GM became aware of a complaint filed with NHTSA involving a 2004 Cadillac SRX, involving an incident that occurred on July 9, 2004, in which the following was reported:

> "THE CAR DIES AFTER TRAVELING ON HIGHWAY. IT GOES FROM 65 MPH TO 0. THE BRAKES, STEERING, AND COMPLETE POWER DIES. YOU HAVE NO CONTROL OVER THE CAR AT THIS POINT. I HAVE ALMOST BEEN HIT 5 TIMES NOW. ALSO, WHEN THE CARS DOES TURN BACK ON IT WILL ONLY GO 10 MPH AND SOMETIMES WHEN YOU TURN IT BACK ON THE RPM'S WILL GO TO THE MAX. IT SOUNDS LIKE THE CAR IS GOING TO EXPLODE. THIS CAR IS A DEATH TRAP. *LA" NHTSA ID Number: 10082289.

331. In August 2004, Old GM became aware of a complaint filed with NHTSA regarding a 2004 Chevrolet Malibu incident that occurred on June 30, 2004, in which it was reported that:

> "WHILE TRAVELING AT ANY SPEED VEHICLE STALLED. WITHOUT CONSUMER HAD SEVERAL CLOSE CALLS OF BEING REAR ENDED. VEHICLE WAS SERVICED SEVERAL TIMES, BUT PROBLEM RECURRED. *AK." **NHTSA ID Number:** 10089418.

332. Another report in August of 2004 which Old GM became aware of involved a 2004 Chevrolet Malibu incident that occurred on August 3, 2004, in which it was reported that:

> "WHEN DRIVING, THE VEHICLE TO CUT OFF. THE DEALER COULD NOT FIND ANY DEFECTS. *JB." **NHTSA ID Number:** 10087966.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 136 of 337

333. On October 23, 2004, Old GM became aware of a complaint with NHTSA regarding a 2003 Chevrolet Monte Carlo, in which the following was reported:

> "VEHICLE CONTINUOUSLY EXPERIENCED AN ELECTRICAL SYSTEM FAILURE. AS A RESULT, THERE'WAS AN ELECTRICAL SHUTDOWN WHICH RESULTED IN THE ENGINE DYING/ STEERING WHEEL LOCKING UP, AND LOSS OF BRAKE POWER.*AK" **NHTSA ID Number:** 10044624.

334. On April 26, 2005, Old GM became aware of a complaint filed with NHTSA involving a 2005 Pontiac Grand Prix, pertaining to an incident that occurred on December 29, 2004, in which the following was reported:

> "2005 PONTIAC GRAND PRIX GT SEDAN VIN #[XXX] PURCHASED 12/16/2004. INTERMITTENTLY VEHICLE STALLS/ LOSS OF POWER IN THE ENGINE. WHILE DRIVING THE VEHICLE IT WILL SUDDENLY JUST LOSES POWER. YOU CONTINUE TO PRESS THE ACCELERATOR PEDAL AND THEN THE ENGINE WILL SUDDENLY TAKE BACK OFF AT A GREAT SPEED. THIS HAS HAPPENED WHILE DRIVING NORMALLY WITHOUT TRYING TO ACCELERATE AND ALSO WHILE TRYING TO ACCELERATE. THE CAR HAS LOST POWER WHILE TRYING TO MERGE IN TRAFFIC. THE CAR HAS LOST POWER WHILE TRYING TO CROSS HIGHWAYS. THE CAR HAS LOST POWER WHILE JUST DRIVING DOWN THE ROAD. GMC HAS PERFORMED THE FOLLOWING REPAIRS WITHOUT FIXING THE PROBLEM. 12/30/2004 [XXX]-MODULE, POWERTRAIN CONTROL-ENGINE REPROGRAMMING. 01/24/2005 [XXX]-SOLENOID,PRESSURE CONTROL-REPLACED. 02/04/2005 [XXX]-MODULE, PCM/VCM-REPLACED. 02/14/2005 [XXX]-PEDAL,ACCELERATOR-REPLACED. DEALERSHIP PURCHASED FROM CAPITAL BUICK-PONTIAC-GMC 225-293-3500. DEALERSHIP HAS ADVISED THAT THEY DO NOT KNOW WHAT IS WRONG WITH THE CAR. WE HAVE BEEN TOLD THAT WE HAVE TO GO DIRECT TO PONTIAC WITH THE PROBLEM. HAVE BEEN IN CONTACT WITH PONTIAC SINCE 02/15/05. PONTIAC ADVISED THAT THEY WERE GOING TO RESEARCH THE PROBLEM AND SEE IF ANY OTHER GRAND PRI WAS REPORTING LIKE PROBLEMS. SO FAR THE ONLY ADVICE FROM PONTIAC IS THEY WANT US TO COME IN AND TAKE ANOTHER

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 137 of 337

> GRAND PRIX OFF THE LOT AND SEE IF WE CAN GET THIS CAR TO DUPLICATE THE SAME PROBLEM. THIS DID NOT IMPRESS ME AT ALL. SO AFTER WAITING FOR 2-1/2 MONTHS FOR PONTIAC TO DO SOMETHING TO FIX THE PROBLEM, I HAVE DECIDED TO REPORT THIS TO NHTSA. *AK *JS INFORMATION REDACTED PURSUANT TO THE FREEDOM OF INFORMATION ACT (FOIA), 5 U.S.C. 552(B)(6)" NHTSA ID Number: 10118501.

335. In May 2005, Old GM became aware of a complaint filed with NHTSA regarding a 2004 Chevrolet Malibu incident that occurred on July 18, 2004, in which it was reported that:

> "THE CAR CUT OFF WHILE I WAS DRIVING AND IN HEAVY TRAFFIC MORE THAN ONCE. THERE WAS NO WARNING THAT THIS WOULD HAPPEN. THE CAR WAS SERVICED BEFORE FOR THIS PROBLEM BUT IT CONTINUED TO HAPPEN. I HAVE HAD 3 RECALLS, THE HORN FUSE HAS BEEN REPLACED TWICE, AND THE BLINKER IS CURRENTLY OUT. THE STEERING COLLAR HAS ALSO BEEN REPLACED. THIS CAR WAS SUPPOSED TO BE A NEW CAR." **NHTSA ID Number:** 10123684.

336. On June 2, 2005, Old GM became aware of a complaint with NHTSA regarding a 2004 Pontiac Grand Am incident that occurred on February 18, 2005, in which the following was reported:

> "2004 PONTIAC GRAND PRIX SHUTS DOWN WHILE DRIVING AND THE POWER STEERING AND BRAKING ABILITY ARE LOST.*MR *NM." **NHTSA ID Number:** 10124713.

337. On August 12, 2005, Old GM became aware of a complaint filed with NHTSA involving a 2003 Cadillac CTS, regarding an incident that occurred on January 3, 2005, in which it was reported that:

> "DT: VEHICLE LOST POWER WHEN THE CONSUMER HIT THE BRAKES. THE TRANSMISSION JOLTS AND THEN THE ENGINE SHUTS OFF. IT HAS BEEN TO THE DEALER 6 TIMES SINCE JANUARY. THE DEALER TRIED SOMETHING DIFFERENT EVERY TIME SHE TOOK IT IN.

MANUFACTURER SAID SHE COULD HAVE A NEW VEHICLE IF SHE PAID FOR IT. SHE WANTED TO GET RID OF THE VEHICLE.*AK THE CHECK ENGINE LIGHT ILLUMINATED. *JB" NHTSA ID Number: 10127580.

338. On August 26, 2005, Old GM became aware of a complaint with NHTSA regarding a 2004 Pontiac Grand Am incident that occurred on August 26, 2005, in which the following was reported:

> "WHILE DRIVING MY 2004 PONTIAC GRAND AM THE CAR FAILED AT 30 MPH. IT COMPLETELY SHUT OFF LEAVING ME WITH NO POWER STEERING AND NO WAY TO REGAIN CONTROL OF THE CAR UNTIL COMING TO A COMPLETE STOP TO RESTART IT. ONCE I HAD STOPPED IT DID RESTART WITHOUT INCIDENT. ONE WEEK LATER THE CAR FAILED TO START AT ALL NOT EVEN TURNING OVER. WHEN THE PROBLEM WAS DIAGNOSED AT THE GARAGE IT WAS FOUND TO BE A FAULTY "IGNITION CONTROL MODULE" IN THE CAR. AT THIS TIME THE PART WAS REPLACED ONLY TO FAIL AGAIN WITHIN 2 MONTHS TIME AGAIN WHILE I WAS DRIVING THIS TIME IN A MUCH MORE HAZARDOUS CONDITION BEING THAT I WAS ON THE HIGHWAY AND WAS TRAVELING AT 50 MPH AND HAD TO TRAVEL ACROSS TWO LANES OF TRAFFIC TO EVEN PULL OVER TO TRY TO RESTART IT. THE CAR CONTINUED TO START AND SHUT OFF ALL THE WAY TO THE SERVICE GARAGE WHERE IT WAS AGAIN FOUND TO BE A FAULTY "IGNITION CONTROL MODULE". IN ANOTHER TWO WEEKS TIME THE CAR FAILED TO START AND WHEN DIAGNOSED THIS TIME IT WAS SAID TO HAVE "ELECTRICAL PROBLEMS" POSSIBLE THE "POWER CONTROL MODULE". AT THIS TIME THE CAR IS STILL UNDRIVEABLE AND UNSAFE FOR TRAVEL. *JB" **NHTSA ID Number:** 10134303.

339. On September 22, 2005, Old GM became aware of a complaint filed with NHTSA involving a 2005 Cadillac CTS, concerning an incident that occurred on September 16, 2005, in which the following was reported:

> "DT: 2005 CADILLAC CTS – THE CALLER'S VEHICLE WAS INVOLVED IN AN ACCIDENT WHILE DRIVING AT 55 MPH. UPON IMPACT, AIR BAGS DID NOT DEPLOY. THE VEHICLE WENT OFF THE ROAD AND HIT A TREE. THIS

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 139 of 337

> WAS ON THE DRIVER'S SIDE FRONT. THERE WERE NO INDICATOR LIGHTS ON PRIOR TO THE ACCIDENT. THE VEHICLE HAS NOT BEEN INSPECTED BY THE DEALERSHIP, AND INSURANCE COMPANY TOTALED THE VEHICLE. THE CALLER SAW NO REASON FOR THE AIR BAGS NOT TO DEPLOY. . TWO INJURED WERE INJURED IN THIS CRASH. T A POLICE REPORT WAS TAKEN. THERE WAS NO FIRE. *AK" NHTSA ID Number: 10137348.

340. On September 29, 2006, Old GM became aware of a complaint filed with NHTSA involving a 2004 Cadillac CTS and an incident that occurred on September 29, 2006, in which the following was reported:

> "DT*: THE CONTACT STATED AT VARIOUS SPEEDS WITHOUT WARNING, THE VEHICLE LOST POWER AND WOULD NOT ACCELERATE ABOVE 20 MPH. ALSO, WITHOUT WARNING, THE VEHICLE STALLED ON SEVERAL OCCASIONS, AND WOULD NOT RESTART. THE VEHICLE WAS TOWED TO THE DEALERSHIP, WHO REPLACED THE THROTTLE TWICE AND THE THROTTLE BODY ASSEMBLY HARNESS, BUT THE PROBLEM PERSISTED. *AK UPDATED 10/25/2006 – *NM" NHTSA ID Number: 10169594.

341. On April 18, 2007, Old GM became aware of a complaint filed with NHTSA involving a 2004 Cadillac SRX, regarding an incident that occurred on April 13, 2007, in which it was reported that:

> "TL*THE CONTACT OWNS A 2004 CADILLAC SRX. THE ENGINE STALLED WITHOUT WARNING AND CAUSED ANOTHER VEHICLE TO CRASH INTO THE VEHICLE. THE VEHICLE WAS ABLE TO RESTART A FEW MINUTES AFTER THE CRASH. THE DEALER AND MANUFACTURER WAS UNABLE TO DIAGNOSE THE FAILURE. THE MANUFACTURER HAD THE VEHICLE INSPECTED BY A CADILLAC SPECIALIST WHO WAS UNABLE TO DIAGNOSE THE FAILURE. THE DEALER UPDATED THE COMPUTER FOUR TIMES, BUT THE ENGINE CONTINUED TO STALL. THE CURRENT AND FAILURE MILEAGES WERE 48,000." NHTSA ID Number: 10188245.

342. On September 20, 2007, Old GM became aware of a complaint filed with NHSTA involving a 2007 Cadillac CTS, in connection with an incident that occurred on January 1, 2007, and the following was reported:

> "TL*THE CONTACT OWNS A 2007 CADILLAC CTS. WHILE DRIVING 40 MPH, THE VEHICLE SHUT OFF WITHOUT WARNING. THE FAILURE OCCURRED ON FIVE SEPARATE OCCASIONS. THE DEALER WAS UNABLE TO DUPLICATE THE FAILURE. AS OF SEPTEMBER 20, 2007, THE DEALER HAD NOT REPAIRED THE VEHICLE. THE POWERTRAIN WAS UNKNOWN. THE FAILURE MILEAGE WAS 2,000 AND CURRENT MILEAGE WAS 11,998." NHTSA ID Number: 10203516.

343. On September 24, 2007, Old GM became aware of a complaint filed with NHTSA involving a 2004 Cadillac SRX, regarding an incident that occurred on January 1, 2005, in which the following was reported:

> "TL*THE CONTACT OWNS A 2004 CADILLAC SRX. WHILE DRIVING 5 MPH OR GREATER, THE VEHICLE WOULD SHUT OFF WITHOUT WARNING. THE DEALER STATED THAT THE BATTERY CAUSED THE FAILURE AND THEY REPLACED THE BATTERY. APPROXIMATELY EIGHT MONTHS LATER, THE FAILURE RECURRED. THE DEALER STATED THAT THE BATTERY CAUSED THE FAILURE AND REPLACED IT A SECOND TIME. APPROXIMATELY THREE MONTHS LATER, THE FAILURE OCCURRED AGAIN. SHE WAS ABLE TO RESTART THE VEHICLE. THE DEALER WAS UNABLE TO DUPLICATE THE FAILURE, HOWEVER, THEY REPLACED THE CRANK SHAFT SENSOR. THE FAILURE CONTINUES TO PERSIST. AS OF SEPTEMBER 24, 2007, THE DEALER HAD NOT REPAIRED THE VEHICLE. THE POWERTRAIN WAS UNKNOWN. THE FAILURE MILEAGE WAS 8,000 AND CURRENT MILEAGE WAS 70,580." NHTSA ID Number: 10203943.

344. On June 18, 2008, Old GM became aware of a complaint filed with NHTSA involving a 2006 Cadillac CTS and an incident that occurred on June 17, 2008, in which it was reported that:

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 141 of 337

> "TL*THE CONTACT OWNS A 2006 CADILLAC CTS. WHILE DRIVING 60 MPH AT NIGHT, THE VEHICLE SHUT OFF AND LOST TOTAL POWER. WHEN THE FAILURE OCCURRED, THE VEHICLE CONTINUED TO ROLL AS IF IT WERE IN NEUTRAL. THERE WERE NO WARNING INDICATORS PRIOR TO THE FAILURE. THE CONTACT FEELS THAT THIS IS A SAFETY HAZARD BECAUSE IT COULD HAVE RESULTED IN A SERIOUS CRASH. THE VEHICLE WAS TAKEN TO THE DEALER TWICE FOR REPAIR FOR THE SAME FAILURE IN FEBURARY OF 2008 AND JUNE 17, 2008. THE FIRST TIME THE CAUSE OF THE FAILURE WAS IDENTIFIED AS A GLITCH WITH THE COMPUTER SWITCH THAT CONTROLS THE TRANSMISSION. AT THE SECOND VISIT, THE SHOP EXPLAINED THAT THEY COULD NOT IDENTIFY THE FAILURE. IT WOULD HAVE TO RECUR IN ORDER FOR THEM TO DIAGNOSE THE FAILURE PROPERLY. THE CURRENT AND FAILURE MILEAGES WERE 43,000." NHTSA ID Number: 10231507.

345. On October 14, 2008, Old GM became aware of a complaint filed with NHTSA involving a 2008 Cadillac CTS and an incident that occurred on April 5, 2008, in which it was reported that:

> "WHILE DRIVING MY 2008 CTS, WITH NO ADVANCE NOTICE, THE ENGINE JUST DIED. IT SEEMED TO RUN OUT OF GAS. MY FUEL GAUGE READ BETWEEN 1/2 TO 3/4 FULL. THIS HAPPENED 3 DIFFERENT OCCASIONS. ALL 3 TIMES I HAD TO HAVE IT TOWED BACK TO THE DEALERSHIP THAT I PURCHASED THE CAR FROM. ALL 3 TIMES I GOT DIFFERENT REASONS IT HAPPENED, FROM BAD FUEL PUMP IN GAS TANK, TO SOME TYPE OF BAD CONNECTION, ETC. AFTER THIS HAPPENED THE 3RD TIME, I DEMANDED A NEW CAR, WHICH I RECEIVED. I HAVE HAD NO PROBLEMS WITH THIS CTS, RUNS GREAT. *TR" NHTSA ID Number: 10245423.

346. On November 13, 2008, Old GM became aware of a complaint with NHTSA regarding a 2001 Oldsmobile Intrigue, in which the following was reported:

> "L*THE CONTACT OWNS A 2001 OLDSMOBILE INTRIGUE. WHILE DRIVING 35 MPH, THE VEHICLE CONTINUOUSLY STALLS AND HESITATES. IN ADDITION, THE INSTRUMENT PANEL INDICATORS WOULD ILLUMINATE

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 142 of 337

> AT RANDOM. THE VEHICLE FAILED INSPECTION AND THE CRANKSHAFT SENSOR WAS REPLACED, WHICH HELPED WITH THE STALLING AND HESITATION; HOWEVER, THE CHECK ENGINE INDICATOR WAS STILL ILLUMINATED. DAYS AFTER THE CRANKSHAFT SENSOR WAS REPLACED, THE VEHICLE FAILED TO START. HOWEVER, ALL OF THE INSTRUMENT PANEL INDICATORS FLASHED ON AND OFF. AFTER NUMEROUS ATTEMPTS TO START THE VEHICLE, HE HAD IT JUMPSTARTED. THE VEHICLE WAS THEN ABLE TO START. WHILE DRIVING HOME, ALL OF THE LIGHTING FLASHED AND THE VEHICLE SUDDENLY SHUT OFF. THE VEHICLE LOST ALL ELECTRICAL POWER AND POWER STEERING ABILITY. THE CONTACT MANAGED TO PARK THE VEHICLE IN A PARKING LOT AND HAD IT TOWED THE FOLLOWING DAY TO A REPAIR SHOP. THE VEHICLE IS CURRENTLY STILL IN THE SHOP. THE VEHICLE HAS BEEN RECALLED IN CANADA AND HE BELIEVES THAT IT SHOULD ALSO BE RECALLED IN THE UNITED STATES. THE FAILURE MILEAGE WAS UNKNOWN AND THE CURRENT MILEAGE WAS 106,000." **NHTSA ID Number:** 10248694.

347. On December 10, 2008, Old GM became aware of a complaint filed with NHTSA regarding a 2004 Oldsmobile Alero and an incident that occurred on December 10, 2008, in which the following was reported:

> "I WAS DRIVING DOWN THE ROAD IN RUSH HOUR GOING APPROX. 55 MPH AND MY CAR COMPLETELY SHUT OFF, THE GAUGES SHUTDOWN, LOST POWER STEERING. HAD TO PULL OFF THE ROAD AS SAFELY AS POSSIBLE, PLACE VEHICLE IN PARK AND RESTART CAR. MY CAR HAS SHUTDOWN PREVIOUSLY TO THIS INCIDENT AND FEEL AS THOUGH IT NEEDS SERIOUS INVESTIGATION. I COULD HAVE BEEN ON THE HIGHWAY AND BEEN KILLED. THIS ALSO HAS HAPPENED WHEN IN A SPIN OUT AS WELL THOUGH THIS PARTICULAR INCIDENT WAS RANDOM. *TR" **NHTSA ID Number:** 10251280.

348. On March 31, 2009, Old GM became aware a complaint filed with NHTSA regarding a 2005 Chevrolet Malibu incident that occurred on May 30, 2008, in which it was reported that:

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 143 of 337

> "TL*THE CONTACT OWNS A 2005 CHEVROLET MALIBU. THE CONTACT STATED THAT THE POWER WINDOWS, LOCKS, LINKAGES, AND IGNITION SWITCH SPORADICALLY BECOME INOPERATIVE. SHE TOOK THE VEHICLE TO THE DEALER AND THEY REPLACED THE IGNITION SWITCH AT THE COST OF $495. THE MANUFACTURER STATED THAT THEY WOULD NOT ASSUME RESPONSIBILITY FOR ANY REPAIRS BECAUSE THE VEHICLE EXCEEDED ITS MILEAGE. ALL REMEDIES AS OF MARCH 31, 2009 HAVE BEEN INSUFFICIENT IN CORRECTING THE FAILURES. THE FAILURE MILEAGE WAS 45,000 AND CURRENT MILEAGE WAS 51,000." **NHTSA ID Number:** 10263716.

349. The defects did not get any safer and the reports did not stop when Old GM ceased to exist. To the contrary, New GM continued receiving the same reports involving the same defects. For example, on August 11, 2010, New GM became aware of the following complaint filed with NHTSA involving a 2005 Cadillac CTS, the incident occurred on May 15, 2010, in which it was reported:

> "TL*THE CONTACT OWNS A 2005 CADILLAC CTS. WHILE DRIVING 40 MPH, ALL OF THE SAFETY LIGHTS ON THE DASHBOARD ILLUMINATED WHEN THE VEHICLE STALLED. THE VEHICLE WAS TURNED BACK ON IT BEGAN TO FUNCTION NORMALLY. THE FAILURE OCCURRED TWICE. THE DEALER WAS CONTACTED AND THEY STATED THAT SHE NEEDED TO BRING IT IN TO HAVE IT DIAGNOSED AGAIN. THE DEALER PREVIOUSLY STATED THAT THEY WERE UNABLE TO DUPLICATE THE FAILURE. THE VEHICLE WAS NOT REPAIRED. THE FAILURE MILEAGE WAS 4100 AND THE CURRENT MILEAGE WAS 58,000." NHTSA ID Number: 10348743.

350. On April 16, 2012, New GM became aware of as complaint filed with NHTSA involving a 2005 Cadillac SRX and an incident that occurred on March 31, 2012, in which the following was reported:

> "TL* THE CONTACT OWNS A 2005 CADILLAC SRX. WHILE DRIVING APPROXIMATELY 45 MPH, THE CONTACT STATED THAT THE STEERING BECAME DIFFICULT TO MANEUVER AND HE LOST CONTROL OF THE VEHICLE.

> THERE WERE NO WARNING LIGHTS ILLUMINATED ON THE INSTRUMENT PANEL. THE CONTACT THEN CRASHED INTO A HIGHWAY DIVIDER AND INTO ANOTHER VEHICLE. THERE WERE NO INJURIES. THE VEHICLE WAS TOWED TO AN AUTO CENTER AND THE MECHANIC STATED THAT THERE WAS A RECALL UNDER NHTSA CAMPAIGN ID NUMBER 06V125000 (SUSPENSION:REAR), THAT MAY BE RELATED TO THE FAILURE. THE MANUFACTURER WAS MADE AWARE OF THE FAILURE AND STATED THAT THE VIN WAS NOT INCLUDED IN THE RECALL. THE VEHICLE WAS NOT REPAIRED. THE APPROXIMATE FAILURE MILEAGE WAS 46,000." NHTSA ID Number: 10455394.

351. On March 20, 2013, New GM became aware of a complaint filed with NHTSA regarding a 2003 Chevrolet Impala incident that occurred on March 1, 2013, in which it was reported that:

> "CAR WILL SHUTDOWN WHILE DRIVING AND SECURITY LIGHT WILL FLASH. HAS DONE IT NUMEROUS TIMES, WORRIED IT WILL CAUSE AN ACCIDENT. THERE ARE MULTIPLE CASES OF THIS PROBLEM ON INTERNET. *TR" **NHTSA ID Number:** 10503840.

352. On May 12, 2013, New GM became aware of the following complaint filed with NHTSA regarding a 2005 Chevrolet Malibu incident that occurred on May 11, 2012, in which the following was reported:

> "I WAS AT A STOP SIGN WENT TO PRESS GAS PEDAL TO TURN ONTO ROAD AND THE CAR JUST SHUT OFF NO WARNING LIGHTS CAME ON NOR DID IT SHOW ANY CODES. GOT OUT OF CAR POPPED TRUNK PULLED RELAY FUSE OUT PUT IT BACK IN AND IT CRANKED UP,THEN ON MY WAY HOME FROM WORK,GOING ABOUT 25 MPH AND IT JUST SHUTDOWN AGAIN,I REPEATED PULLING OUT RELAY FUSE AND PUT IT BACK IN THEN WAITED A MINUTE THEN IT CRANKED AND I DROVE STRAIGHT HOME. *TR" **NHTSA ID Number:** 10458198.

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 145 of 337

353. On February 26, 2014, New GM became aware of a complaint filed with NHTSA involving a 2004 Pontiac Grand Prix, concerning an incident that occurred on May 10, 2005, in which it was reported that:

> "TL – THE CONTACT OWNS A 2004 PONTIAC GRAND PRIX. THE CONTACT STATED THAT WHILE DRIVING AT VARIOUS SPEEDS AND GOING OVER A BUMP, THE VEHICLE WOULD STALL WITHOUT WARNING. THE VEHICLE WAS TAKEN TO THE DEALER. THE TECHNICIAN WAS UNABLE TO DIAGNOSE THE FAILURE. THE MANUFACTURER WAS MADE AWARE OF THE FAILURE. THE VEHICLE WAS NOT REPAIRED. THE VIN WAS NOT AVAILABLE. THE FAILURE MILEAGE WAS 12,000 AND THE CURRENT MILEAGE WAS 82,000. KMJ" NHTSA ID Number: 10566118.

354. On March 13, 2014, New GM became aware of a complaint filed with NHTSA involving a 2006 Pontiac Grand Prix and an incident that occurred on February 27, 2014, in which a driver reported:

> "I WAS DRIVING HOME FROM WORK AND WHEN I TURNED A CORNER, THE ENGINE CUT OUT. I BELIEVE IT WAS FROM THE KEY FLIPPING TO ACCESSORY. I'VE HEARD THAT THIS HAS CAUSED CRASHES THAT HAVE KILLED PEOPLE AND WOULD LIKE THIS FIXED. THIS IS THE FIRST TIME IT HAPPENED, BUT NOW I'M WORRIED EVERY TIME I DRIVE IT THAT THIS IS GOING TO HAPPEN AND I DON'T FEEL SAFE LETTING MY WIFE DRIVE THE CAR NOW. WHY ARE THE 2006 PONTIAC GRAND PRIX VEHICLES NOT PART OF THE RECALL FROM GM? *TR" NHTSA ID Number: 10569215.

355. On April 1, 2014, New GM became aware of a complaint filed with NHTSA involving a 2003 Cadillac CTS and an incident that occurred on January 1, 2008, in which the following was reported:

> "TL* THE CONTACT OWNS A 2003 CADILLAC CTS. THE CONTACT STATED THAT THE VEHICLE EXHIBITED A RECURRING STALLING FAILURE. THE VEHICLE WAS TAKEN TO THE DEALER NUMEROUS TIMES WHERE SEVERAL UNKNOWN REPAIRS WERE PERFORMED ON

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 146 of 337

> THE VEHICLE BUT TO NO AVAIL. THE FAILURE MILEAGE WAS 59,730 AND THE CURRENT MILEAGE WAS 79,000. UPDATED 06/30/14 MA UPDATED 07/3/2014 *JS" NHTSA ID Number: 10576468.

356. On April 1, 2014, New GM became aware of a complaint with NHTSA regarding a 2003 Chevrolet Monte Carlo and an incident that occurred on September 16, 2013, in which the following was reported:

> "WHILE DRIVING AT ANY SPEED THE IGNITION SYSTEM WOULD RESET LIGHTING UP THE DISPLAY CLUSTER JUST AS IF THE KEY WAS TURNED OFF AND BACK ON. THIS WOULD CAUSE A MOMENTARY SHUTDOWN OF THE ENGINE. THE PROBLEM SEEMED TO BE MORE PREVAILANT WHILE TURNING THE WHEEL FOR A CURVE OR TURN OFF THE ROAD. THE TURN SIGNAL UNIT WAS FIRST SUSPECT SINCE IT SEEMED TO CORRELATE WITH APPLYING THE TURN SIGNAL AND TURNING THE WHEEL. THE CONDITION WORSENED TO THE IGNITION SHUTDOWN FOR LONGER PERIODS SHUTTING DOWN THE ENGINE CAUSING STEERING AND BRAKING TO BE SHUTDOWN AND FINALLY DIFFICULTY STARTING THE CAR. AFTER 2 VISITS TO A GM SERVICE CENTER THE PROBLEM WAS FOUND TO BE A FAULTY IGNITION THAT WAS REPLACED AND THE PROBLEM HAS NOT RECURRED." **NHTSA ID Number:** 10576201.

357. On April 8, 2014, New GM became aware of a complaint with NHTSA regarding a 2003 Chevrolet Impala and an incident that occurred on August 14, 2011 and the following was reported:

> "I HAVE HAD INCIDENTS SEVERAL TIMES OVER THE YEARS WHERE I WOULD HIT A BUMP IN THE ROAD AND MY CAR WOULD COMPLETLY SHUT OFF. I HAVE ALSO HAD SEVERAL INCIDENTS WHERE I WAS TRAVELING DOWN THE EXPRESSWAY AND MY CAR TURNED OFF ON ME. I HAD TO SHIFT MY CAR INTO NEUTRAL AND RESTART IT TO CONTINUE GOING. I WAS FORTUNATE NOT TO HAVE AN ACCIDENT." **NHTSA ID Number:** 10578158.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 147 of 337

358. On May 14, 2014, New GM became aware of a complaint filed with NHTSA regarding a 2004 Chevrolet Impala incident that occurred on April 5, 2013 and reported that:

> "CHEVY IMPALA 2004 LS- THE VEHICLE IS STOPPING COMPLETELY WHILE DRIVING OR SITTING AT INTERSECTION. THERE IS NO WARNING, NO MESSAGE, IT JUST DIES. THE STEERING GOES WHEN THIS HAPPENS SO I CANNOT EVEN GET OFF THE ROAD. THEN THERE ARE TIMES THAT THE CAR WILL NOT START AT ALL AND I HAVE BEEN STRANDED. EVENTUALLY AFTER ABOUT 20 MINUTES THE CAR WILL START- I HAVE ALREADY REPLACED THE STARTER BUT THE PROBLEM STILL EXISTS. I HAVE HAD THE CAR CHECKED OUT AT 2 DIFFERENT SHOPS (FIRESTONE) AND THEY CANNOT FIND THE PROBLEM. THERE ARE NO CODES COMING UP. THEY ARE COMPLETELY PERPLEXED. CHEVY STATES THEIR MECHANICS ARE BETTER. ALSO THE CLUSTER PANEL IS GONE AND CHEVY IS AWARE OF THE PROBLEM BUT THEY ONLY RECALLED CERTAIN MODELS AND DID NOT INCLUDE THE IMPALAS. I HAVE 2 ESTIMATES REGARDING FIXING THIS PROBLEM BUT THE QUOTES ARE $500.00. I DO NOT FEEL THAT I SHOULD HAVE TO PAY FOR THIS WHEN CHEVY KNEW THEY HAD THIS PROBLEM WITH CLUSTER PANELS AND OMITTED THE IMPALAS IN THEIR RECALL. SO, TO RECAP: THE CAR DIES IN TRAFFIC (ALMOST HIT TWICE), I DO NOT KNOW HOW MUCH GAS I HAVE, HOW FAST I AM GOING, OR IF THE CAR IS OVERHEATING. IN DEALING WITH CHEVY I WAS TOLD TO TAKE THE CAR TO A CHEVY DEALERSHIP. THEY GAVE ME A PLACE THAT IS 2 1/2 HOURS HOUSE AWAY FROM MY HOME. I WAS ALSO TOLD THAT I WOULD HAVE THE HONOR OF PAYING FOR THE DIAGNOSTICS. IN RESEARCHING THIS PROBLEM, I HAVE PULLED UP SEVERAL COMPLAINTS FROM OTHER CHEVY IMPALA 2004 OWNERS THAT ARE EXPERIENCING THE SAME MULTIPLE PROBLEMS. I ALSO NOTICED THAT MOST OF THE COMPLAINTS ARE STATING THAT THE SAME ISSUES OCCURRED AT APPROX. THE SAME MILEAGE AS MINE. I HAVE DISCUSSED THIS WITH CHEVY CUSTOMER SERVICE AND BASICALLY THAT WAS IGNORED. THIS CAR IS HAZARDOUS TO DRIVE AND POTENTIALLY WILL CAUSE BODILY HARM. DEALING WITH CHEVY IS POINTLESS. ALL THEY CAN THINK OF IS HOW MUCH MONEY THEIR

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 148 of 337

DEFECTS WILL BRING IN. *TR" **NHTSA ID Number:** 10512006.

359. New GM has publicly admitted that it was aware of at least seven (7) crashes, eight (8) injuries, and three (3) deaths linked to this serious safety defect before deciding to finally implement a recall. However, in reality, the number of reports and complaints is much higher.

360. Moreover, notwithstanding years of notice and knowledge of the defect, on top of numerous complaints and reports from consumers, including reports of crashes, injuries and deaths, New GM delayed and did not implement a recall involving this defect until July of 2014.

361. New GM's supposed recall fix does not address the defect or the safety risks that it poses, including insufficient amount of torque to resist rotation from the "run" the "accessory" position under reasonably foreseeable conditions, and puts the burden on drivers to alter their behavior and carry their ignition keys separately from their other keys, and even from their remote fob. The real answer must include the replacement of all the switches with ones that have sufficient torque to resist foreseeable rotational forces. The consequences of an unwanted rotation from the "run" to "accessory" position has the same results in all these cars: loss of power (stalling), loss of power steering, loss of power brakes after one or two depressions of the brake pedal, and suppression of seat belt pretensioners and airbag deployments.

362. In addition, New GM is not addressing the other design issues that create safety risks in connection with this defect. New GM is not altering the algorithm that prevents the airbags from deploying when the ignition leaves the "run" position, even when the vehicle is moving. And New GM is not altering the placement of the ignition in an area where the

driver's knees may inadvertently cause the ignition to move out of the "run" position Moreover, notwithstanding years of notice and knowledge of the defect, on top of numerous complaints and reports from consumers, including reports of crashes, injuries and deaths, New GM delayed and did not implement a recall involving this defect until July of 2014.

363. Further, New GM has not begun implementing its "fix" for these affected vehicles. Thus, owners and lessees continue to operate their vehicles, at risk of the serious safety defects posed if and when the ignition switch in a Defective Vehicle fails during normal and ordinary vehicle operation.

IX. **The September 2014 Ignition Switch Defect Recall Is the Latest Evidence of the Extent of the Defects and New GM's Ongoing Concealment.**

364. On September 4, 2014, New GM recalled 46,873 MY 2011-2013 Chevrolet Caprice and 2008-2009 Pontiac G8 vehicles for yet another ignition switch defect (NHTSA Recall Number 14-V-510).

365. New GM explains that, in these Defective Ignition Switch Vehicles, "there is a risk, under certain conditions, that some drivers may bump the ignition key with their knee and unintentionally move the key away from the 'run' position." New GM admits that, when this happens, "engine power, and power barking will be affected, increasing the risk of a crash." Moreover, "[t]he timing of the key movement out of the 'run' position, relative to the activation of the sending algorithm of the crash event, may result in the airbags not deploying, increasing the potential for occupant injury in certain kinds of crashes."

366. This recall is directly related to the other ignition switch recalls and involves the same safety risks and dangers. The defect poses a serious and dangerous safety risk because the key in the ignition switch can rotate and consequently cause a the ignition to switch from the "on" or "run" position to the "off" or "accessory" position, which causes the

loss of engine power, stalling, loss of speed control, loss of power steering, loss of power braking, and increases the risk of a crash. Moreover, as with the ignition switch torque defect, if a crash occurs, the airbags may not deploy.

367. According to New GM, in late June 2014, "GM Holden began investigating potential operator knee-to-key interference in Holden-produced vehicles consistent with Safety's learning from" earlier ignition switch recalls, NHTSA recalls no. 14V-346 and 14V-355.[107]

368. New GM "analyzed vehicle test results, warranty data, TREAD data, NHTSA Vehicle Owner Questionnaires, and other data."[108] This belated review, concerning vehicles that were sold as long as six years earlier, led to the August 27, 2014 decision to conduct a safety recall.[109]

369. Once again, a review of NHTSA's website shows that New GM was long on notice of ignition switch issues in the vehicles subject to the September 4 recall.

370. For example, on February 10, 2010, New GM became aware of an incident involving a 2009 Pontiac G8 that occurred on November 23, 2009, and again on January 26, 2010, in which the following was reported to NHTSA:

> FIRST OCCURRED ON 11/23/2009. ON THE INTERSTATE IT LOSES ALL POWER, ENGINE SHUTS DOWN, IGNITION STOPS, POWER STEERING STOPS, BRAKES FAIL - COMPLETE VEHICLE STOPPAGE AND FULL OPERATING SYSTEMS SHUTDOWN WITHOUT WARNING AT 70 MPH, TWICE! SECOND OCCURRENCE WAS 1/26/2010.

371. On May 22, 2013, New GM became aware of an incident involving a 2008 Pontiac G8 that occurred on May 18, 2013, in which the following was reported:

---

[107] *Id.*
[108] *Id.*
[109] *Id.*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 151 of 337

> THE CONTACT OWNS A 2008 PONTIAC G8. THE CONTACT STATED THAT WHILE DRIVING 50 MPH, THE VEHICLE STALLED WITHOUT WARNING. THE FAILURE RECURRED TWICE. THE VEHICLE WAS TOWED TO THE DEALER FOR DIAGNOSIS, BUT THE DEALER WAS UNABLE TO DUPLICATE THE PROBLEM. THE VEHICLE WAS NOT REPAIRED. THE MANUFACTURER WAS NOT NOTIFIED. THE APPROXIMATE FAILURE MILEAGE WAS 60,000.

372. Consistent with its pattern in the June and July recalls, New GM's proposed remedy is to provide these Defective Ignition Switch Vehicle owners with a "revised key blade and housing assembly, in which the blade has been indexed by 90 degrees."[110] Until the remedy is provided, New GM asserts, "it is very important that drivers adjust their seat and steering column to allow clearance between their knee and the ignition key."[111] New GM sent its recall notice to NHTSA one week later, on September 4, 2014.

373. New GM's supposed fix does not address the defect or the safety risks that the defect poses, including the apparent insufficient torque to resist rotation from the "run" to the "accessory" position under reasonably foreseeable driving conditions, and puts the burden on drivers to alter their behavior and carry their ignition keys separately from their other keys, and even from their remote fob. The real answer must include the replacement of all the switches with ones that have sufficient torque to resist foreseeable rotational forces.

374. In addition, New GM is not addressing the other design issues that create safety risks in connection with this defect. New GM is not altering the algorithm that prevents the airbags from deploying when the ignition leaves the "run" position, even when the vehicle is moving. And New GM is not altering the placement of the ignition in an area where the driver's knees may inadvertently cause the ignition to move out of the "run" position.

---

[110] New GM's Part 573 Safety Recall Report, Sept. 4, 2014.
[111] *Id.*

375. The September 4 recall is, like the earlier defective ignition switch recalls, too little and too late.

X. <u>Even As They Concealed the Safety Defects From Consumers, Old and New GM Each Presented Their Vehicles As Safe And Reliable, and Presented Itself As An Honest Company With Integrity.</u>

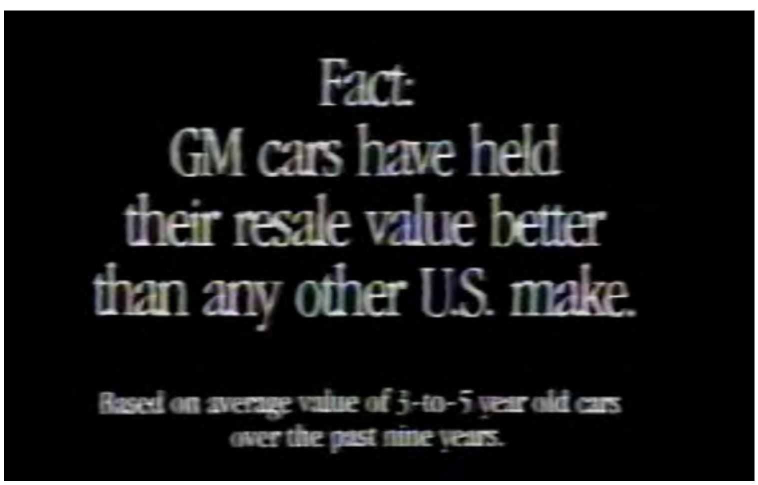
376. Throughout its history, Old GM regularly used print media, press releases, and television and video media to represent its vehicles as safe, reliable, quality products that provide great value to purchasers, and retain their value over time better than other manufacturers' vehicles. Old GM also used these media to present itself as an honest, above-board, values-oriented company with integrity. In truth, however, Old GM was concealing serious safety hazards and endangering its own customers.

377. A 1988 Old GM commercial stated:

> "GM meets your challenge. With outstanding quality and great value… That's leadership, that's GM."[112]

378. In 1989, an Old GM commercial represented:

> "Fact: GM cars have held their resale value better than any other U.S. make."[113]



[112] https://www.youtube.com/watch?v=h19lFAwGDwU.
[113] https://www.youtube.com/watch?v=Bg8CAt5ZhdI.

379. A 1990 Old GM Pontiac commercial stated:

"GM is putting quality on the road."[114]

380. A 1998 General Motors Commercial proclaimed that Old GM cars were reliable and safe:

> "We are fans and nothing keeps us from the game. We need cars and trucks as reliable as we are. Season after season. And when the game is over, we need to know that what got us there will also get us safely home. Delivering cars and trucks that fans count on is what makes us General Motors."[115]

381. Old GM explained that the 2003 Saturn ION had "surprising levels of safety" in the car's Product Information: "Bringing a new charge into the small-car segment, the 2003 Saturn ION sets itself apart from competitors with innovative features, unique personalization opportunities and surprising levels of safety, sophistication and fun."[116]

382. On July 1, 2003, Old GM issued a press release explaining that the 2004 Impala "offers a comprehensive safety package, solid body structure, room for five passengers,

[114] https://www.youtube.com/watch?v=_hR7-7eKufQ.
[115] https://www.youtube.com/watch?v=Dt12Gti12iA.
[116] https://archives.media.gm.com/division/2003_prodinfo/03_saturn/03_Ion/index.html.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 154 of 337

plenty of cargo space, a surprising number of amenities for the price, and a track record of outstanding quality, reliability and durability."[117]

383. In a July 1, 2003 press release Old GM stated that "[e]nhanced handling and acceleration are always paramount for Pontiac enthusiasts, and these, plus added safety and comfort measures, make the 2004 Pontiac lineup one of the most exciting in the division's history."[118]

384. On July 1, 2003, Old GM issued a press release about the 2004 Chevrolet Monte Carlo that explained that "[a]ttention to safety and security is also key to Monte Carlo's success."[119]

385. On July 1, 2003, Old GM issued a press release about the 2004 Pontiac Grand Prix that explained that "[s]afety is always a high priority for Grand Prix."[120]

386. In its Product Information for the 2003 Chevrolet Malibu, Old GM explained that "since 1997, the new Malibu has offered buyers excellent performance, safety and comfort in a trim, stylish package. For 2003, Chevrolet Malibu remains a smart buy for those who want a well-equipped midsize sedan at an attractive price.… Designed for individuals or families with high expectations of quality, reliability, safety, driving pleasure, and affordability, the Malibu appeals to domestic and import owners."[121]

387. On July 1, 2003, Old GM issued a press release about the 2004 Saturn Ion explaining that, "[t]he ION sedan and quad coupe are designed to carry on the Saturn tradition of being at the top of the class when it comes to safety and security. The world-class structural design provides the foundation for this focus on safety. The steel spaceframe's front and rear

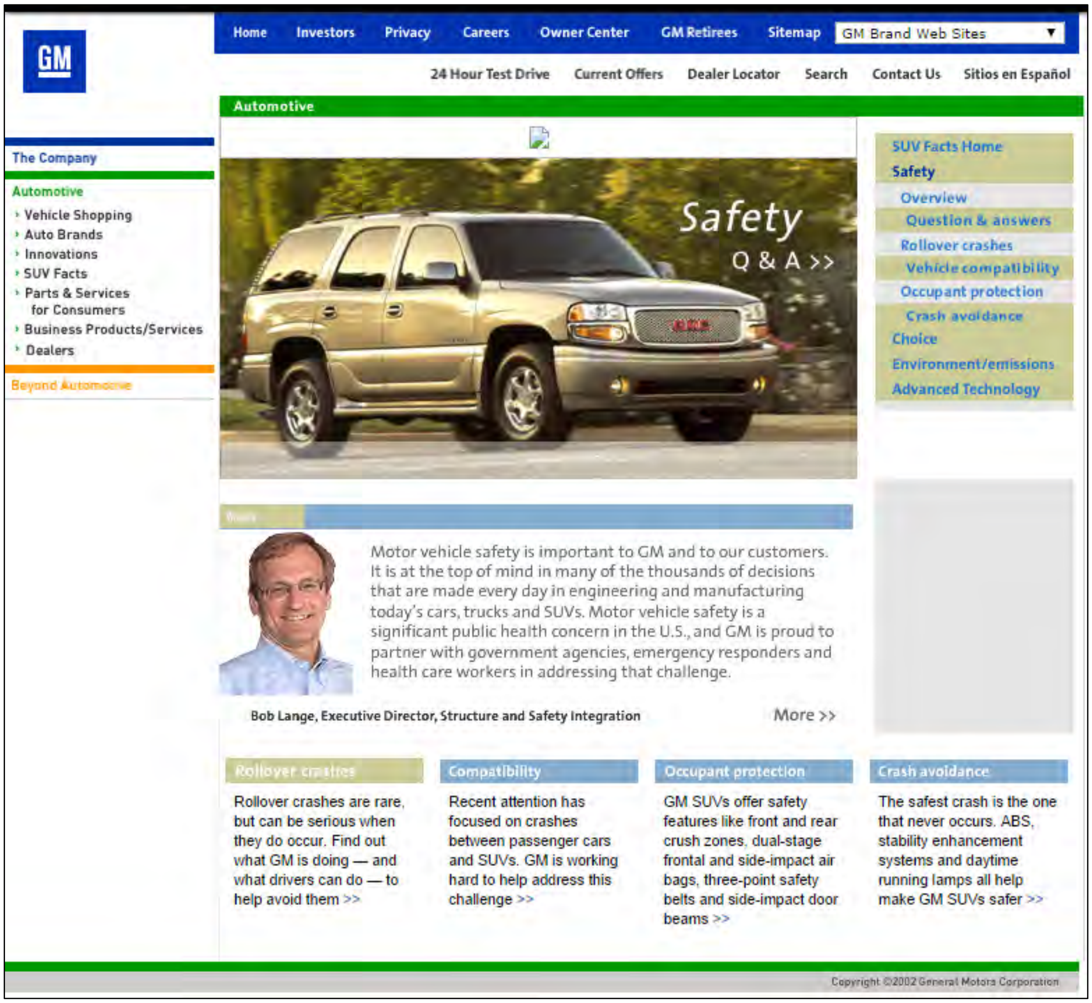
crush zones help absorb the energy of a crash while protecting the integrity of the safety cage."[122]

388. On October 4, 2003, Old GM's website stated that "[m]otor vehicle safety is important to GM and to our customers. It is at the top of mind in many of the thousands of decisions that are made every day in engineering and manufacturing today's cars, trucks, and SUVs/ Motor vehicle safety is a significant public health concern in the U.S., and GM is proud to partner with government agencies, emergency responders and health care workers in addressing that challenge."[123]

[122] https://archives.media.gm.com/division/2004_prodinfo/saturn/ion/index.html.
[123] http://web.archive.org/web/20031004014908/http://www.gm.com/automotive/vehicle _shopping/suv_facts/100_safety/index.html.



389. In 2004, Old GM's marketing campaign incorporated a new phrase "Only GM," which highlighted safety features such as electronic stability control. Old GM stated: "We want to bring this kind of safety, security and peace-of-mind to all of our customers because it's the right thing to do, and because only Old GM can do it."

> **Only GM**
>
> For example, we recently launched a new corporate advertising campaign under the theme, "Only GM." It's part of an effort to use the GM brand more aggressively and with more purpose, to show that we're leading the industry in ways that only GM can.
>
> The "Only GM" campaign began by highlighting our plans to equip all our cars and trucks sold to retail customers in the United States and Canada with OnStar and StabiliTrak, GM's electronic stability control system. We want to bring this kind of safety, security and peace-of-mind to all of our customers because it's the right thing to do, and because only GM can do it. We also want potential customers to know that GM offers them great value, and that buying GM matters. (For more details, go to *onlygm.com*.)

(Old GM's 2004 Annual Report, p. 6.)

390. And in the same Report, under the banner "Peace of mind," Old GM represented that "Only GM can offer its customers the assurance that someone is looking out for them and their families when they're on the road," and that: "This commitment to safety makes GM the only automobile manufacturer able to offer a full range of cars, tricks an SUVs that provide safety protection before, during and after vehicle collisions."

(Old GM's 2004 Annual Report, p. 22.)

391. On May 10, 2004, Old GM's website announced that its "aim is to improve motor vehicle safety for customers, passengers, and other motorists. Our customers expect and demand vehicles that help them to avoid crashes and reduce the risk of injury in case of a crash. We strive to exceed these expectations and to protect customers and their families while they are on the road." The website continued, "GM is committed to continuously improving the crashworthiness and crash avoidance of its vehicles, and we support many programs aimed at encouraging safer motor vehicle use…"[124]

392. On June 4, 2004, Old GM's website stated that "[v]ehicle safety is paramount at GM, and we constantly strive to make our cars and trucks safe. We also continue our support for groups such as the National SAFE KIDS Campaign, and a number of programs aimed at encouraging safer motor vehicle use."[125]

393. Old GM's June 4, 2004, website published a message from its CEO, Rick Wagoner, on corporate responsibility. Mr. Wagoner wrote, "[a]t a time when current events remind us of the critical importance of corporate responsibility and the value of sustainable development, we at General Motors are fortunate to have inherited a legacy of doing business the right way. It's a great asset. And, it's a huge obligation … one we take very seriously. What we call "winning with integrity" is not an optional or occasional behavior at GM. Integrity is one of our core values, and a way of doing business that helps us realize our company's full potential….In short, "winning with integrity" is much more than a one-time exercise at GM. It's how we work every day. It's a philosophy that transcends borders,

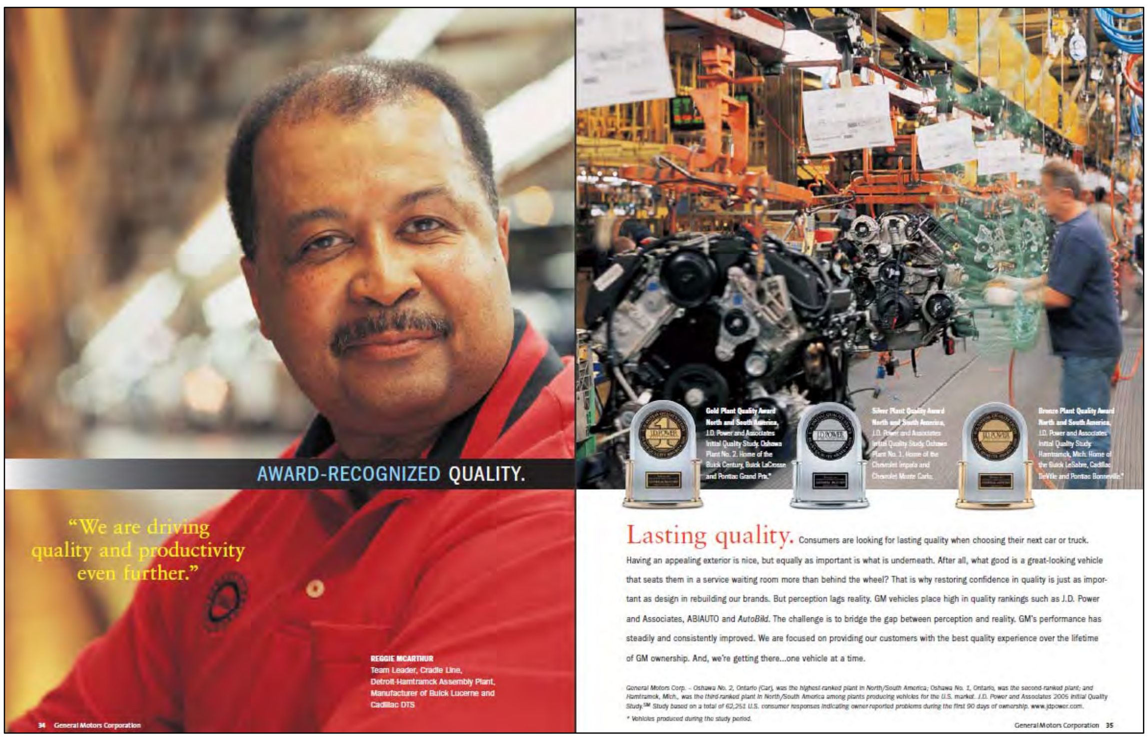
language, and culture, and something we promote by creating an environment within our company that supports, and demands, proper business conduct."[126]

394. In its 2005 Annual Report Old GM stated: "We are driving quality and productivity even further." "Lasting quality—That is why restoring confidence in quality is just as important as design in rebuilding our brands…. We are focused on providing our customers with the best quality experience over the lifetime of GM ownership."



395. The 2005 GMC Yukon, Tahoe, and Cadillac Escalade were touted as "distinctly designed packages that lead the segment in performance, safety, efficiency and capability."[127]

396. On September 9, 2005, Old GM's website described its safety technology as "Helping You Avoid a Crash" and "Giving the driver information never possible before":[128]

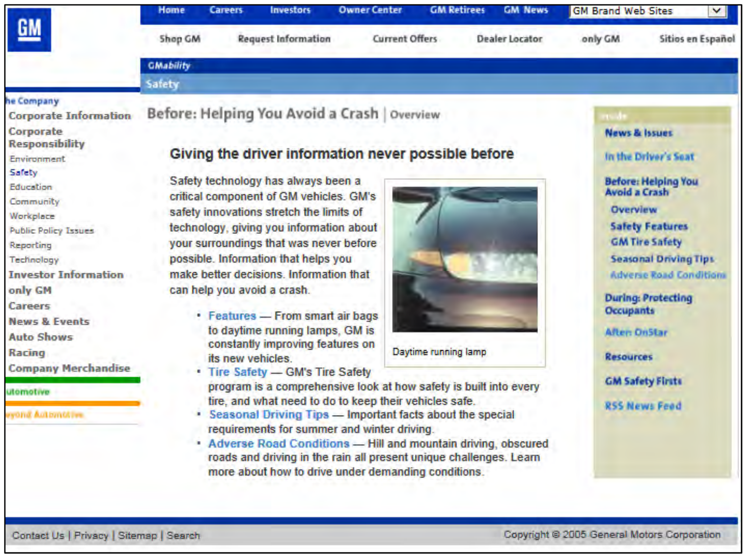
[127] GM's 2005 Annual Report, p. 23.



397. At the same time Old GM announced what it called the next big step in safety:[129]

> "No matter what vehicle you drive, your safety is vital. GM is looking out for you—you deserve that peace of mind on the road. Which is why at GM, we've taken the next big step in our commitment to provide more customers with more safety and security."

Footnote continued from previous page

[129] http://web.archive.org/web/20050909225925/http://www.gm.com/company/onlygm/.

398. In a July 12, 2006 press release regarding Old GM's 2007 model year lineup, Old GM stated, "[f]rom an all-new family of full-size pickup trucks and SUVs to carlike crossovers to small cars and a near-complete revitalization of the Saturn portfolio, General Motors is introducing several new or significantly redesigned vehicles for the 2007 model year—stylish products that leverage GM's global resources to deliver value, brand-distinctive design character, safety, fuel efficiency, relevant technologies and quality to the North American market."[130]

399. In an August 1, 2006 press statement for the 2007 Cadillac Lucerne, Old GM represented that the "Lucerne's body structure is engineered to provide maximum occupant protection and minimum intrusion under a wide range of impact conditions."[131]

400. In an August 1, 2006 press statement for the 2007 Cadillac DTS, Old GM represented: "[d]esigned and engineered with occupant safety and protection in mind, the DTS reinforces Cadillac's long-standing reputation for safe occupant environments in premium vehicles."[132]

401. Old GM's website on August 9, 2006, stated:[133]

> **MAKING VEHICLES SAFER**
>
> "GM strives to make each new model safer than the one it replaces. Vehicle-based safety strategies generally fall into three categories:
>
> BEFORE: Collision avoidance—technologies designed to help the driver avoid potential crashes (sometimes called 'active safety' technologies),

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 162 of 337

> DURING: Crashworthiness—designs and technologies that help mitigate the injury potential of a crash (sometimes called 'passive safety'), and
>
> AFTER: Post-crash—systems that can help alert emergency rescue to a crash and help provide information to aid rescue specialists.
>
> …
>
> GM vehicles are designed to help protect occupants in the 'first' collision, which acts to deform the vehicle structure and change the velocity of the vehicle's center of mass. Also, GM vehicles are designed to help reduce injury risk for occupants in the 'second' collision, which is between the vehicle interior as it responds to the forces imposed by object that collides with the vehicle, and the occupants."

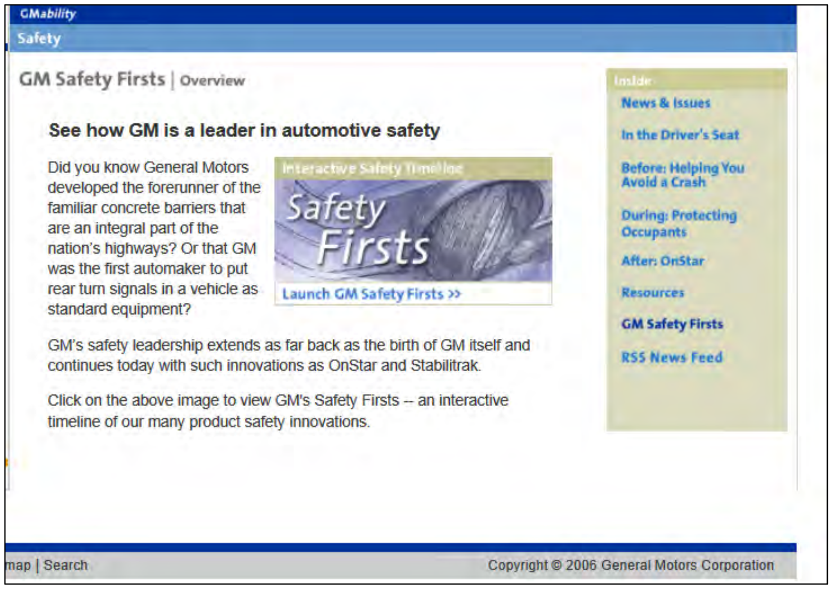
402. Old GM's website on September 6, 2006, stated:[134]

> "Helping drivers avoid crashes and making vehicles safer is a priority for GM.
>
> …
>
> Motor vehicle safety involves not only the design of the vehicle, but the manner in which it is driven, and the driving environment as well. GM is committed to researching and implementing programs and technologies that enhance the safety of vehicles. GM wants to assist drivers to operate their vehicles to avoid hazards, and to help protect occupants in the event of a vehicle crash. GM also focuses on the circumstances that occur after a crash.
>
> GM's vehicle safety priorities are guided by analysis of the real-world experience that customers have with motor vehicles."

403. Old GM stated on its website in October 29, 2006 it is a leader in automotive safety and that its safety leadership extends as far back as the birth of Old GM:[135]

[134] http://web.archive.org/web/20060906083227/http://www.gm.com/company/gmability /sustainability/reports/05/400_products/7_seventy/470.html.

[135] http://web.archive.org/web/20061029080834/http://www.gm.com/company/gmability/ safety/safety_firsts/index.html.



404. In a video published on January 2, 2007, Old GM's Vice Chairman of Product Development, Bob Lutz, stated "Saturn has always been a great brand" and that it "has predominately been known for customer service, fair dealers, honest dealers and having happy buyers."[136]

405. On Old GM's website on January 6, 2007, Bob Lange, Executive Director, Structure and Safety Integration, stated "[o]ur aim is to improve motor vehicle safety for customers, passengers and other motorists. Our customers expect and demand vehicles that help them to avoid crashes and reduce the risk of injury in case of a crash. We strive to exceed these expectations and to protect customers and their families while they are on the road." Further, that "GM is committed to continuously improving the crashworthiness and crash avoidance of its vehicles…"[137]

406. In its 2007 Annual Report, Old GM stated:

> In 2007, we continued to implement major improvements to our U.S. sales and marketing strategy. Over the past two years, we've

---

[136] https://www.youtube.com/watch?v=Kd1Kg0BBdto&list=UUxN-Csvy_9sveql5HJviDjA.
[137] http://web.archive.org/web/20070106044410/http://www.gm.com/company/gmability /safety/.

re-focused our marketing efforts to emphasize the strength and value of our products and brands…

We also continued to make progress in our long-term effort to improve quality…

We've also witnessed, since 2005, an 89 percent reduction in vehicle recall campaigns involving safety and non-compliance.

(Old GM's 2007 Annual Report, p. 7.)

407. Moreover, Old GM represented that it "actively studies trends of claims" to take action to improve vehicle quality:

POLICY, WARRANTY AND RECALLS

Provisions for estimated expenses related to policy and product warranties are made at the time products are sold. These estimates are established using historical information on the nature, frequency, and average cost of claims. We actively study trends of claims and take action to improve vehicle quality and minimize claims. Actual experience could differ from the amounts estimated requiring adjustments to these liabilities in future periods.

(Old GM 2007 Annual Report, p. 74.)

408. In an August 1, 2007 press release, Mark LaNeve, GM North America Vice President, Vehicle Sales, Service and Marketing introduced Old GM's 2008 line up, stating "Old GM's transformation is being driven by high-quality cars and trucks that look great, drive great, are fuel-efficient and provide genuine value to our customers." Further, "[n]o other automaker provides such a diverse lineup of cars and trucks that meets the needs of customers that range from college studies to contactors. And our five-year, 100,000-mile powertrain warranty—the most comprehensive in the industry—adds even more value to the bottom line, demonstrating that we are putting our money where our mouth is on vehicle quality."[138]

409. On August 1, 2007, Old GM represented that "[t]he Cobalt enters the 2008 model year on the heels of a successful '07 model year, which introduced several significant

[138] https://archives.media.gm.com/us/gm/en/product_services/vehicles/2008/08gmna_ overview.html.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 155 of 337

enhancements, including more powerful Ecotec engines. For '08, the Cobalt builds on that powerful foundation with a streamlined model lineup and more standard safety and convenience equipment…Cobalt's enhanced safety features include:

> StabiliTrack electronic stability control system standard on 2LT and Sport
>
> Traction control standard on all models equipped with an automatic transmission and optional ABS
>
> Tire pressure monitoring system standard on all models
>
> Headcurtain side impact air bags standard on all models
>
> OnStar standard on 2LT and Sport; available on 1LT"[139]

410. On August 1, 2007 Old GM represented that "[t]he 2008 Impala reinforces the brand's value story with new features and revisions that add to its safety and efficiency, including the addition of standard StabiliTrack electronic stability control on 2LT, LTZ and SS models…"[140]

411. In an August 1, 2007 press statement for the 2008 Buick LaCrosse, Old GM represented that the "LaCrosse is built with a strong 'safety cage' structure and a full-perimeter aluminum engine cradle that directs impact energy away from passengers. Anti-lock brakes and side curtain airbags are standard on all models."[141]

412. In an August 1, 2007 press statement for the 2008 Buick Lucerne, GM represented that the "Lucerne's body structure is designed to provide maximum occupant protection and minimum intrusion under a wide range of impact conditions. Active safety and handling features offered on Lucerne include a four-channel anti-lock braking system and traction control; an auto-level rear suspension that automatically adjusts the vehicle height for

heavy loads; and four-channel StabiliTrack electronic stability control with brake assist, which senses emergency braking situations and boosts power as needed."[142]

413. In mid to late 2007, Old GM represented that "[t]he 2008 CTS is designed to enhance Cadillac's reputation for providing safe occupant environments in luxury vehicles. Details include:

Dual-stage driver's front air bag

Segment-first dual-depth front passenger air bag

River and front passenger side seat-mounted pelvic/thorax side air bags

Roof-rail side curtain air bags, covers front and rear seating rows

Front safety belt pretensioners

Tire pressure monitoring system

Body structure with strategically place high-strength steels"[143]

414. In an August 1, 2007, press statement for the 2008 Cadillac DTS, Old GM stated, "Designed and engineered with occupant safety and protection in mind, the DTS reinforces Cadillac's long-standing reputation for safe occupant environments in premium vehicles. The DTS is equipped with a host of safety and security features, beginning with its body frame integral (BFI) construction, strategically engineered crumple zones in front and rear; and comprehensive use of high-strength steel. The vehicle's crashworthiness is enhanced with structural foam and nylon structural inserts strategically placed in areas of the vehicle's structure."[144]

415. In an August 1, 2007, press statement for the 2008 Pontiac Grand Prix, Old GM represented that the "Grand Prix's convenience and safety features are perfect for drivers

[142] https://archives.media.gm.com/us/buick/en/product_services/r_cars/r_c_lucerne/ 08index.html.

who enjoy the precise handling characteristics of a sporty, family-friendly package. The 2008 Grand Prix remains a driver's car inside and out. The active and passive safety features on the Grand Prix include standard four-wheel disc brakes, traction control and daytime running lamps."[145]

416. Old GM's website on January 15, 2008, stated "GM incorporates a total safety philosophy into each of its designs to help protect you in a collision—and keep one from occurring in the first place."[146]

417. In February 2008, Old GM aired a Chevy Malibu commercial during The Grammy's which stated the Chevy Malibu was "built to last" "because safety should last a lifetime." The commercial used images of a child being raised to adulthood, in order to convey protection and safety.[147]

418. On its website in March of 2008, Old GM stated it was delivering the best cars and trucks in its 100-year history, and that it was "Obsessed with Quality." The website also spoke of "Continuous Safety," and represented that "GM incorporates a total safety philosophy into each of its designs to help protect you in a collision—and keep one from occurring in the first place":[148/149/150]

XI. <u>New GM Promoted All Of Its Vehicles As Safe, Reliable, And High-Quality While It Fraudulently Concealed Numerous Safety Defects</u>

A. <u>New GM Claimed To Be Turning Over A New Leaf After The Bankruptcy.</u>

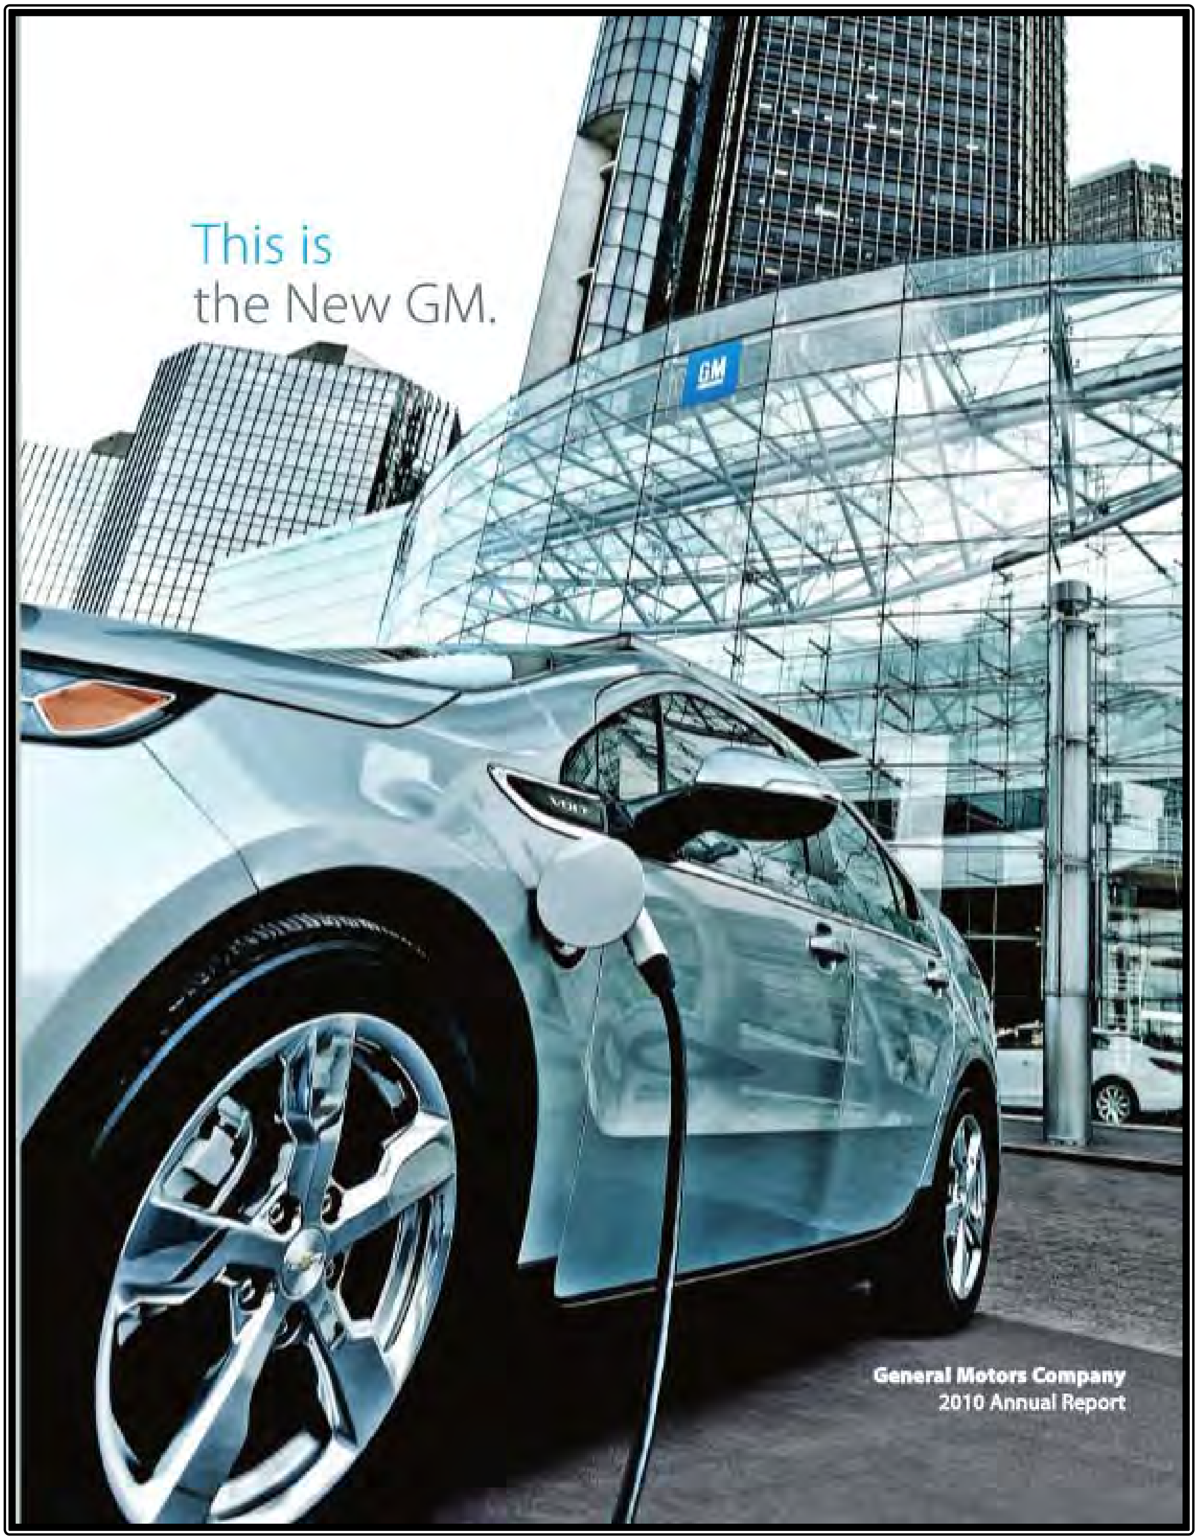
419. New GM was financially successful in emerging from the Old GM bankruptcy. Sales of all its models went up and New GM became profitable. A new GM was born and the GM brand once again stood strong in the eyes of consumers – or so the world thought.

420. In 2010, New GM sold 4.26 million vehicles globally, an average of one every 7.4 seconds. Joel Ewanick, New GM's global chief marketing officer at the time, described this success in a statement to the press, "Chevrolet's dedication to compelling designs, quality, durability and great value is a winning formula that resonates with consumers around the world."[151]

421. New GM led the world and U.S. consumers to believe that, once it emerged from bankruptcy in 2009, it was a new and improved company. New GM repeatedly

[151] https://media.gm.com/media/us/en/gm/news.detail../content/Pages/news/us/en/2011/Jan/0117_chev_ global.

proclaimed that it was a company committed to innovation, safety, and maintaining a strong brand:



General Motors Company 2010 Annual Report, cover page.

422. In New GM's 2010 Annual Report, New GM proclaimed its products would "improve safety and enhance the overall driving experience for our customers." (*See* New GM 2010 Annual Report, p. 10.)

> As we regain our financial footing, we expect the number of new product launches to steadily rise over the next several years. And these new products will increasingly embrace advanced technology to reduce fuel consumption and emissions, improve safety and enhance the overall driving experience for our customers.

General Motors Company 2010 Annual Report, p. 4.

423. New GM claimed the New GM would create vehicles that would define the industry stand.

> BUILDING THE NEW GM
>
> We are moving with increased speed and agility, and implementing change faster than ever before. We are becoming a company with the capability, resources and confidence to play offense, not defense. Instead of creating new vehicles that are just better than their predecessors, we're working to design, build and sell vehicles that define the industry standard.

General Motors Company 2010 Annual Report, p. 5.

424. In its 2010 Annual Report New GM told consumers that it built the world's best vehicles:

> *We truly are building a new GM, from the inside out. Our vision is clear: to design, build, and sell the world's best vehicles, and we*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 171 of 337

have a new business model to bring that vision to life. We have a lower cost structure, a stronger balance sheet, and a dramatically lower risk profile. We have a new leadership team – a strong mix of executive talent from outside the industry and automotive veterans – and a passionate, rejuvenated workforce.

"Our plan is to steadily invest in creating world-class vehicles, which will continuously drive our cycle of great design, high quality and higher profitability."

General Motors Company 2010 Annual Report, p. 2.

425. New GM represented that it was building vehicles with design excellence, quality, and performance:

And across the globe, other GM vehicles are gaining similar acclaim for design excellence, quality, and performance, including the Holden Commodore in Australia. Chevrolet Agile in Brazil, Buick LaCrosse in China, and many others.

The company's progress is early evidence of a new business model that begins and ends with great vehicles. We are leveraging our global resources and scale to maintain stringent cost management while taking advantage of growth and revenue opportunities around the world, to ultimately deliver sustainable results for all of our shareholders.

General Motors Company 2010 Annual Report, p. 3.

426. These themes were repeatedly put forward as the core message about New GM's Brand:

The new General Motors has one clear vision: to design, build and sell the world's best vehicles. Our new business model revolves around this vision, focusing on fewer brands, compelling vehicle design, innovative technology, improved manufacturing productivity and streamlined, more efficient inventory processes. The end result is products that delight customers and generate higher volumes and margins—and ultimately deliver more cash to invest in our future vehicles.

A New Vision, a New Business Model

Our vision is simple, straightforward and clear: to design, build and sell the world's best vehicles. That doesn't mean just making our vehicles better than the ones they replace. We have set a higher standard for the new GM—and that means building the best.

Our vision comes to life in a continuous cycle that starts, ends and begins again with great vehicle designs. To accelerate the momentum we've already created, we reduced our North American portfolio from eight brands to four: Chevrolet, Buick, Cadillac and GMC. Worldwide, we're aggressively developing and leveraging global vehicle architectures to maximize our talent and resources and achieve optimum economies of scale.

Across our manufacturing operations, we have largely eliminated overcapacity in North America while making progress in Europe, and we're committed to managing inventory with a new level of discipline. By using our manufacturing capacity more efficiently and maintaining leaner vehicle inventories, we are reducing the need to offer sales incentives on our vehicles. These moves, combined with offering attractive, high-quality vehicles, are driving healthier margins—and at the same time building stronger brands.

Our new business model creates a self-sustaining cycle of reinvestment that drives continuous improvement in vehicle design, manufacturing discipline, brand strength, pricing and margins, because we are now able to make money at the bottom as well as the top of the industry cycles.

We are seeing positive results already. In the United States, for example, improved design, content and quality have resulted in solid gains in segment share, average transaction prices and projected residual values for the Chevrolet Equinox, Buick LaCrosse and Cadillac SRX. This is just the beginning.

General Motors Company 2010 Annual Report, p. 6.

427. New GM boasted of its new "culture":

General Motors Company 2010 Annual Report, p. 16.

428. In its 2011 Annual Report, New GM proclaimed that it was putting its customers first:

Every driver of a GM car, crossover or truck is a driver of our growth. We're putting our vision in motion by putting our customers first—executing our strategy to attract and delight more of them every day, all over the world.

General Motors Company 2011 Annual Report, p. 1.

429. Further, New GM stated that it is committed to leadership in vehicle safety:

Automotive

We offer a global vehicle portfolio of cars, crossovers and trucks. We are committed to leadership in vehicle design, quality, reliability, telematics and infotainment and safety, as well as to developing key energy efficiency, energy diversity and advanced propulsion technologies, including electric vehicles with range extending capabilities such as the Chevrolet Volt. Our business is

General Motors Company 2011 Annual Report, p. 11.

430. In its 2011 Annual Report, in a "Letter to Stockholders," New GM noted that its brand had grown in value and that it designed the "World's Best Vehicles":

> *Dear Stockholder:*
>
> *Your company is on the move once again. While there were highs and lows in 2011, our overall report card shows very solid marks, including record net income attributable to common stockholders of $7.6 billion and EBIT-adjusted income of $8.3 billion.*
>
> - *GM's overall momentum, including a 13 percent sales increase in the United States, created new jobs and drove investments. We have announced investments in 29 U.S. facilities totaling more than $7.1 billion since July 2009, with more than 17,500 jobs created or retained.*
>
> *Design, Build and Sell the World's Best Vehicles*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 175 of 337

> *This pillar is intended to keep the customer at the center of everything we do, and success is pretty easy to define. It means creating vehicles that people desire, value and are proud to own. When we get this right, it transforms our reputation and the company's bottom line.*

General Motors Company 2011 Annual Report, p. 2.

> *Strengthen Brand Value*
>
> *Clarity of purpose and consistency of execution are the cornerstones of our product strategy, and two brands will drive our global growth. They are Chevrolet, which embodies the qualities of value, reliability, performance, and expressive design; and Cadillac, which creates luxury vehicles that are provocative and powerful. At the same time the Holden, Buick, GMC, Baojun, Opel and Vauxhall brands are being carefully cultivated to satisfy as many customers as possible in select regions.*
>
> *Each day the cultural change underway at GM becomes more striking. The old internally focused, consensus-driven and overly complicated GM is being reinvented brick by brick, by truly accountable executives who know how to take calculated risks and lead global teams that are committed to building the best vehicles in the world as efficiently as we can.*
>
> *That's the crux of our plan. The plan is something we can control. We like the results we're starting to see and we're going to stick to it – always.*

General Motors Company 2011 Annual Report, p. 3.

These themes continued in New GM's 2012 Annual Report:

DANIEL F. AKERSON
Chairman & Chief Executive Officer
with the 2014 Cadillac CTS

TO OUR STOCKHOLDERS:

Last year, I closed my letter to you by talking about how GM was changing its processes and culture in order to build the best vehicles in the world much more efficiently and profitably. This year, I want to pick up where I left off, and articulate what success looks like for you as stockholders, and for everyone else who depends on us. »

General Motors Company 2012 ANNUAL REPORT 3

General Motors Company 2012 Annual Report, p. 3.

431. New GM told the world the following about its brand:

> *What is immutable is our focus on the customer, which requires us to go from "good" today to "great" in everything we do, including product design, initial quality, durability, and service after the sale.*

General Motors Company 2012 Annual Report, p. 4.

432. New GM also indicated it had changed its structure to create more "accountability" which, as shown below, was a blatant falsehood:

> *That work continues, and it has been complemented by changes to our design and engineering organization that have flattened the*

> *structure and created more accountability for produce execution, profitability and customer satisfaction.*

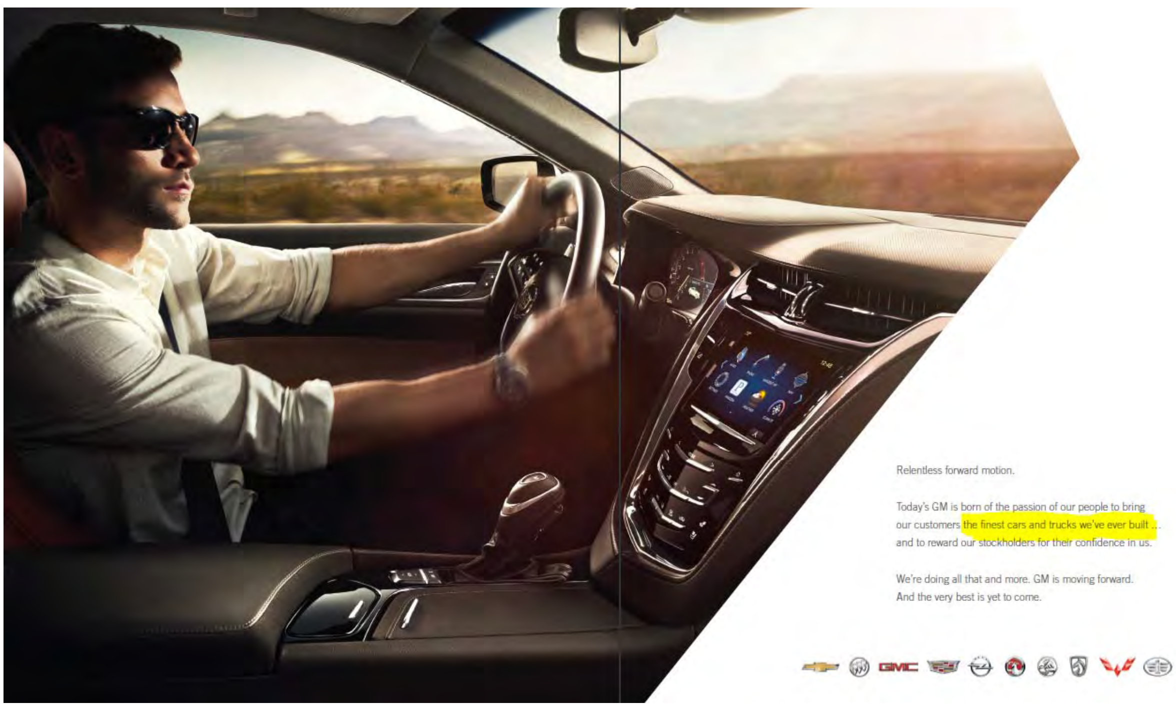
General Motors Company 2012 Annual Report, p. 10.

433. And New GM represented that product quality was a key focus – another blatant falsehood:

> *Product quality and long-term durability are two other areas that demand our unrelenting attention, even though we are doing well on key measures.*

General Motors Company 2012 Annual Report, p. 10.

434. New GM's 2013 Annual Report stated "Today's GM is born of the passion of our people to bring our customers the finest cars and trucks we've ever built":



General Motors Company 2013 Annual Report, inside front cover dual page, (unnumbered).

435. In addition, New GM represented: "Nothing is more important than the safety of our customers":

> Nothing is more important than the safety of our customers, so we are also making changes to ensure that something like this does not happen again. One of our first actions was to name a vice president of Global Vehicle Safety to oversee the safety development of GM vehicle systems on a global basis, the confirmation and validation of safety performance, and post-sale safety activities such as recalls. There will be more changes because we are determined to emerge from this crisis stronger and wiser so we can accelerate the momentum we generated through-out 2013.

General Motors Company 2013 Annual Report, p. 4.

B. <u>New GM's Advertising And Literature Claimed That GM Placed Safety And Quality First.</u>

436. In May of 2014, New GM sponsored the North American Conference on Elderly Mobility. Gay Kent, director, New GM global vehicle safety, and a presenter at the conference stated: "The safety of all our customers is our utmost concern.[152]

437. In advertisements and company literature, New GM consistently promoted all its vehicles as safe and reliable, and presented itself as a responsible manufacturer that stands behind GM-branded vehicles after they are sold. New GM has made, and continues to make, misleading safety and reliability claims in public statements, advertisements, and literature provided with its vehicles. For example:

438. An online ad for "GM certified" used vehicles that ran from July 6, 2009, until April 5, 2010, stated that "GM certified means no worries."

439. In April 2010, General Motors Company Chairman and CEO, Ed Whitacre, starred in a commercial video advertisement on behalf of New GM. In it, Mr. Whitacre acknowledged that not all Americans wanted to give New GM a second chance, but that New

[152] https://media.gm.com/media/us/en/gm/news.detail./content/Pages/news/us/en/2014/May/0514-cameras.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 179 of 337

GM wanted to make itself a company that "all Americans can be proud of again" and "exceed every goal [Americans] set for [General Motors]." He stated that New GM was "designing, building, and selling the best cars in the world." He continued by saying New GM has "unmatched lifesaving technology" to keep customers safe. He concluded by inviting the viewer to take a look at "the new GM."[153]

440. A radio ad that ran from New GM's inception until July 16, 2010 stated that "[a]t GM, building quality cars is the most important thing we can do."

441. On November 10, 2010, General Motors published a video that told consumers that New GM prevents any defects from reaching consumers. The video, entitled "Andy Danko: The White Glove Quality Check," wherein it is stated that there are "quality processes in the plant that prevent any defects from getting out." The video also stated that the goal when a customer buys a New GM vehicle is that they "drive it down the road and they never go back to the dealer."[154]

[153] https://www.youtube.com/watch?v=jbXpV0aqEM4.
[154] https://www.youtube.com/watch?v=JRFO8UzoNho&list=UUxN-Csvy_9sveql5HJviDjA.

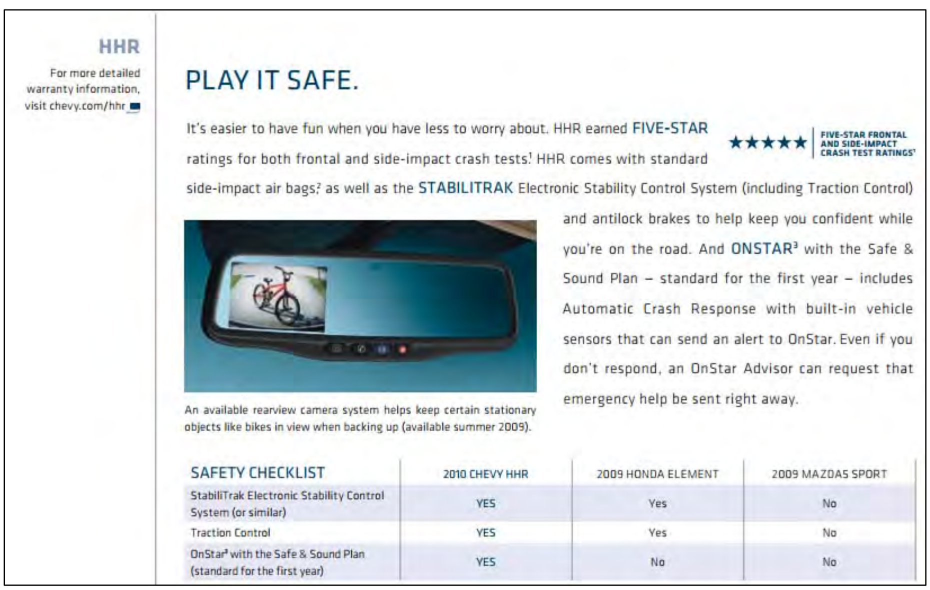
442. In 2010 New GM ran a television advertisement for its Chevrolet brand that implied its vehicles were safe by showing parents bringing their newborn babies home from the hospital, with the tagline "as long as there are babies, there will be Chevys to bring them home."[155]

443. Another 2010 television ad informed consumers that "Chevrolet's ingenuity and integrity remain strong, exploring new areas of design and power, while continuing to make some of the safest vehicles on earth."

444. New GM's 2010 brochure for the Chevy Cobalt states "Chevy Cobalt is savvy when it comes to standard safety" and "you'll see we've thought about safety so you don't have to." It also states "[w]e're filling our cars and trucks with the kind of thinking, features and craftsmanship you'd expect to pay a lot more for."[156]

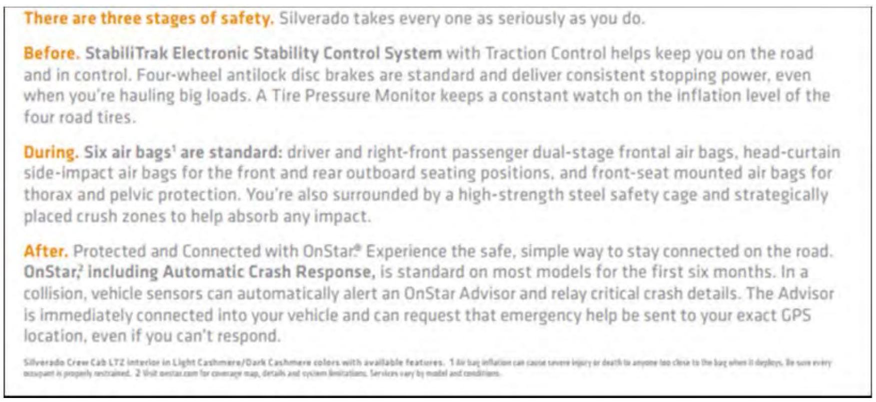
[155] https://www.youtube.com/watch?v=rb28vTN382g.
[156] https://www.auto-brochures.com/makes/Chevrolet/Cobalt/Chevrolet_US%20Cobalt_2010.pdf.

445. New GM's 2010 Chevy HHR brochure proclaims "PLAY IT SAFE" and "It's easier to have fun when you have less to worry about."[157]



[157] https://www.auto-brochures.com/makes/Chevrolet/HHR/Chevrolet_US%20HHR_2010.pdf.

446. New GM's brochure for the 2011 Chevrolet Silverado states "Silverado – the most dependable, long-lasting full size pickups on the road." It goes on to state "[t]here are three stages of safety. Silverado takes every one as seriously as you do."[158]



There are three stages of safety. Silverado takes every one as seriously as you do.

Before. StabiliTrak Electronic Stability Control System with Traction Control helps keep you on the road and in control. Four-wheel antilock disc brakes are standard and deliver consistent stopping power, even when you're hauling big loads. A Tire Pressure Monitor keeps a constant watch on the inflation level of the four road tires.

During. Six air bags[1] are standard: driver and right-front passenger dual-stage frontal air bags, head-curtain side-impact air bags for the front and rear outboard seating positions, and front-seat mounted air bags for thorax and pelvic protection. You're also surrounded by a high-strength steel safety cage and strategically placed crush zones to help absorb any impact.

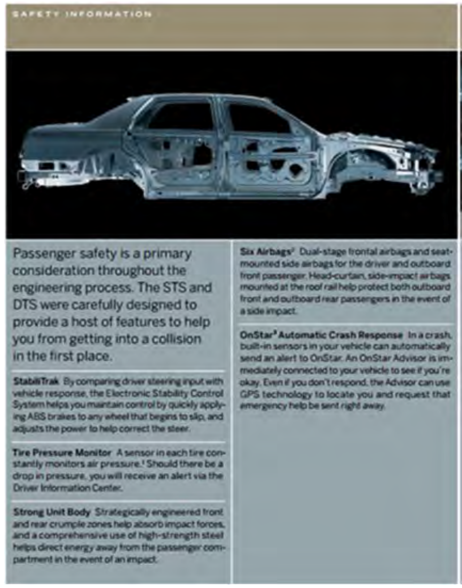
After. Protected and Connected with OnStar.® Experience the safe, simple way to stay connected on the road. **OnStar,[2] including Automatic Crash Response,** is standard on most models for the first six months. In a collision, vehicle sensors can automatically alert an OnStar Advisor and relay critical crash details. The Advisor is immediately connected into your vehicle and can request that emergency help be sent to your exact GPS location, even if you can't respond.

Silverado Crew Cab LTZ interior in Light Cashmere/Dark Cashmere colors with available features.

447. The brochure for the 2011 Cadillac DTS and STS states "Passenger safety is a primary consideration throughout the engineering process." It continues by stating "[t]he STS and DTS were carefully designed to provide a host of features to help you from getting into a collision in the first place."[159]

---

[158] https://www.auto-brochures.com/makes/Chevrolet/Silverado/Chevrolet_US%20Silverado_2011.pdf.
[159] https://www.auto-brochures.com/makes/Cadillac/Cadillac_US%20STS-DTS_2011.pdf.



SAFETY INFORMATION

Passenger safety is a primary consideration throughout the engineering process. The STS and DTS were carefully designed to provide a host of features to help you from getting into a collision in the first place.

StabiliTrak By comparing driver steering input with vehicle response, the Electronic Stability Control System helps you maintain control by quickly applying ABS brakes to any wheel that begins to slip, and adjusts the power to help correct the steer.

Tire Pressure Monitor A sensor in each tire constantly monitors air pressure.[1] Should there be a drop in pressure, you will receive an alert via the Driver Information Center.

Strong Unit Body Strategically engineered front and rear crumple zones help absorb impact forces, and a comprehensive use of high-strength steel helps direct energy away from the passenger compartment in the event of an impact.

Six Airbags[2] Dual-stage frontal airbags and seat-mounted side airbags for the driver and outboard front passenger. Head-curtain, side-impact airbags mounted at the roof rail help protect both outboard front and outboard rear passengers in the event of a side impact.

OnStar[3] Automatic Crash Response In a crash, built-in sensors in your vehicle can automatically send an alert to OnStar. An OnStar Advisor is immediately connected to your vehicle to see if you're okay. Even if you don't respond, the Advisor can use GPS technology to locate you and request that emergency help be sent right away.

448. On August 29, 2011, New GM stated on its website that: "Chevrolet provides consumers with fuel-efficient, safe and reliable vehicles that deliver high quality, expressive design, spirited performance and value."[160]

449. On September 29, 2011, New GM announced on the "News" portion of its website the introduction of front center airbags. The announcement included a quote from Gay Kent, New GM executive director of Vehicle Safety and Crashworthiness, who stated that: "This technology is a further demonstration of New GM's above-and-beyond commitment to provide continuous occupant protection before, during and after a crash."[161]

450. On December 27, 2011, Gay Kent, Executive Director of Vehicle Safety, was quoted in an interview on New GM's website as saying: "Our safety strategy is about providing continuous protection for our customers before, during and after a crash."[162]

451. New GM's brochure for the 2012 Chevrolet Impala proclaims: "[a] safety philosophy that RUNS DEEP," and that "if a moderate to severe collision does happen, Impala is designed to respond quickly":[163]

453. On January 3, 2012, Gay Kent, New GM Executive Director of Vehicle Safety, was quoted on New GM's website as saying: "From the largest vehicles in our lineup to the smallest, we are putting overall crashworthiness and state-of-the-art safety technologies at the top of the list of must-haves."[165]

454. An online national ad campaign for New GM in April 2012 stressed "Safety. Utility. Performance."

455. On June 5, 2012, New GM posted an article on its website announcing that its Malibu Eco had received top safety ratings from the National Highway Traffic Safety Administration and the Insurance Institute for Highway Safety. The article includes the following quotes: "With the Malibu Eco, Chevrolet has earned seven 2012 TOP SAFETY PICK awards," said IIHS President Adrian Lund. "The IIHS and NHTSA results demonstrate GM's commitment to state-of-the-art crash protection." And "We are now seeing the results from our commitment to design the highest-rated vehicles in the world in safety performance," said Gay Kent, New GM executive director of Vehicle Safety. "Earning these top safety ratings demonstrates the strength of the Malibu's advanced structure, overall crashworthiness and effectiveness of the vehicle's state-of-the-art safety technologies."[166]

456. On June 5, 2012, New GM posted an article on its website entitled "Chevrolet Backs New Vehicle Lineup with Guarantee," which included the following statement: "We have transformed the Chevrolet lineup, so there is no better time than now to reach out to new customers with the love it or return it guarantee and very attractive, bottom line pricing," said Chris Perry, Chevrolet global vice president of marketing. "We think customers who have been driving competitive makes or even older Chevrolets will be very pleased by today's

Chevrolet designs, easy-to-use technologies, comprehensive safety and the quality built into all of our cars, trucks and crossovers."[167]

457. On November 5, 2012, New GM published a video to advertise its "Safety Alert Seat" and other safety sensors. The video described older effective safety systems and then added that new systems "can offer drivers even more protection." Then, a Cadillac Safety Engineer stated there "are a variety of crash avoidance sensors that work together to help the driver avoid crashes." Finally, the engineer then discussed all the sensors and the safety alert seat on the Cadillac XTS, leaving the viewer with the impression safety was a top priority at Cadillac.[168]

458. New GM's brochure for the 2013 Chevrolet Traverse states "Traverse provides peace of mind with an array of innovative safety features" and "[i]t helps protect against the unexpected."[169]

[167] https://media.gm.com/media/us/en/gm/news.detail../content/Pages/news/us/en/2012/Jul/0710_ confidence.

[169] https://www.auto-brochures.com/makes/Chevrolet/Traverse/Chevrolet_US%20Traverse_2013.pdf.

459. A national print ad campaign in April 2013 states that "[w]hen lives are on the line, you need a dependable vehicle you can rely on. Chevrolet and GM … for power, performance and safety."

460. On November 8, 2013, New GM posted a press release on its website regarding GMC, referring to it as "one of the industry's healthiest brands":[170]

About GMC

GMC has manufactured trucks since 1902, and is one of the industry's healthiest brands. Innovation and engineering excellence is built into all GMC vehicles and the brand is evolving to offer more fuel-efficient trucks and crossovers, including the Terrain small SUV and Acadia crossover. The 2014 Sierra half-ton pickup boasts all-new powertrains and design, and the Sierra Heavy Duty pickups are the most capable and powerful trucks ever built by GMC. Every retail GMC model, including Yukon and Yukon XL full-size SUVs, is now available in Denali luxury trim. Details on all GMC models are available at http://www.gmc.com/, on Twitter at @thisisgmc or at http://www.facebook.com/gmc.

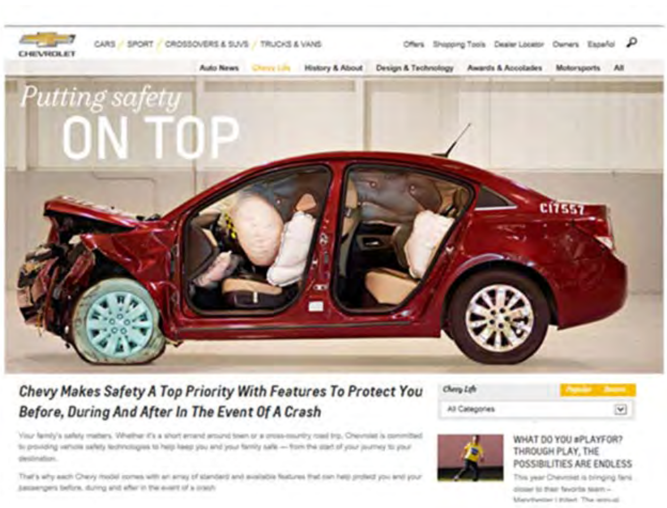
461. A December 2013 New GM testimonial ad stated that "GM has been able to deliver a quality product that satisfies my need for dignity and safety."

[170] https://media.gm.com/media/us/en/gm/news.detail../content/Pages/news/us/en/2013/Nov/1108-truck-lightweighting.

462. In 2013, New GM proclaimed on its website, https://www.gm.com, the company's passion for building and selling the world's best vehicles as "the hallmark of our customer-driven culture":[171]

463. On the same website in 2013, New GM stated: "At GM, it's about getting everything right for our customers – from the way we design, engineer and manufacture our vehicles, all the way through the ownership experience."[172]

464. On its website, Chevrolet.com, New GM promises that it is "Putting safety ON TOP," and that "Chevy Makes Safety a Top Priority":[173]



465. On its website, Buick.com, New GM represents that "Keeping you and your family safe is a priority":[174]

TOP 5 INNOVATIVE VEHICLE SAFETY FEATURES FROM BUICK

Innovative car safety features are usually high on the list of must-haves when selecting a new car and expectations are even higher when it comes to purchasing a luxury vehicle. Buick delivers with great advancements in vehicle safety technology, giving you greater awareness of your surroundings, greater control over your vehicle, and even alerts to any potential trouble before it happens. Such vehicle safety features are available or standard in all current Buick luxury sedans and luxury crossover SUVs.

Sometimes, when you're backing up, you can't always see your surroundings with absolute clarity. Such blind spots can leave you open to the possibility of backing into a potentially dangerous situation. The state-of-the-art Rear Cross Traffic Alert, on the Verano with the available Convenience Group, was developed to alert you to any approaching vehicles or pedestrians within 65 feet of your vehicle. Like the blind zones that may impede visibility when backing up, there can be blind spots on the sides. Many drivers have had the experience of being surprised by another vehicle in a blind spot alongside when intending to change lanes. To reduce this potential danger, Side Blind Zone Alert was created. Available in the Enclave luxury SUV and Lacrosse luxury AWD mid-size sedan models, this feature uses radar to sense vehicles that are in your blind spot and alerts you to their presence. Driving on slick or loose surfaces, you run the risk of losing grip of the road and losing control. In recent years, extremely sophisticated traction and vehicle control systems have developed to give you greater car control. Continuously monitoring how much grip your tires have, traction control comes standard in Enclave, Lacrosse, Verano, and Regal models to transfer power to the wheel with the most grip. In the event that your car is not adequately responding to your steering commands, StabiliTrak detects the difference between the steering wheel angle and the direction you are turning, then applies quick, precise force to the appropriate brakes to help you maintain control the vehicle's direction and help keep it on course.

There are certain situations on the road in which events unfold more quickly than we might first be aware. Luckily, one of the newest available car safety features is Forward Collision Alert. Using cameras mounted on the front of the vehicle, your Buick can alert you to a possible collision threat so you can take action to reduce the risk of having a frontal crash.

Lastly, one of the most unique new car safety features is a system that helps you stay between the lines. There are some instances when we may start to drift out of our lane. Using onboard cameras, the Lane Departure Warning system gives you a visual and audible alert if it senses you are moving from your lane without using your turn signal. The system constantly monitors lane markings on the road and helps you to be aware and stay safe.

Keeping you and your family safe is a priority and Buick is committed to this priority through the delivery of innovative safety technologies. Discover all the reasons why Buick luxury vehicles are considered some of the most advanced on the road and begin demanding more from your luxury car.

466. New GM's website currently states:[175]

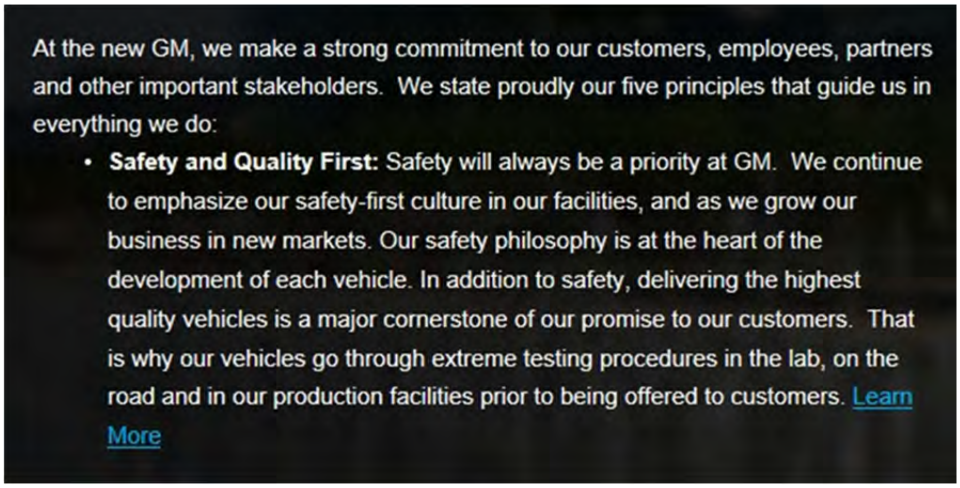
> *Innovation: Quality & Safety; GM's Commitment to Safety; Quality and safety are at the top of the agenda at GM, as we work on technology improvements in crash avoidance and crashworthiness to augment the post-event benefits of OnStar, like advanced automatic crash notification.*
>
> *Understanding what you want and need from your vehicle helps GM proactively design and test features that help keep you safe and enjoy the drive. Our engineers thoroughly test our vehicles for durability, comfort, and noise minimization before you think about them. The same quality process ensures our safety technology performs when you need it.*

467. New GM's website further promises: Safety and Quality First: Safety will always be a priority at New GM. We continue to emphasize our safety-first culture in our facilities," and that, "[i]n addition to safety, delivering the highest quality vehicles is a major cornerstone of our promise to our customers":[176]

---

[175] https://www.gm.com/vision/quality_safety/gms_commitment_tosafety.
[176] https://www.gm.com/company/aboutGM/our_company.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 590 of 337



At the new GM, we make a strong commitment to our customers, employees, partners and other important stakeholders. We state proudly our five principles that guide us in everything we do:

- **Safety and Quality First:** Safety will always be a priority at GM. We continue to emphasize our safety-first culture in our facilities, and as we grow our business in new markets. Our safety philosophy is at the heart of the development of each vehicle. In addition to safety, delivering the highest quality vehicles is a major cornerstone of our promise to our customers. That is why our vehicles go through extreme testing procedures in the lab, on the road and in our production facilities prior to being offered to customers. Learn More

468. New GM's current website states that "leading the way is our seasoned leadership team who set high standards for our company so that we can give you the best cars and trucks. This means that we are committed to delivering vehicles with compelling designs, flawless quality, and reliability, and leading safety, fuel economy and infotainment features… Safety and Quality First: Safety will always be a priority at New GM. We continue to emphasize our safety-first culture in our facilities, and as we grow our business in new markets. Our safety philosophy is at the heart of the development of each vehicle. In addition to safety, delivering the highest quality vehicles is a major cornerstone of our promise to our customers. That is why our vehicles go through extreme testing procedures in the lab, on the road and in our production facilities prior to being offered to customers."[177]

469. New GM is highly aware of the impact vehicle recalls, and their timeliness, have on its brand image. In its 2010 Form 10-K submitted to the United States Securities and Exchange Commission ("SEC"), New GM admitted that "Product recalls can harm our reputation and cause us to lose customers, particularly if those recalls cause consumers to question the safety or reliability of our products. Any costs incurred or lost sales caused by

[177] https://www.gm.com/company/aboutGM/our_company.

future product recalls could materially adversely affect our business. Conversely, not issuing a recall or not issuing a recall on a timely basis can harm our reputation and cause us to lose customers…" General Motors 2010 Form 10-K, p. 31.[178]

470. In its 2011 10-K SEC filing, New GM stated "We are a leading global automotive company. Our vision is to design, build and sell the world's best vehicles. We seek to distinguish our vehicles through superior design, quality, reliability, telematics (wireless voice and data) and infotainment and safety within their respective segments." General Motors 2011 Form 10-K, p. 50.[179]

471. New GM's relentlessly repeated and reinforced product quality and safety representations were not mere harmless "puffery." New GM made these and similar representations to boost vehicle sales while knowing the starkly contrasting truth that millions of GM-branded vehicles, across numerous models and years, were plagued with serious and concealed safety defects that were putting its customers, their passengers, and all those who shared the road with its Defective Vehicles at constant risk of crashes, injury and death.

C. New GM Concealed And Disregarded Safety Issues As A Way Of Doing Business.

472. Ever since its inception, New GM possessed vastly superior knowledge and information to that of consumers – if not exclusive information – about the design and function of GM-branded vehicles and the existence of the defects in those vehicles.

473. Recently revealed information presents a disturbing picture of New GM's approach to safety issues – both in the design and manufacture stages, and in discovering and responding to defects in GM-branded vehicles that have already been sold.

[178] https://www.sec.gov/Archives/edgar/data/1467858/000119312510078119/d10k.htm#toc85733_4.
[179] https://www.sec.gov/Archives/edgar/data/1467858/000119312511051462/d10k.htm.

474. New GM made very clear to its personnel that cost-cutting was more important than safety, deprived its personnel of necessary resources for spotting and remedying defects, trained its employees not to reveal known defects, and rebuked those who attempted to “push hard” on safety issues.

475. One “directive” at New GM was “cost is everything.”[180] The messages from top leadership at New GM to employees, as well as their actions, were focused on the need to control cost.[181]

476. One New GM engineer stated that emphasis on cost control at New GM “permeates the fabric of the whole culture.”[182]

477. According to Mark Reuss (President of GMNA from 2009-2013 before succeeding Mary Barra as Executive Vice President for Global Product Development, Purchasing and Supply Chain in 2014), cost and time-cutting principles known as the “Big 4” at New GM “emphasized timing over quality.”[183]

478. New GM’s focus on cost-cutting created major disincentives to personnel who might wish to address safety issues. For example, those responsible for a vehicle were responsible for its costs, but if they wanted to make a change that incurred cost and affected other vehicles, they also became responsible for the costs incurred in the other vehicles.

479. As another cost-cutting measure, parts were sourced to the lowest bidder, even if they were not the highest quality parts.[184]

480. Because of New GM’s focus on cost-cutting, New GM Engineers did not believe they had extra funds to spend on product improvements.[185]

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 193 of 337

481. New GM's focus on cost-cutting also made it harder for New GM personnel to discover safety defects, as in the case of the "TREAD Reporting team."

482. New GM used its TREAD database (known as "TREAD") to store the data required to be reported quarterly to NHTSA under the TREAD Act.[186] From the date of its inception in 2009, TREAD has been the principal database used by New GM to track incidents related to its vehicles.[187]

483. From 2003-2007 or 2008, the TREAD Reporting team had eight employees, who would conduct monthly searches and prepare scatter graphs to identify spikes in the number of accidents or complaints with respect to various GM-branded vehicles. The TREAD Reporting team reports went to a review panel and sometimes spawned investigations to determine if any safety defect existed.[188]

484. In or around 2007-08, Old GM cut its TREAD Reporting team from eight to three employees, and the monthly data mining process pared down.[189] In 2010, New GM restored two people to the team, but they did not participate in the TREAD database searches.[190] Moreover, until 2014, the TREAD Reporting team did not have sufficient resources to obtain any of the advanced data mining software programs available in the industry to better identify and understand potential defects.[191]

485. By starving the TREAD Reporting team of the resources it needed to identify potential safety issues, New GM helped to insure that safety issues would not come to light.

486. "[T]here was resistance or reluctance to raise issues or concerns in the GM culture." The culture, atmosphere and supervisor response at New GM "discouraged individuals from raising safety concerns."[192]

487. New GM CEO, Mary Barra, experienced instances where New GM engineers were "unwilling to identify issues out of concern that it would delay the launch" of a vehicle.[193]

488. New GM supervisors warned employees to "never put anything above the company" and "never put the company at risk."[194]

489. New GM "pushed back" on describing matters as safety issues and, as a result, "GM personnel failed to raise significant issues to key decision-makers."[195]

490. So, for example, and as set forth above, New GM discouraged the use of the word "stall" in Technical Service Bulletins ("TSBs") it sometimes sent to dealers because the word "stall" was a "hot" word that may raise concerns at NHTSA.[196]

491. Direct of Brand Quality Steven Oakley, who drafted TSBs, noted that "he was reluctant to push hard on safety issues because of his perception that his predecessor had been pushed out of the job for doing just that."[197]

492. Many New GM employees "did not take notes at all at critical safety meetings because they believed New GM lawyers did not want such notes taken."[198]

493. A New GM training document released by NHTSA as an attachment to its Consent Order sheds further light on the lengths to which New GM went to ensure that known

[195] *Id*. at 253.
[196] *Id*. at 92.
[197] *Id*.
[198] *Id*. at 254.

defects were concealed. It appears that the defects were concealed pursuant to a company policy New GM inherited from Old GM.

494. The document consists of slides from a 2008 Technical Learning Symposium for "designing engineers," "company vehicle drivers," and other employees at Old GM. On information and belief, the vast majority of employees who participated in this webinar presentation continued on in their same positions at New GM after July 10, 2009.

495. The presentation focused on recalls, and the "reasons for recalls."

496. One major component of the presentation was captioned "Documentation Guidelines," and focused on what employees should (and should not say) when describing problems in vehicles.

497. Employees were instructed to "[w]rite smart," and to "[b]e factual, not fantastic" in their writing.

498. Company vehicle drivers were given examples of comments to avoid, including the following: "This is a safety and security issue"; "I believe the wheels are too soft and weak and could cause a serious problem"; and "Dangerous … almost caused accident."

499. In documents used for reports and presentations, employees were advised to avoid a long list of words, including: "bad," "dangerous," "defect," "defective," "failed," "flawed," "life-threatening," "problem," "safety," "safety-related," and "serious."

500. As NHTSA's Acting Administrator Friedman noted at the May 16, 2014, press conference announcing the Consent Order concerning the ignition switch defect, it was New GM's company policy to avoid using words that might suggest the existence of a safety defect:

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 196 of 337

> *GM must rethink the corporate philosophy reflected in the documents we reviewed, including training materials that explicitly discouraged employees from using words like 'defect,' 'dangerous,' 'safety related,' and many more essential terms for engineers and investigators to clearly communicate up the chain when they suspect a problem.'*

501. New GM appears to have trained its employees to conceal the existence of known safety defects from consumers and regulators. Indeed, it is nearly impossible to convey the potential existence of a safety defect without using the words "safety" or "defect" or similarly strong language that was verboten at New GM.

502. So institutionalized at New GM was the "phenomenon of avoiding responsibility" that the practice was given a name: "the 'GM salute,'" which was "a crossing of the arms and pointing outward towards others, indicating that the responsibility belongs to someone else, not me."[199]

503. CEO Mary Barra described a related New GM phenomenon, "known as the 'GM nod,'" which was "when everyone nods in agreement to a proposed plan of action, but then leaves the room with no intention to follow through, and the nod is an empty gesture."[200]

504. According to the New GM Report prepared by Anton R. Valukas, part of the failure to properly correct the ignition switch defect was due to problems with New GM's organizational structure.[201] Part of the failure to properly correct the ignition switch defect was due to a corporate culture that did not care enough about safety.[202] Part of the failure to properly correct the ignition switch defect was due to a lack of open and honest communication with NHTSA regarding safety issues.[203] Part of the failure to properly correct

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 197 of 337

the ignition switch defect was due to improper conduct and handling of safety issues by lawyers within New GM's Legal Staff.[204] On information and belief, all of these issues also helped cause the concealment of and failure to remedy the many defects that have led to the spate of recalls in the first half of 2014.

505. An automobile manufacturer has a duty to promptly disclose and remedy defects. New GM knowingly concealed information about material safety hazards from the driving public, its own customers, and the Class, thereby allowing unsuspecting vehicle owners and lessees to continue unknowingly driving patently unsafe vehicles which posed a mortal danger to themselves, their passengers and loved ones, other drivers, and pedestrians.

506. Not only did New GM take far too long in failing to address or remedy the defects, it deliberately worked to cover-up, hide, omit, fraudulently conceal and/or suppress material facts from the Class who relied upon it to the detriment of the Class.

D. New GM Admitted Its Failure To Disclose The Defects In Its Vehicle, Attempting To Reassure The Public That It Can Now Be Trusted.

507. Consistent with its CEO's contrition, GM has once again embarked on a public campaign to convince the public that, this time, it has sincerely reformed.

508. On February 25, 2014, New GM North America President, Alan Batey, publically stated: "Ensuring our customers' safety is our first order of business. We are deeply sorry and we are working to address this issue as quickly as we can."[205]

509. In a press release on March 18, 2014 New GM announced that Jeff Boyer had been named to the newly created position of Vice President, Global Vehicle Safety. In the press release New GM quoted Mr. Boyer as stating that: "Nothing is more important than the

---

[204] *Id*. at 264.
[205] https://media.gm.com/media/us/en/gm/news.detail../content/Pages/news/us/en/2014/Feb/0225-ion.

safety of our customers in the vehicles they drive. Today's GM is committed to this, and I'm ready to take on this assignment."[206]

510. On May 13, 2014, New GM published a video to defend its product and maintain that the ignition defect will never occur when only a single key is used. Jeff Boyer, New GM Vice President of Global Vehicle Safety, addressed viewers and told them New GM's Milford Proving Ground is "the largest and most comprehensive testing facilities in the world." He told viewers that if you use a New GM single key that there is no safety risk.[207]

511. As of July 2014, New GM continues to praise its safety testing. It published a video entitled "90 Years of Safety Testing at New GM's Milford Proving Ground." The narrator describes New GM's testing facility as "one of the world's top automotive facilities" where data is "analyzed for customer safety." The narrator concludes by saying, "[o]ver the past ninety years one thing remained unchanged, GM continues to develop and use the most advanced technologies available to deliver customers the safest vehicles possible."[208]

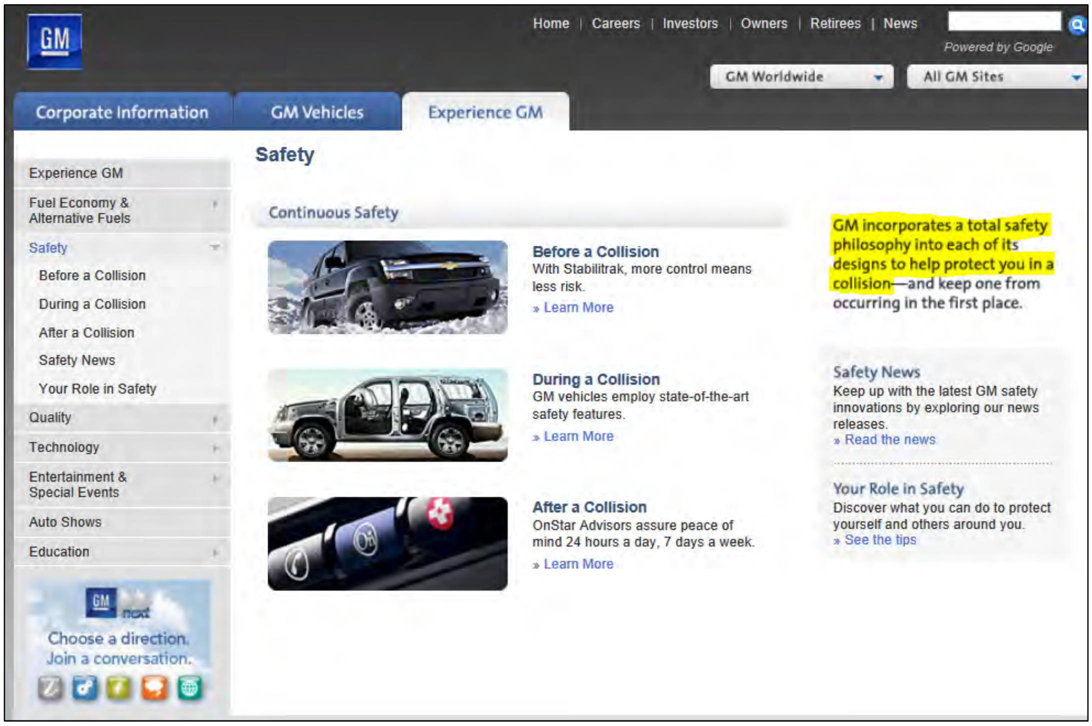
---

206 https://media.gm.com/media/us/en/gm/news.detail../content/Pages/news/us/en/2014/mar/0318-boyer.
207 https://www.youtube.com/watch?v=rXO7F3aUBAY.
208 https://www.youtube.com/watch?v=BPQdlJZvZhE&list=UUxN-Csvy_9sveql5HJviDjA.

512. On July 31, 2014, Jack Jensen, the New GM engineering group manager for the "Milford Proving Ground" dummy lab, told customers that "[w]e have more sophisticated dummies, computers to monitor crashes and new facilities to observe different types of potential hazards. All those things together give our engineers the ability to design a broad range of vehicles that safely get our customers where they need to go."[209]

513. As discussed in this Complaint, these most recent statements from New GM contrast starkly with New GM's wholly inadequate response to remedy the defects in its vehicles, such as the ignition switch defect.

[209] https://media.gm.com/media/us/en/gm/news.detail../content/Pages/news/us/en/2014/Jul/0731-mpg.



XII. Other Recently Revealed Information Demonstrates New GM's Widespread Ongoing Pattern Of Concealing Dangerous Defects In GM-Branded Vehicles That Has Caused Diminution in the Value of the Defective Vehicles.

514. Other recently-revealed information suggests that Old and New GM's egregious mishandling of the ignition switch defects is part of a pattern of concealing dangerous known defects in Old and New GM vehicles.

515. That pattern of conduct, together with the ever-expanding and piecemeal nature of the recall, calls into further question whether New GM is to be trusted when it claims that simply replacing the ignition switch (in some Defective Vehicles) and providing new keys for others, will fully resolve the myriad of issues faced by Defective Vehicle owners as a result of the ignition switch defects.

516. The defects identified in the myriad recalls of 2014 affect virtually every safety system in GM-branded vehicles, including but by no means limited to the airbags, power

steering, power brakes, and seat belts, as discussed below, and are discussed here to illustrate the extent of Old and New GM's pattern of faulty processes and concealment of known defects to the detriment of consumers and public safety.

A. <u>The Ignition Lock Cylinder Defect.</u>

517. As discussed briefly in previous sections, on April 9, 2014, New GM recalled 2,191,014 GM-branded vehicles with faulty ignition lock cylinders.[210] Though the vehicles are the same as those affected by the ignition switch torque defect,[211] the lock cylinder defect is distinct.

518. In these vehicles, faulty ignition lock cylinders can allow removal of the ignition key while the engine is not in the "off" position. If the ignition key is removed when the ignition is not in the "off" position, unintended vehicle motion may occur. That could cause a crash and injury to the vehicle's occupants or pedestrians. Some of the vehicles with faulty ignition lock cylinders may fail to conform to Federal Motor Vehicle Safety Standard number 114, "*Theft Prevention and Rollaway Prevention*."[212]

519. According to New GM's Chronology that it submitted to NHTSA on April 23, 2014, the ignition lock cylinder defect arose out of New GM's notorious recalls for defective ignition switch systems in the Chevrolet Cobalt, Chevrolet HHR, Pontiac G5, Pontiac Solstice, Saturn ION, and Saturn Sky vehicles. Those three recalls occurred in February and March of 2014.[213]

---

[210] New GM Letter to NHTSA dated April 9, 2014.
[211] Namely, MY 2005-2010 Chevrolet Cobalts, 2006-2011 Chevrolet HHRs, 2007-2010 Pontiac G5s, 2003-2007 Saturn Ions, and 2007-2010 Saturn Skys. *See id.*
[212] New GM Notice to NHTSA dated April 9, 2014, at 1.
[213] *See* Attachment B to New GM's letter to NJTSA dated April 23, 2014 ("Chronology").

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 202 of 337

520. In late February or March 2014, New GM personnel participating in the ignition switch recalls observed that the keys could sometimes be removed from the ignition cylinders when the ignition was not in the "off" position. This led to further investigation.

521. After investigation, New GM's findings were presented at an EFADC meeting on April 3, 2014. New GM noted several hundred instances of potential key pullout issues in vehicles covered by the previous ignition switch recalls, and specifically listed 139 instances identified from records relating to customer and dealer reports to GM call centers, 479 instances identified from warranty repair data, one legal claim, and six instances identified from NHTSA VOQ information. New GM investigators also identified 16 roll-away instances associated with the key pullout issue from records relating to customer and dealer reports to GM call centers and legal claims information.

522. New GM noted that excessive wear to ignition tumblers and keys may be the cause of the key pullout issue. New GM also considered the possibility that some vehicles may have experienced key pullout issues at the time they were manufactured, based on information that included the following: (a) a majority of instances of key pullouts that had been identified in the recall population were in early-year Saturn Ion and Chevrolet Cobalt vehicles, and in addition, repair order data indicated vehicles within that population had experienced a repair potentially related to key pullout issues as early as 47 days from the date on which the vehicle was put into service; and (b) an engineering inquiry known within New GM as a Problem Resolution Tracking System inquiry ("PRTS") related to key pullout issues was initiated in June 2005, which resulted in an engineering work order to modify the ignition cylinder going forward.

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 203 of 337

523. A majority of the key pullout instances identified involved 2003-2004 model year Saturn Ion and 2005 model year Chevrolet Cobalt vehicles. An April 3 New GM PowerPoint identified 358 instances of key pullouts involving those vehicles.

524. In addition, with respect to early-year Saturn Ion and Chevrolet Cobalt vehicles, the April 3 PowerPoint materials discussed the number of days that elapsed between the "In Service Date" of those vehicles (the date they first hit the road) and the "Repair Date." The April 3 PowerPoint stated that, with respect to the 2003 model year Saturn Ion, a vehicle was reported as experiencing a potential key pullout repair as early as 47 days from its "In Service Date;" with respect to the 2004 model year Saturn Ion, a vehicle was reported as experiencing a potential key pullout repair as early as 106 days from its "In Service Date;" with respect to the 2005 model year Chevrolet Cobalt, a vehicle was reported as experiencing a potential key pullout repair as early as 173 days from its "In Service Date;" and with respect to the 2006 model year Chevrolet Cobalt, a vehicle was reported as experiencing a potential key pullout repair as early as 169 days from its "In Service Date." The length of time between the "In Service Date" and the "Repair Date" suggested that these vehicles were defective at the time of manufacture.

525. The PowerPoint at the April 3 EFADC meeting also discussed a PRTS that was initiated in June 2005 which related to key pullout issues in the Chevrolet Cobalt (PRTS N 183836). According to PRTS N 183836: "Tolerance stack up condition permits key to be removed from lock cylinder while driving." The "Description of Root Cause Investigation Progress and Verification" stated, "[a]s noted a tolerance stack up exists in between the internal components of the cylinder." According to a "Summary," "A tolerance stack up condition exists between components internal to the cylinder which will allow some keys to

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 204 of 337

be removed." The PRTS identified the following "Solution": "A change to the sidebar of the ignition cylinder will occur to eliminate the stack-up conditions that exist in the cylinder."

526. In response to PRTS N 183836, New GM issued an engineering work order to ·"[c]hange shape of ignition cylinder sidebar top from flat to crowned."

527. According to the work order: "Profile and overall height of ignition cylinder sidebar [will be] changed in order to assist in preventing key pullout on certain keycodes. Profile of sidebar to be domed as opposed to flat and overall height to be increased by 0.23mm."

528. According to PRTS N 183836, this "solution fix[ed] the problem" going forward. An entry in the PRTS made on March 2, 2007 stated: "There were no incidents of the key coming out of the ignition cylinder in the run position during a review of thirty vehicles…." A "Summary" in the PRTS stated: "Because there were no incidents of the key coming out of the ignition cylinder in the run position during a review of thirty vehicles[,] this PRTS issue should be closed." PRTS N 183836 was the only PRTS discussed at the April 3, 2014, EFADC meeting, although it is not the only engineering or field report relating to potential key pullout issues.

529. This data led the EFADC to conclude that 2003-2004 model year Saturn Ion vehicles and 2005 and some 2006 model year Chevrolet Cobalt vehicles failed to conform to FMVSS 114. In addition, the EFADC concluded that a defect related to motor vehicle safety existed, and decided to recall all vehicles covered by the first, second, and third ignition switch torque recalls to prevent unintended vehicle motion potentially caused by key pullout issues that could result in a vehicle crash and occupant or pedestrian injuries. For vehicles that were built with a defective ignition cylinder that have not previously had the ignition cylinder

replaced with a redesigned part, the recall called for dealers to replace the ignition cylinder and provide two new ignition/door keys for each vehicle.

B. <u>There Have Been Extensive Additional Recalls of GM-branded Vehicles With Additional Safety-Related and Other Defects.</u>

530. **<u>Sudden Power-Steering Failure Defect</u>:** Between 2003 and 2010, over 1.3 million GM-branded vehicles in the United States were sold with a safety defect that causes the vehicle's electric power steering ("EPS") to suddenly fail during ordinary driving conditions and revert back to manual steering, requiring greater effort by the driver to steer the vehicle and increasing the risk of collisions and injuries.

531. The affected vehicles are MY 2004-2006 and 2008-2009 Chevrolet Malibu, 2004-2006 Chevrolet Malibu Maxx, 2009-2010 Chevrolet HHR, 2010 Chevrolet Cobalt, 2005-2006 and 2008-2009 Pontiac G6, 2004-2007 Saturn Ion, and 2008-2009 Saturn Aura vehicles.

532. As with the ignition switch defects and many of the other defects, New GM was aware of the power steering defect long before it took anything approaching full remedial action.

533. When the power steering fails, a message appears on the vehicle's dashboard, and a chime sounds to inform the driver. Although steering control can be maintained through manual steering, greater driver effort is required, and the risk of an accident is increased.

534. In 2010, New GM first recalled Chevy Cobalt and Pontiac G5 models for these power steering issues, yet it did *not* recall the many other vehicles that had the very same power steering defect.

535. Documents released by NHTSA show that New GM waited years to recall nearly 335,000 Saturn Ions for power-steering failure – despite receiving nearly 4,800

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 206 of 337

consumer complaints and more than 30,000 claims for warranty repairs. That translates to a complaint rate of 14.3 incidents per thousand vehicles and a warranty claim rate of 9.1 percent. By way of comparison, NHTSA has described as "high" a complaint rate of 250 complaints per 100,000 vehicles.[214] Here, the rate translates to 1,430 complaints per 100,000 vehicles.

536. In response to the consumer complaints, in September 2011, NHTSA opened an investigation into the power-steering defect in Saturn Ions.

537. NHTSA database records show complaints from Ion owners as early as June 2004, with the first injury reported in May 2007.

538. NHTSA has linked approximately 12 crashes and two injuries to the power-steering defect in the Ions.

539. In September 2011, after NHTSA began to make inquiries about the safety of the Saturn Ion, GM acknowledged that it had received almost 3,500 customer reports claiming a sudden loss of power steering in 2004-2007 Ion vehicles.

540. The following month, New GM engineer Terry Woychowski informed current CEO Mary Barra – then head of product development –that there was a serious power-steering issue in Saturn Ions, and that it may be the same power steering issue that plagued the Chevy Cobalt and Pontiac G5. Ms. Barra was also informed of the ongoing NHTSA investigation. At the time, NHTSA reportedly came close to concluding that Saturn Ions should have been included in New GM's 2010 steering recall of Cobalt and G5 vehicles.

541. Instead of recalling the Saturn Ion, GM sent dealers a service bulletin in May of 2012 identifying complaints about the steering system in the vehicle.

---

[214] *See* http://www-odi.nhtsa.dot.gov/cars/problems/defect/-results.cfm?action_number=EA06002&SearchType=QuickSearch&summary=true.

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 207 of 337

542. By the time GM finally recalled the Saturn Ion – four years later, in March 2014 - NHTSA had received more than 1200 complaints about the vehicle's power steering. Similar complaints resulted in over 30,000 warranty claims with GM.

543. After announcing the March 31, 2014 recall, Jeff Boyer, New GM's Vice President of Global Vehicle Safety, acknowledged that New GM recalled some of these same vehicle models previously for the *same issue*, but that New GM "did not do enough."

544. According to an analysis by the New York Times published on April 20, 2014, New GM has "repeatedly used technical service bulletins to dealers and sometimes car owners as stopgap safety measures instead of ordering a timely recall."

545. Former NHTSA head Joan Claybrook echoed this conclusion, stating, "There's no question that service bulletins have been used where recalls should have been."

546. NHTSA has recently criticized New GM for issuing service bulletins on at least four additional occasions in which a recall would have been more appropriate and in which New GM later, in fact, recalled the subject vehicles.

547. These inappropriate uses of service bulletins prompted Frank Borris, the top defect investigator for NHTSA, to write to New GM's product investigations director, Carmen Benavides, in July 2013, complaining that "GM is slow to communicate, slow to act, and, at times, requires additional effort . . . that we do not feel is necessary with some of [GM's] peers."

548. Mr. Borris' correspondence was circulated widely among New GM's top executives. Upon information and belief, the following employees received a copy: John Calabrese and Alicia Boler-Davis, two vice presidents for product safety; Michael Robinson, vice president of regulatory affairs; Jim Federico; Gay Kent, director of product investigations

who had been involved in safety issues with the Cobalt since 2006; and William Kemp, an in-house product liability lawyer.

549. **Ignition Lock Cylinder Defect:** On August 7, 2014, New GM recalled 202,155 MY 2002-2004 Saturn Vue vehicles.[215] In the affected vehicles, the ignition key can be removed when the vehicle is not in the "off" position.[216] If this happens, the vehicle can roll away, increasing the risk for a crash and occupant or pedestrian injuries.[217]

550. Following New GM's April 9, 2014 recall announcement regarding ignition switch defects, New GM reviewed field and warranty data for potential instances of ignition cylinders that permit the operator to remove the ignition key when the key is not in the "off" position in other vehicles outside of those already recalled.[218] New GM identified 152 reports of vehicle roll away and/or ignition keys being removed when the key is not in the "off" position in the 2002-2004 MY Saturn Vue vehicles.[219]

551. After reviewing this data with NHTSA on June 17, 2014, July 7, 2014, and July 24, 2014, GM instituted a safety recall on July 31, 2014.[220]

552. **Safety Defects of the Airbag Systems – Wiring Harness Defect:** On March 17, 2014, New GM recalled nearly 1.2 million vehicles for a dangerous defect involving airbags and seatbelt pretensioners that caused them to fail to deploy, increasing the risk of injury and death to the drivers and front-seat passengers.

553. Once again, Old GM and later New GM knew of the dangerous airbag defect long before it took anything approaching the requisite remedial action. Indeed, the problem

[215] *See* August 7, 2014 Letter from New GM to NHTSA.
[216] *Id.*
[217] *Id.*
[218] *Id.*
[219] *Id.*
[220] *Id.*

apparently arose when Old GM made the change from using gold-plated terminals to connect its wire harnesses to cheaper tin terminals in 2007.

554. In June 2008, Old GM noticed increased warranty claims for airbag service on certain of its vehicles and determined it was due to increased resistance in airbag wiring. After analysis of the tin connectors in September 2008, Old GM determined that corrosion and wear to the connectors was causing the increased resistance in the airbag wiring. It released a technical service bulletin on November 25, 2008, for 2008-2009 Buick Enclaves, 2009 Chevy Traverse, 2008-2009 GMC Acadia, and 2008-2009 Saturn Outlook models, instructing dealers to repair the defect by using Nyogel grease, securing the connectors, and adding slack to the line. Old GM also began the transition back to gold-plated terminals in certain vehicles. At that point, Old GM suspended all investigation into the defective airbag wiring and took no further action.[221]

555. In November 2009, New GM learned of similar reports of increased airbag service messages in 2010 Chevy Malibu and 2010 Pontiac G6 vehicles. After investigation, New GM concluded that corrosion and wear in the same tin connector was the root of the airbag problems in the Malibu and G6 models.[222]

556. In January 2010, after review of the Malibu and G6 airbag connector issues, New GM concluded that ignoring the service airbag message could increase the resistance such that an SIAB might not deploy in a side impact collision. On May 11, 2010, New GM issued a Customer Satisfaction Bulletin for the Malibu and G6 models and instructed dealers

---

[221] *See* New GM Notification Campaign No. 14V-118 dated March 31, 2014, at 1-2.
[222] *Id.* at 2.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/04/14 Page 210 of 337

to secure both front seat-mounted, side-impact airbag wire harnesses and, if necessary, reroute the wire harness.[223]

557. From February to May 2010, New GM revisited the data on vehicles with faulty harness wiring issues, and noted another spike in the volume of the airbag service warranty claims. This led New GM to conclude that the November 2008 bulletin was "not entirely effective in correcting the [wiring defect present in the vehicles]." On November 23, 2010, New GM issued another Customer Satisfaction Bulletin for certain 2008 Buick Enclave, 2008 Saturn Outlook, and 2008 GMC Acadia models built from October 2007 to March 2008, instructing dealers to secure SIAB harnesses and re-route or replace the SIAB connectors.[224]

558. New GM issued a revised Customer Service Bulletin on February 3, 2011, requiring replacement of the front seat-mounted side-impact airbag connectors in the same faulty vehicles mentioned in the November 2010 bulletin. In July 2011, New GM again replaced its connector, this time with a Tyco-manufactured connector featuring a silver-sealed terminal.[225]

559. But in 2012, New GM noticed another spike in the volume of warranty claims relating to SIAB connectors in vehicles built in the second half of 2011. After further analysis of the Tyco connectors, it discovered that inadequate crimping of the connector terminal was causing increased system resistance. In response, New GM issued an internal bulletin for 2011-2012 Buick Enclave, Chevy Traverse, and GMC Acadia vehicles, recommending dealers repair affected vehicles by replacing the original connector with a new sealed connector.[226]

---

[223] *Id.*
[224] *See id.* at 3.
[225] *See id.*
[226] *See id.* at 4.

560. The defect was still uncured, however, because in 2013 New GM again noted an increase in service repairs and buyback activity due to illuminated airbag service lights. On October 4, 2013, New GM opened an investigation into airbag connector issues in 2011-2013 Buick Enclave, Chevy Traverse, and GMC Acadia models. The investigation revealed an increase in warranty claims for vehicles built in late 2011 and early 2012.[227]

561. On February 10, 2014, New GM concluded that corrosion and crimping issues were again the root cause of the airbag problems.228

562. New GM initially planned to issue a less-urgent Customer Satisfaction Program to address the airbag flaw in the 2010-2013 vehicles. But it wasn't until a call with NHTSA on March 14, 2014, that New GM finally issued a full-blown safety recall on the vehicles with the faulty harness wiring – years after it first learned of the defective airbag connectors, after four investigations into the defect, and after issuing at least six service bulletins on the topic. The recall as first approved covered only 912,000 vehicles, but on March 16, 2014, it was increased to cover approximately 1.2 million vehicles.[229]

563. **Safety Defects of the Airbag Systems – Driver-side Airbag Shorting Bar Defect:** On June 5, 2014, New GM issued a safety recall of 38,636 vehicles with a driver's airbag shorting bar defect.

564. In the affected vehicles, the driver side frontal airbag has a shorting bar which may intermittently contact the airbag terminals. If the bar and terminals are contacting each other at the time of a crash, the airbag will not deploy, increasing the driver's risk of injury. New GM admits awareness of one crash with an injury where the relevant diagnostic trouble code was found at the time the vehicle was repaired. New GM is aware of other crashes

[227] *See id.*
[228] *See id.* at 5.
[229] *See id.*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/04/14 Page 212 of 337

involving these vehicles where airbags did not deploy but claims not to know if they were related to this defect.

565. N about the driver's airbag shorting bar defect in 2012. In fact, New GM conducted two previous recalls in connection with shorting bar defect condition involving 7,116 vehicles – one on October 31, 2012, and one on January 24, 2013.[230] Yet it would take New GM nearly two years to finally order a broader recall.

566. On May 31, 2013, after New GM's two incomplete recalls, NHTSA opened an investigation into reports of allegations of the non-deployment of air bags. New GM responded to this investigation on September 13, 2013.

567. On November 1, 2013, NHTSA questioned New GM about: (1) the exclusion of 390 vehicles which met the criteria for the two previous safety recalls; (2) the 30-day in-service cutoff used for the recall population of one previous recall; and (3) twelve additional build days which, as of the June 2013 data pull in the investigation, had an elevated warranty rate. In response to NHTSA's concerns, New GM added additional vehicles to the recall.

568. After announcement the initial ignition switch torque defect in February and March of 2014, New GM re-examined its records relating to the driver's airbag shorting defect. This review finally prompted New GM to expand the recall population on May 29, 2014 – ***long after the problem should have been remedied.***

569. **<u>Safety Defects of the Airbag Systems – Driver-Side Airbag Inflator Defect:</u>** On June 25, 2014, New GM recalled 29,019 vehicles with a driver-side airbag inflator defect.

570. In the affected vehicles, the driver's front airbag inflator may have been manufactured with an incorrect part. In the event of a crash necessitating deployment of the

[230] *See* New GM's Letters to NHTSA date 10/31/2012 and 1/24/2013, respectively.

driver-side airbag, the airbag's inflator may rupture and the airbag may not inflate. The rupture could cause metal fragments to strike and injure the vehicle's occupants. Additionally, if the airbag does not inflate, the driver will be at increased risk of injury.[231]

571. New GM was named in a lawsuit on or about May 1, 2014 involving a 2013 Chevrolet Cruze and an improperly deployed driver-side airbag that caused an injury to the driver.[232] The lawsuit prompted an inspection of "the case vehicle," the assignment of a New GM Product Investigations engineer, and discussions with NHTSA.[233]

572. Meanwhile, the airbag supplier, Takata Corporation/TK Holdings Inc., conducted its own analysis. New GM removed airbags with "build dates near the build date of the case vehicle," and sent them to Takata.[234] Subsequently, on June 20, 2014, Takata informed New GM it had "discovered [the] root cause" of the driver-side airbag defect through analysis of one of the airbags sent by New GM.[235]

573. Shortly thereafter, on June 23, 2014, New GM decided to conduct a safety recall.[236]

574. **Safety Defects of the Airbag Systems – Roof Rail Airbag Defect:** On June 18, 2014, New GM recalled 16,932 MY 2011 Cadillac CTS vehicles with a roof rail airbag defect.

575. In the affected vehicles, vibrations from the drive shaft may cause the vehicle's roll over sensor to command the roof rail airbags to deploy. If the roof rail airbags deploy unexpectedly, there is an increased risk of crash and injury to the occupants.[237]

---

[231] *See* New GM's Letter to NHTSA dated June 25, 2014.
[232] *Id.*
[233] *Id.*
[234] *Id.*
[235] *Id.*
[236] *Id.*

576. According to New GM, the defect is caused by a loss of grease from the center constant velocity (CV) joint; the loss of grease causes vibrations of the propeller shaft that are transferred to the roll over sensor in the vehicle floor above the shat. The vibrations can cause the deployment of the roof rail airbags.[238]

577. On October 28, 2010, a new supplier began shipping propeller shafts for MY 2011 Cadillac CTS vehicles; these propeller shafts used a metal gasket from the CV joint (as opposed to the liquid sealing system used by the previous supplier.).[239] *This new metal gasket design was not validated or approved by New GM.*[240]

578. On June 27, 2011, a Problem Resolution Tracking System (PRTS) was opened concerning this defect. The PRTS resulted in the "purge" of the metal gasket design.[241] Then, on August 1, 2011, New GM issued an Engineering Work Order banning the metal gasket design, and mandating the use of the liquid sealing system. Yet New GM "closed the investigation without action in October 2012."[242]

579. Inexplicably, New GM waited until June of 2014 before finally recalling the affected vehicles.

580. **Safety Defects of the Airbag Systems – Passenger-Side Airbag Defect:** On May 16, 2014, GM recalled 1,953 MY 2015 Cadillac Escalade and Escalade ESV vehicles with a passenger-side airbag defect.

581. The affected vehicles do not conform to Federal Motor Vehicle Safety Standard number 208, "Occupant Crash Protection." In these vehicles, the airbag module is

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 215 of 337

secured to a chute adhered to the backside of the instrument panel with an insufficiently heated infrared weld. As a result, the front passenger-side airbag will only partially deploy in the event of crash, and this will increase the risk of occupant injury.[243]

582. On April 28, 2014, during product validation testing of the "Platinum" Escalade (a planned interim 2015 model), the passenger-side front airbag did not properly deploy.[244] New GM then obtained information from the supplier Johnson Controls Inc. (JCI) concerning the portion of the Escalade instrument panel through which the frontal airbag deploys.[245] In particular, New GM requested information on chute weld integrity.[246]

583. On May 13, 2014, JCI informed New GM engineering that it had modified its infrared weld process on April 2, 2014 and "corrected" that process on April 29, 2014. New GM claims that it was unaware of the changes until May 13, 2014.[247]

584. On May 14, 2014, the Executive Field Action Decision Committee decided to conduct a "noncompliance recall." On May 16, 2014, GM obtained a list of suspected serial numbers from JCI, which GM then matched to VINs through a records obtained from the scanning process used during instrument panel sub-assembly.[248] A recall notice was issued on May 16, 2014 for 1,953 vehicles, each of which will have the JCI part replaced.[249]

585. Subsequently, GM discovered errors in the scanning process, and decided to expand the recall population to include any VINs that could have received parts bearing the suspect JCI serial numbers.[250] GM therefore issued a second recall notice on May 27, 2014.

[243] *See* May 16, 2014 Letter from New GM to NHTSA.
[244] *See* May 27, 2014 Letter from New GM to NHTSA.
[245] *Id.*
[246] *Id.*
[247] *Id.*
[248] *Id.*
[249] *Id.*
[250] *Id.*

With respect to this second set of 885 vehicles, they will be inspected to see if they were made with JCI parts bearing suspect serial numbers. If they are, the part will be replaced.[251]

586. **Safety Defects of the Airbag Systems – Sport Seat Side-Impact Airbag Defect:** On June 18, 2014, New GM issued a safety recall for 712 MY 2014 Chevrolet Corvette vehicles with sport seat side-impact airbag defect.

587. The affected vehicles do not meet a Technical Working Group Side Airbag Injury Assessment Reference Value (IARV) specifications for protecting unbelted, out-of-position young children from injury. In a crash necessitating side impact airbag deployment, an unbelted, out-of-position three year old child may be at an increased risk of neck injury.

588. **Safety Defects of the Airbag Systems – Passenger-side Airbag Inflator Defect:** On June 5, 2014, New GM recalled 61 MY 2013 Chevrolet Spark and 2013 Buick Encore vehicles with a passenger side airbag inflator defect.

589. In the affected vehicles, because of an improper weld, the front passenger airbag end cap could separate from the airbag inflator. This can prevent the airbag from deploying properly, and creates an increased risk of injury to the front passenger.[252]

590. New GM was alerted to this issue on July 10, 2013, when a customer brought an affected vehicle into a dealership with "an airbag readiness light 'ON' condition."[253] After replacing the side frontal airbag, the dealer shipped the original airbag to New GM for warranty analysis.

591. In September 2013, New GM "noted" the "weld condition of the end cap." New GM then sent the airbag to the airbag supplier, S&T Motive, who sent it on to the

[251] *Id.*
[252] *See* June 5, 2014 Letter from New GM to NHTSA.
[253] *Id.*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 217 of 337

inflator supplier, ARC Automotive Inc., for "root cause" analysis.[254] S&T and ARC did not conclude their analysis until April 2014. [255]

592. Based upon the information provided by S&T and ARC, in May 2014 New GM Engineering linked the defect to inflators produced on December 17, 2012. ARC records show that on that date, an inflator end cap separated during testing, but that ARC nonetheless shipped quarantined inflators to S&T where they were used in passenger side frontal airbags beginning on December 29, 2012.[256]

593. On May 29, 2014 – nearly one year after being presented with a faulty airbag – New GM's Safety Field Action Committee finally decided to conduct a safety recall. [257]

594. **<u>Safety Defects of the Airbag Systems – Front Passenger Airbag Defect:</u>** On March 17, 2014, New GM issued a noncompliance recall of 303,013 MY 2009-2014 GMC Savana vehicles with a passenger-side instrument panel defect. [258]

595. In the affected vehicles, in certain frontal impact collisions below the airbag deployment threshold, the panel covering the airbag may not sufficiently absorb the impact of the collision. These vehicles therefore do not meet the requirements of Federal Motor Vehicle Safety Standard number 201, "Occupant Protection in Interior Impact."[259]

596. The defect apparently arose in early 2009, when the passenger-side airbag housing was changed from steel to plastic.[260] Inexplicably, New GM did not act to remedy this defect until March of 2014.

[260] *Id.*

Case 1:14-md-02543-JMF Document 1359-1 Filed 11/03/14 Page 218 of 337

597. **<u>Safety Defects of the Seat Belt Systems – Seat Belt Connector Cable Defect:</u>** On May 20, 2014, New GM issued a safety recall for nearly 1.4 million vehicles with a dangerous safety belt defect.

598. In the affected vehicles, "[t]he flexible steel cable that connects the safety belt to the vehicle at the outside of the front outside of the front outboard seating positions can fatigue and separate over time as a result of occupant movement into the seat. In a crash, a separated cable could increase the risk of injury to the occupant."[261]

599. New GM waited more than two years after learning about this defect before disclosing it or remedying it. [262] This delay is consistent with New GM's long period of concealment of the other defects as set forth above.

600. New GM first learned of the seat belt defect no later than February 10, 2012, when a dealer reported that a seat belt buckle separated from the anchor at the attaching cable in a 2010 GMC Acadia.[263] On March 7, 2012, after notification and analysis of the returned part, the supplier determined the problem was caused by fatigue of the cable.[264]

601. On April 20, 2012, New GM received another part exhibiting the defect from a dealership.[265] New GM also did a warranty analysis that turned up three additional occurrences of similar complaints.[266] But New GM did not order a field review until June 4, 2012.[267] The review, on June 11, 2012, covered just 68 vehicles, and turned up no cable damage.[268]

[261] *See* New GM Notice to NHTSA dated May 19, 2014, at 1.
[262] *See* New GM Notice to NHTSA dated May 30, 2014, at 1-3.

[264] *Id.* at 2.
[265] *Id.*
[266] *Id.*
[267] *Id.*
[268] *Id.*

602. New GM received another part exhibiting the defect on August 28, 2013, from GM Canada Product Investigations.[269] After further testing in October 2013, New GM duplicated the defect condition, determining that, in some seat positions, the sleeve can present the buckle in a manner that can subject the cable to bending during customer entry into the vehicle.[270] New GM duplicated the condition again in a second vehicle in November, 2013.[271] And then just a month later, on December 18, 2013, New GM received another part exhibiting the condition from GM Canada Product Investigations.[272] But still New GM did not issue a safety recall.

603. Further testing between February and April 2014, confirmed the defect resulted from fatigue of the cable.[273] This was the same root cause New GM identified as early as March 7, 2012. Finally, on April 14, 2014, these findings were turned over to New GM Product Investigations and assigned an investigation number.[274]

604. On May 19, 2014, New GM's Executive Field Action Decision Committee decided to conduct a recall of the affected vehicles.[275]

605. **Safety Defects of the Seat Belt Systems – Seat Belt Retractor Defect:** On June 11, 2014, New GM recalled 28,789 MY 2004-2011 Saab 9-3 Convertible vehicles with a seatbelt retractor defect.

606. In the affected vehicles, the driver's side front seat belt retractor may break, causing the seat belt webbing spooled out by the user not to retract.[276] In the event of a crash,

[269] *Id.*
[270] *Id.*
[271] *Id.*
[272] *Id.*
[273] *Id.*
[274] *Id.*
[275] New GM Notice to NHTSA dated May 19, 2014, at 1.
[276] *See* New GM's June 11, 2013 Letter to NHTSA.

a seat belt that has not retracted may not properly restrain the seat occupant, increasing the risk of injury to the driver.[277]

607. By September of 2009 New GM was aware of an issue with seatbelt retractors in MY 2004 Saab 9-3 vehicles; at that time, NHTSA informed New GM that it received 5 Vehicle Owner Questionnaires "alleging that the driver seat belt will no longer retract on 2004 Saab 0-3 vehicles built after September 30, 2003."[278] In December 2009-January 2010, New GM conducted a survey "of customers who had a retractor replaced to determine how many were due" to a break in the Automatic Tensioning System that causes "webbing spooled out by the user not to retract."[279]

608. On February 9, 2010, New GM issued a recall for the driver side retractor, but only in certain MY 2004 Saab 9-3 sedans – some 14,126 vehicles.[280] New GM would wait another 4 years before attempting to address the full scope of the seatbelt retractor defect in Saab 9-3 vehicles.

609. New GM finally opened an investigation into the seatbelt retractor defect in other Saab 9-3 vehicles in February of this year, and that was "in response to NHTSA Vehicle Owner Questionnaires claiming issues with the driver side front seat belt retractor" in the affected vehicles.[281] As a result, New GM eventually recalled 28,789 MY 2004-2011 Saab 9-3 convertible vehicles on June 11, 2014.

[277] *See* New GM's June 11, 2013 Letter to NHTSA.
[278] *See* New GM's February 9, 2010 Letter to NHTSA.
[279] *Id.*
[280] *Id.*
[281] *See* New GM's June 11, 2013 Letter to NHTSA.

610. **<u>Safety Defects of the Seat Belt Systems – Frontal Lap-Belt Pretensioner Defect:</u>** On August 7, 2014, New GM recalled 48,059 MY 2013 Cadillac ATS and 2013 Buick Encore vehicles with a defect in the front lap-belt pretensioners.[282]

611. In the affected vehicles, the driver and passenger lap-belt pretensioner cables may not lock in a retracted position; that allows the seat belts to extend when pulled upon.[283] If the seat belts do not remain locked in the retracted position, the seat occupant may not be adequately restrained in a crash, increasing the risk of injury.[284]

612. In July 2012, GM Korea learned that the lap-belt pretensioner cable and seat belt webbing slipped out after being retracted.[285] Several months later, New GM changed the rivet position on the pretensioner bracket and the design of the pretension mounting bolt.[286] This change was made after New GM started production on the 2013 MY Buick Encore.[287]

613. In October 2012, New GM testing on a pre-production 2014 MY Cadillac CTS revealed that the driver side front seat belt anchor pretensioner cables retracted upon deployment to pull in the lap-belt webbing, as intended, but did not lock in that position; that allowed the retracted webbing to return ("pay out") to its original position under loading, which was not intended.[288]

614. On November 13, 2012, New GM modified the design of the lap-belt pretensioner for the Cadillac CTS, Cadillac ATS, and Cadillac ELR vehicles to include a modified bolt, relocation of a rivet in the cam housing to reposition the locking cam, and a

[282] *See* August 7, 2014 Letter from New GM to NHTSA.

[288] *Id.*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 222 of 337

change in torque of the lap-belt pretensioner bolt to seat.[289] These changes were implemented in the 2014 MY Cadillac CTS and Cadillac ELR, but not in the 2013 MY Cadillac ATS.[290]

615. Despite making these adjustments to later MY vehicles only, New GM did not launch an investigation into the performance of the lap-belt pretensioners in the 2013 MY Buick Encore and Cadillac ATS until mid-April, 2013.[291] New GM claims that during this year-long investigation period it found no issues potentially relating to the pay out of the lap-belt pretensioners.[292]

616. Nonetheless, New GM decided to issue a safety recall for the affected vehicles on July 31, 2014.[293] It later expanded the recall by 55 additional vehicles, to a total population of 48,114, on August 19, 2014.[294]

617. **<u>Safety Defects of the Seat:</u>** On July 22, 2014, New GM issued a safety recall of 414,333 vehicles with a power height adjustable seats defect.[295]

618. In the affected vehicles, the bolt that secures the height adjuster in the driver and front passenger seats may become loose or fall out. If the bolt falls out, the seat will drop suddenly to the lowest vertical position. The sudden drop can affect the driver's ability to safely operate the vehicle, and can increase the risk of injury to the driver and the front-seat passenger if there is an accident. New GM admits to knowledge of at least one crash caused by this defect.[296]

---

[289] *Id.*
[290] *Id.*
[291] *Id.*
[292] *Id.*
[293] *Id.*
[294] *Id.*
[295] *See* July 22, 2014 Letter from New GM to NHTSA.
[296] *Id.*

619. New GM was aware of this defect by July 10, 2013 when the crash occurred, and by July 22, 2013, New GM was aware that the crash was caused when the bolt on the height adjuster fell out.[297]

620. By September 5, 2013, New GM was aware of 27 cases of loose or missing height adjuster bolts in Camaro vehicles.[298] Yet New GM waited until July 15 before its Safety Field Decision Authority made the decision to conduct a safety recall.

621. **Safety Defects Affecting the Brakes in GM-branded Vehicles – Brake Light Defect:** On May 14, 2014, New GM issued a safety recall of approximately 2.4 million vehicles with a dangerous brake light defect.

622. In the affected vehicles, the brake lamps may fail to illuminate when the brakes are applied or illuminate when the brakes are not engaged; the same defect can disable cruise control, traction control, electronic stability control, and panic brake assist operation, thereby increasing the risk of collisions and injuries.[299]

623. Once again, Old GM and later New GM knew of the dangerous brake light defect for years before it took anything approaching the requisite remedial action. In fact, although the brake light defect has caused at least 13 crashes since 2008, New GM did not recall all 2.4 million vehicles with the defect until May 2014.

624. According to New GM, the brake defect originates in the Body Control Module (BCM) connection system. "Increased resistance can develop in the [BCM] connection system and result in voltage fluctuations or intermittency in the Brake Apply Sensor (BAS) circuit that can cause service brakes lamp malfunction."[300] The result is brake

[297] *Id.*
[298] *Id.*
[299] *See* New GM Notification Campaign No. 14V-252 dated May 28, 2014, at 1.
[300] *Id.*

lamps that may illuminate when the brakes are not being applied and may not illuminate when the brakes are being applied. [301]

625. The same defect can also cause the vehicle to get stuck in cruise control if it is engaged, or cause cruise control to not engage, and may also disable the traction control, electronic stability control, and panic-braking assist features.[302]

626. New GM now acknowledges that the brake light defect "may increase the risk of a crash."[303]

627. As early as September 2008, NHTSA opened an investigation for MY 2005-2007 Pontiac G6 vehicles involving allegations that the brake lights may turn on when the driver does not depress the brake pedal and may ***not*** turn on when the driver ***does*** depress the brake pedal.[304]

628. During its investigation of the brake light defect in 2008, Old GM found elevated warranty claims for the brake light defect for MY 2005 and 2006 vehicles built in January 2005, and found "fretting corrosion in the BCM C2 connector was the root cause" of the problem.[305] Old GM and its part supplier Delphi decided that applying dielectric grease to the BCM C2 connector would be "an effective countermeasure to the fretting corrosion."[306] Beginning in November of 2008, the Company began applying dielectric grease in its vehicle assembly plants.[307]

629. On December 4, 2008, Old GM issued a TSB recommending the application of dielectric grease to the BCM C2 connector for the MY 2005-2009, Pontiac G6, 2004-2007

---

[301] *Id.*
[302] *Id.*
[303] *Id.*
[304] *Id.* at 2.
[305] *Id.*
[306] *Id.*
[307] *Id* at 3.

Chevrolet Malibu/Malibu Maxx, 2008 Malibu Classic, and 2007-2009 Saturn Aura vehicles.[308] One month later, in January 2009, Old GM recalled only a small subset of the vehicles with the brake light defect – 8,000 MY 2005-2006 Pontiac G6 vehicles built during the month of January, 2005.[309]

630. Not surprisingly, the brake light problem was far from resolved.

631. In October 2010, New GM released an updated TSB regarding "intermittent brake lamp malfunctions," and added MY 2008-2009 Chevrolet Malibu/Malibu Maxx vehicles to the list of vehicles for which it recommended the application of dielectric grease to the BCM C2 connector.[310]

632. In September of 2011, New GM received an information request from Canadian authorities regarding brake light defect complaints in vehicles that had not yet been recalled. Then, in June 2012, NHTSA provided New GM with additional complaints "that were outside of the build dates for the brake lamp malfunctions on the Pontiac G6" vehicles that had been recalled.[311]

633. In February of 2013, NHTSA opened a "Recall Query" in the face of 324 complaints "that the brake lights do not operate properly" in Pontiac G6, Malibu, and Aura vehicles that had not yet been recalled.[312]

634. In response, New GM asserts that it "investigated these occurrences looking for root causes that could be additional contributors to the previously identified fretting

[308] *Id.* at 2.

[312] *Id.* at 3.

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 226 of 337

corrosion," but that it continued to believe that "fretting corrosion in the BCM C2 connector" was the "root cause" of the brake light defect.[313]

635. In June of 2013, NHTSA upgraded its "Recall Query" concerning brake light problems to an "Engineering Analysis."[314]

636. In August 2013, New GM found an elevated warranty rate for BCM C2 connectors in vehicles built *after* Old GM had begun applying dielectric grease to BCM C2 connectors at its assembly plants in November of 2008.[315] In November of 2013, New GM concluded that "the amount of dielectric grease applied in the assembly plant starting November 2008 was insufficient…."[316]

637. Finally, in March of 2014, "[New] GM engineering teams began conducting analysis and physical testing to measure the effectiveness of potential countermeasures to address fretting corrosion. As a result, New GM determined that additional remedies were needed to address fretting corrosion."[317]

638. On May 7, 2014, New GM's Executive Field Action Decision Committee finally decided to conduct a safety recall.

639. According to New GM, "Dealers are to attach the wiring harness to the BCM with a spacer, apply dielectric lubricant to both the BCM CR and harness connector, and on the BAS and harness connector, and relearn the brake pedal home position."[318]

---

313 *Id.*

317 *Id.* at 4.
318 *Id.*

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 227 of 337

640. New GM sat on and concealed its knowledge of the brake light defect for years, and did not even consider available countermeasures (other than the application of grease that had proven ineffective) until March of this year.

641. **<u>Safety Defects Affecting the Brakes in GM-branded Vehicles – Brake Booster Pump Defect:</u>** On March 17, 2014, New GM issued a safety recall of 63,903 MY 2013-2014 Cadillac XTS vehicles with a brake booster pump defect.

642. In the affected vehicles, a cavity plug on the brake boost pump connector may dislodge and allow corrosion of the brake booster pump relay connector. This can have an adverse impact on the vehicle's brakes and increase the risk of collision. This same defect can also cause a fire in the vehicle resulting from the electrical shore in the relay connector.

643. In June of 2013, New GM learned that a fire occurred in a 2013 Cadillac XTS vehicle while it was being transported between car dealerships. Upon investigation, New GM determined that the fire originated near the brake booster pump relay connector, but could not determine the "root cause" of the fire.

644. A second vehicle fire in a 2013 Cadillac XTS occurred in September of 2013. In November 2013, the same team of New GM investigators examined the second vehicle, but, again, could not determine the "root cause" of the fire.

645. In December 2013, New GM identified two warranty claims submitted by dealers related to complaints by customers about vibrations in the braking system of their vehicles. The New GM team investigating the two prior 2013 Cadillac XTS fires inspected these parts and discovered the relay connector in both vehicles had melted.

646. In January 2014, New GM determined that pressure in the relay connector increased when the brake booster pump vent hose was obstructed or pinched. Further testing

revealed that pressure from an obstructed vent hose could force out the cavity plugs in the relay connector, and in the absence of the plugs, water, and other contaminants can enter and corrode the relay connector, causing a short and leading to a fire or melting.

647. On March 11, 2014, New GM issued a safety recall for the affected vehicles.

648. **Safety Defects Affecting the Brakes in GM-branded Vehicles – Hydraulic Boost Assist Defect:** On May 13, 2014, New GM recalled 140,067 model year 2014 Chevrolet Malibu vehicles with a hydraulic brake boost assist defect.[319]

649. In the affected vehicles, the "hydraulic boost assist" may be disabled; when that happens, slowing or stopping the vehicle requires harder brake pedal force, and the vehicle will travel a greater distance before stopping. Therefore, these vehicles do not comply with Federal Motor Vehicle Safety Standard number 135, "Light Vehicle Brake Systems," and are at increased risk of collision.[320]

650. **Safety Defects Affecting the Brakes in GM-branded Vehicles – Brake Rotor Defect:** On May 7, 2014, New GM recalled 8,208 MY 2014 Chevrolet Malibu and Buick LaCrosse vehicles with a brake rotor defect.

651. In the affected vehicles, New GM may have accidentally installed rear brake rotors on the front brakes. The rear rotors are thinner than the front rotors, and the use of rear rotors in the front of the vehicle may result in a front brake pad detaching from the caliper. The detachment of a break pad from the caliper can cause a sudden reduction in braking which lengthens the distance required to stop the vehicle and increases the risk of a crash.

652. **Safety Defects Affecting the Brakes in GM-branded Vehicles – Reduced Brake Performance Defect:** On July 28, 2014, New GM recalled 1,968 MY 2009-2010

[319] *See* May 13, 2014 Letter from New GM to NHTSA.
[320] *Id.*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 229 of 337

Chevrolet Aveo and 2009 Pontiac G3 vehicles.[321] Affected vehicles may contain brake fluid which does not protect against corrosion of the valves inside the anti-lock brake system ("ABS") module, affecting the closing motion of the valves.[322] If the ABS valve corrodes it may result in longer brake pedal travel or reduced performance, increasing the risk of a vehicle crash.[323]

653. New GM was aware of this defect as far back as August 2012, when it initiated a customer satisfaction campaign.[324] The campaign commenced in November 2012, and New GM estimates that, to date, approximately 34% of Chevrolet Aveo and Pontiac G3 vehicles included in the customer satisfaction campaign are not yet repaired.[325] On July 19, 2014, New GM decided to conduct a safety recall for vehicles that had been included in the customer satisfaction program but had not had the service repair performed.[326]

654. **Safety Defects Affecting the Brakes in GM-branded Vehicles – Parking Brake Defect:** On September 20, 2014, GM recalled more than 221,000 MY 2014-15 Chevrolet Impalas and 2013-15 model Cadillac XTS vehicles because of a parking-brake defect.

655. In the affected vehicles, the brake pads can stay partly engaged, which can lead to "excessive brake heat that may result in a fire," according to documents posted on the NHTSA website.

656. NHTSA said the fire risk stemmed from the rear brakes generating "significant heat, smoke and sparks." The agency also warned that drivers of affected vehicles might

[326] *Id.*

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 230 of 337

experience "poor vehicle acceleration, undesired deceleration, excessive brake heat and premature wear to some brake components."

657. **Safety Defects Affecting the Steering in GM-branded Vehicles – Sudden Power-Steering Failure Defect:** Between 2003 and 2010, over 1.3 million GM-branded vehicles in the United States were sold with a safety defect that causes the vehicle's electric power steering ("EPS") to suddenly fail during ordinary driving conditions and revert back to manual steering, requiring greater effort by the driver to steer the vehicle and increasing the risk of collisions and injuries.

658. The affected vehicles are MY 2004-2006 and 2008-2009 Chevrolet Malibu, 2004-2006 Chevrolet Malibu Maxx, 2009-2010 Chevrolet HHR, 2010 Chevrolet Cobalt, 2005-2006 and 2008-2009 Pontiac G6, 2004-2007 Saturn Ion, and 2008-2009 Saturn Aura vehicles.

659. As with the ignition switch defects and many of the other defects, New GM was aware of the power steering defect long before it took anything approaching full remedial action.

660. When the power steering fails, a message appears on the vehicle's dashboard, and a chime sounds to inform the driver. Although steering control can be maintained through manual steering, greater driver effort is required, and the risk of an accident is increased.

661. In 2010, New GM first recalled Chevy Cobalt and Pontiac G5 models for these power steering issues, yet it did *not* recall the many other vehicles that had the very same power steering defect.

662. Documents released by NHTSA show that New GM waited years to recall nearly 335,000 Saturn Ions for power-steering failure – despite receiving nearly 4,800

consumer complaints and more than 30,000 claims for warranty repairs. That translates to a complaint rate of 14.3 incidents per thousand vehicles and a warranty claim rate of 9.1 percent. By way of comparison, NHTSA has described as "high" a complaint rate of 250 complaints per 100,000 vehicles.[327] Here, the rate translates to 1,430 complaints per 100,000 vehicles.

663. In response to the consumer complaints, in September 2011, NHTSA opened an investigation into the power-steering defect in Saturn Ions.

664. NHTSA database records show complaints from Ion owners as early as June 2004, with the first injury reported in May 2007.

665. NHTSA has linked approximately 12 crashes and two injuries to the power-steering defect in the Ions.

666. In September 2011, after NHTSA began to make inquiries about the safety of the Saturn Ion, GM acknowledged that it had received almost 3,500 customer reports claiming a sudden loss of power steering in 2004-2007 Ion vehicles.

667. The following month, New GM engineer Terry Woychowski informed current CEO Mary Barra – then head of product development –that there was a serious power-steering issue in Saturn Ions, and that it may be the same power steering issue that plagued the Chevy Cobalt and Pontiac G5. Ms. Barra was also informed of the ongoing NHTSA investigation. At the time, NHTSA reportedly came close to concluding that Saturn Ions should have been included in New GM's 2010 steering recall of Cobalt and G5 vehicles.

668. Instead of recalling the Saturn Ion, GM sent dealers a service bulletin in May of 2012 identifying complaints about the steering system in the vehicle.

---

[327] *See* https://www-odi.nhtsa.dot.gov/cars/problems/defect/-results.cfm?action_number=EA06002&Search Type= QuickSearch&summary=true.

669. By the time GM finally recalled the Saturn Ion – four years later, in March 2014 - NHTSA had received more than 1,200 complaints about the vehicle's power steering. Similar complaints resulted in over 30,000 warranty claims with GM.

670. After announcing the March 31, 2014 recall, Jeff Boyer, New GM's Vice President of Global Vehicle Safety, acknowledged that New GM recalled some of these same vehicle models previously for the *same issue*, but that New GM "did not do enough."

671. According to an analysis by the New York Times published on April 20, 2014, New GM has "repeatedly used technical service bulletins to dealers and sometimes car owners as stopgap safety measures instead of ordering a timely recall."

672. Former NHTSA head Joan Claybrook echoed this conclusion, stating, "There's no question that service bulletins have been used where recalls should have been."

673. NHTSA has recently criticized New GM for issuing service bulletins on at least four additional occasions in which a recall would have been more appropriate and in which New GM later, in fact, recalled the subject vehicles.

674. These inappropriate uses of service bulletins prompted Frank Borris, the top defect investigator for NHTSA, to write to New GM's product investigations director, Carmen Benavides, in July 2013, complaining that "GM is slow to communicate, slow to act, and, at times, requires additional effort . . . that we do not feel is necessary with some of [GM's] peers."

675. Mr. Borris' correspondence was circulated widely among New GM's top executives. Upon information and belief, the following employees received a copy: John Calabrese and Alicia Boler-Davis, two vice presidents for product safety; Michael Robinson,

vice president of regulatory affairs; Jim Federico; Gay Kent, director of product investigations, and William Kemp, an in-house product liability lawyer.

676. **Safety Defects Affecting the Steering in GM-branded Vehicles – Power-Steering Hose Clamp Defect:** On June 18, 2014, New GM issued a safety recall of 57,192 MY 2015 Chevrolet Silverado 2500/3500 HD and 2015 GMC Sierra 2500/3500 HD vehicles with a power steering hose clamp defect.

677. In the affected vehicles, the power steering hose clamp may disconnect from the power steering pump or gear, causing a loss of power steering fluid. A loss of power steering fluid can result in a loss of power steering assist and power brake assist, increasing the risk of a crash.

678. **Safety Defects Affecting the Steering in GM-branded Vehicles – Power-Steering Control Module Defect:** On July 22, 2014, New GM recalled 57,242 MY 2014 Chevrolet Impala vehicles with a Power Steering Control Module defect.

679. Drivers of the affected vehicles may experience reduced or no power steering assist at start-up or while driving due to a poor electrical ground connection to the Power Steering Control Module. If power steering is lost, the vehicle will revert to manual steering mode. Manual steering requires greater driver effort and increases the risk of accident. New GM acknowledges one crash related to this condition.

680. On May 17, 2013, New GM received a report of a 2014 Impala losing communication with the Power Steering Control Module ("PSCM"). On or about May 24, 2013, New GM determined the root cause was a poor electrical connection at the PSCM grounding stud wheelhouse assembly.

681. But New GM's initial efforts to implement new procedures and fix the issue were unsuccessful. In January 2014, New GM reviewed warranty data and discovered 72 claims related to loss of assist or the Service Power Steering message after implementation of New GM's process improvements.

682. Then, on February 25, 2014, New GM received notice of a crash involving a 2014 Impala that was built in 2013. The crash occurred when the Impala lost its power steering, and crashed into another vehicle as a result.

683. In response, New GM monitored field and warranty data related to this defect and, as of June 24, 2014, it identified 253 warranty claims related to loss of power steering assist or Service Power Steering messages.

684. On July 15, 2014, New GM finally issued a safety recall for the vehicles, having been unsuccessful in its efforts to minimize and conceal the defect.

685. **Safety Defects Affecting the Steering in GM-branded Vehicles – Lower Control Arm Ball Joint Defect:** On July 18, 2014, New GM issued a safety recall of 1,919 MY 2014-2015 Chevrolet Spark vehicles with a lower control arm ball joint defect.

686. The affected vehicles were assembled with a lower control arm bolt not fastened to specification. This can cause the separation of the lower control arm from the steering knuckle while the vehicle is being driven, and result in the loss of steering control. The loss of steering control in turn creates a risk of accident.[328]

687. **Safety Defects Affecting the Steering in GM-branded Vehicles – Steering Tie-Rod Defect:** On May 13, 2014, New GM issued a safety recall of 477 MY 2014

[328] *See* July 18, 2014 Letter from New GM to NHTSA.

Chevrolet Silverado, 2014 GMC Sierra and 2015 Chevrolet Tahoe vehicles with a steering tie-rod defect.

688. In the affected vehicles, the tie-rod threaded attachment may not be properly tightened to the steering gear rack. An improperly tightened tie-rod attachment may allow the tie-rod to separate from the steering rack and greatly increases the risk of a vehicle crash.[329]

689. **Safety Defects Affecting the Steering in GM-branded Vehicles – Joint Fastener Torque Defect:** On June 30, 2014, New GM issued a safety recall of 106 MY 2014 Chevrolet Camaro, 2014 Chevrolet Impala, 2014 Buick Regal and 2014 Cadillac XTS vehicles with a joint fastener torque defect.

690. In the affected vehicles, joint fasteners were not properly torqued to specification at the assembly plant. As a result of improper torque, the fasteners may "back out" and cause a "loss of steering," increasing the risk of a crash.[330]

691. New GM claims that it was alerted to the problem by a warranty claim filed on December 23, 2013, at a California dealership for a Chevrolet Impala built at New GM's Oshawa car assembly plant in Ontario, Canada. Yet the Oshawa plant was not informed of the issue until March 4, 2014.[331]

692. Between March 4 and March 14, 2014, the Oshawa plant conducted a "root cause" investigation and concluded that the problem was caused by an improperly fastened "Superhold" joint. Though the Impala was electronically flagged for failing to meet the requisite torque level, the employee in charge of correcting the torque level failed to do so.[332]

---

[329] *See* May 27, 2014 Letter from New GM to NHTSA.
[330] *See* July 2, 2014 Letter from New GM to NHTSA.
[331] *Id.*
[332] *Id.*

693. On or about March 14, 2014, New GM Oshawa learned of two more warranty claims concerning improperly fastened Superhold joints. Both of the vehicles were approved by the same employee who had approved the corrective action for the joint involved in the December 23, 2013 warranty claim. The two additional vehicles were also flagged for corrective action, but the employee failed to correct the problem.[333]

694. On March 20, 2014, New GM Oshawa concluded the derelict employee had approved 112 vehicles after they were flagged for corrective action to the Superhold joint.[334]

695. Yet New GM waited until June 25, 2014 before deciding to conduct a safety recall.

696. **Safety Defects Affecting the Powertrain in Chevrolet and Pontiac Vehicles – Transmission Shift Cable Defect:** On May 19, 2014, New GM issued a safety recall for more than 1.1 million Chevrolet and Pontiac vehicles with dangerously defective transmission shift cables.

697. In the affected vehicles, the shift cable may fracture at any time, preventing the driver from switching gears or placing the transmission in the "park" position. According to New GM, "[i]f the driver cannot place the vehicle in park, and exits the vehicle without applying the park brake, the vehicle could roll away and a crash could occur without prior warning."[335]

698. Yet again, Old GM and later New GM knew of the shift cable defect long before it issued the recent recall of more than 1.1 million vehicles with the defect.

699. In May of 2011, NHTSA informed New GM that it had opened an investigation into failed transmission cables in 2007 model year Saturn Aura vehicles. In

[333] *Id.*
[334] *Id.*
[335] *See* New GM letter to NHTSA Re: NHTSA Campaign No. 14V-224 dated May 22, 2014, at 1.

response, New GM noted "a cable failure model in which a tear to the conduit jacket could allow moisture to corrode the interior steel wires, resulting in degradation of shift cable performance, and eventually, a possible shift cable failure."[336]

700. Upon reviewing these findings, New GM's Executive Field Action Committee conducted a "special coverage field action for the 2007-2008 MY Saturn Aura vehicles equipped with 4 speed transmissions and built with Leggett & Platt cables." New GM apparently chose that cut-off date because, on November 1, 2007, Kongsberg Automotive replaced Leggett & Platt as the cable provider.[337]

701. New GM did not recall any of the vehicles with the shift cable defect at this time, and limited its "special coverage field action" to the 2007-2008 Aura vehicles even though "the same or similar Leggett & Platt cables were used on … Pontiac G6 and Chevrolet Malibu (MMX380) vehicles."

702. In March 2012, NHTSA sent New GM an Engineering Assessment request to investigate transmission shift cable failures in 2007-2008 MY Aura, Pontiac G6, and Chevrolet Malibu.[338]

703. In responding to the Engineering Assessment request, New GM for the first time "noticed elevated warranty rates in vehicles built with Kongsberg shift cables." Similar to their predecessor vehicles built with Leggett & Platt shift cables, in the vehicles built with Kongsberg shift cables "the tabs on the transmission shift cable end may fracture and separate without warning, resulting in failure of the transmission shift cable and possible unintended vehicle movement."[339]

---

[336] *Id.* at 2.
[337] *Id.*
[338] *Id.*
[339] *Id.*

704. On September 13, 2012, the Executive Field Action Decision Committee decided to conduct a safety recall. This initial recall was limited to 2008-2010 MY Saturn Aura, Pontiac G6, and Chevrolet Malibu vehicles with 4-speed transmission built with Kongsberg shifter cables, as well as 2007-2008 MY Saturn Aura and 2005-2007 MY Pontiac G6 vehicles with 4-speed transmissions which may have been serviced with Kongsberg shift cables.[340]

705. But the shift cable problem was far from resolved.

706. In March of 2013, NHTSA sent New GM a second Engineering Assessment concerning allegations of failure of the transmission shift cables on all 2007-2008 MY Saturn Aura, Chevrolet Malibu, and Pontiac G6 vehicles.[341]

707. New GM continued its standard process of "investigation" and delay. But by May 9, 2014, New GM was forced to concede that "the same cable failure mode found with the Saturn Aura 4-speed transmission" was present in a wide population of vehicles.[342]

708. Finally, on May 19, 2014, New GM's Executive Field Action Decision Committee decided to conduct a safety recall of more than 1.1 million vehicles with the shift cable defect.

709. **Safety Defects Affecting the Powertrain in Cadillac Vehicles – Transmission Shift Cable Defect:** On June 18, 2014, New GM issued a safety recall of 90,750 MY 2013-2014 Cadillac ATS and 2014 Cadillac CTS vehicles with a transmission shift cable defect.

710. In the affected vehicles, the transmission shift cable may detach from either the bracket on the transmission shifter or the bracket on the transmission. If the cable detaches

[340] *Id.*
[341] *Id.*
[342] *Id.*

while the vehicle is being driven, the transmission gear selection may not match the indicated gear and the vehicle may move in an unintended or unexpected direction, increasing the risk of a crash. Furthermore, when the driver goes to stop and park the vehicle, the transmission may not be in "PARK" even though the driver has selected the "PARK" position. If the vehicle is not in the "PARK" position, there is a risk the vehicle will roll away as the driver and other occupants exit the vehicle or anytime thereafter. A vehicle rollaway causes a risk of injury to exiting occupants and bystanders.

711. On March 20, 2014, a New GM dealership contacted an assembly plant about a detached transmission shift cable. The assembly plant investigated and discovered one additional detached shift cable in the plant.

712. New GM assigned a product investigation engineer was assigned, and from March 24 to June 2, 2014, New GM examined warranty claims and plant assembly procedures and performed vehicle inspections. Based on these findings, New GM issued a safety recall on June 11, 2014.

713. **<u>Safety Defects Affecting the Transmission in GM-branded Vehicles – Transmission Oil Cooler Defect:</u>** On March 31, 2014, New GM issued a safety recall of 489,936 vehicles with a transmission oil cooler line defect.

714. In the affected vehicles, the transmission oil cooler lines may not be securely seated in the fitting. This can cause transmission oil to leak from the fitting, where it can contact a hot surface and cause a vehicle fire.

715. On September 4, 2013, a New GM assembly plant in Silao, Mexico experienced two instances in which a transmission oil cooler ("TOC") line became disconnected from the thermal bypass valve in 2014 pick-up trucks on the K2XX platform

during pressure tests. As a result, New GM required the supplier of the TOC lines and thermal bypass valve assembly (collectively the "TOC assembly") for these vehicles to issue a Quality Alert for its facility concerning the TOC assemblies. The supplier sorted the over 3,000 TOC assemblies at its facility, performed manual pull checks and visual inspections, and found no defects.

716. New GM also conducted manual pull checks and visual inspections on the TOC assemblies in the two New GM assembly plants responsible for the K2XX platform at the time (Silao, Mexico and Fort Wayne, Indiana), and identified no defects.

717. On September 19, 2013, the supplier provided New GM with a plan to ensure that the TOC lines were properly connected to the thermal bypass valve going forward. In addition to continuing its individual pull tests to verify that these connections were secure, the supplier planned to add a manual alignment feature to the three machines that it used to connect the TOC lines to the thermal bypass valve boxes. The supplier completed these upgrades on October 28, 2013.

718. On January 2, 2014, New GM's Product Investigations, Field Performance Assessment, and K2XX program teams received an investigator's report concerning a 2014 Chevrolet Silverado that caught fire during a test drive from a dealer in Gulfport, Mississippi on December 16, 2013. New GM's on-site investigation of the vehicle revealed that a TOC line had disconnected from the thermal bypass valve box. The build date for this vehicle was October 10, 2013, and the build date for the TOC assembly was September 28, 2013, prior to the supplier's October 28, 2013 completion of its machinery upgrades.

719. On January 3, 2014, New GM issued a Quality Alert to its assembly plants for K2XX vehicles, advising them to manually inspect the TOC assemblies from the supplier to

ensure that the TOC lines were securely connected. New GM also informed the supplier of the Mississippi event.

720. On January 15, 2014, New GM learned that a 2014 Chevrolet Silverado had recently caught fire while being driven by a dealer salesperson. New GM's investigation of the incident determined that one of the vehicle's TOC lines was disconnected from the thermal bypass valve box. The vehicle was built on November 12, 2013.

721. On January 29, after completing its investigation, New GM followed up with its K2XX assembly plants, and found no additional cases involving disconnected TOC lines after the January 3 Quality Alert.

722. On January 31, 2014, a team from New GM traveled to the supplier's facility to work with the supplier on its thermal valve assembly process. By February 27, 2014, the supplier added pressure transducers to the machine fixtures used to connect the TOC lines to the thermal bypass valve boxes to directly monitor the delivery of air pressure to the pull-test apparatus.

723. On March 23, 2014, a 2015 GMC Yukon caught fire during a test drive from a dealership in Anaheim, California. On March 24, 2014, New GM formed a team to investigate the incident; the team was dispatched to Anaheim that afternoon. On the morning of March 25, 2014, the New GM team examined the vehicle in Anaheim and determined that the incident was caused by a TOC line that was disconnected from the thermal bypass valve box. The assembly plants for K2XX vehicles were placed on hold and instructed to inspect all TOC assemblies in stock, as well as those in completed vehicles. A team from New GM also traveled to the supplier on March 25, 2014, to further evaluate the assembly process.

724. On March 26, 2014, New GM personnel along with personnel from the supplier examined the TOC assembly from the Anaheim vehicle. The group concluded that a TOC line had not been properly connected to the thermal bypass valve box. The build date for the thermal valve assembly in the Anaheim vehicle was determined to be January 16, 2014, after the supplier's October 28, 2013 machinery upgrades, but before its February 27, 2014 process changes.

725. On March 27, 2014, the Product Investigator assigned to this matter received a list of warranty claims relating to transmission fluid leaks in K2XX vehicles, which he had requested on March 24. From that list, he identified five warranty claims, ranging from August 30, 2013, to November 20, 2013, that potentially involved insecure connections of TOC lines to the thermal bypass valve box, none of which resulted in a fire. All five vehicles were built before the supplier completed its machinery upgrades on October 28, 2013.

726. Also on March 27, 2014, following discussions with New GM, the supplier began using an assurance cap in connecting the TOC lines to the thermal bypass valve boxes to ensure that the TOC lines are properly secured.

727. On March 28, 2014, New GM decided to initiate a recall of vehicles built on the K2XX platform so that they can be inspected to ensure that the TOC lines are properly secured to the thermal bypass valve box.

728. **Safety Defects Affecting the Transmission in GM-branded Vehicles – Transfer Case Control Module Software Defect:** On June 26, 2014, New GM issued a safety recall of 392,459 vehicles with a transfer case control module software defect.

729. In the affected vehicles, the transfer case may electronically switch to neutral without input from the driver. If the transfer case switches to neutral while the vehicle is

parked and the parking brake is not in use, the vehicle may roll away and cause injury to bystanders. If the transfer case switches to neutral while the vehicle is being driven, the vehicle will lose drive power, increasing the risk of a crash.

730. New GM first observed this defect on February 14, 2014, when a 2015 model year development vehicle, under slight acceleration at approximately 70 mph, shifted into a partial neutral position without operator input. When the vehicle shifted into neutral, the driver lost power, could not shift out of neutral, and was forced to stop driving. Once the vehicle stopped, the transfer case was in a complete neutral state and could not be moved out of neutral.

731. On or about February 17, 2014, New GM contacted Magna International Inc., the supplier of the transfer case and the Transfer Case Control Module ("TCCM") hardware and software, to investigate the incident. Magna took the suspect TCCM for testing.

732. From mid-February through mid-March, Magna continued to conduct testing. On March 18, Magna provided its first report to New GM but at that time, Magna had not fully identified the root cause.

733. On March 27, Magna provided an updated report that identified three scenarios that could cause a transfer case to transfer to neutral.

734. Between late March and April, New GM engineers continued to meet with Magna to identify additional conditions that would cause the unwanted transfer to neutral. New GM engineers also analyzed warranty information to identify claims for similar unwanted transfer conditions.

735. Two warranty claims for unwanted transfers were identified that appeared to match the conditions exhibited on February 14, 2014. Those warranty claims were submitted

on March 3 and March 18, 2014. On April 23, 2014, a Product Investigation engineer was assigned. A Problem Resolution Tracking System (PRTS) case was initiated on May 20, 2014.

736. The issue was presented to Open Investigation Review (OIR) on June 16, 2014, and on June 18, 2014, the Safety and Field Action Decision Authority (SFADA) decided to conduct a safety recall.

737. **Safety Defects Affecting the Transmission in GM-branded Vehicles – Acceleration-Lag Defect:** On April 24, 2014, New GM issued a safety recall of 50,571 MY 2013 Cadillac SRX vehicles with an acceleration-lag defect.

738. In the affected vehicles, there may be a three to four-second lag in acceleration due to faulty transmission control module programming. That can increase the risk of a crash.

739. On October 24, 2013, New GM's transmission calibration group learned of an incident involving hesitation in a company owned vehicle. New GM obtained the vehicle to investigate and recorded one possible event showing a one second hesitation.

740. In early December 2013, New GM identified additional reports of hesitation from the New GM company-owned vehicle driver fleet, as well as NHTSA VOQs involving complaints of transmission hesitation in the 2013 SRX vehicles.

741. In mid-February 2014, the transmission calibration team obtained additional company vehicles and repurchased customer vehicles that were reported to have transmission hesitation in order to install data loggers and attempt to reproduce the defect. On February 20, 2014, and February 27, 2014, New GM captured two longer hesitation events consistent with customer reports.

742. In response to the investigation, New GM issued a safety recall for the affected vehicles on April 17, 2014.

743. **Safety Defects Affecting the Transmission in GM-branded Vehicles – Transmission Turbine Shaft Fracture Defect:** On June 11, 2014, New GM recalled 21,567 MY 2012 Chevrolet Sonic vehicles equipped with a 6 Speed Automatic Transmission and a 1.8L Four Cylinder Engine suffering from a turbine shaft fracture defect.

744. In the affected vehicles, the transmission turbine shaft may fracture. If the transmission turbine shaft fracture occurs during vehicle operation in first or second gear, the vehicle will not upshift to the third through sixth gears, limiting the vehicle's speed. If the fracture occurs during operation in third through sixth gear, the vehicle will coast until it slows enough to downshift to first or second gear, increasing the risk of a crash.[343]

745. The turbine shafts at issue were made by Sundram Fasteners Ltd. ("SFL").[344] In November 2013, New GM learned of two broken turbine shafts in the affected vehicles when transmissions were returned to New GM's Warranty Parts Center (WPC). New GM sent the shafts to SFL, but SFL did not identify any "non-conformities."[345] But "[s]ubsequent investigation by GM identified a quality issue" with the SFL turbine shafts.[346]

746. By late January 2014, 5 or 6 more transmissions "were returned to the WPC for the same concern." That prompted a warranty search for related claims by New GM's "Quality Reliability Durability (QRD) lead for Gears and Shafts and Validation Engineer for Global Front Wheel 6 Speed Transmission…." That search revealed "a clear increase in incidents for 2012 Sonic built with 6T30 turbine shaft[s] during late February to June of 2012."[347]

[343] *See* June 11, 2014 Letter from New GM to NHTSA.
[344] *Id.*
[345] *Id.*
[346] *Id.*
[347] *Id.*

747. In March of 2014, New GM engineers found that turbine shafts made "in the suspect window were found to have a sharp corner and not a smooth radius in the spline." Testing done in April of 2014 apparently showed a lower life expectancy for "shafts with sharp corners" as opposed to "shafts with smooth radii."[348]

748. On June 4, 2014 "the Safety Field Action Decision Authority (SFADA) decided to conduct a safety recall," and New GM did so on June 11, 2014.[349]

749. **Safety Defects Affecting the Transmission in GM-branded Vehicles – Automatic Transmission Shaft Cable Adjuster Defect:** On February 20, 2014, New GM issued a noncompliance recall of 352 vehicles with defective automatic transmission shift cable adjusters.[350]

750. In the affected vehicles, one end of the transmission shift cable adjuster body has four legs that snap over a ball stud on the transmission shift lever. One or more of these legs may have been fractured during installation. If any of the legs are fractured, the transmission shift cable adjuster may disengage from the transmission shift lever. When that happens, the driver may be unable to shift gears, and the indicated gear position may not be accurate. If the adjuster is disengaged when the driver attempts to stop and park the vehicle, the driver may be able to shift the lever to the "PARK" position but the vehicle transmission may not be in the "PARK" gear position. That creates the risk that the vehicle will roll away as the driver and other occupants exit the vehicle, or anytime thereafter.[351]

[348] *Id.*
[349] *Id.*
[350] *See* February 20, 2014 Letter from New GM to NHTSA.
[351] *Id.*

751. These vehicles may not conform with Federal Motor Vehicle Safety Standard 102 for Transmission Shift Lever Sequence Starter Interlock and Transmission Braking Effect, or Federal Motor Vehicle Safety Standard 114 for Theft Protection and Rollaway Prevention.

752. **<u>Other Serious Defects Affecting GM-branded Vehicles:</u>** The above-described Safety Defects are not random or coincidental. They are not mere glitches. They are symptoms of an ailing culture at New GM—one that transfers ongoing risk of harm, as well as inconvenience and cost, to New GM's customers. The below list of other serious defects and recalls further illustrates and underscores that New GM has in no way prioritized making safe, defect free cars. There have been no fewer than 20 additional safety and other recalls of GM-Branded vehicles in 2014 alone. The defects are:

- Power management mode software defect
- Light control module defect
- Electrical short in driver's door module defect
- Front axle shaft defect
- Seat hook weld defect
- Front turn signal bulb defect
- Low-beam headlight defect
- Radio chime defect
- Fuel gauge defect
- Windshield wiper system defect
- Console bin door latch defect
- Driver door wiring splice defect
- Overloaded feed defect
- Windshield wiper module assembly defect

Case 1:14-md-02543-JMF Document 1179-1 Filed 07/01/15 Page 248 of 337

- Engine block heater power cord insulation defect
- Rear shock absorber defect
- Electronic stability control defect
- Unsecured floor mat defect
- Fuse block defect
- Diesel transfer pump defect

XIII. New GM's Misrepresentations That It Made Safe And Reliable Cars, The Ignition Switch Defect, and Other Safety Defects Have Harmed Plaintiffs And The Classes.

753. The ignition switch defect and the other safety defects have caused damage to Plaintiffs and the Class.

754. A vehicle purchased, leased, or retained with a serious safety defect is worth less than the equivalent vehicle leased, purchased, or retained without the defect.

755. A vehicle purchased, leased, or retained under the reasonable assumption that it is safe is worth more than a vehicle known to be subject to the unreasonable risk of catastrophic accident because of the ignition switch defects.

756. Purchasers and lessees of Defective Vehicles prior to the July 11, 2009, inception of New GM paid more for the Defective Vehicles, through a higher purchase price or higher lease payments, than they would have had Old GM disclosed the ignition switch defects. Plaintiffs and those Class members who purchased new or used Defective Vehicles overpaid for their Defective Vehicles as the result of Old GM's conduct, for which New GM is responsible. Because Old and New GM concealed the Ignition Switch Defect and the Other Safety Defects, these Plaintiffs did not receive the benefit of the bargain. In addition, the value of all Defective Vehicles has diminished as the result of Old and New GM's deceptive conduct.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 249 of 337

757. Plaintiffs and *millions* of Class members are stuck with vehicles that are now worth less than they would have been but for Old and New GM's failure to disclose and remedy the Ignition Switch Defect and the Other Safety Defects, and the remaining Class members overpaid at the time of purchase or lease, only to then sell at diminished value on or after February 14, 2014.

758. In addition, Plaintiffs and Class members are subject to a recall that *does not* fully cure the safety defects. Even if they receive a replacement switch with a stronger detent plunger, their vehicles will *not* be safe from the unreasonable risk of sudden unintended shutdown, with the attendant loss of power steering and other critical safety systems, including an operable airbag. That is because New GM has *not* pledged to address either the placement of the ignition switch in the Defective Vehicles *or* the fact that the airbags in the Defective Vehicles become inoperable as soon as the ignition switch turns to the "accessory" or "off" position in all of the Defective Vehicles, and refuses to even provide a stronger ignition switch for the millions of vehicles subject to the June and July ignition switch recalls.

759. If Old or New GM had timely disclosed the ignition switch defects as required by the TREAD Act, the law of fraudulent concealment, and the other State laws set forth below, all Class members' vehicles would now be safe to drive, and would have retained considerably more of their value. Because of the Companies' now highly-publicized campaign of deception, and New GM's belated, piecemeal and ever-expanding recalls, so much stigma has attached to the Defective Vehicles that no rational consumer would now purchase a Defective Vehicle—let alone pay what otherwise would have been fair market value for the vehicle.

760. The fact that vehicles owned by the Plaintiffs and Class are worth less than vehicles that are perceived as safe is demonstrated by the decline in value the Defective Vehicles have experienced since the revelation of Old and New GM's misconduct.

761. In essence Plaintiffs and Class members suffered harm from the revelation of two facts (i) Old and New GM's concealment of switch defects, and (2) New GM's widespread inability to produce safe cars as evidenced by the massive recalls in 2014.

762. For example, the following 2007 model year vehicles suffered estimated diminished value in March 2014 following the February ignition switch recall:

Saturn Ion	$251
Pontiac Solstice	$790
Saturn Sky	$238

763. As the truth was revealed that GM cars were not safe and reliable as evidenced by the unprecedented number of recalls and vehicles recalled, Defective Vehicles suffered additional diminished value by way of illustration:

2007 Pontiac G5	September 2014 Diminished Value $459
2007 Saturn Ion Sedan	September 2014 Diminished Value $472
2007 Saturn Sky	September 2014 Diminished Value $686

<u>TOLLING OF THE STATUTES OF LIMITATION</u>

764. All applicable statutes of limitation have been tolled by Old and New GM's knowing, ongoing and active fraudulent concealment and denial of the facts alleged herein. Plaintiffs and Class members did not discover, and did not know of facts that would have caused a reasonable person to suspect, that Old and New GM did not report information

within their knowledge to federal authorities (including NHTSA), their dealerships. Nor consumers, nor would a reasonable and diligent investigation have disclosed that Old or New GM had information in their possession about the existence and dangerousness of the defects, or that each opted to conceal that information until shortly before this action was filed.

765. All applicable statutes of limitation also have been tolled by operation of the discovery rule. Specifically, Plaintiffs and the other Class members could not have discovered, through the exercise of reasonable diligence, that their Defective Vehicles were defective within the time period of any applicable statutes of limitation.

766. Instead of disclosing the myriad safety defects and disregard of safety of which it was aware, New GM falsely represented that its vehicles were safe, reliable, and of high quality, and that it was a reputable manufacturer that stood behind GM-branded vehicles after they were sold.

767. New GM has been, since its inception, under a continuous duty to disclose to Plaintiffs and the other Class members the true character, quality, and nature of the Defective Vehicles. Instead, New GM has consistently, knowingly, affirmatively, and actively concealed the true nature, quality, and character of the Defective Vehicles from consumers.

768. Based on the foregoing, New GM is estopped from relying on any statutes of limitations in defense of this action as to claims for which the doctrine of estoppel is recognized.

769. Overall, regardless of whether it was New GM or Old GM that manufactured or sold a particular Defective Vehicle to a particular Class member, New GM is responsible for *its own* actions with respect to *all* the Defective Vehicles, and the resulting harm to Class members that occurred as the result of GM's acts and omissions. Simply put, GM was aware

of serious safety defects, and it also knew that Defective Vehicle owners were unaware of the defect, and it chose both to conceal these defects, and to forgo or delay any action to correct them. Under these circumstances, New GM had the clear duty to disclose and not conceal the ignition switch defects to Plaintiffs and the Class—regardless of when they acquired their Defective Vehicles.

770. New GM's obligations stem from several different sources, including, but not limited to: (i) the obligations it explicitly assumed under the TREAD Act to promptly report any safety defect to Defective Vehicle owners and to NHTSA so that appropriate remedial action could occur; (ii) the duty it had under the law of fraudulent concealment, as pleaded below; (iii) the duty it had under the State consumer protection and other laws, as pleaded below; and (iv) the general legal principle embodied in § 324A of the RESTATEMENT (SECOND) OF TORTS, ("Liability To Third Person For Negligent Performance Of Undertaking").

771. In acquiring Old GM, New GM expressly assumed the obligations to make all required disclosures under the TREAD Act with respect to all the Defective Vehicles.

772. Under the TREAD Act, if it is determined that vehicle has a safety defect, the manufacturer must promptly notify vehicle owners, purchasers and dealers of the defect, and may be ordered to remedy the defect. 49 U.S.C. § 30118(b)(2)(A) & (B).

773. Under the TREAD Act, manufacturers must also file a report with NHTSA within five working days of discovering "a defect in a vehicle or item of equipment has been determined to be safety related, or a noncompliance with a motor vehicle safety standard has been determined to exist." 49 C.F.R. § 573.6(a) & (b). At a minimum, the report to NHTSA must include: the manufacturer's name; the identification of the vehicles or equipment

containing the defect, including the make, line, model year and years of manufacturing; a description of the basis for determining the recall population; how those vehicles differ from similar vehicles that the manufacturer excluded from the recall; and a description of the defect. 49 C.F.R. § 276.6(b), (c)(1), (c)(2), & (c)(5).

774. The manufacturer must also promptly inform NHTSA regarding: the total number of vehicles or equipment potentially containing the defect; the percentage of vehicles estimated to contain the defect; a chronology of all principal events that were the basis for the determination that the defect related to motor vehicle safety, including a summary of all warranty claims, field or service reports, and other information, with its dates of receipt; and a description of the plan to remedy the defect. 49 C.F.R. § 276.6(b) & (c).

775. It cannot be disputed that New GM assumed a duty to all Defective Vehicle owners under the TREAD Act, and that it violated this duty.

776. Under § 324A of the RESTATEMENT, an entity that undertakes to render services to another which he should recognize as necessary for the protection of a third person or his things, is subject to liability for harm to the third person resulting from the failure to exercise reasonable care to protect the undertaking if the "failure to establish reasonable care increases the risk of such harm…" While this doctrine of negligent undertaking grew up in the context of physical harm, it also applies to economic loss, such as that suffered by Plaintiffs and the Class.

777. RESTATEMENT § 324A applies to an undertaking which is purely gratuitous, and it applies with even greater force here, where New GM is receiving substantial remuneration for its undertaking in relation to its dealerships' service centers. New GM provides parts for the Defective Vehicles as they are serviced at its dealerships, and receives

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 254 of 337

substantial revenue from dealerships relating to the servicing of Defective Vehicles. It also receives an additional benefit in that many of the people who own these vehicles will eventually sell or trade in their old vehicles for new ones. Consumers using New GM service centers and buying New GM replacement parts necessarily rely upon New GM to advise its dealerships of defects, notify its dealerships of safety related issues, provide its dealerships with accurate and up to date information and enable them to remedy defects. New GM's failure to carry out these obligations has increased the risk of harm to owners of Defective Vehicles, who regularly have their vehicles inspected and serviced at New GM dealerships and rely upon representations that the vehicles are safe and free of defects.

778. New GM's dealerships pass along GM replacement parts, and they also rely on New GM's expertise regarding how the vehicles should be maintained, and what conditions are necessary for the dealer to conclude that the vehicles are in proper working order at the time they are inspected, serviced and released back to the owner. The dealerships rely on New GM's assurances of safety, that New GM will tell them about safety related problems that come to New GM's attention, and that New GM will pass along knowledge of defects and how to address them. Dealers servicing the Defective Vehicles rely on New GM's representations that the vehicles and their component parts and safety features will function correctly if certain conditions are met when the vehicles are inspected and serviced, as do the consumers who go to a New GM dealership for repairs. New GM's breach of its obligations to its dealerships has resulted in harm to Plaintiffs and the Class.

SUCCESSOR LIABILITY ALLEGATIONS

779. General Motors Corporation was founded on September 16, 1908, in Flint, Michigan, and was incorporated on October 13, 1916, in Delaware. On June 1, 2009, General Motors Corporation ("Old GM") filed a Chapter 11 bankruptcy petition in the United States

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 255 of 337

Bankruptcy Court for the Southern District of New York.[352] On July 5, 2009, that court approved the sale of substantially all of the assets of Old GM to an entity known as General Motors LLC ("New GM").[353] Old GM sold all of its assets to New GM in a transaction finalized on July 10, 2009.[354] In that sale, all Old GM brands, inventory, physical assets, management, personnel, vehicles and general business operations were transferred to New GM. New GM acquired the contracts, books, and records of Old GM. New GM acquired all goodwill and intellectual property of Old GM. At no time was the business enterprise of the General Motors Company interrupted, and the New GM brand was continued as the same brand as Old GM.[355] New GM is the mere continuation or reincarnation of the same business enterprise as Old GM.

780. New GM acquired all or substantially all of the manufacturing assets of Old GM, and undertook the identical manufacturing operation as Old GM. New GM continued the manufacture, marketing sale and warranty of the Old GM brands, including the Chevrolet Cobalt, the Chevrolet HHR, the Buick Allure, the Buick LaCrosse, the Buick Lucerne, the Cadillac Deville, the Cadillac DTS, the Cadillac CTS, the Cadillac SRX, the Chevrolet Impala, the Chevrolet Camaro, the Chevrolet Malibu, and the Chevrolet Monte Carlo.

781. Saturn Corporation was established on January 7, 1985 as a subsidiary of Old GM. The Saturn Sky was first manufactured in 2006 for the 2007 model year ("MY"), and the Pontiac Solstice was first manufactured in 2005 for the 2006 MY. Old GM manufactured both of these vehicles at its Wilmington, DE plant, and New GM continued to manufacture, market and sell these vehicles post-bankruptcy. After attempting to sell the Saturn brand to Penske,

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 256 of 337

New GM announced on September 30, 2009, that it was going to wind down the Saturn brand by October 2010.[356]

782. Adam Opel AG was founded on January 21, 1862 as a sewing machine manufacturer and produced its first automobiles in 1899. Opel, based in Russelsheim, Hesse, Germany, became a subsidiary of Old GM in 1931. The Opel/Vauxhall GT was introduced as a production model in late 1968. Production of the Opel/Vauxhall GT was shutdown in 1973 only to return 34 years later as a 2007 MY vehicle for GM. The Daewoo G2X was a rebadged version of the Opel GT available in September 2007. Old GM manufactured these vehicles from 2007 until July 28, 2009 at its Wilmington, DE plant, and New GM continued to manufacture, market and sell these Old GM vehicles post-bankruptcy. New GM announced on July 21, 2014, that Opel Group, a new entity created by Adam Opel AG and New GM, would manage and maintain full responsibility for New GM's European business, including Cadillac, Chevrolet, and the Opel/Vauxhall brands.[357]

783. Old GM began production of the Chevrolet Cobalt at its Lordstown Assembly plant in Lordstown, OH, in 2004 for the 2005 MY. New GM continued to manufacture, market and sell the Cobalt, an Old GM vehicle, post-bankruptcy until New GM discontinued the brand in 2010.[358]

[358] Valukas Report at 18; http://www.cleveland.com/business/index.ssf/2010/06/gm_taking_some_unusual_risks_i.html.

784. The Chevrolet HHR was manufactured at Old GM's Ramos Arizpe, Mexico plant for the 2006 MY. New GM continued to manufacture, market and sell the Chevrolet HHR post-bankruptcy.[359]

785. Old GM introduced the Pontiac G5/Pursuit in Canada for the 2005 MY and in the U.S. for the 2007 MY. New GM continued to manufacture, market and sell the Pontiac G5/Pursuit post-bankruptcy.[360]

786. Old GM began manufacturing the Buick LaCrosse (U.S.) (or Buick Allure in Canada) in September 2004 for the 2005 MY.[361] The last vehicle of the first-generation Buick LaCrosse was manufactured on December 23, 2008, at GM's Oshawa, Ontario plant. The second-generation Buick LaCrosse was unveiled at the North American International Auto Show in Detroit, Michigan in January 2009. New GM continues to manufacture, market and sell the LaCrosse to this day.[362]

787. Old GM began production of the Buick Lucerne in 2005 for the 2006 MY.[363] New GM continued production of the Buick Lucerne model vehicle until 2011.[364]

788. Old GM began manufacturing the Cadillac DTS in 2005 for the 2006 MY. In the bankruptcy, New GM acquired the Cadillac brand and continued to manufacture, market and sell the Cadillac DTS until 2011.[365]

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 258 of 337

789. The first-generation Cadillac SRX was manufactured and sold by Old GM between 2004 and 2009. New GM debuted the second-generation Cadillac SRX in 2010 and continues to manufacture, market and sell these vehicles to this day.[366]

790. Old GM began production of the Cadillac CTS in 2002 for the 2003 MY. Old GM redesigned portions of the Cadillac CTS in 2008, and New GM recently completed another redesign of this model in 2014.[367] New GM continues to manufacture, market and sell the Cadillac CTS.

791. The Chevrolet Impala has been manufactured, marketed and sold by Old GM since 1958. Old GM manufactured, marketed and sold the eighth-generation Impala from 2000-2005; followed by the ninth-generation Impala from 2006-2009. New GM continued to manufacture, market and sell the ninth-generation Chevrolet Impala between 2009 and 2013. New GM performed a redesign in 2013 for the 2014 MY, and continues to manufacture, market and sell the Chevrolet Impala.[368]

792. Old GM began manufacturing and selling the Chevrolet Malibu in 1963 for the 1964 MY. Four generations of Malibu were manufactured, marketed and sold by Old GM between 1964 and 1983, when the Malibu was discontinued. Old GM brought back the Malibu make in 1996 for the 1997 MY. With MY 2004, Old GM redesigned the Malibu, manufacturing, marketing and selling the second-generation Malibu until 2008. The third-generation Chevrolet Malibu was manufactured, marketed and sold by Old GM from 2008 to 2009. New GM continued to manufacture, market and sell the third-generation Chevrolet

[367] http://www.edmunds.com/cadillac/cts/.
[368] http://www.edmunds.com/chevrolet/impala/.

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 259 of 337

Malibu from July 10, 2009 through 2012. New GM continues to manufacture, market and sell the current version of the Malibu as redesigned for MY 2013.[369]

793. Old GM manufactured, marketed and sold the Chevrolet Camaro model from its inception in the late 1960s until 2002, when the model was discontinued. The Chevrolet Camaro returned to the New GM lineup in 2009 for the 2010 MY, and continues to be manufactured, marketed and sold by New GM to this day.[370]

794. New GM enjoyed the benefits of the Old GM brands in continuing these brands and product lines. As the specific examples below demonstrate, New GM knowingly and intentionally undertook ongoing duties to the purchasers of Old GM vehicles to ensure the safety, function, and value of these vehicles. New GM cannot in law, equity or fairness absolve itself of liability for the Old GM vehicle defects that New GM fraudulently acted to conceal and keep on the road.

795. New GM honored the vehicle warranties and customer programs of Old GM on Old GM vehicles. On June 1, 2009, days before it was to file for bankruptcy protection, Old GM posted on its Internet website (www.gm.com) a "Customer FAQ on GM's Chapter 11 Filing," which remained accessible on New GM's website (www.gm.com) post-bankruptcy.[371] Among other things, New GM promised its customers and the Class:

> There will be no interruptions in GM's ability to take care of our customers and honor customer programs, warranties and provide replacement parts. In fact, GM has asked the Court for specific orders authorizing GM to honor customer warranties and programs as it always has. You should have total confidence that:

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 260 of 337

- Our products are safe and sound;
- We will honor your existing warranty;
- Customer promotions and incentives will continue without interruption;
- You do not need to do anything differently regarding your warranty[372]

796. New GM continued:

> Will New GM honor customer warranty claims?
>
> Yes. GM will succeed and win by taking care of our customers every day. New GM will assume the obligations to support the express warranties issued by GM to its customers.[373]

797. With respect to Old GM's loyalty program—GM Card Earnings:

> What happens to my GM Card Earnings?
>
> Your GM Card Earnings will continue to be honored in accordance with the Program Rules. You can keep using your Card at more than 18 million outlets where MasterCard is accepted to accumulate Earnings and redeem them toward eligible, new GM vehicles.[374]

798. Under the bankruptcy sale agreement, New GM also expressly assumed certain liabilities of Old GM, including certain statutory requirements:

> From and after the Closing, Purchaser [New GM] shall comply with the certification, reporting and recall requirements of the National Traffic and Motor Vehicle Safety Act, the Transportation Recall Enhancement, Accountability and Documentation Act, the Clean Air Act, the California Health and Safety Code and similar Laws, in each case, to the extent applicable in respect of vehicles and vehicle parts manufactured or distributed by Seller.

799. In the sale agreement, New GM expressly set forth that it:

[372] *Id.*
[373] *Id.*
[374] *Id.*

> shall be responsible for the administration, management and payment of all Liabilities arising under (i) express written warranties of Sellers [Old GM] that are specifically identified as warranties and delivered in connection with the sale of new, certified used or pre-owned vehicles or new or remanufactured motor vehicle parts and equipment (including service parts, accessories, engines and transmissions) manufactured or sold by Sellers or Purchaser prior to or after the Closing and (ii) Lemon Laws.

800. New GM kept the same principle place of business and centers of operation as Old GM. Old GM purchased the Renaissance Center in Detroit, Michigan on May 16, 1996 for use as its global headquarters. New GM still maintains its public presence and residence at 300 Renaissance Center in Detroit, Michigan.[375]

801. In addition, Old GM established the General Motors Proving Grounds in Milford, Michigan in 1924; the Milford Proving Grounds property is still owned and used by New GM. The Milford Proving Grounds is a testing facility where the ignition switch was tested.

802. New GM kept the same employees as Old GM; retaining over 65,000 of Old GM's employees. This included some of Old GM's Board of Directors, top management and key players involved in the ignition switch defect, *inter alia*:

- Terry J. Woychowski was with Old GM since 1978, serving in various engineering positions including Global Vehicle Chief Engineer.[376] He held the position of Vice President of Global Quality and Vehicle Launch for New GM until retiring in June 2012.[377]

- Michael J. Robinson joined Old GM in 1984, and moved up to become North American General Counsel in 2008.[378] He continued to serve in New GM's legal department,

Case 1:14-md-02543-JMF Document 379-1 Filed 11/04/14 Page 262 of 337

becoming New GM's Vice President of Environment, Energy and Safety Policy in September 2009, holding that position until he was fired in 2014.[379]

- John R. Buttermore began his career at GM as an engineer in 1978.[380] He served Old GM as Vice President of Powertrain and Manufacturing Operations, and has served as New GM's Vice President of Manufacturing since September 2009.[381]

- Current New GM Chief Executive Officer, Mary T. Barra, began her career at Old GM in 1980 as a student at General Motors Institute.[382] She served in a number of engineering and management positions throughout Old GM and New GM prior to becoming New GM's Executive Vice President, Global Product Development, Purchasing and Supply Chain in 2013.[383] She assumed her current role with New GM on January 15, 2014.[384]

- Mark L. Reuss began his career with Old GM as an engineering intern in 1983.[385] Having held numerous management positions in engineering for GM, he served as President of GM North America from 2009-2013.[386] He currently serves New GM as Executive Vice President, Global Product Development, Purchasing and Supply Chain, having assumed the role from Barra.[387]

- Gary Altman served as Old GM's Program Engineering Manager for the Chevrolet Cobalt in 2004 and continued to serve New GM as a manager until he was fired in 2014.[388]

- Raymond DeGiorgio served Old GM as the Design Release Engineer for the ignition switch used in the Saturn Ion and Chevrolet Cobalt vehicles in 2003/2004.[389] He continued to

be employed by New GM in an engineering role until he was fired in 2014.[390]

- Lawrence Buonomo served as an attorney in Old GM's legal department from 1994-2009, and served as New GM's Executive Director of Litigation from 2009-2012.[391] New GM named him Practice Area Manager and Global Legal Process Leader - Litigation in 2012, a position in which he served until he was fired in 2014.[392]

- William J. Kemp served as a top product safety attorney for Old GM during 2003-2013.[393] He continued to serve in New GM's legal department until his termination in 2014.[394]

- Michael Millikin, formerly Old GM's Coordinator of Global Legal Services, was renamed Old GM's Associate General Counsel in June 2005, a position he continued to hold until he assumed his current role as New GM's Vice President and General Counsel in July 2009.[395] Millikin remains in place as General Counsel for New GM.

- Thomas G. Stephens began his career at Old GM as an engineer in 1969.[396] Moving up the corporate ladder, he was made Group Vice President, Global Powertrain and Global Quality in 2006, and served as Vice Chairman, Global Product Development for Old GM and New GM from April 2009 through June 2011.[397] He continued to serve New GM as Vice Chairman & Global Chief Technology Officer until April 2012.[398]

- Timothy E. Lee began his career at Old GM as a student at General Motors Institute in 1969.[399] He moved into top management in 2002 when he assumed the role of Vice President of Manufacturing for GM Europe and in 2006 as

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 264 of 337

Vice President of Manufacturing for GM North America.[400] He took over as President of International Operations for New GM in December 2009, and also served New GM as its Executive Vice President of Global Manufacturing from 2012 through 2014.[401]

- Chester N. Watson has served as General Auditor for Old GM and New GM from 2003 through 2010.[402]

- Victoria McInnis began her career at GM Canada in 1995 and served New GM as Chief Tax Officer through 2012.[403]

- Frederick A. Henderson served as Old GM's Vice Chairman of the Board of Directors and Chief Financial Officer from 2005 until he was elected Chairman and Chief Financial Officer in June of 2009, leading new GM through bankruptcy.[404]

- Erroll B. Davis, Jr. served on Old GM's Board of Directors starting in 2007 and, according to New GM's 2013 Annual Report, still serves on the Board of Directors to this day.[405]

- Phillip A. Laskawy served on Old GM's Board of Directors beginning in 2003 and continued to serve on New GM's Board of Directors until 2013.[406]

- Kathryn V. Marinello served on Old GM's Board of Directors starting in 2007 and, according to New GM's 2013 Annual Report, still serves on the Board of Directors to this day.[407]

803. In addition to in-house counsel that remained with New GM post-bankruptcy, Old GM and New GM retained the same outside lawyers and law firms.

804. New GM retained ownership and control over nearly all of Old GM's manufacturing plants; closing only fourteen.[408] New GM also assumed ownership and responsibility for over 3,600 of Old GM's U.S. dealerships.[409]

805. New GM kept the same logos and brand marketing as Old GM. Old GM unveiled its "Mark of Excellence" logo in 1966.

806. The words "Mark of Excellence" were removed in the late 1970's, but what remained of the logo is still in use today.

807. On August 24, 2009, New GM announced the removal of its logo from all of its vehicles starting with the 2010 MY; however, New GM continues to use this logo to this day on its websites and marketing materials.

[408] http://money.cnn.com/2009/07/10/news/companies/new_gm/.
[409] *Id.*

808. New GM has also maintained the logos and branding for Chevrolet and Cadillac, after acquiring these brand assets post-bankruptcy. The Chevrolet bowtie was introduced in late 1913 containing the "Chevrolet" name within the bowtie. Old GM continued to use the bowtie logo after it purchased Chevrolet in 1918.

809. Around 2000, the Chevrolet name was removed from the logo, and, despite slight design variations to the bowtie, the logo and brand remain the same today as used by New GM.

810. The iconic Cadillac crest was first unveiled in 1906. Though there have been slight varying designs of the crest, the Cadillac logo consisting of a silver, gold, red and blue crest surrounded by a wreath has remained conceptually the same since 1982.

811. In January of 2014, New GM announced it was removing the Cadillac wreath from the logo and widening the crest for a more streamlined appearance.

812. New GM's operations have consistently demonstrated a continuity of Old GM as an extension of its predecessor corporations' business and product lines. New GM expressly and impliedly assumed the warranty obligations and liabilities of Old GM. New GM has consistently and continuously held itself out to the public and the Class as the continuation of Old GM. New GM is a mere continuation or reincarnation of the same business of Old GM. New GM had—and continues to have—an ongoing duty to warn the Class of the defects that it knew existed in Old GM vehicles. New GM entered into the bankruptcy having fraudulently concealed material facts on the defects in Old GM and New GM vehicles to the reliance and detriment of the Class, and is responsible for the conduct and fraudulent concealment by Old

Case 1:14-md-02543-JMF Document 379-1 Filed 10/14/14 Page 268 of 337

GM as it relates to the Defective Vehicles. New GM and Old GM were, and New GM remains, under a continuing duty to disclose to the Class the true character, quality, and nature of the Defective Vehicles; that this defect is based on dangerous, inadequate, and defective design and substandard materials; and that the defects will require repair, pose a severe safety concern, and diminishes the value of the Defective Vehicles.

813. New GM undertook the same manufacturing operation as Old GM. New GM continued the product lines of Old GM. The totality of the transaction between the predecessor and successor corporations demonstrates a basic continuity of the predecessor corporation's business. Indeed, the purpose of the bankruptcy transaction funded by taxpayer dollars was to save and continue the Old GM brand, the Old GM name, the Old GM product line, and to ensure the continuation or reincarnation of the same business enterprise as New GM. The fraudulent concealment of material facts begun under Old GM was continued, carried on, and furthered by New GM and its agents. New GM did not report material safety information within its knowledge to the Class, nor would a reasonable and diligent public investigation have disclosed to the Class that New GM had information in its possession about the existence and dangerousness of the Old GM defects that it failed to disclosed and instead acted to fraudulently conceal. The cover-up and omissions of Old GM are the responsibility of New GM. The transfer of Old GM assets to New GM was done fraudulently and in an attempt to escape liability for gross misconduct and to destroy the remedies of the Class as against New GM.

814. New GM continued the business of General Motors as evidenced by the continuity of management, personnel, physical location, assets, and general business operations of Old GM.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 269 of 337

815. Old GM ceased its ordinary business operations and was dissolved by terms of the bankruptcy. New GM expressly and impliedly assumed the obligations of Old GM to manufacture non-defective vehicles and by warranting to the Class and the public that the GM brand would remain in operation as a continuation of the same company. At all relevant times, New GM held itself out to the Class, and to the world, as the effective continuation of Old GM. With respect to each of the Claims for Relief asserted herein, the Classes thus assert two distinct, severable, and independent bases of New GM liability: (1) GM's own knowledge, deceptive, negligent, and violative conduct, its breach of its own duty, and resulting harm; and (2) New GM's successor liability.

CHOICE OF LAW ALLEGATIONS

816. New GM is headquartered in Detroit, Michigan, the "center of gravity" of this case.

817. As did Old GM, New GM does substantial business in Michigan. Nearly half of New GM's United States manufacturing plants are in Michigan, as are a third of its assembly plants. Upon information and belief, there are approximately 20,000 New GM employees in Michigan alone.

818. In addition, the conduct that forms the basis for each and every Class members' claims against New GM emanated from Old and New GM's headquarters in Detroit, Michigan.

819. On information and belief, Old and New GM personnel responsible for customer communications are and were located at the Michigan headquarters, and the core decision not to disclose the ignition switch and safety defects to consumers was made and implemented from there.

820. On information and belief, throughout the Class Period, Old and New GM, in concert with their Michigan-based advertising agencies, failed to disclose the existence of the ignition switch and other safety defects.

821. On information and belief, the Red X team, an engineering team whose purpose is to find the cause of an engineering design defect, is and was located in Detroit, Michigan.

822. On information and belief, marketing campaigns falsely promoting Old and New GM cars as safe and reliable were conceived and designed in Michigan.

823. On information and belief, Old and New GM personnel responsible for managing the customer service division are and were located at the Michigan headquarters. The “Customer Assistance Centers” directs customers to call the following numbers: 1-800-222-1020 (Chevrolet), 1-800-521-7300 (Buick), 1-800-462-8782 (GMC), 1-800-458-8006 (Cadillac), 1-800-762-2737 (Pontiac), 1-800-732-5493 (HUMMER), and 1-800-553-6000 (Saturn), which are landlines in Detroit, Michigan. Customers are directed to send correspondence to GM Company, P.O. Box 33170, Detroit, MI 48232-5170. In addition, personnel from GM in Detroit, Michigan, also communicate via e-mail with customers concerned about the ignition switch and safety defects.

824. On information and belief, Old and New GM personnel responsible for communicating with dealers regarding known problems with Defective Vehicles are and were also located at the Michigan headquarters.

825. On information and belief, Old and New GM personnel responsible for managing the distribution of replacement parts to dealerships are and were located at the Michigan headquarters. The decision not to change the part number and the service stock

(replacement parts they had in inventory) of older, weaker switches was made and implemented from Old GM's Michigan headquarters.

826. On information and belief, New GM's presence is more substantial in Michigan than any other state, and the same was true of Old GM.

CLASS ACTION ALLEGATIONS

827. As alleged throughout this Complaint, the Classes' claims all derive directly from a single course of conduct by New GM, from its inception onward. This case is about the responsibility of New GM, at law and in equity, for its knowledge, its conduct, and its products. New GM has engaged in uniform and standardized conduct toward the Classes. It did not differentiate, in its degree of care or candor, its actions or inactions, OR in the content of its statements or omissions, among individual Class members. The objective facts on these subjects are the same for all Class members. Within each Claim For Relief asserted by the respective Classes, the same legal standards govern. Additionally, many states share the same legal standards and elements of proof, facilitating the certification of multistate classes for some or all claims.

II. The Nationwide Class

828. Accordingly, under Rules 23(a); (b)(1) and/or (b)(2); and (b)(3) of the Federal Rules of Civil Procedure, Plaintiffs bring this action and seek to certify and maintain it as a class action on behalf of themselves and a Nationwide Class initially defined as follows:

> All persons in the United States who entered into a lease or bought, prior to July 11, 2009, and who (i) own or lease, or (ii) who sold after February 14, 2014, or (iii) who had declared a total loss after an accident occurring after February 14, 2014, one or more of the following GM vehicles: 2003-2007 Saturn Ion; 2005-2009 Chevrolet Cobalt; 2007-2009 Pontiac G5; 2006-2009 Chevrolet HHR; 2006-2009 Pontiac Solstice; 2007-2009 Saturn Sky; 2004-2005 Buick Regal LS & GS; 2005-2009 Buick Lacrosse; 2006-2009 Buick Lucerne; 2000-2005 Cadillac Deville; 2004-2009

> Cadillac DTS; 2000-2009 Chevrolet Impala; 2000-2008 Chevrolet Monte Carlo; 2003-2009 Cadillac CTS; 2004-2006 Cadillac SRX; 1997-2005 Chevrolet Malibu; 2000-2005 Pontiac Grand Am; 2004-2008 Pontiac Grand Prix; 1998-2002 Oldsmobile Intrigue; 1999-2004 Oldsmobile Alero; or 2008-2009 Pontiac G8 ("Defective Vehicles").[410]

III. The State Classes

829. Plaintiffs allege statewide class action claims on behalf of classes for each of the 50 states, the District of Columbia and Puerto Rico ("State Classes"). Each of these State Classes is initially defined as follows:

> All persons in the State of _________ (e.g., Alabama) who entered into a lease or bought, prior to July 11, 2009, and who (i) own or lease, or (ii) who sold after February 14, 2014, or (iii) who had declared a total loss after an accident occurring after February 14, 2014, one or more of the following GM vehicles: 2003-2007 Saturn Ion; 2005-2009 Chevrolet Cobalt; 2007-2009 Pontiac G5; 2006-2009 Chevrolet HHR; 2006-2009 Pontiac Solstice; 2007-2009 Saturn Sky; 2004-2005 Buick Regal LS & GS; 2005-2009 Buick Lacrosse; 2006-2009 Buick Lucerne; 2000-2005 Cadillac Deville; 2004-2009 Cadillac DTS; 2000-2009 Chevrolet Impala; 2000-2008 Chevrolet Monte Carlo; 2003-2009 Cadillac CTS; 2004-2006 Cadillac SRX; 1997-2005 Chevrolet Malibu; 2000-2005 Pontiac Grand Am; 2004-2008 Pontiac Grand Prix; 1998-2002 Oldsmobile Intrigue; 1999-2004 Oldsmobile Alero; or 2008-2009 Pontiac G8 ("Defective Vehicles").

830. The Nationwide Class and the State Classes and their members are sometimes referred to herein as the "Class" or "Classes."

831. Excluded from each Class are Old GM and New GM, their employees, co-conspirators, officers, directors, legal representatives, heirs, successors and wholly or partly owned subsidiaries or affiliates of Old GM; Class Counsel and their employees; and the

[410] To the extent warranted, the list of Defective Vehicles for the purpose of the Nationwide and State Class Definitions, will be supplemented to include other GM vehicles that have the defective ignition switches, which inadvertently turn off the engine and vehicle electrical systems during ordinary driving conditions, and related defects.

judicial officers and their immediate family members and associated court staff assigned to this case, and all persons within the third degree of relationship to any such persons.

832. This action satisfies the requirements of Fed. R. Civ. P. 23(a)(1). Plaintiffs are informed and believe that there are millions of Defective Vehicles nationwide, and thousands of Defective Vehicles in each of the States. Individual joinder of all Class members is impracticable.

833. Each of the Classes is ascertainable because its members can be readily identified using registration records, sales records, production records, and other information kept by New GM or third parties in the usual course of business and within their control. Plaintiffs anticipate providing appropriate notice to each certified Class, in compliance with Fed. R. Civ. P. 23(c)(1)(2)(A) and/or (B), to be approved by the Court after class certification, or pursuant to court order under Fed. R. Civ. P. 23(d).

834. This action satisfies the requirements of Fed. R. Civ. P. 23(a)(2) and 23(b)(3) because questions of law and fact that have common answers that are the same for each of the respective Classes predominate over questions affecting only individual Class members. These include, without limitation, the following:

a. Do the Defective Vehicles suffer from ignition switch defects?

b. Did Old GM and/or New GM fraudulently conceal these defects?

c. Did Old GM and/or New GM's conduct toll any or all applicable limitations periods by acts of fraudulent concealment, application of the discovery rule, or equitable estoppel?

d. Did Old GM and/or New GM misrepresent that the Defective Vehicles were safe?

e. Did Old GM and/or New GM engage in unfair, deceptive, unlawful and/or fraudulent acts or practices in trade or commerce by failing to disclose that the Defective Vehicles were designed, manufactured, and sold with defective ignition switches?

f. Was Old GM and/or New GM's conduct, as alleged herein, likely to mislead a reasonable consumer?

g. Were Old GM and/or New GM's statements, concealments and omissions regarding the Defective Vehicles material, in that a reasonable consumer could consider them important in purchasing, selling, maintaining, or operating such vehicles?

h. Did Old GM and/or New GM violate each of the States' consumer protection statutes, and if so, what remedies are available under those statutes?

i. Were the Defective Vehicles unfit for the ordinary purposes for which they were used, in violation of the implied warranty of merchantability?

j. Is New GM liable to the Class for damages and/or penalties, as a result of its own knowledge, conduct, action, or inaction?

k. Is New GM liable to the Class for damages and/or penalties under privileges of successor liability

l. Are Plaintiffs and the Class entitled to a declaratory judgment stating that the ignition switches in the Defective Vehicles are defective and/or not merchantable?

m. Did Old GM and/or New GM's unlawful, unfair, and/or deceptive practices harm Plaintiffs and the Class?

n. Has New GM been unjustly enriched by its conduct?

o. Are Plaintiffs and the Class entitled to equitable relief, including, but not limited to, a preliminary and/or permanent injunction?

p. Should New GM be declared responsible for notifying all Class members of the defects and ensuring that all GM vehicles with the Ignition Switch Defect are promptly recalled and repaired?

q. What aggregate amounts of statutory penalties, as available under the laws of Michigan and other States, are sufficient to punish and deter New GM and to vindicate statutory and public policy?

r. How should such penalties be most equitably distributed among Class members?

835. This action satisfies the requirements of Fed. R. Civ. P. 23(a)(3) because Plaintiffs' claims are typical of the claims of the Class members, and arise from the same course of conduct by New GM. The relief Plaintiffs seek is typical of the relief sought for the absent Class members.

836. This action satisfies the requirements of Fed. R. Civ. P. 23(a)(4) because Plaintiffs will fairly and adequately represent and protect the interests of all absent Class members. Plaintiffs are represented by counsel who are competent and experienced in product liability, consumer protection, and class action litigation.

837. This action satisfies the requirements of Fed. R. Civ. P. 23(b)(1) because the prosecution of separate actions by the individual Class members on the claims asserted herein would create a risk of inconsistent or varying adjudications for individual Class members, which would establish incompatible standards of conduct for New GM; and because adjudication with respect to individual Class members would, as a practical matter, be dispositive of the interests of other Class members, or impair substantially or impede their ability to protect their interests.

838. Absent a class action, most Class Members would likely find the cost of litigating their claims prohibitively high and would therefore have no effective remedy at law. Because of the relatively small size of the individual Class Members' claims, it is likely that only a few Class Members could afford to seek legal redress for Defendant's misconduct. Absent a class action, Class Members will continue to incur damages, and Defendant's misconduct will continue without remedy.

839. This action satisfies the requirements of Fed. R. Civ. P. 23(b)(2) because Defendant New GM has acted and refused to act on grounds generally applicable to each Class, thereby making appropriate final injunctive and/or corresponding declaratory relief with respect to each Class as a whole.

840. This action satisfies the requirements of Fed. R. Civ. P. 23(b)(3) because a class action is superior to other available methods for the fair and efficient adjudication of this controversy. The common questions of law and of fact regarding New GM's conduct and responsibility predominate over any questions affecting only individual Class members.

841. Because the damages suffered by each individual Class member may be relatively small, the expense and burden of individual litigation would make it very difficult or impossible for individual Class members to redress the wrongs done to each of them individually, such that most or all class members would have no rational economic interest in individually controlling the prosecution of specific actions, and the burden imposed on the judicial system by individual litigation by even a small fraction of the Class would be enormous, making class adjudication the superior alternative under Fed. R. Civ. P. 23(b)(3)(A).

842. The claims in this Complaint have been centralized in this forum as MDL proceedings pursuant to 28 U.S.C. § 1407. Essentially all related litigation already begun by GM customers asserting ignition switch-related class claims is now consolidated in this forum. The ongoing concentration of such claims in this forum, at least through the class certification determination and the trial of bellwether class claims, is superior, under Fed. R. Civ. P. 23(b)(3)(B) and (C), to the premature dispersion of these claims or individualized treatment of these claims.

843. The conduct of this action as a class action presents far fewer management difficulties, far better conserves judicial resources and the parties' resources, and far more effectively protects the rights of each Class member than would piecemeal litigation. Compared to the expense, burdens, inconsistencies, economic infeasibility, and inefficiencies of individualized litigation, the challenges of managing this action as a class action are substantially outweighed by the benefits to the legitimate interests of the parties, the court, and the public of class treatment in this court, making class adjudication superior to other alternatives, under Fed. R. Civ. P. 23(b)(3)(D).

844. Plaintiffs are not aware of any obstacles likely to be encountered in the management of this action that would preclude its maintenance as a class action. Rule 23 provides the Court with authority and flexibility to maximize the efficiencies and benefits of the class mechanism and reduce management challenges. The Court may, on motion of Plaintiffs or on its own determination, certify nationwide, statewide and/or multistate classes for claims sharing common legal questions; utilize the provisions of Rule 23(c)(4) to certify any particular claims, issues, or common questions of fact or law for classwide adjudication;

certify and adjudicate bellwether class claims; and utilize Rule 23(c)(5) to divide any Class into subclasses.

845. The Classes expressly disclaim any recovery, in this action, for physical injury resulting from the ignition switch defects without waiving or dismissing such claims. Plaintiffs are informed and believe that crashes implicating the Defective Vehicles are continuing to occur because of New GM's delays and inaction regarding the commencement and completion of recalls. The increased risk of injury from the ignition switch defects serves as an independent justification for the relief sought by Plaintiffs and the Class.

REALLEGATION AND INCORPORATION BY REFERENCE

846. Plaintiffs reallege and incorporate by reference all of the preceding paragraphs and allegations of this Complaint, including the Introduction, all Factual Allegations, Tolling Allegations, Successor Liability Allegations, Choice of Law Allegations, and Class Action Allegations, as though fully set forth in each of the following Claims for Relief asserted on behalf of the Nationwide Class and the Statewide Classes.

CLAIMS FOR RELIEF

I. NATIONWIDE CLASS CLAIMS

FIRST CLAIM FOR RELIEF
ON BEHALF OF NATIONWIDE CLASS

VIOLATION OF THE MAGNUSON-MOSS WARRANTY ACT
15 U.S.C. § 2301 *et. seq.*

847. Plaintiffs bring this Count on behalf of members of the Nationwide Class who are residents of the following States: Alaska, Arkansas, California, Colorado, Delaware, District of Columbia, Hawaii, Indiana, Kansas, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Oklahoma,

Pennsylvania, Rhode Island, South Carolina, South Dakota, Texas, Utah, Virginia, West Virginia and Wyoming.

848. This Court has jurisdiction to decide claims brought under 15 U.S.C. § 2301 by virtue of 28 U.S.C. § 1332 (a)-(d).

849. The Defective Vehicles are "consumer products" within the meaning of the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301(1).

850. Plaintiffs are "consumers" within the meaning of the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301(3). They are consumers because they are persons entitled under applicable state law to enforce against the warrantor the obligations of its express and implied warranties.

851. Old GM was a "supplier" and "warrantor" within the meaning of the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301(4)-(5).

852. 15 U.S.C. § 2310(d)(1) provides a cause of action for any consumer who is damaged by the failure of a warrantor to comply with a written or implied warranty.

853. Old and New GM provided Plaintiffs and the other Class members with an implied warranty of merchantability in connection with the purchase or lease of their vehicles that is an "implied warranty" within the meaning of the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301(7). As a part of the implied warranty of merchantability, Old and New GM warranted that the Defective Vehicles were fit for their ordinary purpose as safe passenger motor vehicles, would pass without objection in the trade as designed, manufactured, and marketed, and were adequately contained, packaged, and labeled. Mich. Comp. Laws § 440.2314(2)(a), (c), and (e); U.C.C. § 2-314.

854. Old and New GM breached these implied warranties, as described in more detail above, and are therefore liable to Plaintiffs and the Class pursuant to 15 U.S.C. § 2310(d)(1). Without limitation, the Defective Vehicles share common design defects in that they are equipped with defective Key Systems that can suddenly fail during normal operation, leaving occupants of the Defective Vehicles vulnerable to crashes, serious injury, and death. New GM has admitted that the Defective Vehicles are defective in issuing its recalls, but the recalls are woefully insufficient to address each of the defects.

855. In its capacity as a warrantor, as Old and New GM had knowledge of the inherent defects in the Defective Vehicles, any efforts to limit the implied warranties in a manner that would exclude coverage of the Defective Vehicles is unconscionable, and any such effort to disclaim, or otherwise limit, liability for the Defective Vehicles is null and void.

856. The limitations on the warranties are procedurally unconscionable. There was unequal bargaining power between Old GM and Plaintiffs and the other Class members, as, at the time of purchase and lease, Plaintiffs and the other Class members had no other options for purchasing warranty coverage other than directly from Old GM.

857. The limitations on the warranties are substantively unconscionable. Old GM and later New GM knew that the Defective Vehicles were defective and would continue to pose safety risks after the warranties purportedly expired. Old and New GM failed to disclose these defects to Plaintiffs and the other Class members. Thus, New GM's enforcement of the durational limitations on those warranties is harsh and shocks the conscience.

858. Plaintiffs and each of the other Class members have had sufficient direct dealings with either Old or New GM or its agents (dealerships) to establish privity of contract. Nonetheless, privity is not required here because Plaintiffs and each of the other Class

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 291 of 337

members are intended third-party beneficiaries of contracts between Old and New GM and its dealers, and specifically, of the implied warranties. The dealers were not intended to be the ultimate consumers of the Defective Vehicles and have no rights under the warranty agreements provided with the Defective Vehicles; the warranty agreements were designed for and intended to benefit consumers. Finally, privity is also not required because the Defective Vehicles are dangerous instrumentalities due to the aforementioned defects and nonconformities.

859. Pursuant to 15 U.S.C. § 2310(e), Plaintiffs are entitled to bring this class action and are not required to give New GM notice and an opportunity to cure until such time as the Court determines the representative capacity of Plaintiffs pursuant to Rule 23 of the Federal Rules of Civil Procedure.

860. Furthermore, affording either Old or New GM an opportunity to cure its breach of written warranties would be unnecessary and futile here. At the time of sale or lease of each Defective Vehicle, Old GM knew, should have known, or was reckless in not knowing of its misrepresentations concerning the Defective Vehicles' inability to perform as warranted, but nonetheless failed to rectify the situation and/or disclose the defective design. Under the circumstances, the remedies available under any informal settlement procedure would be inadequate and any requirement that Plaintiffs resort to an informal dispute resolution procedure and/or afford Old GM a reasonable opportunity to cure its breach of warranties is excused and thereby deemed satisfied.

861. Plaintiffs and the other Class members would suffer economic hardship if they returned their Defective Vehicles but did not receive the return of all payments made by them. Because New GM is refusing to acknowledge any revocation of acceptance and return

immediately any payments made, Plaintiffs and the other Class members have not re-accepted their Defective Vehicles by retaining them.

862. The amount in controversy of Plaintiffs' individual claims meets or exceeds the sum of $25. The amount in controversy of this action exceeds the sum of $50,000, exclusive of interest and costs, computed on the basis of all claims to be determined in this lawsuit. Plaintiffs, individually and on behalf of the other Class members, seek all damages permitted by law, including diminution in value of their vehicles, in an amount to be proven at trial. In addition, pursuant to 15 U.S.C. § 2310(d)(2), Plaintiffs and the other Class members are entitled to recover a sum equal to the aggregate amount of costs and expenses (including attorneys' fees based on actual time expended) determined by the Court to have reasonably been incurred by Plaintiffs and the other Class members in connection with the commencement and prosecution of this action.

863. Further, Plaintiffs and the Class are also entitled to equitable relief under 15 U.S.C. § 2310(d)(1). Based on New GM's continuing failures to fix the known dangerous defects, Plaintiffs seek a declaration that New GM has not adequately implemented its recall commitments and requirements and general commitments to fix its failed processes, and injunctive relief in the form of judicial supervision over the recall process is warranted. Plaintiffs also seek the establishment of the New GM-funded program for Plaintiffs and Class members to recover out of pocket costs incurred, as discussed in Paragraphs __ above.

864. Plaintiffs also request, as a form of equitable monetary relief, re-payment of the out-of-pocket expenses and costs they have incurred in attempting to rectify the Ignition Switch Defects in their vehicles. Such expenses and losses will continue as Plaintiffs and Class members must take time off from work, pay for rental cars or other transportation

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 293 of 337

arrangements, child care, and the myriad expenses involved in going through the recall process.

865. The right of Class members to recover these expenses as an equitable matter to put them in the place they would have been but for Old and New GM's conduct presents common questions of law. Equity and fairness requires the establishment by Court decree and administration under Court supervision of a program funded by New GM, using transparent, consistent, and reasonable protocols, under which such claims can be made and paid.

SECOND CLAIM FOR RELIEF
ON BEHALF OF THE NATIONWIDE CLASS

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(MICH. COMP. LAWS § 440.2314)

866. This claim is brought on behalf of the Nationwide Class for breach of implied warranty under Michigan law.

867. Old GM and New GM were merchants with respect to motor vehicles within the meaning of MICH. COMP. LAWS § 440.2314(1).

868. Under MICH. COMP. LAWS § 440.2314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when Michigan Class members purchased their Defective Vehicles.

869. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

870. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and

communications sent by the Michigan Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

871. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Michigan Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

872. The Michigan Class also seeks available equitable and/or injunctive relief. Based on New GM's continuing failures to fix the known dangerous defects, the Michigan Class seeks a declaration that New GM has not adequately implemented its recall commitments and requirements and general commitments to fix its failed processes, and injunctive relief in the form of judicial supervision over the recall process is warranted. The Michigan Class also seeks the establishment of a New GM-funded program for Plaintiffs and Class members to recover out of pocket costs incurred.

THIRD CLAIM FOR RELIEF
ON BEHALF OF NATIONWIDE CLASS

FRAUDULENT CONCEALMENT

873. This claim is brought on behalf of the Nationwide Class under Michigan law, or, alternatively, under the laws of the all states, as there is no material difference in the law of fraudulent concealment as applied to the claims and questions in this case.

874. Old and New GM each concealed and suppressed material facts concerning the Defective Vehicles.

875. As described above, Old GM and New GM each made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

876. The Companies each knew these representations were false when made.

877. The vehicles purchased or leased by Plaintiffs were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

878. The Companies each had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because Plaintiffs relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

879. The aforementioned concealment was material, because if it had been disclosed Plaintiffs would not have bought, leased or retained their vehicles.

880. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies each knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies each intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

881. Plaintiffs relied on the Companies' reputation-along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurances that their vehicles were safe and reliable and other similar false statements-in purchasing, leasing or retaining the Defective Vehicles.

882. However, Old and New GM each concealed and suppressed material facts concerning the culture of Old and New GM-a culture that emphasized cost-cutting, avoidance of dealing with safety issues and a shoddy design process.

883. Further, Old and then New GM each had a duty to disclose the true facts about the Defective Vehicles because they were known and/or accessible only to Old and then New GM who had superior knowledge and access to the facts, and the facts were not known to or reasonably discoverable by Plaintiff and the Classes. As stated above, these omitted and concealed facts were material because they directly impact the safety, reliability and value of the Defective Vehicles. Whether a manufacturer's products are safe and reliable, and whether that manufacturer stands behind its products, is of material concern to a reasonable consumer.

FOURTH CLAIM FOR RELIEF
ON BEHALF OF NATIONWIDE CLASS

UNJUST ENRICHMENT

880. This claim for unjust enrichment is brought on behalf of the Nationwide Class under Michigan law, or alternatively, under the laws of all states as there is no material difference in the law of unjust enrichment as it applies to the claims and questions in this case.

881. New GM has received and retained a benefit from the Plaintiffs and the Nationwide Class, and inequity has resulted.

882. New GM benefitted from acquiring the assets and goodwill of Old GM, and avoiding and delaying the effort and expenditures involved in recalling and repairing the Defective Vehicles; while Plaintiffs, who originally overpaid for their Old GM cars, have been forced to pay additional out-of-pocket costs and incur additional expense and losses in connection with the belated recalls.

883. It is inequitable for New GM to retain the benefits of its misconduct.

884. As a result of New GM's conduct, the amount of New GM's unjust enrichment should be disgorged, in an amount according to proof.

II. STATE CLASS CLAIMS

ALABAMA

FIFTH CLAIM FOR RELIEF

VIOLATION OF ALABAMA DECEPTIVE TRADE PRACTICES ACT (ALA. CODE § 8-19-1, *et. seq.*)

885. The Class Members who are Alabama residents (the "Alabama Class") are "consumers" within the meaning of ALA. CODE §8-19-3(2).

886. The Alabama Class, Old GM, and New GM are "persons" within the meaning of ALA. CODE §8-19-3(5).

887. The Defective Vehicles are "goods" within the meaning of ALA. CODE §8-19-3(3).

888. The Companies were engaged in "trade or commerce" within the meaning of ALA. CODE §8-19-3(8).

889. The Alabama Deceptive Trade Practices Act ("Alabama DTPA") declares several specific actions to be unlawful, including: "(5) Representing that goods or services have sponsorship, approval, characteristics, ingredients, uses, benefits, or qualities that they do not have," "(7) Representing that goods or services are of a particular standard, quality, or grade, or that goods are of a particular style or model, if they are of another," and "(27) Engaging in any other unconscionable, false, misleading, or deceptive act or practice in the conduct of trade or commerce." ALA. CODE § 8-19-5. By failing to disclose and actively concealing the dangerous risk of ignition switch movement, engine shutdown, and airbag disabling in Defective Vehicles, New GM engaged in deceptive business practices prohibited

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 298 of 337

by the Alabama DTPA, including: representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Class Vehicles are of a particular standard, quality, and grade when they are not; advertising Defective Vehicles with the intent not to sell or lease them as advertised; representing that the subject of a transaction involving Defective Vehicles has been supplied in accordance with a previous representation when it has not; and engaging in any other unconscionable, false, misleading, or deceptive act or practice in the conduct of trade or commerce.

890. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Alabama DTPA, and also has successor liability for the violations of Old GM.

891. As alleged above, both Companies knew of the ignition switch defects, while the Alabama Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

892. The Companies knew or should have known that their conduct violated the Alabama DTPA.

893. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

894. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

895. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

896. The Companies each owed the Alabama Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Alabama Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Alabama Class that contradicted these representations.

897. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Alabama Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

898. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Alabama Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Alabama Class.

899. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Alabama Class. Had the Alabama Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

900. All members of the Alabama Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Alabama Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Alabama Class own vehicles that are not safe.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 291 of 337

901. The Alabama Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

902. The Alabama Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Alabama DTPA, and these violations present a continuing risk to the Alabama Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

903. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

904. As a direct and proximate result of the Companies' violations of the Alabama DTPA, the Alabama Class have suffered injury-in-fact and/or actual damage.

905. Pursuant to ALA. CODE § 8-19-10, the Alabama Class seeks monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $100 for each Alabama Class Member.

906. The Alabama Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under the ALA. CODE §8-19-1, *et. seq.*

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 292 of 337

907. Alabama Plaintiffs have complied with the notice requirement set forth in Alabama Code § 8-19-10 by virtue of the notice previously provided in the context of the underlying action styled *Forbes, et al. v. GM*, 2:14-cv-02018-GP (E.D. Pa.) and other underlying actions, as well as additional notice in the form of a demand letter sent on October 12, 2014.

SIXTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

908. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought only on behalf of the Alabama Class.

909. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

910. The Companies knew these representations were false when made.

911. The vehicles purchased or leased by the Alabama Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

912. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Alabama Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

913. The aforementioned concealment was material, because if it had been disclosed the Alabama Class would not have bought, leased or retained their vehicles.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 293 of 337

914. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

915. The Alabama Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

916. As a result of their reliance, the Alabama Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

917. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Alabama Class. The Alabama Class is therefore entitled to an award of punitive damages.

ALASKA

SEVENTH CLAIM FOR RELIEF

VIOLATION OF THE ALASKA UNFAIR TRADE PRACTICES AND CONSUMER PROTECTION ACT (ALASKA STAT. ANN. § 45.50.471, *et. seq.*)

918. This claim is brought on behalf of Class members who are Alaska residents (the "Alaska Class").

919. The Alaska Unfair Trade Practices And Consumer Protection Act ("Alaska CPA") declares unfair methods of competition and unfair or deceptive acts or practices in the

conduct of trade or commerce unlawful, including: "(4) representing that goods or services have sponsorship, approval, characteristics, ingredients, uses, benefits, or quantities that they do not have or that a person has a sponsorship, approval, status, affiliation, or connection that the person does not have;" "(6) representing that goods or services are of a particular standard, quality, or grade, or that goods are of a particular style or model, if they are of another;" "(8) advertising goods or services with intent not to sell them as advertised;" or "(12) using or employing deception, fraud, false pretense, false promise, misrepresentation, or knowingly concealing, suppressing, or omitting a material fact with intent that others rely upon the concealment, suppression or omission in connection with the sale or advertisement of goods or services whether or not a person has in fact been misled, deceived or damaged." ALASKA STAT. ANN. § 45.50.471.

920. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein. Old GM and New GM also engaged in unlawful trade practices by representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that the Defective Vehicles are of a particular standard and quality when they are not; advertising the Defective Vehicles with the intent not to sell them as advertised; and omitting material facts in describing the Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Alaska CPA, and also has successor liability for the violations of Old GM.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 295 of 337

921. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

922. The Companies knew or should have known that their conduct violated the Alaska CPA.

923. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

924. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

925. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

926. The Companies each owed the Alaska Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 296 of 337

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Alaska Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Alaska Class that contradicted these representations.

927. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Alaska Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

928. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Alaska Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Alaska Class.

929. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Alaska Class. Had the Alaska Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

930. All members of the Alaska Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Alaska Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the

Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Alaska Class own vehicles that are not safe.

931. The Alaska Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

932. The Alaska Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Alaska CPA, and these violations present a continuing risk to the Alaska Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

933. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

934. As a direct and proximate result of the Companies' violations of the Alaska CPA, the Alaska Class has suffered injury-in-fact and/or actual damage.

935. Pursuant to ALASKA STAT. ANN. § 45.50. 535(b)(1), the Alaska Class seek monetary relief against New GM measured as the greater of (a) three times the actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $500 for each Alaska Class member.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 298 of 337

936. The Alaska Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under the Alaska CPA.

937. On October 12, 2014, Plaintiffs sent a notice letter complying with Alaska Stat. § 45.50.535. Plaintiffs presently do not claim the damages relief asserted in this Complaint under the Alaska CPA until and unless New GM fails to remedy its unlawful conduct towards the class within the requisite time period, after which Plaintiffs seek all damages and relief to which Plaintiffs and the Alaska Class are entitled

EIGHTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (ALASKA STAT. § 45.02.314)

938. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought only on behalf of the Alaska Class members.

939. Old GM was a merchant with respect to motor vehicles within the meaning of ALASKA STAT. § 45.02.104(a).

940. Under ALASKA STAT. § 45.02.314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Alaska Class purchased their Defective Vehicles.

941. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the nondeployment of airbags in the event of a collision.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 299 of 337

942. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Alaska Class before or within a reasonable amount of time after GM issued the recall and the allegations of vehicle defects became public.

943. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Alaska Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

NINTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

944. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought only on behalf of the Alaska Class members.

945. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

946. The Companies knew these representations were false when made.

947. The vehicles purchased or leased by the Alaska Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

948. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Alaska Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

949. The aforementioned concealment was material, because if it had been disclosed the Alaska Class would not have bought, leased or retained their vehicles.

950. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

951. The Alaska Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

952. As a result of their reliance, the Alaska Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

953. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Alaska Class. The Alaska Class are therefore entitled to an award of punitive damages.

ARIZONA

TENTH CLAIM FOR RELIEF

VIOLATIONS OF THE CONSUMER FRAUD ACT
(ARIZONA REV. STAT. § 44-1521, *et. seq.*)

954. This claim is brought on behalf of Class members who are Arizona residents (the "Arizona Class").

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 301 of 337

955. The Companies, and the Arizona Class, are "persons" within the meaning of the Arizona Consumer Fraud Act ("Arizona CFA"), ARIZ. REV. STAT. § 44-1521(6).

956. The Defective Vehicles are "merchandise" within the meaning of ARIZ. REV. STAT. § 44-1521(5).

957. The Arizona CFA provides that "[t]he act, use or employment by any person of any deception, deceptive act or practice, fraud,. . . misrepresentation, or concealment, suppression or omission of any material fact with intent that others rely on such concealment, suppression or omission, in connection with the sale . . . of any merchandise whether or not any person has in fact been misled, deceived or damaged thereby, is declared to be an unlawful practice." ARIZ. REV. STAT. § 44-1522(A).

958. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Arizona CFA, and also has successor liability for the violations of Old GM.

959. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/03/14 Page 302 of 337

960. The Companies knew or should have known that their conduct violated the Arizona CFA.

961. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

962. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

963. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

964. The Companies each owed the Arizona Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Arizona Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Arizona Class that contradicted these representations.

965. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Arizona Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

966. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Arizona Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Arizona Class.

967. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Arizona Class. Had the Arizona Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

968. All members of the Arizona Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Arizona Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Arizona Class own vehicles that are not safe.

969. The Arizona Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

970. The Arizona Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Arizona CFA, and these violations present a continuing risk to the Arizona Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

971. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

972. As a direct and proximate result of the Companies' violations of the Arizona CFA, the Arizona Class has suffered injury-in-fact and/or actual damage.

973. The Arizona Class seeks monetary relief against New GM in an amount to be determined at trial. The Arizona Class also seeks punitive damages because the Companies engaged in aggravated and outrageous conduct with an evil mind.

974. The Arizona Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under the Arizona CFA.

ELEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

975. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought only on behalf of the Arizona Class.

976. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

977. The Companies knew these representations were false when made.

978. The vehicles purchased or leased by the Arizona Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

979. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Arizona Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

980. The aforementioned concealment was material, because if it had been disclosed the Arizona Class would not have bought, leased or retained their vehicles.

981. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

982. The Arizona Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

983. As a result of their reliance, the Arizona Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

984. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Arizona Class. The Arizona Class are therefore entitled to an award of punitive damages.

ARKANSAS

TWELFTH CLAIM FOR RELIEF

VIOLATIONS OF THE DECEPTIVE TRADE PRACTICE ACT (ARK. CODE ANN. § 4-88-101, *et. seq.*)

985. This claim is brought on behalf of Class members who are Arkansas residents (the "Arkansas Class").

986. The Companies, and the Arkansas Class, are "persons" within the meaning of Arkansas Deceptive Trade Practices Act ("Arkansas DTPA"), ARK. CODE ANN. § 4-88-102(5).

987. The Class Vehicles are "goods" within the meaning of ARK. CODE ANN. § 4-88-102(4).

988. The Arkansas DTPA prohibits "[d]eceptive and unconscionable trade practices," which include but are not limited to a list of enumerated items, including "[e]ngaging in any other unconscionable, false, or deceptive act or practice in business, commerce, or trade[.]" ARK. CODE ANN. § 4-88-107(a)(10). The Arkansas DTPA also prohibits the following when

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 307 of 337

utilized in connection with the sale or advertisement of any goods: "(1) The act, use, or employment by any person of any deception, fraud, or false pretense; or (2) The concealment, suppression, or omission of any material fact with intent that others rely upon the concealment, suppression, or omission." ARK. CODE ANN. § 4-88-108. The Companies violated the Arkansas DTPA and engaged in deceptive and unconscionable trade practices by failing to disclose and actively concealing the dangerous ignition switch defects in the Defective Vehicles.

989. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

990. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Arkansas DTPA, and also has successor liability for the violations of Old GM.

991. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 308 of 337

992. The Companies knew or should have known that their conduct violated the Arkansas DTPA.

993. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

994. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

995. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

996. The Companies each owed the Arkansas Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Arkansas Class; and/or

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 309 of 337

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Arkansas Class that contradicted these representations.

997. The Defective Vehicles posed and/or posed an unreasonable risk of death or serious bodily injury to the Arkansas Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

998. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Arkansas Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Arkansas Class.

999. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Arkansas Class. Had the Arkansas Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1000. The Arkansas Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Arkansas Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Arkansas Class own vehicles that are not safe.

1001. The Arkansas Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1002. The Arkansas Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Arkansas DTPA, and these violations present a continuing risk to the Arkansas Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1003. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1004. As a direct and proximate result of the Companies' violations of the Arkansas DTPA, the Arkansas Class have suffered injury-in-fact and/or actual damage.

1005. The Arkansas Class seeks monetary relief against New GM in an amount to be determined at trial. The Arkansas Class also seeks punitive damages because the Companies acted wantonly in causing the injury or with such a conscious indifference to the consequences that malice may be inferred.

1006. The Arkansas Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under the Arkansas DTPA.

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 311 of 337

THIRTEENTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (ARK. CODE ANN. § 4-2-314)

1007. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought only on behalf of the Arkansas Class.

1008. Old GM was a merchant with respect to motor vehicles within the meaning of ARK. CODE ANN. § 4-2-104(1).

1009. Under ARK. CODE ANN. § 4-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Arkansas Class purchased their Defective Vehicles.

1010. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the nondeployment of airbags in the event of a collision.

1011. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Arkansas Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1012. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Arkansas Class have been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 312 of 337

FOURTEENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1013. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought only on behalf of Class members who are Arkansas residents.

1014. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1015. The Companies knew these representations were false when made.

1016. The vehicles purchased or leased by the Arkansas Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1017. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Arkansas Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1018. The aforementioned concealment was material, because if it had been disclosed the Arkansas Class would not have bought, leased or retained their vehicles.

1019. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1020. The Arkansas Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1021. As a result of their reliance, the Arkansas Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1022. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Arkansas Class. The Arkansas Class are therefore entitled to an award of punitive damages.

CALIFORNIA

FIFTEENTH CLAIM FOR RELIEF

VIOLATIONS OF THE CONSUMER LEGAL REMEDIES ACT (CAL. CIV. CODE § 1750, *et. seq.*)

1023. This claim is brought on behalf of Class members who are California residents (the "California Class").

1024. New GM is a "person" under CAL. CIV. CODE § 1761(c).

1025. The California Class are "consumers," as defined by CAL. CIVIL CODE § 1761(d), who purchased or leased one or more Defective Vehicles.

1026. The California Legal Remedies Act ("CLRA") prohibits "unfair or deceptive acts or practices undertaken by any person in a transaction intended to result or which results in the sale or lease of goods or services to any consumer[.]" CAL. CIV. CODE § 1770(a). Old GM and New GM have engaged in unfair or deceptive acts or practices that violated CAL. CIV. CODE § 1750, *et. seq.*, as described above and below, by among other things, representing that

Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Defective Vehicles are of a particular standard, quality, and grade when they are not; advertising Defective Vehicles with the intent not to sell or lease them as advertised; and representing that the subject of a transaction involving Defective Vehicles has been supplied in accordance with a previous representation when it has not.

1027. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the CLRA, and also has successor liability for the violations of Old GM.

1028. As alleged above, both Companies knew of the ignition switch defects, while the California Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1029. The Companies knew or should have known that their conduct violated the CLRA.

1030. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 315 of 337

1031. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1032. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1033. The Companies each owed the California Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the California Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the California Class that contradicted these representations.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 316 of 337

1034. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the California Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1035. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the California Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the California Class.

1036. New GM has also violated the CLRA by violating the TREAD Act, 49 U.S.C. §§ 30101, *et. seq.*, and its accompanying regulations. Under the TREAD Act and its regulations, if a manufacturer learns that a vehicle contains a defect and that defect is related to motor vehicle safety, the manufacturer must disclose the defect. 49 U.S.C. § 30118(c)(1) & (2).

1037. In acquiring Old GM, New GM expressly assumed the obligations to make all required disclosures under the TREAD Act with respect to all Defective Vehicles. New GM also has successor liability for the deceptive and unfair acts and omissions of Old GM.

1038. Under the TREAD Act, if it is determined that the vehicle is defective, the manufacturer must promptly notify vehicle owners, purchasers and dealers of the defect and remedy the defect. 49 U.S.C. § 30118(b)(2)(A) & (B).

1039. Under the TREAD Act, manufacturers must also file a report with NHTSA within five working days of discovering "a defect in a vehicle or item of equipment has been determined to be safety related, or a noncompliance with a motor vehicle safety standard has been determined to exist." 49 C.F.R. § 573.6(a) & (b). At a minimum, the report to NHTSA must include: the manufacturer's name; the identification of the vehicles or equipment containing the defect, including the make, line, model year and years of manufacturing; a description of the basis for determining the recall population; how those vehicles differ from similar vehicles that the manufacturer excluded from the recall; and a description of the defect. 49 C.F.R. § 276.6(b), (c)(1), (c)(2), & (c)(5).

1040. The manufacturer must also promptly inform NHTSA regarding: the total number of vehicles or equipment potentially containing the defect; the percentage of vehicles estimated to contain the defect; a chronology of all principal events that were the basis for the determination that the defect related to motor vehicle safety, including a summary of all warranty claims, field or service reports, and other information, with its dates of receipt; and a description of the plan to remedy the defect. 49 C.F.R. § 276.6(b) & (c).

1041. The TREAD Act provides that any manufacturer who violates 49 U.S.C. § 30166 must pay a civil penalty to the U.S. Government. The current penalty "is $7,000 per violation per day," and the maximum penalty "for a related series of daily violations is $17,350,000." 49 C.F.R. § 578.6(c).

1042. From at least 2001, Old GM had knowledge of the ignition switch defect, but hid the problem for the remainder of its existence until 2009.

1043. From the date of its inception on July 5, 2009, New GM knew of the ignition switch problem both because of the knowledge of Old GM personnel who remained at New GM and continuous reports and internal investigation right up until the present.

1044. New GM admits the defect in the ignition switch has been linked to at least 13 accident-related fatalities. But other sources have reported that hundreds of deaths and serious injuries are linked to the faulty ignition switches.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 318 of 337

1045. Despite being aware of the ignition switch defects ever since its creation on July 5, 2009, New GM waited until February 7, 2014, before finally sending a letter to NHTSA confessing its knowledge of the ignition switch defects which could cause the vehicles to lose power, and in turn cause the airbags not to deploy. New GM initially identified two vehicle models, along with the corresponding model years, affected by the defect—the 2005-2007 Chevrolet Cobalt and the 2007 Pontiac G5. On February 25, 2014, New GM amended its letter to include four additional vehicles, the 2006-2007 Chevrolet HHR, 2006-2007 Pontiac Solstice, 2003-2007 Saturn Ion, and the 2007 Saturn Sky. In late March 2014, New GM added later model-year Ions and Cobalts (through 2010), HHRs through 2011, and Skys through 2010.

1046. By failing to disclose and by actively concealing the ignition switch defect, and by selling vehicles while violating the TREAD Act and through its other conduct as alleged herein, Old GM and New GM both engaged in deceptive business practices prohibited by the CLRA, CAL. CIV. CODE § 1750, *et. seq.*

1047. Both Old GM and New GM failed for many years to inform NHTSA about known defects in the Defective Vehicles' ignition system. Consequently, the public, including the California Class, received no notice of the ignition switch defects, that the defect could disable multiple electrical functions including power steering and power brakes, or that the defect could cause the airbags not to deploy in an accident.

1048. Old GM and then New GM knew that the ignition switch had a defect that could cause a vehicle's engine to lose power without warning, and that when the engine lost power there was a risk that electrical functions would fail and that the airbags would not

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 319 of 337

deploy. Yet Old GM and New GM failed to inform NHTSA or warn the California Class or the public about these inherent dangers despite having a duty to do so.

1049. New GM owed the California Class a duty to comply with the TREAD Act and disclose the defective nature of the Defective Vehicles, including the ignition switch defect and accompanying loss of power and failure of the airbags to deploy, because New GM:

a. Possessed exclusive knowledge of the ignition switch defects rendering the Defective Vehicles inherently more dangerous and unreliable than otherwise similar vehicles; and

b. Intentionally concealed the hazardous situation with the Defective Vehicles by failing to comply with the TREAD Act, which required the disclosure of the ignition switch defects.

1050. Defective Vehicles equipped with the faulty ignition switch posed and/or pose an unreasonable risk of death or serious bodily injury to the California Class, passengers, other motorists, and pedestrians, because they are susceptible to sudden loss of power resulting in the loss of power steering and power brakes and failure of the airbags to deploy.

1051. Old GM and New GM's unfair or deceptive acts or practices were likely to and did in fact deceive reasonable consumers, including the California Class, about the true safety and reliability of the Defective Vehicles.

1052. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the California Class. Had the California Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1053. All members of the California Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The California Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the California Class own vehicles that are not safe.

1054. The California Class has been proximately and directly damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of the Companies' failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1055. The California Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the CLRA, and these violations present a continuing risk to the California Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1056. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles. Moreover, notwithstanding its obligations under the TREAD Act and the CLRA, New GM has not yet disclosed that the low placement of the ignition column and the fact that the airbags shut off as soon as the key hits the "accessory" or "off" position are also defects. This failure to disclose continues to pose a grave risk to the California Class.

1057. As a direct and proximate result of the Companies' violations of the CLRA, and the California Class have suffered injury-in-fact and/or actual damage.

1058. Under CAL. CIV. CODE § 1780(a), the California Class seeks monetary relief against New GM measured as the diminution of the value of their vehicles caused by Old GM's and New GM's violations of the CLRA as alleged herein.

1059. Under CAL. CIV. CODE § 1780(b), the California Class seeks an additional award against New GM of up to $5,000 for each California Class member who qualifies as a "senior citizen" or "disabled person" under the CLRA. Old GM and New GM knew or should have known that their conduct was directed to one or more Class members who are senior citizens or disabled persons. Old GM's and New GM's conduct caused one or more of these senior citizens or disabled persons to suffer a substantial loss of property set aside for retirement or for personal or family care and maintenance, or assets essential to the health or welfare of the senior citizen or disabled person. One or more California Class members who are senior citizens or disabled persons are substantially more vulnerable to Old GM's and New GM's conduct because of age, poor health or infirmity, impaired understanding, restricted mobility, or disability, and each of them suffered substantial physical, emotional, or economic damage resulting from Old GM's and New GM's conduct.

1060. The California Class also seeks punitive damages against New GM because it carried out reprehensible conduct with willful and conscious disregard of the rights and safety of others, subjecting the Class to potential cruel and unjust hardship as a result. First Old GM

Case 1:14-md-02543-JMF Document 379-1 Filed 10/14/14 Page 322 of 337

and then New GM intentionally and willfully concealed and failed to inform NHTSA of the unsafe and unreliable Defective Vehicles, deceived the California Class on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations problem of correcting a deadly flaw in the Defective Vehicles. New GM's unlawful conduct constitutes malice, oppression, and fraud warranting punitive damages under CAL. CIV. CODE § 3294.

1061. The California Class further seeks an order enjoining New GM's unfair or deceptive acts or practices, restitution, punitive damages, costs of court, attorneys' fees under CAL. CIV. CODE § 1780(e), and any other just and proper relief available under the CLRA.

1062. California Plaintiffs have complied with the notice requirement set forth in CAL. CIV. CODE § 1780(b) by virtue of the notice previously provided in the context of the underlying action styled *Ramirez, et al. v. GM*, 2:14-cv-02344-JVS-AN (C.D. Cal.), and other underlying actions, as well as additional notice in the form of a demand letter sent on October 12, 2014.

SIXTEENTH CLAIM FOR RELIEF

VIOLATION OF THE CALIFORNIA UNFAIR COMPETITION LAW
(CAL. BUS. & PROF. CODE § 17200, *et. seq.*)
(Asserted on Behalf of the California Class)

1063. This Claim for Relief is brought by the California Class.

1064. California Business and Professions Code § 17200 prohibits acts of "unfair competition," including any "unlawful, unfair or fraudulent business act or practice" and "unfair, deceptive, untrue or misleading advertising. . . ." The Companies engaged in conduct that violated each of this statute's three prongs.

1065. The Companies committed an unlawful business act or practice in violation of § 17200 by their violations of the Consumer Legal Remedies Act, Cal. Civ. Code § 1750, *et. seq.*, as set forth above, by the acts and practices set forth in this Complaint.

1066. New GM has also violated the unlawful prong because it has engaged in violations of National Traffic and Motor Vehicle Safety Act of 1996, codified at 49 U.S.C. § 30101, *et. seq.*, and its regulations.

1067. Federal Motor Vehicle Safety Standard ("FMVSS") 573 governs a motor vehicle manufacturer's responsibility to notify the NHTSA of a motor vehicle defect within five days of determining that a defect in a vehicle has been determined to be safety-related. *See* 49 C.F.R. § 573.6.

1068. Defendant violated the reporting requirements of FMVSS 573 requirement by failing to report the Ignition Switch Defect or any of the other Defects within five days of determining the defect existed, and failing to recall all affected vehicles.

1069. Defendant violated the common-law claim of negligent failure to recall, in that New GM knew or should have known that the Defective Vehicles were dangerous and/or were likely to be dangerous when used in a reasonably foreseeable manner; New GM became aware of the attendant risks after the Defective Vehicles were sold; New GM continued to gain information further corroborating the Ignition Switch Defects; and New GM failed to adequately recall the Defective Vehicles in a timely manner, which failure was a substantial factor in causing the California Class harm, including diminished value and out-of-pocket costs.

1070. Defendant committed unfair business acts and practices in violation of § 17200 when it concealed the existence and nature of the Ignition Switch Defect and the other Defects

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 324 of 337

and represented that the Class Vehicles were reliable and safe when, in fact, they are not. The Ignition Switch Defect and the other Defects present safety hazards for occupants of the Class Vehicles.

1071. New GM also violated the unfairness prong of § 17200 by failing to properly administer the numerous recalls of Defendant's vehicles for the Initiation Switch Defect and the other Defects. As alleged above, the recalls have proceeded unreasonably slowly in light of the safety-related nature of the Defects, and have been plagued with shortages of replacement parts as well as a paucity of loaner vehicles available for Class Members whose Vehicles are in the process of being repaired. Even worse, many consumers continue to experience safety problems with the Defective Vehicles, even after the defective parts have been replaced pursuant to the recalls.

1072. Defendant violated the fraudulent prong of § 17200 because the misrepresentations and omissions regarding the safety and reliability of their vehicles as set forth in this Complaint were likely to deceive a reasonable consumer, and the information would be material to a reasonable consumer.

1073. Defendant committed fraudulent business acts and practices in violation of § 17200 when they concealed the existence and nature of the Ignition Switch Defect and the other Defects, while representing in their marketing, advertising, and other broadly disseminated representations that the Class Vehicles were reliable and safe when, in fact, they are not. Defendant's representations and active concealment of the Defect are likely to mislead the public with regard to the true defective nature of the Class Vehicles.

1074. Defendant has violated the unfair prong of § 17200 because the acts and practices set forth in the Complaint, including the manufacture and sale of vehicles with the

Ignition Switch Defect that unintentionally shifts from the “run” position to the “accessory” or “off” position causing loss of electrical power and turning off the engine, and Defendant’s failure to adequately investigate, disclose and remedy, offend established public policy, and because the harm they cause to consumers greatly outweighs any benefits associated with those practices. Defendant’s conduct has also impaired competition within the automotive vehicles market and has prevented the California Class from making fully informed decisions about whether to purchase or lease Class Vehicles and/or the price to be paid to purchase or lease Class Vehicles.

1075. The California Class has suffered injuries in fact, including the loss of money or property, as a result of Defendant’s unfair, unlawful, and/or deceptive practices. As set forth in the allegations concerning each California Class member, in purchasing or leasing their vehicles, the California Class relied on the misrepresentations and/or omissions of Defendant with respect of the safety and reliability of the vehicles. Defendant’s representations turned out not to be true. Had the California Class known this they would not have purchased or leased their Class Vehicles and/or paid as much for them.

1076. All of the wrongful conduct alleged herein occurred, and continues to occur, in the conduct of Defendant’s businesses. Defendant’s wrongful conduct is part of a pattern or generalized course of conduct that is still perpetuated and repeated, both in the State of California and nationwide.

1077. As a direct and proximate result of Defendant’s unfair and deceptive practices, the California Class Members have suffered and will continue to suffer actual damages.

1078. The California Class requests that this Court enter such orders or judgments as may be necessary to enjoin New GM from continuing its unfair, unlawful, and/or deceptive practices, as provided in Cal. Bus. & Prof. Code § 17203; and for such other relief set forth below.

1079. The California Class also requests equitable and injunctive relief in the form of Court supervision of New GM's numerous recalls of the various Class Vehicles, to ensure that all affected vehicles are recalled and that the recalls properly and adequately cure the Ignition Switch Defect and the other Defects.

SEVENTEENTH CLAIM FOR RELIEF

VIOLATION OF SONG-BEVERLY CONSUMER WARRANTY ACT FOR BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (CALIFORNIA "LEMON LAW") (CAL. CIV. CODE §§ 1791.1 & 1792)

1080. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the California Class.

1081. The California Class members who purchased or leased the Defective Vehicles in California are "buyers" within the meaning of CAL. CIV. CODE § 1791(b).

1082. The Defective Vehicles are "consumer goods" within the meaning of CIV. CODE § 1791(a).

1083. Old GM was a "manufacturer" of the Defective Vehicles within the meaning of CAL. CIV. CODE § 1791(j), and, in purchasing Old GM, New GM expressly assumed liability and responsibility for "payment of all [Old GM's] Liabilities arising under…Lemon Laws," including California's Lemon Law, the Song-Beverly Act.

1084. Old GM and New GM impliedly warranted to the California Class that its Defective Vehicles were "merchantable" within the meaning of CAL. CIV. CODE §§ 1791.1(a) & 1792; however, the Defective Vehicles do not have the quality that a buyer would reasonably expect, and were therefore not merchantable.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/14/14 Page 327 of 337

1085. CAL. CIV. CODE § 1791.1(a) states:

> "Implied warranty of merchantability" or "implied warranty that goods are merchantable" means that the consumer goods meet each of the following:
>
> (1) Pass without objection in the trade under the contract description.
>
> (2) Are fit for the ordinary purposes for which such goods are used.
>
> (3) Are adequately contained, packaged, and labeled.
>
> (4) Conform to the promises or affirmations of fact made on the container or label.

1086. The Defective Vehicles would not pass without objection in the automotive trade because of the ignition switch defects that cause the Defective Vehicles to inadvertently shut down during ordinary driving conditions, leading to an unreasonable likelihood of accident and an unreasonable likelihood that such accidents would cause serious bodily harm or death to vehicle occupants.

1087. Because of the ignition switch defects, the Defective Vehicles are not safe to drive and thus not fit for ordinary purposes.

1088. The Defective Vehicles are not adequately labeled because the labeling fails to disclose the ignition switch defects and does not advise Class members to avoid attaching anything to their vehicle key rings. Old GM and New GM failed to warn about the dangerous safety defects in the Defective Vehicles.

1089. Old GM and New GM breached the implied warranty of merchantability by manufacturing and selling Defective Vehicles containing defects leading to the sudden and unintended shut down of the vehicles during ordinary driving conditions. These defects have

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 328 of 337

deprived the California Class of the benefit of their bargain and have caused the Defective Vehicles to depreciate in value.

1090. Notice of breach is not required because the California Class members did not purchase their automobiles directly from New GM.

1091. As a direct and proximate result of Old GM and New GM's breach of their duties under California's Lemon Law (for which New GM expressly assumed liability), the California Class members received goods whose dangerous condition substantially impairs their value to the California Class members. The California Class has been damaged by the diminished value of the vehicles, the products' malfunctioning, and the non-use of their Defective Vehicles.

1092. Under CAL. CIV. CODE §§ 1791.1(d) & 1794, the California Class members are entitled to damages and other legal and equitable relief including, at their election, the purchase price of their Defective Vehicles, or the overpayment or diminution in value of their Defective Vehicles.

1093. Under CAL. CIV. CODE § 1794, the California Class members are entitled to costs and attorneys' fees.

EIGHTEENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1094. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought only on behalf of the California Class.

1095. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1096. The Companies knew these representations were false when made.

1097. The vehicles purchased or leased by the California Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1098. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the California Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1099. The aforementioned concealment was material, because if it had been disclosed the California Class would not have bought, leased or retained their vehicles.

1100. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1101. The California Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1102. As a result of their reliance, the California Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1103. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the California Class. The California Class are therefore entitled to an award of punitive damages.

NINETEENTH CLAIM FOR RELIEF

VIOLATION OF CALIFORNIA'S FALSE ADVERTISING LAW
CAL. BUS. & PROF. CODE § 17500, *et. seq.*
(Asserted on Behalf of the California Class)

1104. This Claim for Relief is brought by the California Class.

1105. California Business and Professions Code § 17500 states: "It is unlawful for any… corporation… with intent directly or indirectly to dispose of real or personal property… to induce the public to enter into any obligation relating thereto, to make or disseminate or cause to be made or disseminated… from this state before the public in any state, in any newspaper or other publication, or any advertising device,… or in any other manner or means whatever, including over the Internet, any statement… which is untrue or misleading, and which is known, or which by the exercise of reasonable care should be known, to be untrue or misleading...."

1106. Defendant caused to be made or disseminated through California and the United States, through advertising, marketing and other publications, statements that were untrue or misleading, and which were known, or which by the exercise of reasonable care should have been known to the Defendant, to be untrue and misleading to consumers and the California Class.

1107. Defendant violated section 17500 because the misrepresentations and omissions regarding the safety and reliability of their vehicles as set forth in this Complaint were material and likely to deceive a reasonable consumer.

1108. The California Class Members have suffered injuries in fact, including the loss of money or property, as a result of Defendant' unfair, unlawful, and/or deceptive practices. In purchasing or leasing their vehicles, the California Class Members relied on the misrepresentations and/or omissions of Defendant with respect to the safety and reliability of their vehicles. Defendant' representations turned out not to be true. Had the California Class Members known this, they would not have purchased or leased their Class Vehicles and/or paid as much for them.

1109. Accordingly, the California Class Members overpaid for their Class Vehicles and did not receive the benefit of their bargain. One way to measure this overpayment, or lost benefit of the bargain, at the moment of purchase is by the value consumers place on the vehicles now that the truth has been exposed. Both trade-in prices and auction prices for Class Vehicles have declined as a result of Defendant' misconduct. This decline in value measures the overpayment, or lost benefit of the bargain, at the time of the California Class Members' purchases.

1110. All of the wrongful conduct alleged herein occurred, and continues to occur, in the conduct of Defendant' businesses. Defendant' wrongful conduct is part of a pattern or generalized course of conduct that is still perpetuated and repeated, both in the State of California and nationwide.

1111. The California Class requests that this Court enter such orders or judgments as may be necessary to enjoin Defendant from continuing their unfair, unlawful, and/or deceptive practices, and for such other relief set forth below.

TWENTIETH CLAIM FOR RELIEF

NEGLIGENT FAILURE TO RECALL
(Asserted on Behalf of the California Class)

1112. This claim is brought on behalf of the California Class.

1113. New GM knew or reasonably should have known that the Defective Vehicles were dangerous and/or were likely to be dangerous when used in a reasonably foreseeable manner.

1114. New GM either knew of the ignition switch-related defects in the Defective Vehicles before the vehicles were sold, or became aware of them and their attendant risks after the vehicles was sold.

1115. New GM continued to gain information further corroborating the ignition switch-related defects and their risks from its inception until this year.

1116. New GM failed to adequately recall the Defective Vehicles in a timely manner.

1117. Purchasers of the Defective Vehicles, including the California Class, were harmed by New GM's failure to adequately recall all the Defective Vehicles in a timely manner and have suffered damages, including, without limitation, damage to other components of the Defective Vehicles caused by the ignition switch-related defects, the diminished value of the Defective Vehicles, the cost of modification of the defective ignition switch systems, and the costs associated with the loss of use of the Defective Vehicles.

1118. New GM's failure to timely and adequately recall the Defective Vehicles was a substantial factor in causing the purchasers' harm, including that of the California Class.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 333 of 337

COLORADO

TWENTY-FIRST CLAIM FOR RELIEF

VIOLATIONS OF THE COLORADO CONSUMER PROTECTION ACT (COL. REV. STAT. § 6-1-101, *et. seq.*)

1119. This claim is brought on behalf of Class members who are Colorado residents (the "Colorado Class").

1120. Old GM and New GM are "persons" under § 6-1-102(6) of the Colorado Consumer Protection Act ("Colorado CPA"), COL. REV. STAT. § 6-1-101, *et. seq.*

1121. The Colorado Class members are "consumers" for purposes of COL. REV. STAT § 6-1-113(1)(a) who purchased or leased one or more Defective Vehicles.

1122. The Colorado CPA prohibits deceptive trade practices in the course of a person's business. Old GM and New GM engaged in deceptive trade practices prohibited by the Colorado CPA, including: (1) knowingly making a false representation as to the characteristics, uses, and benefits of the Defective Vehicles that had the capacity or tendency to deceive Class members; (2) representing that the Defective Vehicles are of a particular standard, quality, and grade even though both Companies knew or should have known they are not; (3) advertising the Defective Vehicles with the intent not to sell them as advertised; and (4) failing to disclose material information concerning the Defective Vehicles that was known to Old GM and New GM at the time of advertisement or sale with the intent to induce Class members to purchase, lease or retain the Defective Vehicles.

1123. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1124. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective

Case 1:14-md-02543-JMF Document 179-1 Filed 07/03/14 Page 334 of 337

Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Colorado CPA, and also has successor liability for the violations of Old GM.

1125. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1126. The Companies knew or should have known that their conduct violated the Colorado CPA.

1127. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1128. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1129. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 335 of 337

defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1130. The Companies each owed the Colorado Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Colorado Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Colorado Class that contradicted these representations.

1131. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Colorado Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1132. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Colorado Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Colorado Class.

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 336 of 337

1133. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Colorado Class. Had the Colorado Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1134. All members of the Colorado Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Colorado Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Colorado Class own vehicles that are not safe.

1135. The Colorado Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1136. The Colorado Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Colorado CPA, and these violations present

Case 1:14-md-02543-JMF Document 379-1 Filed 11/13/14 Page 337 of 337

a continuing risk to the Colorado Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1137. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1138. As a direct and proximate result of the Companies' violations of the Colorado CPA, the Colorado Class have suffered injury-in-fact and/or actual damage.

1139. Pursuant to COLO. REV. STAT. § 6-1-113, the Colorado Class seeks monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and discretionary trebling of such damages, or (b) statutory damages in the amount of $500 for each Colorado Class Member.

1140. The Colorado Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, declaratory relief, attorneys' fees, and any other just and proper relief available under the Colorado CPA.

TWENTY-SECOND CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (COL. REV. STAT. § 4-2-314)

1141. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of Class members who are Colorado residents.

1142. Old and New GM were merchants with respect to motor vehicles within the meaning of COL. REV. STAT. § 4-2-314.

1143. Under COL. REV. STAT. § 4-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Colorado Class purchased their Defective Vehicles.

EXHIBIT A2

1144. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the nondeployment of airbags in the event of a collision.

1145. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Colorado Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1146. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Colorado Class has been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

TWENTY-THIRD CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1147. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Colorado Class.

1148. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1149. The Companies knew these representations were false when made.

1150. The vehicles purchased or leased by the Colorado Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1151. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Colorado Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1152. The aforementioned concealment was material, because if it had been disclosed the Colorado Class would not have bought, leased or retained their vehicles.

1153. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1154. The Colorado Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1155. As a result of their reliance, the Colorado Class have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1156. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Colorado Class. The Colorado Class are therefore entitled to an award of punitive damages.

Case 1:14-md-02543-JMF Document 1579-2 Filed 11/03/15 Page 4 of 337

CONNECTICUT

TWENTY-FOURTH CLAIM FOR RELIEF

VIOLATION OF CONNECTICUT UNLAWFUL TRADE PRACTICES ACT
(CONN. GEN. STAT. § 42-110a, *et. seq.*)

1157. This claim is brought on behalf of Class members who are Connecticut residents (the "Connecticut Class").

1158. The Connecticut Unfair Trade Practices Act ("Connecticut UTPA") provides: "No person shall engage in unfair methods of competition and unfair or deceptive acts or practices in the conduct of any trade or commerce." CONN. GEN. STAT. § 42-110b(a).

1159. Old GM was, and New GM is, a "person" within the meaning of CONN. GEN. STAT. § 42-110a(3). Both Companies were engaged in in "trade" or "commerce" within the meaning of CONN. GEN. STAT. § 42-110a(4).

1160. Old GM and New GM participated in deceptive trade practices that violated the Connecticut UTPA as described herein. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Connecticut UTPA, and also has successor liability for the violations of Old GM.

1161. As alleged above, both Companies knew of the ignition switch defects, while the Connecticut Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1162. The Companies knew or should have known that their conduct violated the Connecticut UTPA.

1163. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1164. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1165. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1166. The Companies each owed the Connecticut Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Connecticut Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Connecticut Class that contradicted these representations.

1167. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Connecticut Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1168. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Connecticut Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Connecticut Class.

1169. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Connecticut Class. Had the Connecticut Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1170. All members of the Connecticut Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Connecticut Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 7 of 337

failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Connecticut Class own vehicles that are not safe.

1171. The Connecticut Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1172. The Connecticut Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Connecticut UTPA, and these violations present a continuing risk to the Connecticut Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1173. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1174. As a direct and proximate result of the Companies' violations of the Connecticut UTPA, the Connecticut Class has suffered injury-in-fact and/or actual damage.

1175. The Connecticut Class is entitled to recover their actual damages, punitive damages, and attorneys' fees pursuant to CONN. GEN. STAT. § 42-110g.

Case 1:14-md-02543-JMF Document 579-2 Filed 01/08/14 Page 3 of 337

1176. New GM and Old GM acted with a reckless indifference to another's rights or wanton or intentional violation to another's rights and otherwise engaged in conduct amounting to a particularly aggravated, deliberate disregard of the rights and safety of others.

1177. Pursuant to CONN. GEN. STAT. § 42-110g(c), the Connecticut Class will mail a copy of the complaint to Connecticut's Attorney General.

TWENTY-FIFTH CLAIM FOR RELIEF

FRAUDULENT CONCEALMENT

1178. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Connecticut Class.

1179. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1180. The Companies knew these representations were false when made.

1181. The vehicles purchased or leased by the Connecticut Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1182. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Connecticut Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1183. The aforementioned concealment was material, because if it had been disclosed the Connecticut Class would not have bought, leased or retained their vehicles.

1184. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1185. The Connecticut Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1186. As a result of their reliance, the Connecticut Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1187. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Connecticut Class. The Connecticut Class is therefore entitled to an award of punitive damages.

DELAWARE

TWENTY-SIXTH CLAIM FOR RELIEF

VIOLATION OF THE DELAWARE CONSUMER FRAUD ACT (6 DEL. CODE § 2513, *et. seq.*)

1188. This claim is brought on behalf of Class members who are Delaware residents (the "Delaware Class").

1189. New GM and Old GM are both "persons" within the meaning of 6 DEL. CODE § 2511(7).

1190. The Delaware Consumer Fraud Act ("Delaware CFA") prohibits the "act, use or employment by any person of any deception, fraud, false pretense, false promise, misrepresentation, or the concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale, lease or advertisement of any merchandise, whether or not any person has in fact been misled, deceived or damaged thereby." 6 DEL. CODE § 2513(a).

1191. Old GM and New GM participated in deceptive trade practices that violated the Delaware CFA as described herein. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Delaware CFA, and also has successor liability for the violations of Old GM.

1192. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1193. The Companies knew or should have known that their conduct violated the Delaware CFA.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 91 of 387

1194. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1195. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1196. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1197. The Companies each owed the Delaware Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Delaware Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Delaware Class that contradicted these representations.

1198. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Delaware Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1199. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Delaware Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Delaware Class.

1200. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Delaware Class. Had the Delaware Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1201. All members of the Delaware Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Delaware Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Delaware Class own vehicles that are not safe.

1202. The Delaware Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1203. The Delaware Class Members risks irreparable injury as a result of the Companies' act and omissions in violation of the Delaware CFA, and these violations present a continuing risk to the Delaware Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1204. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1205. As a direct and proximate result of the Companies' violations of the Delaware CFA, the Delaware Class have suffered injury-in-fact and/or actual damage.

1206. The Delaware Class seeks damages under the Delaware CFA for injury resulting from the direct and natural consequences of the Companies' unlawful conduct. *See, e.g.*, *Stephenson v. Capano Dev., Inc.*, 462 A.2d 1069, 1077 (Del. 1983). The Delaware Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, declaratory relief, attorneys' fees, and any other just and proper relief available under the Delaware CFA.

1207. New GM and Old GM engaged in gross, oppressive, or aggravated conduct justifying the imposition of punitive damages.

TWENTY-SEVENTH CLAIM FOR RELIEF

VIOLATION OF THE DELAWARE DECEPTIVE TRADE PRACTICES ACT (6 DEL. CODE § 2532, *et. seq.*)

1208. Old GM and New GM are "persons" within the meaning of 6 DEL. CODE § 2531(5).

1209. Delaware's Deceptive Trade Practices Act ("Delaware DTPA") prohibits a person from engaging in a "deceptive trade practice," which includes: "(5) Represent[ing] that goods or services have sponsorship, approval, characteristics, ingredients, uses, benefits, or quantities that they do not have, or that a person has a sponsorship, approval, status, affiliation, or connection that the person does not have"; "(7) Represent[ing] that goods or services are of a particular standard, quality, or grade, or that goods are of a particular style or model, if they are of another"; "(9) Advertis[ing] goods or services with intent not to sell them as advertised"; or "(12) Engag[ing] in any other conduct which similarly creates a likelihood of confusion or of misunderstanding." 6 DEL. CODE § 2532.

1210. Old GM and New GM engaged in deceptive trade practices in violation of the Delaware DTPA by willfully failing to disclose and actively concealing the dangerous risk of ignition switch defects in the Defective Vehicles as described above. The Companies also engaged in deceptive trade practices in violation of the Delaware DTPA by representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that the Defective Vehicles are of a particular standard and quality when they are not; advertising the Defective Vehicles with the intent not to sell them as advertised; and otherwise engaging in conduct likely to deceive.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 95 of 337

1211. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1212. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Delaware DTPA, and also has successor liability for the violations of Old GM.

1213. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1214. The Companies knew or should have known that their conduct violated the Delaware DTPA.

1215. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1216. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/08/15 Page 96 of 367

shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1217. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1218. The Companies each owed the Delaware Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Delaware Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Delaware Class that contradicted these representations.

1219. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Delaware Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/08/15 Page 97 of 337

1220. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Delaware Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Delaware Class.

1221. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Delaware Class. Had the Delaware Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1222. All members of the Delaware Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Delaware Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Delaware Class own vehicles that are not safe.

1223. The Delaware Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/04/16 Page 98 of 337

no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1224. The Delaware Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Delaware DTPA, and these violations present a continuing risk to the Delaware Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1225. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1226. As a direct and proximate result of the Companies' violations of the Delaware DTPA, the Delaware Class have suffered injury-in-fact and/or actual damage.

1227. The Delaware Class seeks injunctive relief and, if awarded damages under Delaware common law or Delaware Consumer Fraud Act, treble damages pursuant to 6 DEL. CODE § 2533(c).

1228. The Delaware Class also seeks punitive damages based on the outrageousness and recklessness of the Companies' conduct and the high net worth of New GM.

TWENTY-EIGHTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (6 DEL. CODE § 2-314)

1229. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Delaware Class.

1230. Old GM and New GM were merchants with respect to motor vehicles within the meaning of 6 DEL. CODE § 2-104(1).

1231. Under 6 DEL. CODE § 2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Delaware Class purchased their Defective Vehicles.

1232. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the nondeployment of airbags in the event of a collision.

1233. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Delaware Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1234. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Delaware Class have been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

TWENTY-NINTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1235. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of Class members who are Delaware residents.

1236. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1237. The Companies knew these representations were false when made.

1238. The vehicles purchased or leased by the Delaware Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down,

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 20 of 337

with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1239. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Delaware Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1240. The aforementioned concealment was material, because if it had been disclosed the Delaware Class would not have bought, leased or retained their vehicles.

1241. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1242. The Delaware Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1243. As a result of their reliance, the Delaware Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 291 of 337

1244. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Delaware Class. The Delaware Class is therefore entitled to an award of punitive damages.

DISTRICT OF COLUMBIA

THIRTIETH CLAIM FOR RELIEF

VIOLATION OF THE CONSUMER PROTECTION PROCEDURES ACT (D.C. CODE § 28-3901, *et. seq.*)

1245. This claim is brought on behalf of Class members who are District of Columbia residents (the "District of Columbia Class").

1246. Old GM and New GM are "persons" under the Consumer Protection Procedures Act ("District of Columbia CPPA"), D.C. CODE § 28-3901(a)(1).

1247. Class members are "consumers," as defined by D.C. CODE § 28-3901(1)(2), who purchased or leased one or more Defective Vehicles.

1248. Old GM's and New GM's actions as set forth herein constitute "trade practices" under D.C. CODE § 28-3901.

1249. Both Old GM and New GM participated in unfair or deceptive acts or practices that violated the District of Columbia CPPA. By failing to disclose and actively concealing the ignition switch defect in the Defective Vehicles, Old GM and New GM engaged in unfair or deceptive practices prohibited by the District of Columbia CPPA, D.C. CODE § 28-3901, *et. seq.*, including: (1) representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; (2) representing that the Defective Vehicles are of a particular standard, quality, and grade when they are not; (3) advertising the Defective Vehicles with the intent not to sell them as advertised; (4) representing that the subject of a transaction involving the Defective Vehicles has been supplied in accordance with a previous

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/04/16 Page 92 of 367

representation when it has not; (5) misrepresenting as to a material fact which has a tendency to mislead; and (6) failing to state a material fact when such failure tends to mislead.

1250. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the District of Columbia CPPA, and also has successor liability for the violations of Old GM.

1251. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1252. The Companies knew or should have known that their conduct violated the District of Columbia CPPA.

1253. As alleged above, each of the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1254. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1255. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1256. The Companies each owed the District of Columbia Class an independent duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the District of Columbia Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the District of Columbia Class that contradicted these representations.

1257. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the District of Columbia Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1258. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the District of Columbia Class, about the true safety and reliability of Defective Vehicles. The Companies each intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the District of Columbia Class.

1259. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the District of Columbia Class. Had the District of Columbia Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1260. All members of the District of Columbia Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The District of Columbia Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the District of Columbia Class own vehicles that are not safe.

1261. The District of Columbia Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1262. The District of Columbia Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the District of Columbia CPPA, and these violations present a continuing risk to the District of Columbia Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1263. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1264. As a direct and proximate result of the Companies' violations of the District of Columbia CPPA, the District of Columbia Class has suffered injury-in-fact and/or actual damage.

1265. The District of Columbia Class is entitled to recover from New GM treble damages or $1,500, whichever is greater, punitive damages, reasonable attorneys' fees, and any other relief the Court deems proper, under D.C. CODE § 28-3901.

1266. The District of Columbia Class seeks punitive damages against New GM because both Old GM's and New GM's conduct evidences malice and/or egregious conduct. Old GM and New GM maliciously and egregiously misrepresented the safety and reliability of the Defective Vehicles, deceived Class members on life-or-death matters, and concealed material facts that only it knew, all to avoid the expense and public relations nightmare of correcting a deadly flaw in the Defective Vehicles it repeatedly promised Class members were

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 26 of 337

safe. Old GM's and New GM's unlawful conduct constitutes malice warranting punitive damages.

THIRTY-FIRST CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (D.C. CODE § 28:2-314)

1267. In the event that the Court declines to certify a nationwide class under Michigan law, this claim is brought solely on behalf of Class members who are District of Columbia residents.

1268. Old GM and New GM were merchants with respect to motor vehicles within the meaning of D.C. CODE § 28:2-104(1).

1269. Under D.C. CODE § 28:2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the District of Columbia Class purchased their Defective Vehicles.

1270. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the nondeployment of airbags in the event of a collision.

1271. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the District of Columbia Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/08/16 Page 97 of 337

1272. As a direct and proximate result of Old GM's breach of the implied warranty of merchantability, the District of Columbia Class has been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

THIRTY-SECOND CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1273. In the event that the Court declines to certify a nationwide class under Michigan law, this claim is brought solely on behalf of the District of Columbia Class.

1274. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1275. The Companies knew these representations were false when made.

1276. The vehicles purchased or leased by the District of Columbia Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1277. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the District of Columbia Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1278. The aforementioned concealment was material, because if it had been disclosed the District of Columbia Class would not have bought, leased or retained their vehicles.

1279. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used

Case 1:14-md-02543-JMF Document 1379-2 Filed 11/14/14 Page 28 of 337

motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1280. The District of Columbia Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1281. As a result of their reliance, the District of Columbia Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1282. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the District of Columbia Class. The District of Columbia Class are therefore entitled to an award of punitive damages.

FLORIDA

THIRTY-THIRD CLAIM FOR RELIEF

VIOLATION OF FLORIDA'S UNFAIR & DECEPTIVE TRADE PRACTICES ACT (FLA. STAT. § 501.201, *et. seq.*)

1283. This claim is brought solely on behalf of Class members who are Florida residents (the "Florida Class").

1284. The Florida Class are "consumers" within the meaning of Florida Unfair and Deceptive Trade Practices Act ("FUDTPA"), FLA. STAT. § 501.203(7).

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 29 of 337

1285. The Companies engaged in "trade or commerce" within the meaning of FLA. STAT. § 501.203(8).

1286. FUDTPA prohibits "[u]nfair methods of competition, unconscionable acts or practices, and unfair or deceptive acts or practices in the conduct of any trade or commerce.…" FLA. STAT. § 501.204(1). Old GM and New GM participated in unfair and deceptive trade practices that violated the FUDTPA as described herein.

1287. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defect in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the FUDTPA, and also has successor liability for the violations of Old GM.

1288. As alleged above, both Companies knew of the ignition switch defects, while the Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1289. The Companies knew or should have known that their conduct violated the FUDTPA.

1290. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 30 of 337

1291. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1292. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1293. The Companies each owed the Florida Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Florida Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Florida Class that contradicted these representations.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/08/15 Page 391 of 837

1294. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Florida Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1295. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Florida Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Florida Class.

1296. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Florida Class. Had the Florida Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1297. All members of the Florida Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Florida Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Florida Class own vehicles that are not safe.

1298. The Florida Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-

Case 1:14-md-02543-JMF Document 1579-2 Filed 07/08/15 Page 32 of 337

publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1299. The Florida Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the FUDTPA, and these violations present a continuing risk to the Florida Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1300. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1301. As a direct and proximate result of the Companies' violations of the FUDTPA, the Florida Class has suffered injury-in-fact and/or actual damage.

1302. The Florida Class are entitled to recover their actual damages under FLA. STAT. § 501.211(2) and attorneys' fees under FLA. STAT. § 501.2105(1).

1303. The Florida Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, declaratory relief, attorneys' fees, and any other just and proper relief available under the FUDTPA.

THIRTY-FOURTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1304. In the event that the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Florida Class.

1305. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1306. The Companies knew these representations were false when made.

1307. The vehicles purchased or leased by the Florida Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1308. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Florida Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1309. The aforementioned concealment was material, because if it had been disclosed the Florida Class would not have bought, leased or retained their vehicles.

1310. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1311. The Florida Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/13/15 Page 94 of 337

1312. As a result of their reliance, the Florida Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1313. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Florida Class. the Florida Class are therefore entitled to an award of punitive damages.

GEORGIA

THIRTY-FIFTH CLAIM FOR RELIEF

VIOLATION OF GEORGIA'S FAIR BUSINESS PRACTICES ACT (GA. CODE ANN. § 10-1-390, *et. seq.*)

1314. This claim is brought solely on behalf of Class members who are Georgia residents (the "Georgia Class").

1315. The Georgia Fair Business Practices Act ("Georgia FBPA") declares "[u]nfair or deceptive acts or practices in the conduct of consumer transactions and consumer acts or practices in trade or commerce" to be unlawful, GA. CODE. ANN. § 10-1-393(a), including but not limited to "(5) representing that goods or services have sponsorship, approval, characteristics, ingredients, uses, benefits, or quantities that they do not have," "(7) [r]epresenting that goods or services are of a particular standard, quality, or grade… if they are of another," and "(9) [a]dvertising goods or services with intent not to sell them as advertised," GA. CODE. ANN. § 10-1-393.

1316. By failing to disclose and actively concealing the ignition switch defects in the Defective Vehicles, Old GM and New GM engaged in unfair or deceptive practices prohibited by the FBPA, including: (1) representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; (2) representing that the Defective Vehicles are of a particular standard, quality, and grade when they are not; and (3) advertising the Defective Vehicles with the intent not to sell them as advertised. Both Old GM and New GM participated in unfair or deceptive acts or practices that violated the Georgia FBPA.

1317. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defect in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Georgia FBPA, and also has successor liability for the violations of Old GM.

1318. As alleged above, both Companies knew of the ignition switch defects, while the Georgia Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1319. The Companies knew or should have known that their conduct violated the Georgia FBPA.

1320. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1321. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/13/15 Page 36 of 337

shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1322. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1323. The Companies each owed the Georgia Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Georgia Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Georgia Class that contradicted these representations.

1324. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Georgia Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 37 of 337

1325. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Georgia Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Georgia Class.

1326. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Georgia Class. Had the Georgia Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1327. All members of the Georgia Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Georgia Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Georgia Class own vehicles that are not safe.

1328. The Georgia Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1329. The Georgia Class Members risks irreparable injury as a result of the Companies' act and omissions in violation of the Georgia FBPA, and these violations present a continuing risk to the Georgia Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1330. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1331. As a direct and proximate result of the Companies' violations of the Georgia FBPA, the Georgia Class has suffered injury-in-fact and/or actual damage.

1332. The Georgia Class is entitled to recover damages and exemplary damages (for intentional violations) per GA. CODE. ANN § 10-1-399(a).

1333. The Georgia Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under the Georgia FBPA per GA. CODE. ANN § 10-1-399.

1334. Georgia Plaintiffs have complied with the notice requirement set forth in GA. CODE. ANN § 10-1-399(b) by virtue of the notice previously provided in the context of the underlying action styled *Dinco, et al. v GM*, 2:14-cv-03638-JVS-AN (C.D. Cal.), and other underlying actions, as well as additional notice in the form of a demand letter sent on October 12, 2014.

THIRTY-SIXTH CLAIM FOR RELIEF

VIOLATION OF GEORGIA'S UNIFORM DECEPTIVE TRADE PRACTICES ACT (GA. CODE ANN. § 10-1-370, *et. seq.*)

1335. The Companies and the Georgia Class are "persons' within the meaning of Georgia Uniform Deceptive Trade Practices Act ("Georgia UDTPA"), GA. CODE. ANN § 10-1-371(5).

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/13/15 Page 39 of 337

1336. The Georgia UDTPA prohibits "deceptive trade practices," which include the "misrepresentation of standard or quality of goods or services," and "engaging in any other conduct which similarly creates a likelihood of confusion or of misunderstanding." GA. CODE. ANN § 10-1-372(a). By failing to disclose and actively concealing the ignition switch defects in the Defective Vehicles, Old GM and New GM engaged in deceptive trade practices prohibited by the Georgia UDTPA.

1337. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defect in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Georgia UDTPA, and also has successor liability for the violations of Old GM.

1338. As alleged above, both Companies knew of the ignition switch defects, while the Georgia Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1339. The Companies knew or should have known that their conduct violated the Georgia UDTPA.

1340. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 390 of 687

1341. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1342. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1343. The Companies each owed the Georgia Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Georgia Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Georgia Class that contradicted these representations.

1344. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to Plaintiffs, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1345. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Georgia Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Georgia Class.

1346. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Georgia Class. Had the Georgia Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1347. All members of the Georgia Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Georgia Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Georgia Class own vehicles that are not safe.

1348. The Georgia Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1349. The Georgia Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Georgia UDTPA, and these violations present a continuing risk to the Georgia Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1350. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1351. As a direct and proximate result of the Companies' violations of the Georgia UDTPA, and the Georgia Class have suffered injury-in-fact and/or actual damage.

1352. Plaintiffs seek an order enjoining New GM's unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under the Georgia UDTPA per GA. CODE. ANN § 10-1-373.

THIRTY-SEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1353. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Georgia Class.

1354. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1355. The Companies knew these representations were false when made.

1356. The vehicles purchased or leased by the Georgia Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with

Case 1:14-md-02543-JMF Document 179-2 Filed 07/02/14 Page 93 of 287

the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1357. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Georgia Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1358. The aforementioned concealment was material, because if it had been disclosed the Georgia Class would not have bought, leased or retained their vehicles.

1359. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1360. The Georgia Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1361. As a result of their reliance, the Georgia Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/14/15 Page 94 of 337

1362. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Georgia Class. The Georgia Class is therefore entitled to an award of punitive damages.

HAWAII

THIRTY-EIGHTH CLAIM FOR RELIEF

UNFAIR AND DECEPTIVE ACTS IN VIOLATION OF HAWAII LAW (HAW. REV. STAT. § 480, *et. seq.*)

1365. This claim is brought on behalf of Class members who are Hawaii residents (the "Hawaii Class").

1366. Old GM and New GM are "persons" under HAW. REV. STAT. § 480-1.

1367. Class members are "consumer[s]" as defined by HAW. REV. STAT. § 480-1, who purchased or leased one or more Defective Vehicles.

1368. Old GM and New GM's acts or practices as set forth above occurred in the conduct of trade or commerce.

1369. The Hawaii Act § 480-2(a) prohibits "unfair methods of competition and unfair or deceptive acts or practices in the conduct of any trade or commerce.…" By failing to disclose and actively concealing the ignition switch defects in the Defective Vehicles, Old GM and New GM engaged in unfair and deceptive trade practices prohibited by the Hawaii Act.

1370. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defect in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or

Case 1:14-md-02543-JMF Document 1379-2 Filed 07/10/15 Page 395 of 387

omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Hawaii Act, and also has successor liability for the violations of Old GM.

1371. As alleged above, both Companies knew of the ignition switch defects, while the Hawaii Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1372. The Companies knew or should have known that their conduct violated the Hawaii Act.

1373. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1374. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1375. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/08/15 Page 96 of 387

1376. The Companies each owed the Hawaii Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Hawaii Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Hawaii Class that contradicted these representations.

1377. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Hawaii Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1378. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Hawaii Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Hawaii Class.

1379. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Hawaii Class. Had the Hawaii Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1380. All members of the Hawaii Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Hawaii Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Hawaii Class own vehicles that are not safe.

1381. The Hawaii Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1382. The Hawaii Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Hawaii Act, and these violations present a continuing risk to the Hawaii Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1383. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1384. As a direct and proximate result of the Companies' violations of the Hawaii Act, the Hawaii Class has suffered injury-in-fact and/or actual damage.

Case 1:14-md-02543-JMF Document 1579-2 Filed 11/03/15 Page 98 of 337

1385. Pursuant to HAW. REV. STAT. § 480-13, the Hawaii Class seeks monetary relief against New GM measured as the greater of (a) $1,000 and (b) threefold actual damages in an amount to be determined at trial.

1386. Under HAW. REV. STAT. § 480-13.5, the Hawaii Class seeks an additional award against New GM of up to $10,000 for each violation directed at a Hawaiian elder. Old GM and later New GM knew or should have known that their conduct was directed to one or more Class members who are elders. Old GM and New GM's conduct caused one or more of these elders to suffer a substantial loss of property set aside for retirement or for personal or family care and maintenance, or assets essential to the health or welfare of the elder. One or more Hawaii Class members who are elders are substantially more vulnerable to Old GM and New GM's conduct because of age, poor health or infirmity, impaired understanding, restricted mobility, or disability, and each of them suffered substantial physical, emotional, or economic damage resulting from Old GM and New GM's conduct.

THIRTY-NINTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY
(HAW. REV. STAT. § 490:2-314)

1387. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Hawaii residents.

1388. Old GM and New GM were merchants with respect to motor vehicles within the meaning of HAW. REV. STAT. § 490:2-104(1).

1389. Under HAW. REV. STAT. § 490:2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Hawaii Class purchased their Defective Vehicles.

Case 1:14-md-02543-JMF Document 1379-2 Filed 11/03/14 Page 399 of 387

1390. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1391. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Hawaii Class before or within a reasonable amount of time after GM issued the recall and the allegations of vehicle defects became public.

1392. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Hawaii Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

FORTIETH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1393. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Hawaii Class.

1394. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1395. The Companies knew these representations were false when made.

1396. The vehicles purchased or leased by the Hawaii Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1397. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Hawaii Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1398. The aforementioned concealment was material, because if it had been disclosed the Hawaii Class would not have bought, leased or retained their vehicles.

1399. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1400. The Hawaii Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1401. As a result of their reliance, the Hawaii Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1402. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Hawaii Class. The Hawaii Class are therefore entitled to an award of punitive damages.

IDAHO

FORTY-FIRST CLAIM FOR RELIEF

VIOLATION OF THE IDAHO CONSUMER PROTECTION ACT (IDAHO CIV. CODE § 48-601, *et. seq.*)

1403. This claim is brought on behalf of Class members who are Idaho residents (the "Idaho Class").

1404. Old GM and New GM are "persons" under the Idaho Consumer Protection Act ("Idaho CPA"), IDAHO CIV. CODE § 48-602(1).

1405. Old GM and New GM's acts or practices as set forth above occurred in the conduct of "trade" or "commerce" under IDAHO CIV. CODE § 48-602(2).

1406. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Idaho CPA. By failing to disclose and actively concealing the dangerous ignition switch defects in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Idaho CPA, including: (1) representing that the Defective Vehicles have characteristics, uses, and benefits which they do not have; (2) representing that the Defective Vehicles are of a particular standard, quality, and grade when they are not; (3) advertising the Defective Vehicles with the intent not to sell them as advertised; (4) engaging in acts or practices which are otherwise misleading, false, or deceptive to the consumer; and (5) engaging in any unconscionable method, act or practice in the conduct of trade or commerce. *See* IDAHO CIV. CODE § 48-603.

1407. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 52 of 337

deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Idaho CPA, and also has successor liability for the violations of Old GM.

1408. As alleged above, both Companies knew of the ignition switch defects, while the Idaho Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1409. The Companies knew or should have known that their conduct violated the Idaho CPA.

1410. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1411. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1412. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/13/15 Page 53 of 337

to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1413. The Companies each owed the Idaho Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Idaho Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Idaho Class that contradicted these representations.

1414. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Idaho Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1415. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Idaho Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Idaho Class.

1416. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Idaho Class. Had the Idaho Class known that their

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/04/15 Page 54 of 337

vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1417. All members of the Idaho Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Idaho Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Idaho Class own vehicles that are not safe.

1418. The Idaho Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1419. The Idaho Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Idaho CPA, and these violations present a continuing risk to the Idaho Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1420. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/14/15 Page 55 of 337

1421. As a direct and proximate result of the Companies' violations of the Idaho CPA, the Idaho Class has suffered injury-in-fact and/or actual damage.

1422. Pursuant to IDAHO CODE § 48-608, the Idaho Class seeks monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $1,000 for each Idaho Class Member.

1423. The Idaho Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under the Idaho CPA.

1424. The Idaho Class members also seek punitive damages against New GM because both Old GM and New GM's conduct evidences an extreme deviation from reasonable standards. Old GM and New GM flagrantly, maliciously, and fraudulently misrepresented the safety and reliability of the Defective Vehicles, deceived Class members on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting a deadly flaw in the Defective Vehicles they repeatedly promised Class members were safe. Old GM and New GM's unlawful conduct constitutes malice, oppression, and fraud warranting punitive damages.

FORTY-SECOND CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1425. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Idaho Class.

1426. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1427. The Companies knew these representations were false when made.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 56 of 387

1428. The vehicles purchased or leased by the Idaho Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1429. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Idaho Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1430. The aforementioned concealment was material, because if it had been disclosed the Idaho Class would not have bought, leased or retained their vehicles.

1431. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1432. The Idaho Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 57 of 387

1433. As a result of their reliance, the Idaho Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1434. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Idaho Class. The Idaho Class is therefore entitled to an award of punitive damages.

ILLINOIS

FORTY-THIRD CLAIM FOR RELIEF

VIOLATION OF ILLINOIS CONSUMER FRAUD AND DECEPTIVE BUSINESS PRACTICES ACT (815 ILCS 505/1, *et. seq.* and 720 ilcs 295/1a)

1435. This claim is brought on behalf of Class members who are Illinois residents (the "Illinois Class").

1436. Old GM and New GM are "persons" as that term is defined in 815 ILCS 505/1(c).

1437. The Illinois Class are "consumers" as that term is defined in 815 ILCS 505/1(e).

1438. The Illinois Consumer Fraud and Deceptive Business Practices Act ("Illinois CFA") prohibits "unfair or deceptive acts or practices, including but not limited to the use or employment of any deception, fraud, false pretense, false promise, misrepresentation or the concealment, suppression or omission of any material fact, with intent that others rely upon the concealment, suppression or omission of such material fact… in the conduct of trade or commerce… whether any person has in fact been misled, deceived or damaged thereby." 815 ILCS 505/2.

1439. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Illinois CFA. By failing to disclose and actively concealing the dangerous

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/14/15 Page 58 of 337

ignition switch defects in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Illinois CFA.

1440. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Illinois CFA, and also has successor liability for the violations of Old GM.

1441. As alleged above, both Companies knew of the ignition switch defects, while the Illinois Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1442. The Companies knew or should have known that their conduct violated the Illinois CFA.

1443. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1444. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

Case 1:14-md-02543-JMF Document 1379-2 Filed 11/03/15 Page 59 of 337

shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1445. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1446. The Companies each owed the Illinois Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Illinois Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Illinois Class that contradicted these representations.

1447. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Illinois Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/08/15 Page 50 of 337

1448. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Illinois Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Illinois Class.

1449. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Illinois Class. Had the Illinois Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1450. All members of the Illinois Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Illinois Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Illinois Class own vehicles that are not safe.

1451. The Illinois Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/08/16 Page 51 of 337

1452. The Illinois Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Illinois CFA, and these violations present a continuing risk to the Illinois Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1453. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1454. As a direct and proximate result of the Companies' violations of the Illinois CFA, the Illinois Class has suffered injury-in-fact and/or actual damage.

1455. Pursuant to 815 ILCS 505/10a(a), the Illinois Class seeks monetary relief against New GM in the amount of actual damages, as well as punitive damages because New GM acted with fraud and/or malice and/or was grossly negligent.

1456. The Illinois Class also seeks an order enjoining New GM's unfair and/or deceptive acts or practices, punitive damages, and attorneys' fees, and any other just and proper relief available under 815 ILCS. § 505/1 *et. seq.*

FORTY-FOURTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1457. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought solely on behalf of the Illinois Class.

1458. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1459. The Companies knew these representations were false when made.

1460. The vehicles purchased or leased by the Illinois Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with

Case 1:14-md-02543-JMF Document 1379-2 Filed 11/13/15 Page 52 of 287

the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1461. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Illinois Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1462. The aforementioned concealment was material, because if it had been disclosed the Illinois Class would not have bought, leased or retained their vehicles.

1463. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1464. The Illinois Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1465. As a result of their reliance, the Illinois Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/04/16 Page 593 of 837

1466. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Illinois Class. The Illinois Class is therefore entitled to an award of punitive damages.

INDIANA

FORTY-FIFTH CLAIM FOR RELIEF

VIOLATION OF THE INDIANA DECEPTIVE CONSUMER SALES ACT (Ind. Code § 24-5-0.5-3)

1467. This claim is brought on behalf of Class members who are Indiana residents (the "Indiana Class").

1468. Old GM and New GM are "persons" within the meaning of IND. CODE § 24-5-0.5-2(2) and "suppliers" within the meaning of IND. CODE § 24-5-0.5-2(a)(3).

1469. The Indiana Class Members' purchases of the Defective Vehicles are "consumer transactions" within the meaning of IND. CODE § 24-5-0.5-2(a)(1).

1470. Indiana's Deceptive Consumer Sales Act ("Indiana DCSA") prohibits a person from engaging in a "deceptive trade practice," which includes representing: "(1) That such subject of a consumer transaction has sponsorship, approval, performance, characteristics, accessories, uses, or benefits that they do not have, or that a person has a sponsorship, approval, status, affiliation, or connection it does not have; (2) That such subject of a consumer transaction is of a particular standard, quality, grade, style or model, if it is not and if the supplier knows or should reasonably know that it is not;… (7) That the supplier has a sponsorship, approval or affiliation in such consumer transaction the supplier does not have, and which the supplier knows or should reasonably know that the supplier does not have;… (c) Any representations on or within a product or its packaging or in advertising or promotional materials which would constitute a deceptive act shall be the deceptive act both of the supplier who places such a representation thereon or therein, or who authored such materials, and such suppliers who shall state orally or in writing that such representation is true if such other supplier shall know or have reason to know that such representation was false." IND. CODE § 24-5-0.5-3.

1471. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Indiana DCSA. By failing to disclose and actively concealing the dangerous ignition switch defects in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Indiana DCSA. The Companies also engaged in unlawful trade practices by: (1) representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; (2) representing that the Defective Vehicles are of a particular standard and quality when they are not; (3) advertising the Defective Vehicles with the intent not to sell them as advertised; and (4) otherwise engaging in conduct likely to deceive.

1472. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1473. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defect in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Indiana DCSA, and also has successor liability for the violations of Old GM.

1474. As alleged above, both Companies knew of the ignition switch defects, while the Indiana was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1475. The Companies knew or should have known that their conduct violated the Indiana DCSA.

1476. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1477. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1478. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1479. The Companies each owed the Indiana Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/08/15 Page 396 of 837

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Indiana Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Indiana Class that contradicted these representations.

1480. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Indiana Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1481. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Indiana Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Indiana Class.

1482. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Indiana Class. Had the Indiana Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1483. All members of the Indiana Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Indiana Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 67 of 337

failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Indiana Class own vehicles that are not safe.

1484. The Indiana Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1485. The Indiana Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Indiana DCSA, and these violations present a continuing risk to the Indiana Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1486. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1487. As a direct and proximate result of the Companies' violations of the Indiana DCSA, the Indiana Class has suffered injury-in-fact and/or actual damage.

1488. Pursuant to IND. CODE § 24-5-0.5-4, the Indiana Class seeks monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $500 for each Indiana Class Member, including treble damages up to $1,000 for New GM's willfully deceptive acts.

1489. The Indiana Class also seeks punitive damages based on the outrageousness and recklessness of the Companies' conduct and New GM's high net worth.

1490. Indiana Plaintiffs have complied with the notice requirement set forth in Indiana Code § 24-5-0.5-5(a) by virtue of the notice previously provided in the context of the underlying action styled *Saclo, et al. v. GM*, 8:14-cv-00604-JVS-AN (C.D. Cal.), and other underlying actions, as well as additional notice in the form of a demand letter sent on October 12, 2014.

FORTY-SIXTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (IND. CODE § 26-1-2-314)

1491. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Indiana Class.

1492. Old GM and New GM were merchants with respect to motor vehicles within the meaning of IND. CODE. § 26-1-2-104(1).

1493. Under IND. CODE. § 26-1-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Indiana Class purchased their Defective Vehicles.

1494. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/13/15 Page 59 of 327

1495. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Indiana Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1496. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Indiana Class has been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

FORTY-SEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1497. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Indiana residents.

1498. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1499. The Companies knew these representations were false when made.

1500. The vehicles purchased or leased by the Indiana Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1501. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Indiana Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

Case 1:14-md-02543-JMF Document 1379-2 Filed 07/14/15 Page 70 of 337

1502. The aforementioned concealment was material, because if it had been disclosed the Indiana Class would not have bought, leased or retained their vehicles.

1503. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1504. The Indiana Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1505. As a result of their reliance, the Indiana Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1506. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Indiana Class. The Indiana Class is therefore entitled to an award of punitive damages.

IOWA

FORTY-EIGHTH CLAIM FOR RELIEF

VIOLATIONS OF THE PRIVATE RIGHT OF ACTION FOR CONSUMER FRAUDS ACT (IOWA CODE § 714h.1, *et. seq.*)

1507. This claim is brought on behalf of Class members who are Iowa residents (the "Iowa Class").

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/13/15 Page 91 of 337

1508. Old GM and New GM are "persons" under IOWA CODE § 714H.2(7).

1509. The Iowa Class are "consumers," as defined by IOWA CODE § 714H.2(3), who purchased or leased one or more Defective Vehicles.

1510. The Iowa Private Right of Action for Consumer Frauds Act ("Iowa CFA") prohibits any "practice or act the person knows or reasonably should know is an unfair practice, deception, fraud, false pretense, or false promise, or the misrepresentation, concealment, suppression, or omission of a material fact, with the intent that others rely upon the unfair practice, deception, fraud, false pretense, false promise, misrepresentation, concealment, suppression, or omission in connection with the advertisement, sale, or lease of consumer merchandise…." IOWA CODE § 714H.3. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Iowa CFA. By failing to disclose and actively concealing the dangerous ignition switch defects in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Iowa CFA.

1511. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1512. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Iowa CFA, and also has successor liability for the violations of Old GM.

1513. As alleged above, both Companies knew of the ignition switch defects, while the Iowa Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1514. The Companies knew or should have known that their conduct violated the Iowa CFA.

1515. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1516. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1517. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

Case 1:14-md-02543-JMF Document 1579-2 Filed 12/03/15 Page 93 of 387

1518. The Companies each owed the Iowa Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Iowa Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Iowa Class that contradicted these representations.

1519. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Iowa Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1520. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Iowa Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Iowa Class.

1521. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Iowa Class. Had the Iowa Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/13/14 Page 394 of 837

1522. All members of the Iowa Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Iowa Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Iowa Class own vehicles that are not safe.

1523. The Iowa Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1524. The Iowa Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Iowa CFA, and these violations present a continuing risk to the Iowa Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1525. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1526. As a direct and proximate result of the Companies' violations of the Iowa CFA, the Iowa Class has suffered injury-in-fact and/or actual damage.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 95 of 337

1527. Pursuant to IOWA CODE § 714H.5, the Iowa Class seeks an order enjoining New GM's unfair and/or deceptive acts or practices; actual damages; in addition to an award of actual damages, statutory damages up to three times the amount of actual damages awarded as a result of New GM's willful and wanton disregard for the rights or safety of others; attorneys' fees; and such other equitable relief as the Court deems necessary to protect the public from further violations of the Iowa CFA.

FORTY-NINTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1528. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Iowa Class.

1529. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1530. The Companies knew these representations were false when made.

1531. The vehicles purchased or leased by the Iowa Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1532. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Iowa Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1533. The aforementioned concealment was material, because if it had been disclosed the Iowa Class would not have bought, leased or retained their vehicles.

1534. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1535. The Iowa Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1536. As a result of their reliance, the Iowa Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1537. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Iowa Class. The Iowa Class is entitled to an award of punitive damages.

KANSAS

FIFTIETH CLAIM FOR RELIEF

VIOLATIONS OF THE KANSAS CONSUMER PROTECTION ACT (KAN. STAT. ANN. § 50-623, *et. seq.*)

1538. This claim is brought on behalf of Class members who are Kansas residents (the "Kansas Class").

1539. Old GM and New GM are "supplier[s]" under the Kansas Consumer Protection Act ("Kansas CPA"), KAN. STAT. ANN. § 50-624(1).

1540. Class members are "consumers," within the meaning of KAN. STAT. ANN. § 50-624(b), who purchased or leased one or more Defective Vehicles.

1541. The sale of the Defective Vehicles to the Class members was a "consumer transaction" within the meaning of KAN. STAT. ANN. § 50-624(c).

1542. The Kansas CPA states "[n]o supplier shall engage in any deceptive act or practice in connection with a consumer transaction," KAN. STAT. ANN. § 50-626(a), and that deceptive acts or practices include: (1) knowingly making representations or with reason to know that "(A) Property or services have sponsorship, approval, accessories, characteristics, ingredients, uses, benefits or quantities that they do not have;" and "(D) property or services are of particular standard, quality, grade, style or model, if they are of another which differs materially from the representation;" "(2) the willful use, in any oral or written representation, of exaggeration, falsehood, innuendo or ambiguity as to a material fact;" and "(3) the willful failure to state a material fact, or the willful concealment, suppression or omission of a material fact." The Kansas CPA also provides that "[n]o supplier shall engage in any unconscionable act or practice in connection with a consumer transaction." KAN. STAT. ANN. § 50-627(a).

1543. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Kansas CPA. By failing to disclose and actively concealing the dangerous ignition switch defect in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Kansas CPA. The Companies also engaged in unlawful trade practices by: (1) representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; (2) representing that the Defective Vehicles are of a particular standard and quality when they are not; (3) advertising the

Defective Vehicles with the intent not to sell them as advertised; (4) willfully using, in any oral or written representation, of exaggeration, falsehood, innuendo or ambiguity as to a material fact; (5) willfully failing to state a material fact, or the willfully concealing, suppressing or omitting a material fact; and (6) otherwise engaging in an unconscionable act or practice in connection with a consumer transaction.

1544. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1545. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Kansas CPA, and also has successor liability for the violations of Old GM.

1546. As alleged above, both Companies knew of the ignition switch defects, while the Kansas Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1547. The Companies knew or should have known that their conduct violated the Kansas CPA.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 79 of 337

1548. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1549. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1550. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1551. The Companies each owed the Kansas Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Kansas Class; and/or

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 80 of 337

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Kansas Class that contradicted these representations.

1552. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Kansas Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1553. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Kansas Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Kansas Class.

1554. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Kansas Class. Had the Kansas Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1555. All members of the Kansas Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Kansas Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Kansas Class own vehicles that are not safe.

Case 1:14-md-02543-JMF Document 1579-2 Filed 12/03/15 Page 81 of 337

1556. The Kansas Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1557. The Kansas Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Kansas CPA, and these violations present a continuing risk to the Kansas Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1558. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1559. As a direct and proximate result of the Companies' violations of the Kansas CPA, the Kansas Class has suffered injury-in-fact and/or actual damage.

1560. Pursuant to KAN. STAT. ANN. § 50-634, the Kansas Class seeks monetary relief against Defendant measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $10,000 for each Kansas Class Member.

1561. The Kansas Class also seeks an order enjoining New GM's unfair, unlawful, and/or deceptive practices, declaratory relief, attorneys' fees, and any other just and proper relief available under KAN. STAT. ANN § 50-623 *et. seq.*

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 82 of 287

FIFTY-FIRST CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (KAN. STAT. ANN. § 84-2-314)

1562. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Kansas Class.

1563. Old GM and New GM were merchants with respect to motor vehicles within the meaning of KAN. STAT. ANN. § 84-2-104(1).

1564. Under KAN. STAT. ANN. § 84-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Kansas Class purchased their Defective Vehicles.

1565. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1566. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Kansas Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1567. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Kansas Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

FIFTY-SECOND CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1568. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Kansas Class.

1569. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1570. The Companies knew these representations were false when made.

1571. The vehicles purchased or leased by the Kansas Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1572. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Kansas Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1573. The aforementioned concealment was material, because if it had been disclosed the Kansas Class would not have bought, leased or retained their vehicles.

1574. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/04/16 Page 394 of 837

1575. The Kansas Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1576. As a result of their reliance, the Kansas Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1577. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Kansas Class. The Kansas Class is therefore entitled to an award of punitive damages.

KENTUCKY

FIFTY-THIRD CLAIM FOR RELIEF

VIOLATION OF THE KENTUCKY CONSUMER PROTECTION ACT (KY. REV. STAT. § 367.110, *et. seq.*)

1578. This claim is brought on behalf of Class members who are Kentucky residents (the "Kentucky Class").

1579. The Companies and the Kentucky Class are "persons" within the meaning of the KY. REV. STAT. § 367.110(1).

1580. The Companies engaged in "trade" or "commerce" within the meaning of KY. REV. STAT. § 367.110(2).

1581. The Kentucky Consumer Protection Act ("Kentucky CPA") makes unlawful "[u]nfair, false, misleading, or deceptive acts or practices in the conduct of any trade or commerce.…" KY. REV. STAT. § 367.170(1). Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Kentucky CPA. By failing to disclose and actively concealing the dangerous ignition switch defect in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Kentucky CPA.

1582. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1583. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Kentucky CPA, and also has successor liability for the violations of Old GM.

1584. As alleged above, both Companies knew of the ignition switch defects, while the Kentucky Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1585. The Companies knew or should have known that their conduct violated the Kentucky CPA.

1586. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 86 of 237

1587. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1588. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1589. The Companies each owed the Kentucky Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Kentucky Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Kentucky Class that contradicted these representations.

1590. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Kentucky Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1591. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Kentucky Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Kentucky Class.

1592. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Kentucky Class. Had the Kentucky Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1593. All members of the Kentucky Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Kentucky Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Kentucky Class own vehicles that are not safe.

1594. The Kentucky Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 58 of 287

failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1595. The Kentucky Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Kentucky CPA, and these violations present a continuing risk to the Kentucky Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1596. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1597. As a direct and proximate result of the Companies' violations of the Kentucky CPA, the Kentucky Class has suffered injury-in-fact and/or actual damage.

1598. Pursuant to KY. REV. STAT. ANN. § 367.220, the Kentucky Class seeks to recover actual damages in an amount to be determined at trial; an order enjoining New GM's unfair, unlawful, and/or deceptive practices; declaratory relief; attorneys' fees; and any other just and proper relief available under KY. REV. STAT. ANN. § 367.220.

FIFTY-FOURTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1599. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Kentucky residents.

1600. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1601. The Companies knew these representations were false when made.

1602. The vehicles purchased or leased by the Kentucky Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1603. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Kentucky Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1604. The aforementioned concealment was material, because if it had been disclosed the Kentucky Class would not have bought, leased or retained their vehicles.

1605. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1606. The Kentucky Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/14/15 Page 90 of 337

1607. As a result of their reliance, the Kentucky Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1608. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Kentucky Class. The Kentucky Class is entitled to an award of punitive damages.

LOUISIANA

FIFTY-FIFTH CLAIM FOR RELIEF

VIOLATION OF THE LOUISIANA UNFAIR TRADE PRACTICES AND CONSUMER PROTECTION LAW (LA. REV. STAT. § 51:1401, *et. seq.*)

1609. This claim is brought on behalf of Class members who are Louisiana residents (the "Louisiana Class").

1610. The Companies and the Louisiana Class are "persons" within the meaning of the LA. REV. STAT. § 51:1402(8).

1611. The Louisiana Class members are "consumers" within the meaning of the LA. REV. STAT. § 51:1402(1).

1612. The Companies engaged in "trade" or "commerce" within the meaning of LA. REV. STAT. § 51:1402(9).

1613. The Louisiana Unfair Trade Practices and Consumer Protection Law ("Louisiana CPL") makes unlawful "deceptive acts or practices in the conduct of any trade or commerce…" LA. REV. STAT. § 51:1405(A). Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Louisiana CPL. By failing to disclose and actively concealing the dangerous ignition switch defect in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Louisiana CPL.

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/13/15 Page 91 of 337

1614. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Louisiana CPL, and also has successor liability for the violations of Old GM.

1615. As alleged above, both Companies knew of the ignition switch defects, while the Louisiana Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1616. The Companies knew or should have known that their conduct violated the Louisiana CPL.

1617. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1618. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/04/16 Page 592 of 837

1619. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1620. The Companies each owed the Louisiana Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Louisiana Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Louisiana Class that contradicted these representations.

1621. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Louisiana Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1622. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Louisiana Class, about the true safety and reliability of

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 93 of 237

Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Louisiana Class.

1623. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Louisiana Class. Had the Louisiana Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1624. All members of the Louisiana Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Louisiana Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Louisiana Class own vehicles that are not safe.

1625. The Louisiana Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/14/15 Page 94 of 337

1626. The Louisiana Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Louisiana CPL, and these violations present a continuing risk to the Louisiana Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1627. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1628. As a direct and proximate result of the Companies' violations of the Louisiana CPL, the Louisiana Class have suffered injury-in-fact and/or actual damage.

1629. Pursuant to LA. REV. STAT. § 51:1409, the Louisiana Class seeks to recover actual damages in an amount to be determined at trial; treble damages for New GM's knowing violations of the Louisiana CPL; an order enjoining New GM's unfair, unlawful, and/or deceptive practices; declaratory relief; attorneys' fees; and any other just and proper relief available under LA. REV. STAT. § 51:1409.

1630. Pursuant to LA. REV. STAT. § 51:1409(B), the Louisiana Class will mail a copy of this complaint to Louisiana's Attorney General

FIFTY-SIXTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (LA. CIV. CODE ART. 2520, 2524)

1631. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Louisiana Class.

1632. At the time the Louisiana Class acquired their Defective Vehicles, those vehicles had a redhibitory defect within the meaning of LA. CIV. CODE ART. 2520, in that (a) the defective ignition switches rendered the use of the Defective Vehicles so inconvenient that the Louisiana Class either would not have purchased the Defective Vehicles had they

Case 1:14-md-02543-JMF Document 1579-2 Filed 01/08/15 Page 95 of 337

known of the defect, or, because the defective ignition switches so diminished the usefulness and/or value of the Defective Vehicles such that it must be presumed that the Louisiana Class would have purchased the Defective Vehicles, but for a lesser price.

1633. No notice of the defect is required under LA. CIV. CODE ART. 2520, since Old GM had knowledge of a redhibitory defect in the Defective Vehicles at the time they were sold to the Louisiana Class.

1634. Under LA. CIV. CODE ART. 2524, a warranty that the Defective Vehicles were in merchantable condition, or fit for ordinary use, was implied by law in the transactions when the Louisiana Class purchased their Defective Vehicles.

1635. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1636. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Louisiana Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1637. As a direct and proximate result of Old GM's sale of vehicles with redhibitory defects, and in violation of the implied warranty that the Defective Vehicles were fit for ordinary use, the Louisiana Class is entitled to either rescission or damages from New GM in an amount to be proven at trial.

1638. New GM also has successor liability for Old GM's breach.

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/13/15 Page 96 of 337

FIFTY-SEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1639. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Louisiana Class.

1640. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1641. The Companies knew these representations were false when made.

1642. The vehicles purchased or leased by the Louisiana Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1643. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Louisiana Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1644. The aforementioned concealment was material, because if it had been disclosed the Louisiana Class would not have bought, leased or retained their vehicles.

1645. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1646. The Louisiana Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1647. As a result of their reliance, the Louisiana Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1648. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Louisiana Class. The Louisiana Class is entitled to an award of punitive damages.

FIFTY-EIGHTH CLAIM FOR RELIEF

REDHIBITION
LA. CIV. CODE ART. 2520, *et. seq.* and 2545
(On Behalf of the Louisiana State Class)

1649. Under Louisiana law, the seller and manufacturer warrants the buyer against redhibitory defects or vices in the thing sold. LA. CIV. CODE ART. 2520. A defect is redhibitory under two circumstances. First, a defect is redhibitory when it renders the thing useless, or renders its use so inconvenient that it must be presumed that a buyer would not have bought the thing had he known of the defect. *Id.* The existence of such a defect gives a buyer the right to obtain rescission of the sale. *Id.* Second, a defect is redhibitory when it diminishes the usefulness or the value of the thing so that it must be presumed that a buyer would still have bought it, but for a lesser price. *Id.* The existence of such a defect entitles the buyer to a reduction in the price. *Id.*

1650. Old GM and New GM defectively designed, manufactured, sold, or otherwise placed in the stream of commerce Vehicles that are defective.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 98 of 287

1651. Old GM and New GM have known of the defects and the safety hazards that result from the defects, as alleged herein, and have failed to adequately address those safety concerns.

1652. New GM is responsible for damages caused by the failure of its products to conform to well-defined standards. In particular, the Defective Vehicles contain vices or defects which have rendered them useless or their use so inconvenient and unsafe that reasonable buyers would not have purchased them had they known of the defects, or at the least, would not have paid as much for the Vehicles as they did. The Louisiana Class members are entitled to obtain either rescission or a reduction in the purchase/lease price of the Vehicles from New GM.

1653. Further, under Louisiana law, Old GM and New GM are deemed to know that the Vehicles contained redhibitory defects pursuant to LA. CIV. CODE ART. 2545. New GM is liable for the bad faith sale of defective products with knowledge of the defects and thus is liable to the Louisiana Class for the price of the Vehicles, with interest from the purchase or lease date, as well as reasonable expenses occasioned by the sale or lease of the Vehicles, as well as attorneys' fees.

1654. Due to the defects and redhibitory vices in the Vehicles sold or leased to the Louisiana Class, they have suffered damages under Louisiana law.

MAINE

FIFTY-NINTH CLAIM FOR RELIEF

VIOLATION OF MAINE UNFAIR TRADE PRACTICES ACT (ME. REV. STAT. ANN. TIT. 5 § 205-a, *et. seq.*)

1655. This claim is brought on behalf of Class members who are Maine residents (the "Maine Class").

1656. The Companies, and the Maine Class are, "persons" within the meaning of ME. REV. STAT. ANN. TIT. 5 § 206(2).

1657. The Companies are engaged in "trade" or "commerce" within the meaning of ME. REV. STAT. ANN. TIT. § 206(3).

1658. The Maine Unfair Trade Practices Act ("Maine UTPA") makes unlawful "[u]nfair methods of competition and unfair or deceptive acts or practices in the conduct of any trade or commerce…." ME. REV. STAT. ANN. TIT. 5 § 207. In the course of the Companies' business, they each willfully failed to disclose and actively concealed the dangerous risk caused by the ignition switch defects in the Defective Vehicles. Accordingly, the Companies engaged in unfair or deceptive acts or practices. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Maine UTPA. By failing to disclose and actively concealing the dangerous ignition switch defect in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Maine UTPA.

1659. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Maine UTPA, and also has successor liability for the violations of Old GM.

1660. As alleged above, both Companies knew of the ignition switch defects, while the Maine Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1661. The Companies knew or should have known that their conduct violated the Maine UTPA.

1662. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1663. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1664. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1665. The Companies each owed the Maine Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Maine Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Maine Class that contradicted these representations.

1666. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Maine Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1667. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Maine Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Maine Class.

1668. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Maine Class. Had the Maine Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1669. All members of the Maine Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Maine Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/14/15 Page 192 of 337

failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Maine Class own vehicles that are not safe.

1670. The Maine Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1671. The Maine Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Maine UTPA, and these violations present a continuing risk to the Maine Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1672. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1673. As a direct and proximate result of the Companies' violations of the Maine UTPA, the Maine Class has suffered injury-in-fact and/or actual damage.

1674. Pursuant to ME. REV. STAT. ANN. TIT. 5 § 213, the Maine Class seeks an order enjoining Defendant's unfair and/or deceptive acts or practices, damages, punitive damages, and attorneys' fees, costs, and any other just and proper relief available under the Maine UTPA.

1675. On October 12, 2014, Plaintiffs sent a notice letter complying with ME. REV. STAT. ANN. TIT. 5, § 213(1-A). Plaintiffs presently do not claim the damages relief asserted in this Complaint under the Maine UTPA until and unless New GM fails to remedy its unlawful conduct towards the Class within the requisite time period, after which Plaintiffs seek all damages and relief to which Plaintiffs and the Maine Class are entitled.

1676. Pursuant to ME. REV. STAT. ANN. TIT. 5 § 213(3), Plaintiffs will mail a copy of this complaint to Maine's Attorney General.

SIXTIETH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(ME. REV. STAT. ANN. TIT. 11 § 2-314)

1677. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Maine residents.

1678. Old GM and New GM were merchants with respect to motor vehicles within the meaning of ME. REV. STAT. ANN. TIT. 11 § 2-104(1).

1679. Under ME. REV. STAT. ANN. TIT. 11 § 2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Maine Class purchased their Defective Vehicles.

1680. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1681. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Maine Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1682. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Maine Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

SIXTY-FIRST CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1683. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Maine residents.

1684. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1685. The Companies knew these representations were false when made.

1686. The vehicles purchased or leased by the Maine Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1687. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Maine Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1688. The aforementioned concealment was material, because if it had been disclosed the Maine Class would not have bought, leased or retained their vehicles.

1689. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1690. The Maine Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1691. As a result of their reliance, the Maine Class been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1692. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Maine Class, who are therefore entitled to an award of punitive damages.

MARYLAND

SIXTY-SECOND CLAIM FOR RELIEF

VIOLATIONS OF THE MARYLAND CONSUMER PROTECTION ACT (MD. CODE COM. LAW § 13-101, *et. seq.*)

1693. This claim is brought on behalf of Class members who are Maryland residents (the "Maryland Class").

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 196 of 337

1694. The Companies and the Maryland Class are "persons" within the meaning of MD. CODE COM. LAW § 13-101(h).

1695. The Maryland Consumer Protection Act ("Maryland CPA") provides that a person may not engage in any unfair or deceptive trade practice in the sale of any consumer good. MD. COM. LAW CODE § 13-303. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Maryland CPA. By failing to disclose and actively concealing the dangerous ignition switch defect in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Maryland CPA.

1696. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1697. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Maryland CPA, and also has successor liability for the violations of Old GM.

1698. As alleged above, both Companies knew of the ignition switch defects, while the Maryland Class was deceived by the Companies' omission into believing the Defective

Vehicles were safe, and the information could not have reasonably been known by the consumer.

1699. The Companies knew or should have known that their conduct violated the Maryland CPA.

1700. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1701. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1702. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1703. The Companies each owed the Maryland Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Maryland Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Maryland Class that contradicted these representations.

1704. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Maryland Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1705. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Maryland Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Maryland Class.

1706. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Maryland Class. Had the Maryland Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1707. The Maryland Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Maryland Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 199 of 337

Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Maryland Class own vehicles that are not safe.

1708. The Maryland Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1709. The Maryland Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Maryland CPA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1710. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1711. As a direct and proximate result of the Companies' violations of the Maryland CPA, the Maryland Class has suffered injury-in-fact and/or actual damage.

1712. Pursuant to MD. CODE COM. LAW § 13-408, the Maryland Class seek actual damages, attorneys' fees, and any other just and proper relief available under the Maryland CPA.

SIXTY-THIRD CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (MD. CODE COM. LAW § 2-314)

1713. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Maryland residents.

1714. Old GM and New GM were merchants with respect to motor vehicles within the meaning of MD. COM. LAW § 2-104(1).

1715. Under MD. COM. LAW § 2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Maryland Class purchased their Defective Vehicles.

1716. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1717. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Maryland Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1718. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Maryland Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 511 of 737

SIXTY-FOURTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1719. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Maryland residents.

1720. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1721. The Companies knew these representations were false when made.

1722. The vehicles purchased or leased were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1723. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Maryland Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1724. The aforementioned concealment was material, because if it had been disclosed the Maryland Class would not have bought, leased or retained their vehicles.

1725. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 112 of 337

1726. The Maryland Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1727. As a result of their reliance, the Maryland Class been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1728. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Maryland Class, who are therefore entitled to an award of punitive damages.

MASSACHUSETTS

SIXTY-FIFTH CLAIM FOR RELIEF

DECEPTIVE ACTS OR PRACTICES PROHIBITED BY MASSACHUSETTS LAW (MASS. GEN. LAWS CH. 93A, § 1, *et. seq.*)

1729. This claim is brought on behalf of Class members who are Massachusetts residents (the "Massachusetts Class or "The MA Class"").

1730. The Companies and the Massachusetts Class are "persons" within the meaning of MASS. GEN. LAWS ch. 93A, § 1(a).

1731. The Companies engaged in "trade" or "commerce" within the meaning of MASS. GEN. LAWS ch. 93A, § 1(b).

1732. Massachusetts law (the "Massachusetts Act") prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce." MASS. GEN. LAWS ch. 93A, § 2. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Massachusetts Act. By failing to disclose and actively concealing the dangerous ignition switch defect in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Massachusetts Act.

1733. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Massachusetts Act, and also has successor liability for the violations of Old GM.

1734. As alleged above, both Companies knew of the ignition switch defects, while the Massachusetts Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1735. The Companies knew or should have known that their conduct violated the Massachusetts Act.

1736. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1737. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 514 of 337

shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1738. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1739. The Companies each owed the MA Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the MA Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the MA Class that contradicted these representations.

1740. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the MA Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1741. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the MA Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Massachusetts Class.

1742. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Massachusetts Class. Had the Massachusetts Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1743. The Massachusetts Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Massachusetts Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Massachusetts Class owns vehicles that are not safe.

1744. The Massachusetts Class Members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 516 of 537

1745. Massachusetts Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Massachusetts Act, and these violations present a continuing risk to the MA Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1746. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1747. As a direct and proximate result of the Companies' violations of the Massachusetts Act, the Massachusetts Class have suffered injury-in-fact and/or actual damage.

1748. Pursuant to MASS. GEN. LAWS ch. 93A, § 9, the Massachusetts Class seeks monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $25 for each Massachusetts Class Member. Because Defendant's conduct was committed willfully and knowingly, up to three times actual damages, but no less than two times actual damages, is warranted as a recovery for each Massachusetts Class Member.

1749. The Massachusetts Class also seeks an order enjoining New GM's unfair and/or deceptive acts or practices, punitive damages, and attorneys' fees, costs, and any other just and proper relief available under the Massachusetts Act.

1750. Massachusetts Plaintiffs have complied with the notice requirement set forth in MASS. GEN. LAWS ch. 93A, § 9(3) by virtue of the notice previously provided in the context of the underlying action styled *Dinco, et al. v GM*, 2:14-cv-03638-JVS-AN (C.D. Cal.), and other underlying actions, as well as additional notice in the form of a demand letter sent on October 12, 2014.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 517 of 337

SIXTY-SIXTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (ALM GL. CH. 106, § 2-314)

1751. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Massachusetts residents.

1752. Old GM and New GM were merchants with respect to motor vehicles within the meaning of ALM GL CH. 106, § 2-104(1).

1753. Under ALM GL CH. 106, § 2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the Defective Vehicle transactions.

1754. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1755. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Massachusetts Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1756. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Massachusetts Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 318 of 337

SIXTY-SEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1757. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Massachusetts residents.

1758. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1759. The Companies knew these representations were false when made.

1760. The vehicles purchased or leased by the MA Class, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1761. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the MA Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1762. The aforementioned concealment was material, because if it had been disclosed the MA Class would not have bought, leased or retained their vehicles.

1763. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1764. The MA Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1765. As a result of their reliance, MA Class Members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1766. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Massachusetts Class, who are therefore entitled to an award of punitive damages.

MICHIGAN

SIXTY-EIGHTH CLAIM FOR RELIEF

VIOLATION OF THE MICHIGAN CONSUMER PROTECTION ACT (MICH. COMP. LAWS § 445.903, *et. seq.*)

1767. This claim is brought under Michigan law on behalf of the Michigan Class for equitable injunctive relief , actual damages, and statutory penalties.

1768. Michigan Class Members were "person[s]" within the meaning of the MICH. COMP. LAWS § 445.902(1)(d).

1769. At all relevant times hereto, the Companies were "persons" engaged in "trade or commerce" within the meaning of the MICH. COMP. LAWS § 445.902(1)(d) and (g).

1770. The Michigan Consumer Protection Act ("Michigan CPA") prohibits "[u]nfair, unconscionable, or deceptive methods, acts, or practices in the conduct of trade or commerce.…" MICH. COMP. LAWS § 445.903(1). Old GM and New GM engaged in unfair, unconscionable, or deceptive methods, acts or practices prohibited by the Michigan CPA, including: "(c) Representing that goods or services have… characteristics… that they do not have….;" "(e) Representing that goods or services are of a particular standard… if they are of another;" "(i) Making false or misleading statements of fact concerning the reasons for, existence of, or amounts of price reductions;" "(s) Failing to reveal a material fact, the omission of which tends to mislead or deceive the consumer, and which fact could not reasonably be known by the consumer;" "(bb) Making a representation of fact or statement of fact material to the transaction such that a person reasonably believes the represented or suggested state of affairs to be other than it actually is;" and "(cc) Failing to reveal facts that are material to the transaction in light of representations of fact made in a positive manner." MICH. COMP. LAWS § 445.903(1). By failing to disclose and actively concealing the dangerous ignition switch defect in the Defective Vehicles, Old GM and New GM both participated in unfair, deceptive, and unconscionable acts that violated the Michigan CPA.

1771. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defect in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Michigan CPA, and also has successor liability for the violations of Old GM.

1772. As alleged above, both Companies knew of the ignition switch defects, and the Michigan Class was deceived by the Companies' omissions into believing the Defective

Vehicles were safe. The true information could not have reasonably been known by the consumer.

1773. The Companies knew or should have known that their conduct violated the Michigan CPA.

1774. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1775. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1776. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1777. The Companies each owed the Michigan Class an independent duty, based on their respective knowledge, to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they each:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from Plaintiffs; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from Plaintiffs that contradicted these representations.

1778. The Defective Vehicles posed and/or continue to pose an unreasonable risk of death or serious bodily injury to the Michigan Class passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1779. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Michigan Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Michigan Class.

1780. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Michigan Class. Had the Michigan Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1781. The Michigan Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Michigan Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 123 of 337

Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Michigan Class owns vehicles that are not safe.

1782. The Michigan Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1783. Michigan Class Members were—and continue to be—at risk of irreparable injury as a result of the respective Companies' acts and omissions in violation of the Michigan CPA, and these violations present a continuing risk to the Michigan Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1784. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1785. As a direct and proximate result of the Companies' violations of the Michigan CPA, the Michigan Class has suffered injury-in-fact and/or actual damage.

1786. The Michigan Class seeks injunctive relief to enjoin New GM from continuing its unfair and deceptive acts; monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $250 for each Michigan Class Member; reasonable attorneys' fees; declaratory

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 524 of 837

relief in the nature of a judicial determination of whether each Company's conduct violated the Michigan Statute, the just total amount of penalties to be assessed against each thereunder, and the formula and procedure for fair and equitable allocation of statutory penalties among the Michigan Class; and any other just and proper relief available under MICH. COMP. LAWS § 445.911.

1787. The Michigan Class also seeks punitive damages against New GM because it carried out despicable conduct with willful and conscious disregard of the rights and safety of others. New GM intentionally and willfully misrepresented the safety and reliability of Defective Vehicles, deceived Michigan Class Members on life-or-death matters, and concealed material facts that only it knew, all to avoid the expense and public relations nightmare of correcting a deadly flaw in the Defective Vehicles it repeatedly promised Michigan Class Members were safe. New GM's unlawful conduct constitutes malice, oppression, and fraud warranting punitive damages.

SIXTY-NINTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (MICH. COMP. LAWS § 440.2314)

1788. This claim is brought on behalf of Michigan residents (the "Michigan Class").

1789. Old GM and New GM were merchants with respect to motor vehicles within the meaning of MICH. COMP. LAWS § 440.2314(1).

1790. Under MICH. COMP. LAWS § 440.2314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when Michigan Class members purchased their Defective Vehicles.

1791. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 125 of 337

Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1792. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Michigan Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1793. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Michigan Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

1794. The Michigan Class also seeks available equitable and/or injunctive relief. Based on New GM's continuing failures to fix the known dangerous defects, the Michigan Class seeks a declaration that New GM has not adequately implemented its recall commitments and requirements and general commitments to fix its failed processes, and injunctive relief in the form of judicial supervision over the recall process is warranted. The Michigan Class also seeks the establishment of a New GM-funded program for Plaintiffs and Class members to recover out of pocket costs incurred.

SEVENTIETH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1795. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Michigan residents.

1796. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1797. The Companies knew these representations were false when made.

1798. The vehicles purchased or leased by the Michigan Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1799. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Michigan Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1800. The aforementioned concealment was material, because if it had been disclosed the Michigan Class would not have bought, leased or retained their vehicles.

1801. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1802. The Michigan Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 127 of 337

1803. As a result of their reliance, the Michigan Class Members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1804. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Michigan Class, who are therefore entitled to an award of punitive damages.

MINNESOTA

SEVENTY-FIRST CLAIM FOR RELIEF

VIOLATION OF MINNESOTA PREVENTION OF CONSUMER FRAUD ACT (MINN. STAT. § 325f.68, *et. seq.*)

1805. This claim is brought on behalf of Class members who are Minnesota residents (the "Minnesota Class").

1806. The Defective Vehicles constitute "merchandise" within the meaning of MINN. STAT. § 325F.68(2).

1807. The Minnesota Prevention of Consumer Fraud Act ("Minnesota CFA") prohibits "[t]he act, use, or employment by any person of any fraud, false pretense, false promise, misrepresentation, misleading statement or deceptive practice, with the intent that others rely thereon in connection with the sale of any merchandise, whether or not any person has in fact been misled, deceived, or damaged thereby…" MINN. STAT. § 325F.69(1). Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Minnesota CFA. By failing to disclose and actively concealing the dangerous ignition switch defects in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Minnesota CFA.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/31/14 Page 58 of 337

1808. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1809. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Minnesota CFA, and also has successor liability for the violations of Old GM.

1810. As alleged above, both Companies knew of the ignition switch defects, while the Minnesota Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1811. The Companies knew or should have known that their conduct violated the Minnesota CFA.

1812. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1813. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 129 of 337

shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1814. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1815. The Companies each owed the Minnesota Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Minnesota Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Minnesota Class that contradicted these representations.

1816. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Minnesota Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1817. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Minnesota Class.

1818. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Minnesota Class. Had the Minnesota Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1819. The Minnesota Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Minnesota Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Minnesota Class owns vehicles that are not safe.

1820. The Minnesota Class Members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1821. Minnesota Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Minnesota CFA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1822. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1823. As a direct and proximate result of the Companies' violations of the Minnesota CFA, the Minnesota Class has suffered injury-in-fact and/or actual damage.

1824. Pursuant to MINN. STAT. § 8.31(3a), the Minnesota Class seeks actual damages, attorneys' fees, and any other just and proper relief available under the Minnesota CFA.

1825. The Minnesota Class also seeks punitive damages under MINN. STAT. § 549.20(1)(a) give the clear and convincing evidence that New GM's acts show deliberate disregard for the rights or safety of others.

SEVENTY-SECOND CLAIM FOR RELIEF

VIOLATION OF MINNESOTA UNIFORM DECEPTIVE TRADE PRACTICES ACT (MINN. STAT. § 325d.43-48, *et. seq.*)

1826. This claim is brought on behalf of Class members who are Minnesota residents.

1827. The Minnesota Deceptive Trade Practices Act ("Minnesota DTPA") prohibits deceptive trade practices, which occur when a person "(5) represents that goods or services have sponsorship, approval, characteristics, ingredients, uses, benefits, or quantities that they do not have or that a person has a sponsorship, approval, status, affiliation, or connection that the person does not have;" "(7) represents that goods or services are of a particular standard, quality, or grade, or that goods are of a particular style or model, if they are of another;" and "(9) advertises goods or services with intent not to sell them as advertised." MINN. STAT.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 132 of 337

§ 325D.44. In the course of the Companies' business, they each willfully failed to disclose and actively concealed the dangerous risk caused by the ignition switch defects in the Defective Vehicles and engaged in deceptive practices by representing that Defective Vehicles have sponsorship, approval, characteristics, ingredients, uses, benefits, or quantities that they do not have; representing that Defective Vehicles are of a particular standard, quality, or grade, or that goods are of a particular style or model, if they are of another; and advertising Defective Vehicles with intent not to sell them as advertised. Old GM and New GM both participated in misleading, false, or deceptive acts that violated the Minnesota DTPA. By failing to disclose and actively concealing the dangerous ignition switch defects in the Defective Vehicles, both Old GM and New GM engaged in deceptive business practices prohibited by the Minnesota DTPA.

1828. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

1829. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Minnesota DTPA, and also has successor liability for the violations of Old GM.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 133 of 337

1830. As alleged above, both Companies knew of the ignition switch defects, while the Minnesota Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1831. The Companies knew or should have known that their conduct violated the Minnesota DTPA.

1832. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1833. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1834. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1835. The Companies each owed the Minnesota Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Minnesota that contradicted these representations.

1836. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Minnesota Class passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1837. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Minnesota Class.

1838. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Minnesota Class. Had the Minnesota Class Members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1839. The Minnesota Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Minnesota Class Members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 135 of 337

failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Minnesota Class owns vehicles that are not safe.

1840. The Minnesota Class Members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1841. The Minnesota Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Minnesota DTPA, and these violations present a continuing risk to the Minnesota Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1842. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1843. As a direct and proximate result of the Companies' violations of the Minnesota DTPA, the Minnesota Class has suffered injury-in-fact and/or actual damages.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 536 of 337

1844. Pursuant to MINN. STAT. § 8.31(3a) and 325D.45, the Minnesota Class seeks actual damages, attorneys' fees, and any other just and proper relief available under the Minnesota DTPA.

1845. The Minnesota Class also seeks punitive damages under MINN. STAT. § 549.20(1)(a) give the clear and convincing evidence that New GM's acts show deliberate disregard for the rights or safety of others.

SEVENTY-THIRD CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (MINN. STAT. § 336.2-314)

1846. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Minnesota residents.

1847. Old GM and New GM were merchants with respect to motor vehicles within the meaning of MINN. STAT. § 336.2-104(1).

1848. Under MINN. STAT. § 336.2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Minnesota Class purchased their Defective Vehicles.

1849. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1850. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 537 of 337

communications sent by the Minnesota Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1851. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Minnesota Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

SEVENTY-FOURTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1852. This claim is brought on behalf of Class members who are Minnesota residents.

1853. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1854. The Companies knew these representations were false when made.

1855. The vehicles purchased or leased by the Minnesota Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1856. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Minnesota Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1857. The aforementioned concealment was material, because if it had been disclosed the Minnesota Class Members would not have bought, leased or retained their vehicles.

1858. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used

Case 1:14-md-02543-JMF Document 379-2 Filed 11/04/14 Page 538 of 737

motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1859. The Minnesota Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1860. As a result of their reliance, they have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1861. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Minnesota Class, who are therefore entitled to an award of punitive damages.

MISSISSIPPI

SEVENTY-FIFTH CLAIM FOR RELIEF

VIOLATION OF MISSISSIPPI CONSUMER PROTECTION ACT (MISS. CODE. ANN. § 75-24-1, *et. seq.*)

1862. This claim is brought solely on behalf of Class members who are Mississippi residents (the "Mississippi Class").

1863. The Mississippi Consumer Protection Act ("Mississippi CPA") prohibits "unfair or deceptive trade practices in or affecting commerce…." MISS. CODE. ANN. § 75-24-5(1). Unfair or deceptive practices include, but are not limited to, "(e) Representing that goods or services have sponsorship, approval, characteristics, ingredients, uses, benefits, or quantities that they do not have or that a person has a sponsorship, approval, status, affiliation, or connection that he does not have;" "(g) Representing that goods or services are of a particular standard, quality, or grade, or that goods are of a particular style or model, if they are of another;" and "(i) Advertising goods or services with intent not to sell them as advertised." Old GM and New GM participated in deceptive trade practices that violated the Mississippi CPA as described herein, including representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Defective Vehicles are of a particular standard and quality when they are not; and advertising Defective Vehicles with the intent not to sell them as advertised.

1864. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defect in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Mississippi CPA, and also has successor liability for the violations of Old GM.

1865. As alleged above, both Companies knew of the ignition switch defects, while the Mississippi Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 540 of 837

1866. The Companies knew or should have known that their conduct violated the Mississippi CPA.

1867. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1868. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1869. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1870. The Companies each owed the Mississippi Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Mississippi Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts that contradicted these representations.

1871. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Mississippi Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1872. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Mississippi, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Mississippi Class.

1873. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Mississippi Class. Had the Mississippi Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1874. All members of the Mississippi Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Mississippi Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Mississippi Class owns vehicles that are not safe.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 542 of 837

1875. The Mississippi Class Members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1876. The Mississippi Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Mississippi CPA, and these violations present a continuing risk to the Mississippi Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1877. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1878. As a direct and proximate result of the Companies' violations of the Mississippi CPA, the Mississippi Class has suffered injury-in-fact and/or actual damage.

1879. The actual damages of the Mississippi Class will be determined at trial, and the Mississippi Class seeks these damages as well as any other just and proper relief available under the Mississippi CPA.

SEVENTY-SIXTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (MISS. CODE ANN. § 75-2-314)

1880. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is solely on behalf of Class members who are Mississippi residents.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 543 of 837

1881. Old GM and New GM were merchants with respect to motor vehicles within the meaning of MISS. CODE ANN. § 75-2-104(1).

1882. Under MISS. CODE ANN. § 75-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Mississippi Class purchased their Defective Vehicles.

1883. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1884. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Mississippi Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1885. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, the Mississippi Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

SEVENTY-SEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1886. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Mississippi residents.

1887. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1888. The Companies knew these representations were false when made.

1889. The vehicles purchased or leased by the Mississippi Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1890. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision, because the Mississippi Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1891. The aforementioned concealment was material, because if it had been disclosed the Mississippi Class would not have bought, leased or retained their vehicles.

1892. The aforementioned representations were also material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1893. The Mississippi Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1894. As a result of their reliance, the Mississippi Class Members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1895. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Mississippi Class, who are therefore entitled to an award of punitive damages.

MISSOURI

SEVENTY-EIGHTH CLAIM FOR RELIEF

VIOLATION OF MISSOURI MERCHANDISING PRACTICES ACT (MO. REV. STAT. § 407.010, *et. seq.*)

1896. Plaintiffs bring this claim on behalf of Class members who are Missouri residents (the "Missouri Class") .

1897. New GM, Old GM, and the Missouri Class are "persons" within the meaning of MO. REV. STAT. § 407.010(5).

1898. Old GM and New GM engaged in "trade" or "commerce" within the meaning of MO. REV. STAT. § 407.010(7).

1899. The Missouri Merchandising Practices Act ("Missouri MPA") makes unlawful the "act, use or employment by any person of any deception, fraud, false pretense, misrepresentation, unfair practice, or the concealment, suppression, or omission of any material fact in connection with the sale or advertisement of any merchandise…." MO. REV. STAT. § 407.020.

1900. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity

to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Missouri MPA, and also has successor liability for the violations of Old GM.

1901. As alleged above, both Companies knew of the ignition switch defects, while the Missouri Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1902. The Companies knew or should have known that their conduct violated the Missouri MPA.

1903. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1904. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1905. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 547 of 737

defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1906. The Companies each owed the Missouri Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Missouri Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Missouri Class that contradicted these representations.

1907. The Defective Vehicles pose an unreasonable risk of death or serious bodily injury to the Missouri Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1908. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Missouri Class.

1909. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Missouri Class. Had the Missouri Class known that

Case 1:14-md-02543-JMF Document 379-2 Filed 11/14/14 Page 148 of 337

their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1910. All members of the Missouri Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Missouri Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Missouri Class owns vehicles that are not safe.

1911. The Missouri Class Members have been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1912. The Missouri Class Members risk irreparable injury as a result of the Companies' acts and omissions in violation of the Missouri MPA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 549 of 887

1913. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1914. As a direct and proximate result of the Companies' violations of the Missouri MPA, the Missouri Class has suffered injury-in-fact and/or actual damage.

1915. New GM is liable to the Missouri Class for damages in amounts to be proven at trial, including attorneys' fees, costs, and punitive damages, as well as injunctive relief enjoining New GM's unfair and deceptive practices, and any other just and proper relief under MO. REV. STAT. § 407.025.

1916. Pursuant to MO. REV. STAT. § 407.010, Plaintiffs will serve the Missouri Attorney General with a copy of this complaint as Plaintiffs seek injunctive relief.

1917. Both companies conduct as described herein is unethical, oppressive, or unscrupulous and/or it presented a risk of substantial injury to consumers whose vehicles were prone to fail at times and under circumstances that could have resulted in death. Such acts are unfair practices in violation of 15 Mo. Code Reg. 60-8.020.

SEVENTY-NINTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (MO. REV. STAT. § 400.2-314)

1918. In the event the Court declines to certify a nationwide Class under Michigan law, Plaintiffs bring this claim on behalf the Missouri Class.

1919. Old GM and New GM were merchants with respect to motor vehicles.

1920. Under MO. REV. STAT. § 400.2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Missouri Class purchased their Defective Vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 150 of 337

1921. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

1922. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by Missouri Class members before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1923. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the Missouri Class has been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

EIGHTIETH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1924. In the event the Court declines to certify a nationwide Class under Michigan law, Plaintiffs bring this claim on behalf the Missouri Class.

1925. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1926. The Companies knew these representations were false when made.

1927. The vehicles purchased or leased by the Missouri Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 151 of 337

1928. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Missouri Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1929. The aforementioned concealment was material because if it had been disclosed the Missouri Class would not have bought, leased or retained their vehicles. When Missouri Class members bought a Defective Vehicle for personal, family, or household purposes, they reasonably expected the vehicle would not change ignition position unless the driver turned the key.

1930. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1931. Missouri Class members relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

1932. As a result of their reliance, the Missouri Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

1933. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Missouri Class. Missouri Class members are therefore entitled to an award of punitive damages.

MONTANA

EIGHTY-FIRST CLAIM FOR RELIEF

VIOLATION OF MONTANA UNFAIR TRADE PRACTICES AND CONSUMER PROTECTION ACT OF 1973 (MONT. CODE ANN. § 30-14-101, *et. seq.*)

1934. This claim is brought on behalf of Class members who are Montana residents (the "Montana Class").

1935. Old GM, New GM, and the Montana Class are "person[s]" within the meaning of MONT. CODE ANN. § 30-14-102(6).

1936. Montana Class members are "consumer[s]" under MONT. CODE ANN. § 30-14-102(1).

1937. The sale or lease of the Defective Vehicles to Montana Class members occurred within "trade and commerce" within the meaning of MONT. CODE ANN. § 30-14-102(8), and the Companies committed deceptive and unfair acts in the conduct of "trade and commerce" as defined in that statutory section.

1938. The Montana Unfair Trade Practices and Consumer Protection Act ("Montana CPA") makes unlawful any "unfair methods of competition and unfair or deceptive acts or practices in the conduct of any trade or commerce." MONT. CODE ANN. § 30-14-103. By failing to disclose and actively concealing the dangerous ignition switch defects in the Defective Vehicles, both Old GM and New GM engaged in unfair and deceptive acts or practices in violation of the Montana CPA.

1939. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Montana CPA, and also has successor liability for the violations of Old GM.

1940. As alleged above, both Companies knew of the ignition switch defects, while the Montana Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1941. The Companies knew or should have known that their conduct violated the Montana CPA.

1942. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1943. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 154 of 337

1944. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

1945. The Companies each owed the Montana Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Montana Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Montana Class that contradicted these representations.

1946. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Montana Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1947. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Montana Class, about the true safety and reliability of

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 155 of 337

Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Montana Class.

1948. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Montana Class. When Montana Class members bought their Defective Vehicles, they reasonably expected the vehicle would not change ignition position unless the driver turned the key. Had Montana Class members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1949. All members of the Montana Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Montana Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Montana Class members own vehicles that are not safe.

1950. The Montana Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 56 of 337

tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1951. Montana Class members risk irreparable injury as a result of the Companies' acts and omissions in violation of the Montana CPA, and these violations present a continuing risk to the Montana Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

1952. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1953. As a direct and proximate result of the Companies' violations of the Montana CPA, the Montana Class has suffered injury-in-fact and/or actual damage.

1954. Because the Companies' unlawful methods, acts, and practices have caused Montana Class members to suffer an ascertainable loss of money and property, the Montana Class seeks from New GM actual damages or $500, whichever is greater, discretionary treble damages, reasonable attorneys' fees, an order enjoining New GM's unfair, unlawful and/or deceptive practices, and any other relief the Court considers necessary or proper, under MONT. CODE ANN. § 30-14-133.

EIGHTY-SECOND CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (MONT. CODE § 30-2-314)

1955. In the event the Court declines to certify a nationwide Class, Plaintiffs bring this claim on behalf of the Montana Class.

1956. Old GM and New GM were merchants with respect to motor vehicles under MONT. CODE § 30-2-104.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 157 of 337

1957. Under MONT. CODE § 30-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when Montana Class members purchased their Defective Vehicles.

1958. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision. .

1959. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by Montana Class members before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1960. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the Montana Class has been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

EIGHTY-THIRD CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1961. In the event the Court declines to certify a nationwide Class under Michigan law, Plaintiffs bring this claim on behalf of the Montana Class.

1962. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1963. The Companies knew these representations were false when made.

1964. The vehicles purchased or leased by the Montana Class were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

1965. The Companies had a duty to disclose that these vehicles were defective, unsafe, and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Montana Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

1966. The aforementioned concealment was material because if it had been disclosed the Montana Class would not have bought, leased, or retained their vehicles.

1967. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

1968. The Montana Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing, or retaining the Defective Vehicles.

1969. As a result of their reliance, Montana Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 59 of 337

1970. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Montana Class. Montana Class members are therefore entitled to an award of punitive damages.

NEBRASKA

EIGHTY-FOURTH CLAIM FOR RELIEF

VIOLATION OF THE NEBRASKA CONSUMER PROTECTION ACT
(NEB. REV. STAT. § 59-1601, *et. seq.*)

1971. This claim is brought on behalf of Class members who are Nebraska residents (the "Nebraska Class").

1972. Old GM, New GM, and Nebraska Class members are "person[s]" under the Nebraska Consumer Protection Act ("Nebraska CPA"), NEB. REV. STAT. § 59-1601(1).

1973. The Companies' actions as set forth herein occurred in the conduct of trade or commerce as defined under NEB. REV. STAT. § 59-1601(2).

1974. The Nebraska CPA prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce." NEB. REV. STAT. § 59-1602. The conduct of Old GM and New GM as set forth herein constitutes unfair or deceptive acts or practices.

1975. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 160 of 337

commerce in violation of the Nebraska CPA, and also has successor liability for the violations of Old GM.

1976. As alleged above, both Companies knew of the ignition switch defects, while the Nebraska Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

1977. The Companies knew or should have known that their conduct violated the Nebraska CPA.

1978. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

1979. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

1980. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 10/03/14 Page 161 of 337

1981. The Companies each owed the Nebraska Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Nebraska Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Nebraska Class that contradicted these representations.

1982. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Nebraska Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

1983. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Nebraska Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Nebraska Class.

1984. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Nebraska Class. When the Nebraska Class members bought a Defective Vehicles, they reasonably expected the vehicle would not change ignition position unless the driver turned the key. Had the Nebraska Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

1985. All members of the Nebraska Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Nebraska Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Nebraska Class members own vehicles that are not safe.

1986. The Nebraska Class has been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

1987. Nebraska Class Members risk irreparable injury as a result of the Companies' acts and omissions in violation of the MPA, and these violations present a continuing risk to the Nebraska Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 153 of 337

1988. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

1989. As a direct and proximate result of the Companies' violations of the Nebraska CPA, the Nebraska Class has suffered injury-in-fact and/or actual damage.

1990. Because the Companies' conduct caused injury to Class members' property through violations of the Nebraska CPA, the Nebraska Class seeks recovery of actual damages, as well as enhanced damages up to $1,000, an order enjoining New GM's unfair or deceptive acts and practices, costs of Court, reasonable attorneys' fees, and any other just and proper relief available under NEB. REV. STAT. § 59-1609.

EIGHTY-FIFTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(NEB. REV. STAT. NEB. § 2-314)

1991. In the event the Court declines to certify a nationwide Class, Plaintiffs bring this claim on behalf of the Nebraska Class.

1992. Old GM and New GM were merchants with respect to motor vehicles.

1993. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when Nebraska Class members purchased their Defective Vehicles.

1994. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 164 of 337

1995. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by Nebraska Class members before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

1996. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the Nebraska Class has been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

EIGHTY-SIXTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

1997. In the event the Court declines to certify a nationwide Class under Michigan law, Plaintiffs bring this claim on behalf of the Nebraska Class.

1998. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

1999. The Companies knew these representations were false when made.

2000. The vehicles purchased or leased by the Nebraska Class were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2001. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Nebraska Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2002. The aforementioned concealment was material because if it had been disclosed the Nebraska Class would not have bought, leased, or retained their vehicles.

2003. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2004. The Nebraska Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2005. As a result of their reliance, the Nebraska Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2006. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Nebraska Class. Nebraska Class members are therefore entitled to an award of punitive damages.

NEVADA

EIGHTY-SEVENTH CLAIM FOR RELIEF

VIOLATION OF THE NEVADA DECEPTIVE TRADE PRACTICES ACT (NEV. REV. STAT. § 598.0903, *Et. seq.*)

2007. This claim is brought on behalf of Class members who are Nevada residents (the "Nevada Class").

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 5 of 337

2008. The Nevada Deceptive Trade Practices Act ("Nevada DTPA"), NEV. REV. STAT. § 598.0903, *et. seq.* prohibits deceptive trade practices. NEV. REV. STAT. § 598.0915 provides that a person engages in a "deceptive trade practice" if, in the course of business or occupation, the person: "(5) Knowingly makes a false representation as to the characteristics, ingredients, uses, benefits, alterations or quantities of goods or services for sale or lease or a false representation as to the sponsorship, approval, status, affiliation or connection of a person therewith"; "(7) Represents that goods or services for sale or lease are of a particular standard, quality or grade, or that such goods are of a particular style or model, if he or she knows or should know that they are of another standard, quality, grade, style or model"; "(9) Advertises goods or services with intent not to sell or lease them as advertised"; or "(15) Knowingly makes any other false representation in a transaction."

2009. Old GM and New GM both engaged in deceptive trade practices that violated the Nevada DTPA, including: knowingly representing that Defective Vehicles have uses and benefits which they do not have; representing that Defective Vehicles are of a particular standard, quality, and grade when they are not; advertising Defective Vehicles with the intent not to sell or lease them as advertised; representing that the subject of a transaction involving Defective Vehicles has been supplied in accordance with a previous representation when it has not; and knowingly making other false representations in a transaction.

2010. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

2011. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 157 of 337

to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Nevada DTPA, and also has successor liability for the violations of Old GM.

2012. As alleged above, both Companies knew of the ignition switch defects, while the Nevada Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2013. The Companies knew or should have known that their conduct violated the Nevada DTPA.

2014. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2015. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2016. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the

defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2017. The Companies each owed the Nevada Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Nevada Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Nevada Class that contradicted these representations.

2018. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Nevada Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2019. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Nevada Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Nevada Class.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 169 of 337

2020. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Nevada Class. Had the Nevada Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2021. All members of the Nevada Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Nevada Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Nevada Class members own vehicles that are not safe.

2022. The Nevada Class has been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2023. Nevada Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Nevada DTPA, and these violations present a continuing risk to the Nevada Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2024. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2025. As a direct and proximate result of the Companies' violations of the Nevada DTPA, the Nevada Class has suffered injury-in-fact and/or actual damage.

2026. Accordingly, the Nevada Class seeks their actual damages, punitive damages, an order enjoining New GM's deceptive acts or practices, costs of Court, attorney's fees, and all other appropriate and available remedies under the Nevada Deceptive Trade Practices Act. NEV. REV. STAT. § 41.600.

EIGHTY-EIGHTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(NEV. REV. STAT. § 104.2314)

2027. In the event the Court declines to certify a nationwide Class, Plaintiffs bring this claim on behalf of the Nevada Class.

2028. Old GM and New GM were merchants with respect to motor vehicles.

2029. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Nevada Class purchased their Defective Vehicles.

2030. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2031. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, internal investigations, and by numerous individual letters and communications sent by the Nevada Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2032. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the Nevada Class has been damaged in an amount to be proven at trial. New GM has successor liability for Old GM's breach.

EIGHTY-NINTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2033. In the event the Court declines to certify a nationwide Class, Plaintiffs bring this claim solely on behalf of Class members who are Nevada residents.

2034. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2035. The Companies knew these representations were false when made.

2036. The vehicles purchased or leased by the Nevada Class were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2037. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Nevada Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 172 of 337

2038. The aforementioned concealment was material because if it had been disclosed the Nevada Class would not have bought, leased, or retained their vehicles.

2039. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2040. The Nevada Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing, or retaining the Defective Vehicles.

2041. As a result of their reliance, the Nevada Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2042. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Nevada Class. Nevada Class members are therefore entitled to an award of punitive damages.

NEW HAMPSHIRE

NINETIETH CLAIM FOR RELIEF

VIOLATION OF N.H. CONSUMER PROTECTION ACT (N.H. REV. STAT. ANN. § 358-A:1, Et. seq.)

2062. This claim is brought on behalf of Class members who are New Hampshire residents (the "New Hampshire Class").

2063. The New Hampshire Class, Old GM and New GM are or were "person[s]" under the New Hampshire Consumer Protection Act ("New Hampshire CPA"), N.H. REV. STAT. ANN. § 358-A:1.

2064. The Companies' actions as set forth herein occurred in the conduct of trade or commerce as defined under N.H. REV. STAT. ANN. § 358-A:1.

2065. The New Hampshire CPA prohibits a person, in the conduct of any trade or commerce, from using "any unfair or deceptive act or practice," including "but… not limited to, the following:…(V) Representing that goods or services have… characteristics,… uses, benefits, or quantities that they do not have;" "(VII) Representing that goods or services are of a particular standard, quality, or grade,… if they are of another;" and "(IX) Advertising goods or services with intent not to sell them as advertised." N.H. REV. STAT. ANN. § 358-A:2.

2066. The Companies both participated in unfair or deceptive acts or practices that violated the New Hampshire CPA as described above and below. By failing to disclose and actively concealing the dangerous risk of ignition switch movement, engine shutdown, and airbag disabling in Defective Vehicles, the Companies engaged in deceptive business practices prohibited by the CPA, including representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Defective Vehicles are of a particular standard, quality, and grade when they are not; advertising Defective Vehicles with the intent not to sell or lease them as advertised; representing that the subject of a transaction involving Defective Vehicles has been supplied in accordance with a previous representation when it has not; and engaging in other unconscionable, false, misleading, or deceptive acts or practices in the conduct of trade or commerce.

2067. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the New Hampshire CPA, and also has successor liability for the violations of Old GM.

2068. As alleged above, both Companies knew of the ignition switch defects, while the New Hampshire Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2069. The Companies knew or should have known that their conduct violated the New Hampshire CPA.

2070. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2071. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2072. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2073. The Companies each owed the New Hampshire Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the New Hampshire Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the New Hampshire Class that contradicted these representations.

2074. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the New Hampshire Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2075. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the New Hampshire Class about the true safety and

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 376 of 387

reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the New Hampshire Class.

2076. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the New Hampshire Class. Had the New Hampshire Class Members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2077. All members of the New Hampshire Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The New Hampshire Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the New Hampshire Class owns vehicles that are not safe.

2078. The New Hampshire Class Members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2079. New Hampshire Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the New Hampshire CPA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2080. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2081. As a direct and proximate result of the Companies' violations of the New Hampshire CPA, the New Hampshire Class has suffered injury-in-fact and/or actual damage.

2082. Because the Companies' willful conduct caused injury to New Hampshire Class members' property through violations of the New Hampshire CPA, the New Hampshire Class seeks recovery of actual damages or $1,000, whichever is greater, treble damages, costs and reasonable attorneys' fees, an order enjoining New GM's unfair and/or deceptive acts and practices, and any other just and proper relief under N.H. REV. STAT. § 358-A:10.

NINETY-FIRST CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (N.H. REV. STAT. ANN. § 382-A:2-314)

2083. In the event the Court declines to certify a nationwide Class, this claim is brought on behalf of Class members who are New Hampshire residents.

2084. Old GM and New GM were merchants with respect to motor vehicles.

2085. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the New Hampshire Class Members purchased their Defective Vehicles.

2086. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 578 of 837

Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2087. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, internal investigations, and by numerous individual letters and communications sent by the New Hampshire Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2088. As a direct and proximate result of Old GM's breach of the warranties of merchantability, the New Hampshire Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach

NINETY-SECOND CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2089. In the event the Court declines to certify a nationwide Class, this claim is brought on behalf of Class members who are New Hampshire residents.

2090. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2091. The Companies knew these representations were false when made.

2092. The vehicles purchased or leased by the New Hampshire Class was, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2093. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 579 of 337

event of a collision because the New Hampshire Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2094. The aforementioned concealment was material because if it had been disclosed the New Hampshire Class would not have bought, leased or retained their vehicles.

2095. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2096. The New Hampshire Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2097. As a result of their reliance, the New Hampshire Class Members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2098. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the New Hampshire Class, who are therefore entitled to an award of punitive damages.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 530 of 337

NEW JERSEY

NINETY-THIRD CLAIM FOR RELIEF

VIOLATION OF NEW JERSEY CONSUMER FRAUD ACT (N.J. STAT. ANN. § 56:8-1, *Et. seq.*)

2099. This claim is on behalf of Class members who are New Jersey residents (the "New Jersey Class").

2100. The New Jersey Class, New GM and Old GM are or were "person[s]" within the meaning of N.J. STAT. ANN. § 56:8-1(d).

2101. Old GM and New GM engaged in the "sale" of "merchandise" within the meaning of N.J. STAT. ANN. § 56:8-1(c), (d).

2102. The New Jersey Consumer Fraud Act ("New Jersey CFA") makes unlawful "[t]he act, use or employment by any person of any unconscionable commercial practice, deception, fraud, false pretense, false promise, misrepresentation, or the knowing concealment, suppression or omission of any material fact with the intent that others rely upon such concealment, suppression or omission, in connection with the sale or advertisement of any merchandise or real estate, or with the subsequent performance of such person as aforesaid, whether or not any person has in fact been misled, deceived or damaged thereby…" N.J. STAT. ANN. § 56:8-2. The Companies engaged in unconscionable or deceptive acts or practices that violated the New Jersey CFA as described above and below, and did so with the intent that Class members rely upon their acts, concealment, suppression or omissions.

2103. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the New Jersey CFA, and also has successor liability for the violations of Old GM.

2104. As alleged above, both Companies knew of the ignition switch defects, while the New Jersey Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2105. The Companies knew or should have known that their conduct violated the New Jersey CFA.

2106. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2107. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2108. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 182 of 337

to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2109. The Companies each owed the New Jersey Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the New Jersey Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the New Jersey Class that contradicted these representations.

2110. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the New Jersey Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2111. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the New Jersey Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the New Jersey Class.

2112. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the New Jersey Class. Had the New Jersey Class known

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 533 of 687

that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2113. All members of the New Jersey Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The New Jersey Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the New Jersey Class owns vehicles that are not safe.

2114. The New Jersey Class Members have been damaged by the Companies' misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase the them—let alone pay what would otherwise be fair market value for the vehicles.

2115. New Jersey Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the New Jersey CFA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/10/14 Page 534 of 637

2116. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2117. As a direct and proximate result of the Companies' violations of the New Jersey CFA, the New Jersey Class has suffered injury-in-fact and/or actual damage.

2118. The New Jersey Class is entitled to recover legal and/or equitable relief including an order enjoining New GM's unlawful conduct, treble damages, costs and reasonable attorneys' fees pursuant to N.J. STAT. ANN. § 56:8-19, and any other just and appropriate relief.

2119. Pursuant to N.J. STAT. ANN. § 56:8-20, the New Jersey Class will mail a copy of the complaint to New Jersey's Attorney General within ten (10) days of filing it with the Court.

NINETY-FOURTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(N.J. STAT. ANN. § 12A:2-314)

2120. In the event the Court declines to certify a nationwide Class, this claim is brought on behalf of Class members who are New Jersey residents.

2121. Old GM and New GM were merchants with respect to motor vehicles.

2122. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the New Jersey Class purchased their Defective Vehicles.

2123. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2124. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, internal investigations, and by numerous individual letters and communications sent by the New Jersey Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2125. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the New Jersey Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

NINETY-FIFTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2126. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are New Jersey residents.

2127. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2128. The Companies knew these representations were false when made.

2129. The vehicles purchased or leased by the New Jersey Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2130. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the New Jersey Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2131. The aforementioned concealment was material because if it had been disclosed the New Jersey Class would not have bought, leased or retained their vehicles.

2132. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2133. The New Jersey Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements – in purchasing, leasing or retaining the Defective Vehicles.

2134. As a result of their reliance, the New Jersey Class Members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2135. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the New Jersey Class, who are therefore entitled to an award of punitive damages.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 537 of 837

NEW MEXICO

NINETY-SIXTH CLAIM FOR RELIEF

VIOLATIONS OF THE NEW MEXICO UNFAIR TRADE PRACTICES ACT (N.M. STAT. ANN. § 57-12-1, *et. seq.*)

2136. This claim is on behalf of Class members who are New Mexico residents (the "New Mexico Class").

2137. Old GM, New GM, and the New Mexico Class members are or were "person[s]" under the New Mexico Unfair Trade Practices Act ("New Mexico UTPA"), N.M. STAT. ANN. § 57-12-2.

2138. The Companies' actions as set forth herein occurred in the conduct of trade or commerce as defined under N.M. STAT. ANN. § 57-12-2.

2139. The New Mexico UTPA makes unlawful "a false or misleading oral or written statement, visual description or other representation of any kind knowingly made in connection with the sale, lease, rental or loan of goods or services… by a person in the regular course of the person's trade or commerce, that may, tends to or does deceive or mislead any person," including but not limited to "(14) failing to state a material fact if doing so deceives or tends to deceive." N.M. STAT. ANN. § 57-12-2(D)(14). The Companies' acts and omissions described herein constitute unfair or deceptive acts or practices under N.M. STAT. ANN. § 57-12-2(D). In addition, the Companies' actions constitute unconscionable actions under N.M. STAT. ANN. § 57-12-2(E), since they took advantage of the lack of knowledge, ability, experience, and capacity of the New Mexico Class members to a grossly unfair degree.

2140. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 538 of 337

to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the New Mexico UTPA, and also has successor liability for the violations of Old GM.

2141. As alleged above, both Companies knew of the ignition switch defects, while the New Mexico Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2142. The Companies knew or should have known that their conduct violated the New Mexico UTPA.

2143. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2144. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2145. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 139 of 337

defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2146. The Companies each owed the New Mexico Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the New Mexico Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the New Mexico Class that contradicted these representations.

2147. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the New Mexico Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2148. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the New Mexico Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the New Mexico Class.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 590 of 837

2149. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the New Mexico Class. Had the New Mexico Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2150. All members of the New Mexico Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The New Mexico Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the New Mexico Class owns vehicles that are not safe.

2151. The New Mexico Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2152. The New Mexico Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the New Mexico UTPA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2153. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2154. As a direct and proximate result of the Companies' violations of the New Mexico UTPA, and the New Mexico Class has suffered injury-in-fact and/or actual damage.

2155. New Mexico Class members seek punitive damages against New GM because the Companies' conduct was malicious, willful, reckless, wanton, fraudulent and in bad faith. The Companies fraudulently and willfully misrepresented the safety and reliability of New GM-branded vehicles, deceived New Mexico Class members on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting the myriad flaws in the New GM-branded vehicles the Companies repeatedly promised New Mexico Class members were safe. Because the Companies' conduct was malicious, willful, reckless, wanton, fraudulent and in bad faith, it warrants punitive damages.

2156. Because the Companies' unconscionable, willful conduct caused actual harm to Class members, the Class seeks recovery of actual damages or $100, whichever is greater, discretionary treble damages or $300 (whichever is greater), punitive damages, and reasonable attorneys' fees and costs, as well as all other proper and just relief available under N.M. STAT. ANN. § 57-12-10.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 592 of 837

NINETY-SEVENTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(N.M. STAT. ANN. § 55-2-314)

2157. In the event the Court declines to certify a nationwide Class, this claim is brought on behalf of Class members who are New Mexico residents.

2158. Old GM and New GM were a merchants with respect to motor vehicles.

2159. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the New Mexico Class purchased their Defective Vehicles.

2160. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision. .

2161. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, internal investigations, and by numerous individual letters and communications sent by the New Mexico Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2162. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the New Mexico Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 193 of 337

NINETY-EIGHTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2163. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are New Mexico residents.

2164. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2165. The Companies knew these representations were false when made.

2166. The vehicles purchased or leased by the New Mexico Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2167. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the New Mexico Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2168. The aforementioned concealment was material because if it had been disclosed they would not have bought, leased or retained their vehicles.

2169. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2170. The New Mexico Class relied on the Companies' reputation – along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements – in purchasing, leasing or retaining the Defective Vehicles.

2171. As a result of their reliance, the New Mexico Class Members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2172. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the New Mexico Class, who are therefore entitled to an award of punitive damages.

NEW YORK

NINETY-NINTH CLAIM FOR RELIEF

DECEPTIVE ACTS OR PRACTICES
(N.Y. GEN. BUS. LAW § 349 AND 350)

2173. This claim is on behalf of Class members residing in New York (the "New York Class").

2174. The New York Class members are "person[s]" within the meaning of New York General Business Law ("New York GBL"), N.Y. GEN. BUS. LAW § 349(h).

2175. New GM is, and Old GM was, a "person," "firm," "corporation," or "association" within the meaning of N.Y. GEN. BUS. LAW § 349(b).

2176. The New York GBL makes unlawful "[d]eceptive acts or practices in the conduct of any business, trade or commerce." N.Y. GEN. BUS. LAW § 349. The Companies' conduct, as described above and below, constitutes "deceptive acts or practices" within the meaning of the New York GBL. Furthermore, the Companies' deceptive acts and practices,

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 595 of 337

which were intended to mislead consumers who were in the process of purchasing and/or leasing the Defective Vehicles, was conduct directed at consumers.

2177. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

2178. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the New York GBL, and also has successor liability for the violations of Old GM.

2179. As alleged above, both Companies knew of the ignition switch defects, while the New York Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2180. The Companies knew or should have known that their conduct violated the New York GBL.

2181. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 596 of 337

2182. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2183. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2184. The Companies each owed the New York Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the New York Class s; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the New York Class that contradicted these representations.

2185. The Defective Vehicles posed and /or pose an unreasonable risk of death or serious bodily injury to the New York Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2186. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the New York Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the New York Class.

2187. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the New York Class. Had the New York Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2188. All members of the New York Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The New York Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the New York Class owns vehicles that are not safe.

2189. The New York Class members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2190. The New York Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the New York GBL, and these violations present a continuing risk to the New York Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2191. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2192. As a direct and proximate result of the Companies' violations of the New York GBL, the New York Class has suffered injury-in-fact and/or actual damage.

2193. New York Class members seek punitive damages against New GM because the Companies' conduct was egregious. The Companies misrepresented the safety and reliability of millions of New GM-branded vehicles, concealed myriad defects in millions of New GM-branded vehicles and the systemic safety issues plaguing the Company, deceived Class members on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting the serious flaw in its culture and in millions of New GM-branded vehicles. The Companies' egregious conduct warrants punitive damages.

2194. Because the Companies' willful and knowing conduct caused injury to Class members, the New York Class seeks recovery of actual damages or $50, whichever is greater, discretionary treble damages up to $1,000, punitive damages, reasonable attorneys' fees and costs, an order enjoining New GM's deceptive conduct, and any other just and proper relief available under N.Y. GEN. BUS. LAW § 349.

ONE HUNDREDTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (N.Y. U.C.C. § 2-314)

2195. In the event the Court declines to certify a nationwide Class, this claim is brought on behalf of Class members who are New York residents.

2196. Old GM and New GM are merchants with respect to motor vehicles.

2197. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the New York Class purchased their Defective Vehicles.

2198. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision. .

2199. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, internal investigations, and by numerous individual letters and communications sent by the New York Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2200. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the New York Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

ONE HUNDRED FIRST CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2201. In the event the Court declines to certify a nationwide Class, this claim is brought solely on behalf of Class members who are New York residents.

2202. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2203. The Companies knew these representations were false when made.

2204. The vehicles purchased or leased by the New York Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2205. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the New York Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2206. The aforementioned concealment was material because if it had been disclosed the New York Class would not have bought, leased or retained their vehicles.

2207. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/14/15 Page 291 of 337

2208. The New York Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2209. As a result of their reliance, the New York Class have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2210. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the New York Class, who are therefore entitled to an award of punitive damages.

ONE HUNDRED SECOND CLAIM FOR RELIEF

VIOLATION OF NEW YORK'S FALSE ADVERTISING ACT (N.Y. GEN. BUS. LAW § 350) (Asserted on Behalf of the New York Class)

2211. This claim is brought on behalf of the New York Class.

2212. Old GM and New GM have been are New GM is engaged in the "conduct of… business, trade or commerce" within the meaning of N.Y. GEN. BUS. LAW § 350.

2213. NEW YORK GEN. BUS. LAW § 350 makes unlawful "[f]alse advertising in the conduct of any business, trade or commerce." False advertising includes "advertising, including labeling, of a commodity… if such advertising is misleading in a material respect," taking into account "the extent to which the advertising fails to reveal facts material in light of… representations [made] with respect to the commodity.…" N.Y. GEN. BUS. LAW § 350-a.

2214. Old GM and New GM caused to be made or disseminated through New York, through advertising, marketing and other publications, statements that were untrue or misleading, and that were known, or which by the exercise of reasonable care should have been known to them, to be untrue and misleading to consumers and New York Class.

2215. Old GM and New GM have violated § 350 because the misrepresentations and omissions regarding the Defects, as set forth above, were material and likely to deceive a reasonable consumer.

2216. The New York Class has suffered an injury, including the loss of money or property, as a result of New GM's false advertising. In purchasing or leasing their vehicles, the New York Class relied on the misrepresentation and/or omissions relating to the safety and reliability of the Defective Vehicles. Those representations were false and/or misleading because the Defects may cause the engine to shutdown, disabling power steering, power brakes, and disabling deployment of safety airbags. Had the New York Class known this, they would not have purchased or leased their Defective Vehicles and/or paid as much for them.

2217. Pursuant to N.Y. GEN. BUS. LAW § 350-e, the New York Class seeks monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $500 each for each New York Class Member. Because the conduct was committed willfully and knowingly, the New York Class is entitled to recover three times actual damages, up to $10,000, for each New York Class Member.

2218. The New York Class also seeks an order enjoining the unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under N.Y. GEN. BUS. LAW §§ 349–350.

NORTH CAROLINA

ONE HUNDRED THIRD CLAIM FOR RELIEF

VIOLATION OF NORTH CAROLINA'S UNFAIR AND DECEPTIVE ACTS AND PRACTICES ACT (N.C. GEN. STAT. § 75-1.1 *et. seq.*)

2219. This claim is on behalf of Class members who are North Carolina residents (the "North Carolina Class").

2220. New GM and Old GM engaged in "commerce" within the meaning of N.C. GEN. STAT. § 75-1.1(b).

2221. The North Carolina Act broadly prohibits "unfair or deceptive acts or practices in or affecting commerce." N.C. GEN. STAT. § 75-1.1(a). As alleged above and below, the Companies willfully committed unfair or deceptive acts or practices in violation of the North Carolina Act.

2222. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the North Carolina Act, and also has successor liability for the violations of Old GM.

2223. As alleged above, both Companies knew of the ignition switch defects, while the North Carolina Class was deceived by the Companies' omission into believing the

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 294 of 337

Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2224. The Companies knew or should have known that their conduct violated the North Carolina Act.

2225. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2226. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2227. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2228. The Companies each owed the North Carolina Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 295 of 337

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the North Carolina Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the North Carolina Class that contradicted these representations.

2229. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the North Carolina Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2230. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the North Carolina Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the North Carolina Class.

2231. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the North Carolina Class. Had the North Carolina Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2232. The North Carolina Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The North Carolina Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective

Case 1:14-md-02543-JMF Document 1379-2 Filed 10/13/15 Page 296 of 337

Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the North Carolina Class own vehicles that are not safe.

2233. The North Carolina Class members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2234. North Carolina Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the North Carolina Act, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2235. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2236. As a direct and proximate result of the Companies' violations of the North Carolina Act, the North Carolina Class has suffered injury-in-fact and/or actual damage.

2237. North Carolina Class members seek punitive damages against New GM because the Companies' conduct was malicious, willful, reckless, wanton, fraudulent and in bad faith. The Companies fraudulently and willfully misrepresented the safety and reliability of the Defective Vehicles, deceived North Carolina Class members on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting the myriad flaws in the Defective Vehicles it repeatedly promised Class members were safe. Because the Companies' conduct was malicious, willful, reckless, wanton, fraudulent and in bad faith, it warrants punitive damages.

2238. Plaintiffs seek an order for treble their actual damages, an order enjoining New GM's unlawful acts, costs of Court, attorney's fees, and any other just and proper relief available under N.C. GEN. STAT. § 75-16.

ONE HUNDRED FOURTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(N.C. GEN. STAT. § 25-2-314)

2239. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are North Carolina residents.

2240. Old GM and New GM were merchants with respect to motor vehicles.

2241. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the North Carolina Class purchased their Defective Vehicles.

2242. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2243. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, internal investigations, and by numerous individual letters and communications sent by the North Carolina Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2244. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the North Carolina Class have been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

ONE HUNDRED FIFTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2245. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are North Carolina residents.

2246. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2247. The Companies knew these representations were false when made.

2248. The vehicles purchased or leased by the North Carolina Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2249. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the North Carolina Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2250. The aforementioned concealment was material because if it had been disclosed they would not have bought, leased or retained their vehicles.

2251. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2252. The North Carolina Class relied on the Companies' reputation – along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements – in purchasing, leasing or retaining the Defective Vehicles.

2253. As a result of their reliance, the North Carolina Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2254. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the North Carolina Class, who are therefore entitled to an award of punitive damages.

NORTH DAKOTA

ONE HUNDRED SIXTH CLAIM FOR RELIEF

VIOLATION OF THE NORTH DAKOTA CONSUMER FRAUD ACT (N.D. CENT. CODE § 51-15-02)

2255. This claim is on behalf of Class members who are North Dakota residents (the "North Dakota Class").

2256. The North Dakota Class members, Old GM and New GM are or were "persons" within the meaning of N.D. CENT. CODE § 51-15-02.

2257. The Companies engaged in the "sale" of "merchandise" within the meaning of N.D. CENT. CODE § 51-15-02.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 210 of 337

2258. The North Dakota Consumer Fraud Act ("North Dakota CFA") makes unlawful "[t]he act, use, or employment by any person of any deceptive act or practice, fraud, false pretense, false promise, or misrepresentation, with the intent that others rely thereon in connection with the sale or advertisement of any merchandise…." N.D. CENT. CODE § 51-15-02. As set forth above and below, the Companies committed deceptive acts or practices, with the intent that Class members rely thereon in connection with their purchase or lease of the Defective Vehicles.

2259. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the North Dakota CFA, and also has successor liability for the violations of Old GM.

2260. As alleged above, both Companies knew of the ignition switch defects, while the North Dakota Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2261. The Companies knew or should have known that their conduct violated the North Dakota CFA.

2262. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2263. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2264. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2265. The Companies each owed the North Dakota Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the North Dakota Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the North Dakota Class that contradicted these representations.

2266. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the North Dakota Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2267. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the North Dakota Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the North Dakota Class.

2268. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the North Dakota Class. Had the North Dakota Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2269. The North Dakota Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The North Dakota Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the North Dakota Class owns vehicles that are not safe.

2270. The North Dakota Class members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2271. North Dakota Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the North Dakota CFA, and these violations present a continuing risk to the North Dakota Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2272. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2273. As a direct and proximate result of the Companies' violations of the North Dakota CFA, the North Dakota Class has suffered injury-in-fact and/or actual damage.

2274. North Dakota Class members seek punitive damages against New GM because the Companies' conduct was egregious. The Companies misrepresented the safety and reliability of millions of Defective Vehicles, concealed myriad defects in millions of Defective Vehicles and the systemic safety issues plaguing the Company, deceived North Dakota Class members on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting the serious flaw in

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 294 of 337

its culture and in millions of New GM-branded vehicles. The Companies' egregious conduct warrants punitive damages.

2275. Further, the Companies knowingly committed the conduct described above, and thus, under N.D. CENT. CODE § 51-15-09, New GM is liable to the North Dakota Class for treble damages in amounts to be proven at trial, as well as attorneys' fees, costs, and disbursements. The North Dakota Class further seeks an order enjoining New GM's unfair and/or deceptive acts or practices, and other just and proper available relief under the North Dakota CFA.

ONE HUNDRED SEVENTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (N.D. CENT. CODE § 41-02-31)

2276. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are North Dakota residents.

2277. Old GM and New GM were merchants with respect to motor vehicles.

2278. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the North Dakota Class members purchased their Defective Vehicles.

2279. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2280. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, internal investigations, and by numerous individual letters and

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 215 of 337

communications sent by the North Dakota Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2281. As a direct and proximate result of Old GM's breach of the warranties of merchantability, the North Dakota Class has been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

ONE HUNDRED EIGHTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2282. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are North Dakota residents.

2283. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2284. The Companies knew these representations were false when made.

2285. The Defective Vehicles were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2286. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the North Dakota Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2287. The aforementioned concealment was material because if it had been disclosed they would not have bought, leased or retained their vehicles.

2288. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 216 of 337

vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2289. The North Dakota Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2290. As a result of their reliance, the North Dakota Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2291. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the North Dakota Class, who are therefore entitled to an award of punitive damages.

OHIO

ONE HUNDRED NINTH CLAIM FOR RELIEF

VIOLATION OF OHIO CONSUMER SALES PRACTICES ACT (OHIO REV. CODE ANN. § 1345.01, *et. seq.*)

2292. This claim is on behalf of Class members who are Ohio residents (the "Ohio Class").

2293. New GM is and Old GM was a "supplier" as that term is defined in OHIO REV. CODE § 1345.01(C).

Case 1:14-md-02543-JMF Document 379-2 Filed 11/14/14 Page 217 of 337

2294. The Ohio Class members are "consumer[s]" as that term is defined in OHIO REV. CODE § 1345.01(D), and their purchases and leases of the Defective Vehicles are "consumer transaction[s]" within the meaning of OHIO REV. CODE § 1345.01(A).

2295. The Ohio Consumer Sales Practices Act ("Ohio CSPA"), OHIO REV. CODE § 1345.02, broadly prohibits unfair or deceptive acts or practices in connection with a consumer transaction. Specifically, and without limitation of the broad prohibition, the Act prohibits suppliers from representing (i) that goods have characteristics or uses or benefits which they do not have; (ii) that their goods are of a particular quality or grade they are not; and (iii) the subject of a consumer transaction has been supplied in accordance with a previous representation, if it has not. *Id.* The conduct of the Companies as alleged above and below constitutes unfair and/or deceptive consumer sales practices in violation of OHIO REV. CODE ANN. § 1345.02.

2296. By failing to disclose and actively concealing the dangerous risk of ignition switch movement, engine shutdown, and airbag disabling in Defective Vehicles, the Companies engaged in deceptive business practices prohibited by the Ohio CSPA, including: representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Defective Vehicles are of a particular standard, quality, and grade when they are not; representing that the subject of a transaction involving Defective Vehicles has been supplied in accordance with a previous representation when it has not; and engaging in other unfair or deceptive acts or practices.

2297. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

2298. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Ohio CSPA, and also has successor liability for the violations of Old GM.

2299. As alleged above, both Companies knew of the ignition switch defects, while the Ohio Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2300. The Companies knew or should have known that their conduct violated the Ohio CSPA Act.

2301. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2302. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 219 of 337

2303. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2304. The Companies each owed the Ohio Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Ohio Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Ohio Class that contradicted these representations.

2305. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Ohio Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2306. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Ohio Class, about the true safety and reliability of

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 520 of 337

Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Ohio Class.

2307. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Ohio Class. Had the Ohio Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2308. The Ohio Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Ohio Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Ohio Class owns vehicles that are not safe.

2309. The Ohio Class members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2310. Ohio Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Ohio CSPA, and these violations present a continuing risk to

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 221 of 337

the Ohio Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2311. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2312. As a direct and proximate result of the Companies' violations of the Ohio CSPA, the Ohio Class has suffered injury-in-fact and/or actual damage.

2313. Ohio Class members seek punitive damages against New GM because the Companies' conduct was egregious. The Companies misrepresented the safety and reliability of millions of Defective Vehicles, concealed myriad defects in millions of Defective Vehicles and the systemic safety issues plaguing the Companies, deceived Class members on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting the serious flaw in its culture and in millions of New GM-branded vehicles. The Companies' egregious conduct warrants punitive damages.

2314. The Ohio Class specifically does not allege herein a claim for violation of OHIO REV. CODE § 1345.72.

2315. The Companies were on notice pursuant to OHIO REV. CODE ANN. § 1345.09(B) that their actions constituted unfair, deceptive, and unconscionable practices by, for example, *Mason v. Mercedes-Benz USA, LLC*, No. 85031, 2005 Ohio App. LEXIS 3911, at *33 (S.D. Ohio Aug. 18, 2005), and *Lilly v. Hewlett-Packard Co.*, No. 1:05-CV-465 , 2006 U.S. Dist. LEXIS 22114, at *17-18 (S.D. Ohio Apr. 21, 2006). Further, the Companies' conduct as alleged above constitutes an act or practice previously declared to be deceptive or unconscionable by rule adopted under division (B)(2) of section 1345.05 and previously determined by Ohio courts to violate Ohio's Consumer Sales Practices Act and was committed after the decisions containing these determinations were made available for public inspection under division (A)(3) of O.R.C. § 1345.05. The applicable rule and Ohio court opinions include, but are not limited to: OAC 109:4-3-16; *Mason v. Mercedes-Benz USA, LLC*, OPIF # 10002382, 2005 Ohio 4296 (Ohio Ct. App. 2005); *Khouri v. Lewis*, OPIF # 10001995, Cuyahoga Common Pleas No. 342098 (2001); *State ex rel. Montgomery v. Canterbury*, Franklin App. No. 98CVH054085 (2000); *Fribourg v. Vandemark* (July 26, 1999), Clermont App. No CA99-02-017, unreported (PIF # 10001874); *State ex rel. Betty D. Montgomery v. Ford Motor Co.*, OPIF #10002123; *State ex rel. Betty D. Montgomery v. Bridgestone/Firestone, Inc.*, OPIF #10002025; *Bellinger v. Hewlett-Packard Co.*, OPIF #10002077, No. 20744, 2002 Ohio App. LEXIS 1573 (Ohio Ct. App. Apr. 10, 2002); *Borror v. MarineMax of Ohio*, OPIF #10002388, No. OT-06-010, 2007 Ohio App. LEXIS 525 (Ohio Ct. App. Feb. 9, 2007); *State ex rel. Jim Petro v. Craftmatic Organization, Inc.*, OPIF #10002347; *Mark J. Cranford, et al v. Joseph Airport Ford, Inc.*, OPIF #10001586; State ex rel. *William J. Brown v. Harold Lyons, et al.*, OPIF #10000304; *Brinkman v. Mazda Motor of America, Inc.*, OPIF #10001427; *Mosley v. Performance Mitsubishi aka Automanage*, OPIF #10001326; *Walls v. Harry Williams dba Butch's Auto Sales*, OPIF #10001524; and, *Brown v. Spears*, OPIF #10000403.

2316. As a result of the foregoing wrongful conduct of New GM, the Ohio Class has been damaged in an amount to be proven at trial, and seek all just and proper remedies, including, but not limited to, actual and statutory damages, an order enjoining New GM's deceptive and unfair conduct, treble damages, court costs and reasonable attorneys' fees, pursuant to OHIO REV. CODE § 1345.09, *et. seq.*

ONE HUNDRED TENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2317. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are Ohio residents.

2318. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2319. The Companies knew these representations were false when made.

2320. The vehicles purchased or leased by the Ohio Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2321. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Ohio Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2322. The aforementioned concealment was material because if it had been disclosed the Ohio Class would not have bought, leased or retained their vehicles.

2323. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2324. The Ohio Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2325. As a result of their reliance, the Ohio Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2326. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Ohio Class, who are therefore entitled to an award of punitive damages.

ONE HUNDRED ELEVENTH CLAIM FOR RELIEF

IMPLIED WARRANTY IN TORT
(On Behalf of the Ohio Class)

2327. This claim is on behalf of the Ohio Class.

2328. The Vehicles contained a design defect, namely, a faulty ignition system that fails under reasonably foreseeable use, resulting in loss of brakes, power steering, and airbags, among others, as detailed herein more fully.

2329. The design, manufacturing, and/or assembly defects existed at the time these Vehicles containing the defective ignition systems left the possession or control of Old GM.

2330. Based upon the dangerous product defects, Old GM and then New GM failed to meet the expectations of a reasonable consumer. The Vehicles failed their ordinary, intended use because the ignition systems in the Vehicles do not function as a reasonable consumer would expect. Moreover, it presents a serious danger to the Ohio Class that cannot be eliminated without significant cost.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 225 of 337

2331. The design defects in the Vehicles were the direct and proximate cause of economic damages to the Ohio Class.

OKLAHOMA

ONE HUNDRED TWELFTH CLAIM FOR RELIEF

VIOLATION OF OKLAHOMA CONSUMER PROTECTION ACT (OKLA. STAT. TIT. 15 § 751, *et. seq.*)

2332. This claim is on behalf of Class members who are Oklahoma residents (the "Oklahoma Class").

2333. Oklahoma Class members are "persons" under the Oklahoma Consumer Protection Act ("Oklahoma CPA"), OKLA. STAT. TIT. 15 § 752.

2334. Old GM was, and New GM is a "person," "corporation," or "association" within the meaning of OKLA. STAT. TIT. 15 § 15-751(1).

2335. The sale or lease of the Defective Vehicles to the Oklahoma Class members was a "consumer transaction" within the meaning of OKLA. STAT. TIT. 15 § 752, and the Companies' actions as set forth herein occurred in the conduct of trade or commerce.

2336. The Oklahoma CPA declares unlawful, *inter* alia, the following acts or practices when committed in the course of business: "mak[ing] a false or misleading representation, knowingly or with reason to know, as to the characteristics…, uses, [or] benefits, of the subject of a consumer transaction," or making a false representation, "knowingly or with reason to know, that the subject of a consumer transaction is of a particular standard, style or model, if it is of another or "[a]dvertis[ing], knowingly or with reason to know, the subject of a consumer transaction with intent not to sell it as advertised;" and otherwise committing "an unfair or deceptive trade practice." *See* OKLA. STAT. TIT. 15, § 753.

2337. By failing to disclose and actively concealing the dangerous risk of ignition switch movement, engine shutdown, and airbag disabling in Defective Vehicles, the Companies engaged in unfair and deceptive business practices prohibited by the Oklahoma CPA, including: representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Defective Vehicles are of a particular standard, quality, and grade when they are not; and advertising Defective Vehicles with the intent not to sell or lease them as advertised; misrepresenting, omitting and engaging in other practices that have deceived or could reasonably be expected to deceive or mislead; and engaging in practices which offend established public policy or are immoral, unethical, oppressive, unscrupulous or substantially injurious to consumers.

2338. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Oklahoma CPA, and also has successor liability for the violations of Old GM.

2339. As alleged above, both Companies knew of the ignition switch defects, while the Oklahoma Class was deceived by the Companies' omission into believing the Defective

Vehicles were safe, and the information could not have reasonably been known by the consumer.

2340. The Companies knew or should have known that their conduct violated the Oklahoma CPA.

2341. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2342. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2343. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2344. The Companies each owed the Oklahoma Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 228 of 337

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Oklahoma Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Oklahoma Class that contradicted these representations.

2345. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Oklahoma Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2346. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Oklahoma Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Oklahoma Class.

2347. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Oklahoma Class. Had the Oklahoma Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2348. The Oklahoma Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Oklahoma Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 229 of 337

Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Oklahoma Class own vehicles that are not safe.

2349. The Oklahoma Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2350. Oklahoma Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the Oklahoma CPA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2351. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2352. As a direct and proximate result of the Companies' violations of the Oklahoma CPA, the Oklahoma Class has suffered injury-in-fact and/or actual damage.

2353. Oklahoma Class members seek punitive damages against New GM because the Companies' conduct was egregious. The Companies misrepresented the safety and reliability of millions of Defective Vehicles, concealed myriad defects in millions of Defective Vehicles and the systemic safety issues plaguing the Companies, deceived Oklahoma Class members on life-or-death matters, and concealed material facts that only it knew, all to avoid the

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 580 of 837

expense and public relations nightmare of correcting the serious flaw in its culture and in millions of New GM-branded vehicles. The Companies' egregious conduct warrants punitive damages.

2354. The Companies' conduct as alleged herein was unconscionable since (1) the Companies, knowingly or with reason to know, took advantage of consumers reasonably unable to protect their interests because of their age, physical infirmity, ignorance, illiteracy, inability to understand the language of an agreement or similar factor; (2) at the time the consumer transaction was entered into, Old GM knew or had reason to know that price grossly exceeded the price at which similar vehicles were readily obtainable in similar transactions by like consumers; and (3) Old GM knew or had reason to know that the transaction Old GM induced the consumer to enter into was excessively one-sided in favor of Old GM.

2355. Because the Companies' unconscionable conduct caused injury to Oklahoma Class members, the Oklahoma Class seeks recovery of actual damages, discretionary penalties up to $2,000 per violation, and reasonable attorneys' fees, under OKLA. STAT. TIT. 15 § 761.1. The Oklahoma Class further seeks an order enjoining New GM's unfair and/or deceptive acts or practices, and any other just and proper relief available under the Oklahoma CPA.

ONE HUNDRED THIRTEENTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (12A OKLA. STAT. ANN. § 2-314)

2356. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are Oklahoma residents.

2357. Old GM and New GM were merchants with respect to motor vehicles.

2358. A warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions when the Oklahoma Class purchased their Defective Vehicles.

2359. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shutdown of power steering and power brakes and the non-deployment of airbags in the event of a collision. .

2360. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, internal investigations, and by numerous individual letters and communications sent by the Oklahoma Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2361. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the Oklahoma Class have been damaged in an amount to be proven at trial. New GM also has successor liability for Old GM's breach.

ONE HUNDRED FOURTEENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2362. In the event the Court declines to certify a nationwide Class, this claim is on behalf of Class members who are Oklahoma residents.

2363. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2364. The Companies knew these representations were false when made.

2365. The vehicles purchased or leased by the Oklahoma Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 232 of 337

shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2366. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shutdown, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Oklahoma Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2367. The aforementioned concealment was material because if it had been disclosed the Oklahoma Class would not have bought, leased or retained their vehicles.

2368. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2369. The Oklahoma Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2370. As a result of their reliance, the Oklahoma Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2371. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Oklahoma Class, who are therefore entitled to an award of punitive damages.

OREGON

ONE HUNDRED FIFTEENTH CLAIM FOR RELIEF

VIOLATION OF THE OREGON UNLAWFUL TRADE PRACTICES ACT (OR. REV. STAT. § 646.605, *et. seq.*)

2372. This claim is brought on behalf of Class members who are Oregon residents (the "Oregon Class")

2373. Old GM was, and New GM is, a person within the meaning of OR. REV. STAT. § 646.605(4).

2374. The Defective Vehicles at issue are "goods" obtained primarily for personal family or household purposes within the meaning of OR. REV. STAT. § 646.605(6).

2375. The Oregon Unfair Trade Practices Act ("Oregon UTPA") prohibits a person from, in the course of the person's business, doing any of the following: "(e) Represent[ing] that… goods… have… characteristics… uses, benefits,… or qualities that [they] do not have; (g) Represent[ing] that… goods… are of a particular standard [or] quality… if they are of another; (i) Advertis[ing]… goods or services with intent not to provide [them] as advertised;" and "(u) engag[ing] in any other unfair or deceptive conduct in trade or commerce." OR. REV. STAT. § 646.608(1).

2376. The Companies engaged in unlawful trade practices, including representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Defective Vehicles are of a particular standard and quality when they are not; advertising Defective Vehicles with the intent not to sell them as advertised; and engaging in other unfair or deceptive acts.

2377. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

2378. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Oregon UTPA, and also has successor liability for the violations of Old GM.

2379. As alleged above, both Companies knew of the ignition switch defects, while the Oregon Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2380. The Companies knew or should have known that their conduct violated the Oregon UTPA.

2381. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 235 of 337

2382. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2383. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2384. The Companies each owed the Oregon Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Oregon Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Oregon Class that contradicted these representations.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 336 of 337

2385. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Oregon Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2386. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Oregon Class.

2387. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Oregon Class. Had the Oregon Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2388. The Oregon Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Oregon Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Oregon Class own vehicles that are not safe.

2389. The Oregon Class members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, has so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2390. Oregon Class members risk irreparable injury as a result of the Companies' acts and omissions in violation of the Oregon UTPA, and these violations present a continuing risk to the Oregon Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2391. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2392. As a direct and proximate result of the Companies' violations of the Oregon UTPA, the Oregon Class has suffered injury-in-fact and/or actual damage.

2393. The Oregon Class is entitled to recover the greater of actual damages or $200 pursuant to OR. REV. STAT. § 646.638(1). The Oregon Class is also entitled to punitive damages because the Companies engaged in conduct amounting to a particularly aggravated, deliberate disregard of the rights of others.

2394. Pursuant to OR. REV. STAT. § 646.638(2), Plaintiffs will mail a copy of the complaint to Oregon's attorney general.

ONE HUNDRED SIXTEENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT
(BASED ON OREGON LAW)

2395. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Oregon residents.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 238 of 337

2396. As set forth above, Old GM concealed and/or suppressed material facts concerning the safety of its vehicles.

2397. Old GM had a duty to disclose these safety issues because it consistently marketed its vehicles as safe and proclaimed that safety was one of Old GM's highest corporate priorities. Once Old GM made representations to the public about safety, it was under a duty to disclose these omitted facts, because where one does speak one must speak the whole truth and not conceal any facts which materially qualify those facts stated. One who volunteers information must be truthful, and the telling of a half-truth calculated to deceive is fraud.

2398. In addition, Old New GM had a duty to disclose these omitted material facts because they were known and/or accessible only to Old GM who had superior knowledge and access to the facts, and Old GM knew they were not known to or reasonably discoverable by Plaintiffs and the Class. These omitted facts were material because they directly impact the safety of the Defective Vehicles. Whether or not a vehicle inadvertently shuts down, and whether a vehicle's power steering, power brakes and airbags become inoperable during ordinary driving conditions, are material safety concerns. Old GM possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles.

2399. Old GM actively concealed and/or suppressed these material facts, in whole or in part, with the intent to induce the Oregon Class to purchase Defective Vehicles at a higher price for the vehicles, which did not match the vehicles' true value.

2400. New GM still has not made full and adequate disclosure and continues to defraud the Oregon Class.

2401. The Oregon Class members were unaware of these omitted material facts and would not have acted as they did if they had known of the concealed and/or suppressed facts. The Oregon Class' actions were justified. Old GM and New GM were in exclusive control of the material facts and such facts were not known to the public or the Oregon Class.

2402. As a result of the concealment and/or suppression of the facts, the Oregon Class sustained damage. For those Oregon Class members who elect to affirm the sale, these damages, include the difference between the actual value of that which the Oregon Class paid and the actual value of that which they received, together with additional damages arising from the sales transaction, amounts expended in reliance upon the fraud, compensation for loss of use and enjoyment of the property, and/or lost profits. Those who want to rescind their purchases are entitled to restitution and consequential damages.

2403. The Companies' acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of the Oregon Class' rights and well-being to enrich the Companies. The Companies' conduct warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

PENNSYLVANIA

ONE HUNDRED SEVENTEENTH CLAIM FOR RELIEF

VIOLATION OF THE PENNSYLVANIA UNFAIR TRADE PRACTICES AND CONSUMER PROTECTION LAW (73 P.S. § 201-1, *et. seq.*)

2404. This claim is brought on behalf of Class members who are Pennsylvania residents (the "Pennsylvania Class")

2405. The Class purchased or leased their Defective Vehicles primarily for personal, family or household purposes within the meaning of 73 P.S. § 201-9.2.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 240 of 337

2406. All of the acts complained of herein were perpetrated by the Companies in the course of trade or commerce within the meaning of 73 P.S. § 201-2(3).

2407. The Pennsylvania Unfair Trade Practices and Consumer Protection Law ("Pennsylvania CPL") prohibits unfair or deceptive acts or practices, including: (i) "Representing that goods or services have… characteristics,…. Benefits or qualities that they do not have;" (ii) "Representing that goods or services are of a particular standard, quality or grade…if they are of another;:" (iii) "Advertising goods or services with intent not to sell them as advertised;" and (iv) "Engaging in any other fraudulent or deceptive conduct which creates a likelihood of confusion or misunderstanding." 73 P.S. § 201-2(4).

2408. The Companies engaged in unlawful trade practices, including representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; representing that Defective Vehicles are of a particular standard and quality when they are not; advertising Defective Vehicles with the intent not to sell them as advertised; and engaging in any other fraudulent or deceptive conduct which creates a likelihood of confusion or of misunderstanding.

2409. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Pennsylvania CPL, and also has successor liability for the violations of Old GM.

2410. As alleged above, both Companies knew of the ignition switch defects, while the Pennsylvania Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2411. The Companies knew or should have known that their conduct violated the Pennsylvania CPL.

2412. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2413. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2414. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. New GM also knew of a serious safety issues and a myriad of serious defects in a host of New GM vehicles. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2415. The Companies each owed the Pennsylvania Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Pennsylvania Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Pennsylvania Class that contradicted these representations.

2416. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Pennsylvania Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2417. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Pennsylvania Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Pennsylvania Class.

2418. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Pennsylvania Class. Had the Pennsylvania Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2419. The Pennsylvania Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Pennsylvania Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Pennsylvania Class owns vehicles that are not safe.

2420. The Pennsylvania Class has been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls has so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2421. Pennsylvania Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Pennsylvania Act, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2422. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2423. As a direct and proximate result of the Companies' violations of the Pennsylvania CPL, the Pennsylvania Class have suffered injury-in-fact and/or actual damage.

2424. New GM is liable to the Pennsylvania Class for treble their actual damages or $100, whichever is greater, and attorneys' fees, costs. 73 P.S. § 201-9.2(a). The Pennsylvania Class are also entitled to an award of punitive damages given that the Companies' conduct was malicious, wanton, willful, oppressive, or exhibited a reckless indifference to the rights of others.

ONE HUNDRED EIGHTEENTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (13 PA. CONS. STAT. ANN. § 2314)

2425. This claim is brought solely on behalf of Class members who are Pennsylvania residents.

2426. Old GM was and New GM is a merchant with respect to motor vehicles.

2427. A warranty that the Defective Vehicles were in merchantable condition was implied by law when Old GM sold the Defective Vehicles to Plaintiffs and the Class.

2428. These vehicles, when sold and at all times thereafter, were not in merchantable condition and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended stalling to occur during ordinary driving conditions; when the vehicles stall, the power brakes and power steering become inoperable and the vehicles' airbags will not deploy,

2429. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, by its own internal investigations, and by numerous individual letters and communications sent by the Pennsylvania Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2430. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the Pennsylvania Class has been damaged in an amount to be proven at trial.

ONE HUNDRED NINETEENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2431. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Pennsylvania residents.

2432. As set forth above, both Old GM and New GM concealed and/or suppressed material facts concerning the safety of the Defective Vehicles.

2433. Both Companies had a duty to disclose these safety issues because they consistently marketed their vehicles as safe and proclaimed that safety was one of the Companies' highest corporate priorities. Once the Companies made representations to the public about safety, they were under a duty to disclose these omitted facts, because where one does speak one must speak the whole truth and not conceal any facts which materially qualify those facts stated. One who volunteers information must be truthful, and the telling of a half-truth calculated to deceive is fraud.

2434. In addition, the Companies had a duty to disclose these omitted material facts because they were known and/or accessible only to the Companies who had superior knowledge and access to the facts, and the Companies new they were not known to or reasonably discoverable by the Pennsylvania Class. These omitted facts were material because they directly impact the safety of the Defective Vehicles. Whether or not a vehicle inadvertently shuts down, and whether a vehicle's power steering, power brakes and airbags become inoperable during ordinary driving conditions, are material safety concerns. The

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 246 of 337

Companies possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles.

2435. The Companies actively concealed and/or suppressed these material facts with the intent to induce the Pennsylvania Class to purchase Defective Vehicles at a higher price for the vehicles, which did not match the vehicles' true value. The Companies also concealed and withheld the information in order to prevent a public relations nightmare and harm to the Companies' profits that would result from disclosure.

2436. New GM still has not made full and adequate disclosure and continues to defraud the Pennsylvania Class.

2437. The Pennsylvania Class was unaware of these omitted material facts and would not have acted as they did if they had known of the concealed and/or suppressed facts. The Pennsylvania Class' actions were justified. The Companies were in exclusive control of the material facts and such facts were not known to the public or the Pennsylvania Class.

2438. As a result of the concealment and/or suppression of the facts, the Pennsylvania Class sustained damage. For those who elect to affirm the sale, these damages include the difference between the actual value of that which the Class member paid and the actual value of that which she received, together with additional damages arising from the sales transaction, amounts expended in reliance upon the fraud, compensation for loss of use and enjoyment of the property, and/or lost profits. Those who want to rescind the purchase are entitled to restitution and consequential damages.

2439. The Companies' acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of the Pennsylvania Class' rights and well-being to enrich the Companies. The Companies' conduct warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

RHODE ISLAND

ONE HUNDRED TWENTIETH CLAIM FOR RELIEF

VIOLATION OF THE RHODE ISLAND UNFAIR TRADE PRACTICES AND CONSUMER PROTECTION ACT
(R.I. GEN. LAWS § 6-13.1, *et. seq.*)

2440. This claim is brought solely on behalf of Class members who are Rhode Island residents (the "Rhode Island Class").

2441. The Rhode Island Class members purchased or leased one or more Defective Vehicles primarily for personal, family, or household purposes within the meaning of R.I. GEN. LAWS § 6-13.1-5.2(a).

2442. Rhode Island's Unfair Trade Practices and Consumer Protection Act ("Rhode Island CPA") prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce" including: "(v) Representing that goods or services have sponsorship, approval, characteristics, ingredients, uses, benefits, or quantities that they do not have"; "(vii) Representing that goods or services are of a particular standard, quality, or grade…, if they are of another"; "(ix) Advertising goods or services with intent not to sell them as advertised"; "(xii) Engaging in any other conduct that similarly creates a likelihood of confusion or of misunderstanding"; "(xiii) Engaging in any act or practice that is unfair or deceptive to the consumer"; and "(xiv) Using any other methods, acts or practices which mislead or deceive members of the public in a material respect." R.I. GEN. LAWS § 6-13.1-1(6).

2443. The Companies engaged in unlawful trade practices, including: (1) representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; (2) representing that the Defective Vehicles are of a particular

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 248 of 337

standard and quality when they are not; (3) advertising the Defective Vehicles with the intent not to sell them as advertised; and (4) otherwise engaging in conduct that is unfair or deceptive and likely to deceive.

2444. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

2445. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Rhode Island CPA, and also has successor liability for the violations of Old GM.

2446. As alleged above, both Companies knew of the ignition switch defects, while the Rhode Island Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2447. The Companies knew or should have known that their conduct violated the Rhode Island CPA.

2448. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 249 of 337

2449. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shutdown in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2450. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2451. The Companies each owed the Rhode Island Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Rhode Island Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Rhode Island Class that contradicted these representations.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 250 of 337

2452. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Rhode Island Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2453. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Rhode Island Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Rhode Island Class.

2454. The propensity of the Defective Vehicles to inadvertently shutdown during ordinary operation was material to the Rhode Island Class. Had they known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2455. The Rhode Island Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Rhode Island Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Rhode Island Class owns vehicles that are not safe.

2456. The Rhode Island Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls has so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2457. The Rhode Island Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Rhode Island CPA, and these violations present a continuing risk to them as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2458. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2459. As a direct and proximate result of the Companies' violations of the Rhode Island CPA, the Rhode Island Class have suffered injury-in-fact and/or actual damage.

2460. The Rhode Island Class are entitled to recover the greater of actual damages or $200 pursuant to R.I. GEN. LAWS § 6-13.1-5.2(a). The Rhode Island Class also seeks punitive damages in the discretion of the Court because of the Companies' egregious disregard of consumer and public safety and its long-running concealment of the serious safety defects and their tragic consequences.

ONE HUNDRED TWENTY-FIRST CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY
(R.I. GEN. LAWS § 6A-2-314)

2461. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Rhode Island residents.

2462. Old GM and New GM were merchants with respect to motor vehicles.

2463. A warranty that the Defective Vehicles were in merchantable condition was implied by law when the Rhode Island Class purchased their Defective Vehicles.

2464. These vehicles, when sold and at all times thereafter, were not in merchantable condition and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended stalling to occur during ordinary driving conditions; when the vehicles stall, the power brakes and power steering become inoperable and the vehicles' airbags will not deploy,

2465. Old GM and New GM were provided notice of these issues by numerous complaints filed against it, by its own internal investigations, and by numerous individual letters and communications sent by the Rhode Island Class before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2466. As a direct and proximate result of Old GM and New GM's breach of the warranties of merchantability, the Rhode Island Class has been damaged in an amount to be proven at trial.

ONE HUNDRED TWENTY-SECOND CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2467. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of Class members who are Rhode Island residents.

2468. As set forth above, Both Old GM and New GM concealed and/or suppressed material facts concerning the safety of the Defective Vehicles.

2469. The Companies had a duty to disclose these safety issues because they consistently marketed their vehicles as safe and proclaimed that safety was one of the Companies' highest corporate priorities. Once the Companies made representations to the public about safety, they were under a duty to disclose these omitted facts, because where one does speak one must speak the whole truth and not conceal any facts which materially qualify those facts stated. One who volunteers information must be truthful, and the telling of a half-truth calculated to deceive is fraud.

2470. In addition, the Companies had a duty to disclose these omitted material facts because they were known and/or accessible only to the Companies who had superior knowledge and access to the facts, and the Companies knew they were not known to or reasonably discoverable by the Rhode Island Class. These omitted facts were material because they directly impact the safety of the Defective Vehicles. Whether or not a vehicle inadvertently shuts down, and whether a vehicle's power steering, power brakes and airbags become inoperable during ordinary driving conditions, are material safety concerns. The Companies possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles.

2471. The Companies actively concealed and/or suppressed these material facts with the intent to induce the Rhode Island Class to purchase Defective Vehicles at a higher price for the vehicles, which did not match the vehicles' true value. The Companies also concealed and withheld the information in order to prevent a public relations nightmare and harm to the Companies' profits that would result from disclosure.

2472. The Rhode Island Class members were unaware of these omitted material facts and would not have acted as they did if they had known of the concealed and/or suppressed facts. The Rhode Island Class' actions were justified. The Companies were in exclusive control of the material facts and such facts were not known to the public or the Rhode Island Class.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 254 of 337

2473. As a result of the concealment and/or suppression of the facts, the Rhode Island Class sustained damage. For those who elect to affirm the sale, these damages include the difference between the actual value of that which the Rhode Island Class member paid and the actual value of what she received, together with additional damages arising from the sales transaction, amounts expended in reliance upon the fraud, compensation for loss of use and enjoyment of the property, and/or lost profits. Those who want to rescind the purchase are entitled to restitution and consequential damages.

2474. The Companies' acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of the Rhode Island Class' rights and well-being to enrich New GM. New GM's conduct warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

SOUTH CAROLINA

ONE HUNDRED TWENTY-THIRD CLAIM FOR RELIEF

VIOLATIONS OF THE SOUTH CAROLINA UNFAIR TRADE PRACTICES ACT (S.C. CODE ANN. § 39-5-10, *et. seq.*)

2475. This claim is brought on behalf of Class members who are South Carolina residents (the "South Carolina Class").

2476. Old GM was, and New GM is, a "person" under S.C. CODE ANN. § 39-5-10.

2477. The South Carolina Unfair Trade Practices Act ("South Carolina UTPA") prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce.…" S.C. CODE § 39-5-20(a). The Companies engaged in unfair and deceptive acts or practices and violated the South Carolina UTPA by failing to disclose and actively concealing the dangerous risk caused by the ignition switch defects in the Defective Vehicles.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 595 of 337

2478. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

2479. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the South Carolina UTPA, and also has successor liability for the violations of Old GM.

2480. As alleged above, both Companies knew of the ignition switch defects, while the South Carolina Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2481. The Companies knew or should have known that their conduct violated the South Carolina UTPA.

2482. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2483. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 256 of 337

shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2484. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2485. The Companies each owed the South Carolina Class a duty to disclose the defective nature of the Defective Vehicles, including the dangerous risks posed by the defective ignition switches, because the Companies:

a. Possessed exclusive knowledge of the defects rendering the Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with the Defective Vehicles in order to hide the life-threatening problems from Plaintiff; and/or

c. Made incomplete representations about the safety and reliability of the Defective Vehicles, while purposefully withholding material facts from Plaintiffs and the Class that contradicted these representations.

2486. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the South Carolina Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2487. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the South Carolina Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the South Carolina Class.

2488. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the South Carolina Class. Had the South Carolina Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2489. All members of the South Carolina Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The South Carolina Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the South Carolina Class own vehicles that are not safe.

2490. The South Carolina Class have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls has so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 258 of 337

2491. South Carolina Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the South Carolina UTPA, and these violations present a continuing risk to the South Carolina Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2492. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2493. As a direct and proximate result of the Companies' violations of the South Carolina UTPA, the South Carolina Class members have suffered injury-in-fact and/or actual damage.

2494. Pursuant to S.C. CODE ANN. § 39-5-140(a), the South Carolina Class seeks monetary relief against New GM to recover for their economic losses. Because the Companies' actions were willful and knowing, the South Carolina Class members' damages should be trebled. *Id.*

2495. The South Carolina Class further alleges that the Companies' malicious and deliberate conduct warrants an assessment of punitive damages because the Companies carried out despicable conduct with willful and conscious disregard of the rights and safety of others, subjecting the South Carolina Class to cruel and unjust hardship as a result. The Companies intentionally and willfully misrepresented the safety and reliability of the Defective Vehicles, deceived the South Carolina Class on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting a deadly flaw in the Defective Vehicles they repeatedly promised the South Carolina Class was safe. New GM's unlawful conduct constitutes malice, oppression, and fraud warranting punitive damages.

2496. The South Carolina Class further seeks an order enjoining New GM's unfair or deceptive acts or practices.

ONE HUNDRED TWENTY-FOURTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (S.C. CODE § 36-2-314)

2497. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the South Carolina Class.

2498. Old GM and New GM are merchants with respect to motor vehicles under S.C. CODE § 36-2-314.

2499. Under S.C. CODE § 36-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law when the South Carolina Class purchased the vehicles.

2500. These vehicles, when sold and at all times thereafter, were not in merchantable condition and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended stalling to occur during ordinary driving conditions; when the vehicles stall, the power brakes and power steering become inoperable and the vehicles' airbags will not deploy,

2501. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, their own internal investigations, and by numerous individual letters and communications sent by the South Carolina Class members before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 260 of 337

2502. As a direct and proximate result of Old GM and New GM's breach of the warranty of merchantability, Plaintiffs and the Class have been damaged in an amount to be proven at trial.

ONE HUNDRED TWENTY-FIFTH CLAIM FOR RELIEF

VIOLATIONS OF THE SOUTH CAROLINA REGULATION OF MANUFACTURERS, DISTRIBUTORS, AND DEALERS ACT
(S.C. CODE ANN. § 56-15-10, *et. seq.*)

2503. This claim is brought solely on behalf of the South Carolina Class.

2504. Old GM and New GM were "manufacturer[s]" as set forth in S.C. CODE ANN. § 56-15-10, as they were engaged in the business of manufacturing or assembling new and unused motor vehicles.

2505. Old GM and New GM participated in unfair or deceptive acts or practices that violated the South Carolina Regulation of Manufacturers, Distributors, and Dealers Act ("Dealers Act"), S.C. CODE ANN. § 56-15-30.

2506. Old GM and New GM engaged in actions which were arbitrary, in bad faith, unconscionable, and which caused damage to Plaintiffs, the Class, and to the public.

2507. Old GM and New GM's bad faith and unconscionable actions include, but are not limited to: (1) representing that Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have, (2) representing that Defective Vehicles are of a particular standard, quality, and grade when they are not, (3) advertising Defective Vehicles with the intent not to sell them as advertised, (4) representing that a transaction involving Defective Vehicles confers or involves rights, remedies, and obligations which it does not, and (5) representing that the subject of a transaction involving Defective Vehicles has been supplied in accordance with a previous representation when it has not.

2508. Old GM and New GM resorted to and used false and misleading advertisements in connection with its business. As alleged above, Old GM and New GM made numerous material statements about the safety and reliability of Defective Vehicles that were either false or misleading. Each of these statements contributed to the deceptive context of Old GM and New GM's unlawful advertising and representations as a whole.

2509. Pursuant to S.C. CODE ANN. § 56-15-110(2), members of the South Carolina Class bring this action on behalf of themselves as the action is one of common or general interest to many persons and the parties are too numerous to bring them all before the court.

2510. The South Carolina Class members are entitled to double the actual damages, the cost of the suit, attorney's fees pursuant to S.C. CODE ANN. § 56-15-110. The South Carolina Class also seeks injunctive relief under S.C. CODE ANN. § 56-15-110. The South Carolina Class also seeks treble damages because Old GM and New GM acted maliciously.

SOUTH DAKOTA

ONE HUNDRED TWENTY-SIXTH CLAIM FOR RELIEF

VIOLATION OF THE SOUTH DAKOTA DECEPTIVE TRADE PRACTICES AND CONSUMER PROTECTION LAW (S.D. CODIFIED LAWS § 37-24-6)

2511. This claim is brought on behalf of Class members who are South Dakota residents (the "South Dakota Class").

2512. The South Dakota Deceptive Trade Practices and Consumer Protection Law ("South Dakota CPL") prohibits deceptive acts or practices, which are defined for relevant purposes to include "[k]nowingly act, use, or employ any deceptive act or practice, fraud, false pretense, false promises, or misrepresentation or to conceal, suppress, or omit any material fact in connection with the sale or advertisement of any merchandise, regardless of whether any person has in fact been misled, deceived, or damaged thereby [.]" S.D. CODIFIED

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 262 of 337

LAWS § 37-24-6(1). The conduct of Old GM and New GM as set forth herein constitutes deceptive acts or practices, fraud, false promises, misrepresentation, concealment, suppression, and omission of material facts in violation of S.D. Codified Laws § 37-24-6 and 37-24-31, including, but not limited to, Old GM and New GM's manufacture and sale of vehicles with an ignition switch defect which the Old GM and New GM failed to adequately investigate, disclose, and remedy, the Companies' misrepresentations and omissions regarding the safety and reliability of the Defective Vehicles, and the Companies' misrepresentations concerning a host of other defects and safety issues.

2513. The Companies' actions as set forth above occurred in the conduct of trade or commerce.

2514. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the South Dakota CPL, and also has successor liability for the violations of Old GM.

2515. As alleged above, both Companies knew of the ignition switch defects, while the South Dakota Class was deceived by the Companies' omission into believing the

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 263 of 337

Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2516. The Companies knew or should have known that their conduct violated the South Dakota CPL.

2517. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2518. Old GM and New GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM and New GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2519. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2520. The Companies each owed the South Dakota Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 264 of 337

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the South Dakota Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the South Dakota Class that contradicted these representations.

2521. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the South Dakota Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2522. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the South Dakota Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the South Dakota Class.

2523. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the South Dakota Class. Had the South Dakota Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2524. All members of the South Dakota Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The South Dakota Class overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the

Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the South Dakota Class own vehicles that are not safe.

2525. The South Dakota Class members have been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2526. South Dakota Class Members risk irreparable injury as a result of the Companies' act and omissions in violation of the South Dakota CPL, and these violations present a continuing risk to the South Dakota Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2527. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2528. As a direct and proximate result of the Companies' violations of the South Dakota CPL, the South Dakota Class members have suffered injury-in-fact and/or actual damage.

2529. Under S.D. CODIFIED LAWS § 37-24-31, the South Dakota Class is entitled to a recovery of their actual damages suffered as a result of New GM's acts and practices, including the acts and practices of Old GM for which New GM has successor liability.

ONE HUNDRED TWENTY-SEVENTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY
(S.D. CODIFIED LAWS § 57a-2-314)

2530. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the South Dakota Class.

2531. Old GM and New GM were merchants with respect to motor vehicles.

2532. South Dakota law imposed a warranty that the Defective Vehicles were merchantable when the South Dakota Class purchased their Defective Vehicles.

2533. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2534. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, Plaintiffs and the Class have been damaged in an amount to be proven at trial.

ONE HUNDRED TWENTY-EIGHTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2535. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the South Dakota Class.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 267 of 337

2536. As set forth above, both Old GM and New GM concealed and/or suppressed material facts concerning the safety of the Defective Vehicles.

2537. The Companies had a duty to disclose these safety issues because they consistently marketed their vehicles as safe and proclaimed that safety was one of the Companies' highest corporate priorities. Once the Companies made representations to the public about safety, they were under a duty to disclose these omitted facts, because where one does speak one must speak the whole truth and not conceal any facts which materially qualify those facts stated. One who volunteers information must be truthful, and the telling of a half-truth calculated to deceive is fraud.

2538. In addition, the Companies had a duty to disclose these omitted material facts because they were known and/or accessible only to the Companies who had superior knowledge and access to the facts, and the Companies knew they were not known to or reasonably discoverable by the South Dakota Class. These omitted facts were material because they directly impact the safety of the Defective Vehicles. Whether or not a vehicle inadvertently shuts down, and whether a vehicle's power steering, power brakes and airbags become inoperable during ordinary driving conditions, are material safety concerns. The Companies possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles.

2539. The Companies actively concealed and/or suppressed these material facts with the intent to induce the South Dakota Class to purchase Defective Vehicles at a higher price for the vehicles, which did not match the vehicles' true value. The Companies also concealed and withheld the information in order to prevent a public relations nightmare and harm to the Companies' profits that would result from disclosure.

2540. The South Dakota Class members were unaware of these omitted material facts and would not have acted as they did if they had known of the concealed and/or suppressed facts. The South Dakota Class' actions were justified. The Companies were in exclusive control of the material facts and such facts were not known to the public or the South Dakota Class.

2541. As a result of the concealment and/or suppression of the facts, the South Dakota Class sustained damage. For those the South Dakota Class members who elect to affirm the sale, these damages include the difference between the actual value of that which members of the South Dakota Class paid and the actual value of that which they received, together with additional damages arising from the sales transaction, amounts expended in reliance upon the fraud, compensation for loss of use and enjoyment of the property, and/or lost profits. For those members of the South Dakota Class who want to rescind the purchase, then those South Dakota Class members are entitled to restitution and consequential damages.

2542. The Companies' acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of the South Dakota Class's rights and well-being to enrich Old GM and New GM. Old GM and New GM's conduct warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

TENNESSEE

ONE HUNDRED TWENTY-NINTH CLAIM FOR RELIEF

VIOLATION OF TENNESSEE CONSUMER PROTECTION ACT
(TENN. CODE ANN. § 47-18-101, *et. seq.*)

2543. This claim is brought on behalf of Class members who are Tennessee residents (the "Tennessee Class").

2544. Tennessee Class members are "natural person[s]" and "consumer[s]" within the meaning of TENN. CODE ANN. § 47-18-103(2).

2545. Old GM was, and New GM is, a "person" within the meaning of TENN. CODE ANN. § 47-18-103(2) (the "Act").

2546. All of the Companies' conduct complained of herein affected "trade," "commerce" or "consumer transactions" within the meaning of TENN. CODE ANN. § 47-18-103(19).

2547. The Tennessee Consumer Protection Act ("Tennessee CPA") prohibits "[u]nfair or deceptive acts or practices affecting the conduct of any trade or commerce," including but not limited to: "(5) Representing that goods or services have… characteristics, [or]… benefits… that they do not have…;" "(7) Representing that goods or services are of a particular standard, quality or grade… if they are of another;" and "Advertising goods or services with intent not to sell them as advertised." TENN. CODE ANN. § 47-18-104. The Companies violated the Tennessee CPA by engaging in unfair or deceptive acts, including representing that Defective Vehicles have characteristics or benefits that they did not have; representing that Defective Vehicles are of a particular standard, quality, or grade when they are of another; and advertising Defective Vehicles with intent not to sell them as advertised.

2548. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment,

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 270 of 337

suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Tennessee CPA, and also has successor liability for the violations of Old GM.

2549. As alleged above, both Companies knew of the ignition switch defects, while the Tennessee Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2550. The Companies knew or should have known that their conduct violated the Tennessee CPA.

2551. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2552. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2553. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 271 of 337

2554. The Companies each owed Tennessee Class members a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Tennessee Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Tennessee Class that contradicted these representations.

2555. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Tennessee Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2556. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Tennessee Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Tennessee Class.

2557. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Tennessee Class. Had the Tennessee Class members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2558. All members of the Tennessee Class suffered ascertainable loss caused by the Companies' failure to disclose material information. The Tennessee Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and the Tennessee Class members own vehicles that are not safe.

2559. Tennessee Class members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2560. Plaintiffs and Tennessee Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Tennessee CPA, and these violations present a continuing risk to the Tennessee Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2561. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2562. As a direct and proximate result of the Companies' violations of the Tennessee CPA, the Tennessee Class members have suffered injury-in-fact and/or actual damage.

2563. Pursuant to TENN. CODE § 47-18-109(a), the Tennessee Class seeks monetary relief against New GM measured as actual damages in an amount to be determined at trial, treble damages as a result of the Companies' willful or knowing violations, and any other just and proper relief available under the Tennessee CPA.

ONE HUNDRED THIRTIETH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2564. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Tennessee Class.

2565. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2566. The Companies knew these representations were false when made.

2567. The vehicles purchased or leased by the Tennessee Class were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2568. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Tennessee Class members relied on the Companies' representations that the vehicles they purchased and retained were safe and free from defects.

2569. The aforementioned concealment was material because if it had been disclosed the Tennessee Class members would not have bought, leased or retained the vehicles.

2570. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2571. The Tennessee Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2572. As a result of their reliance, Tennessee Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2573. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Tennessee Class. The Tennessee Class members are therefore entitled to an award of punitive damages.

TEXAS

ONE HUNDRED THIRTY-FIRST CLAIM FOR RELIEF

VIOLATIONS OF THE TEXAS DECEPTIVE TRADE PRACTICES — CONSUMER PROTECTION ACT (TEX. BUS. & COM. CODE §§ 17.41, *et. seq.*)

2574. This claim is brought on behalf of Class members who are Texas residents (the "Texas Class").

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 275 of 337

2575. Members of the Texas Class are individuals, partnerships, and corporations with assets of less than $25 million (or are controlled by corporations or entities with less than $25 million in assets). *See* TEX. BUS. & COM. CODE § 17.41,

2576. The Texas Deceptive Trade Practices-Consumer Protection Act ("Texas DTPA") prohibits "[f]alse, misleading, or deceptive acts or practices in the conduct of any trade or commerce," TEX. BUS. & COM. CODE § 17.46(a), and an "unconscionable action or course of action," which means "an act or practice which, to a consumer's detriment, takes advantage of the lack of knowledge, ability, experience, or capacity of the consumer to a grossly unfair degree." TEX. BUS. & COM. CODE § 17.45(5); TEX. BUS. & COM. CODE § 17.50(a)(3). The Companies have committed false, misleading, unconscionable and deceptive acts or practices in the conduct of trade or commerce.

2577. The Companies also violated the Texas DTPA by (1) representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; (2) representing that the Defective Vehicles are of a particular standard, quality, and grade when they are not; (3) advertising the Defective Vehicles with the intent not to sell them as advertised; and (4) failing to disclose information concerning the Defective Vehicles with the intent to induce consumers to purchase or lease the Defective Vehicles.

2578. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment,

suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Texas DTPA, and also has successor liability for the violations of Old GM.

2579. As alleged above, both Companies knew of the ignition switch defects, while the Texas Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2580. The Companies knew or should have known that their conduct violated the Texas DTPA.

2581. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2582. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2583. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 597 of 337

2584. The Companies each owed Texas Class members a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Texas Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Texas Class that contradicted these representations.

2585. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Texas Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2586. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Texas Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Texas Class.

2587. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Texas Class. Had Texas Class members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2588. All members of the Texas Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Texas Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Texas Class members own vehicles that are not safe.

2589. Texas Class members have been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2590. Texas Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Texas DTPA, and these violations present a continuing risk to the Texas Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2591. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 579 of 637

2592. As a direct and proximate result of the Companies' violations of the Texas DTPA, Texas Class members have suffered injury-in-fact and/or actual damage.

2593. Pursuant to TEX. BUS. & COM. CODE § 17.50(a)(1) and (b), the Texas Class seeks monetary relief against New GM measured as actual damages in an amount to be determined at trial, treble damages for the Companies' knowing violations of the Texas DTPA, and any other just and proper relief available under the Texas DTPA.

2594. For those Texas Class members who wish to rescind their purchases, they are entitled under TEX. BUS. & COM. CODE § 17.50(b)(4) to rescission and other relief necessary to restore any money or property that was acquired from them based on violations of the Texas DTPA.

2595. The Texas Class also seeks court costs and attorneys' fees under § 17.50(d) of the Texas DTPA.

2596. Texas Plaintiffs have complied with the notice requirement set forth in TEX. BUS. & COM. CODE § 17.505(a) by virtue of the notice previously provided in the context of the underlying action styled *Ramirez, et al. v. GM*, 2:14-cv-02344-JVS-AN (C.D. Cal.), and other underlying actions, as well as additional notice in the form of a demand letter sent on October 12, 2014.

2597. Upon filing this Complaint and as required by TEX. BUS. & COM. CODE § 17.501, Plaintiffs will provide the consumer protection division of the Attorney General's office a copy of the demand letter and a copy of the complaint.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 280 of 337

ONE HUNDRED THIRTY-SECOND CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY
(TEX. BUS. & COM. CODE § 2.314)

2598. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Texas Class.

2599. Old GM and New GM were merchants with respect to motor vehicles under TEX. BUS. & COM. CODE § 2.104.

2600. Under TEX. BUS. & COM. CODE § 2.314, a warranty that the Defective Vehicles were in merchantable condition was implied by law in the transactions in which Texas Class members purchased their Defective Vehicles.

2601. Old GM and New GM impliedly warranted that the vehicles were of good and merchantable quality and fit, and safe for their ordinary intended use—transporting the driver and passengers in reasonable safety during normal operation, and without unduly endangering them or members of the public.

2602. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2603. As a direct and proximate result of Old GM and New GM's breach of the implied warranty of merchantability, Texas Class members have been damaged in an amount to be proven at trial.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 281 of 337

ONE HUNDRED THIRTY-THIRD CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2604. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Texas Class.

2605. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2606. The Companies knew these representations were false when made.

2607. The vehicles purchased or leased by the Texas Class were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2608. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because Texas Class members relied on the Companies' representations that the vehicles they were purchasing were safe.

2609. The aforementioned concealment was material because if it had been disclosed Texas Class members would not have bought, leased, or retained their vehicles, or would have paid less for the vehicles.

2610. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 282 of 337

systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2611. Texas Class members relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2612. As a result of their reliance, Texas Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2613. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Texas Class. Texas Class members are therefore entitled to an award of punitive damages.

UTAH

ONE HUNDRED THIRTY-FOURTH CLAIM FOR RELIEF

VIOLATION OF UTAH CONSUMER SALES PRACTICES ACT (UTAH CODE ANN. § 13-11-1, *et. seq.*)

2614. This claim is brought on behalf of Class members who are Utah residents (the "Utah Class").

2615. Old GM was and New GM is a "supplier" under the Utah Consumer Sales Practices Act ("Utah CSPA"), UTAH CODE ANN. § 13-11-3.

2616. Utah Class members are "persons" under UTAH CODE ANN. § 13-11-3.

2617. The sale of the Defective Vehicles to the Utah Class members was a "consumer transaction" within the meaning of UTAH CODE ANN. § 13-11-3.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 283 of 337

2618. The Utah CSPA makes unlawful any "deceptive act or practice by a supplier in connection with a consumer transaction" under UTAH CODE ANN. § 13-11-4. Specifically, "a supplier commits a deceptive act or practice if the supplier knowingly or intentionally: (a) indicates that the subject of a consumer transaction has sponsorship, approval, performance characteristics, accessories, uses, or benefits, if it has not" or "(b) indicates that the subject of a consumer transaction is of a particular standard, quality, grade, style, or model, if it is not." UTAH CODE ANN. § 13-11-4. "An unconscionable act or practice by a supplier in connection with a consumer transaction" also violates the Utah CSPA. UTAH CODE ANN. § 13-11-5.

2619. The Companies committed deceptive acts or practices in the conduct of trade or commerce, by, among other things, engaging in unconscionable acts, representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; and representing that the Defective Vehicles are of a particular standard, quality, and grade when they are not

2620. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 234 of 337

commerce in violation of the Utah CSPA, and also has successor liability for the violations of Old GM.

2621. As alleged above, both Companies knew of the ignition switch defects, while the Utah Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2622. The Companies knew or should have known that their conduct violated the Utah CSPA.

2623. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2624. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2625. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 295 of 337

2626. The Companies each owed Utah Class members a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Utah Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Utah Class that contradicted these representations.

2627. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Utah Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2628. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Utah Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Utah Class.

2629. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to Utah Class members. Had the Utah Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2630. All members of the Utah Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Utah Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Utah Class members own vehicles that are not safe.

2631. Utah Class members have been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2632. Utah Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Utah CSPA, and these violations present a continuing risk to Utah Class members as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2633. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2634. As a direct and proximate result of the Companies' violations of the Utah CSPA, Utah Class members have suffered injury-in-fact and/or actual damage.

2635. Pursuant to UTAH CODE ANN. § 13-11-4, the Utah Class seek monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $2,000 for each Utah Class member, reasonable attorneys' fees, and any other just and proper relief available under the Utah CSPA.

ONE HUNDRED THIRTY-FIFTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (UTAH CODE ANN. § 70A-2-314)

2636. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Utah Class.

2637. Old GM and New GM were at all relevant times merchants with respect to motor vehicles.

2638. Old GM and New GM impliedly warranted that its vehicles were of good and merchantable quality and fit, and safe for their ordinary intended use—transporting the driver and passengers in reasonable safety during normal operation, and without unduly endangering them or members of the public.

2639. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the non-deployment of airbags in the event of a collision.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/04/14 Page 298 of 337

2640. As a direct and proximate result of the Companies' breach of the implied warranty of merchantability, Utah Class members have been damaged in an amount to be proven at trial.

VERMONT

ONE HUNDRED THIRTY-SIXTH CLAIM FOR RELIEF

VIOLATION OF VERMONT CONSUMER FRAUD ACT
(VT. STAT. ANN. TIT. 9, § 2451 *et. seq.*)

2641. This claim is brought on behalf of Class members who are Vermont residents (the "Vermont Class").

2642. Old GM was, and New GM is, a seller within the meaning of VT. STAT. ANN. TIT. 9, § 2451(a)(c).

2643. The Vermont Consumer Fraud Act ("Vermont CFA") makes unlawful "[u]nfair methods of competition in commerce, and unfair or deceptive acts or practices in commerce.…" VT. STAT. ANN. TIT. 9, § 2453(a). The Companies engaged in unfair and deceptive acts or practices in trade or commerce in violation of the Vermont CFA by failing to disclose and actively concealing the ignition switch defects in the Defective Vehicles.

2644. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 29 of 337

commerce in violation of the Vermont CFA, and also has successor liability for the violations of Old GM.

2645. As alleged above, both Companies knew of the ignition switch defects, while the Vermont Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2646. The Companies knew or should have known that their conduct violated the Vermont CFA.

2647. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2648. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2649. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2650. The Companies each owed Plaintiffs a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Vermont Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Vermont Class that contradicted these representations.

2651. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Vermont Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2652. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Vermont Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Vermont Class.

2653. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to Vermont Class members. Had Vermont Class members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2654. All members of the Vermont Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Vermont Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Vermont Class members own vehicles that are not safe.

2655. Vermont Class members have been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2656. Vermont Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Vermont CFA, and these violations present a continuing risk to the Vermont Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2657. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 292 of 337

2658. As a direct and proximate result of the Companies' violations of the Vermont CFA, Vermont Class members have suffered injury-in-fact and/or actual damage.

2659. Vermont Class members are entitled to recover "appropriate equitable relief" and "the amount of [their] damages, or the consideration or the value of the consideration given by [them], reasonable attorney's fees, and exemplary damages not exceeding three times the value of the consideration given by [them]" pursuant to VT. STAT. ANN. TIT. 9, § 2461(b).

ONE HUNDRED THIRTY-SEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2660. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Vermont Class.

2661. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2662. The Companies knew these representations were false when made.

2663. The vehicles purchased or leased by Vermont Class members were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2664. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because Vermont Class members relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 293 of 337

2665. The aforementioned concealment was material because if it had been disclosed Vermont Class members would not have bought, leased, or retained their vehicles.

2666. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2667. Vermont Class members relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2668. As a result of their reliance, Vermont Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2669. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Vermont Class. Vermont Class members are therefore entitled to an award of punitive damages.

VIRGINIA

ONE HUNDRED THIRTY-EIGHTH CLAIM FOR RELIEF

VIOLATION OF VIRGINIA CONSUMER PROTECTION ACT (VA. CODE ANN. 15 §§ 59.1-196, *et. seq.*)

2670. This claim is brought solely on behalf of Class members who are Virginia residents (the "Virginia Class").

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 294 of 337

2671. Old GM was and New GM are "supplier[s]" under VA. CODE ANN. § 59.1-198.

2672. The sale of the Defective Vehicles to Virginia Class members was a "consumer transaction" within the meaning of VA. CODE ANN. § 59.1-198.

2673. The Virginia Consumer Protection Act ("Virginia CPA") lists prohibited "practices" which include: "5. Misrepresenting that good or services have certain characteristics;" "6. Misrepresenting that goods or services are of a particular standard, quality, grade style, or model;" "8. Advertising goods or services with intent not to sell them as advertised, or with intent not to sell at the price or upon the terms advertised;" "9. Making false or misleading statements of fact concerning the reasons for, existence of, or amounts of price reductions;" and "14. Using any other deception, fraud, or misrepresentation in connection with a consumer transaction." VA. CODE ANN. § 59.1-200. The Companies violated the Virginia CPA by misrepresenting the Defective Vehicles had certain quantities, characteristics, ingredients, uses, or benefits; misrepresenting that Defective Vehicles were of a particular standard, quality, grade, style, or model when they were another; advertising Defective Vehicles with intent not to sell them as advertised; and otherwise "using any other deception, fraud, false pretense, false promise, or misrepresentation in connection with a consumer transaction.

2674. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment,

suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Virginia CPA, and also has successor liability for the violations of Old GM.

2675. As alleged above, both Companies knew of the ignition switch defects, while the Virginia Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2676. The Companies knew or should have known that their conduct violated the Virginia CPA.

2677. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2678. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2679. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 296 of 337

2680. The Companies each owed Virginia Class members a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Virginia Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Virginia Class that contradicted these representations.

2681. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Virginia Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2682. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Virginia Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Virginia Class.

2683. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to Virginia Class members. Had Virginia Class members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2684. All members of the Virginia Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Virginia Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Virginia Class members own vehicles that are not safe.

2685. Virginia Class members have been damaged by New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of New GM's failure to timely disclose and remedy the serious defects. New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2686. Virginia Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Virginia CPA, and these violations present a continuing risk to the Virginia Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2687. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2688. As a direct and proximate result of the Companies' violations of the Virginia CPA, Virginia Class members have suffered injury-in-fact and/or actual damage.

2689. Pursuant to VA. CODE ANN. § 59.1-204, Virginia Class members seek monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $500 for each Virginia Class Member. Because the Companies' conduct was committed willfully and knowingly, the Virginia Classis entitled to recover, for each Virginia Class Member, the greater of (a) three times actual damages or (b) $1,000.

2690. Plaintiffs also seek an order enjoining New GM's unfair and/or deceptive acts or practices, punitive damages, and attorneys' fees, and any other just and proper relief available under General Business Law § 59.1-204, *et. seq.*

ONE HUNDRED THIRTY-NINTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY
(VA. CODE ANN. § 8.2-314)

2691. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Virginia Class.

2692. Old GM and New GM were at all relevant times merchants with respect to motor vehicles.

2693. Old GM and New GM impliedly warranted that their vehicles were of good and merchantable quality and fit, and safe for their ordinary intended use—transporting the driver and passengers in reasonable safety during normal operation, and without unduly endangering them or members of the public.

2694. These vehicles, when sold and at all times thereafter, were not merchantable and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective

Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2695. As a direct and proximate result of the Companies' breach of the implied warranty of merchantability, the Virginia Class has been damaged in an amount to be proven at trial.

ONE HUNDRED FORTIETH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2696. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Virginia Class.

2697. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2698. The Companies knew these representations were false when made.

2699. The vehicles purchased or leased by Virginia Class members were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2700. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because Virginia Class members relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2701. The aforementioned concealment was material because if it had been disclosed Virginia Class members would not have bought, leased, or retained their vehicles.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 390 of 337

2702. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2703. Virginia Class members relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2704. As a result of their reliance, the Virginia Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2705. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Virginia Class. Virginia Class members are therefore entitled to an award of punitive damages.

WASHINGTON

ONE HUNDRED FORTY-FIRST CLAIM FOR RELIEF

VIOLATION OF THE CONSUMER PROTECTION ACT
(REV. CODE WASH. ANN. §§ 19.86.010, *et. seq.*)

2706. This claim is brought on behalf of Class members who are Washington residents (the "Washington Class").

2707. The Companies committed the acts complained of herein in the course of "trade" or "commerce" within the meaning of WASH. REV. CODE. WASH. ANN. §§ 19.96.010.

2708. The Washington Consumer Protection Act ("Washington CPA") broadly prohibits "[u]nfair methods of competition and unfair or deceptive acts or practices in the conduct of any trade or commerce." WASH. REV. CODE. WASH. ANN. §§ 19.96.010. The Companies engaged in unfair and deceptive acts and practices and violated the Washington CPA by failing to disclose and actively concealing the ignition switch defects in the Defective Vehicles.

2709. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Washington CPA, and also has successor liability for the violations of Old GM.

2710. As alleged above, both Companies knew of the ignition switch defects, while the Washington Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2711. The Companies knew or should have known that their conduct violated the Washington CPA.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 302 of 337

2712. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2713. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2714. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2715. The Companies each owed Washington Class members a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from Washington Class members; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully

Case 1:14-md-02543-JMF Document 179-2 Filed 07/03/14 Page 393 of 337

withholding material facts from Washington Class members that contradicted these representations.

2716. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Washington Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2717. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Washington Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Washington Class.

2718. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to Washington Class members. Had the Washington Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2719. All members of the Washington Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Washington Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Washington Class members own vehicles that are not safe.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 394 of 337

2720. Washington Class members have been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2721. Washington Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Washington CPA, and these violations present a continuing risk to the Washington Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2722. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2723. As a direct and proximate result of the Companies' violations of the Washington Act, Washington Class members have suffered injury-in-fact and/or actual damage.

2724. New GM is liable to the Washington Class for damages in amounts to be proven at trial, including attorneys' fees, costs, and treble damages, as well as any other remedies the Court may deem appropriate under REV. CODE. WASH. ANN. § 19.86.090.

2725. Pursuant to WASH. REV. CODE. WASH. ANN. § 19.86.095, Plaintiffs will serve the Washington Attorney General with a copy of this complaint as Plaintiffs seek injunctive relief.

ONE HUNDRED FORTY-SECOND CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2726. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Washington Class.

2727. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2728. The Companies knew these representations were false when made.

2729. The vehicles purchased or leased by Washington Class members were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2730. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because Washington Class members relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2731. The aforementioned concealment was material because if it had been disclosed the Washington Class would not have bought, leased, or retained their vehicles.

2732. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2733. Washington Class members relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing or retaining the Defective Vehicles.

2734. As a result of their reliance, the Washington Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

WEST VIRGINIA

ONE HUNDRED FORTY-THIRD CLAIM FOR RELIEF

VIOLATIONS OF THE CONSUMER CREDIT AND PROTECTION ACT (W. VA. CODE § 46a-1-101, *et. seq.*)

2735. This claim is brought on behalf of Class members who are West Virginia residents (the "West Virginia Class").

2736. Old GM was, and New GM is, a "person" under W.VA. CODE § 46A-1-102(31).

2737. West Virginia Class members are "consumers," as defined by W.VA. CODE §§ and 46A-1-102(12) and 46A-6-102(2), who purchased or leased one or more Defective Vehicles.

2738. The Companies engaged in trade or commerce as defined by W. VA. CODE § 46A-6-102(6).

2739. The West Virginia Consumer Credit and Protection Act ("West Virginia CCPA") prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce…." W. VA. CODE § 46A-6-104. Without limitation, "unfair or deceptive" acts or practices include:

> (I) Advertising goods or services with intent not to sell them as advertised;
>
> (K) Making false or misleading statements of fact concerning the reasons for, existence of or amounts of price reductions;
>
> (L) Engaging in any other conduct which similarly creates a likelihood of confusion or of misunderstanding;
>
> (M) The act, use or employment by any person of any deception, fraud, false pretense, false promise or misrepresentation, or the concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale or advertisement of any goods or services, whether or not any person has in fact been misled, deceived or damaged thereby;
>
> (N) Advertising, printing, displaying, publishing, distributing or broadcasting, or causing to be advertised, printed, displayed, published, distributed or broadcast in any manner, any statement or representation with regard to the sale of goods or the extension of consumer credit including the rates, terms or conditions for the sale of such goods or the extension of such credit, which is false, misleading or deceptive or which omits to state material information which is necessary to make the statements therein not false, misleading or deceptive;

W. VA. CODE § 46A-6-102(7).

2740. By failing to disclose and actively concealing the dangerous risks posed by the defective ignition switches in the Defective Vehicles, the Companies engaged in deceptive business practices prohibited by the West Virginia CCPA, including: (1) representing that the Defective Vehicles have characteristics, uses, benefits, and qualities which they do not have; (2) representing that the Defective Vehicles are of a particular standard, quality, and grade when they are not; (3) advertising the Defective Vehicles with the intent not to sell them as advertised; (4) representing that a transaction involving the Defective Vehicles confers or involves rights, remedies, and obligations which it does not; and (5) representing that the subject of a transaction involving the Defective Vehicles has been supplied in accordance with a previous representation when it has not.

2741. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression, or omission of any material fact with intent that others rely upon such concealment, suppression, or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the West Virginia CCPA, and also has successor liability for the violations of Old GM.

2742. As alleged above, both Companies knew of the ignition switch defects, while the West Virginia Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2743. The Companies knew or should have known that their conduct violated the West Virginia Act.

2744. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2745. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2746. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2747. The Companies each owed the West Virginia Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the West Virginia Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the West Virginia Class that contradicted these representations.

2748. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the West Virginia Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2749. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the West Virginia Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the West Virginia Class.

2750. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the West Virginia Class. Had West Virginia Class members known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2751. All members of the West Virginia Class suffered ascertainable loss caused by the Companies' failure to disclose material information. West Virginia Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and West Virginia Class members own vehicles that are not safe.

2752. West Virginia Class members have been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2753. West Virginia Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the West Virginia CCPA, and these violations present a continuing risk to the West Virginia Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2754. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2755. As a direct and proximate result of the Companies' violations of the West Virginia CCPA, West Virginia Class members have suffered injury-in-fact and/or actual damage.

2756. Pursuant to W. VA. CODE § 46A-1-106, the West Virginia Class seeks monetary relief against New GM measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $200 per violation of the West Virginia CCPA for each West Virginia Class member.

2757. The West Virginia Class also seeks punitive damages against New GM because the Companies carried out despicable conduct with willful and conscious disregard of the rights and safety of others, subjecting the West Virginia Class to cruel and unjust hardship as a result. The Companies intentionally and willfully misrepresented the safety and reliability of the Defective Vehicles, deceived the West Virginia Class on life-or-death matters, and concealed material facts that only they knew, all to avoid the expense and public relations nightmare of correcting a deadly flaw in the Defective Vehicles it repeatedly promised the West Virginia Class was safe. The Companies' unlawful conduct constitutes malice, oppression, and fraud warranting punitive damages.

2758. The West Virginia Class believes that the recalls and repairs instituted by New GM have not been adequate, and that some or all of the Defective Vehicles will remain defective even after New GM's "remedy" is implemented.

2759. The West Virginia Class further seeks an order enjoining New GM's unfair or deceptive acts or practices, restitution, punitive damages, costs of Court, attorney's fees under W. VA. CODE § 46A-5-101, *et. seq.*, and any other just and proper relief available under the West Virginia CCPA.

2760. West Virginia Plaintiffs have complied with the notice requirement set forth in W. VA. CODE § 46A-6-106(b) by virtue of the notice previously provided in the context of the underlying action styled *Ramirez, et al. v. GM*, 2:14-cv-02344-JVS-AN (C.D. Cal.), and other underlying actions, as well as additional notice in the form of a demand letter sent on October 12, 2014.

ONE HUNDRED FORTY-FOURTH CLAIM FOR RELIEF

BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY (W. VA. CODE § 46-2-314)

2761. In the event the Court declines to certify a nationwide Class, Plaintiffs bring this claim on behalf of the West Virginia Class.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 313 of 337

2762. Old GM and New GM were at all relevant times sellers of motor vehicles under W. VA. CODE § 46-2-314, and were also "merchant[s]" as the term is used in W. VA. CODE § 46A-6-107 and § 46-2-314.

2763. Under W. VA. CODE § 46-2-314, a warranty that the Defective Vehicles were in merchantable condition was implied by law when West Virginia Class members purchased their Defective Vehicles.

2764. These vehicles, when sold and at all times thereafter, were not in merchantable condition and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2765. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, their own internal investigations, and by numerous individual letters and communications sent by West Virginia Class members before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2766. As a direct and proximate result of Old GM and New GM's breach of the warranty of merchantability, the West Virginia Class been damaged in an amount to be proven at trial.

ONE HUNDRED FORTY-FIFTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2767. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the West Virginia Class.

2768. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2769. The Companies knew these representations were false when made.

2770. The vehicles purchased or leased by West Virginia Class members were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2771. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because West Virginia Class members relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2772. The aforementioned concealment was material because if it had been disclosed West Virginia Class members would not have bought, leased or retained their vehicles.

2773. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2774. The West Virginia Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 315 of 337

assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing, or retaining the Defective Vehicles.

2775. As a result of their reliance, the West Virginia Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2776. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the West Virginia Class. West Virginia Class members are therefore entitled to an award of punitive damages.

WISCONSIN

ONE HUNDRED FORTY-SIXTH CLAIM FOR RELIEF

VIOLATIONS OF THE WISCONSIN DECEPTIVE TRADE PRACTICES ACT (WIS. STAT. § 110.18)

2777. This claim is brought on behalf of Class members who are Wisconsin residents (the "Wisconsin Class").

2778. The Companies are a "person, firm, corporation or association" within the meaning of WIS. STAT. § 100.18(1).

2779. The Wisconsin Class members are members of "the public" within the meaning of WIS. STAT. § 100.18(1). Wisconsin Class members purchased or leased one or more Class Vehicles.

2780. The Wisconsin Deceptive Trade Practices Act ("Wisconsin DTPA") prohibits a "representation or statement of fact which is untrue, deceptive or misleading." WIS. STAT. § 100.18(1). The Companies engaged in unfair and deceptive acts and practices and violated the Wisconsin DTPA by making misrepresentations and failing to disclose and actively concealing the ignition switch defects in the Defective Vehicles.

2781. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Wisconsin DTPA, and also has successor liability for the violations of Old GM.

2782. As alleged above, both Companies knew of the ignition switch defects, while the Wisconsin Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2783. The Companies knew or should have known that their conduct violated the Wisconsin DTPA.

2784. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2785. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 317 of 337

2786. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2787. The Companies each owed Wisconsin Class members a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Wisconsin Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Wisconsin Class that contradicted these representations.

2788. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Wisconsin Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2789. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Wisconsin Class, about the true safety and reliability of

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 318 of 337

Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Wisconsin Class.

2790. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Wisconsin Class. Had the Wisconsin Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2791. All members of the Wisconsin Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Wisconsin Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Wisconsin Class members own vehicles that are not safe.

2792. The Wisconsin Class has been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2793. Wisconsin Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Wisconsin DTPA, and these violations present a continuing risk to the Wisconsin Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest.

2794. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2795. As a direct and proximate result of the Companies' violations of the Wisconsin DTPA, Wisconsin Class members have suffered injury-in-fact and/or actual damage.

2796. The Wisconsin Class is entitled to damages and other relief provided for under WIS. STAT. § 110.18(11)(b)(2). Because the Companies' conduct was committed knowingly and/or intentionally, the Wisconsin Class is entitled to treble damages.

2797. The Wisconsin Class also seeks court costs and attorneys' fees under WIS. STAT. § 110.18(11)(b)(2).

ONE HUNDRED FORTY-SEVENTH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2798. In the event the Court declines to certify a nationwide Class, this claim is brought on behalf of the Wisconsin Class.

2799. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2800. The Companies knew these representations were false when made.

2801. The vehicles purchased or leased by the Wisconsin Class were, in fact, defective, unsafe, and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2802. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Wisconsin Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2803. The aforementioned concealment was material because if it had been disclosed Wisconsin Class members would not have bought, leased, or retained their vehicles.

2804. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2805. The Wisconsin Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing, or retaining the Defective Vehicles.

2806. As a result of their reliance, the Wisconsin Class has been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2807. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Wisconsin Class. Wisconsin Class members are therefore entitled to an award of punitive damages.

WYOMING

ONE HUNDRED FORTY-EIGHTH CLAIM FOR RELIEF

VIOLATION OF THE WYOMING CONSUMER PROTECTION ACT (WYO. STAT. § 40-12-105 *et. seq.)*

2808. This claim is brought on behalf of Class members who are Wyoming residents (the "Wyoming Class").

2809. The Wyoming Class members, Old GM, and New GM are "persons" within the meaning of WYO. STAT. § 40-12-102(a)(i).

2810. The sales of the Defective Vehicles to the Wyoming Class were "consumer transaction[s]" within the meaning of WYO. STAT. § 40-12-105.

2811. Under the Wyoming Consumer Protection Act ("Wyoming CPA"), a person engages in a deceptive trade practice when, in the course of its business and in connection with a consumer transaction it knowingly: "(iii) Represents that merchandise is of a particular standard, grade, style or model, if it is not"; "(v) Represents that merchandise has been supplied in accordance with a previous representation, if it has not…"; "(viii) Represents that a consumer transaction involves a warranty, a disclaimer of warranties, particular warranty terms, or other rights, remedies or obligations if the representation is false"; "(x) Advertises merchandise with intent not to sell it as advertised"; or "(xv) Engages in unfair or deceptive acts or practices." WYO. STAT. § 45-12-105.

2812. The Companies willfully failed to disclose and actively concealed the ignition switch defects in the Defective Vehicles as described above in violation of the Wyoming CPA. The Companies engaged in deceptive trade practices, including (among other things) representing that the Defective Vehicles are of a particular standard and grade, which they are not; advertising the Defective Vehicles with the intent not to sell them as advertised; and overall engaging in unfair and deceptive acts or practices.

2813. In the course of their business, both Old GM and New GM willfully failed to disclose and actively concealed the dangerous ignition switch defects in the Defective Vehicles as described herein and otherwise engaged in activities with a tendency or capacity to deceive. Old GM and New GM also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of Defective Vehicles. New GM is directly liable for engaging in unfair and deceptive acts or practices in the conduct of trade or commerce in violation of the Wyoming CPA, and also has successor liability for the violations of Old GM.

2814. As alleged above, both Companies knew of the ignition switch defects, while the Wyoming Class was deceived by the Companies' omission into believing the Defective Vehicles were safe, and the information could not have reasonably been known by the consumer.

2815. The Companies knew or should have known that their conduct violated the Wyoming CPA.

2816. As alleged above, the Companies made material statements about the safety and reliability of Defective Vehicles that were either false or misleading.

2817. Old GM engaged in a deceptive trade practice when it failed to disclose material information concerning the Defective Vehicles which it knew at the time of the sale. Old GM deliberately withheld the information about the vehicles' propensity to inadvertently

Case 1:14-md-02543-JMF Document 379-2 Filed 11/03/14 Page 323 of 337

shut down in order to ensure that consumers would purchase its vehicles and to induce the consumer to enter into a transaction.

2818. From its inception in 2009, New GM has known of the ignition switch defects that exist in millions of Defective Vehicles sold in the United States. But, to protect its profits and to avoid remediation costs and a public relations nightmare, New GM concealed the defects and their tragic consequences and allowed unsuspecting new and used car purchasers to continue to buy the Defective Vehicles and allowed all Defective Vehicle owners to continue driving highly dangerous vehicles.

2819. The Companies each owed the Wyoming Class a duty to disclose the defective nature of Defective Vehicles, including the dangerous risk of ignition switch movement, engine shutdown, and disabled safety airbags, because they:

a. Possessed exclusive knowledge of the defects rendering Defective Vehicles inherently more dangerous and unreliable than similar vehicles;

b. Intentionally concealed the hazardous situation with Defective Vehicles through their deceptive marketing campaign and recall program that they designed to hide the life-threatening problems from the Wyoming Class; and/or

c. Made incomplete representations about the safety and reliability of Defective Vehicles generally, and the ignition switch in particular, while purposefully withholding material facts from the Wyoming Class that contradicted these representations.

2820. The Defective Vehicles posed and/or pose an unreasonable risk of death or serious bodily injury to the Wyoming Class, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents of sudden and unintended engine shutdown.

2821. The Companies' unfair or deceptive acts or practices were likely to deceive reasonable consumers, including the Wyoming Class, about the true safety and reliability of Defective Vehicles. The Companies intentionally and knowingly misrepresented material facts regarding the Defective Vehicles with an intent to mislead the Wyoming Class.

2822. The propensity of the Defective Vehicles to inadvertently shut down during ordinary operation was material to the Wyoming Class. Had the Wyoming Class known that their vehicles had these serious safety defects, they would either not have purchased their Defective Vehicles, or would have paid less for them than they did.

2823. All members of the Wyoming Class suffered ascertainable loss caused by the Companies' failure to disclose material information. Wyoming Class members overpaid for their vehicles and did not receive the benefit of their bargain. As the result of the concealment and failure to remedy the serious safety defect, and the piecemeal and serial nature of the recalls, the value of their Defective Vehicles has diminished now that the safety issues in the Defective Vehicles, and the many other serious safety issues and myriad defects in the Companies' vehicles have come to light, and Wyoming Class members own vehicles that are not safe.

2824. The Wyoming Class has been damaged by Old GM and New GM's misrepresentations, concealment, and non-disclosure of the ignition switch defects in the Defective Vehicles, as they are now holding vehicles whose value has greatly diminished because of Old GM and New GM's failure to timely disclose and remedy the serious defects. Old GM and New GM's egregious and widely-publicized conduct and the never-ending and piecemeal nature of New GM's recalls, and the many other serious defects in Old GM and New GM vehicles, have so tarnished the Defective Vehicles that no reasonable consumer would purchase them—let alone pay what would otherwise be fair market value for the vehicles.

2825. Wyoming Class members risk irreparable injury as a result of the Companies' act and omissions in violation of the Wyoming CPA, and these violations present a continuing risk to the Wyoming Class as well as to the general public. The Companies' unlawful acts and practices complained of herein affect the public interest

2826. The recalls and repairs instituted by New GM have not been adequate. The recall is not an effective remedy and is not offered for all Defective Vehicles.

2827. As a direct and proximate result of the Companies' violations of the Wyoming CPA, Wyoming Class members have suffered injury-in-fact and/or actual damage.

2828. Pursuant to WYO. STAT. § 40-12-108(a), the Wyoming Class seeks monetary relief against New GM measured as actual damages in an amount to be determined at trial, in addition to any other just and proper relief available under the Wyoming CPA.

2829. On October 12, 2014, Plaintiffs sent a notice letter complying with WYO. STAT. § 45-12-109. Plaintiffs presently do not claim the damages relief asserted in this Complaint under the Wyoming CPA until and unless New GM fails to remedy its unlawful conduct towards the class within the requisite time period, after which Plaintiffs seek all damages and relief to which Plaintiffs and the Wyoming Class are entitled.

ONE HUNDRED FORTY-NINTH CLAIM FOR RELIEF

BREACH OF THE IMPLIED WARRANTY OF MERCHANTABILITY (WYO. STAT. § 34.1-2-314)

2830. In the event the Court declines to certify a nationwide Class, Plaintiffs brings this claim on behalf of the Wyoming Class.

2831. Old GM and New GM were at all relevant times merchants with respect to motor vehicles.

2832. Under Wyoming law, a warranty that the Defective Vehicles were in merchantable condition was implied when Wyoming Class members purchased their Defective Vehicles.

2833. These vehicles, when sold and at all times thereafter, were not in merchantable condition and are not fit for the ordinary purpose for which cars are used. Specifically, the Defective Vehicles are inherently defective in that there are defects in the ignition switch systems that permit sudden unintended shutdown to occur, with the attendant shut down of power steering and power brakes and the non-deployment of airbags in the event of a collision.

2834. Old GM and New GM were provided notice of these issues by numerous complaints filed against them, their own internal investigations, and by numerous individual letters and communications sent by Wyoming Class members before or within a reasonable amount of time after New GM issued the recall and the allegations of vehicle defects became public.

2835. As a direct and proximate result of Old GM and New GM's breach of the warranty of merchantability, the Wyoming Class has been damaged in an amount to be proven at trial.

ONE HUNDRED FIFTIETH CLAIM FOR RELIEF

FRAUD BY CONCEALMENT

2836. In the event the Court declines to certify a nationwide Class under Michigan law, this claim is brought on behalf of the Wyoming Class.

2837. As described above, Old GM and New GM made material omissions and affirmative misrepresentations regarding the Defective Vehicles.

2838. The Companies knew these representations were false when made.

2839. The vehicles purchased or leased by the Wyoming Class were, in fact, defective, unsafe and unreliable, because the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision.

2840. The Companies had a duty to disclose that these vehicles were defective, unsafe and unreliable in that the vehicles were subject to sudden unintended shut down, with the attendant loss of power steering, power brakes, and the non-deployment of airbags in the event of a collision because the Wyoming Class relied on the Companies' representations that the vehicles they were purchasing and retaining were safe and free from defects.

2841. The aforementioned concealment was material because if it had been disclosed the Wyoming Class would not have bought, leased, or retained their vehicles.

2842. The aforementioned representations were material because they were facts that would typically be relied on by a person purchasing, leasing, or retaining a new or used motor vehicle. The Companies knew or recklessly disregarded that their representations were false because they knew that people had died as the result of the vehicles' defective ignition switch systems. The Companies intentionally made the false statements in order to sell vehicles and avoid the expense and public relations nightmare of a recall.

2843. The Wyoming Class relied on the Companies' reputation—along with their failure to disclose the ignition switch system problems and the Companies' affirmative assurance that its vehicles were safe and reliable and other similar false statements—in purchasing, leasing, or retaining the Defective Vehicles.

2844. As a result of their reliance, Wyoming Class members have been injured in an amount to be proven at trial, including, but not limited to, their lost benefit of the bargain and overpayment at the time of purchase and/or the diminished value of their vehicles.

2845. The Companies' conduct was knowing, intentional, with malice, demonstrated a complete lack of care, and was in reckless disregard for the rights of the Wyoming Class. Wyoming Class members are therefore entitled to an award of punitive damages.

ONE HUNDRED FIFTY-FIRST CLAIM FOR RELIEF

NEGLIGENCE
(On Behalf of the Arkansas, Louisiana, Maryland, and Ohio Classes)

2846. Plaintiffs Camille Burns, Jennifer Crowder, Robert Wyman, George Mathis, Jayn Roush, Bonnie Taylor, and Sharon Dorsey ("Plaintiffs," for purposes of this Count) bring this Count on behalf of the Arkansas, Louisiana, Maryland, and Ohio State Classes ("Negligence Classes").

2847. Old GM and New GM have designed, manufactured, sold, or otherwise placed in the stream of commerce Vehicles with defects, as set forth above.

2848. Od GM and New GM had a duty to design and manufacture a product that would be safe for its intended and foreseeable uses and users, including the use to which its products were put by Plaintiffs and the other members of the Negligence Classes. Old GM and New GM breached their duties to Plaintiffs and the other members of the Negligence Classes because they were negligent in the design, development, manufacture, and testing of the Vehicles, and New GM is responsible for this negligence.

2849. Old GM and New GM were negligent in the design, development, manufacture, and testing of the Vehicles because they knew, or in the exercise of reasonable care should have known, that the Vehicles equipped with defective ignition systems pose an unreasonable risk of death or serious bodily injury to Plaintiffs and the other members of the Negligence Classes, passengers, other motorists, pedestrians, and the public at large, because they are susceptible to incidents in which brakes, power steering, and airbags are all rendered inoperable.

2850. Whereupon Plaintiffs, individually and on behalf of the other members of the Negligence Classes, respectfully rely upon the Restatement (Second) of Torts § 395.

2851. Old GM and New GM further breached their duties to Plaintiffs and the other members of the Negligence Classes by supplying directly or through a third person defective Vehicles to be used by such foreseeable persons as Plaintiffs and the other members of the Negligence Classes when:

a. Old GM and New GM knew or had reason to know that the Vehicles were dangerous or likely to be dangerous for the use for which they were supplied; and

b. Old GM and New GM failed to exercise reasonable care to inform customers of the dangerous condition or of the facts under which the Vehicles are likely to be dangerous.

2852. Old GM and New GM had a continuing duty to warn and instruct the intended and foreseeable users of its Vehicles, including Plaintiffs and the other members of the Negligence Classes, of the defective condition of the Vehicles and the high degree of risk attendant to using the Vehicles. Plaintiffs and the other members of the Negligence Classes were entitled to know that the Vehicles, in their ordinary operation, were not reasonably safe for their intended and ordinary purposes and uses.

2853. At all times at which Old GM and New GM knew or should have known of the defects described herein, Old GM and New GM breached its duty to Plaintiffs and the other

Case 1:14-md-02543-JMF Document 379-2 Filed 11/13/14 Page 330 of 337

members of the Negligence Classes because it failed to warn and instruct the intended and foreseeable users of its Vehicles of the defective condition of the Vehicles and the high degree of risk attendant to using the Vehicles.

2854. As a direct and proximate result of Old GM and New GM's negligence, Plaintiffs and the other members of the Negligence Classes suffered damages.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs, individually and on behalf of the Classes as defined herein, respectfully request that this Court enter a judgment against New GM and in favor of Plaintiffs and the Classes, and grant the following relief:

A. Determine that this action may be maintained and certified as a class action on a nationwide, statewide, and/or multistate basis under Rule 23(b)(1), 23(b)(2) and/or 23(b)(3); or alternatively, certify all questions, issues and claims that are appropriately certified under 23(c)(4); and that it designate and appoint Plaintiffs as Class Representatives, and appoint Class Counsel under Rule 23(g).

B. Declare, adjudge, and decree the conduct of New GM, as alleged herein, to be unlawful, unfair, and/or deceptive; enjoin any such future conduct; and issue an injunction under which the Court will, *inter alia*: (1) monitor New GM's response to problems with its recalls, defects in its replacement parts, and efforts to improve its safety processes, and (2) establish by Court decree and administrator, under Court supervision, a program funded by New GM, under which claims can be made and paid for Class members' recall-related out-of-pocket expenses and costs;

C. Award Plaintiffs and Class members their actual, compensatory and/or statutory damages, according to proof;

D. Award Plaintiffs and the Class members punitive and exemplary damages in an amount sufficient to punish New GM for its misconduct and deter the repetition of such conduct by New GM or others;

E. Award Plaintiffs and Class members their reasonable attorneys' fees, costs, and pre-judgment and post-judgment interest;

F. Award Plaintiffs and Class members restitution and/or disgorgement of New GM's ill-gotten gains for the conduct described in this Complaint; and

G. Award Plaintiffs and Class members such other, further and different relief as the case may require; or as determined to be just, equitable, and proper by this Court.

JURY TRIAL DEMANDED

Plaintiffs request a trial by jury on all claims so triable.

THE GM IGNITION SWITCH RECALL:

WHY DID IT TAKE SO LONG?

TUESDAY, APRIL 1, 2014

House of Representatives,

Subcommittee on Oversight

and Investigations,

Committee on Energy and Commerce,

Washington, D.C.

The subcommittee met, pursuant to call, at 2:00 p.m., in Room 2123, Rayburn House Office Building, Hon. Tim Murphy [chairman of the subcommittee] presiding.

Present: Representatives Murphy, Burgess, Blackburn, Gingrey, Scalise, Harper, Olson, Griffith, Long, Barton, Upton (ex officio), DeGette, Braley, Schakowsky, Castor, Welch, Tonko, Yarmuth, Green, Dingell (ex officio-nonvoting), and Waxman (ex officio).

Staff Present: Carl Anderson, Counsel, Oversight; Gary Andres, Staff Director, Charlotte Baker, Deputy Communications Director; Mike Bloomquist, General Counsel; Sean Bonyun, Communications Director; Matt Bravo, Professional Staff Member; Leighton Brown, Press Assistant; Karen Christian, Chief Counsel, Oversight; Brad Grantz, Policy Coordinator, O&I; Brittany Havens, Legislative Clerk; Sean Hayes, Deputy Chief Counsel, O&I; Kirby Howard, Legislative Clerk; Peter Kielty, Deputy General Counsel; Alexa Marrero, Deputy Staff Director; Brian McCullough, Senior Professional Staff Member, CMT; Brandon Mooney, Professional Staff Member; Paul Nagle, Chief Counsel, CMT; John Ohly, Professional Staff, O&I; Krista Rosenthall, Counsel to Chairman Emeritus; Peter Spencer, Professional Staff Member, Oversight; Shannon Weinberg Taylor, Counsel, CMT; Tom Wilbur, Digital Media Advisor; Jessica Wilkerson, Legislative Clerk; Michele Ash, Minority Chief Counsel, CMT; Phil Barnett, Minority Staff Director; Brian Cohen, Minority Staff Director, O&I, and Senior Policy Advisor; Elizabeth Ertel, Minority Deputy Clerk; Kiren Gopal, Minority Counsel; Hannah Green, Minority Staff Assistant; Elizabeth Letter, Minority Press Secretary; Karen Lightfoot, Minority Communications Director and Senior Policy Advisor; and Stephen Salsbury, Minority Investigator.

Mr. Murphy. I now convene this hearing of the Oversight and Investigation Subcommittee, entitled the "GM Ignition Switch Recall: Why Did It Take So Long?"

Ms. Barra, if you would like to take a seat, please. Thank you.

This question is the focus of our investigation. As soon as the Chevy Cobalt rolled off the production line in 2004, customers began filing complaints about the ignition switch. These customers told General Motors that just by bumping the key with their knee while driving the Cobalt, it would shut off. In 2004 and 2005, GM engineers twice considered the problem and even developed potential solutions to fix it, but GM decided the, quote, "tooling cost and piece prices are too high," unquote, and that, quote, "none of the solutions represent an acceptable business case," end quote.

The solution GM ultimately settled for was to tell their dealers to ask Cobalt drivers to remove heavy objects from their key chains, and yet just a year later, GM decided to fix the ignition switch. In 2005, GM told their supplier, Delphi, to increase the torque in the ignition switch so the key wouldn't move out of the run position and into accessory mode.

GM was not alone in examining problems with the Cobalt. The lead government safety regulator, the National Highway Traffic Safety Administration, known as NHTSA, was also evaluating concerns with the Cobalt. But NHTSA didn't look at the ignition switch problem, just air bag nondeployment. In 2007, 3 years after the Cobalt's release, the chief of NHTSA's Defects Assessment Division proposed that the agency investigate the Cobalt because he spotted a, quote, "pattern of nondeployments," unquote, in Cobalt air bags that didn't exist with similar sedans.

An internal NHTSA presentation noted a spike in warranty claims for Cobalt air bags, a total of 29 crashes causing 25 injuries, 4 deaths, and 14 field reports. Yet NHTSA ultimately decided not to investigate. Even when the issue was again raised 3 years later in 2010, NHTSA again passed on investigating.

GM was also looking into the air bag nondeployments. As early as 2007, GM started tracking incidents where Cobalt air bags did not deploy in car crashes.

In 2011 and 2012, GM assigned at least two groups of engineers to examine the problem. According to GM's public statements, it wasn't until December 2013 the company finally put the pieces together and linked the problems with the air bags with the faulty ignition switch, almost 10 years after customers first told GM the Cobalt ignition switch didn't work.

We know this. The red flags were there for GM and NHTSA to take action, but for some reason, it did not happen. Why didn't GM and NHTSA put the pieces together for 10 years? Why didn't anyone ask the critical important questions? Why did GM accept parts below their own company standards and specs? When GM decided to get a new ignition switch for the Cobalt in 2006, did

GM do so because they recognized that the faulty switch posed a safety problem? Why did GM keep the old part number which led to confusion? When GM replaced the ignition switch, did engineers also consider how the faulty ignition impacted other systems in the car like air bags? Why did GM the replace the ignition switch in new cars but not the older models? Why did GM think a memo about the size of key chains was enough to solve the problems? Why did NHTSA twice decide not to investigate the Cobalt? And why didn't NHTSA make the link between the keys being in the accessory position and air bags not deploying? Did anyone ask why?

And for both GM and NHTSA, are people talking to one another? Do GM and NHTSA have a culture where people don't pass information up and down the chain of command? To borrow a phrase, what we have here is a failure to communicate, and the results were deadly, a failure to communicate both between and within GM and NHTSA. Today we will ask GM and NHTSA what they are doing to not just fix the car but to fix the culture within a business and a government regulator that led to these problems. This is about restoring public trust and giving the families and crash victims the truth about whether this tragedy could have been prevented and if future ones will be prevented. It is my hope and expectation that today we will not hear a blame game or finger pointing. All the brilliant engineers and workers in the world won't matter if the people don't really care, and as the old saying goes, people don't care that you know until they know that you care.

This investigation is only 3 weeks old, and we are determined to find the facts and identify the problem so a tragedy like this won't ever happen again. This investigation is bipartisan, is a priority of all the members of this committee. I want to thank Mary Barra for being here and also the head of NHTSA, David Friedman, ranking members Waxman, DeGette, and Dingell for working with us, and I now yield the remaining amount of my time to Dr. Michael Burgess.

[The prepared statement of Mr. Murphy follows:]

******** COMMITTEE INSERT ********

Dr. Burgess. I thank the chairman for yielding.

I thank our witnesses for being here. I thank our witnesses for being so responsive to the committee staff request. We are here to examine a very important matter. The hearing is appropriately named. We do have questions for General Motors.

We have questions for the National Highway Traffic Safety Administration. Two chances to open up formal investigations into the recalled General Motors cars: Both in 2007 and 2010, NHTSA initially examined problems with the vehicles and both times -- both times -- decided that no investigation was needed.

We need to hear from NHTSA today how you intend to improve the process going forward, and we were just here 5 years ago with the Toyota investigation. We heard a lot of things out of NHTSA on those hearings. I would like to know how they have improved the process and how we can expect to have confidence in their ability going forward.

I yield back.

[The prepared statement of Dr. Burgess follows:]

******** COMMITTEE INSERT ********

Mr. Murphy. Now recognize the ranking member of the committee, Ms. DeGette, of Colorado.

Ms. DeGette. Thank you very much, Mr. Chairman.

Like all of us, I am deeply troubled about what our investigation has revealed about GM's business practices and its commitment to safety.

Here is what we know. We know that GM has recalled over 2.5 million vehicles because of defective ignition switches. We know they should have done it much, much earlier. We know that GM failed to provide Federal regulators with key information, and sadly, we know that at least 13 people are dead. And there have been dozens of crashes because GM produced cars that had a deadly effect.

Mr. Chairman, I have a copy of the ignition switch assembly for one of these vehicles, and this is it. A spring inside the switch, a piece that cost pennies, failed to provide enough force causing the switch to turn off when the car went over a bump.

GM knew about this problem in 2001. They were warned again and again over the next decade, but they did nothing. And I just want to show how easy it is to turn this key in this switch. If you had a heavy key chain, like my long key chain, or if you had -- if you were short and you bumped up against the ignition with your knee, it could cause this key to switch right off.

Mr. Chairman, we now know that these switches were defective from the start. In February of 2002, GM's ignition switch supplier, Delphi, informed the company that the switch did not meet GM's minimum specifications, but GM approved it anyway.

Now, yesterday, we sent Ms. Barra a letter about this decision. I would like unanimous consent to make that letter a part of the hearing record.

Mr. Murphy. Without objection.

[The information follows:]

******** COMMITTEE INSERT ********

Ms. DeGette. Soon after this approval, the defective cars were on the road, and it didn't take long for problems to appear. In 2003, June 2003, the owner of a Saturn Ion with 3,474 miles on the odometer made a warranty report that he or she, quote, "bumped the key and the car shut off." GM would receive more than 130 similar warranty claims from owners about this problem over the next decade, but it never informed the public or reported the problem to Federal safety regulators.

The minority staff conducted this warranty analysis, and again, we prepared a memo about these claims. I would also ask unanimous consent to put that in the record, Mr. Chairman.

Mr. Murphy. Without objection.

[The information follows:]

******** COMMITTEE INSERT ********

Ms. DeGette. Initially, GM opened multiple investigations into the ignition switch issue, each which concluded the switch was bad; it didn't meet the minimums. In 2005, GM identified solutions to the problem but concluded that, quote, "the tooling cost and piece price are too high... thus none of the solutions represents an acceptable business case."

Documents provided by GM show that this unacceptable cost increase was only 57 cents.

And Mr. Chairman, we have this document that we got from GM. Somehow it is not in the binder. I would ask unanimous consent to put this in the record as well.

Mr. Murphy. Without objection, so ordered.

[The information follows:]

******** COMMITTEE INSERT ********

Ms. DeGette. Another technical investigation completed in 2005 led GM to issue a technical service bulletin advising dealers to distribute key inserts to help reduce the problem. This was a simple fix to reduce the force on the switch.

And Mr. Chairman, these are the keys of one of my staff members who actually owns one of these cars, and as you can see, there is a long, long insert. What the key inserts were supposed to do is go in the middle and just create a little hole so the key and the keys wouldn't go back and forth. Unfortunately, GM never made this bulletin public. More than 500 people out of the thousands of drivers who had cars with faulty switches got the key insert, and GM knew it.

Soon after this decision, company officials quietly redesigned the switch, but they never changed the part number, and astonishingly, this committee has learned that when GM approved a new switch in 2006, they did it with still not -- still knowing that the new switch didn't meet specifications. The company even put more cars with bad switches on the road from 2008 until 2011, and we still don't know all the information about this.

Between 2003 and 2014, GM learned hundreds of reports of ignition switch problems through customer complaints, warranty claims, lawsuits, press coverage, field reports and even more internal investigations, but time and time again, GM did nothing. The company continued to sell cars, knowing they were unsafe.

I know we have a lot of family members here, Mr. Chairman, and I know -- and I want to express my deepest sympathies to them, but I want to tell them something more. We are going to get to the bottom of this. We are going to figure out what happened, and we are going to make sure it doesn't happen again.

Now, Mr. Chairman, I want to thank Ms. Barra for coming. She is brand new at the company. I believe she is committed to fixing this situation. We have a lot of questions to ask today, though, and I know every member of this committee is concerned about this. Thank you very much.

Mr. Murphy. And the gentlelady's time expired.

[The prepared statement of Ms. DeGette follows:]

******** COMMITTEE INSERT ********

Mr. Murphy. Now recognize the chairman of the full committee, Mr. Upton, for 5 minutes.

The Chairman. Well, thank you, Mr. Chairman.

We know that with a 2-ton piece of high velocity machinery, there is in fact a zero margin for error. Product safety is indeed a life or death issue, but sadly, vehicle safety has fallen short, and it is not the first time.

During the late summer of 2000, in this very room, I led the oversight hearings that examined the Ford-Firestone recalls, a tire malfunction was causing violent crashes, and Americans did not feel safe behind the wheel. We gathered testimony from the company and agency officials and reviewed thousands and thousands of pages of documents, and we found that the system indeed had failed. Information about the defective tires had been shared with the companies and with NHTSA, the parties failed to protect the public safety, and over 100 people died.

After that investigation, I introduced the TREAD Act to correct many of the problems that contributed to the Ford-Firestone tragedy. That bill was meant to ensure data about safety is reported so that defects can be quickly identified and fixed and lives ultimately saved. The TREAD Act has now been law since November of 2000, but yet here we are investigating another safety failure. It is deja vu all over again.

One month ago, GM issued a recall for an ignition switch defect in six vehicles, totalling 1.6 million cars. And last

Friday, they called another 900,000 vehicles. GM acknowledges that a dozen people have died in automobile crashes associated with that defect. Two were teenagers from my own community.

Testifying today are GM CEO Mary Barra and NHTSA Acting Administrator David Friedman, a first step in our quest to find out what went wrong.

The committee's purpose is the same as it was in 2000, making sure that drivers and families are protected and cars are safe. And I will repeat what I said at the first oversight hearings on Firestone tires in 2000. Today's hearing is very personal to me because I come from Michigan, the auto State, the auto capital of the world. That is no less true today. Michigan is proud of its auto industry, and while Michigan citizens build cars, obviously, we drive them, too.

Documents produced to the committee show that both NHTSA and GM received complaints about and data about problems with ignition switches and air bags. These complaints go back at least a decade. NHTSA engineers did crash investigations as early as 2005 and twice examined whether complaints with air bags constituted a trend. GM submitted early warning reports to NHTSA, including data about crashes in the recalled cars. With all that information available, why did it take so long to issue the recall?

In this case, just as it was with Ford-Firestone, it was news reports that brought the attention to the Nation's attention -- brought the problem to the Nation's attention. This investigation of the recall is indeed bipartisan, as it should be. We will follow the facts wherever they lead us, and we are going to work until we have the answers and can assure the public that indeed they are safe. I would like to note that the chairman of our CMT Subcommittee, Mr. Terry, will be joining us for questions this afternoon. With his subcommittee's record on motor vehicle safety issues, he will be watching closely as this investigation unfolds so that he can take our findings and determine whether and what changes may be needed to the laws designed to keep drivers safe on the road. After all, our goal on every issue follows the Dingell model: Identify the problem or abuse fully, and where needed, fix it with legislation so that it won't happen again.

I yield to the vice chair of the committee, Mrs. Blackburn.

[The prepared statement of The Chairman follows:]

******** COMMITTEE INSERT ********

Mrs. Blackburn. Thank you, Mr. Chairman.

And Ms. Barra, thank you very much for being here today. We really owe this hearing to the American people, to GM customers, and to the relatives of the 12 individuals that have lost their lives. And it is important that we get to the bottom of this and to see what the roles of GM and NHTSA were in this, figure out who is at fault, and we want to know who knew what when.

And Ms. Barra, that includes you. We are going to want to know what your exposure was to this issue as you took the helm at GM as the CEO.

You know, in my district, we have the GM plant. The Saturn Ion has been recalled. That was made at that plant there in Spring Hill, so this is something that is important to my constituents. Those that have worked with GM, I thank you for being here, and we look forward to the answers.

I yield back.

Mr. Murphy. Thank you. The gentlelady yields back.

[The prepared statement of Mrs. Blackburn follows:]

******** COMMITTEE INSERT ********

Mr. Murphy. I now recognize the ranking member of the full committee, Mr. Waxman, for 5 minutes.

Mr. Waxman. Thank you very much, Mr. Chairman. I have a sad sense of deja vu as I sit here today. I was part of this committee when we held our Ford-Firestone hearing in 2000. I led the committee's hearing on Toyota's problems with unintended acceleration in 2010. Each time, we heard about how auto manufacturers knew about potential defects and about how Federal safety officials at the National Highway Traffic Safety Administration missed signals that should have alerted them to defective cars on the road, and here we are today under similar circumstances.

Over the last month, the full dimensions of another auto safety disaster have unfolded. General Motors has recalled 2.5 million vehicles due to a defective ignition switch, and the company has acknowledged that these cars have caused dozens of crashes and 13 fatalities.

Mr. Chairman, I know the families of some of these victims are in the audience for today's hearing. I want to acknowledge them, thank them for coming. We owe it to them to find out what happened.

The facts that we already know are hard to believe. GM has known for years about this safety defect and has failed to take appropriate action to fix the problem. The company installed an ignition switch it knew did not meet its own specifications.

Numerous internal investigations resulted in nothing but a nonpublic technical service bulletin that partially fixed the problem for fewer than 500 drivers.

A new analysis I released this morning revealed that over the last decade, GM received over 130 warranty claims from drivers and GM technicians who experienced and identified the defect. Drivers reported that their car shut off after hitting bumps or potholes at highway speeds when they did something as simple as brushing the ignition switch with their knee. One GM technician even identified the exact part causing the problem, a spring that would have caused at most as much as a few postage stamps, a couple of dollars.

Because GM didn't implement this simple fix when it learned about the problem, at least a dozen people have died in defective GM vehicles. What is more, new information the committee received last week suggests that GM still has failed to fully own up to potential problems. GM finally modified the ignition switch for later model cars, but Delphi, the manufacturer of the ignition switch, told the committee that the switches installed in model year 2008 to 2011 vehicles still did not meet GM's own specifications. GM finally announced a recall of these vehicles last Friday but told the public that it was because of bad parts installed during repairs, not because of defective parts originally installed in the vehicles.

There are legitimate questions we need to ask about whether

NHTSA did enough to identify and uncover this problem. In retrospect, it is clear that the agency missed some red flags, but NHTSA was also laboring under a handicap. There appears to have been a lot of information that GM knew but they didn't share with the National Highway Traffic Safety Administration. We need to make sure that NHTSA and the public have access to the same information about safety as auto executives.

That is why today I am introducing the Motor Vehicle Safety Act of 2014. This bill is modeled on the legislation that the committee passed in 2010 but was never enacted into law. It will make more information on defects available to the public, and it will increase NHTSA's funding and increase civil penalties for manufacturers when companies like GM fail to comply with the law.

Mr. Chairman, we should learn as much as we can from this investigation. Then we should improve the law to make sure we are not here again after another auto safety tragedy in the near future. I want to yield back my time. Thank you.

Mr. <u>Murphy.</u> The gentleman yields back.

[The prepared statement of Mr. Waxman follows:]

******** COMMITTEE INSERT ********

Mr. Murphy. I would now like to introduce the witness on the first panel for today's hearing. Ms. Mary Barra is the chief executive officer of General Motors Company and has been in this role since January 15th, 2014, when she also became a member of its board of directors.

She has held a number of positions in this company. From 2008 to 2009, Ms. Barra served as vice president of global manufacturing engineering, and from 2005 to 2008, she was executive director of vehicle manufacturing engineering. She has also served as a plant manager and director of competitive operations engineering as well as numerous other positions.

I will now swear in the witness.

Ms. Barra, you are aware that the committee is holding an investigative hearing and, when doing so, has a practice of taking testimony under oath. Do you have any objections to testifying under oath?

Ms. Barra. No.

Mr. Murphy. The chair then advises you that under the Rules of the House and under the rules of the committee, you are entitled to be advised by counsel. Do you desire to be advised by counsel during today's hearing?

Ms. Barra. No.

Mr. Murphy. In that case, if you would please rise and raise your right hand, I will swear you in.

[Witness sworn.]

Mr. Murphy. Thank you. Ms. Barra, you are now under oath and subject to the penalties set forth in Title 18, Section 1001 of the United States Code. You may now give a 5-minute summary of your written statement.

STATEMENT OF MARY T. BARRA, CHIEF EXECUTIVE OFFICER, THE GENERAL MOTORS COMPANY

Ms. Barra. Thank you, Mr. Chairman and committee members.

Mr. Murphy. Please pull your microphone close to your mouth and make sure it is on. Thank you.

Ms. Barra. Can you hear me? Okay.

Thank you, Mr. Chairman and committee members. My name is Mary Barra, and I am the chief executive officer of General Motors. I appreciate the opportunity to be here today. More than a decade ago, GM embarked on a small-car program. Sitting here today, I cannot tell you why it took so long for a safety defect to be announced for this program, but I can tell you we will find out.

This is an extraordinary situation. It involves vehicles we no longer make, but it came to light on my watch, so I am responsible for resolving it.

When we have answers, we will be fully transparent with you, with our regulators, and with our customers.

While I cannot turn back the clock, as soon as I learned about the problem, we acted without hesitation. We told the world we had a problem that needed to be fixed. We did so because whatever mistakes were made in the past, we will not shirk from our responsibilities now or in the future.

Today's GM will do the right thing. That begins with my sincere apologies to everyone who has been affected by this recall, especially the families and friends who lost their lives or were injured. I am deeply sorry.

I have asked former U.S. Attorney Anton Valukas to conduct a thorough and unimpeded investigation of the actions of General Motors. I have received updates from him, and he tells me he is well along with his work. He has free rein to go where the facts take him, regardless of outcome. The facts will be the facts. Once they are in, my leadership team and I will do what is needed to help assure this does not happen again. We will hold ourselves fully accountable.

However, I want to stress I am not waiting for his results to make changes. I have named a new vice president of global vehicle safety, a first for General Motors. Jeff Boyer's top priority is to quickly identify and resolve any and all product safety issues. He is not taking on this task alone. I stand with him, and my senior leadership team stands with him as well, and we will welcome input from outside of GM, from you, from NHTSA, from our customers, our dealers, and current and former employees.

The latest round of recalls demonstrates just how serious we are about the way we want to do things at today's GM. We've identified these issues, and we brought them forward and we're fixing them. I have asked our team to keep stressing the system at GM and work with one thing in mind, the customer and their safety are at the center of everything we do. Our customers who have been affected by this recall are getting our full and undivided attention. We are talking directly to them through a dedicated Web site with constantly updated information and through social media platforms. We have trained and assigned more people, over 100, to our customer call centers, and wait times are down to seconds. And of course, we are sending customers written information through the mail.

We have empowered our dealers to take extraordinary measures to treat each case specifically. If people do not want to drive a recalled vehicle before it is repaired, dealers can provide them with a loaner or a rental car free of charge. Today, we provided nearly 13,000 loaner vehicles. If a customer is already looking for another car, dealers are allowed to provide additional cash allowances for the purchase of a lease or new vehicle.

Our supplier is manufacturing new replacement parts for the vehicles that are no longer in production. We have commissioned two lines and have asked for a third production line. And those parts will start being delivered to dealers next week. These measures are only the first in making things right and rebuilding trust with our customers. And as I have reminded our employees, getting the cars repaired is only the first step. Giving customers the best support possible throughout this process is how we will be judged.

I would like this committee to know that all of our GM employees and I are determined to set a new standard. I am encouraged to say that everyone at GM, up to and including our board of directors, supports this. I am a second generation GM employee, and I am here as our CEO. But I am also here representing the men and women who are part of today's GM and are dedicated to putting the highest quality, safest vehicles on the road.

I recently held a town hall meeting to formally introduce our new VP of safety. We met at our technical center in Michigan. This is one of the places where the men and women who engineer our vehicles work. They are the brains behind our cars, but they are also the heart of General Motors. It was a tough meeting. Like me, they are disappointed and upset. I could see it in their faces. I could hear it in their voices. They had many of the same questions that I suspect are on your mind. They want to make things better for our customers and, in that process, make GM better. They particularly wanted to know what we plan to do for those who have suffered the most from this tragedy.

That is why I am pleased to announce that we have retained Kenneth Feinberg as a consultant to help us evaluate the situation and recommend the best path forward. I am sure this committee knows Mr. Feinberg is highly qualified and is very experienced in handling matters such as this. Having led the compensation efforts involved with 9/11, the BP oil spill, and the Boston marathon bombing, Mr. Feinberg brings expertise and objectivity to this effort.

As I have said, I consider this to be an extraordinary event, and we are responding to it in an extraordinary way. As I see it, GM has civil responsibilities and legal responsibilities. We are thinking through exactly what those responsibilities are and how to balance them in an appropriate manner. Bringing in Mr. Feinberg is the first step.

I would now be happy to answer your questions. Thank you.

Mr. Murphy. Thank you, Ms. Barra.

[The prepared statement of Ms. Barra follows:]

******** INSERT 1-1 ********

Mr. Murphy. I also want to acknowledge all the families that are here today and know that we are aware and have sympathies of all the committee here. One Kelly Erin Ruddy of Scranton, Pennsylvania, is one of those who we offer sympathy to the family, but we have all of your in our hearts.

Ms. Barra, our committee reviewed more than 200,000 pages of documents. What we found is that as soon as the Cobalt hit the road in 2004, drivers began to immediately complain to General Motors that the car's ignition systems didn't work properly. You can imagine how frightening it is to drive a car that suddenly you lose your power steering and power brakes. When the switch for the Cobalt was being built back in 2002, GM knew the switch did not meet its specification for torque. Am I correct?

Ms. Barra. Yes.

Mr. Murphy. GM engineers began to look at the problem and try to figure out how to address it. GM understood the torque and the switch as measured below its own specifications. Is that right?

Ms. Barra. Yes.

Mr. Murphy. Is it common practice for GM to accept a part that does not meet GM specifications?

Ms. Barra. No, but there is a difference between a part meeting or not meting specifications and a part being defective.

Mr. Murphy. So under what scenario is accepting parts that don't meet GM specs allowable?

Ms. Barra. An example would that be when you are purchasing steel. You will set a specification for steel, but then because of the different suppliers and availability of steel to make products, you will assess the performance, the functionality, the durability, you know, the aspects of the part, or in this case, steel, that is necessary to live up to what the performance and the durability the safety needs to be.

Mr. Murphy. Well, let's --

Ms. Barra. So that is an example of when you would have a part or have material that doesn't meet the spec that was set out but is acceptable from a safety, from a functionality perspective, performance as well.

Mr. Murphy. Is that switch acceptable?

Ms. Barra. The switch -- I am sorry, the switch.

Mr. Murphy. Is the switch acceptable?

Ms. Barra. At what timeframe, I am sorry?

Mr. Murphy. Well, at the beginning. It didn't meet the specs for GM, so is that what you would consider acceptable?

Ms. Barra. As we -- as we clearly know today, it is not.

Mr. Murphy. So, in 2006, GM changed its ignition switch, and GM's switch supplier Delphi put in a new spring to increase the torque. Am I correct?

Ms. Barra. I didn't hear the last part. I am sorry.

Mr. Murphy. GM switch supplier Delphi put a new spring in to increase the torque. Is that correct?

Ms. Barra. There was a new part.

Mr. Murphy. Thank you. Now, in that binder next to you, if you would turn to tab 25. This is an email exchange between Delphi employees in 2005 discussing the changes to the ignition switch. The email notes that a GM engineer is asking for information about the ignition switch because, quote, "Cobalt is blowing up in their face in regards to turning the car off with the driver's knee," unquote.

If this was such a big problem, why didn't GM replace the ignition switch in the cars already on the road, the cars where the torque fell well below GM's specifications, instead of just the new cars, why?

Ms. Barra. What you just said does not match under tab 25.

Mr. Murphy. It is the bottom of the page; there should be something there. Well, just note that what I have said -- I apologize for that.

Ms. Barra. Okay.

Mr. Murphy. But there was a statement made, that Cobalt is blowing up in their face just by a bump of the driver's knee.

Ms. Barra. Clearly, there were a lot of things that happened. There has been a lot of statements made as it relates. That is why we have answered Anton Valukas to do a complete investigation of this process. We are spanning over a decade of time.

Mr. Murphy. But you don't know why they didn't just replace the switch on the old cars as well as the new cars?

Ms. Barra. I do not know the answer to that, and that is why we are doing this investigation.

Mr. Murphy. Well, given the number of complaints about ignitions turning off while driving, why wasn't this identified as a safety issue?

Ms. Barra. Again, I can't answer specific questions at that point in time. That is why we are doing a full and complete investigation.

Mr. Murphy. Well, then, another one, in the chronology GM submitted to NHTSA, GM states it didn't make the connection between the ignition switch problems and the air bag nondeployment problems until late 2013. So my question is, when GM decided to switch the ignition in 2006, did the company ever examine how a faulty ignition switch could affect other vehicle systems like the air bags?

Ms. Barra. Again, that is part of the investigation.

Mr. Murphy. Should they?

Ms. Barra. Should we understand?

Mr. Murphy. Should they look at how it affects other vehicle systems?

Ms. Barra. Yes.

Mr. Murphy. Let me ask another question then. So when GM concluded, and you heard from my opening statement, that the tooling cost and price pieces are too high, what does that mean?

Ms. Barra. I find that statement to be very disturbing. As we do this investigation and understand it in the context of the whole timeline, if that was the reason the decision was made, that is unacceptable. That is not the way we do business in today's GM.

Mr. Murphy. Well, how does GM balance cost and safety?

Ms. Barra. We don't. Today, if there is a safety issue, we take action. If we know there is a defect in our vehicles, we do not look at the cost associated with it. We look at the speed in which we can fix the issue.

Mr. Murphy. Was there a culture in GM at that time that they would have put cost over safety?

Ms. Barra. Again, we are doing a complete investigation, but I would say, in general, we have moved from a cost culture after the bankruptcy to a customer culture. We have trained thousands of people on putting the customer first. We have actually gone with outside training. It is a part of our core values, and it is one of the most important cultural changes we are driving in General Motors today.

Mr. Murphy. I understand today. We are asking about then.

I am out of time.

Ms. DeGette, you are recognized for 5 minutes.

Ms. DeGette. Thank you very much, Mr. Chairman.

Ms. Barra, GM knew about the defect in the ignition switches as far back as 2001, 13 years before the recall. Correct? Yes or no will work.

Ms. Barra. The investigation will tell us that.

Ms. DeGette. You don't know when GM knew about the defect?

Ms. Barra. I will -- I would like --

Ms. DeGette. Take a look at tab 7 in your notebook, Ms. Barra. This is a GM document, and what this GM document talks about is this switch. It says, Tear down evaluation on the switch revealed two causes of failure, low contact force and low detent plunger force.

Do you recognize that document, ma'am?

Ms. Barra. This is the first I have seen this document.

Ms. DeGette. Okay. Well, so you don't know how long GM knew about this, right?

Ms. Barra. And that is why -- and that is why I am doing an investigation.

Ms. DeGette. Okay. In fact, Delphi, the manufacturer of the ignition switch, informed GM in 2002 that the switch was supposed to be 15 minimum torque specification, but in fact, these switches were between 4 and 10, didn't it?

Ms. Barra. The specification is correct that it was supposed to be 20, plus or minus 5.

Ms. DeGette. And these switches were between 4 and 10, correct? Yes or no will work.

Ms. Barra. We know that now.

Ms. DeGette. And -- and GM was notified by Delphi of this correct, yes or no?

Ms. Barra. I am not aware of being notified.

Ms. DeGette. Okay. Then --

Ms. Barra. Can I also correct I was not aware that --

Ms. DeGette. I need a yes or no. I only have 5 minutes. I am sorry.

So, as far back as 2004, 10 years ago, GM conducted a problem resolution tracking system inquiry after it learned of an incident where the key moved out of the run condition in a 2005 Chevrolet Cobalt. Is this correct?

Ms. Barra. Again, you are relating specific incidents that happened --

Ms. DeGette. You don't know?

Ms. Barra. -- in our entire investigation.

Ms. DeGette. You don't know about that? Take a look at tab 8, please. And by the way, ma'am, I am getting this information from the chronology that GM provided to NHTSA.

Ms. Barra. Right. And they are --

Ms. DeGette. So, let me ask you again, as far back as 2004, GM conducted a problem resolution tracking system inquiry after it learned of an incident where the key moved out of the run condition. Is that correct?

Ms. Barra. Yes.

Ms. DeGette. Thank you.

Now, after the PRTS inquiry, one engineer advised against further action because there was, quote, "no acceptable business case to provide a resolution and the PRTS was closed." Is that correct?

Ms. Barra. If that is true, that is a very disturbing fact.

Ms. DeGette. Yes, it is.

Ms. Barra. That is not the way we make decisions.

Ms. DeGette. Okay. Again in 2005, GM received more reports of engines stopping when the keys were jerked out of the run condition. Further investigations were conducted, and engineers proposed changes to the keys. Is that correct?

Ms. Barra. It is part of our investigation to get that complete timeline.

Ms. DeGette. Much of this I am taking from the timeline GM has already done.

Ms. Barra. Which was a summary.

Ms. DeGette. Okay. So, as a result of the investigation, a technical service bulletin was issued to dealers that if car owners complained, they should be warned of this risk and advised to take unessential items from the key chain, but this recommendation was not made to the public. No public statements were issued. No recall sent. Is that correct?

Ms. Barra. To my understanding, yes.

Ms. DeGette. Thank you.

In 2006, GM contracted with Delphi to redesign the ignition switch to use a new detent plunger and spring that would increase torque force in the switch. Is that correct?

Ms. Barra. Yes.

Ms. DeGette. And for some reason, though, the new switch was not given a part number and instead shared a number with the original defective switch. Is that correct?

Ms. Barra. Yes.

Ms. DeGette. Now, this new switch also did not meet GM's minimum torque specifications either. This one, Delphi said, was in the range of 10 to 15, and it really should have been 15 at a minimum. Is that correct?

Ms. Barra. I have not seen the test results from that.

Ms. DeGette. You don't know that. Okay.

Now, despite these facts, GM continued to manufacture its car with these same ignition switches for the model years 2008 to 2011. Is that correct?

Ms. Barra. Yes.

Ms. DeGette. And between 2004 and 2014, no public notices were issued as a result of GM's knowledge of these facts and no recalls were issued for the over 2.5 million vehicles manufactured with these defective ignition switches. Is that correct?

Ms. Barra. Yes.

Ms. DeGette. And finally, three recalls were made this year, 2014, two in February, and one just last Friday. Is that right?

Ms. Barra. Related to this ignition switch?

Ms. DeGette. Now, I have -- I have just a couple of more questions.

The first question I have, Ms. Barra, GM is intending to replace all the switches for those cars beginning on April 7th. Is that right?

Ms. Barra. We will begin shipping material or new parts this week.

Ms. DeGette. Now, are you going to put a completely redesigned switch, or are you going to put the old switches from 2006 into those cars?

Ms. Barra. It is going to be a switch that meets the --

Ms. DeGette. Is it going to be a newly designed switch or is it going to be the old switch from 2006?

Ms. Barra. It is the old design that meets the performance that is required to act -- to operate safely.

Ms. DeGette. Okay. I have more questions, Mr. Chairman. Perhaps we can do another round. Thank you.

Mr. Murphy. But an important part, a follow up of several members being concerned about this, too. You are saying that there is an ongoing investigation; you cannot comment on these yet. Are you getting updates on a regular basis as this is going on?

Ms. Barra. From Mr. Valukas?

Mr. Murphy. From anybody in the company regarding these proceedings, are you getting updates?

Ms. Barra. Yes, I am.

Mr. Murphy. Thank you.

Now go to the chairman of the full committee, Mr. Upton for 5 minutes.

The Chairman. Thanks, again, Ms. Barra, for being here this afternoon. I want to make sure that we ask similar questions of both you and of NHTSA. We want to learn about the documents that were submitted on a timely and appropriate basis to NHTSA, and in fact, what did they do with that information.

The documents that we have looked at as produced show that GM received complaints about its Cobalt ignition switches for about 2 years that ultimately resulted in a redesigned ignition switch in 2006. Who within GM would have known about those specific complaints? What was the process back then?

Ms. Barra. I was not a part of that organization at the time. That is why I am doing the investigation to understand that.

The Chairman. So you don't know the folks that it would have been reported to at this point. Is that right?

Ms. Barra. I don't know the people who would have been handling this issue at that point.

The Chairman. But you are getting updates, and what is -- what is supposed to happen? Looking back, what should have happened when these reports came in?

Ms. Barra. In general, when you have an issue, a product issue, a safety issue, a field incident, any type of issue that comes in, you have a team of engineers that are the most knowledgeable that work on that. If they see there is an issue, they elevate it to a cross-functional team that looks at it, and then it goes to a group for decision.

The Chairman. Now, we know that the ignition switch was in fact redesigned because it didn't meet the specs that were there. Is that right?

Ms. Barra. Yes.

The Chairman. Now, I would guess engineering 101 would normally require that when you assign a new part or replace a new part or replace a part with a new part, that that newly redesigned part, in fact, should have a different number on it. Is that right?

Ms. Barra. That is correct.

The Chairman. So, and that didn't happen, right, did not happen?

Ms. Barra. That is correct.

The Chairman. Who within GM made the decision to move forward with that redesigned switch without a new part number? Do you know who that is?

Ms. Barra. I do not know the name of the individual.

The Chairman. Are you going to be able to find that out for us?

Ms. Barra. Yes, I will.

The Chairman. And will you give that name to our committee?

Ms. Barra. And provide that.

The Chairman. Who -- is it -- would it -- is it likely that that same person was the one that decided not to recall the defective version? Where in the timeline is that?

Ms. Barra. I don't know, but that is part of the investigation that we are doing.

The Chairman. Do you know when it was that it was discovered, what year, you know, where in the timeline that it was discovered that in fact a new part number was not assigned?

Ms. Barra. I became aware of that after we did the recall and the timeline was put together.

The Chairman. So that was just in the last month or so. Is that right?

Ms. Barra. That is when I became aware.

The Chairman. But when -- when did GM realize that no new part number had been assigned?

Ms. Barra. Again, that is part of our investigation. I am -- I want to know that just as much as you because that is an unacceptable practice. It is not the way we do business.

The Chairman. So, you stated publicly that something went wrong with our process. How is the process supposed to work? How is this -- how are you redesigning the process to ensure that in fact it should work the way that it needs to work?

Ms. Barra. Well, one of things we are doing is the investigation by Mr. Valukas. I have some early findings from Mr.

Valukas. As we look across the company, it appears at this time there was information in one part of the company, and another part of the company didn't have access to that. At times, they didn't share information just by course of process or they didn't recognize that the information would be valuable to another area of the company. We have fixed that. We have announced a new position. Jeff Boyer who is the vice president of Global Vehicle Safety, all of this we will report to him. He will have additional staff and will have the ability to cut across the organization and will also have the right functional leadership that understands what is going on in the different areas, so that is a fix we have already made, and he is operating that way today.

The Chairman. So, when GM received complaints about the ignition switches for a number of years and ended up resulting in the redesigned ignition switch in 2006, when was it that anyone linked up the ignition switch problems to look at the Cobalt's air bags not deploying? Was that at about the same time? Was that later? What is the timeline on that?

Ms. Barra. That is something I very much want to understand and know, but I again, this is -- we are doing an investigation that spans over a decade, and it is very important, because designing a vehicle is a very complex process, that we get a detailed understanding of exactly what happened because that is the only way we can know that we can fix processes and make sure it never happens again.

The Chairman. When was it that GM informed NHTSA that in fact a redesigned -- did in fact GM inform NHTSA that the ignition switch had been redesigned?

Ms. Barra. I don't know that.

The Chairman. I yield back.

Mr. Murphy. The gentleman yields back.

I now recognize the ranking member of the full committee, Mr. Waxman, for 5 minutes.

Mr. Waxman. Thank you, Mr. Chairman.

Ms. Barra, we heard about how in 2002, GM approved the use of faulty ignition switches in Cobalts, Ions and other cars. That is what caused many of the problems that led to the recall of the cars from model years 2003 to 2007. So new ignition switches were designed and approved by General Motors. These were switches that were used -- were in use in the model years 2008 to 2010. Does that all sound right to you? Am I correct in what I am saying?

Ms. Barra. There is a couple of statements you made at the beginning that I don't know to be true.

Mr. Waxman. Well, in 2002, GM approved the use of what turned out to be faulty ignition switches in several of these cars.

Ms. Barra. They were actually in -- they were parts that went into a 2003 was the earliest model.

Mr. Waxman. Well, the tests were done in 2002, but the cars were 2003 to 2007, so we had a recall of those cars.

Ms. Barra. Right.

Mr. Waxman. And then there was a new switch, new ignition switch designed and approved by GM, and these new switches were in use in the model years 2008 to 2010 Cobalts and Ions. Is that --

Ms. Barra. To the best of my knowledge, that's correct.

Mr. Waxman. Okay. But in a briefing last week, Delphi told committee staff that these new switches also did not meet GM specifications. They told us the force required to turn these switches was about two-thirds of what GM said it should be, and documents that were provided to the committee also confirmed that top GM officials were aware of the out-of-spec switches in 2008 to 2002 vehicles in December 2013.

So, there's a document, if you want to look it up, it's tab 39, page 6 of your binder. There was a December presentation for GM's high level executive field action decision committee, and that meeting -- at that meeting they show that the performance measurement for almost half of the 2008, so you go to 2008-2010 model year vehicles, ignition switches were below the minimum GM required specifications. My question to you is, are you concerned that many 2008 to 2010 model year cars have switches that do not meet the company specifications?

Ms. Barra. As we assess the situation, my understanding that there was work going on to look at the switches again, looking at just because a switch, or a part, any generic part doesn't meet specifications does not necessarily mean it is a defective part.

As that analysis was going on, at the same time we were doing the look across to make sure we could get all of the spare parts, and when we recognized that spare parts might be -- have been sold through third parties that have no tracking to know which vend, we made the decision to recall all of those vehicles.

Mr. Waxman. Well, your own executives were informed that a lot of these cars, that those model years had switches that were just as defective as the 2003 to 2007 cars, that -- those cars were recalled, but you didn't recall the model year 2008 to 2011 vehicles until a month later on March 28th. Why did the company delay in recalling these newer vehicles?

Ms. Barra. The company was looking -- my understanding is the company was assessing those switches, but again, at the same time, in parallel, they were looking at the spare parts issue, and the spare parts issue became very clear we needed to go and get all of those vehicles because we couldn't identify which vehicles may have had a spare part put in them, and we then recalled the entire population.

Mr. Waxman. But you recalled those vehicles. You recalled them later.

Ms. Barra. Yes, we did.

Mr. Waxman. But not when you knew there was a problem.

Ms. Barra. Well, we recall them --

Mr. Waxman. Your recall of these later vehicles did not mention the faulty switches that were originally installed in the cars. They mention only, quote, faulty switches may have been used to repair the vehicles.

Why did the company not announce that subpar switches may have been installed in those vehicles in the first place?

Ms. Barra. Again, there was an assessment going on to understand if the specification -- the parts performance was adequate.

Mr. Waxman. Well, wasn't it misleading to say that that company didn't tell them sub par switches may have been installed in the first place? What if I owned a later model car with its original ignition switch, your recall implies that I don't have to do anything, but my car might still, still have a sub par switch. Will your company conduct a detailed analysis of these late model vehicles to determine if they are safe and will you provide the committee with warranty reports and other information so we can do our own analysis?

Ms. Barra. I believe we're recalling all of those parts. All of those vehicles are being recalled.

Mr. Waxman. They are all being recalled.

Well, I must say, in conclusion, Mr. Chairman, I am concerned. I know you have taken this job in an auspicious time; you are trying to clean up a mess that was left behind for you by your predecessors, but I have one last question. How can GM assure its customers that new switches being installed beginning April 7 will finally meet GM's requirements?

Mr. Murphy. Thank you.

Ms. Barra. We have done -- we are working very closely with our supplier. Our executive director responsible for switches is personally looking at the performance of the new switches. We will do 100 percent end-of-line testing to make sure that the performance, the safety, the functionality of these switches are safe.

Mr. Murphy. Thank you. Gentleman's time expired.

Ms. Barra, you are being asked a number of questions. I just want to be clear. Did you review the documents that GM submitted to the committee?

Ms. Barra. No, I did not. There was over 200,000 pages, my understanding.

Mr. Murphy. How about the document Mr. Waxman was talking about? Did you review that?

Ms. Barra. This page right here?

Mr. Murphy. Yes.

Ms. Barra. I actually saw this for the first time I think a day ago.

Mr. Murphy. Thank you.

I now recognize Mrs. Blackburn for 5 minutes.

Mrs. Blackburn. Thank you, Mr. Chairman.

Ms. Barra, you mentioned several times in your comments "today's GM," so my assumption is that you are going to run GM in a different manner than it has been run in the past.

Ms. Barra. That is correct.

Mrs. Blackburn. And that you are making some changes.

I want to ask you just a little bit about timeline, helping us to get our hands around this because this is the first investigation we are going to do. We are going to have others and continue to look at this to get answers and figure out what has happened here between you all and NHTSA and also within what happened at GM.

So you mentioned in your testimony that this came to light on your watch, so I am assuming that there was no widespread knowledge in GM about this issue until you became CEO. Am I correct on that?

Ms. Barra. At the senior level of the company, we learned of this after the recall decision was made on January 31st. I was aware in late December there was analysis going on on the Cobalt issue, but I had no more information than that. But I can assure you, as soon as we understood, the senior leadership understood this issue and that a recall decision had been made, we acted without hesitation.

RPTS BAKER

DCMN WILTSIE

[2:58 p.m.]

Ms. Blackburn. Okay. Then, how did you find out about it? Was it through someone bringing the issue to you to say, "Ms. Barra, we have a real problem here" or, in doing your due diligence, did you find out about it?

Ms. Barra. The leadership committee responsible for making recall decisions made a decision on January 31. They notified Mark Royse, who immediately picked up the phone and called me.

Ms. Blackburn. Okay. And could you submit to us the members of that leadership committee that makes those recommendations.

Ms. Barra. Yes.

Ms. Blackburn. Thank you.

And then was your predecessor -- Mr. Akerson, your predecessor, was he aware of this issue?

Ms. Barra. Not to my knowledge.

Ms. Blackburn. He was not.

Are any of the members of the leadership committee also -- were they a part of his leadership committee?

Ms. Barra. There are members of today's team that were also members of Mr. Akerson's leadership team. And, to my knowledge, they were not aware.

Ms. Blackburn. Do you think there was a coverup or it was sloppy work?

Ms. Barra. That is the question I have asked Mr. Valukus to uncover, and I am anxiously awaiting the results from his study.

Ms. Blackburn. Okay. Do you think it had anything to do with the auto bailout?

Ms. Barra. I am sorry?

Ms. Blackburn. With the auto bailout. Do you think it had any --

Ms. Barra. Again, I need to get the results of the study to make all determinations.

Ms. Blackburn. And going back to what Mr. Upton said, you are going to be sharing that information with us?

Ms. Barra. Yes. We will be transparent.

Ms. Blackburn. Okay. The engineers that were responsible for this, have you brought them into the process? I know this is something that the part was actually created by Delphi. Correct?

Ms. Barra. Correct.

Ms. Blackburn. And they have an engineering team that was working on that; so, they have a shared responsibility and liability in this entire issue.

Have you met with them and with the engineering team that was responsible for this switch?

Ms. Barra. I have not met with the specific engineering team that is responsible, but I am speaking to leadership. And those individuals are being interviewed as part of the investigation conducted by Mr. Valukus.

Ms. Blackburn. Okay. Now, going back, did you say that this was a defective part when you talked about it earlier?

Ms. Barra. We have learned when we knew -- when the recall decision was made and we later went back and looked at the chronology, there is points that suggest, and that is why we are doing the investigation.

Ms. Blackburn. Okay. All right. Now, I think that you are going to hear from more than one of us about not having a new part number assigned.

Who made that decision? Was that strictly a Delphi decision or did that come into the GM supply chain for that decision to be made as to how that part number would be coded?

Ms. Barra. At a general level, General Motors is responsible for General Motors' parts numbers. But, again, that is part of the investigation, to understand how that happened.

Ms. Blackburn. Okay. Does that seem inconceivable to you?

Ms. Barra. Yes. It is inconceivable. It is not our process, and it is not acceptable.

Ms. Blackburn. Okay. I would think that it probably is not.

Have you asked Delphi if you can have access to their documentation and their email chain dealing with this issue?

Ms. Barra. I have not. And, again, Mr. Valukus will go -- as the investigation takes him to get the information he needs to make a complete and accurate accounting of what happened.

Ms. Blackburn. My time has expired.

Thank you, Mr. Chairman. I yield back.

Mr. Murphy. Just for clarification, Ms. Blackburn, we have asked for that email chain from Delphi and we will let you know when we get that.

Now recognize Chairman Emeritus of the committee, Mr. Dingell, for 5 minutes.

Mr. Dingell. Mr. Chairman, I thank you for your courtesy.

I begin by telling the families of those who were injured or killed by the defective General Motors' vehicles they have our sympathy, and we believe the events here are tragic, indeed. And I join everyone in expressing my condolences to the families who were killed or injured in those crashes.

Now it is incumbent upon the Congress, Federal regulators, and General Motors to determine how these deaths could have happened and to take reasonable steps to ensure that the safety of American motorists and their families are moving forward. I expect that this investigation will be thorough. And I counsel all the stakeholders to be unabashedly forthright.

Now, Ms. Barra, I would like to build on Chairman Murphy's line of questioning. And all of my questions will require "yes" or "no" answers. If you cannot answer some of my questions, I expect that you will submit responses for the record and all available relevant supporting materials.

Now, Ms. Barra, is it correct that GM has now recalled approximately 2.5 million small cars in the United States due to defective ignition switches? Yes or no?

Ms. Barra. Yes.

Mr. Dingell. Now, Ms. Barra, is it correct that GM recently expanded its recall of small cars because it was possible that defective ignition switches may have been installed as replacement parts? Yes or no?

Ms. Barra. Yes.

Mr. Dingell. Ms. Barra, is it correct that the ignition switch in question was originally developed in the late 1990s and approved by General Motors in February of 2002? Yes or no?

Ms. Barra. Yes.

Mr. Dingell. Ms. Barra, is it correct that General Motors' own design specifications for such ignition switch required 20 plus or minus 5 newton centimeters of torque to move the switch from the accessory position to the run position? Yes or no?

Ms. Barra. Yes.

Mr. Dingell. Ms. Barra, is it correct that General Motors approved production of such ignition switch despite test results by Delphi during the production part approval process, or PPAP, showing that the switch did not meet GM's torque requirement? Yes or no?

Ms. Barra. It is not clear to me.

Mr. Dingell. Now, Ms. Barra, is it correct that General Motors approved a redesign of the ignition switch used in the presently recalled vehicles in April of 2006?

Ms. Barra. Yes.

Mr. Dingell. Ms. Barra, is it correct that GM's torque requirement for the redesigned switch remained the same as for the original ignition switch? Yes or no?

Ms. Barra. It is not clear to me. And that is why we are focusing the investigation on that area specifically.

Mr. Dingell. When that information becomes available, would you submit it to the committee, please?

Ms. Barra. Yes, I will.

Mr. Dingell. Ms. Barra, to your knowledge, did the redesigned ignition switch meet GM's torque requirements? Yes or no?

Ms. Barra. I --

Mr. Dingell. Want me to say it again?

To your knowledge, did the redesigned ignition switch meet GM's torque requirement? Yes or no?

Ms. Barra. It is part of the investigation.

Mr. Dingell. Ms. Barra, will you please submit for the record an explanation of the factors that GM takes into consideration when approving a part for production. Are there circumstances where GM may approve parts for production when such parts do not make such design specifications? Yes or no?

Ms. Barra. Yes.

Mr. Dingell. If so, could you please submit materials for the record explaining when and why that might occur.

Ms. Barra. Yes.

Mr. Dingell. Ms. Barra, I appreciate the lengths to which GM, under your leadership, is going to recall the vehicles and ensure that they are safe to drive.

GM's cooperation with the committee is necessary in order to understand the process by which -- and the reasons decisions were made leading up to the 2014 recall. You may have so far done so, and I expect that you will continue to do so.

Thank you for your courtesy, Mr. Chairman.

Thank you, Ms. Barra.

I yield back the balance of my time.

Mr. Murphy. The gentleman yields back.

I now recognize the Chairman Emeritus of the majority, Mr. Barton of Texas, for 5 minutes.

Mr. Barton. Thank you, Mr. Chairman.

Before I ask my questions, I want to make just a general observation. This is probably the last major investigation that this subcommittee and full committee is going to conduct where we have the services of Mr. Dingell and Mr. Waxman.

We have had a history on this committee and this subcommittee going back at least 40 to 50 years that, when we have major issues, we try to approach them on behalf of the American people in a non-partisan, very open way. And it certainly appears that we are going to continue that tradition today.

So I hope that we can show the best to the American people, that the Congress at its best gets the facts, presents the facts, and does so in a way that in the future we protect the public health and safety for the American people.

Now, with that caveat, I do have a few questions.

A number of Congressmen so far have made the point that these ignition switches didn't appear to meet specifications.

And my assumption is that you have agreed that they did not meet specifications. Is that correct?

Ms. Barra. We have learned that as we did the recall.

Mr. Barton. Now, I am an industrial engineer. I used to be a registered professional engineer. I am not currently registered, but I have been in the past.

Why in the world would a company with the stellar reputation of General Motors purchase a part that did not meet its own specifications?

Ms. Barra. I want to know that as much as you do. It is not the way we do business today. It is not the way we want to design and engineer vehicles for our customers.

Mr. Barton. I mean, I just don't understand that. I have never worked in an auto assembly environment. I have worked in a defense plant, an aircraft plant. I was plant manager of a printing plant.

I have done very limited consulting in the oil and gas industry, but I have never been a part of an organization that said, "We set the specs. When a part doesn't meet the specs, we go ahead and buy it anyway."

You know, you are currently the CEO, but at one time, I think, before you became CEO, you were the vice president for Global Product Development, purchasing and supply chain.

Is it your position now that General Motors will not accept parts that don't meet specifications?

Ms. Barra. We will not accept parts that don't meet our performance, safety, functionality, durability requirements. As I mentioned before in the steel example, there will be times where there will be a material or a part that doesn't meet the exact specification, but after analysis and looking at the performance, the safety, the durability, the reliability, the functionality, it will be okayed. That happens very often as we buy steel to make the bodies of the vehicles.

Mr. Barton. Well, then, you don't need specifications -- with all respect --

Ms. Barra. No. But --

Mr. Barton. -- what you just answered is gobbledygook. It is your own specification. It is your company's specification.

If a part doesn't meet the specification, why in the world would you not refuse it and only accept a part that meets the specification?

Ms. Barra. There needs to be a well-documented process if you accept a part that doesn't meet the original specifications.

Ms. DeGette. Would the gentleman yield?

Mr. Barton. Briefly, yes.

Ms. DeGette. Do you have that information?

Ms. Barra. On steel?

Ms. DeGette. No. On starters.

Ms. Barra. On the ignition switch --

Ms. DeGette. Yeah.

If it didn't meet specifications, do you have the information on these starters that it met all those other criteria?

Ms. Barra. That is part of the investigation. But, clearly, by the fact that we made a recall, it did not meet the performance specifications.

Mr. Barton. We have the advantage, as a subcommittee, that we know now what happened in the past. We know now that there is a real problem. We know now that a number of young people have lost their lives apparently because of this defect.

So we have the advantage of hindsight. So I understand that. But as Ms. DeGette just said and a number of others, there is no reason to have specifications if you don't enforce them.

This next question is not a trick question, but it is an important question. Right now, how many parts are being used in General Motors' products that don't meet your own company's specifications?

Ms. Barra. I don't have that exact number. But I can tell you the parts that we are using today meet the performance and the reliability, the safety, that they need to. If we find we have a part that is defective, that doesn't meet the requirements, we then do a recall.

Mr. Barton. Well, again, with due -- that is not an acceptable answer, I think, to the American people.

We are not telling you the specifications to set. Now, there are some safety specifications that -- by law and NHTSA, by regulation, sets, but there shouldn't be a part used in any GM product or, for that matter, any other automobile product that is sold in the United States that doesn't meet the specifications.

At what level was the decision made to override and to use this part even though it didn't meet specification? Was that made at the manufacturing level, at the executive level, or even at some subcomponent purchasing level? Do you know that right now?

Ms. Barra. That is part of our investigation to answer that question.

Mr. Barton. All right. Thank you.

Thank you, Mr. Chairman.

Mr. Murphy. Thank you.

I now recognize Mr. Braley for 5 minutes.

Mr. Braley. Thank you, Mr. Chairman.

Ms. Barra, we have had different perspectives during this hearing. You have been appropriately focusing your attention on the members of this committee and answering our questions.

I have been staring at these photographs on the back wall.

And I see young women the same age as my daughter. I see young men the same age as my two sons. My son Paul owns one of your Cobalts.

I see a young Marine in his dress blues, and I am reminded of the photograph I have in my office upstairs of my father at the age of 18 in his dress blues at Camp Pendleton.

And the focus of this hearing so far has been on GM's commitment to safety, which I think we all agree on is an important topic for this hearing.

You testified in your opening -- and I think I am quoting -- "Our customers and their safety are at the center of everything we do."

And you responded to a question from Ms. Blackburn and told us that you were going to run GM differently than it has been run in the past.

And I have a copy of GM's March 18 press release announcing Jeff Boyer as your new vice president of Global Vehicle Safety.

And in this press release he is quoted as saying, "Nothing is more important than the safety of our customers and the vehicles they drive. Today's GM is committed to this, and I am ready to take on this assignment."

20 years before this hearing an Iowa family harmed by another defective GM vehicle gave me this promotional screwdriver set that they got from their local GM dealer. And if you look at it, on the outside it has a slogan, "Safety comes first at GM."

So my question for you and I think the question that these families back here want to know is: What has changed at GM? Isn't it true that, throughout its corporate history, GM has represented to the driving public that safety has always been their number one priority?

Ms. Barra. I can't speak to the statements that were made in the past. All I can tell you is the way we are working now, the training that we have done, we have changed our core values, the decisionmaking we are leading, we are leading by example.

One of the process changes that we have also made is, in addition to when the technical community makes their decision about a safety recall or a recall, we are going to be reviewing it, Mark Royce, the head of Global Product Development, and myself, to see if there is more than we want to do.

Mr. Braley. Hasn't the core values of General Motors always been that safety comes first?

Ms. Barra. I have never seen that part before.

Mr. Braley. Isn't it true that, throughout the history of the company, it has made representations like this to the driving public as a way of inducing them to buy your vehicles?

Ms. Barra. Today's General Motors -- all I can tell you is today's General Motors, we are focused or safety. We have over 18 vehicles that have a five-star crash rating. Our entire Buick lineup meets that requirement. We take it very seriously.

Mr. Braley. But we are talking about these vehicles and what has changed.

Have you had a chance to read this article in the Saturday New York Times: A Florida Engineer's Eureka Moment With a Deadly G.M. Flaw?

Ms. Barra. I believe I read a portion of that article.

Mr. Braley. This is an article by a writer named Bill Vlasic. And he wrote in here about an engineer named Mark Hood who is "at a loss to explain why the engine in Brooke Melton's Cobalt had suddenly shut off, causing her fatal accident in 2010 in Georgia.

"Then he bought a replacement for $30 from a local G.M. dealership, and the mystery quickly unraveled. For the first time, someone outside G.M., even by the company's own account, had figured out a problem that it had known about for a decade, and is now linked to 12 deaths.

"Even though the new switch had the same identification number, Mr. Hood found big differences."

And then the article continues, "So began the discovery that would set in motion G.M.'s worldwide recall of 2.6 million Cobalts and other cars, and one of the gravest safety crises in the company's history."

Do you agree with the author that this is a grave safety crisis in the history of General Motors?

Ms. Barra. I have said that this incident took way too long, it is not acceptable, and that is why we are making a radical change to the entire process, adding more resources, naming a vice president of Global Vehicle Safety who is tremendously experienced and of the highest integrity, and we will continue to make process changes and people changes as we get the results of the Mr. Valukus investigation, and we will take all of those recommendations and we will make changes.

Mr. Braley. Before I yield back, Mr. Chairman, I would like to ask unanimous consent to have this article added to the record for the hearing, if it is not already a part of the record.

Mr. Murphy. Without objection.

[The information follows:]

******** COMMITTEE INSERT ********

Ms. Blackburn. If the gentleman would yield his remaining second, Ms. Barra said they had changed their core values. I think it would be great if she could submit to us what those new core values for GM are so we would have those for the record.

Mr. Murphy. We will ask that for the record.

Mr. Braley. I would also like to have any prior statement of core values for General Motors over the last 20 years so that we can see what has changed, Mr. Chairman.

Mr. Murphy. We will be asking members for several questions to submit to GM for the record.

Now recognize the vice chair of the subcommittee, Dr. Burgess, for 5 minutes.

Dr. Burgess. Thank the chairman.

And thank the witness for spending so much time with us this afternoon.

You mentioned, Ms. Barra, at the start of your written testimony that, over a decade ago, General Motors embarked upon a small car program.

Do you recall why that was?

Ms. Barra. I am sorry?

Dr. Burgess. Why did GM embark upon a small car program 10 years ago, over a decade ago?

Ms. Barra. To have a complete portfolio, I believe.

Dr. Burgess. But the mission -- or the type of car that was manufactured by GM previously had not fit that model; so, this was an entirely new business line that GM was undertaking?

Ms. Barra. The Cobalt -- and there are several products. But if you are speaking specifically about the Cobalt, it was following a previous small car, but it was an all-new program architecture, et cetera.

Dr. Burgess. Was any part of this done because of the CAFE standards that were changing? Was any of this done because of congressional action that had occurred previously?

Ms. Barra. I cannot answer that question. I wasn't in on decisionmaking at that point.

Dr. Burgess. Let me ask you this. When Mr. Waxman was giving his opening statement, he said it was a shame that the National Highway Traffic Safety Administration did not have access to the same information that General Motors had.

Do you think that was a fair statement for him to have made?

Ms. Barra. As part of the investigation we are doing, I am looking at what information was provided and when.

Dr. Burgess. And that becomes, then, the troubling part of all of this.

I think Ranking Member DeGette had you look at tab 8 in the information binder, and this was talking about the ignition key cylinder assembly. And the date of the PDF that I have is January 1 of 2005. Again, you will find that under tab 8.

But later on in the same document it says, "We are closing this with no action. The main reasons are all possible solutions were presented. The lead time for solutions is too long. The tooling costs and piece price are too high, and none of the solution seems to fully countermeasure the possibility of the key being turned off."

So that was all in January of 2005. And then, you know, as part of our document evaluation for getting ready for this hearing, there were several accident reports that were supplied to us. And one of those occurred not too far away in Maryland in the middle of the summer of 2005.

And in that accident sequence, a Cobalt hit a series of trees at the end of a cul-de-sac. The driver was fatally injured during that. She wasn't wearing a seatbelt. She wasn't a terribly large individual. She weighed about 100 pounds.

Because the air bag did not deploy, though -- or it would be my -- well, you just have to wonder. Had the air bag deployed, would her small frame have been protected?

I mean, she broke the rim off the steering wheel because of the impact of the collision, her body with the steering wheel and steering column.

Of course, the steering wheel, being somewhat indented toward the driver -- the lower part of the driver's body, hit her under the ribcage, apparently resulting in a liver laceration, which resulted in the exsanguination and the time sequence to get her out of the crash and get her to the hospital.

You can't help but wonder -- because the other injuries that were reported with that crash are really fairly mild. You have got to believe the air bag would have made a difference there.

I just can't help but think that the people evaluating this must have asked themselves why no air bag went off with this type of crash. She was going 70 miles an hour and hit an oak tree.

Wouldn't that be a logical place for an air bag to deploy?

Ms. Barra. First of all, it is a very tragic situation. Some of the fatalities in these vehicles, again, we see as a tragedy, and we have apologized.

As I read the document that you asked me, I find that unacceptable, that any engineer would stop at that point if there was an issue that they felt was a safety defect.

That is why we are doing the investigation, again, to put a complete timeline together. And I commit to you, we will take action. We have made process changes. We will fix the process. Our goal is to have a world-class safety process.

Dr. Burgess. And I respect you for being here and answering that way.

One of the other accidents that is recorded in our binder under tab 20 was a head-on collision that occurred, I believe, in Pennsylvania where the Cobalt was not at fault.

Another car went over the center line, and there was a head-on impact. Again the Cobalt air bags did not deploy. The driver of the other vehicle -- the air bag did deploy.

I mean, it seems to me this should be a red flag to the people who investigate air bag non-deployments as an occurrence or as an issue.

In fairness, let me just state that all of the front-seat occupants of both vehicles were deceased as a result of that accident; so, the deployment of the air bag in that situation did not protect, preserve the life of the driver.

But, still, you would have to ask the question. You have a Cobalt and a Hyundai meeting head on. Why did the Cobalt's air bags not deploy?

It was the exact same force for both vehicles. There was no intercedent jarring of the vehicle. They didn't run off the curb. They didn't run over another tree first. So the air bag did not deploy.

Why would that have been the case in that particular accident?

Ms. Barra. Again, it is a tragic situation anytime there is a loss of life in a traffic situation. Again, this is not an investigation that was done by GM. I can't answer your questions because it is usually very complex as they look at that. So I can't comment on this particular study.

Dr. Burgess. If that is part of your internal investigation, though, I would like for you to make that information available to the committee staff and to the committee.

Ms. Barra. We will make whatever information we have available.

Dr. Burgess. Thank you. And thanks for being here.

Mr. Murphy. The gentleman's time is expired.

I will now recognize Ms. Schakowsky for 5 minutes.

Ms. Schakowsky. Thank you, Mr. Chairman.

Mr. Braley talked about the pictures in the back, and I think that what must make it even more painful is that these deaths were needless.

So I want to ask you about something a little bit more than an apology. One of the many questions raised about GM is how -- GM today -- is how you will handle accidents that happened prior to the company's bankruptcy.

GM filed for bankruptcy in 2009, emerging as new GM about 6 weeks later. So that means that new GM, the company as it exists today, I have been told, may not be liable for accidents that occurred prior to July 2009.

Is that your understanding, Ms. Barra?

Ms. Barra. We at General Motors want to do the right thing for our customers, and that is why we feel this is an extraordinary situation, as I have said.

It took too long to get to the answers and the understandings about this part. That is why we have hired Mr. Feinberg.

We feel Mr. Feinberg has had extensive experience and he will bring his experience and objectivity to assess what are the appropriate next steps, because we do understand that we have civic responsibilities as well as legal responsibilities.

Ms. Schakowsky. Are you saying that the hiring of Mr. Feinberg indicates that GM will give some kind of settlement with those individuals whose -- the families whose loved ones lost their lives?

Ms. Barra. We have just begun to work with Mr. Feinberg. In fact, our first meeting will be on Friday. It will take probably 30 to 60 days to evaluate the situation. So we have not made any decisions. We have just started this process with Mr. Feinberg.

Ms. Schakowsky. And that might include people who have been injured as well?

Ms. Barra. Again, we have not made any decisions.

Ms. Schakowsky. Let me ask you this: During GM's restructuring, did the company disclose what it knew about this ignition switch defect? By 2009, there is no doubt that officials in GM were aware of this problem.

Ms. Barra. I was not aware of this issue. I can't speak to what was disclosed. So, again, our investigation will cover if there was any information. But, to my knowledge, it was not known at the senior leadership of the company.

Ms. Schakowsky. So does GM accept responsibility for the accidents caused by the company's defective vehicles?

Ms. Barra. First of all, I again want to reiterate we think the situation is tragic and we apologize for what has happened and we are doing a full investigation to understand --

Ms. Schakowsky. I am talking about responsibility and even liability.

Ms. Barra. Responsibility -- I am sorry. I don't understand your question.

Ms. Schakowsky. And even liability.

Do you take responsibility? Is the company responsible? The new GM, is it responsible?

Ms. Barra. We will make the best decisions for our customers, recognizing that we have legal obligations and responsibilities as well as moral obligations. We are committed to our customers, and we are going to work very hard to do the right thing for our customers.

Ms. Schakowsky. I hope that you do do the right thing.

Let me ask you about some of the people who potentially knew about this.

So you have appointed for the first time a president of Global Vehicle Safety. I have to tell you I am underwhelmed by that, thinking that it is such an obvious thing to have someone high up that would, in fact, be able to connect the departments so everybody knew. I guess it is a good thing, however, that it is finally done.

So we know that Ray DeGiorgio was the GM engineer who approved the ignition switch redesign in 2006. Is he still an employee of your company?

Ms. Barra. I believe he is.

Ms. Schakowsky. Do you know who signed off on the initial faulty ignition switch that did not meet your specifications?

Ms. Barra. I don't. But that is what I will learn with the investigation. And after we have a complete investigation from a very complex process, we will take action.

We will change process, and we will deal with any people issues. I think we demonstrated in the issues we learned in India with the Tavera about a year ago, we will take serious steps and hold people accountable.

Ms. Schakowsky. So no one right now has lost their job as a result of this knowledge about this defective part?

Ms. Barra. We are just a few weeks into the investigation by Mr. Valukus. We have already made process changes.

And as I return to the office after this, we will begin to look at the implications, now that we have more data coming from the investigation, and take the appropriate steps.

Ms. Schakowsky. Thank you.

I yield back.

Mr. Murphy. Gentlelady yields back.

Now recognize the gentleman from Georgia, Dr. Gingrey, for 5 minutes.

Dr. Gingrey. Mr. Chairman, thank you very much.

This hearing is much appreciated, pretty poignant to me, since Brooke Melton lived in my congressional district at the time.

And had it not been for an outstanding plaintiff's attorney in the Cobb Judicial District of Georgia in bringing this case -- I am sure it was against a local dealership -- resulted in a settlement, but it brought to light what is going on now and the purpose. And, hopefully, some good can come from this hearing.

And I want to thank Chairman Murphy for holding it and investigating the root cause of the General Motors recall of over 2.6 million vehicles linked to these ignition defects. Unfortunately, Ms. Barra, I heard just yesterday that the recall now includes 6.3 million vehicles.

And I do want to speak a little about this young lady named Brooke Melton, a nurse in Paulding County, Georgia, which, at the time, was in the district I represent.

And she was, as you know, tragically killed March the 10th, 2010, on her 29th birthday in a horrific side-impact accident on Highway 92, and the ignition switch in the accessory position.

Just the day before, just the day before, her death, she took her 2005 Chevy Cobalt into the dealership for service, and the service report stated, "Customer states engine shut off while driving. Please check."

Despite the fact that a service bulletin was issued from General Motors for faulty ignition switches back in 2005 for that make and that model, the on-site mechanic cleaned the fuel line, cleaned the fuel injection, told her to come pick up her car, which she did.

Brooke Melton's tragic death is not acknowledged as part of this recall because it involved a side impact instead of a front impact. Ms. Melton's parents, Ken and Beth -- they are not here today, I don't think, but they deserve answers.

Ms. Barra, is Brooke Melton included in General Motors' death count? Yes or no?

Ms. Barra. To my knowledge, no.

Dr. Gingrey. No?

Ms. Barra. Because it was a side impact and we --

Dr. Gingrey. Right.

Why did General Motors not include the non-deployment of air bags from side-impact accidents resulting in loss of life or injury in this recall?

Ms. Barra. As you look at a frontal collision and the way the air bag is to operate, I believe the assessment -- the assessment was made that would potentially be related to the switch.

Dr. Gingrey. Yeah. But, Ms. Barra, if you connect the dots -- I mean, the ignition gets knocked over to the accessory position. There was a problem using faulty, even by your own standards, equipment.

And so maybe what happened was that all of a sudden the car stalls. She is driving perfectly, trying to control without any power steering, without any power brakes, and may very well have -- and I don't know the details of that accident -- but may very well have run through a four-way or a red light and was slammed into from the side.

Whether it was a head-on collision or a side collision, it was for the same reason, and she is dead. And that was almost four years ago.

I don't understand why General Motors does not include the non-deployment of air bags from side-impact accidents resulting in loss of life or injury in this recall. Can you explain that to us.

Ms. Barra. Well, first of all, all of the accidents and fatalities are very tragic, as you have indicated, and we are deeply sorry for those.

We have been very clear of the number that we put forward. There has been a lot of analysis that has gone on to look at potential incidents and --

Dr. Gingrey. Well, did General Motors investigate or do you plan to investigate whether this condition relates to the non-deployment of air bags in side-impact crashes?

Ms. Barra. We have individuals that are looking at the available information from accidents --

Mr. Dingell. You told us about your recent hire, and I hope -- well, lastly, Ms. Barra, to what extent did GM regularly inform dealerships, like the dealership, obviously, in Cobb County, of its 2005 technical service bulletin on faulty ignition switches so that these service technicians, the young guys, you know, maybe working there 6 months to a year, that they could properly address a customer complaint like Brooke had the day before her death?

Ms. Barra. I am sorry. Was your question how do we communicate service bulletins?

Dr. Gingrey. How do you make sure that these dealerships all across the country and their service departments are making sure that their technicians are getting and receiving the instruction?

Ms. Barra. We can provide details on exactly how we communicate service bulletins and how that is rolled out to each of our dealerships across the country.

Dr. Gingrey. I hope you will. Thank you, Ms. Barra.

And, Mr. Chairman, I yield back.

Mr. Murphy. Ms. Barra, related to his questions, with all these calls in recall and waiting for parts, what are drivers supposed to do in the meantime while their cars sit in the driveway?

Ms. Barra. We have communicated and we have done extensive testing that, if you have just the ignition key with the ring or just the ignition key, the vehicle is safe to drive.

If people are not comfortable with that, we are making loaners or rentals available. They can go to their dealer. We have over 13,000 customers that have these vehicles in rentals or loaners right now.

Mr. Murphy. And you are assuring people that it is safe to drive if they just take the other things off the key?

Ms. Barra. There has been extensive testing done by the engineering team. And with just the key and the ring or just the key, we believe it is safe based on our testing.

Mr. Murphy. Recognize Mr. --

Ms. DeGette. Excuse me, Mr. Chairman.

Is that true of the earlier ignitions as well as the 2006, all of them? All these cars, that's true?

Ms. Barra. Yes.

Ms. DeGette. Thank you.

Mr. Murphy. Mr. Tonko, you are recognized for 5 minutes.

Mr. Tonko. Thank you, Mr. Chair.

Ms. Barra, thank you for appearing before the committee.

And I have to believe, for the family members and friends of the victims of this tragic outcome, it must be a very painful process to sit here and listen to the exchange.

Just a comment at first. We are hearing a lot about information that will come post the investigation or the review.

However, I hold in my hands a February report and a March report to NHTSA on behalf of GM under your watch that provides detailed timelines with a whole bit of knowledge exchanged.

And I am confused somewhat about that fair amount of knowledge that has been formally exchanged to NHTSA and, at the same time, we are hearing, "Well, we don't know until the investigation is complete."

So there is a conflict that I think is brought to bear here in terms of an exchange that has been detailed in the last few weeks under the watch of the new General Motors, today's GM.

And at the same time, when I was listening to our representative from Illinois ask about the corporate chart and the changes, no changes have been made. We are waiting for that pending the investigation. But at the same time, we have characterized -- or relabeled it as today's General Motors.

So while we are all products of the environment that produces us, the cultural impact of GM seems to still be in play with a number of people who have perhaps shifted positions, but are all part of that organization.

So comfort me by telling me that there is a new thinking, there is a new culture, that has beset GM while all the players are still there in the corporate chart. Tell me how the company has restructured and reorganized so as to bring comfort to the consumer.

Ms. Barra. First, there are many new people in the company as well as people who have experience across the company. There is a new structure. For instance, in Global Product Development, we have streamlined, eliminated bureaucracy.

We took out an entire layer of management in the product development. We have completely redone the quality processes over the last -- it started in the 2011-2012 time frame.

We have changed our test procedure. We have added additional validation. So there has been a complete remake of the way we drive quality. We test to failure instead of testing to a standard. That is just one example.

And we have looked across the entire organization. We have rebuilt our supplier quality organization, adding over 100 resources just in this country alone.

So systematically we have gone across the company and we are making changes, even in the chronologies which I think you held up.

Those are the most detailed chronologies that we have ever provided, sharing, again, in a summary fashion, the information we have now, but then we are conducting an investigation with Mr. Valukus.

We have also rolled out new values with the customer as our compass, relationships matter and individual excellence. We have trained thousands of people.

But, most importantly, it is leadership at the top. It is the leadership of how we behave, of how we demonstrate when we make decisions, and that we make decisions that focus on the customer, focus on safety, focus on quality. And I can tell you, from my leadership team and the next layer, we continue to drive that every day.

We recognize culture change doesn't happen in a year or two, but we are well on that journey, and we are dedicated to it and we very clearly want to have the safest vehicles on the road.

Mr. Tonko. And will you make that list public from the report that you are anticipating?

Ms. Barra. I am sorry?

Mr. Tonko. Will you make the list that will be coming forth public? Will you share it?

Ms. Barra. That's the list of? I am sorry.

Mr. Tonko. The full report coming from Mr. Valukus.

Ms. Barra. Mr. Valukus will give us findings and we will make the appropriate findings available to this body, to our customers, and to our employees.

Mr. Tonko. The appropriate findings.

What about the full report?

Ms. Barra. I don't know if he will give a report or if he will share findings.

Mr. Tonko. If he does, will you share the full report?

Ms. Barra. We will share the appropriate information.

Mr. Tonko. Not the full report?

Ms. Barra. Again, I don't know if there will be a full report. But we will share --

Mr. Tonko. If there will be a full report, will you share it?

Ms. Barra. I commit that we will be very transparent and we will share what's appropriate.

Mr. Tonko. So, in other words, there is no commitment to share the full report?

Ms. Barra. I am saying I will share what is appropriate.

Mr. Tonko. I hear the answer.

Mr. Chair, I yield back.

Mr. Murphy. Gentleman yields back.

Recognize the gentleman from Louisiana, Mr. Scalise, for 5 minutes.

Mr. Scalise. Thank you, Mr. Chairman. I appreciate you having this hearing.

Ms. Barra, I thank you for being here.

Let me say first my prayers are with all the families of those who lost their lives and others who have been impacted by this. I want to thank you all for being here in this room as well.

Obviously, the questions we have are even more pertinent to the families that are here, and that is why it is important that we ask the questions and get answers.

And if we are going to make sure that we can prevent something like this from happening again, we have got to get into the real details of what went on during those period of years, unfortunately, years, where it seemed somewhere inside of General Motors there was knowledge that this was a problem before it got to the level of recall.

I want to first take you, Ms. Barra, to the tab you have got there, Number 38. Tab 38 is the signoff. This is what is called a General Motors commodity validation signoff. This is the actual sheet that the engineer signed off on that approved the design change in the faulty ignition switch.

Have you seen that document before?

Ms. Barra. This is the first time I have seen this document that is labeled "Delphi."

Mr. Scalise. Now, what we are talking about here -- I mean, how long have you been aware of the problem with these faulty ignition switches?

Ms. Barra. I was aware that there was a faulty ignition switch on January 31.

Mr. Scalise. Of this year?

Ms. Barra. Of this year.

Mr. Scalise. Okay. So as you are going through -- I'm sure some of the questions you have and are asking and maybe some of the ones we are having -- the first question you would want to ask is: What did we know about it? When did we know? Did we know well in advance? And why didn't we prevent it from happening?

The first thing we all are talking about is when was this found out within GM to the point where they actually made a change. I mean, you all made a design change.

The letter I have got here, this form, is dated April 25 of 2006. So 2006 is when your engineers -- and there is a name on this sheet. There is an actual engineer who you just said under oath earlier is still employed with GM.

There is an engineer that actually signed this document requesting -- not requesting -- approving a change in this ignition switch, in fact, with the part number. The part number is on here.

To your knowledge, has anyone in GM taken this -- he is an employee of yours. You can just pull him aside right now and ask him, "When you signed off on this in 2006, number one, why didn't you change the part number? And, number two, why did you approve a change in the ignition switch and not bring it to the level of recall?"

In 2006 -- clearly people lost their lives after this was signed off on. So do you know right now -- and you are under oath -- do you know of anyone that has asked the person that signed this -- that signed off on this -- have any of you all asked him those basic questions?

Ms. Barra. I know this is part of the Anton Valukus investigation. And I want to know the answers to the questions you are asking as well as you.

Mr. Scalise. Do you know of anyone that's asked him that question? I mean, he's an employee of yours right now. You can pull him aside right when you leave here today and ask him these questions.

Ms. Barra. I think it is very important as we do an independent investigation that we let Mr. Valukus go do a thorough investigation, talk to people, that there is not a lot of side investigations going on. He is the one standard that we are going to use in this investigation. He brings the objectivity to it.

Mr. Scalise. Clearly, you know, there -- I mean, you talk about a new culture.

Has anyone been held accountable as of now for what's happened?

Ms. Barra. Again, we learned of this on January 31.

Mr. Scalise. Well, again, you have a design change in 2006 related to what we are talking about. This is not a 2014 issue.

The recall was issued in 2014, but the product, the faulty ignition switch we are talking about, was redesigned in 2006 by one of your engineers who's still an employee of General Motors.

If you can't get me that information -- and if you do find that information out, by the way, would you get that to the committee?

Ms. Barra. It will be part of the investigation and we will share that.

Mr. Scalise. The other question I want to ask you -- because later on we are going to have the acting administrator of the National Highway Traffic Safety Administration.

Some of the things he says in his testimony -- before you leave, I would like to get at least some responses. He says, number one, "We are pursuing an investigation of whether GM met its timeliness responsibilities to report and address this defect under Federal law."

Are you aware of whether or not GM has met its obligations of timeliness?

Ms. Barra. That will be part of the investigation that we are doing.

Mr. Scalise. But you are not aware at this time, though. I mean, if you are aware of something, that would be a violation of Federal law.

If you are aware of that already, can you share that with us?

Ms. Barra. I am aware of the findings that I have already shared from Mr. Valukus today.

Mr. Scalise. And another question he asks -- in the brief time I have left, he says, "GM had critical information that would have helped identify this defect."

That's the gentleman that's testifying right after you. You don't have the opportunity to come behind him and respond. He is going to be saying this. He is writing this in his testimony.

What would you say in response to his statement that GM had critical information that would have helped identify this defect?

Ms. Barra. As I have already said, we have already learned through Mr. Valukus's investigation that there were points in time where one part of the organization had information that wasn't shared across to the other side of the organization. You can call it a silo.

At some point, they didn't understand that the information would be valuable to another party. So I have already shared that we have found that to be true and we have already made changes to the structure and to the responsibilities of people. So that won't happen again.

Mr. Scalise. We appreciate getting the full range of answers to all these questions.

And, with that, I yield back the balance of my time. Thank you, Mr. Chairman.

Mr. Murphy. Time is expired.

I now recognize Mr. Green for 5 minutes, of Texas.

Mr. Green. Thank you, Mr. Chairman.

Ms. Barra, first of all, congratulations on being the CEO of General Motors. Like a lot of my constituents, I have been a customer of GM. In fact, I can't list the number of vehicles I think I have owned. Although my wife drives a Tahoe, I lease a Malibu. I have a Blazer. And, you know, we keep them for a long time. So I appreciate GM products.

And you have heard the questioning today, and it seems like on a bipartisan basis we are trying to find out what is happening, although -- Mr. Chairman, I know you heard it -- I was surprised because Dr. Gingrey is a good friend of mine and a physician and, to say he thanked a plaintiff's lawyer for something, you have at least gotten Republicans and Democrats on the same side on something. Phil's not here now, but there is a reason we have a civil bar.

You have gone down the litany with the other questions of the problems that were happening. In 2002, the switch was acknowledged it was below specs. In 2005, the dealers were notified of a problem, but it was because of heavier key rings.

And I thought about my wife's key ring that she uses. It has everything in the world on that key ring. So I couldn't imagine that would be an issue.

But, I guess, getting down to the concern I have -- and in 2007 you modified the switch ignition for future models, but -- though the switch ignition still fell below the initial torque standards by GM.

Let me give you an example of what this has caused. I have a constituent who I talked to yesterday before I left Houston whose mother, Lois, owns a 2003 Regal, which is 10 years old. And she has owned GM products, like I guess I have, for many years.

But the Regal began stalling and turning off in February of 2013 and even the car had less than 50,000 miles. Since she's owned the car, it's gone to the GM dealer six times.

The battery has been replaced, and each time the dealer did not fix the problem. She ended up finding -- and I quote Mrs. Knutson who told it to me -- she finally found a shade tree mechanic who actually fixed it.

And I guess what bothers me, if you go back to the dealer this many times -- and I hold the dealers -- you know, repair shops to a higher level simply because they know the product -- that what has happened -- can you confidently say that these stalling issues are limited only to the Cobalt, the HHR, the Pontiac G5, the Solstice and Saturn Ion, and the Sky models of vehicles or is it other ones like the Regal or maybe like the Malibu I drive?

Ms. Barra. Again, I am not aware of any other stalling issues. If we have an issue, we put it into our recall process and make decisions. So if there is a defect that you are aware of, I would appreciate the information, and I will definitely look into it.

Mr. Green. Well, we will get you that information.

I have a couple minutes left. But I represent a very industrial area. We have refineries and chemical plants. What we do is inherently dangerous. And so you have to take extra concern about it.

It looks like in the last 10 years GM has not -- somewhere along that line, the culture of the company is not there to deal with that. And, as the new CEO, I would hope you would make sure it happens.

And I have said this many times. When I have a chemical plant or a refinery that has an accident and somebody dies and -- we have been able to pinpoint sometimes with civil justice, but sometimes through Chemical Safety Board, on what decision was made that they didn't do that caused people to die.

That is what happened here. And General Motors is a much greater company than to do that, and I would hope the culture of your corporation would be better so it would continue to earn the respect that both this lady and I have.

But that is your job now as CEO, but you need to fix it and fix it as quick as you can because it is going to cause problems, obviously.

Ms. Barra. I agree with you. It is completely my responsibility, and I will work day and night. We have already made tremendous change at General Motors. We will continue to do that, and I recognize it is my responsibility.

Mr. Green. The last thing in my 30 seconds is: Should my constituent -- should she have her mother in Phoenix take that Regal back and have it checked by a dealer now and see what happened?

Ms. Barra. Yes. And I wish you would send a note to me, and I will --

Mr. Green. I will get you that information.

Ms. Barra. Thank you.

Mr. Green. Thank you, Mr. Chairman.

Mr. Murphy. I now recognize Mr. Griffith for 5 minutes.

Mr. Griffith. Thank you, Mr. Chairman.

Ms. Barra, you have indicated that not having a new part number when the part was changed in 2006 is not acceptable. Is that correct?

Ms. Barra. That is correct. Yes.

Mr. Griffith. And I guess it is hard to figure that somebody would have just done that by accident and that there had to be a reason.

Because that was a breach of protocol, wasn't it?

Ms. Barra. I don't think there is an acceptable reason to do that.

Mr. Griffith. And while there may not be an acceptable reason, you would have to acknowledge that a reason in somebody's mind, while not acceptable, might be that it is actually harder to track the problem with the old part when you have an improved new part that is put in its place. Isn't that correct? Yes or no?

Ms. Barra. Yes.

Mr. Griffith. And while you have indicated that you did not know the individual name of the person who made that decision, do you know whose job title it was or in whose chain of command it was to make the decision not to create a new part number for that part?

Ms. Barra. I don't. It would be within the engineering organization, but I will learn that from the investigation and we will take appropriate action.

Mr. Griffith. And would that engineering department have been under your chain of command at some point in your tenure with GM?

Ms. Barra. Since February of 2011.

Mr. Griffith. But it never got to you? Nobody ever brought this to your attention?

Ms. Barra. No, it did not.

Mr. Griffith. I appreciate that.

I do have this question, and I think that the answer probably is that your investigation will reveal this.

But it is somewhat concerning that, while the trial lawyer that uncovered this may be very savvy and his expert might be pretty sharp, you all have sharp people working at GM as well; do you not?

Ms. Barra. I believe we do.

Mr. Griffith. It is one of those questions that I am sure your investigation will uncover. But why didn't your team of engineers connect the dots and figure out that, when the ignition slips into that auxiliary position, the air bags won't function properly?

Ms. Barra. Congressman, those are the questions I want to answer and, as I have said, it has taken way too long. And we will learn from this and we will make changes and we will hold people accountable.

Mr. Griffith. And not only holding people accountable, but you were asked earlier -- and I know you are in a tough spot on that -- as to what kind of liability GM will end up accepting because there is legal liability and moral liability. And you have said that.

One of the questions that I would have -- it would have been a whole lot easier just to have actually listed these liabilities in the bankruptcy; would it not? It would have been easier to do it in the bankruptcy instead of having to come out now, wouldn't it?

Ms. Barra. The best thing in the world would be, as soon as we find a problem, we fix it and it doesn't exist in the marketplace and doesn't affect our customers and doesn't create tragedies.

RPTS JANSEN

DCMN HUMKE

[3:47 p.m.]

Mr. Griffith. And here is one of the things that concerns me. Have you been given any estimates yet by Mr. Feinberg or others as to what a best-case or worst-case scenario is on your civil liabilities?

Ms. Barra. We have just been in initial conversations with Mr. Feinberg. I believe we will work through him to evaluate the situation over the next 30 to 60 days.

Mr. Griffith. Has anybody else given you a best-case or worst-case scenario over liability issues related to this problem?

Ms. Barra. There has been a lot of estimates done in the public, but none given specifically to me.

Mr. Griffith. Okay. Would those liability issues have negatively impacted the prospects of either a bailout by the Federal government, or prior to the bailout, the people who were lending you money to keep GM afloat with its heavy liabilities already existing, would not the additional liabilities that would have come forward by this problem have had the potential to dissuade private investors or the Federal government from giving cash to GM?

Ms. Barra. As I look at it, as soon as we identify an issue and fix it, then there aren't liabilities or the liabilities are contained. As we look at problems as we go forward, we want to fix them as soon as we can. If there is a safety issue, we are going to make the change, make the right investment, and accept that.

Mr. Griffith. But in the real world of business, if there is a new set of liabilities that come onto the page that weren't there before, it is harder to get money from both public and private sources; isn't that true?

Ms. Barra. I think it depends on the situation. So it is a general question. I don't feel appropriate commenting.

Mr. Griffith. I appreciate that.

Let me ask this last question. When this issue first came up, the corresponding Problem Resolution Tracking System report document identified the issue of severity 3. What does that mean?

Ms. Barra. I am sorry, I didn't hear you.

Mr. Griffith. Severity 3. I am referencing back to some of the documents that you have given and your folks have given us. And it is initial assessment in 2004, 2005 when your Problem Resolution Tracking System report came out, it related this problem as being severity 3. What does that mean?

Ms. Barra. I don't have a specific definition for that. I --

Mr. Griffith. Can you get one for us?

Ms. Barra. I can.

Mr. Griffith. I appreciate that.

And I yield back.

Mr. Murphy. Can I ask a clarifying question to what Mr. Griffith was saying.

Did GM purposely, willfully negotiate, during the bankruptcy issues or in the process of obtaining the loans, did they purposely withhold any information that they may have known about pending lawsuits or things that would be emerging in the future about the Cobalt or other cars?

Ms. Barra. I am not aware. I personally did not withhold any information. I am not aware, but I can't speak to every single person.

Mr. Murphy. Thank you.

Mr. Welsh, you are recognized for 5 minutes.

Mr. Welsh. Thank you.

I have to congratulate General Motors for doing the impossible: You have got Republicans and Democrats working together. And I thank my colleagues for their focus on this hearing.

Couple of things. How many cars have been recalled as of this date?

Ms. Barra. Related to the ignition switch?

Mr. Welsh. Right.

Ms. Barra. Over 2.5 million.

Mr. Welsh. Now, this ignition switch issue, was first -- it came to light in 2006; is that correct?

Ms. Barra. Through our investigation, we will know when it came to light. It came to light to me on January 31st, 2014.

Mr. Welch. That is totally irrelevant to the people who lost their lives.

Ms. Barra. I understand.

Mr. Welch. I mean, you are the current CEO, but that is not relevant to the question I asked.

Ms. Barra. You asked when I became aware of it.

Mr. Welch. No. GM.

Ms. Barra. Again, that is what we will learn in our investigation.

Mr. Welsh. Well, you changed the switch after 2006. You began in 2007 changing the switch; right?

Ms. Barra. Yes, there were changes made.

Mr. Welsh. So would it be a logical inference that somebody thought there was a reason to change the switch that had been in use in 2006 to 2007?

Ms. Barra. As we do our internal investigation, I hope get those answers.

Mr. Welch. Wouldn't that be a starting point? Somebody for some reason decided to change the very critical part in the car, between 2006, 2007; correct?

Ms. Barra. Correct.

Mr. Welsh. So let me ask you this: If you had recalled cars and acted on this aggressively in 2006, when you were making the decision that you had to change this -- you, GM, not you.

Ms. Barra. I am sorry.

Mr. Welsh. GM the changed the switch, how many cars would you have had to recall had you acted in 2007 when you made the decision to change the switch?

Ms. Barra. I can get you the exact number. But it would have been significantly less. I don't know.

Mr. Welsh. Give me an estimate. You can talk to your back row there if you want.

Ms. Barra. Again, I will confirm with an answer, but I would assume it is something around more 1.2 million.

Mr. Welsh. Just from 2000 -- so you would have cut it down at least in half, and maybe more --

Ms. Barra. Because, again, we are starting with vehicles that the Saturn ION was in production in 2003.

Mr. Welsh. Let me just get a business-type question here. What do you estimate would have been the cost to GM of this recall had they done it in 2007?

Ms. Barra. When we looked at the population from 2003 to 2007, actually, if I look at all of the vehicles that had this, it would have been a higher number, I believe it was 1.8. And that would have probably -- the estimated costs for those two pieces is something less than a hundred million.

Mr. Welch. Okay. And what do you estimate will be the cost of the recall now that it is being done 8 years later?

Ms. Barra. Well, there is a larger population. We can provide the information.

Mr. Welsh. I want an estimate. I want people to be able to hear this. A decision delayed is money and lives at risk. So I am trying to get an opinion from you, and it is ballpark so it can be adjusted, as to what the costs would have been had you acted 8 years ago versus acting now. You, GM.

Ms. Barra. Well, if we would have acted at that point we would have had a smaller population, as we talked about.

Mr. Welsh. I know that. That is obvious.

Ms. Barra. I am sorry, I am not trying to be difficult. I don't understand your question.

Mr. Welch. You know what? If I were on the board of directors and I had an obligation to shareholders, and I had a company that could have acted 8 years ago, to deal with a problem but by not acting let that problem increase in magnitude, do more damage to shareholders, do more damage to the bottom line, do enormous damage to the reputation of this company, and cause we don't know how much harm to citizens, I would want an answer to the question.

Ms. Barra. I agree. It would have been substantially less at that time frame had we done it than what it will be now.

Mr. Welsh. GM was involved in litigation concerning allegations that this switch was defective and caused problems; correct?

Ms. Barra. Yes.

Mr. Welsh. And GM settled some of these litigation matters; correct?

Ms. Barra. Correct.

Mr. Welch. After very aggressive defense. Those settlements were secret?

Ms. Barra. They are confidential by both parties.

Mr. Welsh. By both parties -- I am -- you know, some of us have been in court. By "both parties" usually means by the request of the party that is paying the damages.

Ms. Barra. I wasn't involved in those settlements. All I know is confidential was by both parties.

Mr. Welsh. Okay. This is not good. You are the company right now. All right?

Ms. Barra. I am.

Mr. Welsh. Let me ask this question. Do you believe that when a company that has been sued about a matter involving product safety, where a person has been seriously injured or has died, that the company that settles as a matter of policy, should be entitled to keep secret what that settlement was about?

Ms. Barra. I am not -- I think that there are issues associated with that that every settlement is unique and it is a decision that is agreed to by both parties. And I don't have any comment beyond that. Each one is unique.

Mr. Welsh. Let me ask you this: If a company, GM or any company, settles litigation and pays a substantial amount of money pertaining to an allegation about serious bodily injury or death, should that company be permitted to keep secret that settlement from the governmental agency whose responsibility it is to protect the public safety?

Ms. Barra. If that is information required by that government agency, then we would provide it if the two parties involved in the settlement agree to it, that is their agreement.

Mr. Welsh. So if you don't have to do it, you won't do it?

Ms. Barra. If both parties want that. I am making the assumption that both parties agreed to it, which what is I have been told.

Mr. Welsh. I yield back.

Thank you.

Mr. Murphy. Gentleman's time has expired.

Now recognize the gentleman from Mississippi for 5 minutes, Mr. Long.

Mr. Long. Thank you, Mr. Chairman.

And thank you for being here, Ms. Barra.

And I want to thank the families that you here today for keeping safety in the forefront of America's and Congress's consciousness when it comes to automobile safety. And we have heard about the same subcommittee in the past, dealing with the issue before I came to Congress, the Ford Explorer/ Firestone tire situation. We have heard about the Toyota accelerating car issue.

And, like I say, I wasn't here, but I can imagine that the questions were similar: Who knew what when? Who was responsible? Did you know this person? Have you done anything about it?

I want to take a little different tack with my line of questioning, as I normally do. And that is that, people ask me all the time, Do you think you make a difference? When you go to Congress, you are up here a few years, do you think you are making a difference? And that is hard to quantify, to explain to somebody whether you are making a difference or not. But today this is a day I want to look back on and say, you know, I think I made a difference. I think that we got some answers to questions in the future to prevent -- I don't want to be here again and I don't want to have them say Ford Explorer/Firestone tire, Toyota accelerating, and you remember the GM faulty ignition switch. So that is what I would like to say, yeah, we made a difference.

And with that, like I say, I thank the families for being here and keeping it in the forefront of safety so there is not other people sitting in those same seats next time we approach an issue like this. Because hopefully there won't be a next time. And the finger pointing, the old analogy, when you are pointing your finger, you got three fingers pointing at yourself. There is going to be a lot of finger pointing in this.

But I would really like to drill down on and get answers to is how the NHTSA, or whatever they are calling it, the National Transportation -- National Highway Transportation -- or excuse me, National Highway Traffic Safety Administration and you all, as an automobile manufacturer, if you can work to see that this doesn't happen again so that the two organizations can work together and drill down on these problems when we first learn them, whatever the next problem may be, that would be my goal for here today.

In answer to one of Chairman Upton's, the Chairman of full committee's questions awhile ago, and I don't even know what he was asking about exactly. But you said "I was not part of that organization at the time."

I am sure that was something within General Motors. Because you, like I, have a history that goes back I think to when you were 18 years old with General Motors. So you were there at the time as far as the overall organization but not whatever part he had -- your father, I believe, worked 39 years for Pontiac. So you indeed go way back.

I go back to 18 years old with General Motors too. When I was 18, my folks bought me a 1973 GM Jimmy. If you think of a big Suburban today, cut off two doors, and that was a Jimmy, or a Blazer; Chevrolet called theirs a Blazer. I was in the real estate and auction business for years, from 1973 to about 2005, I drove nothing but General Motors Suburbans. I remember times when the key would be in there and you would go to put your key in and it wouldn't work. Why wouldn't it work? Because I had a big key chain a big key ring. And it would vibrate. And it would tear the teeth off the keys to where the key no longer functioned.

But never once did I have that shut off, never once did I have that fail to act or shut off in the middle of driving. So, to me, from 1973 to 2005, with my experience, they made pretty good ignition switches.

Can you tell me how many models GM makes today?

Ms. Barra. Oh, around the globe, over a hundred.

Mr. Long. Hundred different models. Can you tell me how many ignition switches they make?

Ms. Barra. Well, we sell over 8 million vehicles.

Mr. Long. No, I mean how many per -- if you have a hundred models, how many different ignition switches would there be?

Ms. Barra. I can't answer that question. I don't know.

Mr. Long. To me, GM has proven in the past, and other companies have, that you can -- I just don't understand this reinventing the wheel, that every car has to have a different ignition switch with different set of circumstances made by somebody down in Mexico to make sure that it meets the qualifications.

So I would recommend two things: That you work hard with us. Our next witness from the National Highway Traffic Safety Administration says that a car, when it shuts off that the airbag will still deploy for 60 seconds. I can't imagine being in a cash that a car shut off and you continue for more and 60 seconds. So that is a question that I am going to have for him.

But I would ask that you reach out and work not only with your engineers, saying, hey, we have got some pretty good -- why do we reinvent the wheel every time we go to invent a new ignition switch for all these different models? And also hope that you will reach out and work with the National Highway Traffic Safety Administration so.

Ms. Barra. I would welcome the opportunity to have our technical experts look at how we can improve the way the system works. Because airbag deployment is part of the system, and I would welcome the opportunity if there are improvements that can be made, we would want to be in the forefront of making them.

Mr. Long. In communication with NHTSA.

Ms. Barra. And work closely with NHTSA --

Mr. Long. I appreciate it. I thank the families.

Mr. Chairman, I yield back.

Mr. Murphy. Now recognize Mr. Yarmuth for 5 minutes.

Mr. Yarmuth. Thank you, Mr. Chairman.

I, at the outset, want to express my condolences to the family of the victims of this tragedy. And I know it must be frustrating to you to listen to this testimony. And you are looking for answers and so are we and so is GM right now. And I hope we do get answers because I was frustrated by the same questions that my colleague had just mentioned. I have been driving a long time, and this is a pretty well established technology, sticking a key into an ignition and turning it. Are you aware of any other ignition problems that have been discovered or -- in GM or any other vehicle over the history of key ignition systems?

Ms. Barra. I have not reviewed every incident we have ever had. By I -- you know, we do, as we find issues, we document them and take them through our process. And in particular case it took way too long.

Mr. Yarmuth. And there is a new technology. I have been driving a car for four and a half years. I confess it is a Ford product, not a GM product, that has a push-button ignition. I was in a GM car last week, very nice one, by the way, which has a push-button ignition system.

How do you make the judgment as to whether a car has a push-button ignition system and/or a key ignition system and what are the differences?

First of all, in terms of safety, we know that this particular situation wouldn't occur with a push-button ignition system. But how do you make that decision as to what goes into which car.

Ms. Barra. We evaluate. And actually the push-button start is something that we are evaluating putting across the portfolio. As you look at the specifics of a push-button start versus the traditional ignition, I would like our experts to provide that information. Because again. The ignition switch and how it is a component that operates as part of a system of the vehicle especially as it relates from a safety perspective. I think we would be better served to have our experts cover that.

Mr. Yarmuth. But you are doing an analysis of whether a push-button ignition system is safer than a key ignition system?

Ms. Barra. We can definitely do that. I think, you know, there has been work done that both can be designed to be safe. But we are looking because of the customer, you know, it is a function, it is a delighter, usually when the vehicle has a push-button start, we have them on some of our vehicles. We continue to roll those out across our entire portfolio, and we are looking at doing it across the board.

Mr. Yarmuth. I have no idea if there is a difference in the safety. There may be done. But it would be worth doing that analysis.

One of my staff members has a 2005 Malibu that was recalled because of a power steering issue, and she called the dealership, and the dealership said that they didn't know how to fix it. So my question to you is, are you confident that GM knows how to fix the vehicles it recalls for the variety of problems that have --

Ms. Barra. Well, first of all, if we find a situation that is not safe and we don't know how to fix it, we are still going to recall the vehicles and we will take those actions. In this case, there may be a communication lag, because there is a fix, whether it is a check or a replacement of the product. So that does exist for that specific vehicle.

Mr. Yarmuth. So she is getting bad information from here dealership or they haven't been told yet.

Ms. Barra. I would assume. I can follow up if you would like.

Mr. Yarmuth. I mean, I think the public be would want to know that --

Ms. Barra. Right.

Mr. Yarmuth. Because you now have --

Ms. Barra. Right. That there is --

Mr. Yarmuth. -- millions of vehicles out there under recall. And she was told to go ahead and drive the vehicle if she felt safe. And I am not sure that every driver would know whether they should feel safe or not.

I mean, that -- some people, if the power steering goes out are strong people and maybe it is happened to them before and they know that it is going to take a little more effort to steer, other people might not. So, I mean, I don't even know how the average consumer is supposed to know whether they feel safe or not after a vehicle has been recalled.

Doesn't the company have some disclosure responsibility to say these things, at least these things could happen?

Ms. Barra. Yes, and we have done that, and that is a part of the letter that we send to the customer with we notify them of this issue, and then we provide information to the dealers as well.

Mr. Yarmuth. Okay. One final question.

We talk about and we are going to have the NHTSA representative here earlier. One of the things that you are not required to do is to provide warranty data proactively to the National Highway Traffic Safety Administration. Do you think that that is something that ought to be considered, that might be helpful? In this case, maybe dots could have been connected sooner if all that data had been --

Ms. Barra. I welcome the opportunity to look at what information that NHTSA would feel of value to submit.

Mr. Yarmuth. Thank you. I yield back.

Mr. Murphy. Thank the gentleman yields back.

I will now recognize Mr. Harper for 5 minutes.

Mr. Harper. Thank you, Mr. Chairman.

And to the family members that are here, our hearts indeed go out to you. And we will continue to get to the bottom of this.

And Ms. Barra, I know this is not the most enjoyable experience to go through this. But we are in a situation that, you know, we don't trust the company right now. And we have to get to the bottom of this. And so we want to continue to ask some questions.

If I can get you to refer to tab 28 in your binder. And I want to direct your attention to that email that is found at tab 28. In September of 2005, a few months after General Motors decided that there was not an acceptable business case to implement changes to the ignition switch, an engineering group manager emailed Lori Queen and other GM personnel including Raymond DeGiorgio about proposed changes for model year 2008 ignition switch.

So this engineer obviously explains that a more robust ignition switch will not be implemented in model year 2008 vehicles because it appears that piece cost could not be offset with warranty savings. In his email he references "piece cost." Is that just the ignition switch?

Ms. Barra. Generally, when people refer to piece cost, they refer to the part.

Mr. Harper. So he is just referring to that ignition switch. That is a yes?

Ms. Barra. Again, I didn't write this note. But I am just telling you generally when people use the term "piece cost," that is what it means.

Mr. Harper. As he notes in that email, an increase of 90 cents; is that correct?

Ms. Barra. I am sorry?

Mr. Harper. Does the email say there would be an increase of 90 cents?

Ms. Barra. Yes, I see that?

Mr. Harper. And since the warranty offset was only 10 cents to 15 cents, GM didn't make the change.

Ms. Barra. And that is not something that I find acceptable. If there is a safety defect, there is not a business case, this analysis is inappropriate.

Mr. Harper. And I appreciate that you don't find that acceptable. But that indeed is what happened here. Correct?

Ms. Barra. And that is -- exactly. And that is one piece of data as we go through the investigation as we put the pieces together we will take action. Because this is not the type of behavior that we want in our company today with our engineers today.

Mr. Harper. And understand, we are trying to go back and figure out what happened and understand that so we can indeed make sure as you do that this never happens to anyone else again.

Now Lori Queen, what was her position at the time?

Ms. Barra. 2005, I believe she was a vehicle line executive. But you can go back and confirm that.

Mr. Harper. If you would let us know, please.

How does cost factor into decisions about safety?

Ms. Barra. They don't.

Mr. Harper. Has --

Ms. Barra. But they --

Mr. Harper. Go ahead.

Ms. Barra. Again, I can only speak to the way that we are running the company. And if there is a safety issue, if there is a defect identified, we go fix the vehicle, fix the part, fix the system. It is not acceptable to have a cost put on a safety issue.

Mr. Harper. And that is obviously your position and your goal and the way you want it to be now, but that is not the case of what we are going back and looking at.

So you are telling us that General Motors has changed its position of how it handles costs and is safety issues. It hasn't been this way before, but this is how you want it now. Am I correct?

Ms. Barra. This is how it is, I think we in the past had more of a cost culture, and we are going to a customer culture that focuses on safety and quality.

Mr. Harper. When we go back and look at who first, who first authorized the use of an ignition switch that did not meet specifications.

Ms. Barra. And that is something we will learn in our investigation.

Mr. Harper. Now, one of the things that concerns us, of course, is when General Motors filed bankruptcy in 2009, it wasn't an overnight problem with money or with the loss of profits or losing money each year. In 2005, I know General Motors lost 10.6 billion; jump to 2007, lost 38.7 billion, 2008, lost 30.9 billion, and then filed for bankruptcy in 2009.

The fact that General Motors was going through many years of financial issues, did that impact how this was categorized and was not dealt with at that time as it should have been?

Ms. Barra. I can't answer that question. I want to know the answer to that question, and when I do, I will take action.

Mr. Harper. You indicated earlier that a specific traffic death was not included in the count of fatalities that may have been associated with this issue, I would like to see other traffic deaths or serious injuries that were looked at but the determination was made that it was not part of this total. Can you get us that information?

Ms. Barra. Through our TREAD information, yes.

Mr. Harper. Will you get that for us?

Ms. Barra. Yes.

Mr. Harper. Thank you very much. I yield back.

Mr. Murphy. Gentleman yields back.

Now recognize Ms. Castor for 5 minutes.

Ms. Castor. Thank you.

Natasha Weigel, age 18, was killed October 24th, 2006 while riding in a 2005 Chevy Cobalt. Sarah Troutwine, age, 19 was killed on June 12th, 2009, after losing control of her 2005 Chevy Cobalt, and Allen Ray Floyd, age 26, was killed on July 3rd, 2009 after losing control of his 2006 Chevy Cobalt.

I understand that Ms. Weigel's parents and Ms. Troutwine's family are in attendance at the hearing today. Others have been killed because of GM's defective ignition switch. The fact is, we do not know yet the full extent of the fatalities, injuries, and accidents. But evidence is growing through this investigation and that in the press and hopefully your own investigation, that the deaths could have been avoided if GM had addressed this issue long ago.

We know that GM knew about this problem as far back as 2001. The committee learned last week that the supplier of the faulty switch, Delphi, conducted tests, that year, 2001 which showed that the switch didn't meet GM's specifications. But GM used this switch in Cobalts and IONs and other vehicles anyway.

Ms. Barra, the committee sent you a letter about this issue. And documents were received yesterday that show that these inadequate switches were approved by GM in May 2002. I have a document here and it has been placed before you and it is at tab 54 in the binder as well. This document shows that the force required to turn the ignition switch was too low. That specification is clearly marked "not okay." Ms. Barra, does this document show that GM officials were aware that the ignition switch did not meet company standards in 2002?

Ms. Barra. If this document was provided to the engineers, again, that is something I will learn in our investigation.

Ms. Castor. Internally, GM knew there were problems. By 2004, they are considering ways to fix the problem by redesigning the faulty switch.

This document, which is also placed before you, this is at tab 8 in that notebook as well. From 2004, shows that GM did reject alternative designs. It mentions 1-year lead times and says, quote, the tooling costs and piece prices are too high. It concludes, "Thus none of the solutions represents an acceptable business case."

Other documents present the piece-cost increase for a potential solution as 57 cents per unit. Ms. Barra, do you know who at GM would have made the decision about whether to make this change in 2004?

Ms. Barra. Well, first of all, I find that decision unacceptable, as I have stated. If there is a safety defect, the cost is not the issue that we look at. We look at what is going to take the fix the problem and make the vehicle safe. As we go through our investigation, we will put all the pieces together of incidents and actions that were taken or not taken over a more than and decade period and make the appropriate process changes.

Ms. Castor. So, in retrospect, do you think that a repair cost of 57 cents was too costly for GM to undertake?

Ms. Barra. Again, if we are making a decision on safety, we don't even look at costs. We make the change.

Ms. Castor. But there was a major disconnect between what GM told the public and what it knew in private. In private, GM approved the switch that it knew it was defective, and then the company appeared to reject other changes because of cost of 57 cents per fix was too high a price to pay.

Now also in 2005, the New York Times ran a review in which the author wrote about his wife encountering a problem account Chevy Cobalt. He, quote, said, "She was driving on a freeway when the car just went dead. The only other thing besides a key on the ring was a remote control fob provided by GM. The GM spokesman at that time, Allen Adler, issued a statement saying, In rare cases, when a combination of factors is present, a Chevrolet Cobalt driver can cut power to the engine by inadvertently bumping the ignition key to the accessory or off position while the car is running. When this happens, the Cobalt is still controllable."

So I find it baffling that not only did GM know about this serious problem over a decade ago but that it was discussed on the pages of the New York Times. And when GM responded publicly, it essentially told drivers, no big deal. Engines cut off all the time.

When your engine suddenly cuts off when you are driving on the highway, would you consider this a safety issue?

Ms. Barra. Yes.

Ms. Castor. And you have indicated that you were not even aware that GM was investigating the Cobalts until December 2013; is that correct?

Ms. Barra. I was aware that there was analysis going on related to a Cobalt.

Ms. Castor. But at the time the New York Times wrote their report in 2005, what was your position?

Ms. Barra. In 2005, I believe I was in the manufacturing engineering organization of the company.

Ms. Castor. So you were a high-level executive at GM responsible for vehicle manufacturing?

Ms. Barra. The equipment that we use to build vehicles.

Ms. Castor. And one of the Nation's largest newspapers raised the issue in this important new vehicle launch for GM and you did not know about it at the time?

Ms. Barra. I don't have a recollection of that article.

Ms. Castor. Do you recall it being a concern for GM?

Ms. Barra. I was not aware that this was this issue until the recall was introduced on January 31st. I only knew at the end of December that there was an issue with the Cobalt. I did not know it was an ignition switch issue.

Ms. Castor. Thank you, Mr. Chairman.

Mr. Murphy. Thank you.

That concludes our members, but I would like to see if Mr. Terry of Nebraska, who is the subcommittee chairman of Commerce, Manufacturing, and Trade would have an opportunity for 5 minutes. Is there any objection.

Mr. Terry. Thank you.

Mr. Murphy. Without objection, you may proceed Mr. Terry.

Mr. Terry. Thank you.

I appreciate this. And I am sorry for being late, but my plane was canceled for mechanical reasons, probably an ignition switch. USAir.

So, getting back to NHTSA. And I chair the subcommittee over jurisdiction with NHTSA and the TREAD Act. And the TREAD Act clearly requires in the act manufacturers to inform NHTSA within 5 days of any, quote, "noncompliance or defects that create an unreasonable risk of safety."

Did GM at any time contact or notice NHTSA of any noncompliance or defects regarding the ignition switch?

Ms. Barra. That is something I hope to learn as we go through our investigation.

Mr. Terry. Okay. What is the difference between noncompliance and a defect?

Ms. Barra. It is a very broad question.

Mr. Terry. No. It is a very specific question.

Ms. Barra. I think it depends on the specific situation that you are talking about.

Mr. Terry. Regarding an ignition switch.

Ms. Barra. So your question is what is a noncompliant --

Mr. Terry. Yeah, a noncompliant ignition switch.

Ms. Barra. My understanding of when there is a noncompliance it is a very specific term used by NHTSA to standards.

Mr. Terry. Right.

Mr. Barra. But I can get you the specific definition of that, versus when we feel we have found a defect with one of our parts. That is my understanding.

Mr. Terry. And that is why it is "or." So when an ignition switch is substandard, it is noncompliant. And a defect, then, is a higher level. And I think that is what we are looking for here today, is to determine if there was, quote, unquote, a "defect."

Ms. Barra. Congressman, I think in the language that we use with NHTSA there is very specific definitions. And I would like to provide those to you as opposed too --

Mr. Terry. I can get the definitions from NHTSA. I am not asking you to do that.

Ms. Barra. You are asking a very specific question related to this, and I am trying to be truthful.

Mr. Terry. Okay. But just all right, I am not trying to beat up on you here, but just repeating back NHTSA's definition, I am asking specifically how it applies to the ignition switch. And NHTSA's going to testify there was no notice.

Ms. Barra. I am sorry, I didn't hear. NHTSA is going --

Mr. Terry. My understanding is that NHTSA said that GM did not contact them of noncompliance.

Ms. Barra. If I find through our investigation that we did not provide the appropriate information to NHTSA, that will be a very serious issue and we will take --

Mr. Terry. Okay.

Ms. Barra. -- appropriate action with the individuals involved.

Mr. Terry. All right, thank you.

I yield back.

Mr. Murphy. The gentleman yields back.

I think there are no further questions.

Although, Ms. DeGette, you had a clarifying question?

Ms. DeGette. I just had two questions, Mr. Chairman. Thank you.

The first one is, I have been sitting here thinking about these new ignition switches that you are putting into the recalled cars. They are based on the 2006 specs. But what you are saying, Ms. Barra, is that they are going to meet the highest safety standards when they are manufactured; is that right?

Ms. Barra. Our engineering team is going through extensive validation testing to make sure that they meet the requirements.

Ms. DeGette. And, on the component technical specification, it is tab 53 of your notebook, which was December 6, 2012, it says, The minimum torque required by the switch on the return side of the ignition switch, from crank to the run position must be 15 N-CM. So would that be the standard, then, since it says it must be that?

Ms. Barra. From the position of run to accessory?

Ms. DeGette. Yes.

Ms. Barra. Fifteen is the minimum. The spec is 20 plus --

Ms. GeGette. Right.

Ms. Barra. -- or minus five.

Ms. DeGette. But yeah okay.

And my final question is, I am impressed, this committee has had experience with Kenneth Feinberg before. Because he was appointed to help administer the fund that was set up by BP after

Deepwater Horizon, which was this committee's investigation. He was also appointed to administer the fund after the Boston Marathon terrorist attacks.

But I want to make sure that what you are doing when you hire him is you are really doing something. Because he is usually hired to sort out the value of people's claims. And then assign money. And I am assuming GM's hiring him to help identify the size of claims and then help compensate the victims; is that right? Is GM willing to put together some kind of a compensation fund for these victims that Mr. Feinberg will then administer? Is that why you have hired him?

Ms. Barra. We have hired Mr. Feinberg to help us assess the situation. We understand --

Ms. DeGette. So really there is no money involved in this at this point?

Ms. Barra. We have just hired him and will begin work with him on Friday.

Ms. DeGette. So really you hired him, you announced it today. But so far he has not being given any ability to compensate victims; is that what you are saying?

Ms. Barra. We are going to work with him to determine what the right course of action is.

Ms. DeGette. And might that include victim compensation here?

Ms. Barra. We haven't made any decisions on that yet.

Ms. DeGette. Okay.

Thank you so much, Mr. Chairman.

Mr. Murphy. Thank you, Ms. Barra. We thank you for your time today. GM has cooperated with this investigation, and we expect your company will continue to cooperate. Let me make a couple requests. One is, members will have other questions for you, and we hope that you respond to those within a timely manner. We also plan to conduct interviews, further interviews with General Motors officials and employees involved in the recalled part and maybe requesting more records. Will you make sure you make those available to us?

Ms. Barra. We will absolutely cooperate.

Mr. Murphy. Thank you.

And also on behalf of Chairman Upton and I, we would also like to be notified when you get your internal report and would like to discuss with you a chance to review that report as well.

Ms. Barra. We will notify you.

Mr. Murphy. Thank you very much.

I thank you, Ms. Barra. You will be dismissed.

But while this is taking place and waiting for Mr. Friedman to sit down, we are going to take a 5-minute break to allow Mr. Friedman to take his seat, and we will reconvene this hearing in 5 minutes. Thank you.

[Recess.]

Mr. Murphy. Thank you. This hearing of the Oversight and

Investigation Subcommittee on Energy and Commerce will now continue with our second witness.

Mr. David Friedman has served as an acting administrator of the National Highway Traffic Safety Administration since January 18th, 2014. He was sworn in as deputy administrator on May 15th, 2013. Before becoming NHTSA's, which is the National Highway Traffic Administration's, deputy administrator, Mr. Friedman worked for 12 years at the Union of Concerned Scientists as a Senior Engineer, Research Director, and as the Deputy Director of the Clean Vehicles Program.

I'll now swear in the witness.

Mr. Friedman, you are aware that the committee is holding an investigative hearing, and when doing so, has a practice of taking testimony under oath. Do you have any objections to testifying under oath?

Mr. Friedman. I do not.

Mr. Murphy. Thank you.

The chair then advises you under that under the rules of the House and the rules of the committee, you are entitled to be advised by counsel. Do you desire to be advised by counsel during your testimony today?

Mr. Friedman. I do not.

Mr. Murphy. In that case, would you please rise and raise your right hand.

[Witness sworn.]

Mr. Murphy. Let the record show the witness is now under oath and subject to the penalties set forth on Title 18, Section 1001 of the United States Code.

Mr. Friedman, you may now give a 5-minute summary of your written statement.

TESTIMONY OF DAVID FRIEDMAN, ACTING ADMINISTRATOR, NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION

Mr. Friedman. Chairman Murphy, Ranking Member DeGette, and members of the committee, thank you for the opportunity to testify before you today.

To begin, I would like to say that on behalf of everyone at NHTSA, we are deeply saddened by the lives lost in crashes involving the General Motors' ignition switch defect. The victims' families and friends some of whom I believe are here today, have suffered greatly, and I am deeply sorry for their loss.

Safety is NHTSA's top priority, and our employees go to work every day trying to prevent tragedies like these. Our work reducing dangerous behaviors behind the wheel, improving the safety of vehicles, and addressing safety defects has helped reduce highway fatalities to historic lows not seen since 1950.

In the case of the recently recalled General Motors vehicles, we are first, focused on ensuring that General Motors identifies all vehicles with a defective ignition switch, fixes the vehicles quickly, and is doing all it can to inform consumers on how to keep themselves safe.

We are also investigating whether General Motors met its responsibilities to report and address this defect as required under federal law. If it failed to do so, we will hold General Motors accountable, as we have in other cases over the last 5 years, which have led to record fines on automakers.

Internally at NHTSA and the department, we have already begun a review of our actions and assumptions in this case to further our ability to address potential defects. Today I will share what I have learned so far.

NHTSA used consumer complaints and early warning data, three special crash investigations on the Cobalt, industry websites, and agency expertise on airbag technology. Some of that information did raise concerns about airbag non-deployments. So in 2007, we convened an expert panel to review the data. Our consumer complaint data on injury crashes with airbag non-deployments showed that neither the Cobalt nor the ION stood out when compared to other vehicles.

The two special crash investigation reports we reviewed at the time were inconclusive on the cause of non-deployment. The reports noted that the airbags did not deploy and the power mode was in accessory. But these crashes involved unbelted occupants and off-road conditions that began with relatively small collisions where, by design, airbags are less likely to deploy in order to avoid doing more harm than good. Further, power loss is not uncommon in crashes where airbags deploy and did not stand out as a reason for non-deployment. In light of these factors, NHTSA did not launch a formal investigation.

We continued monitoring the data and in 2010 found that the related consumer complaint rate for the Cobalt had decreased by nearly half since the 2007 review. Based on our engineering expertise and our process, the data available to NHTSA at the time was not sufficient to warrant a formal investigation.

So what does all this mean? It means that NHTSA was concerned and engaged on this issue. This was a difficult case where we used tools and expertise that over the last decade have successfully resulted in 1,299 recalls, including 35 recalls on airbag non-deployments. These tools and expertise have served us well, and we will continue to rely on and improve them. For example, we have already invested in advanced computer tools to improve our ability to spot defects and trends, and we are planning to expand that effort. But what we know now, also means that we need to challenge our assumptions, we need to look at how we handle difficult cases like this going forward.

So we are looking to better understand how manufacturers deal with power loss and airbags. We are also considering ways to improve the use of crash investigations in identifying defects. We are reviewing ways to address what appear to be remote defect possibilities. And we are evaluating our approach to engaging manufacturers in all stages of our defects process. Between these efforts and those of the department's inspector general, I know that we will continue to improve our ability to identify vehicle defects and ensure that they are fixed.

But I want to close on one important note. Our ability to find defects also requires automakers to act in good faith and to provide information on time. General Motors has now provided new information definitively linking airbag non-deployment to faulty ignition switches. Identifying the parts change and indicating potentially critical supplier conversations on airbags. Had this information been available earlier, it would have likely changed NHTSA's approach to this issue. But let me be clear, both NHTSA and the auto industry as a whole must look to improve.

Mr. Chairman, Ranking Member DeGette, I greatly appreciate the opportunity to testify before you today. Thank you.

[The prepared statement of Mr. Friedman follows:]

******** INSERT 3-1 ********

Mr. Murphy. Thank you.

Now recognize myself for 5 minutes.

Now Mr. Friedman, with the understanding you just got in this position of acting administrator just a couple months ago. And for the last 12 years, you were involved in other groups that focused on green energy and fuel cell technology. We understand if you are unable or uncomfortable asking specific questions about automobile engineering and safety, you are more than welcome to ask someone else, some of your support staff behind you.

So, I wanted to find out how NHTSA is communicating to the public about this recall. And I believe I have a slide available, or I have a poster here. I went to your website to see what I could learn.

And do we have that image available about this? And what it shows -- this is all. This is all I could find on your website about the recall notice. No information about the broader recalls, about parts replacement, investigation, or anything. I can't even click on this. It simply says, get rid of your car key fobs. But there is nothing else a person could do.

Can you fix the website so people could use to it get more useful information, please?

Mr. Friedman. Congressman, if there is added information that should be on there to make sure that people can get to the information available on our website, we will take those steps. Right now, consumers can go to our website and get all of the details associated with this recall. If they go to that "search" button and select the 2005 Cobalt.

Mr. Murphy. Just to make it easier, because no one trusts government websites --

Mr. Friedman. -- links right there, sir, absolutely.

Mr. Murphy. In 2007, the chief of NHTSA's Defect Assessment Division proposed opening an investigation of airbag non-deployment to the Chevy Cobalts. Am I correct about that date?

Mr. Friedman. Yes.

Mr. Murphy. Now, if you turn to tab 19 in your binder, it is labeled as the DAD Panel for November 15, 2007.

This is the PowerPoint presentation made to the Defect Assessment Panel on November 15th. At Bates stamp 4474, those little numbers at the bottom of the page, the presentation states that there have been 29 complaints about the Cobalt airbags, four fatal crashes, and 14 field reports; is that correct?

Mr. Friedman. That sounds correct.

Mr. Murphy. At Bates stamp 4480, there is a chart of airbag warranty claims for Cobalt airbags as compared to other comparable vehicles. Do you agree that the number of warranty claims for Cobalt airbags is much higher than other cars?

Mr. Friedman. Congressman, Mr. Chairman, that is one of the issues that did raise concerns on our part. What that chart shows is warranty claims, some of which are likely associated with airbag non-deployments, some of which may also and are very likely to be associated with warning lights on airbags or other potential problems.

This is a gross look at the data, and important look at the data that is provided by our early warning data system that we use to decide whether or not we need to look further into one of these issues, which is what we did do in this case.

Mr. Murphy. But still NHTSA panel decided there was not a trend here and decided not to investigate, despite the number of complaints, the fatal crashes, and the warranty claims. Why was NHTSA convinced that an investigation was not warranted? I believe this happened on two occasions.

NHTSA decided twice, don't move forward with an investigation. What specific information did you have that said don't go forward?

Mr. Friedman. Mr. Chairman, when we look at these cases and when they looked at this case at the time, they look at the whole body of information. You can't just rely necessarily on one piece of information. The core pieces of information that they relied on in the determination there wasn't sufficient enough information.

First was an analysis of the complaints, the injury crash complaints associated with airbag non-deployment and the exposure, the number of those divided by the number of vehicles that were on the road and the number of years they were on the road. That gives you a sense of how large the problem is in comparison to other vehicles.

When the team did that comparison, the Cobalt did not stand out. It was a little bit above average, but there were several vehicles that were significantly higher, there were some vehicles that --

Mr. Murphy. I understand. But twice, employees of NHTSA, raised a red flag on this. It wasn't just once. A second time too they said something is not right here.

So I am wondering if you did something different when that occurred the second time in reviewing it.

And such as, did anybody ask questions of why an airbag doesn't deploy? I mean, I looked at the statements there and had a number of things about power losses or how much longer battery power would be involved on an airbag deployment in case of an accident.

But did anybody ask a question, was there anything else, any other reason why an airbag wouldn't deploy, within NHTSA? Did anybody ask those questions.

Mr. Friedman. Mr. Chairman, my understanding is folks were trying to understand why the airbags did not deploy. When they looked at the special crash investigations in 2007, as well as the data available, those special crash investigations were inconclusive. Why? Because they indicated that these crashes were happening in off-road conditions with unbelted occupants.

Mr. Murphy. I understand. I am looking at reasons why airbags wouldn't deploy. And so you were talking among yourselves, according to what we understand, the PowerPoints.

What specifically did NHTSA ask GM? For example, and this is very important: Did NHTSA raise a question with GM, tell us the reasons why an airbag would not deploy in one of your cars? Did you ask GM that question?

Mr. Friedman. I don't have a record of that. I know our team did bring up concerns over this case to General Motors in a meeting, but I don't have records of us asking that specific question.

Mr. Murphy. I mean, it is important, because you are saying GM didn't provide you information. But you are also saying you don't know if you asked them for the information. I mean, it is important for the families to know what happened and if this key government agency which is tasked with protecting the safety of the public. I just want to know if those kinds of questions get asked?

Mr. Friedman. Mr. Chairman, those kind of questions typically do get asked of the car companies when we move into the investigation phase.

What this phase and where this was, was a phase where concerns are raised and it is discussed whether or not there is sufficient information to move to the point of asking those questions of automakers. Roughly in these defects panels, roughly half of the cases that are brought up are brought into investigations, roughly half are not.

One of the things that we are looking at relative to this process going forward is, do we need to make any changes when it comes to how we present this information and when we present our concerns to automakers. I do believe that there are some changes that we can make to engage automakers earlier in the process to put them in the position of letting us know if our concerns are shared by them and if they --

Mr. Murphy. Certainly I know the family members would want to know in retrospect what would you change in this whole process. But I am out of time.

I now recognize Ms. DeGette for 5 minutes.

Ms. DeGette. Thank you, Mr. Chairman.

Mr. Friedman, NHTSA investigated airbag non-deployment. But as you talked about, it was never able to connect the dots between that problem and the defective ignition switch.

So what I want to know is, if NHTSA had the relevant information it needed to make a fully informed determination and what the agency believed about the connection between the ignition switch position and airbag non-deployment during the time of its special crash investigations?

In your written testimony, you know that when NHTSA was investigating the airbag non-deployment issue, the agency mistakenly believed based on GM's service literature that the airbags would function up to 60 seconds after the power cut off.

Why did NHTSA think that?

Mr. Friedman. Thank you, Ranking Member.

That knowledge was actually based on years of experience and previous experience with earlier airbags where there was actually a problem, where airbags would go off long after the vehicle was turned off.

Ms. DeGette. And --

Mr. Friedman. Airbag systems have capacitors in them, and those capacitors are designed to store energy, so that if power is lost, the airbag can still deploy. Because power is often lost some of these kinds of crashes.

Ms. DeGette. But that is based on the GM service literature or the agency's experience or both?

Mr. Friedman. That is a very important question.

Ms. DeGette. Right.

Mr. Friedman. My understanding is that was based on the agency's experience. My understanding is -- and I apologize if I was not clear enough in my testimony. We have since, after General Motors made this recall, found that service information that confirmed our understanding at the time, which was that airbags are designed to be powered when the power is lost. So a power loss would not typically stand out --

Ms. DeGette. So okay. So you were base -- so NHTSA was base -- you weren't there -- but NHTSA was basing its determination on its experience. How is that, then, that it failed to connect the dots between the airbag non-deployment problem and it ignition switch problem?

Mr. Friedman. I believe there is two situations here.

First of all, the information we had at the time indicated that, you know, there were two possibilities put in front us in one of the special crash investigation reports. One of them was that the ignition being off could have been a cause. Another one was that the circumstances of the crash could have been the cause.

In those two cases, the more likely scenario was that the circumstances of the crash were more likely to yield to the airbags not deploying.

Ms. DeGette. So you also said that GM had critical information that would have helped identify this defect that NHTSA didn't have. What information could GM have given you that the agency -- that would have helped identify the real problem?

Mr. Friedman. Well, I made that statement based on looking at the chronology that General Motors provided with this recall.

Ms. DeGette. Okay.

Mr. Friedman. And there were at least a few things, in that chronology that raised serious concerns for me.

Ms. DeGette. And what were those things?

Mr. Friedman. The first was that there was a change in part number relative to the ignition switch, and we were never informed of that change.

The second is that there were some conversations with suppliers about their control algorithm, the control systems for airbags. We were never informed of that conversation, to my knowledge. And we did not have the details on how those algorithms worked.

Third, and most importantly, General Motors created a direct connection in their recall between the airbag non-deployment and the ignition switch. If we had any of those pieces of information, I truly believe it would have changed the way NHTSA would have approached this.

Ms. DeGette. Now, if GM is changing a part, are they legally required to inform NHTSA of that change?

Mr. Friedman. It is not clear to me that that is a legal requirement. But I can get back to you to make sure.

Ms. DeGette. I would appreciate it. Because it seems to me that is critical.

Now, in your opening statement, you said that in order for NHTSA to be able to make a correct determination, you need all of the information, as you just said. And you need it company to be acting in good faith.

Based on what you know now, do you think that at the time that all of this was happening GM was acting in good faith towards the agency?

Mr. Friedman. Congresswoman, we have an open investigation to answer that exact question. And if we find out that they were not, we will hold them accountable.

Ms. DeGette. And I would hope that you would inform this committee, irrespective of your determination, whether they did or didn't.

Mr. Friedman. Absolutely.

Ms. DeGette. When do you expect to finish that investigation?

Mr. Friedman. I can't put an exact timeline on it. We are getting hundreds of thousands of documents from General Motors. The deadline is April 3rd for them to provide those documents. It is not clear that they will be able to provide all the documents at the time.

But we have been making sure that they are continuously producing documents so that we can understand. As soon as my team is able to find information in those documents that indicate that General Motors had information that they should have acted on sooner, we will determine how to move forward to hold General Motors accountable; or, if we don't find that information, then we will also let you know.

Ms. DeGette. Thank you.

Mr. Murphy. Gentlelady yields back.

With regard to Ms. DeGette's question about if there is a change in a part, do they need to notify you. Will you also let us know if they make a change in a part, do they also have to have a different part number? I don't know what NHTSA's requirements are on that. That is an issue. Just you can submit that for the record.

Mr. Friedman. I will go back to you to be clear.

Mr. Murphy. We also need to know what information you were reviewing with regard to these airbags, GM cars or specific to the Cobalt. And would you please provide that information to the committee.

Mr. Friedman. Mr. Chairman, I believe we provided a significant amount of documentation, but we will continue to do so.

Mr. Murphy. On this, we would like to know what you are viewing.

RPTS KERR

DCMN SECKMAN

[5:05 p.m.]

Mr. Murphy. Unless -- we would like to know what you are reviewing.

Now recognize the chairman of the full committee, Mr. Upton, 5 minutes.

The Chairman. Well, thank you, Mr. Chairman, and I just want to -- I know you are, as well as our committee, is literally, we are looking through boxes of information, thousands and thousands of pages. And that continues and looks like we will be getting some more down the road.

Well, as you know, I wrote the TREAD Act, which passed unanimously in the Congress. President Clinton signed it into law, and the whole point or a major point of that law was that NHTSA would in fact get the information that it needed to detect a trend as quickly as they could. So when NHTSA considered whether to investigate the Cobalt for an air bag defect back in 2007, the early warning data was one of the factors that was cited in the Defect Assessment Division's recommendation to investigate it, correct?

Mr. Friedman. That is correct.

The Chairman. So what was -- looking back, what is -- what is the problem? Did GM not report the information that the law required? Or was NHTSA unable to sort through the information that it had to find the problem or both?

Mr. Friedman. Congressman, we have an open investigation to determine whether or not General Motors failed in their responsibility to provide information, and we will definitely report to this committee the results of that effort.

In terms of what our team did. Our team looked at all the available information using the approach that we have used successfully to lead to over 1,299 recalls influenced by NHTSA over the last 10 years. We use that process to look into the early warning data, to look at the consumer complaint data, to look at special crash investigations, and a variety of other information.

We dug into that data. We analyzed it. We tried to see if there was a defect trend that stood out. The data didn't support that. It showed that the Cobalt did not stand out when it came to air bag nondeployments.

We looked at the special crash investigations. Those available at the time were inconclusive. This was a case where the team worked very hard to try to understand what was happening and wasn't able to see a significant enough trend or a clear enough defect.

What I am learning from this and where we have to go in the future is we need to look more carefully at remote defect possibilities. We need to reconsider the way we are using special crash investigations. We need to continue to invest in tools. We are already investing in computer tools basically grown out of the Watson IBM software to be able to more effectively, more efficiently use our resources to spot trends. We've got to put all these tools forward, and we've got to look for opportunities to make changes, look in better spots that --

The Chairman. So, as you look to embark on an investigation, do you consider the number of deaths? I mean, is there some trigger that you use to warn further exploration, whether it is 1 death, 4 deaths, 10 deaths, 20, 100, I mean, is there some type of standard equation that you put into place?

Mr. Friedman. Congressman, there is not. Our goal, what I would love to be able to do is to find each and every one of these defects before there's a single death. It is the manufacturer's responsibility to be reporting all of these defects and getting them fixed. When they do not, it is our job to try to find them. We don't have a simple rule-of-thumb because each case is different. In some cases, we have opened investigations after one incident where it was clear that it was a defect. In other cases, we have had to rely on the trend data that indicates that this stands out. I can't give you a specific --

The Chairman. So let's play Monday morning quarterback. So, today is April 1st, 2014. These problems arose over the last 10 years. What would you have liked to have had on your platter from GM specifically in terms of information today that you didn't have in the last 8 or 10 years?

Mr. Friedman. Well, at a minimum, what I can tell you, based on their chronology, I would have liked to have had information that they had changed the parts on the ignition switch. I would have liked to have had information that they were talking to their suppliers, because they appear to have had concerns about the algorithm associated with air bag nondeployments. I would have certainly liked to have any information they had directly linking the ignition switch defect to air bag nondeployments. As we go through our investigation, I should be able to come back to you and let you know if there is additional information they should have had --

The Chairman. And are you pretty certain that today that they did not provide that information to you?

Mr. Friedman. It is my understanding that none of that information was available. We are continuing our efforts to try to make sure that we understand what happened, so I can't say that I can give you a comprehensive and definitive answer, but my understanding at this point is that, no, we did not have that information.

The Chairman. I know Mr. Long wanted my last 15 seconds, so I -- that is now gone.

I yield back.

Mr. Long. Thank you, Mr. Chairman.

I will have my friend Mr. Terry here assist me, and the chairman of the committee here -- subcommittee showed you this picture awhile ago and said he couldn't navigate past this page, and you said that if any new information became available to you, that you would get that on the Web site.

Something we learned in the first hearing that I think is very germane is that if you will take your car to General Motors, they will give you a loaner at no cost or a rental car at no cost. I would call that very germane. I would call it critical, and if somebody has got an 2005, 2006, 2007, I think it would be enticing to drive a 2014 for a little while they repair your car, so that would be a suggestion to put on there.

I yield back.

Mr. Murphy. Thank you.

I might note to the gentleman, I received a call from one of my constituents who said he has tried to get a loaner car, and the dealer told him he couldn't have one, too.

Ms. DeGette. One more thing, too, you could put on there is take all your keys off the key ring except for the ignition key. That is the other thing Ms. Barra said. Is that on there?

Mr. Friedman. I believe that is very clearly on there. In fact, just to be clear, the reason why we did that is because safety is our top priority. We are all focused on investigating this case, but safety, safety is our top priority, which is why the first thing I wanted people to see when they came to that Web site was how to keep themselves safe. So I do just want to be clear, that is why we have that limited information there because I didn't want anyone out there who came to our Web site not to understand the steps how to keep themselves safe. I agree it is a good idea to put on there -- I will have to see if we can fit it in the space we've got, or if there is another way to point people to it, but I agree it is a good idea to let them know that --

Mr. Murphy. People need to know if it is safe to drive their current cars.

Mr. Dingell, you are now recognized for 5 minutes.

Mr. Dingell. Mr. Chairman, I thank you.

Mr. Friedman, let's look at NHTSA's internal decisionmaking processes. These questions will require a yes or no answer.

Is it correct that contractors for NHTSA's special crash investigations program conducted three separate investigations of Chevy Cobalt in 2005, 2006, and 2009 related to air bag nondeployment?

Mr. Friedman. Yes, that is correct

Mr. Dingell. Now, is it correct that NHTSA's Office of Defects Investigation reviews early warning reporting data and consumer complaints in deciding whether to open a formal defect investigation?

Mr. Friedman. Yes, those are parts of the process.

Mr. Dingell. Now, is it correct that GM submitted EWR data to NHTSA concerning Chevrolet Cobalts, subject to NHTSA's 2005 and 2006 special crash investigation? Yes, or no.

Mr. Friedman. I'm sorry, sir. Could you repeat that, please?

Mr. Dingell. I'll give it to you again. Is it correct that GM submitted EWR data to NHTSA concerning Chevrolet Cobalt, subject to NHTSA's 2005 and 2006 special crash investigation?

Mr. Friedman. Yes, that's correct. Those are important bits of our investigation.

Mr. Dingell. Now, is it correct that the Office of Defects Investigation, ODI, follows a multistep process in order to determine whether a defect exists in the vehicle? Yes or no.

Mr. Friedman. Yes

Mr. Dingell. Now, and that process includes an initial evaluation, a preliminary evaluation, and an engineering analysis. Is that correct?

Mr. Friedman. Yes, that is the standard process, but we will act earlier in that stage if we have compelling information that there's a defect. We do not wait necessarily to go through that whole process if we have sufficient information to act on.

Mr. Dingell. All right. Now, let's clarify something. NHTSA's Special Crash Investigation program is something separate and distinct from the formal ODI investigations process. Is that correct?

Mr. Friedman. That is correct

Mr. Dingell. Now, is it correct that the Office of Defects Investigation convened an initial evaluation panel in 2007 to investigate the nondeployment of air bags in the 2003, 2006 Chevy Cobalts and Ions, yes or no?

Mr. Friedman. That is correct

Mr. Dingell. Now, is it correct that the review was prompted by 29 consumer complaints, 4 fatal crashes, and 14 field reports?

Mr. Friedman. That was one of the reasons for the review. The additional --

Mr. Dingell. What were the other reasons?

Mr. Friedman. In addition, we were looking at consumer complaints. Those complaints raised concerns as well, and I can get back to you on the record with each of the pieces of information that were involved, but we do have a memo that was provided when this -- when it was proposed to potentially move this to a defect that lays out early warning data, consumer complaint data concern on the record, special crash investigation --

Mr. Dingell. Would you submit that for the record, please?

Mr. Friedman. Yes.

Mr. Dingell. Now, were there other things that triggered this review?

Mr. Friedman. My understanding is it was all the items in that memo was the information that triggered this review.

Mr. Dingell. So there weren't other things.

Now, is it correct that ODI decided not to elevate that review to a more formal investigation because there was a lack of discernible trend, yes or no?

Mr. Friedman. Yes, that was one of the reasons.

Mr. Dingell. What were the other reasons?

Mr. Friedman. The other reason is that the crash investigation information we had was inconclusive and did not -- was not able to point to a specific defect.

Mr. Dingell. All right. Now, to be clear, at the time of the 2000 initial evaluation, NHTSA had concluded that the Chevy Cobalt was not over representative compared to other peer vehicles with respect to injury crash incident rates. Is that correct?

Mr. Friedman. That's correct.

Mr. Dingell. Is there any other reason?

Mr. Friedman. Was there any -- the other --

Mr. Dingell. Was there any other reason that you came to that conclusion?

Mr. Friedman. In 2007.

Mr. Dingell. Now, also to be clear, NHTSA did not have information at the time of the 2007 investigation that, for example, linked air bag nondeployment to ignition switch position. Is that correct?

Mr. Friedman. We do not have any specific information that provided a direct link.

Mr. Dingell. So you are agreeing?

Mr. Friedman. I believe so.

Mr. Dingell. Okay. Now, Mr. Chairman, I am troubled here.

It appears that we have a flaw in NHTSA's decisionmaking process which is related to defects and their inquiries into defects. I fully recognize, and I am like most of the members of this committee, I think, critical of the fact that NHTSA is short staffed and underfunded. At the same time, I am compelled to agree with Acting Administrator Friedman that Congress may need to examine the usual -- use of special crash investigations in the defect screening process, how best to get NHTSA the information it needs for that process, and how best to engage manufacturers around issue evaluations. In so doing, I think we will help to better ensure the safety of American motorists and their families.

And I yield back the balance of my time.

Mr. Murphy. The gentleman yields back.

Now recognize Dr. Gingrey from Georgia for 5 minutes.

Dr. Gingrey. Mr. Chairman, thank you.

Mr. Friedman, in your written testimony, you suggested that NHTSA, your agency, did not pursue investigations into the issues with Cobalts and Ions because they were unaware of information developed by General Motors. In the years leading up to this recall, has NHTSA had any concerns with General Motors' responsiveness or lack thereof to safety defects and concerns?

Mr. Friedman. Congressman, I would like to get back to you on the record with that just to defer.

Dr. Gingrey. Let me do this. You may not have to do that. Just look at tab 34. It is right there in front of you. In

July 2013, the head of ODI emailed General Motors with a number of concerns. It is the second page, bottom of the second page, sent to Carmen. You see you where I am -- you with me?

Mr. Friedman. I have not seen this before, but yes, I see it.

Dr. Gingrey. Okay. You want to read that first paragraph and then look -- look up and I will know that you have read it?

Mr. Friedman. Yes

Dr. Gingrey. He stated, The general perception is that General Motors is slow to communicate, slow to act and, at times, requires additional efforts of ODI that we do not feel is necessary with some of your peers. You read that, didn't you?

Mr. Friedman. Yes

Dr. Gingrey. Were you aware of the concerns raised by ODI, and I guess that was July 2013?

Mr. Friedman. I was not aware of this specific email, but I have been in at least one meeting where we sat down with General Motors and made clear to them that they needed to make sure that they were following an effective process when it came to their recalls.

Dr. Gingrey. So there was definitely some concern.

Mr. Friedman. Well, we -- with each and every automaker, we need to make sure that they have a good and effective process to quickly deal with this. This email clearly indicates some very specific concerns.

Dr. Gingrey. Did the agency have similar concerns in 2007, 2010, when it declined to advance any investigations into nondeployment of air bags in these GM vehicles?

Mr. Friedman. I don't know

Dr. Gingrey. You weren't with NHTSA at the time?

Mr. Friedman. No. I joined NHTSA back last year, I have been there for almost a year now.

Dr. Gingrey. Do you think NHTSA did enough to get the information that it needed?

Mr. Friedman. I believe in this case that the team looked very clearly and very carefully at the data. I believe that the reason why we didn't move forward was because the data indicated that the Cobalts didn't stand out and that we didn't have conclusive -- we didn't have conclusive information as to a very specific intent.

Dr. Gingrey. Well, you know, in 2005, GM issued this technical services bulletin -- and that's tab 12, if you want to flip quickly to tab 12 of your document binder -- this technical service bulletin to its dealers, and it recommended a solution for complaints of this inadvertent key turn due to the low torque, particularly by these Chevrolet Cobalts. The technical services bulletin instructed the dealers exactly what to do to provide an insert that converted a key from a slot design to a hold design. I don't know exactly what that means, but they do. General Motors believed that this would help reduce the force exerted on the ignition while driving from maybe shaking of the keys or bumping it with your knee.

In 2006, the technical services bulletin was expanded to include additional make and model years. Unfortunately, in the case of this young girl, 29-year old Brooke Melton, a nurse from my congressional district that was killed the day after she took her car in, saying, Hey, this engine is cutting off for no reason. And, you know, I know they must have gotten the technical service bulletin about this issue, but all they did was clean out a fuel line, gave her the car the next day, and led her to her death.

Administrator Friedman, yes or no, was NHTSA aware of General Motors' 2005, 2006 technical services bulletins related to low ignition key cylinder torque effect?

Mr. Friedman. Mr. Gingrey, first, if I may, Brooke's death was a tragedy. And it's a tragedy that we work each and every day to avoid. I do believe we were aware, as part of our efforts and as part of the special crash investigation, that we were aware of that technical service bulletin. At the time, that technical service bulletin would not have been seen as being associated with air bag nondeployment.

Dr. Gingrey. Yeah. Listen, I believe you, Mr. Friedman, I believe you, and you know, obviously, when people are driving impaired or texting or emailing or whatever, and you know, they don't change the oil when they should and their tires are low and the brakes are worn out, you know, there's some responsibility, some personal responsibility. But when they're doing everything the right way and they take their car in, and you know, they think that -- they trust the service department of the local dealership and they get a situation like this, I mean, you can understand why -- she's gone, but her parents, obviously -- and all these parents, these families are just irate because the expectation, if they're doing the right thing, they ought to be safe.

Mr. Friedman. Congressman, I completely understand, and I would actually argue that consumers should expect that their cars should function as they're designed no matter the cause of the crash.

Dr. Gingrey. Absolutely. Thank you, Mr. Friedman.

I yield back.

Mr. Murphy. I venture to say that they would assume the car keys don't have to be monitored --

Mr. Friedman. Correct.

Mr. Murphy. -- and checked.

Mr. Murphy. Mr. Green, you are recognized for 5 minutes.

Mr. Green. Thank you, Mr. Chairman.

Mr. Friedman, thank you for appearing today. NHTSA has a central role for consumer safety, and I would like to understand better how long it took for NHTSA to identify this fault. In your opinion, how did NHTSA not identify the deadly trend.

Mr. Friedman. Congressman, when our team looked at the data, the trend did not -- there was not a trend that stuck out. In fact, when it came to air bag nondeployments, the Cobalt was not an outlier.

Mr. Green. Was it -- was GM forthcoming with their data?

Mr. Friedman. Well, that's the exact question and that's the exact reason why we have an open investigation to them. I do have concerns about the parts change, about conversations they had with suppliers, and any of their information they may have had, which is exactly why we opened up an investigation to them, and if they did not follow the law in their requirements to get information to us and to respond quickly, we're going to hold them accountable as we have with many other automakers.

Mr. Green. Okay. Earlier this month, the New York Times reported on NHTSA's response to the consumer complaints over the years about ignition switch issues used for the recalled vehicles. According to the Times, many of the complaints detailed frightening scenes which moving cars suddenly stalled at high speeds on highways, in the middle of city traffic and while crossing railroad tracks. A number of the complaints warned of catastrophic consequences if something was not done. NHTSA received more than 260 of these consumer complaints over the past 11 years about GM vehicles suddenly turning off while driving, but it never once opened an effective investigation with the ignition issue -- switch issue. If consumers submitted these complaints to NHTSA, many were met with a quote of just silence.

Mr. Friedman, Mary Ruddy's daughter died in a crash involving a 2005 Cobalt. Ms. Ruddy has repeatedly tried to contact NHTSA for information but has only received form letters. She told the New York Times that, quote, I just want to hear -- someone to hear from me. We've had no closure. We still have no answers. Ms. Ruddy was -- I don't know if she's still here today, but she was in the audience. Has NHTSA been in contact with Ms. Ruddy?

Mr. Friedman. Mr. Congressman, my understanding of what happened with Ms. Ruddy -- well, first of all, Ms. Ruddy deserves answers, and that is exactly why we are looking into what GM did. That is exactly why we are making sure we understand what happened. What she has been through, it is a tragedy, and we've got to work to make sure that those don't happen again.

In terms of my understanding of Ms. Ruddy's contacts with NHTSA, those contacts were made through our complaint system. In those complaint systems, as we do note on the Web site, we do not necessarily respond to all of those complaints because what we are doing with those complaints is we are looking for potential problems, and if those complaints don't contain sufficient information, if we have questions about them, we do follow up with consumers. But if they have the information we need, we do not, because the goal of those complaint databases is to try to find problems.

In this case, my understanding is Ms. Ruddy provided those complaints after being notified of a recall that NHTSA did influence. We got the Cobalt recalled.

Mr. Green. I only have 5 minutes, but do you -- did NHTSA really receive 260 consumer complaints over 11 years about this automatic shutdown of your engines?

Mr. Friedman. I don't have that exact number, but what I do know is that at NHTSA, we -- human eyes look at every single one of these complaints to try to find out if there is something that stands out. My understanding of the complaints you are referencing are that they were for stalls and that only a very small number of them were related to air bag nondeployments. What we were looking for --

Mr. Green. I know but 260 complaints on the car stopping.

Mr. Friedman. Right.

Mr. Green. On the freeway or wherever it's at. I don't know if that is a high number or a low number over, you know, 11 years, but you might need to have somebody or who actually looks at complaints, and I assume they come from different parts of the country, so somebody identifies and said, Hey, we need to focus on these 260 complaints.

Mr. Friedman. Congressman, in this case, a human eye looked at each and every one of those, and whether that's a large or a small number based on the analysis that I've seen relative to the number of Cobalts that were out on the road, that was not a very large number compared to a lot of the other stall complaints that do happen for a variety of other vehicles that are out there.

Mr. Green. Well, you told me about how NHTSA responds to consumer complaints, but it seems like in this case, NHTSA might look at how they respond to consumer complaints much better because I know as a Member of Congress, believe me, if we don't respond to emails and letters, we will hear about it, and if I get a number of emails on a certain subject, you know, we obviously respond to it.

So, Mr. Chairman, I know I'm almost out of time, and thank you for your courtesy.

Mr. Murphy. The gentleman yields back.

I now recognize the gentleman from Louisiana, Mr. Scalise, for 5 minutes

Mr. Scalise. Thank you, Mr. Chairman.

And Mr. Friedman, thank you for being with us and participating in this investigative hearing as well. I know earlier you had talked about the decision back in 2007 when the chief of Defect Assessment Division at your agency had suggested opening an investigation and then ultimately, some time after, it was decided not to open that investigation. When was the decision made not to open the investigation?

Mr. Friedman. That was also made in 2007, and basically what the chief of the defect investment -- sorry, Defects Assessment Division was doing was exactly what his job requires him to do. He is supposed to look for potential defect cases and bring those up to a panel where those are considered, where a broad set of evidence is considered.

Mr. Scalise. Is that the trends in relation to peers, i that's the language that you all were using when you're looking at, I guess, similar cars that were having similar problems with air bags?

Mr. Friedman. That's one of the pieces of information that's used as well as crash investigations and other EWR data that is involved. About half of those that are brought up do not end up going to investigation, but we have designed our system to make sure that we have at least two teams always looking for potential problems. The Defects Assessment Division is always looking for potential problems and raising that question. That's what --

Mr. Scalise. And then I'd be curious to get the information that you got within NHTSA that helped make that decision not to move forward with the investigation between September 2007, when the Defect Assessment Division decided -- that suggested to go forward, and then when you subsequently, your agency subsequently decide not to because when you look at this chart we got from 2007, the Cobalt versus Peer crash rate, there is a chart, and you've got the other peers and you've got some fairly static numbers and then you've got the spike here in what's called exposure rate per population that seems to spike with the Cobalt, and so if -- if the internal decisionmaking was that they were similar to their peers, it doesn't seem to mesh from this chart from 2007. So if you can get me or get the committee whatever information you have on what decisionmaking went into NHTSA's final call to reject what was a warning or so from internal -- the Defect Assessment Division, and can you get us that information?

Mr. Friedman. Well, I believe we provided that information to the committee already, but if there is additional information, I'll make sure committee has --

Mr. Scalise. And were you all --

Mr. Friedman. I'm sorry, sir

Mr. Scalise. You had something else you wanted to add to that?

Mr. Friedman. Thank you, yes, I apologize. I just wanted to make clear about what the data shows. I believe you're referring to this chart. The bars here represent the defect, the potential defect, or really the complaint rate, and what you'll see with these bars is they're not spiking, they're not standing out in comparison to these others. The average is here, and they're just above average

Mr. Scalise. The blue line there on your chart

Mr. Friedman. Right. And that's what I was wondering if you were pointing to. The blue line is the volume of -- I believe that's the volume of reports. No, that's the volume of sales, so that indicates how many vehicles were sold, but the complaint rate that's the important data that we're looking at are the bars.

Mr. Scalise. Okay. Did you take action on any of those other cars that are identified in that chart?

Mr. Friedman. In some cases, we took action. In some cases, we did not.

Mr. Scalise. So in some, you did. If you can get us -- again, if you can get the committee the list of those cars where you did take action because clearly you made the choice not to take action in the case of the Cobalt, so we appreciate if you can get us that.

I do want to ask a few other questions because in your testimony, you'd made a few, I don't know if you'd call them accusations, but I guess you could call them that. I mean, here you're saying we're pursuing an investigation of whether GM met its timeliness responsibilities to report and address this defect under Federal law. I know you addressed this a little bit earlier, but if you've got any specifics that you're referring to when you make that statement, can you get that to the committee?

Mr. Friedman. Yeah. Well, the specifics, I believe, are in my testimony that there are three things that I am concerned about based on their chronology. First and foremost is that they have identified that there's a link between the ignition switch and air bag nondeployment. Second is that they changed the part. And third is they appear to have had conversations with their suppliers about the air bag algorithm in relationship to the key --

Mr. Scalise. Final question, and I know I am out time, GM had -- this is your statement: GM had critical information that would have helped identify this defect. Have you gotten our staff that critical information already that you feel GM had that would have helped identify this defect?

Mr. Friedman. So that information is the information that was referred to in General Motors' chronology. I believe the committee has asked for all that information.

Mr. Scalise. So we don't yet have that, as far as you know?

Mr. Friedman. I am not aware of exactly what documents you do or don't have, but if you don't have that information --

Mr. Scalise. If you can make sure we get that information if you have it.

Mr. Friedman. I also just wanted to clarify. We don't only look for trends. If there is a clear defect, we move forward into the investigation as well, so on -- I don't know the answer but on some of these cases, there may have not been as large of a trend, but if there was a clear defect, we would have investigated this --

Mr. Scalise. Thanks for your testimony.

And I yield back the balance of my time, Mr. Chairman.

Mr. Murphy. I just want to make sure, so we're very clear on this, when he's referring to the information given this committee, if you could highlight very specifically the information you did not have that GM later gave you that would have changed your decision, you make sure the committee has that. I mean, I know you said it was a parts switch, and that's what we have.

Mr. Friedman. Well, so, what I'm referring to, and I can highlight it in GM's chronology, is I'm referring to specific items that are identified in General Motors' chronology that brought concerns. We are getting that information from General Motors.

Mr. Murphy. Thank you.

I now recognize the gentlewoman from Florida, Ms. Castor, for 5 minutes.

Ms. Castor. Thank you, Mr. Chairman.

Administrator Friedman, GM has confirmed that it knew as early as 2001 that its ignition switches contained defects. And by 2004, GM had a body of consumer complaints that raised enough questions for them to open an internal engineering inquiry of the switches. Meanwhile, the National Highway Traffic Safety Administration, your agency, was beginning to receive its own body of consumer complaints of cars stalling and ignition switch failures, and in 2005, as your agency was monitoring air bag nondeployment issues, its special crash investigation of a 2005 Cobalt found that the ignition switch was in the accessory position when the air bags did not deploy. You said, At this point, it was not clear to the Highway Traffic Safety Administration what was happening.

But then information came out subsequently that you can tell us, should this have pointed NHTSA in the right direction, in 2007 agency investigated a second crash of a 2005 Cobalt where the air bags did not deploy, I think you said, At this point, it still, it did not stick out. And you've testified that you didn't see trends.

The crash report found that the nondeployment could be the result of, quote, "power loss due to movement of the ignition switch just prior to impact." But at this point, GM was also providing your agency with early warning reports in the third quarter of 2005, the fourth quarter of 2006, in addition to the crash -- special crash investigation, so we're all trying to figure out how it took so long for these defective ignition switches to trigger a recall at GM and then raise red flags at NHTSA and how the Highway Traffic Safety Administration could have noticed this issue sooner if GM had been more forthcoming.

So the committee's investigation has revealed that GM approved switches for these cars that did not meet the company specifications in 2002 and again in 2006. Did GM ever inform the Highway Traffic Safety Administration of this fact?

Mr. Friedman. Of which specific fact? I apologize.

Ms. Castor. That they -- that the ignition switches did not meet the company specifications?

Mr. Friedman. It's my understanding that we did not have that information.

Ms. Castor. Okay. The supplemental memo released this morning by the committee staff also revealed that GM had over 130 warranty claims on the recalled vehicles that specifically referred to problems with the ignition switch turning off -- turning the car off when going over bumps or when drivers accidentally hit the key with their knee or leg. Is it true that GM provides -- provided early -- in their early warning reports aggregate data of the warranty information but not the specific warranty claims listed by -- one by one in the comments from consumers?

Mr. Friedman. What all car companies provide are aggregate numbers associated with warranties, and so we don't know when we get those counts what the reason for those warranties could be. For example, on the air bag side, I believe I mentioned before, you know, the complaints could be because the air bag light was going off when they thought it shouldn't or because the passenger sensor was not working. So, we don't -- when we have that count, we do not have the information as to the detail of exactly what each and every one of those warranty claims is.

Ms. Castor. So if GM had shared the specific warranty claims, would that have been helpful to your agency?

Mr. Friedman. The specific warranty claims I believe you're speaking of are related to the ignition switch itself?

Ms. Castor. Yes, the 130 that have now come out due to the committee investigation.

Mr. Friedman. And my honest answer is I don't know, and that is in part because what -- at the time, we did not have the information we now have for General Motors directly connecting the ignition switch to the air bag recalls.

Ms. Castor. So the state of the law currently is that in early warning reports on any type of vehicle problem, the car companies do not have to provide you the specific warranty claims?

Mr. Friedman. I believe that's the case.

Ms. Castor. They can give you a summary in general?

Mr. Friedman. Yes, I believe that's the case.

Ms. Castor. And that's true whether it is a warranty problem with the radio or a warranty problem that could be a serious safety defect?

Mr. Friedman. I believe that's correct

Ms. Castor. Is that -- do you think it's time to look at the law if the -- if they're -- if a car company has so many -- you know, here, 130 warranty claims that are specific and they relate to a serious safety defect, do you think that would be helpful to your agency, maybe change the law and say when a car company becomes aware that they have so many of these serious safety defects, they have to provide you the specific warranty complaints from the consumer?

Mr. Friedman. Congresswoman, I have to look at the exact data before I would be able to tell you whether or not it would be valuable, but what I will --

Ms. Castor. But certainly if a company had gathered a critical mass of serious safety defect complaints, that would be helpful --

Mr. Friedman. Well --

Ms. Castor. -- correct?

Mr. Friedman. -- if they have information regarding a defect, I believe that information they would, without a doubt, have to provide to us. I believe the information --

Ms. Castor. But the law does not require that currently?

Mr. Friedman. Well, if they have information about a defect, I believe the law does. I believe what you're referring to are warranty claims, which may or may not be associated with a defect.

Ms. Castor. Okay. Well, I think this is an important issue for the committee to look at. There might be some new line drawing or directions on what these early warning reports and if there is serious safety information that they've -- a car company has -- has gleaned through their own internal investigation, it really needs to be provided to the agency.

Mr. Murphy. Thank you.

Mr. Friedman. And Congressman -- Chairman --

Mr. Murphy. Now recognize Dr. Burgess for 5 minutes. Thank you.

Dr. Burgess. Thank you, Mr. Chairman.

Thank you, Mr. Friedman, for being here with us. It's been a long afternoon. Now, your testimony, I think you stated that, in 2007 and 2010, there was not enough evidence to conduct a formal investigation into General Motors' Chevrolet Cobalt, despite the number of complaints and four fatal crashes that had already shown up, but in 2012, your agency, the National Highway Traffic Safety

Administration opened an investigation into an air bag problem that some Hyundai models -- my understanding is this was based on a single complaint, and that is okay. I think the air bag nondeployment is a serious issue, but why wasn't it a serious issue when the complaints were coming in about the Cobalt? Given the fact that you initiated the investigation with much less evidence in the case of Hyundai, how can you -- how can you assert that there was not enough evidence to proceed with General Motors' case?

Mr. Friedman. Congressman, safety is our priority, and air bag nondeployments is a serious issue and we treat them very, very seriously. I would have to get back to you on specifics of the Hyundai case, but it goes back to one of the points I made before, which is we are looking for two potential things. The best thing and the easiest ability -- the best thing to be able to find and the clearest thing to be able find is when there's an obvious indication of a defect. All it takes is one if that's clear.

Dr. Burgess. Yeah. And I agree completely, and I don't know -- I mean, you were not here when the CEO testified when we posed questions. One of questions I posed was for the accident that occurred in Maryland in July of 2005 where a Chevy Cobalt went down a street that ended in a cul-de-sac, maybe was driving too fast, a lot of problems that night, but the air bag didn't deploy when the car impacted some trees. And it was a pretty serious impact. In fact, it was so serious that the driver was then pushed up, compressed against the steering wheel with such force, I mean, she only weighed 106 pounds, and she broke the rim off the steering wheel, and that's a massive amount of force for a little 106-pound body to exhibit. So the air bag didn't deploy, and you know, I got your report here that it was in fact investigated in December of 2006, but that's a big deal that that air bag didn't deploy.

Different from all of the other accidents that we were given information about, because of the nature of this person's injuries, because of the cause of her demise, I can't tell you that the air bag would have saved her life, but I know, without the air bag, there was no chance at all, and of course, that was proven that night. But an air bag might have made a difference because the steering wheel that she broke off actually compressed against the upper dome, just below the diaphragm, below the rib cage, and lacerated the liver, and over the course of the next hour and 45 minutes, small woman, small blood volume, she bled out. I mean, an air bag might have made a big difference that night.

Now, contrasting that with another accident that occurred in Pennsylvania in 2009, where there was a head-on collision between a Hyundai and a Cobalt, and as I pointed out to the GM CEO, the Cobalt was not at fault, and that is, the driver of the Cobalt was not at fault. The Hyundai came over the center line, and there was a head-on collision. Closing speed was probably close to 100 miles an hour when you add the two speeds of the automobiles together. Everyone who was in the front seat of those vehicles died, but the Cobalt air bag did not deploy. The Hyundai did. Now, unfortunately, it didn't make any difference as to the overall fatality of that accident, but here you've got a side-by-side, identical speeds with which the impact occurred, the deceleration forces were identical in both automobiles. Hyundai deploys, Cobalt doesn't, this is a problem. Don't you agree?

Mr. Friedman. Congressman, when air bags don't deploy, that's a serious issue. There's also a serious issue sometimes when air bags do deploy. Over 200 people died because air bags, earlier air bags, deployed when they shouldn't have or deployed too strongly when they shouldn't have. Part of the challenge with all this, part of the reason why this information ended up not being conclusive for us is because air bags are designed, even in some difficult crashes, to not go off because that's the safest thing, that's the best way to avoid potential harm.

Dr. Burgess. Sir, in all due respect, I cannot imagine -- and I'm not an engineer, and I'm not lawyer, but I cannot imagine any circumstance where impacting an oak tree at 70 miles an hour or a head-on collision at 45 miles per hour per vehicle would not be a situation where you did not want the deployment of the air bag. I can't think of a single reason why the air bag deploying would add to the lethality of that accident sequence.

Mr. Friedman. Congressman, I completely understand why -- why you have -- why you feel that and why you have that impression. In the case of the 2005 crash and in general with these air bags, if you have an unbelted occupant and a small strike first, the risk at play here is that the occupant may be moving forward during that crash. If you're moving forward during that crash and the air bag is opening, yes, it actually could cause more harm than good. When the air bag is -- system is trying to decide whether or not to deploy --

Dr. Burgess. It couldn't have possibly done more harm that night. I would just submit that first impact was with a 5-inch pine tree, and although the pine tree yielded to the Cobalt, it was still a pretty significant impact when that happened.

Thank you, Mr. Chairman. I will yield back.

Mr. Murphy. The gentleman's time is expired.

I will now recognize Mr. Barton for 5 minutes.

Mr. Barton. Thank you. And I want to apologize to the other recall members that are still here. I have been watching the hearing as I've been doing meetings, but I apologize for not being here physically to go ahead of some of you folks, and having said that, I'm going to go ahead.

I have listened to most of what you said today on the television, and I think it's obvious that GM has some real questions that they've not done a very good answering today, but I also think, as the Federal regulator on the block, there are some valid questions for your agency to answer. My first question is, at what level of accidents or deaths or incidents of malfunction triggers more than normal NHTSA review, not necessarily a full fledged investigation, but in this case, we, in hindsight, have got 13 deaths that we feel are attributable to this ignition problem over a 10-year period. I don't know how many accidents, how many injuries, but you know, when would NHTSA really start looking at something and say, you know, there's an anomaly here, we need to check it out?

Mr. Friedman. Congressman, first, I appreciate your question, and you know, part of what you started with is there are important questions that NHTSA has to answer in addition to General Motors, and I think this is an incredibly important process because we have questions, you have questions. What we need -- what my focus is in addition to the recall is making sure NHTSA does everything we can to improve the way we deal with these cases.

When it comes to your question about, is there a specific level? Each case ends up being different. Ideally, what I would like to have happen, is that we find any -- first, that automakers find and fix these defects right away. If they don't, ideally, I want to find and fix these defects --

Mr. Barton. But there is some internal reporting system or monitoring system and like if a specific model started showing up, 100 accidents a month that were unexplainable, that would be a big enough blip that somebody at NHTSA would say, Well, what's going on there. I mean, if you had a steering problem, if you had a brake problem, if you had a gasoline tank problem that kept exploding over and over again, not once every decade, but I mean, you know, enough that you could see in your reporting, somebody at NHTSA would say, Hey, we need to check that out.

Now, I am told that at the staff level, there were some internal NHTSA employees, some employees at NHTSA said, you know, before GM admitted that there was a problem, there were some NHTSA midlevel people that said we need to look at it and a decision was made within NHTSA that it wasn't at a level that was worthy of further investigation. Is that true?

Mr. Friedman. Congressman, we have a process to do exactly what you just said. We have people who are reading every single one of the more than 45,000 complaints that come in. We have a team dedicated to do that. We have a team dedicated to looking at all the early warning data that comes in. In this case, red flags were raised. Concerns were raised, and it was proposed, because of that exact process, the exact process that you're talking about that we do have, concerns were raised. And this was brought to a panel. The job of that panel is to consider all of the evidence, the initial evidence as well as more detailed look at the data, whether or not there's a clear trend, whether or not there's a -- enough information to have concern over a specific defect. The panel did that in this case. What I'm learning, what I'm seeing from all this is that we need to reconsider and look at, how do we deal with cases where there may be something that's considered a remote explanation? Should we change the way we follow up on it? Should we change the way we follow up on that with the car company? These are things that I think we're learning, lessons that --

Mr. Barton. My time is just about out. I want to make one general comment and then one final question. You know, we pointed out to the GM executive that was here that their part didn't meet their own specifications, and it didn't just almost not meet them; it didn't meet them by a long way. I mean, like a third, it was like two-thirds off. It was way below, not just a little bit, and that's not NHTSA's problem, and you're not expected to -- the NHTSA people aren't expected to know things at that level. But on the general point that Dr. Burgess was asking about, you know, when the air bag doesn't deploy when it runs into a tree at 40 or 50 miles an hour and the general response from NHTSA is that we didn't know how that particular air bag system was supposed to work, I don't think that's a very good answer. Isn't NHTSA supposed to know how the air bag systems work, and if they are not, if NHTSA doesn't know, aren't you, in your agency, supposed to find out?

Mr. Friedman. Congressman, the circumstances of these crashes were much more complicated than that. We applied expertise, we applied our understanding, we applied a process that has worked to generate over 1,299 recalls over the last decade. Are there improvements that we need to make to that process based on what we've learned today? Yes, absolutely.

Mr. Barton. Okay.

Mr. Friedman. and I'm committed to making sure that that happens, but these -- I wish these crashes were as simple as they appear to be. I wish the connection was as direct as we now know it is. At the time and with the information that we had --

Mr. Barton. Hindsight is always easier than current sight.

Mr. Friedman. As before, hindsight is 20/20, and ideally, we --

Mr. Barton. Thank you, Mr. Chairman.

Mr. Murphy. The gentleman yields back.

I'll recognize Mr. Griffith of Virginia for 5 minutes.

Mr. Griffith. Thank you very much. I appreciate it. I would ask -- I appreciate you being here today, and I would ask several questions following up, you know, on why didn't NHTSA know, and it is true that hindsight is 20/20, but it appears that some of your folks were at least sent enough warning signals.

I am looking at what I believe is tab 18, and the DAD, which is the Defects Assessment Division, and I know you know that, but not everybody watching on TV knows that, and so I want to make sure they know because I had to look it up, sent out and said in one of their emails in 2007, said, Notwithstanding GM's indications that they see no specific problem pattern, DAD perceives a pattern of nondeployments in these vehicles that does not exist in their peers and that their circumstances are such that in our engineering judgment merited a deployment and that such a deployment would have reduced injury level or saved lives.

When you combine that flag with the flag I think you mentioned earlier in your testimony that you were getting a number, if I remember correctly, was about 200-and-some complaints on this particular Cobalt vehicle, that they were stalling out in the road or the engine was cutting off, and you start adding those together along with the fact that I believe you all knew that there were at least, I think it was three where the air bag didn't deploy and the ignition was in the accessory mode, it would seem that somebody ought to start an investigation that those coincidences might have been more than coincidences. And I would ask, I know you're trying to do things better, but apparently, the person who put all this together was an investigator for a one-man law firm. He did have somebody of counsel, but basically you've got a one man law firm with an engineering investigator who figures this out. So I would say to you, you know, what can you do better and have you called on that investigator to come in and maybe train some of your folks that -- to look at some of these coincidences because when you start seeing a series of negative things happen, that might be where you ought to be looking.

Mr. Friedman. Congressman, our team was looking at this issue. The Defects Assessment Division was doing exactly their job. We have a system that is designed to raise those red flags. About half of the time, the recommendations of those Defects Assessment Division end up moving on to investigations. This -- what I see in this case is one of the things I mentioned before, which is one of the things we need to look at is, how do we make connections between remote defect possibilities?

In this case, you had one theory that was put forth, which was that the accessory -- the key being the accessory position could have caused air bag nondeployments. In the crashes that we looked at, the circumstances of those crashes led the investigators to believe that it was more -- much more likely that the air bags didn't go off because of the circumstances of that crash. I understand -- completely understand why it looks like --

Mr. Griffith. Well, but let me --

Mr. Friedman. It should have been clear, but it's clear now in part because we have that clear connection from General Motors.

Mr. Griffith. Well, but let me raise this concern. This memo indicates that there's a reliance, and I'm implying this from the wording, notwithstanding GM's indication that they see no specific pattern problem. It shows -- that statement shows a reliance on GM. Likewise, in your testimony, you state that this understanding was verified -- talking about the power loss situation -- This understanding was verified by GM service literature during our due diligence effort.

Now, if you've got a company that's got a car that is not functioning the way it is supposed to, I would like to think that with 51 employees versus that one-man law firm out of Georgia, that you would look at something other than the service literature and not necessarily that rely on GM indications that they see no specific pattern or problem pattern. So, I am concerned that there may have been too much reliance on the information from GM, including their service -- let me make sure I get the wording right -- their service literature and what they saw as problem patterns when in fact I think that you all are supposed to be finding the problem patterns.

Now, I understand it is easy, in hindsight, sitting up here to say that, but these are warning signs that go off to me as a legislator that maybe you all need to take a look at that, and you know, when you see problems, maybe the service literature of the company that you're looking at is not the best place to get your information.

Mr. Friedman. Congressman, just to be clear, we did not rely on General Motors when it came to defects, whether or not there was a defect trend. We did our own analysis of the data, and our own analysis indicated that the Cobalt did stand out. I also wonder if I haven't been clear enough relative to that service bulletin. We did not rely on that service bulletin at the time. We did not rely on that information from General Motors. We relied on our expert's understanding of air bag systems.

Mr. Griffith. But their understanding of the air bag system in the Cobalt was based on the service literature for the Cobalt, according to your written testimony. Am I not correct? Is that not what you said?

Mr. Friedman. My testimony sounds like it was not clear enough. What happened was once we found out about this defect, we looked into the service literature to confirm our understanding at the time, and the service literature that we looked at this year for that vehicle confirmed our understanding at the time, which was that --

Mr. Griffith. Your understanding at the time and the service literature were both wrong. Isn't that correct, yes or no?

Mr. Friedman. Yes, that's correct.

Mr. Griffith. Thank you.

I yield back.

Mr. Murphy. The gentleman yields back.

Now recognize Mr. Long for 5 minutes.

Mr. Long. Thank you, Mr. Chairman.

I want to thank the chairman and the ranking member and all of the members on both sides that have been here today. We originally weren't scheduled to be in this soon, and so a lot of us had to change our travel plans to get in today, and a lot of us have been sitting here through the entire both hearings today because it is a very, very important issue, of course, that we're discussing.

And thank you, Mr. Friedman, for being here with us today with your testimony. You know, when I think of NHTSA, I think of Number 66 for the Green Bay Packer's linebacker Ray Nitschke, and all day we've been talking about NHTSA, NHTSA. Tell me what NHTSA is.

Mr. Friedman. NHTSA is the National Highway Traffic Safety Administration. It's an organization of nearly 600 people, whose mission is to save lives and reduce injuries by addressing issues like drunk driving, unbelted occupants, vehicle safety, and the subject we're talking about today, which is finding vehicle defects when automakers don't find them themselves, which is their first and foremost responsibility.

Mr. Long. I just wanted to get that out there on the record. I, of course, know what it is, but I think a lot of people when they hear that NHTSA, NHTSA, NHTSA all day, they're thinking, what exactly is this? So the next question I would have would be do you have any way to track consumer complaints to auto dealers short of waiting for them to reach out to you, not the dealers, but the consumers that are having a problem? Do you have any way to track people coming in and my car stopped, it died, it did this, it did that, do you have any way to track that, or do you have to wait for someone to contact you all?

Mr. Friedman. We have early warning data which tracks the cases where warranty services are provided on vehicles

Mr. Long. So anytime a warranty service is provided, you will be notified of that?

Mr. Friedman. We're notified of a count. We have a total number -- a count of the number of those and the part that that's associated with.

Mr. Long. And how often --

Mr. Friedman. Not the reason for the complaint.

Mr. Long. Do you get that annually, semi-annually, quarterly, how often?

Mr. Friedman. Once a quarter --

Mr. Long. Once a quarter.

Mr. Friedman. -- have the information we need, it's required once a quarter.

Mr. Long. How would a -- what kind of marketing do you do? How would a consumer know -- learn about the National Highway Traffic Safety Administration? What kind of market do you do? If I took my car in, had a problem, it wouldn't pop into my head to call you, so how do you market yourself? How can we let the American public know if they do have an issue and they're not satisfied with their dealer, how can they contact you or what can we do to better augment that, I guess?

Mr. Friedman. Well, some of the things that we're already looking at doing and we're already making sure that happens is on every single recall letter that goes out, both NHTSA's name is on that letter, even though it's sent from the automaker, and it's in clear red letters that this is an important safety recall information. We also have apps that are available online that we try to make sure the consumers download. These apps allow people to lodge complaints directly to us. They allow them to track their recalls. We're also moving forward later on this year with a tool that will allow all consumers to come to our Web site, put in their VIN number to find out if there is a recall associated with their very specific vehicle that has yet to be addressed.

We have additional efforts where we try to make sure that people are aware of who NHTSA is, but yes, I have seen the same data, and one of the things I've talked to any staff about is that I'm concerned that we are not at the top of the list when people have complaints, and we've been talking about ways to make sure that we have campaigns to make people aware that if you've got a complaint, if you've got a concern, come to NHTSA. We need that information. Consumer complaint data is one of the vital tools that we have to try to find these defects, and I would appreciate any help anyone can provide to make sure that people are aware, that people go to SaferCar.gov to report these defects.

Mr. Long. Where tomorrow you're going to be able to see on there that you could take your car in and get a free loaner or a free rental, right?

Mr. Friedman. Absolutely.

Mr. Long. Very good. My last question. At what point is a consumer supposed to reach out to you?

Mr. Friedman. At any point they have a concern. I mean, you know --

Mr. Long. At what point is that, though? If I get a -- go home this evening, in the mail I get a recall on my vehicle, and they want me to bring it in and fix this switch or that doodad there or whatever, do I run to the phone or call you and say, Hey, I've got a recall? Or do I wait until I'm not satisfied with the dealer? At what point do consumers -- should consumers reach out to you?

Mr. Friedman. Well, in that case, if you get a recall letter, the first thing you should do, without a doubt, is contact your dealer and get your vehicle fixed as soon as possible. These are --

Mr. Long. Yeah, but I'm talking about contacting you. At what point do I -- if it's just a standard thing, I don't need to contact you on that?

Mr. Friedman. If it's a standard recall and you're concerned and you want to reach out to us, absolutely, but typically, when we want people to contact us is well before there's a recall. We rely on and look at over 45,000 consumer complaints every single year to try to spot these trends, so I want someone to reach out to NHTSA the instant they have a serious concern about their vehicle and they feel that their safety is at risk so that we can have that information. Right now, we've got 45,000 complaints. I'd like to see that number get up to 50,000; 60,000; 75,000 complaints relative to safety issues so that we can have more information to be able to track down these problems.

Mr. Long. Okay. Mr. Chairman, I don't have any time left, but if I did, I'd sure yield back.

Mr. Griffith. [Presiding.] Thank you.

I thank the gentleman.

The gentleman from Nebraska, Mr. Terry, 5 minutes.

Mr. Terry. Thank you, Acting Chair.

You had testified, Mr. Friedman, or in your testimony, you showed or testified that there were two SCI reports that showed indications of power loss and identified the vehicle power mode as accessory. And I think one of these has been highlighted in several newspaper articles that the SCI noted during air bag investigation a problem with the accessory.

So the question I have is, did these reports merely report the vehicle power mode as a fact, or did it report this and identify it as a potential contributing factor?

Mr. Friedman. Well, the two reports handled the case differently. My understanding and my memory is that in one of the reports, it simply had an entry in the EDR data, in the event data recorder data, that indicated that the vehicle power mode was accessory. That's typically not reported. In other case, in the other -- it was included in the special crash investigation that there were two possible reasons why the air bag did not deploy. One possible reason was because of the ignition switch. The other possible reason was because the yielding nature of the trees wasn't sufficient.

Mr. Terry. You mean, they're hard when they're hit?

Mr. Friedman. I'm sorry?

Mr. Terry. I'm being sarcastic. You said the yielding nature of the tree is kind of -- they're hard and objects hit them and --

Mr. Friedman. Well, different trees have different sizes. In this case --

Mr. Terry. Well anyway, I don't want to get bogged down into the force of the impact of a tree, but the point is that they were noted in two SCI reports but not acted upon, so what is the communication process between the SCI and the ODI? Someone has got to take that up and say, Gee, there's a problem with an ignition switch that's been noted; maybe we should follow up on that. What's the process?

RPTS BAKER

DCMN SECKMAN

[6:02 p.m.]

Mr. Friedman. So the process, it depends on the circumstance. In some cases, our Office of Defects Investigation will actually ask the special crash investigators to go out and look at a crash so that they can seek new information. In other cases, when the special crash investigators follow up on a crash, they will bring it to the attention of the Office of Defects Investigation. So we try to make sure that both teams are talking to each other and sharing critical information.

Mr. Terry. Okay. So in these two SCI reports that were filed, did the SCI, the special crash investigator, communicate that there was a problem, other than noting it in those reports on those two occasions to the ODI?

Mr. Friedman. I don't know if SCI specifically communicated the accessory issue, but when the team did look at especially the investigation that indicated that there were two possible reasons for that.

Mr. Terry. Yeah. So the ODI knew that there may have been, that the switch may have been part of the problem, let's say?

Mr. Friedman. ODI would have been aware of exactly?

Mr. Terry. So ODI was aware?

Mr. Friedman. I believe so because my understanding is that --

Mr. Terry. Because it looks like you have one group of people that's not talking to another group of people.

Mr. Friedman. Our teams do talk to each other, but as you'll notice in my testimony, one of the things I do think we need to discuss is, are there ways that we can change the way these crash investigations are used in our defective products?

But in this case, I do want to note that the draft version of this report that the team had at the time, at that moment, indicated that the crash investigators thought the more likely reason that the air bags did not go off was because of the circumstances.

Mr. Terry. I would think if you note that there was a problem with the switch automatically turning to accessory, that that would be significant enough to just follow up on, whether or not it was deemed to be a contributing factor or the sole factor. I need to ask, though, on the early warning reports, you were receiving early warning, the reports from GM. Correct?

Mr. Friedman. That's correct.

Mr. Terry. In my question to the chair -- I'm sorry, the president of GM, she said that they were submitting those. Were they required when they know or feel that there is a problem with a specific item in that car like the ignition switch, to report that? Or is that just one of the many items to be submitted within the EWR?

Mr. Friedman. Well, my understanding is that if they're aware of a problem that relates to a safety defect, that that actually is not reported within EWR. That needs to be directly reported --

Mr. Terry. Under the TREAD Act, they have to support that separately.

Mr. Friedman. Well, under the TREAD Act, they're required to report warranty claims and a variety of other pieces of information to us. But if they saw a defect, then they needed to report that to us completely separate from, you know -- that's simply --

Mr. Terry. What's noncompliance? I'm over my time, but I do need to get on the record, what is noncompliance versus defect? And you have 2 seconds.

Mr. Friedman. Sure. Really quickly, noncompliance means you did not meet the standards that we have. A safety defect means that you may have met the standards, but there's something wrong with the vehicle that poses an unreasonable risk to safety.

Mr. Griffith. I thank the gentleman.

I would ask for unanimous consent that the members' written opening statements be introduced into the record.

Without objection, the documents will be entered into the record. Hearing none.

[The information follows:]

******** COMMITTEE INSERT ********

Mr. Griffith. I will ask unanimous consent that the contents of the document binder be introduced into the record and to authorize staff to make appropriate redaction.

Without objection, the documents will be entered into the record with any redactions that staff determines are appropriate. Hearing no objections.

[The information follows:]

******** COMMITTEE INSERT ********

Mr. Griffith. In conclusion, I would like to thank all the witnesses.

Thank you, Mr. Friedman, and members that participated in today's hearing. I remind members that they have 10 business days to submit questions for the record, and I ask that the witnesses all agree to respond promptly to the questions.

Anything else? Thank you very much. This hearing is adjourned.

[Whereupon, at 6:07 p.m., the subcommittee was adjourned.]

Root Cause Analysis

Target Date:	Actual Date:	Actual date reported by champion:
02/06/2005	02/04/2005	

☒ Description of Root Cause Investigation Progress and Verification:

Author: Blendi Sullaj/US/GM/GMC on 01-Feb-2005 14:00

There are two main reasons that we believe can cause a lower effort in turning the key:

1. A low torque detent in the ignition switch
2. A low position of the lock module in the column.

Looking at the first reason, one would immediately think that changing/increasing the ignition switch torque effort would be a good solution. After talking to Ray DeGiorgio, I found out that it is close to impossible to modify the present ignition switch. The switch itself is very fragile and doing any further changes will lead to mechanical and /or electrical problems.

There are two other ways we can approach towards possible solutions:

a. Modifying/adding detent to lock module cam shaft
b. Adding detent to the lock cylinder-lock housing interface at RUN position (Similar to T257).

We discussed with our supplier regarding a possible torque increase from the cam shaft. Even though this is possible, it involves changes in tooling for almost all components that constitute the lock housing.

It seems that adding a detent to the key cylinder-lock housing interface at RUN position will be the most viable solution.

Problem Solving Methodology:
Document the Solving Process seen as appropriate

Other Statistical Methods

Potential Solution Champion / Department:

Department: or Name:	Potential Champion: Suspension - Steering - Structures & Mounts (Warren) *** Frame-Body Integral Steering Sherman, Scott Phone: [redacted] Fax: [redacted]

Problem mainly caused by:	Field Remedy Requested?
Engineering	No

Root Cause Summary:

The low key effort from RUN to ACC seems to occur because of a combination of two main reasons:

1. Not enough detent in the ignition switch
2. The lock module is a low mounted one.

The possibility of adding a detent in the lock cylinder to lock housing interface is being investigated.

03/06/2005	03/09/2005	

Description of Solution Investigation Progress and Verification:

Author: Blendi Sullaj/US/GM/GMC on 01-Mar-2005 16:07

Several possible solutions were presented to CPIT on 02/18/2005 See the folloing file for a better understanding of the solutions presented.

GMX001 Lock Module Detent in RUN 20050216.ppt

We were advised to look at the key slot change as a containment. This is in order to reduce the lever arm and as a result the pulling load.

We discussed the above solutions with Ray DeGiorgio (ignition switch DE) and Dave Trush (Lead Engineer, Closures)
on 02/28/2005. After a thorough discussion, the following file was generated:

VAPIR GMX001 Lock Module Detent in RUN 20050301.ppt

This file was presented in VAPIR on 01/03/2005. The advised was the same as CPIT; to look into the key slot change

as a containment (i.e., look into pricing and timing for the change).

Next step is to provide the required information (key slot change) to CPIT on 03/04/2005

Cost estimate to modify vehicle key for Cobalt

Cost estimate to change the vehicle key for the Cobalt only
per David Trush 3/04/05

Author: Blendi Sullaj/US/GM/GMC on 09-Mar-2005 9:36

Per GMX001 PEM's directive we are closing this PRTS with no action. The main reasons are as following:
1.All possible solutions were presented in CPIT and VAPIR:

a. The lead-time for all the solutions is too long.
b. The tooling cost and piece price are too high.
c. None of the solutions seems to fully countermeasure the possibility of the key being turned (ignition turn off) during driving.

Thus none of the solutions represents an acceptable business case.
03/09/2005 - Blendi Sullaj

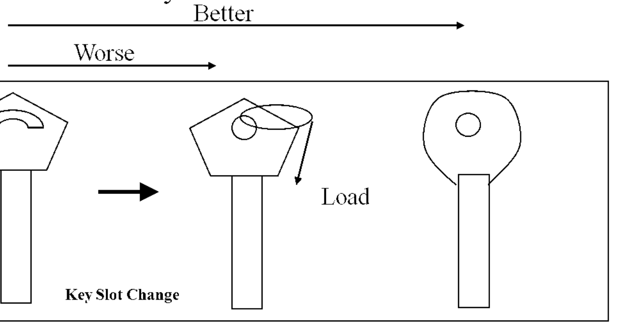
GMX001 Lock Module Detent in RUN

Containment Solution

➢ Changing slot in the key in order to reduce lever arm and thus the torque:



✓It was determined that the lever arm is still present due to fob ring. This may even cause a higher pulling load if fob ring is wedged between the slot and the sharp corner of key.

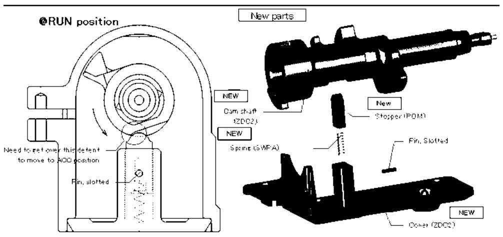
✓Can be considered as a containment if the shape of key is changed to round corners

1

GMX001 Lock Module Detent in RUN

Partial Solution Design Concept

➢ Detent between lock cover and cam shaft:



✓ Partial solution based on engineering judgment. No experimental verification that detent is sufficient.

✓If chosen, will drive changes and tuning efforts in ignition switch in order to avoid double detent feel.

✓Design has to become common between Delta, Theta and Kappa

✓ Can be combined with the new ignition switch presently sourced for GMT191/2/3 for better detent

2

GMHEC000001740

GMX001 Lock Module Detent in RUN

Sure Solution Description

- Change from a low mount to a high mount lock module.
  - ✓ It will considerably reduce the possibility of the key/key fob being pulled by driver
  - ✓ Can be combined with gear driven ignition switch design (Additive internal friction → more detent)

Description of Root Cause Investigation Progress and Verification:

Author: Joseph R. MansonII/US/GM/GMC on 18-Aug-2005 10:13

Per Al Manzor's comments, this item has been closed without action. Code 19-part met requirements.

Author: Joseph R. MansonII/US/GM/GMC on 18-Aug-2005 10:23

Correction to previous, solution (smaller key ring) is scheduled to be implemented and will be monitored through feedback process. Additional solution set(s) were rejected previously due to unacceptable business case. Brad, please move this PRTS to closed status.

Author: Craig St Pierre/US/GM/GMC on 13-Sep-2005 9:36

Detent efforts on ignition switch are too low allowing key to be cycled to off position inadvertently.

Changes to key can be made to reduce the moment which can be applied to key by key ring/keys. This will assist in limiting the issue but will not completely eliminate it. Changes to switch will not be forthcoming from electrical group until MY07.

Subject Re: N182276 Ignition Cylinder -Ignition Lock Module

Progression of work orders... which looks like ending up being reversals to old p/n?

Work order CAHTZ, with CCTVP 07SOP & 550144 (now cancelled), changed to CAHTZC changed to CCTVPA.

I may have the wrong order. However, it looks like after all is said and done, reverts back to old p/n.

If correct, then should be closed w/o action... business case.

Ralph

Subject N182276 Ignition Cylinder -Ignition Lock Module

Ralph/Brad -

I see that this issue is on this Friday's CPIT.

A service fix is already available and in the field.

Craig StPierre/David Trush had a WO to implement into production, but the program team cancelled - business case not acceptable.

The WO was cancelled back in March of 2006 - and the PRTS was updated at that time.

I just spoke to Joe Manson - and we believe the PRTS should have been closed.

What is the next step?

I believe the discussing this in CPIT will only further confuse matters.

Can we close today?

David K.

EXHIBIT 8

Service Bulletin

File In Section: 02 - Steering

Bulletin No.: 05-02-35-007

Date: December, 2005

CHEVROLET PONTIAC SATURN.

INFORMATION

Subject: **Information on Inadvertent Turning of Key Cylinder, Loss of Electrical System and No DTCs**

Models: **2005-2006 Chevrolet Cobalt**
2006 Chevrolet HHR
2005-2006 Pontiac Pursuit (Canada Only)
2006 Pontiac Solstice
2003-2006 Saturn ION

There is potential for the driver to inadvertently turn off the ignition due to low ignition key cylinder torque/effort.

The concern is more likely to occur if the driver is short and has a large and/or heavy key chain. In these cases, this condition was documented and the driver's knee would contact the key chain while the vehicle was turning and the steering column was adjusted all the way down. This is more likely to happen to a person who is short, as they will have the seat positioned closer to the steering column.

In cases that fit this profile, question the customer thoroughly to determine if this may the cause. The customer should be advised of this potential and should take steps to prevent it – such as removing unessential items from their key chain.

Engineering has come up with an insert for the key ring so that it goes from a "slot" design to a hole design. As a result, the key ring cannot move up and down in the slot any longer – it can only rotate on the hole. In addition, the previous key ring has been replaced with a smaller, 13 mm design. This will result in the keys not hanging as low as in the past.

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.

GM Redoubles Safety Efforts, Announces New Recalls

- **2009-2014 Chevrolet Express and GMC Savana to get reworked instrument panel material to meet compliance for unbelted passengers**
- **2013 and some 2014 Cadillac XTS models to be repaired to prevent possible brake booster corrosion that may result in overheating**
- **Some 2008-2009 and all 2010-2013 Buick Enclave and GMC Acadia, some 2009 and all 2010-2013 Chevrolet Traverse, and some 2008-2009 and all 2010 Saturn Outlook to repair the wiring harness of seat mounted side air bags**

DETROIT - As a result of Mary Barra's request for a comprehensive internal safety review following the ignition switch recall, General Motors today announced three separate recalls involving U.S. production and sales of approximately:

- 303,000 Chevrolet Express and GMC Savana from the 2009-2014 model years with gross vehicle weight under 10,000 pounds
- 63,900 Cadillac XTS full-size sedan from the 2013 and 2014 model years
- 1.18 million Buick Enclave and GMC Acadia models from the 2008-2013 model years, Chevrolet Traverse from the 2009-2013 model years, and Saturn Outlook from the 2008-2010 model years

"I asked our team to redouble our efforts on our pending product reviews, bring them forward and resolve them quickly," said Mary Barra, GM CEO. "That is what today's GM is all about."

The full-size vans with gross vehicle weights of 10,000 pounds or less do not comply with a head impact requirement for unrestrained occupants, requiring a rework of the passenger instrument panel material.

Unsold vehicles have been placed on a stop delivery until development of the solution has been completed and parts are available. Customers will be notified at that time. Repairs will be made at no charge to customers.

In the XTS, a brake booster pump can create positive pressure within the wiring harness attached to the pump relay. This pressure can lead to the dislodging of a plug in the brake booster pump relay, allowing corrosive elements to enter the connector and form a low-resistance short that could lead to overheating, melting of plastic components and a possible engine compartment fire.

GM is aware of two engine compartment fires in unsold vehicles at dealerships and two cases of melted components.

With respect to the Enclave, Traverse, Acadia and Outlook, the vehicles are equipped with a Service Air Bag warning light in the driver information center. Ignoring the Service Air Bag warning light will eventually result in the non-deployment of the side impact restraints, which include driver and passenger seat-mounted side air bags, front center air bag (if equipped), and the seat belt pretensioners.

To repair the condition, dealers will remove the driver and passenger side air bag wiring harness connectors and splice and solder the wires together.

“Today’s announcement underscores the focus we’re putting on the safety and peace of mind of our customers. We are conducting an intense review of our internal processes and will have more developments to announce as we move forward,” Barra said.

GM expects to take a charge of approximately $300 million in the first quarter primarily for the cost of the repairs for the three safety actions and the previously announced ignition switch recall.

General Motors Co. (NYSE:GM, TSX: GMM) and its partners produce vehicles in 30 countries, and the company has leadership positions in the world's largest and fastest-growing automotive markets. GM, its subsidiaries and joint venture entities sell vehicles under the Chevrolet, Cadillac, Baojun, Buick, GMC, Holden, Jiefang, Opel, Vauxhall and Wuling brands. Exhibit 99.1

GM News

For Immediate Release: Thursday, May 15, 2014

GM Announces Five Safety Recalls

DETROIT - General Motors said Thursday it has informed the National Highway Traffic Safety Administration of five safety recalls covering about 2.7 million vehicles in the United States. The recalls cover:

- 2,440,524 previous generation passenger cars for taillamp malfunctions
- 111,889 previous generation Chevrolet Corvettes for loss of low-beam head lamps
- 140,067 Chevrolet Malibus from the 2014 model year for hydraulic brake booster malfunctions
- 19,225 Cadillac CTS 2013-2014 models for windshield wiper failures
- 477 full-size trucks from the 2014 and 2015 model years for a tie-rod defect that can lead to a crash

"Customer safety is at the heart of how GM designs and produces vehicles, and these announcements are examples of two ways we are putting that into practice," said Jeff Boyer, vice president of GM Global Vehicle Safety.

"We have redoubled our efforts to expedite and resolve current reviews in process and also have identified and analyzed recent vehicle issues which require action. These are examples of our focus to surface issues quickly and promptly take necessary actions in the best interest of our customers."

The largest recall involves 2004-2012 Chevrolet Malibu, 2004-2007 Chevrolet Malibu Maxx, 2005-2010 Pontiac G6 and 2007-2010 Saturn Auras model cars in U.S. to modify the brake lamp wiring harness.

Affected vehicles could have corrosion develop in the wiring harness for the body control module due to micro-vibration. The condition could result in brake lamps failing to illuminate when the brakes are applied or brake lamps illuminating when the brakes are not engaged. Additionally, cruise control, traction control, electronic stability control and panic braking assist operation could be disabled.

GM is aware of several hundred complaints, 13 crashes and two injuries but no fatalities as a result of the condition. The company issued a technical service bulletin in 2008 and conducted a safety campaign for a small population of 2005 model year vehicles in January 2009.

The second safety recall covers 111,889 Chevrolet Corvettes from the 2005-2007 model years for potential loss of low-beam headlamp operation Models from 2008-2013 will be covered under a Customer Satisfaction Program. All repairs will be at no cost to customers.

When the engine is warm, the underhood electrical center housing could expand, causing the headlamp low-beam relay control circuit wire to bend slightly. After the wire is repeatedly bent, it can fracture and separate. When this occurs, the low-beam headlamps will not illuminate. As the housing cools and contracts, the low-beam headlamp function may return. This condition does not affect the high-beam headlamps, marker lamps, turn signals, daytime running lamps or fog lamps. Loss of low beam headlamps when they are required could reduce the driver's visibility, increasing the risk of a crash.

GM is aware of several hundred complaints as result of the condition but no crashes, injuries or fatalities.

The third recall covers 140,067 Chevrolet Malibus from the 2014 model year with 2.5L engines and stop/start technology. These vehicles are subject to the disabling of hydraulic brake boost that can require greater pedal efforts and extended stopping distances. Dealers will reprogram the electronic brake control module. The issue was discovered in testing of a future model with similar technology. GM is aware of four crashes but it is not clear that these are related to the condition. No injuries are known from those crashes.

The fourth recall covers 19,225 Cadillac CTS from the 2013-2014 model year for a condition in which the windshield wiper system may become inoperable after a vehicle jump start with wipers active and restricted, such as by ice and snow. Potential lack of visibility could increase the risk of a crash. Dealers will replace the front wiper module free of charge. GM is unaware of any crashes or injuries due to the condition.

The fifth recall involves certain 2014 Chevrolet Silverado and GMC Sierra light duty pickups and 2015 model year Chevrolet Tahoe SUVs. The tie rod threaded attachment to the steering gear rack in these vehicles may not be tightened to specification. With this condition, the tie rod can separate from the steering rack and a crash could occur without prior warning. Customers are being contacted and told to have their vehicles taken by flatbed to their dealer, where the inner tie rods will be inspected for correct torque, and, if necessary, the steering gear will be replaced. The repair procedure was being sent to dealers and owner letters sent by overnight mail to customers on May 14. The issue was discovered and corrected during assembly after the small number of vehicles was released.

GM expects to take a charge of up to approximately $200 million in the second quarter, primarily for the cost of recall-related repairs announced in the quarter.

General Motors Co. (NYSE:GM, TSX: GMM) and its partners produce vehicles in 30 countries, and the company has leadership positions in the world's largest and fastest-growing automotive markets. GM, its subsidiaries and joint venture entities sell vehicles under the Chevrolet, Cadillac, Baojun, Buick, GMC, Holden, Jiefang, Opel, Vauxhall and Wuling brands. Forward-Looking Statements

In this press release and in related comments by our management, our use of the words “expect,” “anticipate,” “possible,” “potential,” “target,” “believe,” “commit,” “intend,” “continue,” “may,” “would,” “could,” “should,” “project,” “projected,” “positioned” or similar expressions is intended to identify forward-looking statements that represent our current judgment about possible future events. We believe these judgments are reasonable, but these statements are not guarantees of any events or financial results, and our actual results may differ materially due to a variety of important factors. Among other items, such factors might include: our ability to realize production efficiencies and to achieve reductions in costs as a result of our restructuring initiatives and labor modifications; our ability to maintain quality control over our vehicles and avoid material vehicle recalls; our ability to maintain adequate liquidity and financing sources and an appropriate level of debt, including as required to fund our planned significant investment in new technology; the ability of our suppliers to timely deliver parts, components and systems; our ability to realize successful vehicle applications of new technology; and our ability to continue to attract new customers, particularly for our new products. GM's most recent annual report on Form 10-K and quarterly reports on Form 10-Q provides information about these and other factors, which we may revise or supplement in future reports to the SEC.

EX-99.1 2 ex-99106162014.htm EXHIBIT - PRESS RELEASE

Exhibit 99.1

GM News

For Immediate Release: Monday, June 16, 2014

GM Will Rework or Replace Keys on 3.16 Million U.S. Cars

DETROIT - General Motors will rework or replace the ignition keys on about 3.16 million 2000 to 2014 model year cars in the U.S. because the ignition switch may inadvertently move out of the "run" position if the key is carrying extra weight and experiences some jarring event.

The use of a key with a hole, rather than a slotted key, addresses the concern of unintended key rotation due to a jarring road event, such as striking a pothole or crossing railroad tracks.

Only one of the models included in the U.S. recall of 3,160,725 cars is still in production - the previous generation Chevrolet Impala, which is sold to daily rental fleets as the Impala Limited. The total North America population - U.S., Canada, Mexico and exports - is 3,360,555.

The safety recall follows a review of ignition issues following the recall in February of 2.6 million Chevrolet Cobalts and other small cars. GM is aware of eight crashes and six injuries related to this recall.

If the ignition switch moves out of the "run" position, there is an effect on power steering and power braking. In addition, the timing of the key movement out of the "run" position, relative to the activation of the sensing algorithm of the crash event, may result in the air bags not deploying.

The cars being recalled are the:

Buick Lacrosse	MY 2005-2009
Chevrolet Impala	MY 2006-2014
Cadillac Deville	MY 2000-2005
Cadillac DTS	MY 2004-2011
Buick Lucerne	MY 2006-2011
Buick Regal LS & GS	MY 2004-2005
Chevy Monte Carlo	MY 2006-2008

In these vehicles, the ignition switch may be unable to handle extra weight hanging on a slotted key. GM will add an insert to the ignition keys of the recalled vehicles to close the slot and leave a 4x6-millimeter hole through which the key ring could be attached. In vehicles where the key cover has been worn, new keys with holes instead of slots will be provided free of charge.

Rework of the keys - adding key inserts - at GM dealerships is expected to begin in the next few weeks. Until the rework or replacement is completed, owners of the recalled cars are urged to remove additional weight from their key chains and drive with only the ignition key.

In addition to the ignition key recall, GM also announced U.S. recalls for 165,770 vehicles in these five actions:

- 68,887 model year 2013-14 Cadillac ATS and 21,863 model year 2014 Cadillac CTS sedans. In certain vehicles with automatic transmissions, the shift cable may not be fully secured to the shifter bracket or transmission bracket. If the shift cable comes out of the brackets, the driver may not be able to shift the transmission in or out of gear. GM is unaware of any crashes or injuries related to this condition.

- 57,192 2015 Chevrolet Silverado 2500/3500 HD and 2015 GMC Sierra 2500/3500 GMC Sierra HD to inspect for proper attachment of power steering hose clamps to the power steering pump. If the vehicle is driven with the clamp unattached, the hose may disconnect from the pump or gear, causing a rapid loss of power steering fluid. This will result in loss of power steering assist and Hydro Boost powered brakes without warning. The vehicle would revert to manual brakes and manual steering. GM knows of no crashes or injuries from the condition. Dealers are to inspect power steering hose clamps in two locations to ensure they are properly attached.

- 16,932 model year 2011 Cadillac CTS sedans with AWD. On some vehicles, a gasket leak where the constant velocity joint meets the rear propeller shaft may cause the rear propeller shaft to separate or become loose, making contact with the vehicle floor above and causing the rollover sensor to deploy the roof rail air bags. GM is aware of 15 unintended deployments, but injury data is unclear.

- 712 model year 2014 Chevrolet Corvettes with optional Competition Sport Seats, because an unbelted child and door trim may block the passenger seat side air bag vent in a deployment. Dealers will replace the current air bag with a redesigned version. GM is unaware of any crashes or injuries related to this condition, but advises customers to not allow small children in the front seat until the vehicle is serviced.

- 184 model year 2014-15 Chevrolet Silverado and GMC Sierra full-size pickups with vinyl floors and accessory all-weather floor mats purchased new with the vehicle. The mats can slip under the driver's feet because the vinyl floors have no attachments to secure them in place. Customers are advised take the floor mats to their dealer for a full refund. GM is unaware of any crashes or injuries related to the mats.

GM expects to take a charge of up to approximately $700 million in the second quarter for the cost of recall-related repairs announced in the quarter. This amount includes a previously disclosed $400 million charge for recalls announced May 15 and May 20.

General Motors Co. (NYSE:GM, TSX: GMM) and its partners produce vehicles in 30 countries, and the company has leadership positions in the world's largest and fastest-growing automotive markets. GM, its subsidiaries and joint venture entities sell vehicles under the Chevrolet, Cadillac, Baojun, Buick, GMC, Holden, Jiefang, Opel, Vauxhall and Wuling brands. Exhibit 99.1

GM News

For Immediate Release: Monday, June 30, 2014

GM Announces Six Safety Recalls

DETROIT - General Motors announced today it will conduct six new safety recalls in the United States involving about 7.6 million vehicles from the 1997 to 2014 model years.

“We undertook what I believe is the most comprehensive safety review in the history of our company because nothing is more important than the safety of our customers,” said GM CEO Mary Barra. “Our customers deserve more than we delivered in these vehicles. That has hardened my resolve to set a new industry standard for vehicle safety, quality and excellence.”

Among these recalled vehicles, GM is aware of seven crashes, eight injuries and three fatalities. The fatal crashes occurred in older model full-size sedans being recalled for inadvertent ignition key rotation. There is no conclusive evidence that the defect condition caused those crashes.

“We have worked aggressively to identify and address the major outstanding issues that could impact the safety of our customers,” Barra said. “If any other issues come to our attention, we will act appropriately and without hesitation.”

GM has made changes to every process that affects the safety of its vehicles, and the company has acted or will act on all 90 of the recommendations put forward by former U.S. Attorney Anton Valukas in his independent report to the company’s Board of Directors.

GM expects to take a charge of up to approximately $1.2 billion in the second quarter for the cost of recall-related repairs announced in the quarter. This amount includes a previously disclosed $700 million charge for recalls already announced during the quarter.

Until the ignition recall repairs have been performed, it is very important that customers remove all items from their key ring, leaving only the vehicle key, and always use their seat belts. The key fob, if present, should also be removed from the key ring.

General Motors Co. (NYSE:GM, TSX: GMM) and its partners produce vehicles in 30 countries, and the company has leadership positions in the world's largest and fastest-growing automotive markets. GM, its subsidiaries and joint venture entities sell vehicles under the Chevrolet, Cadillac, Baojun, Buick, GMC, Holden, Jiefang, Opel, Vauxhall and Wuling brands. Table of Contents

General Motors Company was formed by the United States Department of the Treasury (UST) in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation (363 Sale) and changed its name to General Motors Company, is sometimes referred to in this Annual Report on Form 10-K (2009 10-K) for the periods on or subsequent to July 10, 2009 as "we," "our," "us," "ourselves," the "Company," "General Motors," or "GM," and is the successor entity solely for accounting and financial reporting purposes (Successor). General Motors Corporation is sometimes referred to in this 2009 10-K, for the periods on or before July 9, 2009, as "Old GM." Prior to July 10, 2009 Old GM operated the business of the Company, and pursuant to the agreement with the SEC Staff, the accompanying consolidated financial statements include the financial statements and related information of Old GM as it is our predecessor entity solely for accounting and financial reporting purposes (Predecessor). On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company, which is sometimes referred to in this 2009 10-K for the periods after July 10, 2009 as "MLC." MLC continues to exist as a distinct legal entity for the sole purpose of liquidating its remaining assets and liabilities. Refer to Note 1 to the consolidated financial statements for additional information.

We are a private company and were not previously subject to the filing requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934. We are a voluntary filer with the Securities and Exchange Commission (SEC). We are filing an Annual Report on Form 10-K for the year ended December 31, 2009, a Quarterly Report on Form 10-Q for the quarter ended September 30, 2009 and a Registration Statement on Form 10 pursuant to an agreement with the SEC Staff, as described in a no-action letter issued to Old GM by the SEC Staff on July 9, 2009 regarding our filing requirements and those of MLC.

Prior to July 10, 2009 Old GM operated the business of the Company, and pursuant to the agreement with the SEC Staff, the accompanying consolidated financial statements include the financial statements and related information of Old GM as it is our predecessor entity solely for accounting and financial reporting purposes.

The 363 Sale resulted in a new entity, General Motors Company, which is the successor entity solely for accounting and financial reporting purposes. Because we are a new reporting entity, our financial statements are not comparable to the financial statements of Old GM.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

PART I

General Motors Company was formed by the United States Department of the Treasury (UST) in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation (363 Sale) and changed its name to General Motors Company, is sometimes referred to in this Annual Report on Form 10-K (2009 10-K) for the periods on or subsequent to July 10, 2009 as "we," "our," "us," "ourselves," the "Company," "General Motors," or "GM," and is the successor entity solely for accounting and financial reporting purposes (Successor). General Motors Corporation is sometimes referred to in this 2009 10-K, for the periods on or before July 9, 2009, as "Old GM." Prior to July 10, 2009 Old GM operated the business of the Company, and pursuant to the agreement with the SEC Staff, the accompanying consolidated financial statements include the financial statements and related information of Old GM as it is our predecessor entity solely for accounting and financial reporting purposes (Predecessor). On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company, which is sometimes referred to in this 2009 10-K for the periods after July 10, 2009 as "MLC." MLC continues to exist as a distinct legal entity for the sole purpose of liquidating its remaining assets and liabilities.

Item 1. *Business*

Launch of General Motors Company

Prior to July 10, 2009 Old GM operated the business of the Company, and pursuant to the agreement with the SEC Staff, the accompanying consolidated financial statements include the financial statements and related information of Old GM as it is our predecessor entity solely for accounting and financial reporting purposes. On June 1, 2009 Old GM and three of its domestic direct and indirect subsidiaries filed voluntary petitions for relief under Chapter 11 (Chapter 11 Proceedings) of the U.S. Bankruptcy Code (Bankruptcy Code) in the U.S. Bankruptcy Court for the Southern District of New York (Bankruptcy Court). On July 10, 2009 in connection with the 363 Sale, we, through certain of our subsidiaries, acquired substantially all of the assets and assumed certain liabilities of Old GM. MLC continues to exist as a distinct legal entity for the sole purpose of liquidating its remaining assets and liabilities.

Through our purchase of substantially all of the assets and assumption of certain liabilities of Old GM in connection with the 363 Sale, we have launched a new company with a strong balance sheet, a competitive cost structure, and a strong cash position, which we believe will enable us to compete more effectively with our U.S. and foreign-based competitors in the U.S. and to continue our strong presence in growing global markets. In particular, we acquired Old GM's strongest operations and we believe we will have a competitive operating cost structure, partly as a result of recent agreements with the International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (UAW) and Canadian Auto Workers Union (CAW).

In addition the formation of General Motors Company comes with a renewed vision to design, build and sell the world's best vehicles. In order to implement this renewed vision, a majority of our Board of Directors is comprised of directors that did not serve on Old GM's Board of Directors, and we have recently appointed new executive leadership, including our CEO and CFO. We have also recently installed a smaller executive committee, which meets more frequently than prior leadership committees, resulting in faster decision making and increased accountability.

Our executive leadership and our employees are committed to:

- Building our market share, revenue, earnings and cash flow with the goal of paying back in 2010 our loans from the UST and Export Development Canada (EDC), a corporation wholly-owned by the government of Canada;
- Improving the quality of our cars and trucks, while increasing customer satisfaction and overall perception of our products; and
- Continuing to take a leadership role in the development of advanced energy saving technologies, including advanced combustion engines, biofuels, fuel cells, hybrid vehicles, extended-range-electric vehicles, and advanced battery development.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

General

We develop, produce and market cars, trucks and parts worldwide. We do so through our three segments: General Motors North America (GMNA), General Motors Europe (GME) and General Motors International Operations (GMIO).

In the year ended 2009 vehicle sales, market share data and production volume combine our data in the period July 10, 2009 through December 31, 2009 with Old GM's data in the period January 1, 2009 through July 9, 2009 for comparative purposes.

Total combined GM and Old GM worldwide vehicle sales in the year ended 2009 were 7.5 million. Old GM's total worldwide vehicle sales were 8.4 million and 9.4 million in the years ended 2008 and 2007. Substantially all of the cars, trucks and parts are marketed through retail dealers in North America, and through distributors and dealers outside of North America, the substantial majority of which are independently owned. GMNA primarily meets the demands of customers in North America with vehicles developed, manufactured and/or marketed under the following core brands:

- Buick
- Cadillac
- Chevrolet
- GMC

The demands of customers outside North America are primarily met with vehicles developed, manufactured and/or marketed under the following brands:

- Buick
- Cadillac
- Chevrolet
- Daewoo
- GMC
- Holden
- Isuzu
- Opel
- Vauxhall

At December 31, 2009 we had equity ownership stakes directly or indirectly through various regional subsidiaries, including GM Daewoo Auto & Technology Co. (GM Daewoo), Shanghai General Motors Co., Ltd. (SGM), SAIC-GM-Wuling Automobile Co., Ltd. (SGMW), and FAW-GM Light Duty Commercial Vehicle Co., Ltd. (FAW-GM). These companies design, manufacture and market vehicles under the following brands:

- Buick
- Cadillac
- Chevrolet
- Daewoo
- FAW
- GMC
- Holden
- Jiefang
- Wuling

In addition to the products we sell to our dealers for consumer retail sales, we also sell cars and trucks to fleet customers, including daily rental car companies, commercial fleet customers, leasing companies and governments. Sales to fleet customers are completed through our network of dealers and in some cases directly by us. Our retail and fleet customers can obtain a wide range of aftersale vehicle services and products through our dealer network, such as maintenance, light repairs, collision repairs, vehicle accessories and extended service warranties.

Brand Rationalization

We have focused our resources in the U.S. on four core brands: Chevrolet, Cadillac, Buick and GMC. As a result, we have sold our Saab brand and announced plans to phase out our Pontiac, Saturn and HUMMER brands. In connection with the rationalization of our brands, there is no planned investment for Pontiac, and the brand is expected to be phased out by the end of 2010.

Saturn

In September 2009 we decided to wind-down the Saturn brand and dealership network in accordance with the deferred termination agreements that Saturn dealers have signed with us. Refer to "Management's Discussion and Analysis of Financial Condition and Results of Operations — Brand Rationalization" for a further discussion on the Saturn disposition.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

HUMMER

In February 2010 we announced that Tengzhong Heavy Industrial Machinery Co., Ltd. (Tengzhong), was unable to complete the acquisition of HUMMER and that we would proceed to wind down the HUMMER brand. Refer to "Management's Discussion and Analysis of Financial Condition and Results of Operations — Brand Rationalization" for a further discussion on the HUMMER disposition.

Saab

In February 2010 we completed the sale of Saab to Spyker Cars NV. Refer to "Management's Discussion and Analysis of Financial Condition and Results of Operations – Brand Rationalization" for a further discussion on the Saab disposition.

Opel/Vauxhall Restructuring Activities

In February 2010 we presented our plan for the long-term viability of our Opel/Vauxhall operations to the German government. Our plan includes specific capital requirements, restructuring initiatives, estimated 12 product launches in the next two years and emphasis on alternative propulsion technologies. Refer to "Management's Discussion and Analysis of Financial Condition and Results of Operations — Opel/Vauxhall Restructuring Activities" for a further discussion on the Opel/Vauxhall operations long-term viability plan.

Vehicle Sales

The following tables summarize total industry sales of new motor vehicles of domestic and foreign makes and the related competitive position (vehicles in thousands):

(a) Vehicle sales above primarily represent vehicles manufactured or sold under a GM brand or through an owned distribution network. Under contractual agreements with SGMW and FAW-GM, joint venture vehicle sales in China are included in the vehicle sales and global market share above. Combined GM and Old GM joint venture vehicle sales in China included in the vehicle sales and market share data above was 1.0 million vehicles in the year ended 2009. Old GM's joint venture vehicle sales in China included in the vehicle sales and market share data above was 606,000 vehicles and 516,000 vehicles in the years ended 2008 and 2007. Consistent with industry practice, vehicle sales information includes estimates of industry sales in certain countries where public reporting is not legally required or otherwise available on a consistent basis.

(b) Totals may include rounding differences.

Form 10-K

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Fleet Sales and Deliveries

The sales and market share data provided previously includes both retail and fleet vehicle sales. Fleet sales are comprised of vehicle sales to daily rental car companies, as well as leasing companies and commercial fleet and government customers. Certain fleet transactions, particularly daily rental, are generally less profitable than retail sales. As part of our pricing strategy, particularly in the U.S., we have improved our mix of sales to specific customers.

The following table summarizes estimated fleet sales and the amount of those sales as a percentage of total vehicle sales (vehicles in thousands):

	Years Ended December 31,		
	2009	2008	2007
	Combined GM and Old GM	Old GM	Old GM
GMNA	590	953	1,152
GMIO	510	587	594
GME	540	769	833
Total fleet sales (a)	1,640	2,309	2,579
Fleet sales as a percentage of total vehicle sales	21.9%	27.6%	27.5%

(a) Fleet sale transactions vary by segment and some amounts are estimated.

The following table summarizes U.S. fleet sales and the amount of those sales as a percentage of total U.S. vehicle sales (vehicles in thousands):

	Years Ended December 31,		
	2009	2008	2007
	Combined GM and Old GM	Old GM	Old GM
Daily rental sales	307	480	596
Other fleet sales	207	343	412
Total fleet sales	514	823	1,008
Fleet sales as a percentage of total vehicle sales			
Cars	29.0%	34.8%	34.9%
Trucks	21.6%	22.4%	20.5%
Total cars and trucks	24.7%	27.6%	26.1%

Competitive Position

The global automotive industry is highly competitive. The principal factors that determine consumer vehicle preferences in the markets in which we operate include price, quality, available options, style, safety, reliability, fuel economy and functionality. Market leadership in individual countries in which we compete varies widely.

In the year ended 2009 combined GM and Old GM estimated worldwide market share was 11.6%. In 2009 the U.S. continued to be negatively affected by the economic factors experienced in 2008 as U.S. automotive industry sales declined 21.4% when compared to 2008. Despite this U.S. industry sales decline and the fact that the market share decreased from Old GM 2008 levels of 22.1%, combined GM and Old GM estimated U.S. market share of 19.6% was the highest among GM and Old GM's principal competitors.

Old GM's estimated worldwide market share was 12.4% and 13.2% in the years ended 2008 and 2007. In 2008 worldwide market share was severely affected by the recession in Old GM's largest market, the U.S., and the recession in Western Europe. Tightening of the credit markets, increases in the unemployment rate, declining consumer confidence as a result of declining household incomes and

Table of Contents

escalating public speculation related to Old GM's potential bankruptcy contributed to significantly lower vehicle sales in the U.S. These economic factors had a negative effect on the U.S. automotive industry and the principal factors that determine consumers' vehicle buying decisions. As a result, consumers delayed purchasing or leasing new vehicles which caused a decline in U.S. vehicle sales.

The following table summarizes the respective U.S. market shares in passenger cars and trucks:

	Years Ended December 31,		
	2009	2008	2007
GM (a)	19.6%	22.1%	23.5%
Toyota	16.7%	16.5%	15.9%
Ford	15.9%	14.7%	15.2%
Honda	10.8%	10.6%	9.4%
Chrysler	8.8%	10.8%	12.6%
Nissan	7.3%	7.0%	6.5%
Hyundai/Kia	6.9%	5.0%	4.7%

(a) Market share data in the year ended 2009 combines our market share data in the period July 10, 2009 through December 31, 2009 with Old GM's market share data in the period January 1, 2009 through July 9, 2009 for comparative purposes. Market share data in the years ended 2008 and 2007 relate to Old GM.

Product Pricing

A number of methods are used to promote our products, including the use of dealer, retail and fleet incentives such as customer rebates and finance rate support. The level of incentives is dependent in large part upon the level of competition in the markets in which we operate and the level of demand for our products. In 2010, we will continue to price vehicles competitively, including offering strategic and tactical incentives as required. We believe this strategy coupled with improved inventory management will continue to strengthen the reputation of our brands and continue to improve our average transaction price.

Cyclical Nature of Business

In the automotive industry, retail sales are cyclical and production varies from month to month. Vehicle model changeovers occur throughout the year as a result of new market entries. The market for vehicles is cyclical and depends on general economic conditions, credit availability and consumer spending. In 2009 the global automotive industry, particularly in the U.S., had not yet recovered from the negative economic factors experienced in 2008 and has continued to experience decreases in the total number of new cars and trucks sold and decreased production volume.

Relationship with Dealers

Worldwide we market vehicles through a network of independent retail dealers and distributors. At December 31, 2009 there were 5,619 vehicle dealers in the U.S., 568 in Canada and 263 in Mexico. Additionally, there were a total of 14,317 distribution outlets throughout the rest of the world. These outlets include distributors, dealers and authorized sales, service and parts outlets.

The following table summarizes the number of authorized dealerships:

	December 31,		
	2009	2008	2007
GMNA	6,450	7,360	7,835
GMIO	5,895	5,510	5,150
GME	8,422	8,732	8,902
Total Worldwide	20,767	21,602	21,887

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

As part of achieving and sustaining long-term viability and the viability of our dealer network, we determined that a reduction in the number of GMNA dealerships was necessary. In determining which dealerships would remain in our network we performed analyses of volumes and consumer satisfaction indexes, among other criteria. Refer to "Management's Discussion and Analysis of Financial Condition and Results of Operations — U.S. Dealer Reduction" for a further discussion on our plan to reduce U.S. dealerships.

We enter into a contract with each authorized dealer agreeing to sell to the dealer one or more specified product lines at wholesale prices and granting the dealer the right to sell those vehicles to retail customers from a GM approved location. Our dealers often offer more than one GM brand of vehicle at a single dealership. In fact, we actively promote this for several of our brands in a number of our markets in order to enhance dealer profitability. Authorized GM dealers offer parts, accessories, service and repairs for GM vehicles in the product lines that they sell, using genuine GM parts and accessories. Our dealers are authorized to service GM vehicles under our limited warranty program, and those repairs are to be made only with genuine GM parts. In addition, our dealers generally provide their customers access to credit or lease financing, vehicle insurance and extended service contracts provided by GMAC Inc. (GMAC) or its subsidiaries and other financial institutions.

Because dealers maintain the primary sales and service interface with the ultimate consumer of our products, the quality of GM dealerships and our relationship with our dealers and distributors are critical to our success. In addition to the terms of our contracts with our dealers, we are regulated by various country and state franchise laws that may supersede those contractual terms and impose specific regulatory requirements and standards for initiating dealer network changes, pursuing terminations for cause and other contractual matters.

Research, Development and Intellectual Property

Costs for research, manufacturing engineering, product engineering, and design and development activities relate primarily to developing new products or services or improving existing products or services, including activities related to vehicle emissions control, improved fuel economy and the safety of drivers and passengers.

The following table summarizes research and development expense (dollars in millions):

	Successor	Predecessor		
	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008	Year Ended December 31, 2007
Research and development expense	$ 3,034	$ 3,017	$ 8,012	$ 8,081

Research

Overview

Our top priority for research is to continue to develop and advance our alternative propulsion strategy, as energy diversity and environmental leadership are critical elements of our overall business strategy. Our objective is to be the recognized industry leader in fuel efficiency through the development of a wide variety of technologies to reduce petroleum consumption. To meet this objective we focus on five specific areas:

- Continue to increase the fuel efficiency of our cars and trucks;
- Development of alternative fuel vehicles;
- Invest significantly in our hybrid and electric technologies;
- Invest significantly in plug-in electric vehicle technology; and
- Continued development of hydrogen fuel cell technology.

Table of Contents

Fuel Efficiency

We and Old GM have complied with federal fuel economy requirements since their inception in 1978, and we are fully committed to meeting the requirements of the Energy Independence and Security Act of 2007 (EISA) and compliance with other regulatory schemes, including the California CO_2 program. We anticipate steadily improving fuel economy for both our car and truck fleets. We are committed to meeting or exceeding all federal fuel economy standards in the 2010 through 2015 model years. We plan to achieve compliance through a combination of strategies, including: (1) extensive technology improvements to conventional powertrains; (2) increased use of smaller displacement engines and six speed automatic transmissions; (3) vehicle improvements, including increased use of lighter, front-wheel drive architectures; (4) increased hybrid offerings and the launch of the Chevrolet Volt electric vehicle with extended range in 2010; and (5) portfolio changes, including the increasing car/crossover mix and dropping select larger vehicles in favor of smaller, more fuel efficient offerings.

We are among the industry leaders in fuel efficiency and we are committed to lead in the development of technologies to increase the fuel efficiency of internal combustion engines such as cylinder deactivation, direct injection, turbo-charging with engine downsizing, six speed transmissions and variable valve timing. As a full-line manufacturer that produces a wide variety of cars, trucks and sport utility vehicles, we currently offer 20 models obtaining 30 mpg or more in highway driving, more than any other manufacturer.

Alternative Fuel Vehicles

We have also been in the forefront in the development of alternative fuel vehicles, leveraging experience and capability developed around these technologies in our operations in Brazil. Alternative fuels offer the greatest near-term potential to reduce petroleum consumption in the transportation sector, especially as cellulosic sources of ethanol become more affordable and readily available in the U.S. An increasing percentage of our sales will be alternative fuel capable vehicles, estimated to increase from 17% in 2010 to 65% in 2014.

As part of an overall energy diversity strategy, we remain committed to making at least 50% of the vehicles we produce for the U.S. capable of operating on biofuels, specifically E85 ethanol, by 2012. We currently offer 17 FlexFuel models capable of operating on gasoline, E85 ethanol or any combination of the two.

We are focused on promoting sustainable biofuels derived from non-food sources, such as agricultural, forestry and municipal waste. We are continuing to work with our two strategic alliances with cellulosic ethanol makers Coskata, Inc., of Warrenville, Illinois, and New Hampshire based Mascoma Corp. In October 2009 Coskata, Inc. opened its semi-commercial facility for manufacturing cellulosic ethanol and Mascoma Corp. has been making cellulosic ethanol at its Rome, New York, demonstration plant since late 2008.

We are also supporting the development of biodiesel, a clean-burning alternative diesel fuel that is produced from renewable sources. We currently approve the use of B5, which are certified biodiesel blends of up to 5%, in our Duramax engine that we sell in the U.S. This engine is available on the Chevrolet Silverado and GMC Sierra heavy-duty pick-up trucks, Chevrolet Express and GMC Savanna fullsize vans and the Chevrolet Kodiak and GMC Top Kick commercial vehicles. B5 is also approved for all GM diesels in Europe and Asia. We offer a special equipment option on the 6.6-liter Duramax for B20, a 20% biodiesel blend. The special equipment option is available on certain configurations of the GMC Savanna and Chevrolet Express Vans and the Chevrolet Silverado and GMC Sierra Heavy-Duty One-Ton Pick-ups. For the 2011 model year, B20 capability will be available on our 6.6L turbo diesel engine.

Hybrid and Plug-In Electric Vehicles

We are also investing significantly in vehicle electrification including hybrid, plug-in hybrid and electric vehicles with extended-range technology. We currently offer seven hybrid models. We are also developing plug-in hybrid electric vehicle technology (PHEV) and the Chevrolet Volt and Opel Ampera electric vehicles with extended range. We plan to invest heavily between 2010 and 2012 to support the expansion of our electrified vehicle offering and in-house development and manufacturing capabilities of the enabling technologies-advanced batteries, electric motors and power control systems.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

We have multiple technologies offering increasing levels of vehicle electrification — hybrid, plug-in hybrid and electric vehicle with extended range.

The highly capable GM Two-mode Hybrid system is offered with the automotive industry's only hybrid fullsize trucks and sport utility vehicles: Chevrolet Tahoe, Chevrolet Silverado, GMC Yukon and Yukon Denali, GMC Sierra, Cadillac Escalade and Escalade Platinum.

A PHEV, using a modified version of GM's Two-Mode Hybrid system and advanced lithium-ion battery technology, is scheduled to launch in 2012. The PHEV will provide low-speed electric-only propulsion, and blend engine and battery power to significantly improve fuel efficiency.

We have also announced that we plan to launch the Chevrolet Volt electric vehicle with extended range in late 2010. The Chevrolet Volt is powered by electricity at all times and at all speeds. The Chevrolet Volt is designed to operate on battery power alone for up to 40 miles, after which an engine-generator will provide the electricity to power the electric drive unit. Advanced lithium-ion battery technology is the key enabling technology for the Chevrolet Volt. In January 2009 Old GM announced that it would assemble the battery packs for the Chevrolet Volt in the U.S. using cells supplied by LG Chem. Battery production began at our Brownstown Battery facility in January 2010. A second electric vehicle with extended range, the Opel Ampera, is under development and scheduled to launch in Europe in late 2011.

Hydrogen Fuel Cell Technology

As part of our long-term strategy to reduce petroleum consumption and greenhouse gas emissions we are committed to continuing development of our hydrogen fuel cell technology. We and Old GM have conducted research in hydrogen fuel cell development spanning the last 15 years, and we are the only U.S. automobile manufacturer actively engaged in fuel cell development. Our Chevrolet Equinox fuel cell electric vehicle demonstration programs, such as Project Driveway, are the largest in the world and have accumulated more than 1.2 million miles of real-world driving by consumers, celebrities, business partners and government agencies. More than 6,000 individuals have driven the fuel cell powered Chevrolet Equinox, either in short drives, such as media or special events, or as part of Project Driveway. To date, their feedback has led to technology improvements such as extending fuel cell stack life and improvements in the regenerative braking system, which has also benefited our Two-Mode Hybrid vehicles, and improvements in the infrastructure of fueling stations for hydrogen fuel cell electric vehicles. In addition, the knowledge gained during Project Driveway on the fuel cell itself has affected the development of the Chevrolet Volt battery as we are applying fuel cell thermal design knowledge to the Chevrolet Volt battery design. Project Driveway operates in Washington DC and California (including Los Angeles, Orange County and Sacramento) for the California Fuel Cell Partnership and the California Air Resources Board (CARB). Project Driveway also operates in the New York Metropolitan area in Westchester County with expansion to the greater New York City area due to recent openings of hydrogen fueling stations at JFK International Airport and in the Bronx. Most Project Driveway participants drive Chevrolet Equinoxes for two months with the cost of fuel and insurance provided free in exchange for participant feedback. The Chevrolet Equinox fuel cell electric vehicles do not use any gasoline or oil and emit only water vapor. We have made significant progress on the fuel cell stack for a second-generation fuel cell vehicle, though we currently have no vehicle program approved.

OnStar

Advancements in telematics technology are demonstrated through our OnStar service. OnStar's in-vehicle safety, security and communications service is the automotive industry's leading telematics provider, available on more than 30 of our 2010 model year vehicles and currently serving approximately 5.5 million subscribers. OnStar's key services include: Automatic Crash Response, Stolen Vehicle Assistance, Turn-by-Turn Navigation, OnStar Vehicle Diagnostics and Hands-Free Calling. In May 2009 OnStar announced the development of an Injury Severity Prediction based on the findings of a Center for Disease Control and Prevention expert panel. This will allow OnStar advisors to alert first responders when a vehicle crash is likely to have caused serious injury to the occupants. Data from OnStar's Automatic Crash Response system will be used to automatically calculate the Injury Severity Prediction which can assist responders in determining the level of care required and the transport destination for patients. OnStar has

Table of Contents

also expanded its Stolen Vehicle Assistance services with the announcement of Remote Ignition Block. This will allow an OnStar Advisor to send a remote signal to a subscriber's stolen vehicle to prevent the vehicle from restarting once the ignition is turned off. This capability will not only help authorities recover stolen vehicles, but can also prevent or shorten dangerous high speed pursuits.

Other Technologies

Other safety systems include the third generation of our StabiliTrak electronic stability control system. In addition to controlling brakes and reducing engine power, the latest iteration of the system combines active front steering to turn the front wheels into the skid when the rear wheels lose traction. Our Lane Departure Warning System and Side Blind Zone Alert System extend and enhance driver awareness and vision.

Refer to "Environmental and Regulatory Matters" for a discussion of vehicle emissions requirements, vehicle noise requirements, fuel economy requirements and safety requirements, which also affect our research and development activities.

Product Development

Our vehicle development activities are integrated into a single global organization. This strategy built on earlier efforts to consolidate and standardize our approach to vehicle development.

For example, in the 1990s Old GM merged 11 different engineering centers in the U.S. into a single organization. In 2005, GM Europe Engineering was created, following a similar consolidation from three separate engineering organizations. At the same time, we and Old GM have grown our engineering operations in emerging markets in the Asia Pacific and Latin America/Africa/Middle East (LAAM) regions.

As a result of this process, product development activities are fully integrated on a global basis under one budget and one decision-making group. Similar approaches have been in place for a number of years in other key functions, such as powertrain, purchasing and manufacturing, to take full advantage of our global footprint and resources.

Under our global vehicle architecture strategy and for each of our nine global architectures, we define a specific range of performance characteristics and dimensions supporting a common set of major underbody components and subsystems with common interfaces.

A centralized organization is responsible for many of the non-visible parts of the vehicle, referred to as the architecture, such as steering, suspension, the brake system, the heating, ventilation and air conditioning system and the electrical system. This team works very closely with the global architecture development teams around the world, who are responsible for components that are unique to each brand, such as exterior and interior design, tuning of the vehicle to meet the brand character requirements and final validation to meet applicable government requirements.

We currently have nine different global architectures that are assigned to regional centers around the world. The allocation of the architectures to specific regions is based on where the expertise for the vehicle segment resides, e.g., mini and small vehicles in Asia Pacific, compact vehicles in Europe and fullsize pick-up trucks, sport utility vehicles, midsize vehicles and crossover vehicles in North America.

The nine global architectures are:

- Mini
- Small
- Compact
- Full and Midsize
- Fullsize Truck
- Rear-Wheel Drive and Performance
- Crossover
- Midsize Truck
- Electric

Table of Contents

Intellectual Property

We generate and hold a significant number of patents in a number of countries in connection with the operation of our business. While none of these patents by itself is material to our business as a whole, these patents are very important to our operations and continued technological development. In addition, we hold a number of trademarks and service marks that are very important to our identity and recognition in the marketplace.

Raw Materials, Services and Supplies

We purchase a wide variety of raw materials, parts, supplies, energy, freight, transportation and other services from numerous suppliers for use in the manufacture of our products. The raw materials are primarily comprised of steel, aluminum, resins, copper, lead and platinum group metals. We have not experienced any significant shortages of raw materials and normally do not carry substantial inventories of such raw materials in excess of levels reasonably required to meet our production requirements. In 2009 the weakening of commodity prices experienced in the latter part of 2008 was generally reversed, with prices returning to more historical levels in the year ended 2009 and having the effect of increasing our costs. In a gradually recovering global economic climate, this shift is believed to be the result of speculative activity and the weakening of the U.S. Dollar combined with increased confidence and mild improvements in underlying demand.

In some instances, we purchase systems, components, parts and supplies from a single source, and may be at an increased risk for supply disruptions. Based on our standard payment terms with our systems, components and parts suppliers, we are generally required to pay most of these suppliers on average 47 days following delivery with weekly disbursements.

Environmental and Regulatory Matters

Automotive Emissions Control

We are subject to laws and regulations, regarding vehicle exhaust emission standards, vehicle evaporative emission standards and onboard diagnostic system (OBD) requirements, in the regions throughout the world in which we sell cars, trucks and heavy-duty engines.

North America

The U.S. federal government imposes stringent emission control requirements on vehicles sold in the U.S., and additional requirements are imposed by various state governments, most notably California. These requirements include pre-production testing of vehicles, testing of vehicles after assembly, the imposition of emission defect and performance warranties and the obligation to recall and repair customer owned vehicles that do not comply with emissions requirements. We must obtain certification that the vehicles will meet emission requirements from the Environmental Protection Agency (EPA) before we can sell vehicles in the U.S. and Canada and from the CARB before we can sell vehicles in California and other states that have adopted the California emissions requirements.

The EPA and the CARB continue to emphasize testing on vehicles sold in the U.S. for compliance. We believe that our vehicles meet currently applicable EPA and CARB requirements. If our vehicles do not comply with the emission standards or if defective emission control systems or components are discovered in such testing, or as part of government required defect reporting, we could incur substantial costs related to emissions recalls. We expect that new CARB and federal requirements will increase the time and mileage periods over which manufacturers are responsible for a vehicle's emission performance.

The EPA and the CARB emission requirements currently in place are referred to as Tier 2 and Low Emission Vehicle (LEV) II. The Tier 2 requirements began in 2004 and were fully phased-in by the 2009 model year, while the LEV II requirements began in 2004 and increase in stringency each year through the 2010 model year. Fleet-wide compliance with the Tier 2 and LEV II standards must be achieved based on a sales-weighted fleet average. CARB is developing its next generation emission standards, LEV III,

Table of Contents

which will further increase the stringency of its emission standards. Based on discussions with the CARB staff, we expect the LEV III requirements to be adopted in the second half of 2010 and to apply beginning in the 2014 model year. California has also passed legislation and enacted a regulation to control the emissions of greenhouse gases. Since we believe this regulation is effectively a form of fuel economy requirement, it is discussed under "Automotive Fuel Economy." In addition, both the CARB and the EPA have adopted more stringent standards applicable to heavy-duty trucks.

California law requires that a specified percentage of cars and certain light-duty trucks sold in the state must be zero emission vehicles (ZEV), such as electric vehicles or hydrogen fuel cell vehicles. This requirement started at 10% for the 2005 model year and increased in subsequent years. Manufacturers have the option of meeting a portion of this requirement with partial ZEV credit for vehicles that meet very stringent exhaust and evaporative emission standards and have extended emission system warranties. An additional portion of the ZEV requirement can be met with vehicles that meet these partial ZEV requirements and incorporate advanced technology, such as a hybrid electric propulsion system meeting specified criteria. We are complying with the ZEV requirements using a variety of means, including producing vehicles certified to the partial ZEV requirements. California recently adopted changes applicable to the 2012 and later model years that allow an additional portion of the ZEV requirements to be met with PHEVs, including E-REV's such as the Chevrolet Volt, that meet partial ZEV requirements and other specified criteria. CARB has also announced plans to adopt, in the second half of 2010, 2015 model year and later requirements for ZEVs and PHEVs to achieve greenhouse gas as well as criteria pollutant emission reductions.

The Clean Air Act permits states that have areas with air quality compliance issues to adopt the California car and truck emission standards in lieu of the federal requirements. Ten states, including New York, Massachusetts, Maine, Vermont, Connecticut, Pennsylvania, Rhode Island, New Jersey, Oregon and Washington, currently have these standards in effect. Maryland and New Mexico have adopted the California standards effective beginning in the 2011 model year and Arizona's standards are effective beginning in the 2012 model year. Additional states could also adopt the California standards in the future.

In addition to the exhaust emission programs previously discussed, advanced OBD systems, used to identify and diagnose problems with emission control systems, have been required under federal and California law since the 1996 model year. Problems detected by the OBD system have the potential of increasing warranty costs and the chance for recall. OBD requirements become more challenging each year as vehicles must meet lower emission standards, and new diagnostics are required. Beginning with the 2004 model year, California adopted more stringent OBD requirements, including new design requirements and corresponding enforcement procedures, and we have implemented hardware and software changes to comply with these more stringent requirements. In addition, California adopted technically challenging new OBD requirements that take effect from the 2008 through 2013 model years.

The federal Tier 2 and California evaporative emission LEV II requirements began phasing-in with the 2004 model year. The federal requirements are being harmonized with the California requirements beginning with a 2009 model year phase-in. California plans to further increase the stringency of its requirements as part of its LEV III rulemaking.

Europe

In Europe emissions are regulated by two different entities: the European Union (EU) and the United Nations Economic Commission for Europe (UN ECE). The EU imposes stringent emission control requirements on vehicles sold in all 27 EU Member States, and other countries apply regulations under the framework of the UN ECE. EU member states can give tax incentives to automobile manufacturers for vehicles which meet emission standards earlier than the compliance date. This can result in specific market requirements for automobile manufacturers to introduce technology earlier than is required for compliance with the EU emission standards. The current EU requirements include type approval of preproduction testing of vehicles, testing of vehicles after assembly and the obligation to recall and repair customer owned vehicles that do not comply with emissions requirements. EU and UN ECE requirements are equivalent in terms of stringency and implementation. We must demonstrate that vehicles will meet emission requirements in witness tests and obtain type approval from an approval authority before we can sell vehicles in the EU.

Emission requirements in Europe will become even more stringent in the future. A new level of exhaust emission standards for cars and light-duty trucks, Euro 5 standards, were applied in September 2009, while stricter Euro 6 standards are expected to apply beginning in 2014. The OBD requirements associated with these new standards will become more challenging as well. The new

Table of Contents

European emission standards focus particularly on reducing emissions from diesel vehicles. Diesel vehicles have become important in the European marketplace, where they encompass 50% of the market share. The new requirements will require additional technologies and further increase the cost of diesel engines, which currently cost more than gasoline engines. To comply with Euro 6, we expect that technologies need to be implemented which are identical to those being developed to meet U.S. emission standards. The technologies available today are not cost effective and would therefore not be suitable for the European market for small and midsize diesel vehicles, which typically are under high cost pressure. Further, measures to reduce exhaust pollutant emissions have detrimental effects on vehicle fuel economy which drives additional technology cost to maintain fuel economy.

In the long-term, notwithstanding the already low vehicle emissions in Europe, regulatory discussions in Europe are expected to continue. Regulators will continue to refine the testing requirements addressing issues such as test cycle, durability, OBD, in-service conformity and off-cycle emissions.

International Operations

Within the Asia Pacific region, our vehicles are subject to a broad range of vehicle emission laws and regulations. China has implemented European standards, with Euro 4 standards first applied in Beijing in 2008. Shanghai implemented Euro 4 standards with European OBD requirements for newly registered vehicles in November 2009 and other cities are expected to implement the same standards for newly registered vehicles in 2010. China plans to implement Euro 4 standards nationwide beginning in July 2010 for new vehicle type approvals and beginning in July 2011 for newly registered vehicles. Since January 2009 South Korea has implemented the CARB emission Fleet Average System with different application timings and levels of nonmethanic organic gas targets for gasoline and liquefied petroleum gas powered vehicles. In September 2009 South Korea implemented Euro 5 standards for diesel powered vehicles. South Korea has adopted CARB standards for gasoline powered vehicles and EU regulations for diesel powered vehicles for OBD and evaporative emissions. The Association of Southeast Asian Nations (ASEAN) Committee has agreed that the major ASEAN countries Thailand, Malaysia, Indonesia, Philippines and Singapore will implement Euro 4 standards in 2012, although implementation of OBD requirements is still under study. In India, Bharat Stage IV emission standards will be required for new vehicle registrations in 11 major cities and Bharat Stage III emission standards will be required throughout India beginning in April 2010. Japan sets specific exhaust emission and durability standards, test methods and driving cycles. In Japan, OBD is required with both EU and U.S. OBD systems accepted. All other countries in which we conduct operations within the Asia Pacific region either require or allow some form of EPA, EU or UN ECE style emission regulations with or without OBD requirements.

Within the LAAM region, some countries follow the U.S. test procedures, standards and OBD requirements and some follow the EU test procedures, standards and OBD requirements with different levels of stringency. In terms of standards, Brazil implemented national LEV standards, L5, which preceded Tier 2 standards in the U.S., for passenger cars and light commercial vehicles in January 2009. Brazil has published new emission standards, L6, which are based on Euro 5 standards, for light diesel and gasoline vehicles. L6 standards for light diesel vehicles are to be implemented in January 2013, which mandate OBD requirements for light diesel vehicles in 2015. L6 standards for light gasoline vehicles are to be implemented in January 2014 for new types and January 2015 for all models. Argentina implemented Euro 4 standards starting with new vehicle registrations in January 2009 and is moving to Euro 5 standards in January 2012 for new vehicle types and January 2014 for all models. Chile currently requires Euro 3 standards for gasoline vehicles and Euro 4 standards for diesel vehicles and has proposed Euro 4 standards for gasoline vehicles beginning in September 2010 and Euro 5 standards for diesel vehicles beginning in September 2011. Other countries in the LAAM region either have some level of U.S. or EU standards or no standards at all.

Industrial Environmental Control

Our operations are subject to a wide range of environmental protection laws including those laws regulating air emissions, water discharges, waste management and environmental cleanup. In connection with the 363 Sale we have assumed various stages of investigation for sites where contamination has been alleged and a number of remediation actions to clean up hazardous wastes as required by federal and state laws. Certain environmental statutes require that responsible parties fund remediation actions regardless of fault, legality of original disposal or ownership of a disposal site. Under certain circumstances these laws impose joint and several liability, as well as liability for related damages to natural resources.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

The future effect of environmental matters, including potential liabilities, is often difficult to estimate. Environmental reserves are recorded when it is probable that a liability has been incurred and the amount of the liability is reasonably estimable. This practice is followed whether the claims are asserted or unasserted. The amounts of current reserves are expected to be paid out over the periods of remediation for the applicable sites, which typically range from two to 30 years.

The following table summarizes the expenses for site remediation actions, including ongoing operations and maintenance (dollars in millions):

	Successor	Predecessor		
	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008	Year Ended December 31, 2007
Site remediation expenses	$ 3	$ 34	$ 94	$ 104

It is possible that such remediation actions could require average annual expenditures of $30 million over the next five years.

Remediation costs and other damages for which we ultimately may be responsible are not reasonably estimable because of uncertainties with respect to factors such as our connection to the site or to materials located at the site, the involvement of other potentially responsible parties, the application of laws and other standards or regulations, site conditions and the nature and scope of investigations, studies and remediation to be undertaken (including the technologies to be required and the extent, duration and success of remediation). As a result, we are unable to determine or reasonably estimate the amount of costs or other damages for which we are potentially responsible in connection with these sites, although that total could be substantial.

To mitigate the effects our worldwide facilities have on the environment we are committed to convert as many of our worldwide facilities as possible to landfill-free facilities. Landfill-free facilities send no waste to landfills, waste is either recycled or used to create energy. As part of Old GM's commitment to reduce the effect its worldwide facilities had on the environment, Old GM had committed to convert half of its major global manufacturing operations to landfill-free facilities by 2010. This landfill-free strategy translated, on an individual facility basis, to more than 70 of Old GM's manufacturing operations worldwide. At July 10, 2009 we had acquired, in connection with the 363 Sale, 56 landfill-free manufacturing facilities worldwide. At our landfill-free facilities, 97% of waste materials are recycled or reused and 3% is converted to energy at waste-to-energy facilities. We estimate that over 2 million tons of waste materials were recycled or reused by us and Old GM in 2009 and estimate that 41,000 tons of waste materials from us and Old GM in 2009 were converted to energy at waste-to-energy facilities. These numbers will increase as additional manufacturing sites reach landfill-free status.

We currently have not announced publicly any future targets to reduce CO_2 emission levels from our worldwide facilities; however, we are continuing to make significant progress in further reducing CO_2 emission levels. Seven of our facilities in Europe are included in and comply with the European Emissions Trading Scheme, which is being implemented to meet the European Community's greenhouse gas reduction commitments under the Kyoto Protocol. We and Old GM reported in accordance with the Global Reporting Initiative, the Carbon Disclosure Project, the EPA Climate Leaders Program and the Department of Energy (DOE) 1605(b) program since their inception. We are implementing and publicly reporting on various voluntary initiatives to reduce energy consumption and greenhouse gas emissions from our worldwide operations. In 2005 Old GM had a 2010 target of an 8% reduction in CO_2 emissions from its worldwide facilities compared to Old GM's worldwide facilities 2005 emission levels. By 2008 Old GM had exceeded this target by reducing CO_2 emissions from its worldwide facilities by 20% compared to 2005 levels.

Automotive Fuel Economy

North America

The 1975 Energy Policy and Conservation Act (EPCA) provided for average fuel economy requirements for fleets of passenger cars built for the 1978 model year and thereafter. For the 2009 model year, our and Old GM's domestic passenger car fleet achieved a Corporate Average Fuel Economy (CAFE) of 31.1 mpg, which exceeded the standard of 27.5 mpg. The estimated CAFE for our 2010 model year domestic passenger cars is 30.3 mpg, which would also exceed the 27.5 mpg standard applicable for that model year.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Cars that are imported for sale in the U.S. are accounted for separately. For our and Old GM's imported passenger cars, the 2009 model year CAFE was 30.3 mpg, which exceeded the requirement of 27.5 mpg. The estimated CAFE for our 2010 model year imported passenger cars is 34.5 mpg, which would also exceed the applicable requirement.

Fuel economy standards for light-duty trucks became effective in 1979. Starting with the 2008 model year, the National Highway Traffic Safety Administration (NHTSA) implemented substantial changes to the structure of the truck CAFE program, including reformed standards based upon truck size. Under the existing truck rules, reformed standards are optional for the 2008 through 2010 model years. Old GM chose to comply with these optional reform-based standards beginning with the 2008 model year. Our and Old GM's light-duty truck CAFE performance for the 2009 model year was 23.7 mpg, which exceeds our and Old GM's reformed requirement of 22.5 mpg. Our projected reform standard for light-duty trucks for the 2010 model year is 22.9 mpg and our projected performance under this standard is 23.7 mpg.

In 2007 Congress passed the Energy Independence and Security Act, which directed NHTSA to modify the CAFE program. Among the provisions in the new law was a requirement that fuel economy standards continue to be set separately for cars and trucks that combined would increase to at least 35.0 mpg by 2020.

In addition, California has passed legislation (AB 1493) requiring the CARB to regulate greenhouse gas emissions from vehicles (which is the same as regulating fuel economy). This California program is currently established for the 2009 through 2016 model years. California needed a federal waiver to implement this program and was granted this waiver on June 30, 2009.

Further, in response to a U.S. Supreme Court decision, the EPA was directed to establish a new program to regulate greenhouse gas emissions for vehicles under the Clean Air Act. As a result, in September 2009 the EPA and the NHTSA issued a joint proposal to establish a coordinated national program consisting of new requirements for model year 2012 through 2016 light-duty vehicles that will reduce greenhouse gas emissions under the Clean Air Act and improve fuel economy pursuant to the CAFE standards under the EPCA. These reform-based standards will apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles (collectively, light-duty vehicles) built in model years 2012 through 2016. The rule is to be finalized by April 2010. Our current product plan projects compliance with the federal and California programs through 2016.

CARB has agreed that compliance with the EPA's greenhouse gas emission standards will be deemed compliant with the AB 1493 standards for 2012 through 2016 model years. In the meantime, California's program to regulate vehicle greenhouse gases is in effect for the 2009-2011 model years. The following table illustrates California's program compliance standards and our projected compliance (in grams per mile CO_2-equivalent):

	2009 Model Year		2010 Model Year		2011 Model Year	
	Standard	Combined GM and Old GM	Standard	GM(a)	Standard	GM(a)
Passenger car and light-duty truck 1 fleet	323	292	301	303	267	290
Light–duty truck 2 + medium-duty passenger vehicle fleet	439	413	420	387	390	394

(a) Our performance projections for the 2010 model year for the passenger car and light-duty truck 1 fleet as well as both fleets for the 2011 model year are projected to be more than the standard. We are still projecting compliance due to the allowed use of credits earned in previous years.

Europe

In Europe, the EU passed legislation in December 2008 to regulate CO_2 emissions beginning in 2012. Based on a target function of CO_2 to vehicle weight, each manufacturer must meet a specific target based on the CO_2 target value on this curve for each vehicle it sells, but with the ability to average across its fleet in each year. This requirement will be phased in with 65% of vehicles sold in 2012 required to meet this target, 75% in 2013, 80% in 2014 and 100% in 2015 and beyond. Automobile manufacturers can earn super-credits under this legislation for the sales volume of vehicles having a specific CO_2 value of less than 50 grams CO_2. This is intended to encourage the early introduction of ultra-low CO_2 vehicles such as the Chevrolet Volt and Opel/Vauxhall Ampera by providing an

Table of Contents

additional incentive to reduce the CO_2 fleet average. Automobile manufacturers may gain credit of up to 7 grams for eco-innovations for those technologies which improve real-world fuel economy but may not show in the test cycle, such as solar panels on vehicles. There is also a 5% credit for E85 flexible-fuel vehicles if more than 30% of refueling stations in an EU member state sell E85. Further regulatory detail is being developed in the comitology process, which develops the detail of the regulatory requirements through a process involving the European Commission and member states. The legislation sets a target of 95 grams per kilometer CO_2 for 2020 with an impact assessment required to further assess and develop this requirement. We have developed a compliance plan by adopting operational CO_2 targets for each market entry in Europe.

In October 2009 the EU Commission adopted a proposal to regulate CO_2 emissions from light commercial vehicles. The proposal is modeled after the CO_2 regulation for passenger cars. It proposes that new light commercial vehicles meet a fleet average CO_2 target of 175 grams per kilometer CO_2 with a phase-in of compliance beginning with 75% of new light commercial vehicles by 2014, 80% by 2015 and 100% compliance by 2016. The manufacturer-specific CO_2 compliance target will be determined as a function of vehicle curb mass. Flexibilities, such as eco-innovations and super credits, are part of the regulatory proposal as well. A long-term target for 2020 of 135g/km has been also proposed, to be confirmed after an impact assessment in 2013. We are currently making an assessment of the effect of the proposal on our fleet of light commercial vehicles. The EU Commission's proposal will now go through the legislative process with the European Parliament and European Council, during which we expect some modifications to be adopted.

A regulation has been adopted that will require low-rolling resistance tires, tire pressure monitoring systems and gear shift indicators by 2012. An additional regulation has been adopted that will require labeling of tires for noise, fuel efficiency and rolling resistance, affecting vehicles at sale as well as the sale of tires in the aftermarket. Further, there are plans to introduce regulatory proposals regarding energy efficiency of air conditioning systems and fuel economy meters.

Sixteen EU member states have introduced CO_2 based vehicle taxation schemes. Tax measures are within the jurisdiction of the EU member states. We are faced with significant challenges relative to the predictability of future tax laws and differences in the tax schemes and thresholds.

International Operations

In the Asia Pacific region, we face new or increasingly more stringent fuel economy standards. In China, Phase 3 fuel economy standards are under development and may move from a vehicle pass-fail system to a corporate fleet average scheme. Phase 3 fuel economy standards are expected to increase by 15% to 20% from the current Phase 2 targets and implementation is expected to begin in 2012. Phase 2 currently allows some relief for certain vehicle types and vehicles with automatic transmissions. It is unclear at this time if that relief will be carried over in Phase 3. In Korea, new fuel economy/CO_2 targets were announced last year as part of the government's low carbon/green growth strategy. These targets are planned to be set at levels more stringent than fuel economy/CO_2 targets in the U.S., but less stringent than fuel economy/CO_2 targets in Europe. Phase-in is expected to begin in 2012 and finish in 2015 with manufacturers having the option to certify either on a fuel consumption basis or a CO_2 emissions basis. Each manufacturer will be given a corporate target to meet based on an overall industry fleet fuel economy/CO_2 average. Other aspects of the program being considered include credits, incentives, and penalties. Legislation of the new standard is expected to be completed by the end of 2010. In Australia the government is conducting an assessment of possible vehicle fuel efficiency measures including shifting from voluntary to mandatory standards and how any such move would align with the government's policy response to climate change. Before the government makes any decisions on additional fuel efficiency measures, it will conduct an industry consultation. For the first time, India is expected to establish fuel economy norms based on weight and measured in CO_2 emissions that will become mandatory sometime in 2011. Final targets and labeling requirements are still to be determined. In April 2009 automobile manufacturers in India began to voluntarily declare the fuel economy of each vehicle at the point of sale.

In Brazil, governmental bodies and the Brazilian automobile makers association established, in 2009, a national voluntary program for evaluation and labeling of light passenger and commercial vehicles equipped with internal combustion engines. This voluntary program aims to increase vehicles energy efficiency by labeling vehicles with fuel consumption measurements for urban, extra-urban and combined (equivalent to city and highway mpg measurements in the U.S.) driving conditions. We are and Old GM was engaged in this program along with other leading car manufacturers.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Chemical Regulations

North America

Several states have introduced legislation related to green chemistry and product stewardship initiatives. These initiatives would give states broad regulatory authority in relation to the use of certain chemical substances and potentially affect a manufacturer's vehicle life-cycle responsibilities. For example, we expect California's Green Chemistry regulations to be finalized at the end of 2010. Currently, vehicles are not included in the scope of the regulations; however, if vehicles are included in future revised regulations it could lead to increased product complexity and cost.

Europe

In June 2007 the EU implemented its regulatory requirements to register, evaluate, authorize and restrict the use of chemical substances (REACH). The regulation deals with chemical substances produced with a production volume of one ton or more per year are required to be registered with a new European Chemicals Agency. During REACH's pre-registration phase, Old GM and our suppliers registered those substances identified by the regulation. REACH is to be phased in over a 10 year period from the implementation date. During the implementation phase, REACH will require ongoing action from us, Original Equipment Manufacturers (OEM), our suppliers and other suppliers in the supply chain. Under REACH, substances of very high concern may require authorization for further use and may also be restricted in the future, which could increase the cost of certain substances that are used to manufacture vehicles and parts. In addition, our research and development initiatives may be diverted to address future REACH requirements. We are continually monitoring the implementation of REACH and its effect on our suppliers and the automotive industry to maintain compliance.

Safety

New vehicles and equipment sold in the U.S. are required to meet certain safety standards promulgated by the NHTSA. The National Traffic and Motor Vehicle Safety Act of 1966 authorized the NHTSA to determine these standards and the schedule for implementing them. In addition, in the case of a vehicle defect that creates an unreasonable risk to motor vehicle safety or does not comply with a safety standard, the National Traffic and Motor Vehicle Safety Act of 1966 generally requires that the manufacturer notify owners and provide a remedy. The Transportation Recall Enhancement, Accountability and Documentation Act requires us to report certain information relating to certain customer complaints, warranty claims, field reports and lawsuits in the U.S. and fatalities and recalls outside the U.S.

We are subject to certain safety standards and recall regulations in the markets outside the U.S. in which we operate. These standards often have the same purpose as the U.S. standards, but may differ in their requirements and test procedures. From time to time, other countries pass regulations which are more stringent than U.S. standards. Most countries require type approval while the U.S. and Canada require self-certification.

Vehicular Noise Control

Vehicles we manufacture and sell may be subject to noise emission regulations.

In the U.S., passenger cars and light-duty trucks are subject to state and local motor vehicle noise regulations. We are committed to designing and developing our products to meet these noise regulations. Since addressing different vehicle noise regulations established in numerous state and local jurisdictions is not practical, we attempt to identify the most stringent requirements and validate to those requirements. In the rare instances where a state or local noise regulation is not covered by the composite requirement, a waiver of the requirement is requested and to date no significant cost has resulted from such a request. Medium to heavy-duty trucks are regulated at the federal level. Federal truck regulations preempt all United States state or local noise regulations for trucks over 10,000 lbs. gross vehicle weight rating.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Outside the U.S., noise regulations have been established by authorities at the national and supranational level (e.g., EU or UN ECE for Europe). We believe that our vehicles meet all applicable noise regulations in the markets where they are sold.

While current noise emission regulations serve to regulate maximum allowable noise levels, proposals have been made to regulate minimum noise levels. These proposals stem from concern that vehicles that are relatively quiet, specifically hybrids, may not be heard by the sight-impaired. We are committed to design and manufacture vehicles to comply with potential noise emission regulations that may come from these proposals.

Potential Effect of Regulations

We have established aggressive near-term and long-term plans to develop and bring to market technologies designed to further reduce emissions, mitigate remediation expenses related to environmental liabilities, improve fuel efficiency, monitor and enhance the safety features of our vehicles and provide additional value and benefits to our customers. This is illustrated by our commitment to marketing more hybrid vehicles, our accelerated commitment to develop electrically powered vehicles, our use of biofuels in our expanded portfolio of flexible-fuel vehicles and enhancements to conventional internal combustion engine technology have contributed to the fuel efficiency of our vehicles. In addition, the conversion of many of our manufacturing facilities to landfill-free status has shown our commitment to mitigate potential environmental liability. We believe that the development and global implementation of new, cost-effective energy technologies in all sectors is the most effective way to improve energy efficiency, reduce greenhouse gas emissions and mitigate environmental liabilities.

Despite these advanced technology efforts, our ability to satisfy fuel economy and CO_2 requirements is contingent on various future economic, consumer, legislative and regulatory factors that we cannot control and cannot predict with certainty. If we are not able to comply with specific new fuel economy requirements, which include higher CAFE standards and state CO_2 requirements such as those imposed by the AB 1493 Rules, then we could be subject to sizeable civil penalties or have to restrict product offerings drastically to remain in compliance. Environmental liabilities, which we may be responsible for, are not reasonably estimable and could be substantial. In addition, violations of safety standards could result in the recall of one or more of our products. In turn, any of these actions could have substantial adverse effects on our operations, including facility idling, reduced employment, increased costs and loss of revenue.

Pension Legislation

We are subject to a variety of federal rules and regulations, including the Employee Retirement Income Security Act of 1974, as amended (ERISA) and the Pension Protection Act of 2006, which govern the manner in which we fund and administer our pensions for our retired employees and their spouses. The Pension Protection Act of 2006 is designed, among other things, to more appropriately reflect the value of pension assets and liabilities to determine funding requirements. Under the Pension Protection Act of 2006 we expect there will be no cash funding requirement for our U.S. hourly and salaried pension plans in 2010. We remeasure our U.S. pension plans at the end of each year and for significant plan amendments, benefit modifications and related events. Based on preliminary asset returns, the year-to-date discount rate, assuming interest rates remain at current levels and pension fund assets earn 8.5% annually going forward, we may need to make significant contributions to the U.S. pension plans in 2013 and beyond. We are currently analyzing our pension funding strategies. We also maintain pension plans for employees in a number of countries outside the U.S., which are subject to local laws and regulations.

Export Control

We are subject to U.S. export control laws and regulations, including those administered by the U.S. Departments of State, Commerce, and Treasury. In addition, most countries in which we do business have applicable export controls. Our Office of Export Compliance and global Export Compliance Officers are responsible for working with our business units to ensure compliance with these laws and regulations. Non-U.S. export controls are likely to become increasingly significant to our business as we develop our research and development operations on a global basis. If we fail to comply with applicable export compliance regulations, we and our employees could be subject to criminal and civil penalties and, under certain circumstances, loss of export privileges and debarment from doing business with the U.S. government and the governments of other countries.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Significant Transactions

On July 10, 2009 we completed the acquisition of substantially all of the assets and assumed certain liabilities of Old GM and its direct and indirect subsidiaries (collectively, the Sellers). The 363 Sale was consummated in accordance with the Amended and Restated Master Sale and Purchase Agreement, dated June 26, 2009, as amended, (Purchase Agreement) between us and the Sellers, and pursuant to the Bankruptcy Court's sale order dated July 5, 2009.

In connection with the 363 Sale, the purchase price we paid to Old GM equaled the sum of:

- A credit bid in an amount equal to the total of: (1) debt of $19.8 billion under Old GM's UST Loan Agreement, plus notes of $1.2 billion issued as additional compensation for the UST Loan Agreement, plus interest on such debt Old GM owed as of the closing date of the 363 Sale; and (2) debt of $33.3 billion under Old GM's DIP Facility, plus notes of $2.2 billion issued as additional compensation for the DIP Facility, plus interest Old GM owed as of the closing date, less debt of $8.2 billion owed under the DIP Facility;
- The UST's return of the warrants Old GM previously issued to it;
- The issuance to MLC of 50 million shares (or 10%) of our common stock and warrants to acquire newly issued shares of our common stock initially exercisable for a total of 91 million shares of our common stock (or 15% on a fully diluted basis); and
- Our assumption of certain specified liabilities of Old GM (including debt of $7.1 billion owed under the DIP Facility).

Under the Purchase Agreement, we are obligated to issue additional shares of our common stock to MLC (Adjustment Shares) in the event that allowed general unsecured claims against MLC, as estimated by the Bankruptcy Court, exceed $35.0 billion. The maximum Adjustment Shares equate to 2% (or 10 million shares) of our common stock. The number of Adjustment Shares to be issued is calculated based on the extent to which estimated general unsecured claims exceed $35.0 billion with the maximum number of Adjustment Shares issued if estimated general unsecured claims total $42.0 billion or more. We determined that it is probable that general unsecured claims allowed against MLC will ultimately exceed $35.0 billion by at least $2.0 billion. In that circumstance, under the terms of the Purchase Agreement, we would be required to issue 2.9 million Adjustment Shares to MLC as an adjustment to the purchase price.

At July 10, 2009 we accrued $113 million in Other liabilities and deferred income taxes related to this contingent obligation.

Agreements with the UST, UAW Retiree Medical Benefits Trust and Export Development Canada

On July 10, 2009 we entered into the UST Credit Agreement and assumed debt of $7.1 billion Old GM incurred under its DIP Facility. Immediately after entering into the UST Credit Agreement, we made a partial pre-payment, reducing the UST Loans principal balance to $6.7 billion. An amendment to the UST Credit Agreement, as subsequently discussed, provides for quarterly payments of $1.0 billion beginning in December 2009. At March 31, 2010 the first two quarterly payments have been made reducing the UST Loans principal balance to $4.7 billion. We also entered into the VEBA Note Agreement and issued a note in the principal amount of $2.5 billion (VEBA Notes) to the UAW Retiree Medical Benefits Trust (New VEBA).

We are required to prepay the UST Loans, VEBA Notes and Canadian Loan (as subsequently defined), in certain cases on a pro rata basis, in an amount equal to the net cash proceeds received from certain asset dispositions, casualty events, extraordinary receipts and the incurrence of certain debt. We can voluntarily repay all or a portion of the UST Loans or VEBA Notes at any time. Once repaid, we cannot reborrow under the UST Credit Agreement.

The obligations under the UST Credit Agreement and the VEBA Note Agreement are secured by substantially all of our assets, subject to certain exceptions, including our equity interests in certain of our foreign subsidiaries, limited in most cases to 65% of the equity interests of the pledged foreign subsidiaries due to tax considerations.

Table of Contents

Proceeds of the DIP Facility of $16.4 billion were deposited in escrow and will be distributed to us at our request if the following conditions are met: (1) the representations and warranties we made in the loan documents are true and correct in all material respects on the date of our request; (2) we are not in default on the date of our request taking into consideration the amount of the withdrawal request; and (3) the UST, in its sole discretion, approves the amount and intended use of the requested disbursement. Any unused amounts in escrow on June 30, 2010 are required to be used to repay the UST Loans and the Canadian Loan on a pro rata basis. Any proceeds remaining in the escrow account after the UST Loans and the Canadian Loan are repaid in full shall be returned to us.

On July 10, 2009 through our wholly-owned subsidiary General Motors of Canada Limited (GMCL), we also entered into the amended and restated Canadian Loan Agreement with EDC, as a result of which GMCL has a CAD $1.5 billion (equivalent to $1.3 billion when entered into) term loan (Canadian Loan). An amendment to the UST Credit Agreement provides for quarterly payments of $192 million beginning December 2009. At March 31, 2010 the first two quarterly payments had been made reducing the Canadian Loan principal balance to $1.0 billion.

GMCL may voluntarily repay the Canadian Loan in whole or in part at any time. Once repaid, GMCL cannot reborrow under the Canadian Loan Agreement. We and 1908 Holdings Ltd., Parkwood Holdings Ltd., and GM Overseas Funding LLC, each of which is a Subsidiary Guarantor of GMCL, have guaranteed the Canadian Loan. Our guarantee of GMCL's obligations under the Canadian Loan Agreement is secured by a lien on the equity of GMCL. Because 65% of our ownership interest in GMCL was previously pledged to secure the obligations under the UST Credit Agreement and the VEBA Note Agreement, EDC received a first priority lien on 35% of our equity interest in GMCL and a second priority lien on the remaining 65%. With certain exceptions, GMCL's obligations under the Canadian Loan Agreement are secured by a first lien on substantially all of its and the Subsidiary Guarantors' assets, including GMCL's ownership interests in the Subsidiary Guarantors and a portion of GMCL's equity interests in General Motors Product Services Inc., a subsidiary of ours.

In November 2009 we signed amendments to the UST Credit Agreement and the Canadian Loan Agreement to provide for quarterly repayments of the UST Loans and Canadian Loan. Under these amendments, we agreed to make quarterly payments of $1.0 billion and $192 million to the UST and EDC, which began in the fourth quarter of 2009. Upon making such payments, equivalent amounts were released to us from escrow. In the event of an initial public offering of our equity, this payment schedule would be suspended. The remaining terms would remain unchanged versus the original agreement. Any funds remaining in our escrow account after repayment of the loans will be released to us.

Agreement with Delphi Corporation

In July 2009 we entered into the Delphi Master Disposition Agreement (DMDA) with Delphi Corporation (Delphi) and other parties. Under the DMDA, we agreed to acquire Delphi's global steering business (Nexteer), which supplies us and other OEMs with steering systems and columns, and four domestic facilities that manufacture a variety of automotive components, primarily sold to us. We and several third party investors who held the Delphi Tranche DIP facilities (collectively the Investors) agreed to acquire substantially all of Delphi's remaining assets through DIP HOLDCO, LLP, subsequently named Delphi Automotive LLP (New Delphi). Certain excluded assets and liabilities have been retained by a Delphi entity (DPH) to be sold or liquidated. In October 2009 we consummated the transaction contemplated by the DMDA with Delphi, New Delphi, Old GM and other sellers and other buyers that are party to the agreement, as more fully described in Note 5 to the consolidated financial statements. Refer to "Item 7 — Management's Discussion and Analysis of Financial Condition and Results of Operations — Strategic Initiatives — Delphi Master Disposition Agreement" for a description of the terms of the DMDA and related agreements.

Holding Company Merger

On October 19, 2009 we completed our holding company merger to implement a new holding company structure that is intended to provide greater financial and organizational flexibility. In connection with the merger, all of the outstanding shares of common stock and Series A Preferred Stock in our previous legal entity were exchanged on a one-for-one basis for new shares of our common stock and Series A Preferred Stock. These new securities have the same economic terms and provisions as the securities for which they were exchanged and are held by our securityholders in the same class evidencing the same proportional interest in us as the securityholders held prior to the exchange.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

In addition, in connection with the merger we entered into amended and restated warrant agreements and a Stockholders Agreement dated as of October 15, 2009, which are substantially identical to our prior warrant agreements and Stockholders Agreement dated as of July 10, 2009, respectively. Also in connection with the merger, GMCL entered into an amendment (Canadian Loan Amendment) to the Canadian Loan Agreement and we entered into an assignment and assumption agreement and amendment to the UST Credit Agreement and an assignment and assumption agreement and amendment to the VEBA Note Agreement. Refer to “Market for the Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities — Recent Sales of Unregistered Securities” for a further discussion on the merger.

Employees

At December 31, 2009 we employed 217,000 employees, of whom 151,000 (70%) were hourly employees and 66,000 (30%) were salaried employees. The following table summarizes employment by segment (in thousands):

	Successor	Predecessor	
	Year Ended December 31,	Years Ended December 31,	
	2009	2008	2007
GMNA(a)	102	116	139
GMIO	61	70	68
GME	53	55	57
Corporate	1	2	2
Total Worldwide	217	243	266
U.S. — Salaried(a)(b)(d)	26	29	34
U.S. — Hourly(a)(c)	51	62	78

(a) Includes additional 11,000 employees due to the acquisition of Nexteer and four domestic facilities from Delphi on October 6, 2009, of which 2,000 are U.S. salaried employees, 5,000 are U.S. hourly employees and 4,000 are employees located outside the U.S.

(b) 5,000 U.S. salaried employees irrevocably accepted the 2009 Salaried Window Program (a voluntary program, subject to management approval, to reduce salaried headcount based on individual eligibility and employees elections made) option or the GM severance program option.

(c) 13,000 U.S. hourly employees elected to participate in Old GM’s 2009 Special Attrition Programs, which were introduced in February and June of 2009 and offered cash and other incentives for individuals who elected to retire or voluntarily terminate employment.

(d) Includes employees in GMNA and Corporate.

Refer to Note 19 to the consolidated financial statements for additional information on our salaried and hourly severance programs.

At December 31, 2009 52,000 of our U.S. employees (or 67%) were represented by unions, of which 50,000 employees were represented by the UAW. In addition, many of our employees outside the U.S. were represented by various unions. At December 31, 2009 we had 388,000 U.S. hourly and 118,000 U.S. salaried retirees, surviving spouses and deferred vested participants.

Segment Reporting Data

Operating segment and principal geographic area data for July 10, 2009 through December 31, 2009, January 1, 2009 through July 9, 2009, and the years ended 2008 and 2007 are summarized in Note 33 to the consolidated financial statements.

Item 1A. ***Risk Factors***

We face a number of significant risks and uncertainties in connection with our operations. Our business, results of operations and financial condition could be materially adversely affected by the factors described below.

While we describe each risk separately, some of these risks are interrelated and certain risks could trigger the applicability of other risks described below. Also, the risks and uncertainties described below are not the only ones that we may face. Additional risks and uncertainties not presently known to us, or that we currently do not consider significant, could also potentially impair, and have a material adverse effect on, our business, results of operations and financial condition.

Our business is highly dependent on sales volume. Global vehicle sales have declined significantly from their peak levels and there is no assurance that the global automobile market will recover in the near future or that it will not suffer a significant further downturn.

Our business and financial results are highly sensitive to sales volume, as demonstrated by the effect of sharp declines in vehicle sales in the U.S. since 2007 and globally since 2008 on our business. Vehicle sales in the U.S. have fallen significantly on an annualized basis since their peak in 2007, and sales globally have shown steep declines on an annualized basis since their peak in January 2008. The deteriorating economic and market conditions that have driven the drop in vehicle sales, including declines in real estate and equity values, rising unemployment, tightened credit markets, depressed consumer confidence and weak housing markets, may not improve significantly during 2010 and may continue past 2010 and could deteriorate further. Although vehicle sales began to recover in the last quarter of 2009 and we expect that they will continue to recover in 2010, there is no assurance that any recovery in vehicle sales will continue. Further, sales volumes may decline more severely or take longer to recover than we expect, and if they do, our results of operations and financial condition will be materially adversely affected.

Our ability to attract a sufficient number of consumers to consider our vehicles particularly our new products, including cars and crossover vehicles, is essential.

Our ability to achieve long-term profitability depends on our ability to entice consumers to consider our products when purchasing a new vehicle. The automotive industry, particularly in the U.S., is very competitive and our competitors have been very successful in persuading customers that previously purchased our products to purchase their vehicles instead as is reflected by our loss of market

Table of Contents

share over the past three years. We believe that this is due, in part, to a negative public perception of our products in relation to those of some of our competitors. Changing this perception will be critical. If we are unable to change public perception of our company and products, particularly our new products, including cars and crossovers, our results of operations and financial condition could be materially adversely affected.

Our continued ability to achieve cost reductions and to realize production efficiencies for our automotive operations is critical to our ability to return to profitability.

We are continuing to implement a number of cost reduction and productivity improvement initiatives in our automotive operations, including substantial restructuring initiatives for our North American operations. Our future competitiveness depends upon our continued success in implementing these restructuring initiatives throughout our automotive operations, especially in North America. In addition, while some of the elements of cost reduction are within our control, others such as interest rates or return on investments, which influence our expense for pensions, depend more on external factors, and there can be no assurance that such external factors will not materially adversely affect our ability to reduce our structural costs. Reducing costs may prove difficult due to our focus on increasing advertising and our belief that engineering expenses necessary to improve the performance, safety, and customer satisfaction of our vehicles are likely to increase.

The ability of our new executive management team to quickly learn the automotive industry and lead our company will be critical to our ability to succeed.

During the last six months we have substantially changed our executive management team. We have appointed a new Chief Executive Officer and a new Chief Financial Officer, both of whom have no outside automotive industry experience. We have also promoted from within many new senior officers in areas ranging from marketing to engineering. It is important to our success that the new members of the executive management team quickly understand the automotive industry and that our senior officers quickly adapt and excel in their new senior management roles. If they are unable to do so, and as a result are unable to provide effective guidance and leadership, our business and financial results could be materially adversely affected.

Failure of our suppliers, due to difficult economic conditions affecting our industry, to provide us with the systems, components and parts that we need to manufacture our automotive products and operate our business could result in a disruption in our operations and have a material adverse effect on our business.

We rely on many suppliers to provide us with the systems, components and parts that we need to manufacture our automotive products and operate our business. In recent years, a number of these suppliers have experienced severe financial difficulties and solvency problems, and some have sought relief under the Bankruptcy Code or similar reorganization laws. This trend intensified in 2009 due to the combination of general economic weakness, sharply declining vehicle sales and tightened credit availability that has affected the automotive industry generally. Suppliers may encounter difficulties in obtaining credit or may receive an opinion from their independent public accountants regarding their financial statements that includes a statement expressing substantial doubt about their ability to continue as a going concern, which could trigger defaults under their financings or other agreements or impede their ability to raise new funds.

When comparable situations have occurred in the past, suppliers have attempted to increase their prices, pass through increased costs, alter payment terms or seek other relief. In instances where suppliers have not been able to generate sufficient additional revenues or obtain the additional financing they need to continue their operations, either through private sources or government funding, which may not be available, some have been forced to reduce their output, shut down their operations or file for bankruptcy protection. Such actions would likely increase our costs, create challenges to meeting our quality objectives and in some cases make it difficult for us to continue production of certain vehicles. To the extent we take steps in such cases to help key suppliers remain in business, our liquidity would be adversely affected. It may also be difficult to find a replacement for certain suppliers without significant delay.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Increase in cost, disruption of supply or shortage of raw materials could materially harm our business.

We use various raw materials in our business including steel, non-ferrous metals such as aluminum and copper and precious metals such as platinum and palladium. The prices for these raw materials fluctuate depending on market conditions. In recent years, freight charges and raw material costs increased significantly. Substantial increases in the prices for our raw materials increase our operating costs and could reduce our profitability if we cannot recoup the increased costs through vehicle prices. In addition, some of these raw materials, such as corrosion-resistant steel, are only available from a limited number of suppliers. We cannot guarantee that we will be able to maintain favorable arrangements and relationships with these suppliers. An increase in the cost or a sustained interruption in the supply or shortage of some of these raw materials, which may be caused by a deterioration of our relationships with suppliers or by events such as labor strikes, could negatively affect our net revenues and profitability to a material extent.

The pace of introduction and market acceptance of new vehicles is important to our success and the frequency of new vehicle introductions may be materially adversely affected by reductions in capital expenditures.

Our competitors have introduced new and improved vehicle models designed to meet consumer expectations, and will continue to do so. Our profit margins, sales volumes and market shares may decrease if we are unable to produce models that compare favorably to these competing models. If we are unable to produce new and improved vehicle models on a basis competitive with the models introduced by our competitors, demand for our vehicles may be materially adversely affected. Further, the pace of our development and introduction of new and improved vehicles depends on our ability to successfully implement improved technological innovations in design, engineering and manufacturing, which requires extensive capital investment. Any capital expenditure cuts in this area that we may determine to implement in the future to reduce costs and conserve cash could reduce our ability to develop and implement improved technological innovations, which may materially reduce demand for our vehicles.

Inadequate cash flow could materially adversely affect our business operations in the future.

We will require substantial liquidity to implement long-term cost savings and restructuring plans, satisfy our obligations under the UST Credit Agreement, continue capital spending to support product programs and development of advanced technologies, and meet scheduled term debt and lease maturities, in each case as contemplated by our business plan. If our cash levels approach the minimum cash levels necessary to support our normal business operations, we may be forced to borrow additional funds at rates that may not be favorable, curtail capital spending, and reduce research and development and other programs that are important to the future success of our business. If this were to happen, our need for cash would be intensified.

Although we believe that the funding we received in connection with our formation and our purchase of substantially all of MLC’s assets provides us with sufficient liquidity to operate our business in the near-term, our ability to maintain adequate liquidity in the medium- and long-term will depend significantly on the volume, mix and quality of vehicle sales and the continuing curtailment of operating expenses. Our liquidity needs are sensitive to changes in each of these and other factors.
