In October 2008 subject to Delphi obtaining an extension or other accommodation of its DIP financing through June 30, 2009, Old GM agreed to temporarily accelerate payment of North American payables to Delphi in the three months ended June 30, 2009. In January 2009 Old GM agreed to immediately accelerate $50 million in advances towards the temporary acceleration of North American payables. Additionally, Old GM agreed to accelerate $150 million and $100 million of North American payables to Delphi in March and April of 2009 bringing the total amount accelerated to the total agreed upon $300 million. Upon consummation of the DMDA, we waived our rights to the accelerated payments that became consideration to Delphi and other parties under the DMDA.

Delphi Master Disposition Agreement

In July 2009 we, Delphi and the PBGC negotiated an agreement to be effective upon consummation of the DMDA regarding the settlement of PBGC's claims from the termination of the Delphi pension plans and the release of certain liens with the PBGC against Delphi's foreign assets. In return, the PBGC received a payment of $70 million from us and was granted a 100% interest in Class C Membership Interests in New Delphi which provide for the PBGC to participate in predefined equity distributions. We maintain the obligation to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the Delphi Benefit Guarantee Agreements.

In October 2009 we consummated the transaction contemplated by the DMDA with Delphi, New Delphi, Old GM and other sellers and other buyers that are party to the DMDA, as more fully described in Note 5. Upon consummation of the DMDA, the MRA was terminated with limited exceptions, and we and Delphi waived all claims against each other under the GSA. Upon consummation of the DMDA we settled our commitments to Delphi accrued to date except for the obligation to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the Delphi Benefit Guarantee Agreements that we continue to maintain. In addition, the DMDA establishes an ongoing commercial relationship with New Delphi. We also agreed to continue all existing Delphi supply agreements and purchase orders for GMNA to the end of the related product program, and New Delphi agreed to provide us with access rights designed to allow us to operate specific sites on defined triggering events to provide us with protection of supply.

Delphi Charges

The following table summarizes charges that have been recorded with respect to the various agreements with Delphi (dollars in millions):

	Successor	Predecessor	
	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Other automotive expenses, net	$ 8	$ 184	$ 4,797
Automotive cost of sales	193	142	555
Reorganization gains, net	—	662	—
Total Delphi charges	$ 201	$ 988	$ 5,352

These charges reflect the best estimate of obligations associated with the various Delphi agreements, including obligations under the Delphi Benefit Guarantee Agreements, updated to reflect the DMDA. At July 9, 2009 these charges reflect the obligation to the PBGC upon consummation of the DMDA, consisting of the estimated fair value of the PBGC Class C Membership Interests in New Delphi of $317 million and the payment of $70 million due from us. Further, at July 9, 2009 these charges reflect an estimated value of $966 million pertaining to claims we have against Delphi that were waived upon consummation of the DMDA. The estimated value of the claims represents the excess after settlement of certain pre-existing commitments to Delphi of the fair value of Nexteer, the four

Table of Contents

domestic facilities and the investment in New Delphi over the cash consideration paid under the DMDA. Refer to Note 5 for additional information on the total consideration paid under the DMDA and the allocation of such consideration to the various units of account.

The charges recorded in the year ended December 31, 2008 primarily related to estimated losses associated with the guarantee of Delphi's hourly pension plans and the write off of any estimated recoveries from Delphi. The charges also reflected a benefit of $622 million due to a reduction in the estimated liability associated with Delphi OPEB related costs for Delphi active employees and retirees, based on the terms of the New VEBA, who were not previously participants in Old GM's plans. The terms of the New VEBA also reduced Old GM's OPEB obligation for Delphi employees who returned to Old GM and became participants in the UAW hourly medical plan primarily in 2006. Such benefit is included in the actuarial gain recorded in our UAW hourly medical plan. Refer to Note 22 for additional information on the Delphi benefit plans.

Note 23. Income Taxes

Consolidated

The following table summarizes Income (loss) before income taxes and equity income (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
U.S. income (loss)	$ 2,648	$ (6,647)	$105,420	$ (26,742)
Non-U.S. income (loss)	3,089	1,364	2,356	(2,729)
Income (loss) before income taxes and equity income	$ 5,737	$ (5,283)	$107,776	$ (29,471)

Provision (Benefit) for Income Taxes

The following table summarizes the provision (benefit) for income taxes (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Current income tax expense (benefit)				
U.S. federal	$ (10)	$ 7	$ (60)	$ (31)
Non-U.S.	441	421	(522)	668
U.S. state and local	(1)	(1)	16	(34)
Total current	430	427	(566)	603
Deferred income tax expense (benefit)				
U.S. federal	(25)	(1,204)	110	(163)
Non-U.S.	259	(52)	(716)	1,175
U.S. state and local	8	(171)	6	151
Total deferred	242	(1,427)	(600)	1,163
Total income tax expense (benefit)	$ 672	$ (1,000)	$ (1,166)	$ 1,766

Annual tax provisions include amounts considered sufficient to pay assessments that may result from examination of prior year tax returns.

The following table summarizes the cash paid (received) for income taxes (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Cash paid (received) for income taxes	$ 357	$ (65)	$ (1,011)	$ 718

Provisions are made for estimated U.S. and non-U.S. income taxes, less available tax credits and deductions, which may be incurred on the remittance of our and Old GM's share of basis differences in investments in foreign subsidiaries and corporate joint ventures not deemed to be permanently reinvested. Taxes have not been provided on basis differences in investments in foreign subsidiaries and corporate joint ventures which are deemed permanently reinvested of $6.9 billion and $5.5 billion at December 31, 2010 and 2009. Quantification of the deferred tax liability, if any, associated with permanently reinvested earnings is not practicable.

Total income tax expense (benefit)	$ 672	$ (1,000)	$ (1,166)	$ 1,766

Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities at December 31, 2010 and 2009 reflect the effect of temporary differences between amounts of assets, liabilities and equity for financial reporting purposes and the bases of such assets, liabilities and equity as measured by tax laws, as well as tax loss and tax credit carryforwards.

The following table summarizes the components of temporary differences and carryforwards that give rise to deferred tax assets (liabilities) (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Deferred tax assets		
Postretirement benefits other than pensions	$ 3,884	$ 5,231
Pension and other employee benefit plans	7,127	8,951
Warranties, dealer and customer allowances, claims and discounts	4,276	4,255
Property, plants and equipment	2,275	3,333
Capitalized research expenditures	5,033	4,693
Tax carryforwards	20,109	18,880
Miscellaneous U.S.	2,387	2,693
Miscellaneous non-U.S.	357	1,049
Total deferred tax assets before valuation allowances	45,448	49,085
Less: Valuation allowances	(42,979)	(45,281)
Net deferred tax assets	2,469	3,804
Deferred tax liabilities		
Intangible assets	2,609	3,642
Total deferred tax liabilities	2,609	3,642
Net deferred tax assets (liabilities)	$ (140)	$ 162

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

In July 2009 Old GM recorded adjustments resulting in a net decrease in valuation allowances of $20.7 billion as a result of the 363 Sale and fresh-start reporting. The net decrease primarily resulted from U.S. federal and state tax attribute reduction of $12.2 billion related to debt cancellation income, a net difference of $5.5 billion between fresh-start reporting and historical U.S. GAAP bases of assets and liabilities at entities with valuation allowances, net valuation allowances of $1.7 billion associated with assets and liabilities retained by Old GM, a foreign tax attribute reduction of $0.9 billion and release of valuation allowances of $0.7 billion. After the deconsolidation of our Saab unit in February 2009, corresponding deferred taxes and valuation allowances in Sweden were no longer recorded in Old GM financial statements.

Old GM established or released the following significant valuation allowances for jurisdictions not on a full valuation allowance throughout the applicable period (dollars in millions):

	Predecessor	
Jurisdiction(s)	Valuation Allowance Charge/(Release)	Period Ended
Brazil	$ (465)	July 9, 2009
Various non-U.S.	$ (286)	July 9, 2009
South Korea	$ 725	December 31, 2008
Various non-U.S.	$ 329	December 31, 2008
Australia	$ 284	December 31, 2008
Texas	$ 152	December 31, 2008
Spain	$ 206	March 31, 2008
United Kingdom	$ 173	March 31, 2008

Over the past several years, we and Old GM have accumulated pre-tax losses in the U.S. and various non-U.S. jurisdictions. These historical pre-tax losses were driven by several factors including but not limited to instability of the global economic environment, automotive price competition, relatively high cost structure, unfavorable commodity prices, unfavorable regulatory and tax environments and a challenging foreign currency exchange environment. By December 31, 2008, after weighing these objective and verifiable negative evidence factors with all other available positive and negative evidence, Old GM determined it was more likely than not it would not realize its net deferred tax assets, and established valuation allowances for major jurisdictions including the U.S., Canada, Brazil, Australia, South Korea, Germany, Spain and the United Kingdom. Additional concerns arose related to the U.S. parent company's liquidity which led us to establish valuation allowances for Texas and various non-U.S. jurisdictions, even though many of these jurisdictions had historical profits and no other significant negative evidence factors.

In 2009 the U.S. parent company liquidity concerns were resolved in connection with the Chapter 11 Proceedings and the 363 Sale, and many non-U.S. jurisdictions, including Brazil, were generating and projecting U.S. GAAP and local taxable income. To the extent there were no other significant negative evidence factors, Old GM determined it was more likely than not it would realize its net deferred tax assets and reversed valuation allowances in Brazil and various non-U.S. jurisdictions.

Although we are a new company, and our ability to achieve future profitability was enhanced by the cost and liability reductions that occurred as a result of the Chapter 11 Proceedings and 363 Sale, Old GM's historic operating results remain relevant as they are reflective of the industry and the effect of economic conditions. The fundamental businesses and inherent risks in which we globally operate did not change from those in which Old GM operated. As such, subsequent to the Chapter 11 Proceedings and the 363 Sale, due to objective and verifiable negative evidence including cumulative and current losses, we determined it was still more likely than not the net deferred tax assets would not be realized in major jurisdictions including the U.S., Canada, Australia, South Korea, Germany, Spain and the United Kingdom.

At December 31, 2010 objective and verifiable negative evidence continues to outweigh positive evidence in our key valuation allowance jurisdictions. If, in the future, we generate taxable income in jurisdictions where we have recorded full valuation allowances, on a sustained basis, our conclusion regarding the need for full valuation allowances in these tax jurisdictions could

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

change, resulting in the reversal of some or all of the valuation allowances. If our operations generate taxable income prior to reaching profitability on a sustained basis, we would reverse a portion of the valuation allowance related to the corresponding realized tax benefit for that period, without changing our conclusions on the need for a full valuation allowance against the remaining net deferred tax assets.

Uncertain Tax Positions

The following table summarizes gross unrecognized tax benefits before valuation allowances and the amount that would favorably affect the effective tax rate in future periods after valuation allowances (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Gross unrecognized tax benefits before valuation allowances	$ 5,169	$ 5,410
Amount that would favorably affect effective tax rate in future	$ 785	$ 618
Amount of liability for uncertain tax positions benefits netted against deferred tax assets in the same jurisdiction (a)	$ 3,605	$ 4,007

(a) The remaining uncertain tax positions are classified as current and non-current liabilities.

The following table summarizes activity of the total amounts of unrecognized tax benefits (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Beginning balance	$ 5,410	$ 4,096	$ 2,803	$ 2,754
Additions to tax positions in the current year	195	1,454	1,493	208
Additions to tax positions in prior years	803	22	594	751
Reductions to tax positions in the current year	—	(44)	(25)	(47)
Reductions to tax positions in prior years	(475)	(128)	(626)	(725)
Reductions in tax positions due to lapse of statutory limitations	(18)	—	(281)	—
Settlements	(761)	(111)	(16)	(275)
Other	15	121	154	137
Ending balance	$ 5,169	$ 5,410	$ 4,096	$ 2,803

The following tables summarize information regarding income tax related interest and penalties (dollars in millions):

	Successor		Predecessor

Accrued interest payable	$ 250	$ 275
Accrued penalties	$ 119	$ 137

Other Matters

Most of the tax attributes generated by Old GM and its domestic and foreign subsidiaries (net operating loss carryforwards and various income tax credits) survived the Chapter 11 Proceedings, and we are using or expect to use the tax attributes to reduce future tax liabilities. The ability to utilize certain of the U.S. tax attributes in future tax periods could be limited by Section 382(a) of the Internal Revenue Code. On November 1, 2010, we amended our certificate of incorporation to minimize the likelihood of an ownership change occurring for Section 382 purposes. In Germany, we have net operating loss carryforwards for corporate income tax and trade tax purposes through November 30, 2009 that, as a result of reorganizations that took place in 2008 and 2009, were not recorded as deferred tax assets. Although we received a ruling from the German tax authorities confirming the availability of these losses for carry over on January 26, 2011, a European Union Commission review concluded the German law on which the ruling was based is void and therefore reaffirmed these loss carryforwards are not available. We are evaluating options that would allow these loss carryforwards to reduce future taxable income. In Australia, we have net operating loss carryforwards which are subject to meeting a “Same Business Test” requirement that we assess on a quarterly basis.

In the U.S., we have continuing responsibility for Old GM’s open tax years. Old GM’s federal income tax returns for 2004 through 2006 were audited by the Internal Revenue Service (IRS), and the review was concluded in February 2010. The IRS is currently auditing Old GM’s federal 2007 and 2008 tax years. The IRS is also reviewing the January 1 through July 9, 2009 Old GM tax year as part of the IRS Compliance Assurance Process (CAP), the objective of which is to reach early issue resolution and increase audit efficiency. Our July 10, 2009 through December 31, 2009 and 2010 tax years are also under IRS CAP review. In addition to the U.S., income tax returns are filed in multiple jurisdictions and are subject to examination by taxing authorities throughout the world. We have open tax years from 2001 to 2009 with various significant tax jurisdictions. These open years contain matters that could be subject to differing interpretations of applicable tax laws and regulations as they relate to the amount, character, timing or inclusion of revenue and expenses or the sustainability of income tax credits for a given audit cycle. Given the global nature of our operations, there is a risk that transfer pricing disputes may arise.

In May 2009 the U.S. and Canadian governments resolved a transfer pricing matter for Old GM which covered the tax years 2001 through 2007. In the three months ended June 30, 2009 this resolution resulted in a tax benefit of $692 million and interest of $229 million. Final administrative processing of the Canadian case closing occurred in late 2009, and final administrative processing of the U.S. case closing occurred in February 2010.

In June 2010 a Mexican income tax audit covering the 2002 and 2003 years was concluded and an assessment of 2.0 billion pesos (equivalent to $165 million) including tax, interest and penalties was issued. We do not agree with the assessment and intend to appeal. We believe we have adequate reserves established and collection of the assessment will be suspended during the appeal period and any subsequent proceedings through U.S. and Mexican competent authorities.

In November 2010 an agreement was reached with the Canadian government to resolve various income tax matters in the years 2003 through 2009. In the three months ended December 31, 2010, this resolution resulted in a tax benefit of $140 million including interest.

Based on an unfavorable Brazilian Supreme court decision rendered to a separate Brazilian taxpayer on a similar income tax matter, it is likely we will settle a contested income tax matter for $242 million in the next twelve months. This amount was fully reserved in a prior period.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

At December 31, 2010, aside from the Brazilian matter, it is not possible to reasonably estimate the expected change to the total amount of unrecognized tax benefits in the next twelve months.

Transfers In and/or Out of Level 3

At December 31, 2010 our non-performance risk remains unobservable through a liquid credit default swap market. In the three months ended December 31, 2010 we determined that our non-performance risk no longer represents a significant input in the determination of the fair value of our derivatives. The effect of our non-performance risk in the valuation has been reduced due to the reduction in the remaining duration and magnitude of these net derivative liability positions. In October 2010 we transferred foreign currency derivatives with a fair market value of $183 million out of Level 3 to Level 2.

In the period January 1, 2009 through July 9, 2009 Old GM's mortgage- and asset-backed securities were transferred out of Level 3 to Level 2 as the significant inputs used to measure fair value and quoted prices for similar instruments were determined to be observable in an active market.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

For periods presented from June 1, 2009 through September 30, 2010 nonperformance risk for us and Old GM was not observable through a liquid credit default swap market as a result of the Chapter 11 Proceedings and lack of traded instruments for us after the 363 Sale. As a result, foreign currency derivatives with a fair market value of $1.6 billion were transferred into Level 3 from Level 2 in the period January 1, 2009 through July 9, 2009.

In the three months ended March 31, 2009 Old GM determined the credit profile of certain foreign subsidiaries was equivalent to Old GM's nonperformance risk which was observable through the credit default swap market and bond market based on prices for recent trades. Foreign currency derivatives with a fair value of $2.1 billion were transferred from Level 3 into Level 2.

The following tables summarize the activity for financial instruments classified in Level 3 (dollars in millions):

Short-Term and Long-Term Debt

We determined the fair value of debt based on a discounted cash flow model which used benchmark yield curves plus a spread that represented the yields on traded bonds of companies with comparable credit ratings and risk profiles.

The following table summarizes the carrying amount and estimated fair values of short-term and long-term debt (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Carrying amount (a)	$ 4,630	$ 15,783
Fair value (a)	$ 4,840	$ 16,024

(a) Accounts and notes receivable, net and Accounts payable (principally trade) are not included because the carrying amount approximates fair value due to their short-term nature.

Ally Financial Common and Preferred Stock

At December 31, 2010 we estimated the fair value of Ally Financial common stock using a market approach that applies the average price to tangible book value multiples of comparable companies to the consolidated Ally Financial tangible book value. This approach provides our best estimate of the fair value of our investment in Ally Financial common stock at December 31, 2010 due to Ally Financial's transition to a bank holding company and less readily available information with which to value Ally Financial's business operations individually. The significant inputs used in our fair value analysis were Ally Financial's December 31, 2010 financial statements, as well as the financial statements and price to tangible book value multiples of comparable companies in the banking and finance industry.

At December 31, 2009 we estimated the fair value of our investment in Ally Financial common stock using a market approach based on the average price to tangible book value multiples of comparable companies to each of Ally Financial's Auto Finance, Commercial Finance, Mortgage, and Insurance operations to determine the fair value of the individual operations. These values were aggregated to estimate the fair value of Ally Financial's common stock. The significant inputs used to determine the appropriate multiple for Ally Financial and used in our analysis were as follows:

- Ally Financial's December 31, 2009 financial statements, as well as the financial statements and price to tangible book value multiples of comparable companies in the Auto Finance, Commercial Finance and Insurance industries;
- Historical segment equity information separately provided by Ally Financial;

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

- Expected performance of Ally Financial, as well as our view on its ability to access capital markets; and
- The value of Ally Financial's mortgage operations, taking into consideration the continuing challenges in the housing markets and mortgage industry, and its need for additional liquidity to maintain business operations.

At December 31, 2010 and 2009 we calculated the fair value of our investment in Ally Financial's preferred stock using a discounted cash flow approach. The present value of the cash flows was determined using assumptions regarding the expected receipt of dividends on Ally Financial's preferred stock and the expected call date.

The following table summarizes the carrying amount and estimated fair value of Ally Financial common and preferred stock (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Common stock		
Carrying amount (a)	$ 964	$ 970
Fair value	$ 1,031	$ 970
Preferred stock		
Carrying amount	$ 665	$ 665
Fair value	$ 1,055	$ 989

(a) Investment in Ally Financial common stock at December 31, 2010 and 2009 includes the 9.9% and 16.6% held directly and indirectly through an independent trust.

Automotive Financing

Fair Value Measurements on a Recurring Basis

The following table summarizes the financial instruments measured at fair value on a recurring basis (dollars in millions):

	Successor			
	Fair Value Measurements on a Recurring Basis at December 31, 2010			
	Level 1	Level 2	Level 3	Total
Assets				
Cash equivalents (a)

Total liabilities	$	$ 10	$ 47	$ 57

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(a) Cash deposits and cash held in Guaranteed Investment Contracts have been excluded.

(b) The fair value of interest rate cap and swap derivatives are based upon quoted market prices when available. If quoted prices are not available, the fair value is estimated by discounting future net cash flows expected to be settled using a current risk adjusted rate.

Transfers In and/or Out of Level 3

The following table summarizes the activity for financial instruments classified in Level 3 (dollars in millions):

	Successor	
	Assets	(Liabilities)
	Interest Rate Swap Derivatives	Interest Rate Swap Derivatives
Balance at October 1, 2010	$ 27	$ (61)
Transfers in and/or out of Level 3	—	—
Total realized/unrealized gains (losses)		
Included in earnings	1	(1)
Included in other comprehensive income (loss)	—	—
Settlements	(5)	15
Balance at December 31, 2010	$ 23	$ (47)

The following table summarizes estimated fair values, carrying amounts and various methods and assumptions used in valuing GM Financial's financial instruments (dollars in millions):

	December 31, 2010	
	Carrying Amount	Estimated Fair Value
Financial assets		
Finance receivables, net (a)	$ 8,197	$ 8,186
Financial liabilities		
Credit facilities(b)	$ 832	$ 832
Securitization notes payable (c)	$ 6,128	$ 6,107
Senior notes and convertible senior notes (c)	$ 72	$ 72

(a) The fair value of the finance receivables is estimated based upon forecasted cash flows discounted using a pre-tax weighted-average cost of capital. The forecast includes among other things items such as prepayment, defaults, recoveries and fee income assumptions.

(b) Credit facilities have variable rates of interest and maturities of three years or less. The carrying amount is considered to be a reasonable estimate of fair value.

(c) The fair values of the securitization notes payable and senior notes and convertible senior notes are based on quoted market prices, when available. If quoted market prices are not available, the fair value is estimated by discounting future net cash flows expected to be settled using a current risk-adjusted rate.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Note 25. Restructuring and Other Initiatives

Automotive

We have and Old GM had previously executed various restructuring and other initiatives, and we plan to execute additional initiatives in the future, if necessary, in order to preserve adequate liquidity, to align manufacturing capacity and other costs with prevailing global automotive production and to improve the utilization of remaining facilities. Related charges are recorded in Automotive cost of sales and Automotive selling, general and administrative expense.

Refer to Note 26 for asset impairment charges related to our restructuring initiatives and Note 20 for pension and other postretirement benefit charges resulting from our hourly and salaried employee separation initiatives, including special attrition programs.

GM Financial did not execute any new restructuring initiatives in the three months ended December 31, 2010. Charges and payments for restructuring activities in the three months ended December 31, 2010 related to previously announced programs are not significant.

The following table summarizes Automotive restructuring reserves (excluding restructuring reserves related to dealer wind-down agreements) and charges by segment, including postemployment benefit reserves and charges (dollars in millions):

	Successor				
	GMNA	GME	GMIO	GMSA	Total

(a) The remaining cash payments related to these restructuring reserves primarily relate to postemployment benefits to be paid.

GM

GMNA recorded charges, interest accretion and other, and revisions to estimates that decreased the restructuring reserves by $275 million in the year ended December 31, 2010. The decreases were primarily related to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites and revisions to productivity initiatives, partially offset by Canadian restructuring activities.

GME recorded charges, interest accretion and other, and revisions to estimates of $840 million in the year ended December 31, 2010 for separation programs primarily related to the following initiatives:

- Separation charges of $527 million related to the closure of the Antwerp, Belgium facility which affects 2,600 employees.
- Separation charges of $72 million and revisions to estimates to decrease the reserve by $9 million related to separation/layoff plans and an early retirement plan in Spain which affects 1,200 employees.
- Separation charges of $31 million related to a voluntary separation program in the United Kingdom.
- Separation charges of $95 million and interest accretion and other of $104 million related to a voluntary separation program and previously announced programs in Germany.

We have committed to a restructuring plan for GME, and as of December 31, 2010 we expect to expend up to $1.4 billion. Of this amount $0.8 billion was recorded in 2010 as charges for the separation programs described above. We expect to incur an additional $0.6 billion primarily in 2011 and 2012 to complete these programs. Because these programs involve voluntary separations, no liabilities are recorded until offers to employees are accepted.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

GMNA recorded charges, interest accretion and other, and revisions to estimates of $89 million in the period July 10, 2009 through December 31, 2009 for separation programs primarily related to the following initiatives:

- The restructuring reserves were increased by $213 million due to an increase in the SUB and TSP accrual of $183 million related to capacity actions, productivity initiatives, acquisition of Nexteer and four domestic facilities and Canadian restructuring activities of $30 million.

- The salaried and hourly workforce severance accruals were reduced by $146 million as a result of elections subsequently made by terminating employees. Such amounts were reclassified as special termination benefits and were funded from the U.S. defined benefit pension plans and other applicable retirement benefit plans.

GME recorded charges, interest accretion and other, and revisions to estimates of $72 million in the period July 10, 2009 through December 31, 2009 primarily related to separation charges for early retirement programs and additional liability adjustments, primarily in Germany.

GMIO recorded charges, interest accretion and other, and revisions to estimates of $77 million in the period July 10, 2009 through December 31, 2009, primarily related to separation charges of $72 million related to restructuring programs in Australia for salaried and hourly employees.

Dealer Wind-downs

We market vehicles worldwide through a network of independent retail dealers and distributors. As part of achieving and sustaining long-term viability and the viability of our dealer network, we determined that a reduction in the number of GMNA dealerships was necessary. At December 31, 2010 there were 5,200 dealers in GMNA compared to 6,500 at December 31, 2009. Certain dealers in the U.S. that had signed wind-down agreements with us elected to file for reinstatement through a binding arbitration process. At December 31, 2010 the arbitration process had been resolved. As a result of the arbitration process we offered 332 dealers reinstatement in their entirety and 460 existing dealers reinstatement of certain brands.

The following table summarizes GMNA's restructuring reserves related to dealer wind-down agreements in the period July 10, 2009 through December 31, 2009 and in the year ended December 31, 2010 (dollars in millions):

	Successor		
	U.S.	Canada and Mexico	Total
Balance at July 10, 2009	$ 398	$ 118	$ 516
Additions	229	46	275
Payments	(167)	(118)	(285)
Transfer to legal reserve	—	(17)	(17)
Effect of foreign currency	—	12	12
Balance at December 31, 2009	460	41	501
Revisions to estimates	(2)	9	7
Payments	(323)	(43)	(366)
Effect of foreign currency	—	2	2
Balance at December 31, 2010	$ 135	$ 9	$ 144

Restructuring reserves related to dealer wind-down agreements in the period July 10, 2009 through December 31, 2009 increased primarily due to additional accruals recorded for wind-down payments to Saturn dealerships in accordance with the deferred termination agreements that Saturn dealers signed.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Old GM

GMNA recorded charges, interest accretion and other, and revisions to estimates of $1.5 billion in the period January 1, 2009 through July 9, 2009 for separation programs related to the following initiatives:

- Postemployment benefit charges in the U.S. of $825 million related to 13,000 hourly employees who participated in the 2009 Special Attrition Programs.
- SUB and TSP related charges in the U.S. of $707 million, recorded as an additional liability determined by an actuarial analysis at the implementation of the SUB and TSP and related suspension of the JOBS Program.
- Revisions to estimates of $401 million to decrease the reserve, primarily related to $335 million for the suspension of the JOBS Program and $141 million for estimated future wages and benefits due to employees who participated in the 2009 Special Attrition Programs; offset by a net increase of $86 million related to Canadian salaried workforce reductions and other restructuring initiatives in Canada.
- Separation charges of $250 million for a U.S. salaried severance program to allow 6,000 terminated employees to receive ongoing wages and benefits for up to 12 months.
- Postemployment benefit charges in Canada of $38 million related to 380 hourly employees who participated in a special attrition program at the Oshawa Facility.

GME recorded charges, interest accretion and other, and revisions to estimates of $31 million in the period January 1, 2009 through July 9, 2009 primarily related to separation charges for early retirement programs and additional liability adjustments, primarily in Germany.

GMIO recorded charges, interest accretion and other, and revisions to estimates of $27 million in the period January 1, 2009 through July 9, 2009 primarily related to separation charges in Australia of $19 million related to a facility idling. The program affects employees who left through December 2009.

GMSA recorded charges, interest accretion and other, and revisions to estimates of $47 million in the period January 1, 2009 through July 9, 2009 related to voluntary and involuntary separation programs in South America affecting 3,300 salaried and hourly employees.

GMNA recorded charges, interest accretion and other, and revisions to estimates of $2.5 billion in the year ended December 31, 2008 for separation programs related to the following initiatives:

- Postemployment benefit costs in the U.S. and Canada of $2.1 billion, which was comprised of $1.7 billion related to previously announced capacity actions and $407 million for special attrition programs.
- Revisions to estimates that increased the reserve of $320 million.
- Separation charges of $40 million for a U.S. salaried severance program, which allowed terminated employees to receive ongoing wages and benefits for up to 12 months.

GME recorded charges, interest accretion and other, and revisions to estimates of $286 million in the year ended December 31, 2008 for separation programs related to the following initiatives:

- Separation charges in Germany of $107 million related to early retirement programs, along with additional minor separations under other current programs.
- Separation charges in Belgium of $92 million related to current and previously announced programs.
- Separation charges of $43 million related to separation programs and the cost of previously announced initiatives, which include voluntary separations, in Sweden, the United Kingdom, Spain and France.

(a) The year ended December 31, 2008 includes an increase in intersegment residual support and risk sharing reserves of $220 million recorded as a reduction of revenue in GMNA.

(b) Refer to Note 8 and Note 24 for additional information on marketable securities and financial instruments measured at fair value on a recurring basis.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Fair value measurements, excluding vehicles leased to rental car companies and automotive retail leases, utilized projected cash flows discounted at a rate commensurate with the perceived business risks related to the assets involved. Fair value measurements of vehicles leased to rental car companies utilized projected cash flows from vehicle sales at auction. Fair value measurements of automotive retail leases utilized discounted projected cash flows from lease payments and anticipated future auction proceeds.

The following tables summarize assets measured at fair value (all of which utilized Level 3 inputs) on a nonrecurring basis subsequent to initial recognition (dollars in millions):

GM

	Successor				
		Fair Value Measurements Using			
	Year Ended December 31, 2010 (a)	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Year Ended December 31, 2010 Total Losses

Intangible assets	$ —	$ —	$ —	$ —	(21)
					$ (315)

(a) Amounts represent the fair value measure (or range of measures) during the period.

(b) In the period July 10, 2009 through September 30, 2009 we recorded impairment charges of $12 million to write down vehicles leased to rental car companies to their fair value of $543 million. In the three months ended December 31, 2009 we recorded an impairment charge of $6 million to write down vehicles leased to rental car companies to their fair value of $567 million.

At December 31, 2009 we determined that indicators were present that suggested our investments in Ally Financial common and preferred stock could be impaired. Such indicators included the continuing deterioration in Ally Financial's mortgage operations, as evidenced by the strategic actions Ally Financial took in December 2009 to position itself to sell certain mortgage assets. These actions resulted in Ally Financial recording an increase in its provision for loan losses of $2.4 billion in the three months ended December 31, 2009. These indicators also included Ally Financial's receipt of $3.8 billion of additional financial support from the UST on December 30, 2009.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

As a result of these impairment indicators, we evaluated the fair value of our investments in Ally Financial common and preferred stock and recorded an impairment charge of $270 million related to our Ally Financial common stock to record the investment at its estimated fair value of $970 million. We determined the fair value of these investments using valuation methodologies that were consistent with those we used in our application of fresh-start reporting. In applying these valuation methodologies at December 31, 2009, however, we updated the analyses to reflect changes in market comparables and other relevant assumptions.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Series A Preferred Stock

At December 31, 2010 we had 276 million shares of Series A Preferred Stock issued and outstanding. The Series A Preferred Stock ranks senior with respect to liquidation preference and dividend rights to our common stock and Series B Preferred Stock and any other class or series of stock that we may issue. In the event of any voluntary or involuntary liquidation, dissolution, or winding up of our affairs, a holder of Series A Preferred Stock will be entitled to be paid, before any distribution or payment may be made to any holders of common stock or Series B Preferred Stock, the liquidation amount of $25.00 per share and the amount of any accrued and unpaid dividends, if any, whether or not declared, prior to such distribution or payment date. Holders of the Series A Preferred Stock are entitled to receive dividends at the sole discretion of our Board of Directors at a rate of 9.0% per annum. Unless all accrued and unpaid dividends on the Series A Preferred Stock are paid in full, no dividends or distributions may be paid on common stock or Series B Preferred Stock and no shares of common stock or Series B Preferred Stock may be purchased or redeemed by us (subject to certain exceptions that are specified in the certificate of designations for the Series A Preferred Stock). Dividends, if declared, will be payable on March 15, June 15, September 15 and December 15 of each year. In the year ended December 31, 2010 we paid dividends on our Series A Preferred Stock of $810 million or $2.25 per share. In the year ended December 31, 2009 we paid dividends on our Series A Preferred Stock of $349 million or $0.97 per share. We may not redeem the Series A Preferred Stock prior to December 31, 2014. On or after December 31, 2014, the Series A Preferred Stock may be redeemed, in whole or in part, for cash at a price per share equal to the $25.00 per share liquidation amount, plus any accrued and unpaid dividends.

The Series A Preferred Stock was originally classified as temporary equity because the holders of Series A Preferred Stock, as a class, owned greater than 50% of our common stock and therefore had the ability to exert control, through its power to vote for the election of our directors, over various matters, including compelling us to redeem the Series A Preferred Stock when it becomes callable by us on or after December 31, 2014. In December 2010 we purchased 84 million shares of Series A Preferred Stock, held by the UST, at a price equal to 102% of the aggregate liquidation amount, for $2.1 billion. The purchase of the UST's Series A Preferred Stock resulted in a charge of $0.7 billion recorded in Cumulative dividends on and charge related to purchase of preferred stock. Upon the purchase of the Series A Preferred Stock held by the UST, the Series A Preferred Stock held by Canada Holdings and the New VEBA was reclassified to permanent equity at its carrying amount of $5.5 billion because the remaining holders of our Series A Preferred Stock, Canada Holdings and the New VEBA, do not own a majority of our common stock and therefore do not have the ability to exert control, through the power to vote for the election of our directors, over various matters, including compelling us to redeem the Series A Preferred Stock when it becomes callable by us on or after December 31, 2014. Upon a redemption or purchase of any or all Series A Preferred Stock, the difference, if any, between the recorded amount of the Series A Preferred Stock being redeemed or purchased and the consideration paid would be recorded as a charge to Net income attributable to common stockholders. If all of the Series A preferred Stock were to be redeemed or purchased at its par value, the amount of the charge would be $1.4 billion.

Series B Preferred Stock

At December 31, 2010 we had 100 million shares of Series B Preferred Stock issued and outstanding. The Series B Preferred Stock, with respect to dividend rights and rights upon our liquidation, winding-up or dissolution, ranks: (1) senior to our common stock and to each other class of capital stock or series of preferred stock the terms of which do not expressly provide that such class or series ranks senior to, or on a parity with, the Series B Preferred Stock; (2) on a parity with any class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank on a parity with the Series B Preferred Stock; (3) junior to our Series A Preferred Stock and to each class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank senior to the Series B Preferred Stock; and (4) junior to all of our existing and future debt obligations. Holders of our Series B Preferred Stock are entitled to dividends that accumulate at a rate of 4.75% per annum. Dividends, if declared based on the sole discretion of our Board of Directors, will be payable on March 1, June 1, September 1 and December 1. The Series B Preferred Stock is not redeemable and has a liquidation preference in the amount of $50.00 per share. The holders of the Series B Preferred Stock do not have voting rights, except with respect to certain fundamental changes in the terms of the Series B Preferred Stock, in the case of certain dividend arrearages and as required under Delaware law. Each share of the Series B Preferred Stock, unless previously converted, will automatically convert on December 1, 2013 (mandatory conversion date) into a number of shares of

Table of Contents

our common stock. The number of shares of our common stock issuable upon conversion of each share of Series B Preferred Stock on the mandatory conversion date, is determined based on the applicable market value of our common stock subject to anti-dilution adjustments and accumulated and unpaid dividends. The applicable market value of our common stock is the average of the closing prices of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the mandatory conversion date. Holders of the Series B Preferred Stock have the right to convert their shares at any time prior to the mandatory conversion date at a conversion ratio of 1.2626 shares of our common stock for each share of the Series B Preferred Stock that is optionally converted, subject to anti-dilution, make-whole and other adjustments.

If the applicable market value of our common stock upon mandatory conversion falls within a price range of $33.00 to $39.60 per common share, the holder receives a variable number of shares of our common stock with a value equal to the security's liquidation value of $50.00 per share (plus accumulated dividends on the Series B Preferred Stock). If the applicable market value of our common stock upon mandatory conversion is above or below the price range of $33.00 to $39.60 per common share, the Series B Preferred Stock converts into a fixed number of shares of our common stock based on a fixed conversion ratio. The fixed conversion ratio will be 1.2626 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is greater than $39.60. The fixed conversion ratio will be 1.5152 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is less than $33.00. The fixed conversion ratios will be adjusted for events that would otherwise dilute a Series B Preferred Stock holder's interest. These anti-dilution provisions provide a holder of the Series B Preferred Stock a right to participate in our undistributed earnings because a dividend, if declared, would result in a transfer of value to the holder through an adjustment to the fixed conversion ratios. Based on the nature of the Series B Preferred Stock and the nature of these anti-dilution provisions, we have concluded that the Series B Preferred Stock is a participating security and, as such, the application of the two-class method for computing earnings per share is required. Under the two-class method for computing earnings per share, undistributed earnings will be allocated to the Series B Preferred Stock in each period in which the applicable market value of our common stock is above or below the price range of $33.00 to $39.60 per common share. The amount of the undistributed earnings to be allocated to the Series B Preferred Stock is based on the terms of the anti-dilution provisions and reflects the incremental value above the $50.00 per share liquidation value that the holder would receive if the market value of our common stock falls outside the price range of $33.00 to $39.60. When the applicable market value of our common stock falls within the price range of $33.00 to $39.60 per common share, no undistributed earnings will be allocated to the Series B Preferred Stock for earnings per share purposes because a holder of Series B Preferred Stock is entitled only to the security's liquidation value of $50.00 per share (plus accumulated dividends on the Series B Preferred Stock) upon mandatory conversion and therefore does not participate in earnings. For purposes of computing diluted earnings per share, the if-converted method will be used to the extent that the result is more dilutive than the application of the two-class method.

Common Stock

We have 5.0 billion shares of common stock authorized, with a par value of $0.01 per share. At December 31, 2010 and 2009 we had 1.5 billion shares issued and outstanding. Holders of our common stock are entitled to dividends at the sole discretion of our Board of Directors. However, the terms of the Series A Preferred Stock and Series B Preferred Stock prohibit, subject to exceptions, the payment of dividends on our common stock, unless all accrued and unpaid dividends on the Series A Preferred Stock and Series B Preferred Stock are paid in full. Holders of common stock are entitled to one vote per share on all matters submitted to our stockholders for a vote. The liquidation rights of holders of our common stock are secondary to the payment or provision for payment of all our debts and liabilities and to holders of our Series A Preferred Stock and Series B Preferred Stock, if any such shares are then outstanding.

Warrants

In connection with the 363 Sale, we issued two warrants, each to acquire 136 million shares of common stock, to MLC and one warrant to acquire 46 million shares of common stock to the New VEBA. The first of the MLC warrants is exercisable at any time prior to July 10, 2016 at an exercise price of $10.00 per share, and the second of the MLC warrants is exercisable at any time prior to July 10, 2019 at an exercise price of $18.33 per share. The New VEBA warrant is exercisable at any time prior to December 31, 2015

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

at an exercise price of $42.31 per share. The number of shares of common stock underlying each of the warrants and the per share exercise price thereof are subject to adjustment as a result of certain events, including stock splits, reverse stock splits and stock dividends.

Noncontrolling Interests

In October 2009 we completed our participation in an equity rights offering in GM Daewoo, a majority-owned and consolidated subsidiary, for Korean Won 491 billion (equivalent to $417 million when entered into). As a result of the participation in the equity rights offering, our ownership interest in GM Daewoo increased from 50.9% to 70.1%. Funds from our UST escrow account were utilized for this rights offering.

In December 2009 we acquired the remaining noncontrolling interest of CAMI from Suzuki Motor Corporation for $100 million increasing our ownership interest from 50% to 100%. This transaction resulted in no charge to Capital surplus.

The table below summarizes the changes in equity resulting from Net loss attributable to common stockholders and transfers from (to) noncontrolling interests (dollars in millions):

	Successor
	July 10, 2009 Through December 31, 2009

Note 30. Earnings (Loss) Per Share

Basic and diluted earnings (loss) per share was computed by dividing Net income (loss) attributable to common stockholders by the weighted-average common shares outstanding in the period. Diluted earnings (loss) per share was computed by giving effect to all potentially dilutive securities that were outstanding.

The following table summarizes basic and diluted earnings (loss) per share (in millions, except for per share amounts):

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

	Successor		Predecessor

Diluted earnings per share	$ 2.89	$ (3.58)	$ 178.55	$ (53.47)

(a) The year ended December 31, 2010 includes earned but undeclared dividends of $26 million on our Series A Preferred Stock and $25 million on our Series B Preferred Stock, which decreases Net income attributable to common stockholders.

(b) The period July 10, 2009 through December 31, 2009 includes accumulated but undeclared dividends of $34 million on Series A Preferred Stock, which increases Net loss attributable to common stockholders, and excludes dividends of $252 million on Series A Preferred Stock, which were paid to the New VEBA prior to December 31, 2009. The 260 million shares of Series A Preferred Stock issued to the New VEBA were not considered outstanding until December 31, 2009 due to the terms of the 2009 UAW Retiree Settlement Agreement.

GM

In the year ended December 31, 2010 we considered potentially dilutive securities in our diluted earnings per share computation under the treasury stock method. In periods prior to our public offering, we utilized an average stock price based upon estimates of the fair value of our common stock. Subsequent to our public offering, we used the New York Stock Exchange price.

In the year ended December 31, 2010 because the market value of our common stock was within the price range of $33.00 to $39.60 per common share no undistributed earnings were allocated to our Series B Preferred Stock under the two-class method for purposes of calculating basic earnings per share. The dilutive effect of these securities was determined by assuming conversion of the securities at issuance resulting in an increase to the weighted-average common shares outstanding and an increase to Net income attributable to common stockholders for accumulated dividends on our Series B Preferred Stock.

In the year ended December 31, 2010 warrants to purchase 318 million shares were outstanding, of which 46 million were not included in the computation of diluted earnings per share because the warrants' exercise price was greater than the average market price of the common shares. Under the treasury stock method, the assumed exercise of the remaining 272 million warrants resulted in 106 million dilutive shares for the year ended December 31, 2010.

In the year ended December 31, 2010 diluted earnings per share included the assumed issuance of unvested restricted stock units (RSUs) granted to certain global executives. The dilutive effect of the RSUs was included only for the period subsequent to our public offering as the RSUs prior were accounted for as liability awards prior to that date. At December 31, 2010 there were 11 million unvested RSUs outstanding.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

In the period July 10, 2009 through December 31, 2009, outstanding warrants to purchase 272 million shares of common stock were not included in the computation of diluted loss per share because the effect would have been antidilutive and RSUs were excluded from the computation of diluted earnings per share as these awards were payable in cash during that time. At December 31, 2009 there were 1 million RSUs outstanding.

In the year ended December 31, 2010 and the period July 10, 2009 through December 31, 2009 the Adjustment Shares were excluded from the computation of basic and diluted earnings per share as the condition that would result in the issuance of the Adjustment Shares was not satisfied.

The 61 million shares of common stock contributed to our pension plan in January 2011 will not be included in the computation of earnings per share until they meet the criteria to qualify as plan assets for accounting purposes.

Old GM

In the period January 1, 2009 through July 9, 2009 diluted earnings per share included the potential effect of the assumed exercise of certain stock options. Old GM excluded 208 million of stock options and warrants in the computation of diluted earnings per share because the exercise price was greater than the average market price of the common shares.

Due to Old GM's net losses in the year ended December 31, 2008, the assumed exercise of stock options and warrants had an antidilutive effect and therefore was excluded from the computation of diluted loss per share. Old GM excluded 101 million such options and warrants in the computation of diluted loss per share.

No shares potentially issuable to satisfy the in-the-money amount of Old GM's convertible debentures have been included in the computation of diluted income (loss) per share for the period January 1, 2009 through July 9, 2009 and in the year ended December 31, 2008 as the conversion options in various series of convertible debentures were not in-the-money.

Note 31. Stock Incentive Plans

Consolidated

GM

Our stock incentive plans consist of the 2009 Long-Term Incentive Plan as amended December 22, 2010 (2009 GMLTIP) and the Salary Stock Plan as amended October 5, 2010 (GMSSP). Both plans are administered by the Executive Compensation Committee of our Board of Directors. The aggregate number of shares with respect to which awards may be granted under these plans shall not exceed 75 million.

The following table summarizes compensation expense and total Income tax expense recorded for our stock incentive plans (dollars in millions):

	Successor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009
Compensation expense (a)	$ 235	$ 23
Income tax expense (b)	$ —	$ 8

(a) Includes an insignificant amount of restricted stock granted in December 2010.

(b) Income tax expense does not include U.S. and non-U.S. jurisdictions which have full valuation allowances.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Long-Term Incentive Plan

In 2010 we granted RSUs to certain global executives under the 2009 GMLTIP. We granted 15 million RSUs valued at the grant date fair value of our common stock in the year ended December 31, 2010 and no RSUs under this plan in the period June 10, 2009 through December 31, 2009. Awards granted under the 2009 GMLTIP will generally vest over a three year service period. Compensation cost for these awards are recorded on a straight-line basis over the vesting period. Our policy is to issue new shares upon settlement of RSUs.

The awards for the Top 25 highest compensated employees will settle three years from the grant date in 25% increments in conjunction with each 25% of our Troubled Asset Relief Program (TARP) obligations that are repaid. The awards for the non-top 25 highest compensated employees will settle after three years in 25% increments in conjunction with each 25% of the U.S. and Canadian government loans that are repaid. The U.S. and Canadian government loans were fully repaid in April 2010, thus these awards will be settled upon completion of the remaining three year service period.

Retirement eligible participants that are non-top 25 highest compensated employees who retire during the service period will retain and vest in a pro-rata portion of RSUs earned. The vested award will be payable on the third anniversary date of the grant. Compensation cost for these employees is recognized on a straight-line basis over the requisite service period.

Prior to our public offering, all RSU awards were classified as liability awards as they were payable in cash. On November 18, 2010 we reclassified all of the RSU liability awards to equity for those awards that became payable in shares in accordance with the plan terms.

Salary Stock

In November 2009 we initiated a salary stock program for certain global executives under the GMSSP whereby, a portion of each participant's total annual compensation was accrued and converted to RSUs at each salary payment date. In 2010 a portion of each participant's salary accrued on each salary payment date converted to RSUs on a quarterly basis. Our policy is to issue new shares upon settlement of these awards.

The awards are fully vested and nonforfeitable upon grant, therefore compensation cost is fully recognized on the date of grant. The awards are settled quarterly over a three year period commencing on the first anniversary date of grant. Under the terms of the plan, each installment is now redeemable one year earlier from the original settlement date as we have repaid the financial assistance we received from the UST under the TARP program in 2010. Prior to our public offering, all RSU awards were classified as liability awards as they were payable in cash. On November 18, 2010 we reclassified all of the RSU liability awards to equity for those awards that became payable in shares in accordance with the plan terms.

The compensation cost of each RSU granted under the 2009 GMLTIP and GMSSP that will be settled in equity is based on the fair value of our common stock on the date of grant or, for those RSUs reclassified from liability to equity-based awards, the fair value of our common stock as of the date of the public offering.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following table summarizes our RSU activity under the 2009 GMLTIP and GMSSP in the period July 10, 2009 through December 31, 2010 (RSUs in millions):

	Successor RSUs		
	Shares	Weighted-Average Grant Date Fair Value	Weighted-Average Remaining Contractual Term
RSUs outstanding at July 10, 2009	—	$ —	
Granted	1.1	$ 16.39	
Settled	—	$ —	
Forfeited or expired	—	$ —	
RSUs outstanding at December 31, 2009	1.1	$ 16.39	
Granted	17.2	$ 19.17	
Settled	(0.3)	$ 16.39	
Forfeited or expired	(0.8)	$ 18.80	
RSUs outstanding at December 31, 2010	17.2	$ 19.03	1.8
RSUs unvested and expected to vest at December 31, 2010	11.9	$ 18.82	2.2
RSUs vested and payable at December 31, 2010	4.7	$ 19.58	—

At December 31, 2010 the total unrecognized compensation expense for nonvested equity awards granted under the 2009 GMLTIP was $313 million. This expense is expected to be recorded over a weighted-average period of 2.2 years.

In the year ended December 31, 2010 total payments for 291,753 RSUs settled under the GMSSP was $5 million.

Old GM

Old GM had various stock incentive plans which were administered by either its Executive Compensation Committee of its Board of Directors or its Vice President of Human Resources. Stock incentive awards consisted of stock options, market-contingent stock options, stock performance awards and cash-based restricted stock units. Stock incentive awards, some of which were subject to performance conditions, were granted at fair value and were subject to various vesting conditions. In connection with the 363 Sale, MLC retained the responsibility for administering Old GM's stock incentive plans. We have recorded no compensation expense related to Old GM's stock incentive plans subsequent to July 9, 2009.

The following table summarizes compensation expense (benefit) and total Income tax expense (benefit) recorded for the Old GM Stock Incentive Plans (dollars in millions):

	Predecessor	
	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Compensation expense (benefit)	$ (10)	$ (65)
Income tax expense (benefit) (a)	$ —	$ 3

(a) Income tax expense (benefit) does not include U.S. and non-U.S. jurisdictions which have full valuation allowances.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Note 32. Transactions with Ally Financial

Automotive

Old GM entered into various operating and financing arrangements with Ally Financial, a related party, and in connection with the 363 Sale we assumed the terms and conditions of these arrangements. The following tables describe the financial statement effects of and maximum obligations under these agreements (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Operating lease residuals		
Residual support (a)		
Liabilities (receivables) recorded	$ (24)	$ 369
Maximum obligation	$ 523	$ 1,159
Risk sharing (a)		
Liabilities recorded	$ 269	$ 366
Maximum obligation	$ 692	$ 1,392
Note payable to Ally Financial	$ —	$ 35
Vehicle repurchase obligations		
Maximum obligations	$ 18,807	$ 14,249
Fair value of guarantee	$ 21	$ 46

(a) Represents liabilities (receivables) recorded and maximum obligations for agreements entered into prior to December 31, 2008. Agreements entered into in 2010 and 2009 do not include residual support or risk sharing programs. In the year ended December 31, 2010 favorable adjustments to our residual support and risk sharing liabilities of $0.6 billion were recorded in the U.S. due to increases in estimated residual values.

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Marketing incentives and operating lease residual payments (a)	$ 1,111	$ 695	$ 601	$ 3,400
Exclusivity fee revenue	$ 99	$ 47	$ 52	$ 105
Royalty income	$ 15	$ 7	$ 8	$ 16

(a) Payments to Ally Financial related to U.S. marketing incentive and operating lease residual programs. Excludes payments to Ally Financial related to the contractual exposure limit, as subsequently discussed.

Marketing Incentives and Operating Lease Residuals

As a marketing incentive, interest rate support, residual support, risk sharing, capitalized cost reduction and lease pull-ahead programs are initiated as a way to lower customers' monthly lease and retail contractual payments.

Under an interest rate support program, Ally Financial is paid an amount at the time of lease or retail contract origination to adjust the interest rate in the retail contract or implicit in the lease below Ally Financial's standard interest rate. Such marketing incentives are referred to as rate support or subvention and the amount paid at contract origination represents the present value of the difference between the customer's contractual rate and Ally Financial's standard rate for a given program.

Under a residual support program, a customer's contract residual value is adjusted above Ally Financial's standard residual value. Ally Financial is reimbursed to the extent that sales proceeds are less than the customer's contract residual value, limited to Ally

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Financial's standard residual value. As it relates to Ally Financial's U.S. lease originations and U.S. balloon retail contract originations occurring after April 30, 2006, Old GM agreed to pay the present value of the expected residual support owed to Ally Financial at the time of contract origination as opposed to after contract termination when the off-lease vehicles are sold. The actual residual support amount owed to Ally Financial is calculated as the contracts terminate and, in cases where the actual amount differs from the expected amount paid at contract origination, the difference is paid to or paid by Ally Financial, depending if sales proceeds are lower or higher than estimated at contract origination.

Under a risk-sharing arrangement, residual losses are shared equally with Ally Financial to the extent that remarketing proceeds are below Ally Financial's standard residual value (limited to a floor). As a result of revisions to the risk-sharing arrangement, Old GM agreed to pay Ally Financial a quarterly fee through 2014.

In the event it is publicly announced that a GM vehicle brand will be discontinued, phased-out, sold or other strategic options are being considered, the residual value of the related vehicles may change. If such an announcement in the U.S. or Canada results in an estimated decrease in the residual value of the related vehicles, Ally Financial will be reimbursed for the estimated decrease for certain vehicles for a certain period of time. If such an announcement results in an increase in the residual value of the related vehicles, Ally Financial will pay the increase in the sale proceeds received at auction.

Under a capitalized cost reduction program, Ally Financial is paid an amount at the time of lease or retail contract origination to reduce the principal amount implicit in the lease or retail contract below the standard manufacturers' suggested retail price.

Under a lease pull-ahead program, a customer is encouraged to terminate their lease early and buy or lease a new GM vehicle. As part of such a program, Ally Financial waives the customer's remaining payment obligation under their current lease, and Ally Financial is compensated for any foregone revenue from the waived payments. Since these programs generally accelerate the resale of the vehicle, the proceeds are typically higher than if the vehicle had been sold at contract maturity. The reimbursement to Ally Financial for the foregone payments is reduced by the amount of this benefit. Anticipated payments are made to Ally Financial each month based on the estimated number of customers expected to participate in a lease-pull ahead program. These estimates are adjusted once all vehicles that could have been pulled-ahead have terminated and the vehicles have been sold. Any differences between the estimates and the actual amounts owed to or from Ally Financial are subsequently settled.

In May 2009 Old GM entered into the Amended and Restated United States Consumer Financing Services Agreement (Amended Financing Agreement) with an effective date of December 29, 2008. The terms of the Amended Financing Agreement included conditions of interest rate support, residual support, risk sharing, capitalized cost reduction, and lease pull-ahead programs.

Exclusivity Arrangement

In November 2006 Old GM granted Ally Financial exclusivity for U.S., Canadian and international GM-sponsored consumer and wholesale marketing incentives for products in specified markets around the world, with the exception of Saturn branded products. In return for exclusivity, Ally Financial paid an annual exclusivity fee of $105 million ($75 million for the U.S. retail business, $15 million for the Canadian retail business, $10 million for the international operations retail business, and $5 million for the dealer business).

As a result of the Amended Financing Agreement, Old GM and Ally Financial agreed to modify certain terms related to the exclusivity arrangements: (1) for a two-year period, retail financing incentive programs can be offered through a third party financing source under certain specified circumstances, and in some cases subject to the limitation that pricing offered by such third party meets certain restrictions, and after such two-year period any such incentive programs can be offered on a graduated basis through third parties on a non-exclusive, side-by-side basis with Ally Financial provided that pricing with such third parties meets certain requirements; (2) Ally Financial has no obligation to provide financing; and (3) Ally Financial has no targets against which it could be assessed penalties. After December 24, 2013 we will have the right to offer retail financing incentive programs through any third party financing source, including Ally Financial, without any restrictions or limitations.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Beginning in 2009 under the Amended Financing Agreement, Old GM agreed to pro-rate the exclusivity fee in the U.S. and Canada under certain circumstances if incentives were offered through a third party financing source. The international exclusivity fee arrangement remains unchanged and the dealer exclusivity fee was terminated.

In December 2008 Old GM and FIM Holdings entered into the Ally Financial Exchange Agreement with Ally Financial. Pursuant to the Ally Financial Exchange Agreement, Old GM and FIM Holdings exchanged their respective amounts funded under the Ally Financial Participation Agreement for 79,368 Class B Common Membership Interests and 82,608 Class A Common Membership Interests. As the carrying amount of the amount funded under the Ally Financial Participation Agreement approximated fair value, Old GM did not recognize a gain or loss on the exchange.

Contractual Exposure Limit

An agreement between Ally Financial and Old GM limited certain unsecured obligations arising from service agreements to Ally Financial in the U.S. to $1.5 billion. In accordance with the Amended Financing Agreement, Old GM and Ally Financial agreed to increase the probable potential unsecured exposure limit from $1.5 billion in the United States to $2.1 billion globally. Ally Financial's maximum potential unsecured exposure to us cannot exceed $4.1 billion globally. Old GM and Ally Financial also agreed to reduce the global unsecured obligation limit from $2.1 billion to $1.5 billion at December 31, 2010. Old GM and Ally Financial agreed that the sum of the maximum unsecured and committed secured exposures at December 31, 2010 will not exceed the greater of $3.0 billion or 15% of Ally Financial's capital.

Vehicle Repurchase Obligations

In May 2009 Old GM and Ally Financial agreed to expand Old GM's repurchase obligations for Ally Financial financed inventory at certain dealers in Europe, Asia, Brazil and Mexico. In November 2008 Old GM and Ally Financial agreed to expand repurchase obligations for Ally Financial financed inventory at certain dealers in the United States and Canada. The current agreement with Ally Financial requires the repurchase of Ally Financial financed inventory invoiced to dealers after September 1, 2008, with limited exclusions, in the event of a qualifying voluntary or involuntary termination of the dealer's sales and service agreement. Repurchase obligations exclude vehicles which are damaged, have excessive mileage or have been altered. The repurchase obligation ended in August 2010 for vehicles invoiced through August 2009, ends in August 2011 for vehicles invoiced through August 2010 and ends August 2012 for vehicles invoiced through August 2011.

The maximum potential amount of future payments required to be made to Ally Financial under this guarantee is based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer. The fair value of the guarantee, which considers the likelihood of dealers terminating and estimated loss exposure for ultimate disposition of vehicles, was recorded as a reduction of revenue.

Automotive Retail Leases

In November 2006 Ally Financial transferred automotive retail leases to Old GM, along with related debt and other assets. Ally Financial retained an investment in a note, which is secured by the automotive retail leases. Ally Financial continues to service the portfolio of automotive retail leases and related debt and receives a servicing fee. Ally Financial is obligated, as servicer, to repurchase any equipment on operating leases that are in breach of any of the covenants in the securitization agreements. In addition, in a number of the transactions securitizing the equipment on operating leases, the trusts issued one or more series of floating rate debt obligations and entered into derivative transactions to eliminate the market risk associated with funding the fixed payment lease assets with floating interest rate debt. To facilitate these securitization transactions, Ally Financial entered into secondary derivative transactions with the primary derivative counterparties, essentially offsetting the primary derivatives. As part of the transfer, Old GM assumed the rights and obligations of the primary derivative while Ally Financial retained the secondary, leaving both companies

Table of Contents

exposed to market value movements of their respective derivatives. Old GM subsequently entered into derivative transactions with Ally Financial that are intended to offset the exposure each party has to its component of the primary and secondary derivatives.

Royalty Arrangement

For certain insurance products, Old GM entered into 10-year intellectual property license agreements with Ally Financial giving Ally Financial the right to use the GM name on certain products. In exchange, Ally Financial pays a royalty fee of 3.25% of revenue, net of cancellations, related to these products with a minimum annual guarantee of $15 million in the United States.

Balance Sheet

The following table summarizes the balance sheet effects of transactions with Ally Financial (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Assets		
Accounts and notes receivable, net (a)	$ 290	$ 404
Restricted cash and marketable securities (b)	$ —	$ 127
Other assets (c)	$ 26	$ 27
Liabilities		
Accounts payable (d)	$ 168	$ 131
Short-term debt and current portion of long-term debt (e)	$ 1,043	$ 1,077
Accrued liabilities and other liabilities (f)	$ 1,167	$ 817
Long-term debt (g)	$ 43	$ 59
Other non-current liabilities (h)	$ 84	$ 383

(a) Represents wholesale settlements due from Ally Financial, amounts owed by Ally Financial with respect to automotive retail leases and receivables for exclusivity fees and royalties.

(b) Represents certificates of deposit purchased from Ally Financial that are pledged as collateral for certain guarantees provided to Ally Financial in Brazil in connection with dealer floor plan financing.

(c) Primarily represents distributions due from Ally Financial on our investments in Ally Financial preferred stock.

(d) Primarily represents amounts billed to us and payable related to incentive programs.

(e) Represents wholesale financing, sales of receivable transactions and the short-term portion of term loans provided to certain dealerships which we own or in which we have an equity interest. It includes borrowing arrangements with various foreign locations and arrangements related to Ally Financial's funding of company-owned vehicles, rental car vehicles awaiting sale at auction and funding of the sale of vehicles to which title is retained while the vehicles are consigned to Ally Financial or dealers, primarily in the United Kingdom. Financing remains outstanding until the title is transferred to the dealers. This amount also includes the short-term portion of a note payable related to automotive retail leases.

(f) Primarily represents accruals for marketing incentives on vehicles which are sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial in North America. This includes the estimated amount of residual support accrued under the residual support and risk sharing programs, rate support under the interest rate support programs, operating lease and finance receivable capitalized cost reduction incentives paid to Ally Financial to reduce the capitalized cost in automotive lease contracts and retail automotive contracts, and amounts owed under lease pull-ahead programs. In addition it includes interest accrued on the transactions in (e) above.

(g) Primarily represents the long-term portion of term loans from Ally Financial to certain consolidated dealerships.

(h) Primarily represents long-term portion of liabilities for marketing incentives on vehicles financed by Ally Financial.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Statement of Operations

The following table summarizes the income statement effects of transactions with Ally Financial (dollars in millions):

	Successor		Successor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Total net sales and revenue (reduction) (a)	$ (1,383)	$ (259)	$ 207	$ (2,350)
Automotive cost of sales and other automotive expenses (b)	$ 36	$ 113	$ 180	$ 688
Interest income and other non-operating income, net (c)	$ 228	$ 127	$ 166	$ 192
Automotive interest expense (d)	$ 243	$ 121	$ 100	$ 221
Servicing expense (e)	$ 2	$ 22	$ 16	$ 144
Derivative losses (f)	$ —	$ 1	$ 2	$ 4

(a) Primarily represents the increase (reduction) in Total net sales and revenue for marketing incentives on vehicles which were sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial. This includes the estimated amount of residual support accrued under residual support and risk sharing programs, rate support under the interest rate support programs, operating lease and finance receivable capitalized cost reduction incentives paid to Ally Financial to reduce the capitalized cost in automotive lease contracts and retail automotive contracts, and costs under lease pull-ahead programs. This amount is offset by net sales for vehicles sold to Ally Financial for employee and governmental lease programs and third party resale purposes.

(b) Primarily represents cost of sales on the sale of vehicles to Ally Financial for employee and governmental lease programs and third party resale purposes. Also includes miscellaneous expenses on services performed by Ally Financial.

(c) Represents income on investments in Ally Financial preferred stock and Preferred Membership Interests, exclusivity and royalty fee income and reimbursements by Ally Financial for certain services provided to Ally Financial. Included in this amount is rental income related to Ally Financial's primary executive and administrative offices located in the Renaissance Center in Detroit, Michigan. The lease agreement expires in November 2016.

(d) Represents interest incurred on term loans, notes payable and wholesale settlements.

(e) Represents servicing fees paid to Ally Financial on certain automotive retail leases.

(f) Represents amounts recorded in connection with a derivative transaction entered into with Ally Financial as the counterparty.

Note 33. Transactions with MLC

Automotive

In connection with the 363 Sale, we and MLC entered into a Transition Services Agreement (TSA), pursuant to which, among other things, we provided MLC with certain transition services and support functions in connection with their operation and ultimate liquidation in bankruptcy. MLC is required to pay the applicable usage fees specified with respect to various types of services under the TSA. Types of services provided under the TSA included: (1) property management; (2) assistance in idling certain facilities; (3) provisions of access rights and storage of personal property at certain facilities; (4) security; (5) administrative services including accounting, treasury and tax; (6) purchasing; (7) information systems and services support; (8) communication services to the public; and (9) splinter union services including payroll and benefits administration. Services MLC provides to us under the TSA include: (1) provisions of access rights and storage of personal property at certain facilities; (2) assistance in obtaining certain permits and consents to permit us to own and operate purchased assets in connection with the 363 Sale; (3) allowing us to manage and exercise our rights under the TSA; and (4) use of certain real estate and equipment while we are in negotiation to assume or renegotiate certain leases or enter into agreements to purchase certain lease-related assets. At December 31, 2010 we are not obligated to provide any services under the TSA.

GM

Results for the three months ended December 31, 2010 included:

- A charge of $677 million related to our purchase of 84 million shares of Series A Preferred Stock from the UST.
- A reversal of our $231 million liability for contingently issuable Adjustment Shares based on a revised assessment of the estimate of allowed general unsecured claims against MLC.
- A gain of $198 million related to our repayment of the VEBA Notes of $2.8 billion.
- Restructuring reserve decrease of $183 million in GMNA primarily related to capacity actions and revisions to productivity initiatives.
- Restructuring charges and interest accretion and other of $154 million in GME primarily related to separation programs announced in Belgium, Spain, Germany and the United Kingdom.
- Income before income taxes and equity income and net income of $129 million and $90 million related to the October 1, 2010 acquisition of GM Financial including net income of $10 million related to amounts recorded to reflect the changes in the valuation allowance on deferred tax assets that were not applicable to GM Financial on a stand-alone basis.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Results for the three months ended September 30, 2010 included:

- Restructuring charges and interest accretion and other of $153 million in GME primarily related to separation programs announced in Belgium, Spain, Germany and the United Kingdom.
- Impairment charges of $140 million related to product-specific tooling assets in GMNA.

Results for the three months ended June 30, 2010 included:

- Restructuring charges and interest accretion and other of $235 million in GME primarily related to separation programs announced in Belgium, the United Kingdom and Germany.
- Charge of $200 million relating to a recall campaign on windshield fluid heaters.

Results for the three months ended March 31, 2010 included:

- Restructuring charges and interest accretion and other of $305 million in GME primarily related to separation programs announced in Belgium and Spain. These charges were partially offset by a favorable adjustment of $104 million related to GMNA restructuring reserves due to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites.

Results for the three months ended December 31, 2009 included:

- Impairment charges of $270 million related to our investment in Ally Financial common stock.
- Settlement loss of $2.6 billion related to the 2009 UAW Settlement Agreement.

Results for the period July 10, 2009 through September 30, 2009 included:

- Charges of $195 million related to dealer wind-down agreements.

Old GM

Results for the period July 1, 2009 through July 9, 2009 included:

- Accelerated debt discount amortization of $600 million on the DIP Facility.
- Reorganization gains, net of $129.3 billion. Refer to Note 2 for additional information on these gains.
- Charges of $398 million related to dealer wind-down agreements.

Results for the three months ended June 30, 2009 included:

- Gain of $2.5 billion on the disposition of Ally Financial Common Membership Interests partially offset by a loss on extinguishment of the UST Ally Financial Loan of $2.0 billion.

Table of Contents

- Accelerated debt discount amortization of $1.6 billion on the DIP Facility.
- Charges of $1.9 billion related to U.S. salaried and hourly headcount reduction programs.
- Restructuring charges of $1.1 billion related to SUB and TSP.
- Reorganization costs of $1.1 billion, primarily related to loss on extinguishment of debt of $958 million.
- Impairment charges of $239 million related to product-specific tooling assets.

Results for the three months ended March 31, 2009 included:

- Old GM amended the terms of its U.S. term loan and recorded a gain of $906 million on the extinguishment of the original loan facility.
- Upon Saab's filing for reorganization, Old GM recorded charges of $618 million related to its net investment in, and advances to, Saab and other commitments and obligations.
- Impairment charges of $327 million related to product-specific tooling assets and cancelled powertrain programs.

Note 35. Segment Reporting

Consolidated

We design, build and sell cars, trucks and parts worldwide. We also conduct our automotive finance operations through GM Financial. We manage our operations through our five segments: GMNA, GME, GMIO, GMSA and GM Financial. Each segment has a manager responsible for executing our strategies. Our automotive manufacturing operations are integrated within the segments, benefit from broad-based trade agreements and are subject to regulatory requirements, such as Corporate Average Fuel Economy (CAFE) regulations. While not all vehicles within a segment are individually profitable on a fully loaded cost basis, those vehicles are needed in our product mix in order to attract customers to dealer showrooms and to maintain sales volumes for other, more profitable vehicles. Because of these factors, we do not manage our business on an individual brand or vehicle basis. The chief operating decision maker evaluates the operating results and performance of our automotive segments through Income (loss) before interest and income taxes and evaluates GM Financial through Income (loss) before income taxes.

In the year ended December 31, 2010 we changed our managerial and financial reporting structure so that certain entities geographically located within Russia and Uzbekistan were transferred from our GME segment to our GMIO segment, and certain entities geographically located in Brazil, Argentina, Colombia, Ecuador, Venezuela, Bolivia, Chile, Paraguay, Peru and Uruguay were transferred from our GMIO segment to our newly created GMSA segment. We have retrospectively revised the segment presentation for all periods presented.

Substantially all of the cars, trucks and parts produced are marketed through retail dealers in North America, and through distributors and dealers outside of North America, the substantial majority of which are independently owned.

In addition to the products sold to dealers for consumer retail sales, cars and trucks are also sold to fleet customers, including daily rental car companies, commercial fleet customers, leasing companies and governments. Sales to fleet customers are completed through the network of dealers and in some cases sold directly to fleet customers. Retail and fleet customers can obtain a wide range of aftersale vehicle services and products through the dealer network, such as maintenance, light repairs, collision repairs, vehicle accessories and extended service warranties.

Table of Contents

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

GMNA primarily meets the demands of customers in North America with vehicles developed, manufactured and/or marketed under the following four brands:

- Buick
- Cadillac
- Chevrolet
- GMC

The demands of customers outside of North America are primarily met with vehicles developed, manufactured and/or marketed under the following brands:

- Buick
- Cadillac
- Chevrolet
- Daewoo
- GMC
- Holden
- Isuzu
- Opel
- Vauxhall

At December 31, 2010 we also had equity ownership stakes directly or indirectly in entities through various regional subsidiaries, including GM Daewoo, SGM, SGMW, FAW-GM and HKJV. In January 2011 GM Daewoo announced it will be changing its name to GM Korea and will sell most of its cars under the Chevrolet brand. These companies design, manufacture and market vehicles under the following brands:

- Buick
- Cadillac
- Chevrolet
- Daewoo
- FAW
- GMC
- Holden
- Jiefang
- Wuling

Nonsegment operations are classified as Corporate and Corporate assets, liabilities and results of operations are a component of Total Automotive in our consolidated financial statements. Corporate includes investments in Ally Financial, certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures, certain nonsegment specific revenues and expenses, including costs related to the Delphi Benefit Guarantee Agreements and a portfolio of automotive retail leases.

All intersegment balances and transactions have been eliminated in consolidation.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None

* * * * * * *

Item 9A. Controls and Procedures

Disclosure Controls and Procedures

We maintain disclosure controls and procedures designed to provide reasonable assurance that information required to be disclosed in reports filed under the Securities Exchange Act of 1934, as amended (Exchange Act) is recorded, processed, summarized and reported within the specified time periods and accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Our management, with the participation of our Chairman and CEO and our Vice Chairman and CFO, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) or 15d-15(e) promulgated under the Exchange Act) at December 31, 2010. Based on these evaluations, our CEO and CFO concluded that our disclosure controls and procedures required by paragraph (b) of Rules 13a-15 or 15d-15 were effective as of December 31, 2010.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining effective internal control over financial reporting. This system is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with U.S. GAAP.

Our internal control over financial reporting includes those policies and procedures that: (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect our transactions and dispositions of our assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of consolidated financial statements in accordance with U.S. GAAP, and that our receipts and expenditures are being made only in accordance with authorizations of our management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on the consolidated financial statements.

Our management performed an assessment of the effectiveness of our internal control over financial reporting at December 31, 2010, utilizing the criteria discussed in the "Internal Control — Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission. The objective of this assessment was to determine whether our internal control over financial reporting was effective at December 31, 2010.

Based on management's assessment, we have concluded that our internal control over financial reporting was effective at December 31, 2010. The effectiveness of our internal control over financial reporting has been audited by Deloitte & Touche LLP, an independent registered public accounting firm, as stated in its report which is included herein.

Remediation and Changes in Internal Controls

In our 2009 Annual Report on Form 10-K, we identified a material weakness because we did not maintain effective controls over the period-end financial reporting process. A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our annual or interim consolidated financial statements will not be prevented or detected on a timely basis.

In 2009, significant activities were performed in remediating the material weakness. However, we were not able to sufficiently test the operating effectiveness of certain remediated internal controls given the limited time that controls were in operation. During 2010, management led various initiatives to further enhance our controls over period-end financial reporting, including training and

Table of Contents

enhanced procedures related to the preparation of the statement of cash flows, to help ensure controls over the period-end financial reporting process would operate as they had been designed and deployed during the 2009 material weakness remediation efforts. Based upon the actions taken and our testing and evaluation of the effectiveness of our internal controls, we have concluded the material weakness related to controls over the period-end financial reporting process no longer existed as of December 31, 2010.

Other than as previously discussed, there have not been any other changes in our internal control over financial reporting in the three months ended December 31, 2010, which have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

/s/ DANIEL F. AKERSON	/s/ CHRISTOPHER P. LIDDELL

Limitations on the Effectiveness of Controls

Our management, including our CEO and CFO, does not expect that our disclosure controls and procedures or internal control over financial reporting will prevent or detect all errors and all fraud. A control system cannot provide absolute assurance due to its inherent limitations; it is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. A control system also can be circumvented by collusion or improper management override. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of such limitations, disclosure controls and procedures and internal control over financial reporting cannot prevent or detect all misstatements, whether unintentional errors or fraud. However, these inherent limitations are known features of the financial reporting process, therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

This is the New GM.

General Motors Company
2010 Annual Report

ABOUT THE COVER:
Featured on the cover is the Chevrolet Volt, the 2011 North American Car of the Year and *Motor Trend* Car of the Year.

We are Building
a New General Motors.

We have a new vision and business model to bring it to life, supported by a healthy balance sheet. We have a new team, focused on delivering results. We have the number-one market share in the world's highest-growth markets. We have the breakthrough new technology of the Volt as evidence of what we can do.

And we're just getting started.

Dear Fellow Stakeholders:

DANIEL F. AKERSON
Chairman & Chief Executive Officer

On November 18, 2010, the General Motors team, along with our United Auto Workers partners, experienced something special as we stood together on the balcony of the storied New York Stock Exchange. As we rang the opening bell to the unmistakable sound of a Chevy Camaro engine at full throttle, we knew we were doing much more than just starting a new trading day. We were revving up Wall Street, and setting the pace for our company—the new General Motors.

We truly are building a new GM, from the inside out. Our vision is clear: to design, build and sell the world's best vehicles, and we have a new business model to bring that vision to life. We have a lower cost structure, a stronger balance sheet and a dramatically lower risk profile. We have a new leadership team—a strong mix of executive talent from outside the industry and automotive veterans—and a passionate, rejuvenated workforce.

Entering the public equity market capped a year of historic change. And yet, at that moment on the NYSE balcony, for us and for our employees around the world, it was crystal clear—our work was just beginning.

A STRONG FOUNDATION

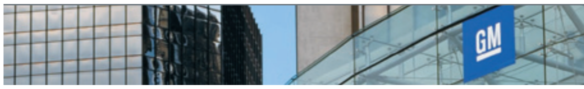
GM made important operational and financial progress in 2010, and set a strong foundation to build upon for the future.

GM, with its joint venture partners, maintained its leading market position in the key growth markets of Brazil, Russia, India and China (the BRIC countries) during the year, with a particularly strong performance in China, where GM and our partners delivered 2.4 million cars and trucks. Meanwhile, we continued the aggressive implementation of our restructuring plan in Europe to position our business to operate at a lower break-even level.

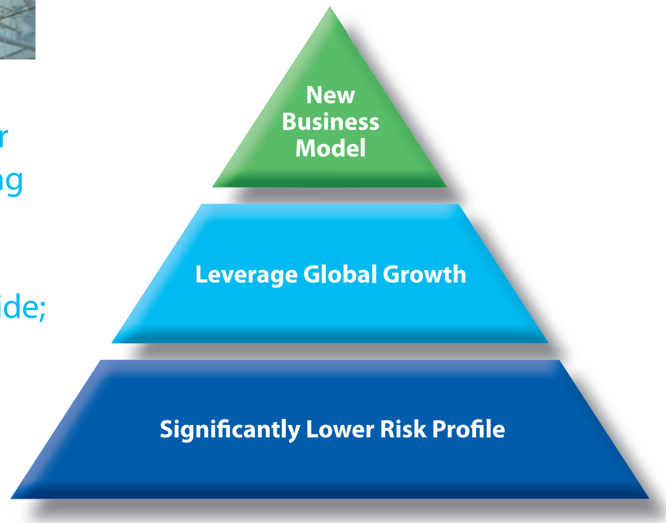
> "Our plan is to steadily invest in creating world-class vehicles, which will continuously drive our cycle of great design, high quality and higher profitability."

In the United States, GM saw robust sales across all of our brands—Cadillac, Chevrolet, Buick and GMC—thanks to an exciting lineup of vehicles that have captured the imagination of customers and critics alike, epitomized by the launch of the Chevrolet Volt—the groundbreaking extended-range electric vehicle. GM vehicles won numerous awards throughout the year, led by the Volt, which ran the table with the North American Car of the Year, *Automobile Magazine*'s Automobile of the Year, Green Car of the Year, a *Car and Driver* 10 Best Award and *Motor Trend* Car of the Year.

Continuing that progress, we kicked off 2011 with another big win with the Chevrolet Silverado HD winning the top honor as *Motor Trend* Truck of the Year. It was the first time



The strength of the new GM: a new business model centered on our vision of designing, building and selling the world's best vehicles; a leader's leverage to economic growth in key mature and emerging markets worldwide; and a new balance sheet with a significantly improved risk profile.



GM brands captured both of the prestigious *Motor Trend* Car and Truck of the Year awards since Buick and Chevrolet captured both awards in 1979.

And across the globe, other GM vehicles are gaining similar acclaim for design excellence, quality and performance, including the Holden Commodore in Australia, Chevrolet Agile in Brazil, Buick LaCrosse in China and many others.

We also acquired AmeriCredit to form GM Financial, expanding the financing options for customers in the United States and Canada who want to buy or lease new GM vehicles.

We lowered our cost base and restructured operations in North America to achieve a break-even level near the bottom of the economic cycle. Despite depressed industry conditions, GM posted $5.7 billion of earnings before interest and taxes (EBIT) in North America. We significantly improved our balance sheet, reduced debt by more than $11 billion and improved the funding level of our U.S. pension plans with a $4 billion cash contribution. At the same time, we maintained our strong liquidity position through positive cash flow and a new $5 billion revolving line of credit.

In November we completed a landmark $23 billion public offering, the largest in history, allowing the U.S. and Canadian governments to reduce their ownership stakes in the company. The successful offering was an important vote of confidence for the progress and potential of the new General Motors.

BRIGHTENING FINANCIAL PICTURE

We were pleased to achieve profitability in our first full year as a new company, with 2010 net income attributable to common stockholders of $4.7 billion on revenue of $135.6 billion. We achieved earnings per share of $2.89 on a fully diluted basis.

"Our 2010 progress is early evidence of a new business model that begins and ends with great vehicles."

GM recorded adjusted EBIT of $7 billion and positive automotive free cash flow of $2.4 billion in 2010. Excluding a $4 billion discretionary contribution to the U.S. pension plans, free cash flow would have been $6.4 billion for the year.

The company's progress is early evidence of a new business model that begins and ends with great vehicles. We are leveraging our global resources and scale to maintain stringent cost management while taking advantage of growth and revenue opportunities around the world, to ultimately deliver sustainable results for all of our stakeholders.

The 2011 North American and *Motor Trend* Car of the Year Chevrolet Volt performs on the road and for the environment.

After a groundbreaking development process, GM launched the Chevrolet Volt electric vehicle with extended-range capability in November 2010. The vehicle underscores GM's commitment to technology leadership, while positively shaping perceptions about electric vehicles. Thanks to strong customer interest, GM has expanded its initial seven-state rollout plan, and the Volt will be available nationwide in the United States by the end of 2011.

THE ROAD AHEAD

It was a good year for GM, but we have a lot of work ahead of us. Although great opportunity abounds around the globe, risks do as well. In a still-recovering global economy, uncertainty surrounding the crisis in Japan, a volatile oil price environment, higher commodity prices and an increasingly competitive automotive marketplace, we will build on our 2010 progress by concentrating on three critical areas.

First, we will remain focused on our top priority—developing and introducing great new products to our valued customers worldwide. Key launches in 2011 include the fuel-efficient and sporty Chevy Sonic and the Buick Verano luxury small car in the United States; the Opel Zafira seven-seat MPV and the Ampera extended-range electric car in Europe; and our all-new Baojun brand in China.

As we regain our financial footing, we expect the number of new product launches to steadily rise over the next several years. And these new products will increasingly embrace advanced technology to reduce fuel consumption and emissions, improve safety and enhance the overall driving experience for our customers.

Advanced technology is key to GM product leadership in the future. This is what makes the Volt so important for GM. It's not just another "me too" vehicle. While it is by no means the ultimate solution for reducing our dependence on oil, the Volt is a glimpse into what's possible from GM. We will leverage what we have learned in its development—from the automotive battery, electric power control and other new technologies to the processes and partnerships we created—to help us accelerate the pace of innovation across the company.

Second, we will continue to sharpen our focus on how we engage customers. Fundamental to this is designing and producing vehicles that surprise and delight them. We're doing that by listening to customers, taking a wider view to predict emerging trends, ensuring we have the right features and technologies in our vehicles to set them apart from the rest, and enhancing our advertising and marketing efforts to more effectively connect with customers.

> "A key priority is to sharpen our focus on engaging our customers. That's critical to ensuring that we have the right features and technologies in our vehicles to win in a competitive marketplace."

We're working closely with our revitalized dealer network in the United States to deliver the best sales and service experience possible, and we continue to implement a highly disciplined inventory management approach worldwide to create an integrated, holistic brand experience everywhere we sell vehicles. In all efforts, we'll never forget what's most important: our customers.

Chevrolet Silverado HD named 2011 *Motor Trend* Truck of the Year.

Editors recognized Silverado for engineering excellence and advanced design, efficiency, safety, value and performance, especially the truck's new Duramax diesel engine, which delivers increased performance and significantly reduced emissions.

Our third area of focus is financial discipline. We will maintain a sharp global focus on cost management as we invest in products and technology and expand to meet increasing demand. At the same time, we are building a strong and resilient balance sheet, and expect to maintain a minimal level of debt and to take meaningful steps toward fully funding our U.S. pension plans.

BUILDING THE NEW GM

We are moving with increased speed and agility, and implementing change faster than ever before. We are becoming a company with the capability, resources and confidence to play offense, not defense. Instead of creating new vehicles that are just better than their predecessors, we're working to design, build and sell vehicles that define the industry standard.

I would like to close this letter with sincere thanks, from every one of us at General Motors, to the American and Canadian people and their governments. We will always be grateful for their support in GM's hour of greatest need, and we are determined to prove that this was an investment worth making.

I would also like to thank the investors who made our public offering so successful. Most of all, I want to thank our employees, retirees, dealers, union partners and many other stakeholders who stood by us through the toughest of times, and who made the sacrifices necessary for us to create our new company.

For the first time in decades, the playing field in the auto business is level. Now, the best car truly can win. GM can now dedicate its full attention to designing, building and selling the world's best vehicles—something that we hadn't been able to do in the past, due to a historical cost structure that was unsustainable, distracted our resources and hindered our ability to compete.

We will never forget the path that led to the old GM's bankruptcy and the sacrifices that were made by many to create the new GM. Most important, we learned from that experience, we understand why it happened and we will never go back there again. That is our commitment.

GM's strong 2010 results were evidence of what we now can achieve. Make no mistake; we have a long road ahead. There will be many bumps and unexpected bends. And we are building the right vehicle to navigate them: The New GM.

Thank you.

Sincerely,

Daniel F. Akerson
Chairman & Chief Executive Officer
General Motors Company

*See page 20 for a reconciliation of non-GAAP measures to results reported under U.S. GAAP.

The new General Motors has one clear vision: to design, build and sell the world's best vehicles. Our new business model revolves around this vision, focusing on fewer brands, compelling vehicle design, innovative technology, improved manufacturing productivity and streamlined, more efficient inventory processes. The end result is products that delight customers and generate higher volumes and margins—and ultimately deliver more cash to invest in our future vehicles.

A New Vision, a New Business Model

Our vision is simple, straightforward and clear; to design, build and sell the world's best vehicles. That doesn't mean just making our vehicles better than the ones they replace. We have set a higher standard for the new GM—and that means building the best.

Our vision comes to life in a continuous cycle that starts, ends and begins again with great vehicle designs. To accelerate the momentum we've already created, we reduced our North American portfolio from eight brands to four: Chevrolet, Buick, Cadillac and GMC. Worldwide, we're aggressively developing and leveraging global vehicle architectures to maximize our talent and resources and achieve optimum economies of scale.

Across our manufacturing operations, we have largely eliminated overcapacity in North America while making progress in Europe, and we're committed to managing inventory with a new level of discipline. By using our manufacturing capacity more efficiently and maintaining leaner vehicle inventories, we are reducing the need to offer sales incentives on our vehicles. These moves, combined with offering attractive, high-quality vehicles, are driving healthier margins—and at the same time building stronger brands.

Our new business model creates a self-sustaining cycle of reinvestment that drives continuous improvement in vehicle design, manufacturing discipline, brand strength, pricing and margins, because we are now able to make money at the bottom as well as the top of the industry cycles.

We are seeing positive results already. In the United States, for example, improved design, content and quality have resulted in solid gains in segment share, average transaction prices and projected residual values for the Chevrolet Equinox, Buick LaCrosse and Cadillac SRX. This is just the beginning.

GM's new business model is designed to continuously and consistently invest in vehicle design, quality and technology, in turn building stronger brands and higher residual values.

Focusing on fewer U.S. brands—each with a distinct strategy—allows GM to stabilize and begin to improve market share.

Improvements in design, content, engineering and quality are resulting in increased segment share as well as improved average transaction prices.

The New GM Business Model

DESIGN
Focusing on fewer brands; leveraging global resources to create the most compelling vehicles and technologies

REINVEST
Reinvesting cash and profits consistently into vehicle and technology development, regardless of business cycle

BUILD
Optimizing our global footprint to cost-effectively develop best-in-segment vehicles

SELL
Maximizing revenues with a focused brand strategy; delivering world-class vehicles to market

The new GM is in a strong position to compete. Along with our joint venture partners, GM holds the leading position in the BRIC markets—Brazil, Russia, India and China—which collectively present the biggest opportunity for growth over the next five years. North America presents additional growth potential as it continues to recover from the economic crisis.

A New World of Opportunity and Growth

Despite the recent downturn, the global automotive industry remains a growth business. In fact, some industry analysts expect the market to increase from 72 million units in 2010 to as much as 96 million units by 2015. GM is well-poised to capitalize on that explosive growth.

The emerging BRIC markets are projected to grow collectively by nearly 12 million vehicles by 2015 as robust economies and increasing personal wealth drive demand. GM, together with our joint venture partners, ended 2010 with a market-leading 12.2 percent share in the combined BRIC countries, holding the number-one position for the sixth consecutive year.

Over the past decade, GM and our joint venture partners have built a leading position in China—the world's largest automotive market—with share increasing from 3.4 percent in 2000 to our current 12.8 percent. In India, GM and its partners saw a strong performance in 2010, delivering record volume, up 60 percent year over year, and an overall 0.6 point gain in market share. Brazil is the world's fifth-largest vehicle market, and GM is one of the top automakers there with a 19 percent market share.

In North America, GM ended the year as the market share leader, driven by sharper brand focus and strong market acceptance of our new vehicles. In the United States, Buick has become the fastest-growing major automotive brand by appealing to a broad spectrum of vehicle buyers, with a 52 percent increase in sales in 2010. And in Canada, our core brand retail sales grew 26.4 percent in 2010, helping us achieve 15.6 percent market share.

It's becoming increasingly clear, all over the world: From Europe to Africa, Asia to North and South America, the new GM is taking hold. We're making progress every day in our drive to design, build and sell the world's best vehicles.

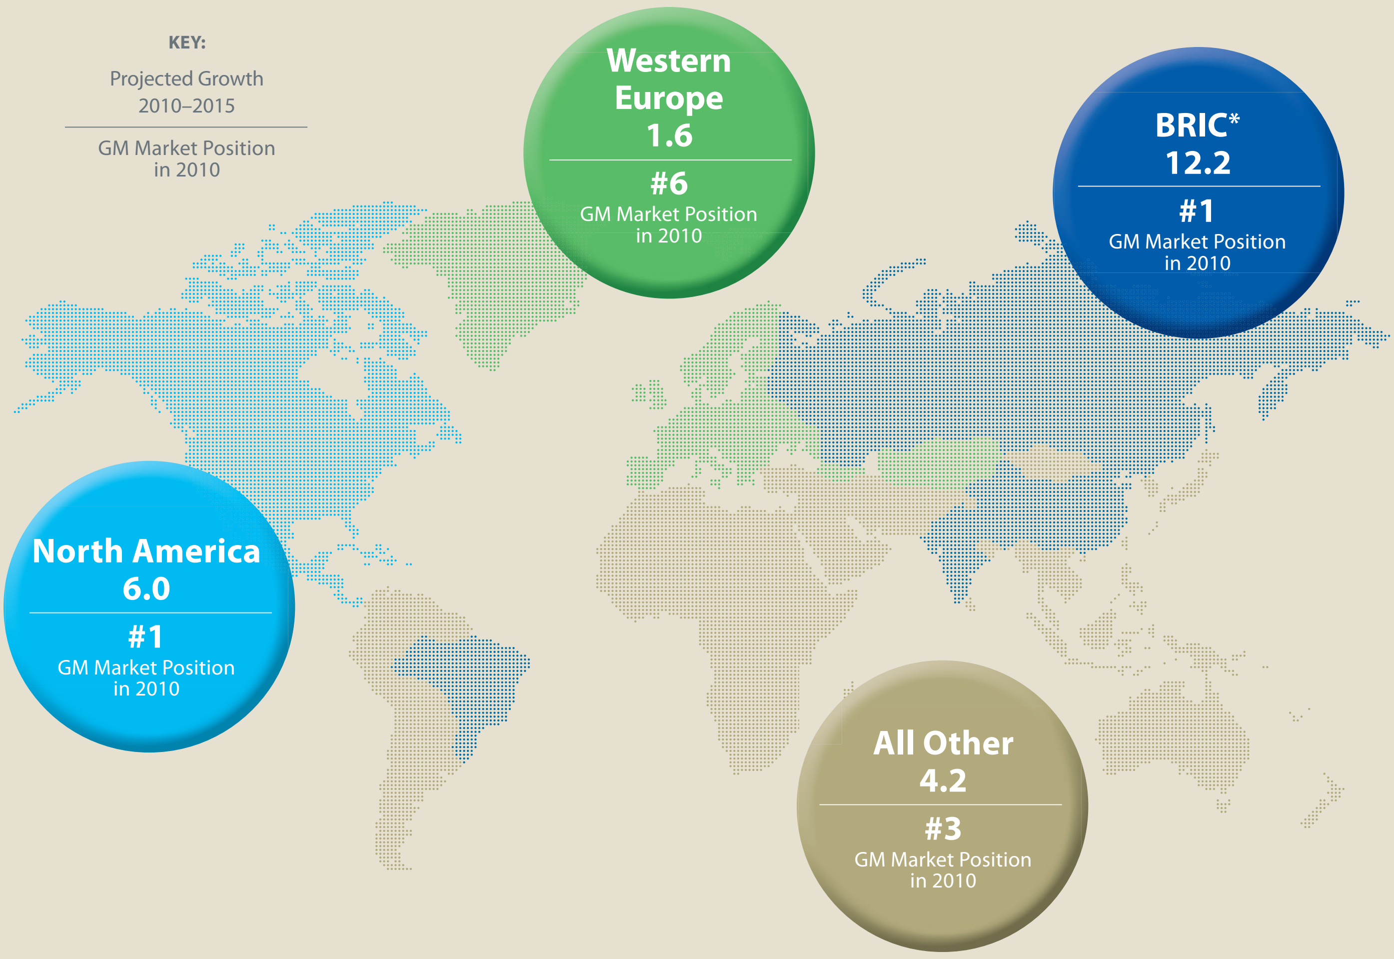
The combined BRIC countries represent the industry's most compelling growth opportunity, expected to expand by more than 12 million vehicles from 2010 through 2015.

2011 will be a big year for introducing new, world-class vehicles in China. In Europe, 2012 will be a major launch year, as will the following two years in the United States. 2012 will be a significant year for launches in Brazil.

China is now the largest vehicle market in the world, having passed the United States in 2009.

A Leader in the Highest-Growth Automotive Markets

Industry projected 5-year unit growth, 2010–2015
(units in millions)



Source: IHS Automotive car and light truck sales forecast March 2011
*Brazil, Russia, India, China; includes joint ventures

The new GM has a much improved balance sheet that, combined with our competitive cost structure in North America, provides for a significantly lower risk profile. Given the cyclical nature of our industry and the capital-intensive nature of our business, our leadership team is committed to minimizing our financial leverage. After reinvesting in the business, we plan to use excess cash to fully fund our pension plans and maintain minimal debt, with the goal of attaining an investment-grade credit rating over the long term.

Significantly Lower Risk Profile

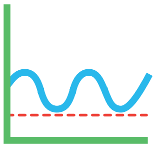
We have made solid progress reducing our financial leverage in 2010, with nearly $16 billion of combined reductions in key automotive obligations, including an $11.2 billion reduction in automotive debt and a $4.7 billion improvement in the underfunded status of our U.S. pension plans. In addition, we reduced our Series A Preferred Stock by $1.5 billion. Importantly, we ended the year with a very healthy $34 billion in available automotive liquidity to support the business going forward.

Our competitive cost structure in North America was the result of the progress we made through our restructuring and is supported by competitive agreements with our labor partners and our ability to more efficiently manage our manufacturing capacity. Our cost structure, strong product portfolio and pricing discipline in North America have allowed us to achieve breakeven near the bottom of the industry cycle.

As we manage through the downturns and rebounds of our industry, a key objective is to maintain consistent levels of investment in our engineering and product development in order to deliver the world's best vehicles, which will in turn deliver consistent financial performance over the long term. Minimizing financial leverage and maintaining cost discipline will help ensure we are able to do so.

We still have more work to do, but the progress we already have made is moving us closer to our ultimate goal: to be in a solid position to play offense, not defense, even in a down cycle. This is the essence of the new GM.

A much improved risk profile, strong liquidity, lower debt and competitive cost structure in North America position the company for sustainable results.

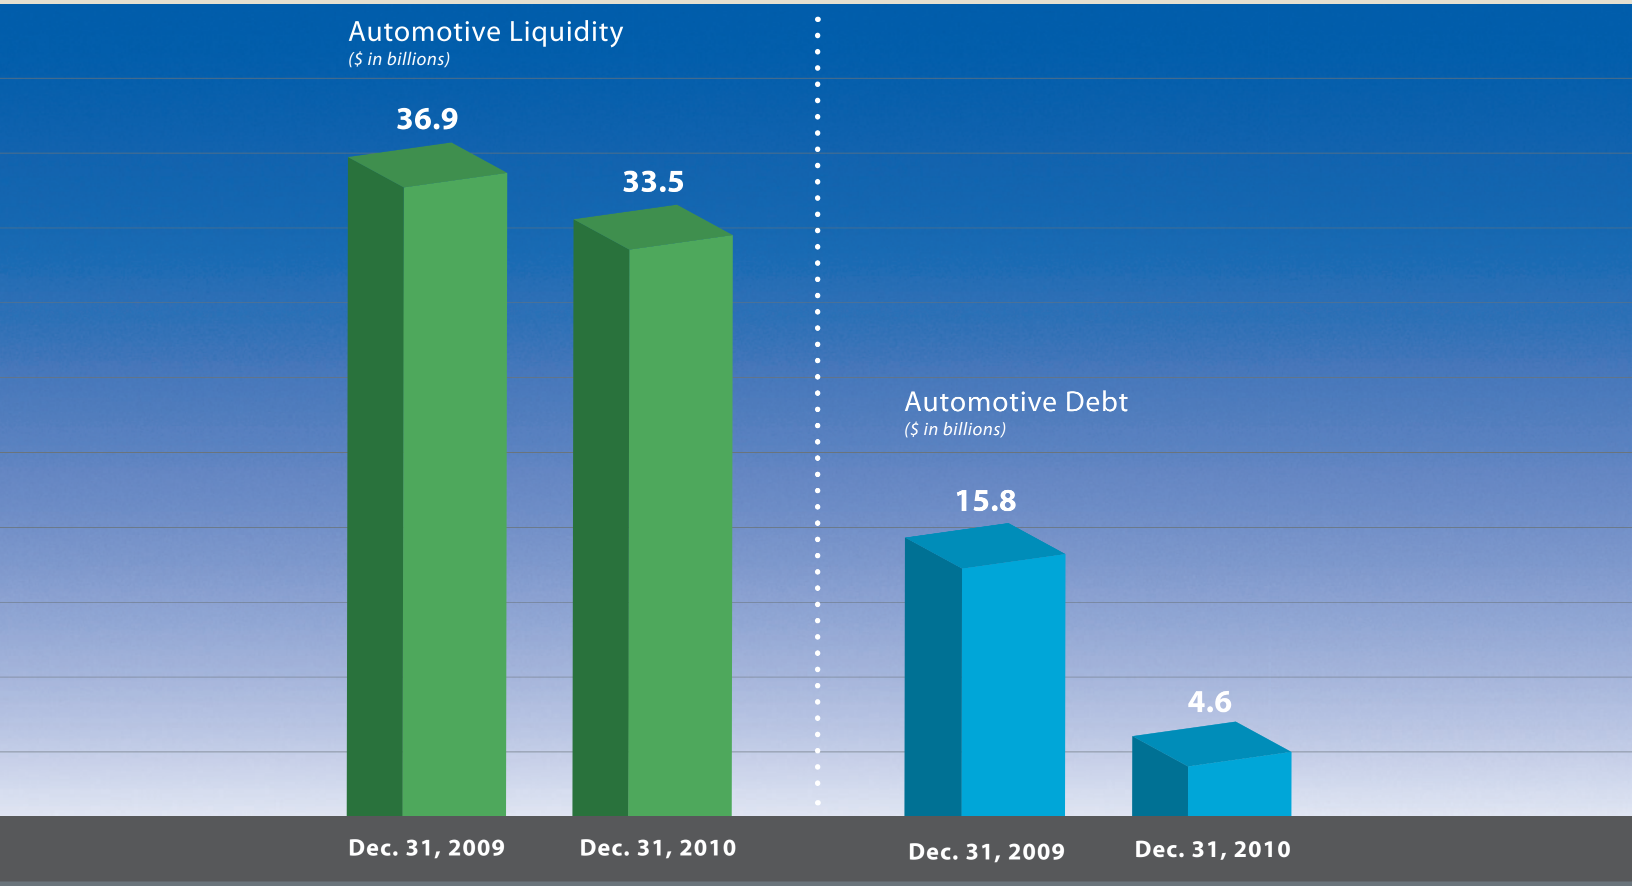


We now have a cost structure in North America that breaks even near the bottom of the industry cycle, enabling GM to succeed through downturns and rebounds alike.

A key objective at GM is to achieve investment-grade status by strengthening the balance sheet, fully funding our pension plans and improving our risk profile.

Strong Liquidity, Minimizing Debt

Reduced automotive debt by more than $11 billion, while maintaining healthy liquidity



Automotive Liquidity includes: cash, marketable securities, certain escrow restricted cash and available credit facilities

A World-Class Lineup in North America

Chevrolet Cruze
Global success is no surprise for the new Chevrolet Cruze, which is sold in more than 60 countries around the world. In addition to a 42 mpg Eco model (sold in North America), Cruze's globally influenced design is complemented by its exceptional quietness, high quality and attention to detail not matched by the competition.

Buick Regal
The sport-injected Buick Regal is the brand's latest addition, attracting a whole new demographic for the Buick brand. The newly designed Buick lineup, which saw 52 percent volume growth in 2010 in the United States alone, is appealing to a broader spectrum of buyers.

Chevrolet Equinox
The Chevrolet Equinox delivers best-in-segment 32-mpg highway fuel economy in a sleek, roomy new package. With the success of the Equinox and other strong-selling crossovers, GM leads the U.S. industry in total unit sales for the segment.

Chevrolet Sonic
Stylish four-door sedan and sporty five-door hatchback versions of the Chevrolet Sonic will be in U.S. showrooms in fall 2011. Currently the only small car built in the United States, it will be sold as the Aveo in other parts of the world.

Buick LaCrosse
Buick builds on the brand's momentum in the United States and China with the fuel-efficient LaCrosse. With eAssist technology, the LaCrosse achieves an expected 37 mpg on the highway.

Buick Verano
The all-new Buick Verano, which will be available in late 2011, appeals to customers in the United States, Canada and Mexico who want great fuel economy and luxury in a smaller but premium package.

GMC Terrain
The GMC Terrain delivers segment-leading fuel economy of 32 mpg highway, plus uncompromising content and premium technology, in a 5-passenger, compact SUV.

Cadillac CTS *V*-Coupe
Cadillac's new CTS *V*-Coupe is the complete package for the driving enthusiast—a 556 hp supercharged V-8 engine, stunning lines and performance handling.

GMC Sierra Heavy Duty
The GMC Sierra offers heavy-duty power and performance with the proven and powerful Duramax Diesel/Allison Transmission combination and a completely new chassis with improved capabilities and ride comfort.

GMC Yukon Hybrid
The GMC Yukon Hybrid is America's first full-sized SUV hybrid, with city fuel economy of 20 mpg—better than a standard 6-cylinder Honda Accord and 43 percent better than any full-size SUV in its class.

Cadillac CTS Sport Wagon
With an available advanced direct-injected V6 engine, the Cadillac CTS Sport Wagon sets a new standard for versatility, while offering excitement and purpose.

Cadillac SRX
The Cadillac SRX looks and performs like no other crossover, with a cockpit that offers utility and elegance and an optional 70-inch Ultraview sunroof.

A World-Class Lineup Around the World

Chevy Orlando
Using our global compact architecture, Chevrolet is launching the new Orlando seven-seat family van in select markets worldwide in 2011.

Baojun 630
The all-new Baojun 630 debuted in China in 2010—our new affordable vehicle brand designed to appeal to first-time car buyers.

Opel Meriva
The award-winning 2010 Opel Meriva is Europe's small monocab with more—from the centered handles of its FlexDoors to its dynamic lines and roomy, versatile interior.

Chevy Flex-Fuel Agile
With its efficient 1.4-liter Ecoflex engine, Brazil's Chevrolet Flex-Fuel Agile represents flex-fuel technology in a subcompact.

Opel Astra
The Opel Astra brings a new look and award-winning design to the European compact class with Hatchback and Sports Tourer models.

Chevrolet Montana
The Chevrolet Montana, which shares GM do Brasil's new Agile Hatchback city car platform, delivers a compact truck with 30-mpg highway fuel economy to markets in South America and Africa.

Chevrolet Beat Diesel
Building on the global success of the Chevrolet Spark, Chevrolet has announced plans for the summer 2011 launch of the Chevrolet Beat Diesel in India, offering a new 1.0-liter diesel version of this popular, stylish hatchback.

Opel Ampera
In late 2011 European customers will be able to experience GM's award-winning Voltec technology when both the Chevrolet Volt and Opel Ampera go on sale there. Both vehicles feature their own unique styling and bring pioneering technology to new markets.

The New GM's vehicle lineup had a banner year for honors and awards in 2010, capturing many of the industry's most prestigious awards, including the *Motor Trend* Car and Truck of the Year for the Chevrolet Volt and Silverado HD; North American Car of the Year for the Volt; the *Auto Bild* Golden Steering Wheel Award 2010 for the Opel Meriva; and the *Consumers Digest* Automotive Best Buy Award for the all-new Buick Regal. The Cadillac CTS-*V* and Volt were also recognized among the *Car and Driver* 10 Best and the GMC Terrain was ranked highest in its segment in the J.D. Power APEAL study. For information on these wins and many more, please visit *www.gmwins.com*.

A New Attitude

We are making major strides in becoming a GM that works smart, thinks big and moves fast. The new GM culture values simplicity, agility and action—making and implementing decisions faster, pushing accountability deeper into the organization and demanding results from everyone. There's never been a greater need to change, and there's never been a better time.

New Leadership

(As of April 1, 2011)

Board of Directors

(Front Row, Left to Right)

Erroll B. Davis, Jr. 1, 4
Chancellor,
University System
of Georgia
Director since July 10, 2009

Daniel F. Akerson
Chairman &
Chief Executive Officer
Director since July 24, 2009

Financial Contents

General Motors Company and Subsidiaries
Reconciliation of Non-GAAP Measures

The accompanying Letter to Stakeholders includes earnings before interest and taxes (EBIT), EBIT adjusted and Automotive free cash flow which are not prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP) and have not been audited or reviewed by GM's independent registered public accounting firm. EBIT, EBIT adjusted and Automotive free cash flow are considered non-GAAP financial measures.

Management believes these non-GAAP financial measures provide meaningful supplemental information regarding GM's operating results because they exclude amounts that management does not consider part of operating results when assessing and measuring the operational and financial performance of the organization. Management believes these measures allow it to readily view operating trends, perform analytical comparisons and benchmark performance among geographic regions. Accordingly, GM believes these non-GAAP financial measures are useful in allowing for greater transparency of GM's core operations and they are therefore used by management in its financial and operational decision-making.

The following table summarizes the reconciliation of EBIT to its most comparable U.S. GAAP measure (dollars in millions):

	Successor **Year Ended** December 31, 2010
Operating segments	
GMNA	$ 5,748
GME	(1,764)
GMIO	2,262
GMSA	818
GM Financial(a)	129
Total operating segments	7,193
Corporate and eliminations	284
EBIT	**7,477**
Interest income	465
Automotive interest expense	1,098
Income tax expense	672
Net income attributable to stockholders	**6,172**
Less: Cumulative dividends on and charge related to purchase of preferred stock	1,504
Net income attributable to common stockholders	**$ 4,668**

(a) GM Financial amounts represent income before income taxes.

General Motors Company and Subsidiaries
Reconciliation of Non-GAAP Measures

The following table summarizes the reconciliation of EBIT adjusted to EBIT and Automotive free cash flow to Automotive Net cash provided by (used in) operating activities (dollars in millions):

	Successor **Year Ended** December 31, 2010
EBIT adjusted(a)	$ 7,030
Adjustments	447
EBIT(a)	**$ 7,477**
Automotive	
Free cash flow	$ 2,389
Capital expenditures	4,200
Net cash provided by operating activities	**$ 6,589**

(a) GM Financial amounts included in EBIT and EBIT adjusted represent income before income taxes.

Adjustments

In the year ended December 31, 2010 Adjustments included the following:

- Gain of $198 million on the extinguishment of the VEBA Notes;
- Gain of $66 million related to the acquisition of General Motors Strasbourg S.A.S;
- Gain of $123 million as a result of the sale of Saab Automobile AB to Spyker Cars NV; and
- Gain of $60 million related to the sale of Nexteer, a manufacturer of steering components and half-shafts, to Pacific Century Motors

Market Information

Shares of our common stock have only been publicly traded since November 18, 2010 when our common stock was listed and began trading on the New York Stock Exchange and the Toronto Stock Exchange. As a result our table below only provides data with respect to the fourth quarter for our common stock.

Quarterly price ranges of our common stock on the New York Stock Exchange, the principal market in which the stock is traded are as follows:

	Year Ended December 31, 2010	
	High (a)	**Low (a)**
Quarter		
First	N/A	N/A
Second	N/A	N/A
Third	N/A	N/A
Fourth	$36.98	$33.07

(a) The quarterly price ranges for our common stock are based on high and low prices from intraday trades.

Holders

As of February 15, 2011 we had a total of 1.6 billion issued and outstanding shares of common stock and a total of 318 million shares of common stock for which warrants are initially exercisable by two warrant holders of record. As of February 15, 2011 there were 185 holders of record of our common stock.

Dividends

Since our formation, we have not paid any dividends on our common stock. We have no current plans to pay any dividends on our common stock. So long as any share of our Series A or Series B Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on our Series A and Series B Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. Our secured revolving credit facility contains certain restrictions on our ability to pay dividends on our common stock, subject to exceptions, such as dividends payable solely in shares of our common stock.

So long as any share of our Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on our Series A Preferred Stock, subject to exceptions, such as dividends on our Series B Preferred Stock payable solely in shares of our common stock.

Our payment of dividends in the future, if any, will be determined by our Board of Directors and will be paid out of funds legally available for that purpose. Our payment of dividends in the future will depend on business conditions, our financial condition, earnings, liquidity and capital requirements, the covenants in our new secured revolving credit facility, and other factors.

(a) All applicable Successor share, per share and related information has been adjusted retroactively for the three-for-one stock split effected on November 1, 2010.

(b) At July 10, 2009 we applied fresh-start reporting following the guidance in Accounting Standards Codification (ASC) 852, "Reorganizations" (ASC 852). The consolidated financial statements for the periods ended on or before July 9, 2009 do not include the effect of any changes in the fair value of assets or liabilities as a result of the application of fresh-start reporting. Therefore, our financial information at and for any period after July 10, 2009 is not comparable to Old GM's financial information.

(c) In November 2006 Old GM sold a 51% controlling ownership interest in Ally Financial, Inc., formerly GMAC, Inc. (Ally Financial) resulting in a significant decrease in total consolidated net sales and revenue.

(d) GM Financial was consolidated effective October 1, 2010.

(e) In the period January 1, 2009 through July 9, 2009 Old GM recorded Reorganization gains, net of $128.2 billion directly associated with the Chapter 11 Proceedings, the 363 Sale and the application of fresh-start reporting. Refer to Note 2 to our consolidated financial statements for additional detail.

(f) In September 2007 Old GM recorded full valuation allowances of $39.0 billion against net deferred tax assets in Canada, Germany and the United States.

(g) In August 2007 Old GM completed the sale of the commercial and military operations of its Allison business. The results of operations, cash flows and the 2007 gain on sale of Allison have been reported as discontinued operations for all periods presented.

(h) Includes a charge related to the purchase of Series A Preferred Stock of $677 million in the year ended December 31, 2010.

(i) In December 2008 Old GM entered into the UST Loan Agreement, pursuant to which the UST agreed to provide a $13.4 billion UST Loan Facility.

(j) In December 2010 GM Daewoo Auto & Technology Co. (GM Daewoo) terminated a Korean Won 1.4 trillion (equivalent to $1.2 billion) credit facility following the repayment of the remaining $1.0 billion under the facility.

(k) In December 2010 we purchased 84 million shares of our Series A Preferred Stock from the UST for a purchase price of $2.1 billion, which was equal to 102% of their aggregate liquidation amount.

(l) Series B Preferred Stock was issued in a public offering in November and December 2010. The Series B Preferred Stock pays dividends at 4.75% and is convertible to common stock at the option of the holder until December 1, 2013 the date on which all outstanding shares of Series B Preferred Stock will be mandatorily converted into common stock based on pre-defined conversion ratios that adjust based on the share price of our common stock.

(m) In January 2007 Old GM recorded a decrease to Retained earnings of $425 million and a decrease of $1.2 billion to Accumulated other comprehensive loss in accordance with the early adoption of the measurement provisions of ASC 715, “Compensation — Retirement Benefits” (ASC 715).

(n) In January 2007 Old GM recorded an increase to Retained earnings of $137 million with a corresponding decrease to its liability for uncertain tax positions in accordance with ASC 740, “Income Taxes” (ASC 740).

* * * * * * *

General Motors Company was formed by the United States Department of the Treasury (UST) in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation and changed its name to General Motors Company, is sometimes referred to in this management's discussion and analysis of financial condition and results of operations for the periods on or subsequent to July 10, 2009 as "we," "our," "us," "ourselves," the "Company," "General Motors," or "GM," and is the successor entity solely for accounting and financial reporting purposes (Successor). General Motors Corporation is sometimes referred to in this management's discussion and analysis of financial condition and results of operations, for the periods on or before July 9, 2009, as "Old GM." Prior to July 10, 2009 Old GM operated the business of the Company, and pursuant to the agreement with the Staff of the Securities and Exchange Commission (SEC), as described in a no-action letter issued to Old GM by the SEC Staff on July 9, 2009 regarding our filing requirements and those of Motors Liquidation Company (MLC), the accompanying consolidated financial statements include the financial statements and related information of Old GM as it is our predecessor entity solely for accounting and financial reporting purposes (Predecessor). On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company, which is sometimes referred to in this management's discussion and analysis of financial condition and results of operations for the periods on or after July 10, 2009 as "MLC." MLC continues to exist as a distinct legal entity for the sole purpose of liquidating its remaining assets and liabilities.

Presentation and Estimates

Basis of Presentation

This Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) should be read in conjunction with the accompanying consolidated financial statements.

We analyze the results of our business through our five segments, namely GM North America (GMNA), GM Europe (GME), GM International Operations (GMIO), GM South America (GMSA) and General Motors Financial Company, Inc. (GM Financial).

In the year ended December 31, 2010 we changed our managerial and financial reporting structure so that certain entities geographically located within Russia and Uzbekistan were transferred from our GME segment to our GMIO segment, and certain entities geographically located in Brazil, Argentina, Colombia, Ecuador, Venezuela, Bolivia, Chile, Paraguay, Peru and Uruguay were transferred from our GMIO segment to our newly created GMSA segment. We have retrospectively revised the segment presentation for all periods presented.

Change in Presentation of Financial Statements

In 2010 we changed the presentation of our consolidated balance sheet, consolidated statement of cash flows and certain footnotes to combine line items which were either of a related nature or not individually material. We have made corresponding reclassifications to the comparable information for all periods presented.

Consistent with industry practice, market share information includes estimates of industry sales in certain countries where public reporting is not legally required or otherwise available on a consistent basis.

On October 5, 2010 our Board of Directors recommended a three-for-one stock split on shares of our common stock, which was approved by our stockholders on November 1, 2010. The stock split was effected on November 1, 2010.

Each stockholder's percentage ownership in us and proportional voting power remained unchanged after the stock split. All applicable share, per share and related information for periods on or subsequent to July 10, 2009 has been adjusted retroactively to give effect to the three-for-one stock split.

On October 5, 2010 our Board of Directors recommended that we amend our Certificate of Incorporation to increase the number of shares of common stock that we are authorized to issue from 2.5 billion shares to 5.0 billion shares and to increase the number of preferred shares that we are authorized to issue from 1.0 billion shares to 2.0 billion shares. Our stockholders approved these amendments on November 1, 2010, and they were effected on November 1, 2010.

Use of Estimates in the Preparation of the Financial Statements

The consolidated financial statements are prepared in conformity with U.S. GAAP, which requires the use of estimates, judgments, and assumptions that affect the reported amounts of assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and the resulting balances are reasonable; however, due to the inherent uncertainties in making estimates, actual results could differ from the original estimates, requiring adjustments to these balances in future periods.

Overview

Our Company

Our company commenced operations on July 10, 2009 when we completed the acquisition of substantially all of the assets and assumption of certain liabilities of Old GM through a 363 Sale under the Bankruptcy Code. As a result of the 363 Sale and other recent restructuring and cost savings initiatives, we have improved our financial position and level of operational flexibility as compared to Old GM when it operated the business. We commenced operations upon completion of the 363 Sale with a total amount of debt and other liabilities at July 10, 2009 that was $92.7 billion less than Old GM's total amount of debt and other liabilities at July 9, 2009. We reached a competitive labor agreement with our unions, restructured our dealer network and reduced and refocused our brand strategy in the U.S. to our four brands.

In November and December of 2010 we consummated a public offering of 550 million shares of our common stock and 100 million shares of Series B Preferred Stock and listed both of these securities on the New York Stock Exchange and the common stock on the Toronto Stock Exchange.

Automotive

We are a leading global automotive company. Our vision is to design, build and sell the world's best vehicles. We seek to distinguish our vehicles through superior design, quality, reliability, telematics (wireless voice and data) and infotainment and safety within their respective segments. Our business is diversified across products and geographic markets. With a global network of independent dealers we meet the local sales and service needs of our retail and fleet customers. Of our total 2010 vehicle sales volume, 73.6% was generated outside the United States, including 43.0% from emerging markets, such as Brazil, Russia, India and China (collectively BRIC), which have recently experienced the industry's highest volume growth.

Our automotive business is organized into four geographically-based segments:

- GMNA, with sales, manufacturing and distribution operations in the U.S., Canada and Mexico and distribution operations in Central America and the Caribbean, represented 31.3% of our total 2010 vehicle sales volume. In North America, we sell our vehicles through four brands — Chevrolet, GMC, Buick and Cadillac — which are manufactured at plants across the U.S., Canada and Mexico and imported from other GM regions. In 2010, GMNA had the largest market share of any competitor in this market at 18.2%.

- GME has sales, manufacturing and distribution operations across Western and Central Europe. GME's vehicle sales volume, which in addition to Western and Central Europe, includes Russia, the Commonwealth of Independent States and Eastern Europe represented 19.8% of our total 2010 vehicle sales volume. In Western and Central Europe, we sell our vehicles under the Opel and Vauxhall (U.K. only) brands, which are manufactured in Europe, and under the Chevrolet brand, which is imported from South Korea where it is manufactured by GM Daewoo of which we own 70.1%. In 2010, GME had the number five market share in this market, at 8.8%.

- GMIO, with sales, manufacturing and distribution operations in Asia-Pacific, Russia, the Commonwealth of Independent States, Eastern Europe, Africa and the Middle East, is our largest segment by vehicle sales volume. GMIO's vehicle sales volume, which includes Asia-Pacific, Africa and the Middle East represented 36.7% of our total 2010 vehicle sales volume including sales through our joint ventures. In these regions, we sell our vehicles under the Buick, Cadillac, Chevrolet, Daewoo, FAW, GMC, Holden, Isuzu, Jiefang, Opel and Wuling brands, and we plan to commence sales under the Baojun brand in 2011. In 2010, GMIO had the second largest market share for this market at 8.8% and the number one market share in China. Of GMIO's vehicle sales volume 76.4% is from China in 2010. Our Chinese operations are primarily comprised of three joint ventures: Shanghai General Motors Co., Ltd. (SGM); of which we own 49%, SAIC-GM-Wuling Automobile Co., Ltd. (SGMW); of which we own 44% and FAW-GM Light Duty Commercial Vehicle Co., Ltd. (FAW-GM); of which we own 50%.

- GMSA, with sales, manufacturing and distribution operations in Brazil, Argentina, Colombia, Ecuador and Venezuela as well as sales activities in Bolivia, Chile, Paraguay, Peru and Uruguay represented 12.2% of our total 2010 vehicle sales volume. In South America, we sell our vehicles under the Chevrolet, Suzuki and Isuzu brands. In 2010 GMSA had the largest market share for this market at 19.9% and the number three market share in Brazil. Of GMSA's vehicle sales volume 64.1% is from Brazil in 2010.

We offer a global vehicle portfolio of cars, crossovers and trucks. We are committed to leadership in vehicle design, quality, reliability, telematics and infotainment and safety, as well as to developing key energy efficiency, energy diversity and advanced propulsion technologies, including electric vehicles with range extending capabilities such as the new Chevrolet Volt.

Automotive Financing

On October 1, 2010 we completed the acquisition of AmeriCredit Corp. for cash of approximately $3.5 billion and changed its name to General Motors Financial Company, Inc.

GM Financial specializes in purchasing retail automobile installment sales contracts originated by franchised and select independent dealers in connection with the sale of used and new automobiles. GM Financial generates revenue and cash flows primarily through the purchase, retention, subsequent securitization and servicing of finance receivables. To fund the acquisition of receivables prior to securitization, GM Financial uses available cash and borrowings under its credit facilities. GM Financial earns finance charge income on the finance receivables and pays interest expense on borrowings under its credit facilities. GM Financial periodically transfers receivables to securitization trusts that issue asset-backed securities to investors. The securitization trusts are special purpose entities that are also variable interest entities that meet the requirements to be consolidated in the financial statements.

Our Strategy

Our vision is to design, build and sell the world's best vehicles. The primary elements of our strategy to achieve this vision are to:

- Deliver a product portfolio of the world's best vehicles, allowing us to maximize sales under any market conditions;
- Sell our vehicles globally by targeting developed markets, which are projected to have increases in vehicle demand as the global economy recovers, and further strengthening our position in high growth emerging markets;
- Improve revenue realization and maintain a competitive cost structure to allow us to remain profitable at lower industry volumes and across the lifecycle of our product portfolio; and
- Maintain a strong balance sheet by reducing financial leverage given the high operating leverage of our business model.

Our management team is focused on hiring new and promoting current talented employees who can bring new perspectives to our business in order to execute on our strategy as follows:

Deliver quality products. We intend to maintain a broad portfolio of vehicles so that we are positioned to meet global consumer preferences. We plan to do this in several ways.

- *Concentrate our design, engineering and marketing resources on fewer brands and architectures.* We plan to increase the volume of vehicles produced from common global architectures to more than 50% of our total volumes in 2015 from less than 17% today. We expect that this initiative will result in greater investment per architecture and brand and will increase our product development and manufacturing flexibility, allowing us to maintain a steady schedule of important new product launches in the future. We believe our four-brand strategy in the U.S. will continue to enable us to allocate higher marketing expenditures per brand.

- *Develop products across vehicle segments in our global markets.* We plan to develop vehicles in each of the key segments of the global markets in which we compete. For example, in September 2010 we introduced the Chevrolet Cruze in the U.S. small car segment, an important and growing segment where we have historically been under-represented.

- *Continued investment in a portfolio of technologies.* We will continue to invest in technologies that support energy diversity and energy efficiency as well as in safety, telematics and infotainment technology. We are committed to advanced propulsion technologies and intend to offer a portfolio of fuel efficient alternatives that use energy sources such as petroleum, bio-fuels, hydrogen and electricity, including the new Chevrolet Volt. We are committed to increasing the fuel efficiency of our vehicles with internal combustion engines through features such as cylinder deactivation, direct injection, variable valve timing, turbo-charging with engine downsizing and six speed transmissions. For example, we expect the Chevrolet Cruze Eco to be capable of achieving an estimated 40 mpg on the highway with a traditional internal combustion engine. We are expanding our telematics and infotainment offerings and, as a result of our OnStar service and our partnerships with companies such as Google, are in a position to deliver safety, security, navigation and connectivity systems and features.

Sell our vehicles globally. We will continue to compete in the largest and fastest growing markets globally.

- *Broaden GMNA product portfolio.* We plan to launch 13 new vehicles in GMNA across our four brands in 2011 and 2012, primarily in the growing car and crossover segments, where, in some cases, we are under-represented, and an additional 29 new vehicles between 2013 and 2014. Launched vehicles in 2010 included the Chevrolet Matiz, Spark, Spark Lite and Volt, Cadillac CTS Coupe and Buick Regal. We believe that we have achieved a more balanced portfolio in the U.S. market, where we maintained a sales volume mix of 36% from cars, 38% from trucks and 26% from crossovers in 2010 compared to 51% from trucks in 2006.

- *Refresh GME's vehicle portfolio.* To improve our product quality and product perception in Europe, by the start of 2012, we plan to have 80% of our Opel/Vauxhall carlines volume refreshed such that the model stylings are less than three years old. We have four product launches scheduled in 2011. As part of our planned rejuvenation of Chevrolet's portfolio, which increasingly supplements our Opel/Vauxhall brands throughout Europe, we are moving the entire Chevrolet lineup to new global architectures.

- *Increase sales in GMIO, particularly in China.* We plan to continue to execute our growth strategies in countries where we already hold strong positions, such as China, and to improve market share in other important markets, including South Korea, South Africa, Russia, India and the ASEAN region. We aim to launch 70 new vehicles throughout GMIO through 2012. We plan to enhance and strengthen our GMIO product portfolio through three strategies: (1) leveraging our global architectures; (2) pursuing local and regional solutions to meet specific market requirements; and (3) expanding our joint venture partner collaboration opportunities.

- Increase sales in GMSA, particularly in Brazil. We plan to continue to execute our growth strategies in countries where we already hold strong positions, such as Brazil. We aim to launch 40 new vehicles throughout GMSA through 2011. We plan to strengthen our GMSA product portfolio through three strategies: (1) leveraging our global architectures; (2) pursuing local and regional solutions to meet specific market requirements; and (3) expanding our joint venture partner collaboration opportunities.

- *Ensure competitive financing is available to our dealers and customers.* We currently maintain multiple financing programs and arrangements with third parties for our wholesale and retail customers to utilize when purchasing or leasing our vehicles. Through our long-standing arrangements with Ally Financial and a variety of other worldwide, regional and local lenders, we provide our customers and dealers with access to financing alternatives. We plan to further expand the range of financing options available to our customers and dealers to help grow our vehicle sales through two specific objectives: (1) ensure certainty of availability of financing; and (2) competitive and transparent pricing for financing, for our dealers and customers. We expect GM Financial will offer increased availability of leasing and sub-prime financing for our customers in the United States and Canada throughout economic cycles. We also plan to use GM Financial to initiate targeted customer marketing initiatives to expand our vehicle sales.

Reduce breakeven levels through improved revenue realization and a competitive cost structure. In developed markets, we are improving our cost structure to become profitable at lower industry volumes.

- *Capitalize on cost structure improvement and maintain reduced incentive levels in GMNA*. We plan to sustain the cost reduction and operating flexibility progress we have made as a result of our North American restructuring. Our current U.S. and Canadian hourly labor agreements provide the flexibility to utilize a lower tiered wage and benefit structure for new hires, part-time employees and temporary employees. We aim to increase our vehicle profitability by maintaining competitive incentive levels with our strengthened product portfolio and by actively managing our production levels through monitoring of our dealer inventory levels. For the twelve months ended December 31, 2010 and based on GMNA's 2010 market share, GMNA's earnings before interest and taxes (EBIT) (EBIT is not an operating measure under U.S. GAAP — refer to "Reconciliation of Consolidated, Automotive and GM Financial Segment Results" for additional discussion) would have achieved breakeven at GMNA wholesale volume of approximately 2.3 million vehicles, consistent with an annual U.S. industry sales volume of approximately 9.5 to 10.0 million vehicles.

- *Execute on our Opel/Vauxhall restructuring plan*. We expect our Opel/Vauxhall restructuring plan to lower our vehicle manufacturing costs. The plan includes manufacturing rationalization, headcount reduction, labor cost concessions from the remaining workforce and selling, general and administrative efficiency initiatives. Specifically, we have reached an agreement to reduce our European manufacturing capacity by 20% through, among other things, the closing of our Antwerp facility in Belgium and the rationalization of our powertrain operations in our Bochum and Kaiserslautern facilities in Germany. Additionally, we have reached an agreement with the labor unions in Europe to reduce labor costs by Euro 265 million per year. The objective of our restructuring, along with the refreshed product portfolio pipeline, is to restore the profitability of the GME business.

- *Enhance manufacturing flexibility.* We primarily produce vehicles in locations where we sell them and we have significant manufacturing capacity in medium- and low-cost countries. We intend to maximize capacity utilization across our production footprint to meet demand without requiring significant additional capital investment. For example, we were able to leverage the benefit of a global architecture and start initial production for the U.S. of the Buick Regal 11 months ahead of schedule by temporarily shifting production from North America to Rüsselsheim, Germany.

Maintain a strong balance sheet. Given our business's high operating leverage and the cyclical nature of our industry, we intend to minimize our financial leverage. We plan to use excess cash to repay debt and to make discretionary contributions to our U.S. pension plans. Based on this planned reduction in financial leverage and the anticipated benefits resulting from our operating strategy described above, we will aim to attain an investment grade credit rating over the long-term.

Chapter 11 Proceedings and the 363 Sale

Background

Over time as Old GM's market share declined in North America, Old GM needed to continually restructure its business operations to reduce cost and excess capacity. Legacy labor costs and obligations and capacity in its dealer network made Old GM less competitive than new entrants into the U.S. market. These factors continued to strain Old GM's liquidity. In 2005 Old GM incurred significant losses from operations and from restructuring activities such as providing support to Delphi and other efforts intended to reduce operating costs. Old GM managed its liquidity during this time through a series of cost reduction initiatives, capital markets transactions and sales of assets. However, the global credit market crisis had a dramatic effect on Old GM and the automotive industry. In the second half of 2008, the increased turmoil in the mortgage and overall credit markets (particularly the lack of financing for buyers or lessees of vehicles), the continued reductions in U.S. housing values, the volatility in the price of oil, recessions in the United States and Western Europe and the slowdown of economic growth in the rest of the world created a substantially more difficult business environment. The ability to execute capital markets transactions or sales of assets was extremely limited, vehicle sales in North America and Western Europe contracted severely, and the pace of vehicle sales in the rest of the world slowed. Old GM's liquidity position, as well as its operating performance, were negatively affected by these economic and industry conditions and by other financial and business factors, many of which were beyond its control.

As a result of these economic conditions and the rapid decline in sales in the three months ended December 31, 2008 Old GM determined that, despite the actions it had then taken to restructure its U.S. business, it would be unable to pay its obligations in the normal course of business in 2009 or service its debt in a timely fashion, which required the development of a new plan that depended on financial assistance from the U.S. government.

In December 2008 Old GM requested and received financial assistance from the U.S. government and entered into the UST Loan Agreement. In early 2009 Old GM's business results and liquidity continued to deteriorate, and, as a result, Old GM obtained additional funding from the UST under the UST Loan Agreement. Old GM, through its wholly-owned subsidiary GMCL, also received funding from Export Development of Canada (EDC), a corporation wholly-owned by the Government of Canada, under a loan and security agreement entered into in April 2009 (EDC Loan Facility).

As a condition to obtaining the UST Loan Facility under the UST Loan Agreement, Old GM was required to submit a Viability Plan in February 2009 that included specific actions intended to result in the following:

- Repayment of all loans, interest and expenses under the UST Loan Agreement, and all other funding provided by the U.S. government;
- Compliance with federal fuel efficiency and emissions requirements and commencement of domestic manufacturing of advanced technology vehicles;
- Achievement of a positive net present value, using reasonable assumptions and taking into account all existing and projected future costs;
- Rationalization of costs, capitalization and capacity with respect to its manufacturing workforce, suppliers and dealerships; and
- A product mix and cost structure that is competitive in the U.S. marketplace.

The UST Loan Agreement also required Old GM to, among other things, use its best efforts to achieve the following restructuring targets:

Debt Reduction

- Reduction of its outstanding unsecured public debt by not less than two-thirds through conversion of existing unsecured public debt into equity, debt and/or cash or by other appropriate means.

Labor Modifications

- Reduction of the total amount of compensation paid to its U.S. employees so that, by no later than December 31, 2009, the average of such total amount is competitive with the average total amount of such compensation paid to U.S. employees of certain foreign-owned, U.S. domiciled automakers (transplant automakers);

- Elimination of the payment of any compensation or benefits to U.S. employees who have been fired, laid-off, furloughed or idled, other than customary severance pay; and

- Application of work rules for U.S. employees in a manner that is competitive with the work rules for employees of transplant automakers.

VEBA Modifications

- Modification of its retiree healthcare obligations arising under the 2008 UAW Settlement Agreement under which responsibility for providing healthcare for International Union, United Automobile, Aerospace and Agriculture Implement Workers of America (UAW) retirees, their spouses and dependents would permanently shift from Old GM to the New Plan funded by the UAW Retiree Medical Benefits Trust (New VEBA), such that payment or contribution of not less than one-half of the value of each future payment was to be made in the form of Old GM common stock, subject to certain limitations.

The UST Loan Agreement provided that if, by March 31, 2009 or a later date (not to exceed 30 days after March 31, 2009) as determined by the Presidential Task Force on the Auto Industry (Auto Task Force) (Certification Deadline), the Auto Task Force had not certified that Old GM had taken all steps necessary to achieve and sustain its long-term viability, international competitiveness and energy efficiency in accordance with the Viability Plan, then the loans and other obligations under the UST Loan Agreement were to become due and payable on the thirtieth day after the Certification Deadline.

On March 30, 2009 the Auto Task Force determined that the plan was not viable and required substantial revisions. In conjunction with the March 30, 2009 announcement, the administration announced that it would offer Old GM adequate working capital financing for a period of 60 days while it worked with Old GM to develop and implement a more accelerated and aggressive restructuring that would provide a sound long-term foundation. On March 31, 2009 Old GM and the UST agreed to postpone the Certification Deadline to June 1, 2009.

Old GM made further modifications to its Viability Plan in an attempt to satisfy the Auto Task Force requirement that it undertake a substantially more accelerated and aggressive restructuring plan (Revised Viability Plan). The following is a summary of significant cost reduction and restructuring actions contemplated by the Revised Viability Plan, the most significant of which included reducing Old GM's indebtedness and VEBA obligations.

Indebtedness and VEBA Obligations

In April 2009 Old GM commenced exchange offers for certain unsecured notes to reduce its unsecured debt in order to comply with the debt reduction condition of the UST Loan Agreement.

Old GM also commenced discussions with the UST regarding the terms of a potential restructuring of its debt obligations under the UST Loan Agreement, the UST Ally Financial Loan Agreement (as subsequently defined), and any other debt issued or owed to the UST in connection with those loan agreements pursuant to which the UST would exchange at least 50% of the total outstanding debt Old GM owed to it at June 1, 2009 for Old GM common stock.

Old GM commenced discussions with the UAW and the VEBA-settlement class representative regarding the terms of potential VEBA modifications.

Other Cost Reduction and Restructuring Actions

In addition to the efforts to reduce debt and modify the VEBA obligations, the Revised Viability Plan also contemplated the following cost reduction efforts:

- Extended shutdowns of certain North American manufacturing facilities in order to reduce dealer inventory;
- Refocus of resources on four U.S. brands: Chevrolet, Cadillac, Buick and GMC;
- Acceleration of the resolution for Saab, HUMMER and Saturn and no planned future investment for Pontiac, which was phased out by the end of 2010;
- Acceleration of the reduction in U.S. nameplates to 34 by 2010 — there were 34 nameplates at December 31, 2010;
- A reduction in the number of U.S. dealers was targeted from 6,246 in 2008 to 3,605 in 2010 — we have completed the federal dealer arbitration process and reduced the number of U.S. dealers to 4,500 at December 31, 2010;
- A reduction in the total number of plants in the U.S. to 34 by the end of 2010 and 31 by 2012 — there were 40 plants in the U.S. at December 31, 2010; and
- A reduction in the U.S. hourly employment levels from 61,000 in 2008 to 40,000 in 2010 as a result of the nameplate reductions, operational efficiencies and plant capacity reductions — through these actions, our special attrition programs and other U.S. hourly workforce reductions, we have reduced the number of U.S. hourly employees to 49,000 at December 31, 2010.

Old GM had previously announced that it would reduce salaried employment levels on a global basis by 10,000 during 2009 and had instituted several programs to effect reductions in salaried employment levels. Old GM had also negotiated a revised labor agreement with the CAW to reduce its hourly labor costs to approximately the level paid to the transplant automakers; however, such agreement was contingent upon receiving longer term financial support for its Canadian operations from the Canadian federal and Ontario provincial governments.

Chapter 11 Proceedings

Old GM was not able to complete the cost reduction and restructuring actions in its Revised Viability Plan, including the debt reductions and VEBA modifications, which resulted in extreme liquidity constraints. As a result, on June 1, 2009 Old GM and certain of its direct and indirect subsidiaries entered into the Chapter 11 Proceedings.

In connection with the Chapter 11 Proceedings, Old GM entered into a secured superpriority debtor-in-possession credit agreement with the UST and EDC (DIP Facility) and received additional funding commitments from EDC to support Old GM's Canadian operations.

The following table summarizes the total funding and funding commitments Old GM received from the U.S. and Canadian governments and the additional notes Old GM issued related thereto in the period December 31, 2008 through July 9, 2009 (dollars in millions):

Description of Funding Commitment	Funding and Funding Commitments	Additional Notes Issued (a)	Total Obligation
UST Loan Agreement (b)	$19,761	$1,172	$20,933
EDC funding (c)	6,294	161	6,455
DIP Facility	33,300	2,221	35,521
Total	$59,355	$3,554	$62,909

(a) Old GM did not receive any proceeds from the issuance of these promissory notes, which were issued as additional compensation to the UST and EDC.

(b) Includes debt of $361 million, which UST loaned to Old GM under the warranty program.

(c) Includes approximately $2.4 billion from the EDC Loan Facility received in the period January 1, 2009 through July 9, 2009 and funding commitments of CAD $4.5 billion (equivalent to $3.9 billion when entered into) that were immediately converted into our equity. This funding was received on July 15, 2009.

363 Sale

On July 10, 2009, we completed the acquisition of substantially all of the assets and assumed certain liabilities of the Sellers. The 363 Sale was consummated in accordance with the Purchase Agreement, between us and the Sellers, and pursuant to the Bankruptcy Court's sale order dated July 5, 2009.

In connection with the 363 Sale, the purchase price we paid to Old GM equaled the sum of:

- A credit bid in an amount equal to the total of: (1) debt of $19.8 billion under Old GM's UST Loan Agreement, plus notes of $1.2 billion issued as additional compensation for the UST Loan Agreement, plus interest on such debt Old GM owed as of the closing date of the 363 Sale; and (2) debt of $33.3 billion under Old GM's DIP Facility, plus notes of $2.2 billion issued as additional compensation for the DIP Facility, plus interest Old GM owed as of the closing date, less debt of $8.2 billion owed under the DIP Facility;
- UST's return of the warrants Old GM previously issued to it;
- The issuance to MLC of 150 million shares (or 10%) of our common stock and warrants to acquire newly issued shares of our common stock initially exercisable for a total of 273 million shares of our common stock (or 15% on a fully diluted basis); and
- Our assumption of certain specified liabilities of Old GM (including debt of $7.1 billion owed under the DIP Facility).

Under the Purchase Agreement, we are obligated to issue additional shares of our common stock to MLC (Adjustment Shares) in the event that allowed general unsecured claims against MLC, as estimated by the Bankruptcy Court, exceed $35.0 billion. The maximum number of Adjustment Shares issuable is 30 million shares (subject to adjustment to take into account stock dividends, stock splits and other transactions). The number of Adjustment Shares to be issued is calculated based on the extent to which estimated general unsecured claims exceed $35.0 billion with the maximum number of Adjustment Shares issued if estimated general unsecured claims total $42.0 billion or more. In the period July 10, 2009 to December 31, 2009 we determined that it was probable that general unsecured claims allowed against MLC would ultimately exceed $35.0 billion by at least $2.0 billion. In the circumstance where expected general unsecured claims equal $37.0 billion, we would have been required to issue 8.6 million Adjustment Shares to MLC as an adjustment to the purchase price. At December 31, 2009 we recorded a liability of $162 million included in Accrued liabilities. In the year ended December 31, 2010 the liability was adjusted quarterly based on available information. Based on information which became available in the three months ended December 31, 2010, we concluded it was no longer probable that general unsecured claims would exceed $35 billion and we reversed to income our previously recorded liability of $231 million for the contingently issuable Adjustment Shares.

Agreements with the UST, EDC and New VEBA

On July 10, 2009, we entered into the UST Credit Agreement and assumed debt of $7.1 billion Old GM incurred under the DIP Facility (UST Loans). Through our wholly-owned subsidiary GMCL, we entered into the Canadian Loan Agreement with EDC and assumed a CAD $1.5 billion (equivalent to $1.3 billion when entered into) term loan maturing on July 10, 2015. Proceeds of the DIP Facility of $16.4 billion were deposited in escrow, to be distributed to us at our request if certain conditions were met and returned to us after the UST Loans and the Canadian Loan were repaid in full. Immediately after entering into the UST Credit Agreement, we made a partial pre-payment due to the termination of the U.S. government sponsored warranty program, reducing the UST Loans principal balance to $6.7 billion. We also entered into the VEBA Note Agreement and issued the VEBA Notes to the New VEBA in the principal amount of $2.5 billion pursuant to the VEBA Note Agreement.

In December 2009 and March 2010 we made quarterly payments of $1.0 billion and $1.0 billion on the UST Loans and GMCL made quarterly payments of $192 million and $194 million on the Canadian Loan. In April 2010, we used funds from our escrow account to repay in full the outstanding amount of the UST Loans of $4.7 billion, and GMCL repaid in full the outstanding amount of the Canadian Loan of $1.1 billion. Both loans were repaid prior to maturity. On October 26, 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion.

Refer to Note 19 to our consolidated financial statements for additional information on the UST Loans, VEBA Notes and the Canadian Loan.

Issuance of Common Stock, Preferred Stock and Warrants

On July 10, 2009 we issued the following securities to the UST, Canada Holdings, the New VEBA and MLC (shares in millions):

	Common Stock	Series A Preferred Stock
UST	912	84
Canada Holdings	175	16
New VEBA (a)	263	260
MLC (a)	150	—
	1,500	360

(a) New VEBA also received a warrant to acquire 46 million shares of our common stock and MLC received two warrants, each to acquire 136 million shares of our common stock.

Preferred Stock

The shares of Series A Preferred Stock have a liquidation amount of $25.00 per share and accrue cumulative dividends at 9.0% per annum (payable quarterly on March 15, June 15, September 15 and December 15) that are payable if, as and when declared by our Board of Directors. So long as any share of the Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock or our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on the Series A Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. On or after December 31, 2014 we may redeem, in whole or in part, the shares of Series A Preferred Stock outstanding, at a redemption price per share equal to $25.00 per share plus any accrued and unpaid dividends, subject to limited exceptions.

The Series A Preferred Stock was previously classified as temporary equity because the holders of the Series A Preferred Stock, as a class, owned greater than 50% of our common stock and therefore had the ability to exert control, through its power to vote for the election of our directors, over various matters, which could have included compelling us to redeem the Series A Preferred Stock in 2014 or later. In December 2010 we purchased the 84 million shares of Series A Preferred Stock held by the UST. Since the remaining holders of our Series A Preferred Stock, Canada Holdings and the New VEBA, do not own a majority of our common stock and therefore do not have the ability to exert control, through the power to vote for the election of our directors, over various matters, including compelling us to redeem the Series A Preferred Stock when it becomes callable by us on or after December 31, 2014, our classification of the Series A Preferred Stock as temporary equity is no longer appropriate. Upon the purchase of the Series A Preferred Stock held by the UST, the Series A Preferred Stock held by Canada Holdings and the New VEBA was reclassified to permanent equity at its carrying amount of $5.5 billion. Refer to Note 29 to our consolidated financial statements for additional information on the purchase of shares of Series A Preferred Stock.

Warrants

The first tranche of warrants issued to MLC is exercisable at any time prior to July 10, 2016, with an exercise price of $10.00 per share. The second tranche of warrants issued to MLC is exercisable at any time prior to July 10, 2019, with an exercise price of $18.33 per share. The warrant issued to the New VEBA is exercisable at any time prior to December 31, 2015, with an exercise price of $42.31 per share. The number of shares of our common stock underlying each of the warrants issued to MLC and the New VEBA and the per share exercise price are subject to adjustment as a result of certain events, including stock splits, reverse stock splits and stock dividends.

Additional Modifications to Pension and Other Postretirement Plans Contingent upon Completion of the 363 Sale

We modified the U.S. hourly pension plan, the U.S. executive retirement plan, the U.S. salaried life plan, the non-UAW hourly retiree medical plan and the U.S. hourly life plan. These modifications became effective upon the completion of the 363 Sale. The key modifications were:

- Elimination of the post-age-65 benefits and placing a cap on pre-age-65 benefits in the non-UAW hourly retiree medical plan;
- Capping the life benefit for non-UAW retirees and future retirees at $10,000 in the U.S. hourly life plan;
- Capping the life benefit for existing salaried retirees at $10,000, reduced the retiree benefit for future salaried retirees and eliminated the executive benefit for the U.S. salaried life plan;
- Elimination of a portion of nonqualified benefits in the U.S. executive retirement plan; and
- Elimination of the flat monthly special lifetime benefit of $66.70 that was to commence on January 1, 2010 for the U.S. hourly pension plan.

Accounting for the Effects of the Chapter 11 Proceedings and the 363 Sale

Chapter 11 Proceedings

ASC 852 is applicable to entities operating under Chapter 11 of the Bankruptcy Code. ASC 852 generally does not affect the application of U.S. GAAP that we and Old GM followed to prepare the consolidated financial statements, but it does require specific disclosures for transactions and events that were directly related to the Chapter 11 Proceedings and transactions and events that resulted from ongoing operations.

Old GM prepared its consolidated financial statements in accordance with the guidance in ASC 852 in the period June 1, 2009 through July 9, 2009. Revenues, expenses, realized gains and losses, and provisions for losses directly related to the Chapter 11

Proceedings were recorded in Reorganization gains, net. Expenses and gains and losses directly related to the reorganization do not constitute an element of operating loss due to their nature and due to the requirement of ASC 852 that they be reported separately. Old GM's balance sheet prior to the 363 Sale distinguished prepetition liabilities subject to compromise from prepetition liabilities not subject to compromise and from postpetition liabilities.

Specific Management Initiatives

The execution of certain management initiatives is critical to achieving our goal of sustained future profitability. The following provides a summary of these management initiatives and significant results and events.

Repayment of Debt and Reduction of Financial Leverage

Purchase of Series A Preferred Stock from the UST

In December 2010 we purchased 84 million shares of Series A Preferred Stock, held by the UST, at a price equal to 102% of the aggregate liquidation amount, for $2.1 billion. The purchase of the UST's Series A Preferred Stock resulted in a charge of $0.7 billion.

Contribution of Cash and Common Stock to U.S. Hourly and Salaried Pension Plans

In October 2010 we announced our intention to contribute $6.0 billion to our U.S. hourly and salaried pension plans, consisting of $4.0 billion of cash and $2.0 billion of our common stock. In December 2010 we made the $4.0 billion cash contribution to our U.S. hourly and salaried pension plans consisting of a $2.7 billion contribution to the U.S. hourly pension plan and a $1.3 billion contribution to the U.S. salaried pension plan. In January 2011 we contributed 61 million shares of our common stock to our U.S. hourly and salaried pension plans valued at $2.2 billion for funding purposes. We contributed 41 million shares of our common stock to the U.S. hourly pension plan and 20 million shares of our common stock to the U.S. salaried pension plan.

Repayment of GM Daewoo Credit Facility

In December 2010 GM Daewoo terminated its $1.2 billion credit facility following the repayment of the remaining $1.0 billion under the facility.

Repayment of VEBA Notes

On July 10, 2009 we entered into the VEBA Note Agreement and issued the VEBA Notes in the principal amount of $2.5 billion to the New VEBA. In October 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion.

Repayment of UST Loans and Canadian Loan

Proceeds from the DIP Facility were necessary in order to provide sufficient capital for Old GM to operate pending the closing of the 363 Sale. In connection with the 363 Sale, we assumed the UST Loans and Canadian Loan, which Old GM incurred under the DIP Facility. One of our key priorities was to repay the outstanding balances from these loans prior to maturity. We also plan to use excess cash to repay debt and reduce our financial leverage.

In April 2010, we used funds from our escrow account (described below) to repay in full the then-outstanding amount of the UST Loans of $4.7 billion and GMCL repaid in full the then-outstanding amount of the Canadian Loan of $1.1 billion. Both loans were repaid prior to maturity.

UST Escrow Funds

Proceeds of the DIP Facility of $16.4 billion were deposited in escrow. We used our escrow account to acquire all Class A Membership Interests in DIP HOLDCO LLP, subsequently named Delphi Automotive LLP (New Delphi), in the amount of $1.7 billion and acquire Nexteer and four domestic facilities and make other related payments in the amount of $1.0 billion. We released from escrow $2.4 billion in connection with two quarterly payments on the UST Loans and Canadian Loan and another $4.7 billion was released upon the repayment of the UST Loans. The remaining funds in the amount of $6.6 billion that were held in escrow became unrestricted and the availability of those funds was no longer subject to the conditions set forth in the UST Credit Agreement.

Repayment of German Revolving Bridge Facility

In May 2009 Old GM entered into a revolving bridge facility with the German federal government and certain German states (German Facility) with a total commitment of up to Euro 1.5 billion (equivalent to $2.1 billion when entered into) and maturing November 30, 2009. The German Facility was necessary in order to provide sufficient capital to operate Opel/Vauxhall. On November 24, 2009, the debt was paid in full and extinguished.

Focus on Chinese Market

Our Chinese operations, which we established beginning in 1997, are composed of the following joint ventures: SGM, SGMW, FAW-GM, Pan Asia Technical Automotive Center Co., Ltd. (PATAC), Shanghai OnStar Telematics Co. Ltd. (Shanghai OnStar) and Shanghai Chengxin Used Car Operation and Management Co., Ltd. (Used Car JV), collectively referred to as China JVs. We view the Chinese market, the fastest growing global market by volume of vehicles sold, as important to our global growth strategy and are employing a multi-brand strategy, led by our Buick division, which we believe is a strong brand in China. In the coming years, we plan to increasingly leverage our global architectures to increase the number of nameplates under the Chevrolet brand in China. Sales and income of the joint ventures are not consolidated into our financial statements; rather, our proportionate share of the earnings of each joint venture is reflected as Equity income, net of tax.

SGM is a joint venture established by Shanghai Automotive Industry Corporation (SAIC) (51%) and us (49%) in 1997. SGM has interests in three other joint ventures in China — Shanghai GM (Shenyang) Norsom Motor Co., Ltd (SGM Norsom), Shanghai GM Dong Yue Motors Co., Ltd (SGM DY) and Shanghai GM Dong Yue Powertrain (SGM DYPT). These three joint ventures are jointly held by SGM (50%), SAIC (25%) and us (25%). The four joint ventures (SGM Group) are engaged in the production, import, and sale of a comprehensive range of products under the brands of Buick, Chevrolet, and Cadillac.

SGMW, of which we own 44%, SAIC owns 50.1% and certain Liuzhou investors own 5.9%, produces mini-commercial vehicles and passenger cars utilizing local architectures under the Wuling and Chevrolet brands. In 2010 we entered into an equity transfer agreement to purchase an additional 10% interest in SGMW from Liuzhou Wuling Motors Co., Ltd. and Liuzhou Mini Vehicles Factory, (together the Wuling Group) for $52 million in cash plus an agreement to provide technical services to the Wuling Group through 2013. Upon receiving regulatory approval in China, the transaction closed in November of 2010 increasing our ownership from 34% to 44% of the outstanding stock of SGMW. FAW-GM, of which we own 50% and China FAW Group Corporation (FAW) owns 50%, produces light commercial vehicles under the Jiefang brand and medium vans under the FAW brand. Our joint venture agreements allow for significant rights as a member as well as the contractual right to report SGMW and FAW-GM joint venture vehicle sales and production volume in China. SAIC, one of our joint venture partners, currently produces vehicles under its own brands for sale in the Chinese market. At present vehicles that SAIC produces primarily serve markets that are different from markets served by our joint ventures.

PATAC is our China-based engineering and technical joint venture with SAIC. Shanghai OnStar is our joint venture with SAIC that provides Chinese customers with a wide array of vehicle safety and information services. Used Car JV is our joint venture with SAIC that will cooperate with current distributors of SGM products in the establishment of dedicated used car sales and service facilities across China.

The following table summarizes certain key operational and financial data for the China JVs (dollars in millions):

	Years Ended	
	December 31, 2010	December 31, 2009
Total wholesale units	2,348,391	1,823,693
Market share	12.8%	13.3%
Total net sales and revenues	$ 25,395	$ 18,098
Net income	$ 2,808	$ 1,636

	December 31, 2010	December 31, 2009
Cash and cash equivalents	$ 5,247	$ 3,516
Debt	$ 61	$ 30

In November 2010 we and SAIC entered into a non-binding Memorandum of Understanding (MOU) that would, if binding agreements are concluded by the parties, result in several strategic cooperation initiatives between us and SAIC. The initiatives covered by the MOU include:

- Cooperation in the development of new energy vehicles, such as appropriate electric vehicle architectures and battery electric vehicle technical development;
- Further expanding the role of PATAC in vehicle development, new technology development and participation in our global vehicle development process;
- Sharing an additional vehicle architecture and powertrain application with SAIC in an effort to help reduce development costs and benefit from economies of scale;
- Potential cooperation in providing access to our distribution network outside China for certain of SAIC's MG branded products;
- Providing training sources to assist a limited number of SAIC engineers with their professional development; and
- Discussions to determine possible areas of cooperation in the development of future diesel engines.

We expect definitive agreements will be reached in the first half of 2011 for the initiatives not yet agreed to at December 31, 2010.

Development of Multiple Financing Sources and GM Financial

A significant percentage of our customers and dealers require financing to purchase our vehicles. Historically, Ally Financial has provided most of the financing for our dealers and a significant amount of financing for our customers in the U.S., Canada and various other markets around the world. We maintain other financing relationships, such as with U.S. Bank for U.S. leasing, GM Financial for sub-prime lending and a variety of local and regional financing sources around the world.

We expect GM Financial will allow us to complement our existing relationship with Ally Financial in order to provide a more complete range of financing options to our customers, specifically focusing on providing additional capabilities in leasing and sub-prime financing options. We also plan to use GM Financial for targeted customer marketing initiatives to expand our vehicle sales.

Secured Revolving Credit Facility

In October 2010 we entered into a five year, $5.0 billion secured revolving credit facility. While we do not believe the amounts available under the secured revolving credit facility will be needed to fund operating activities, the facility is expected to provide additional liquidity and financing flexibility. Refer to the section of this report entitled "— Liquidity and Capital Resources — Secured Revolving Credit Facility" for additional information about the secured revolving credit facility.

Opel/Vauxhall Restructuring Activities

In June 2010 the German federal government notified us of its decision not to provide loan guarantees to Opel/Vauxhall. As a result, we have decided to fund the requirements of Opel/Vauxhall internally, including any amounts necessary to fund the $1.4 billion in cash required to complete the European restructuring program. Opel/Vauxhall has subsequently withdrawn all applications for government loan guarantees from European governments.

Through September 2010 we committed up to a total of Euro 3.3 billion (equivalent to $4.2 billion when committed) to fund Opel/Vauxhall's restructuring and ongoing cash requirements. This funding includes cumulative lending commitments combined into a Euro 2.6 billion intercompany facility and equity commitments of Euro 700 million.

We plan to continue to invest in capital, engineering and innovative fuel efficient powertrain technologies including an extended-range electric vehicle and battery electric vehicles. Our plan also includes aggressive capacity reductions including headcount reductions and the closing of our Antwerp, Belgium facility.

In the year ended December 31, 2010 GME recorded charges for 2010 restructuring programs of $81 million related to separation programs in the U.K. and Germany and an early retirement plan in Spain of $63 million, which will affect 1,200 employees.

In the year ended December 31, 2010 GME recorded charges of $527 million related to a separation plan associated with the closure of the Antwerp, Belgium facility. There were 2,600 employees affected, of which 1,300 separated in June 2010. In addition, GME and employee representatives entered into a Memorandum of Understanding whereby both parties cooperated in a working group, which also included the Flemish government, in order to find an outside investor to acquire and operate the facility. In October 2010 we announced that the search for an investor had been unsuccessful and the vehicle assembly operations in Antwerp, Belgium ceased at the end of 2010.

Increased GMNA Production Volume

The moderate improvement in the U.S. economy, resulting increase in U.S. industry vehicle sales and increase in demand for our products has resulted in increased production volumes for GMNA. In the year ended December 31, 2010 GMNA produced 2.8 million vehicles. This represents an increase of 46.8% compared to 1.9 million vehicles that combined GM and Old GM GMNA produced in the year ended December 31, 2009.

The following table summarizes GMNA's quarterly production volume (in thousands):

	Three Months Ended December 31	Three Months Ended September 30	Three Months Ended June 30	Three Months Ended March 31
GMNA quarterly production volume 2010	703	707	731	668
GMNA quarterly production volume 2009	616	531 (a)	395 (b)	371 (b)
Total GMNA quarterly production volume year- over-year increase	14.1%	33.1%	85.1%	80.1%

(a) Combined GM and Old GM GMNA production volume.

(b) Old GM GMNA production volume.

Increased U.S. Vehicle Sales

GMNA dealers in the U.S. sold 2.2 million vehicles in the year ended December 31, 2010. This represents an increase of 131,000 vehicles (or 6.3%) from our and Old GM's U.S. vehicle sales in the year ended December 31, 2009. This increase reflects our brand rationalization strategy to focus our product engineering and design and marketing on our four brands. This strategy has resulted in increased consumer demand for certain products such as the Chevrolet Equinox, GMC Terrain, Buick LaCrosse and Cadillac SRX.

These four brands accounted for 99.4% of our U.S. vehicle sales in the year ended December 31, 2010. The moderate improvement in the U.S. economy has contributed to a slow but steady improvement in U.S. industry vehicle sales and increased consumer confidence.

The continued increase in U.S. industry vehicle sales and the vehicle sales of our four brands is critical for us to maintain our worldwide profitability.

U.S. Dealer Reduction

We market vehicles worldwide through a network of independent retail dealers and distributors. As part of achieving and sustaining long-term viability and the viability of our dealer network, we determined that a reduction in the number of U.S. dealerships was necessary. In determining which dealerships would remain in our network, we performed analyses of volumes and consumer satisfaction indexes, among other criteria, and over 1,800 U.S. retail dealers signed wind-down agreements effectively terminating their dealer agreements with us on October 31, 2010. Pursuant to legislation passed in December 2009 over 1,100 dealers filed for arbitration seeking reinstatement. In 2010 the arbitration process was resolved. As a result of the arbitration process we offered 332 dealers reinstatement in their entirety and 460 existing dealers reinstatement of certain brands. At December 31, 2010 there were 4,500 vehicle dealers in the U.S. compared to 5,600 at December 31, 2009.

Section 136 Loans

Section 136 of the Energy Independence and Security Act of 2007 (EISA) established an incentive program consisting of both grants and direct loans to support the development of advanced technology vehicles and associated components in the U.S. In January 2011 consistent with our strategy to maintain a strong balance sheet by minimizing our financial leverage, we withdrew our $14.4 billion loan application, under Section 136, to the U.S. Department of Energy.

Brand Rationalization

We have focused our resources in the U.S. on four brands. As a result, we completed the sale of Saab Automobile AB (Saab) in February 2010 and the sale of Saab Automobile GB (Saab GB) in May 2010 and have completed the wind down of our Pontiac, Saturn, and HUMMER brands.

Sale of Nexteer

On November 30, 2010 we completed the sale of Nexteer, a manufacturer of steering components and half-shafts, to Pacific Century Motors. The sale of Nexteer included the global steering business which was acquired in October 2009. The 2009 acquisition of Nexteer included 22 manufacturing facilities, six engineering facilities and 14 customer support centers located in North and South America, Europe and Asia. We received consideration of $426 million in cash and a $39 million promissory note in exchange for 100% of our ownership interest in Nexteer and recorded a gain of $60 million on the sale.

Resolution of Delphi Matters

In October 2009 we consummated the transaction contemplated in the Delphi Master Distribution Agreement (DMDA) with Delphi Corporation (Delphi) and other parties. Under the DMDA, we agreed to acquire Nexteer, which supplies us and other original equipment manufacturers with steering systems and columns, and four domestic facilities that manufacture a variety of automotive components, primarily sold to us. We, along with several third party investors who held the Delphi Tranche DIP Facility (collectively, the Investors), agreed to acquire substantially all of Delphi's remaining assets through New Delphi. Certain excluded assets and liabilities had been retained by a Delphi entity (DPH) to be sold or liquidated. In connection with the DMDA, we agreed to pay or assume Delphi obligations of $1.0 billion related to its senior DIP credit facility, including certain outstanding derivative instruments, its junior DIP credit facility, and other Delphi obligations, including certain administrative claims. At the closing of the transactions contemplated by the DMDA, we waived administrative claims associated with our advance agreements with Delphi, the payment terms acceleration agreement with Delphi and the claims associated with previously transferred pension costs for hourly employees.

We agreed to acquire, prior to the consummation of the transactions contemplated by the DMDA, all Class A Membership Interests in New Delphi for a cash contribution of $1.7 billion with the Investors acquiring Class B Membership Interests. We and the Investors also agreed to establish: (1) a secured delayed draw term loan facility for New Delphi, with us and the Investors each committing to provide loans of up to $500 million; and (2) a note of $41 million to be funded at closing by the Investors. The DMDA settled outstanding claims and assessments against and from MLC, us and Delphi, including the termination of the Master Restructuring Agreement with limited exceptions, and establishes an ongoing commercial relationship with New Delphi. We agreed to continue all existing Delphi supply agreements and purchase orders for GMNA to the end of the related product program, and New Delphi agreed to provide us with access rights designed to allow us to operate specific sites on defined triggering events to provide us with protection of supply.

In separate agreements, we, Delphi and the Pension Benefit Guarantee Corporation (PBGC) negotiated the settlement of the PBGC's claims from the termination of the Delphi pension plans and the release of certain liens with the PBGC against Delphi's foreign assets. In return, the PBGC was granted a 100% interest in Class C Membership Interests in New Delphi which provides for the PBGC to participate in predefined equity distributions and received a payment of $70 million from us. We maintain certain obligations relating to Delphi hourly employees to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the Delphi Benefit Guarantee Agreements.

Investment in Ally Financial

As part of the approval process for Ally Financial to obtain Bank Holding Company status in December 2008, Old GM agreed to reduce its ownership in Ally Financial to less than 10% of the voting and total equity of Ally Financial by December 24, 2011. At December 31, 2010 our equity ownership in Ally Financial was 9.9%.

In December 2010 the UST agreed to convert its optional conversion feature on the shares of mandatory convertible preferred securities held by the UST. Through this transaction, Ally Financial converted 110 million shares of preferred securities into 532 thousand shares of common stock. This action resulted in the dilution of our investment in Ally Financial common stock from 16.6% to 9.9%, of which 4.0% is held directly and 5.9% is held indirectly through an independent trust. Pursuant to previous commitments to reduce influence over and ownership in Ally Financial, the trustee, who is independent of us, has the sole authority to vote and is required to dispose of all Ally Financial common stock held in the trust by December 24, 2011. We can cause the trustee to return any Ally Financial common stock to us to hold directly, so long as our directly held voting and total common equity interests remain below 10%.

Special Attrition Programs, Labor Agreements and Benefit Plan Changes

During 2009 we and Old GM implemented various programs which reduced the hourly and salary workforce. Significant workforce reductions and settlements with various represented employee groups are discussed below.

2009 Special Attrition Programs

In 2009 Old GM announced special attrition programs for eligible UAW represented employees, offering cash and other incentives for individuals who elected to retire or voluntarily terminate employment.

Global Salaried Workforce Reductions

In 2009 U.S. salaried workforce reductions were accomplished primarily through a salaried retirement program or through a severance program funded from operating cash flows.

Delphi Benefit Guarantee Agreements

The Delphi Benefit Guarantee Agreements were affected by the settlement of the PBGC claims from the termination of the Delphi pension plan. We maintained the obligation to provide the difference between the pension benefits paid by the PBGC and those originally guaranteed by Old GM under the Delphi Benefit Guarantee Agreements.

U.S. Salaried Benefit Changes

U.S. salaried benefit changes reduced the salaried life benefits and a negative amendment to the U.S. salaried retiree healthcare program reduced coverage and increased cost sharing.

2009 UAW Retiree Settlement Agreement

In 2009 Old GM and the UAW agreed to a 2009 UAW Retiree Settlement Agreement which permanently shifted responsibility for providing retiree healthcare to the new plan funded by the New VEBA. Under the terms of the settlement agreement, we are released from UAW retiree healthcare claims incurred after December 31, 2009. All obligations of ours and any other entity or benefit plan of ours for retiree medical benefits for the class and the covered group arising from any agreement between us and the UAW terminated at December 31, 2009. Our obligations to the new healthcare plan and the New VEBA are limited to the terms of the settlement agreement.

At December 31, 2009 we accounted for the termination of our UAW hourly retiree medical plan and Mitigation Plan as a settlement. The resulting settlement loss of $2.6 billion recorded on December 31, 2009 represented the difference between the sum of the accrued other postretirement benefits (OPEB) liability of $10.6 billion and the existing internal VEBA assets of $12.6 billion, and $25.8 billion representing the fair value of the consideration transferred at December 31, 2009, including the contribution of the existing internal VEBA assets. Upon the settlement of the UAW hourly retiree medical plan at December 31, 2009 the VEBA Notes, Series A Preferred Stock, common stock, and warrants contributed to the New VEBA were recorded at fair value and classified as outstanding debt and equity instruments.

Prior to December 31, 2009 the 260 million shares of Series A Preferred Stock issued to the New VEBA were not considered outstanding for accounting purposes due to the terms of the revised settlement agreement with the UAW. As a result, $105 million of the $146 million of dividends paid on September 15, 2009 and $147 million of the $203 million of dividends paid on December 15, 2009 were recorded as employer contributions resulting in a reduction of Postretirement benefits other than pensions.

IUE-CWA and USW Settlement Agreement

In September 2009 we entered into a settlement agreement with MLC, The International Union of Electronic, Electrical, Salaried, Machine and Furniture Workers — Communication Workers of America (IUE-CWA) and United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union (USW). The approved settlement agreement resulted in remeasurements of the U.S. hourly defined benefit pension plan, the non-UAW hourly retiree healthcare plan and the U.S. hourly life plan to reflect the terms of the agreement. The settlement agreement was expressly conditioned upon and did not become effective until approved by the Bankruptcy Court in MLC's Chapter 11 proceedings, which occurred in November 2009. Several additional unions representing MLC hourly retirees joined the IUE-CWA and USW settlement agreement with respect to healthcare and life insurance. The remeasurement of these plans resulted in a decrease in a contingent liability accrual and an offsetting increase in the projected benefit obligation (PBO) or accumulated postretirement benefit obligation (APBO) of the benefit plan.

2009 CAW Agreement

In March 2009 Old GM announced that the members of the Canadian Auto Workers Union (CAW) had ratified an agreement intended to reduce costs in Canada through introducing co-payments for healthcare benefits, increasing employee healthcare cost sharing, freezing pension benefits and eliminating cost of living adjustments to pensions for retired hourly workers. The 2009 CAW Agreement was conditioned on Old GM receiving longer term financial support from the Canadian and Ontario governments and those governments agreed to the terms of a loan agreement, approved the GMCL viability plan and provided funding to GMCL. The Canadian hourly defined benefit pension plan was remeasured in June 2009.

The CAW hourly retiree healthcare plan and the CAW retiree life plan were also remeasured in June 2009. Additionally, as a result of the termination of employees from the former Oshawa, Ontario truck facility, GMCL recorded a curtailment gain associated with the CAW hourly retiree healthcare plan.

In June 2009 GMCL and the CAW agreed to the terms of an independent Health Care Trust (HCT) to provide retiree healthcare benefits to certain active and retired employees and it will be implemented when certain preconditions are achieved. Certain of the preconditions have not been achieved and the HCT is not yet implemented at December 31, 2010. GMCL is obligated to make a payment of CAD $1.0 billion on the HCT implementation date which it will fund out of its CAD $1.0 billion escrow funds, adjusted for the net difference between the amount of retiree monthly contributions received during the period January 1, 2010 through the HCT implementation date less the cost of benefits paid for claims incurred by covered employees during this period. GMCL will provide a CAD $800 million note payable to the HCT on the HCT implementation date which will accrue interest at an annual rate of 7.0% with five equal annual installments of CAD $256 million due December 31 of 2014 through 2018. Concurrent with the implementation of the HCT, GMCL will be legally released from all obligations associated with the cost of providing retiree healthcare benefits to CAW active and retired employees bound by the class action process, and we will account for the related termination of CAW hourly retiree healthcare benefits as a settlement, based upon the difference between the fair value of the notes and cash contributed and the healthcare plan obligation at the settlement date. As a result of the conditions precedent to this agreement not having yet been achieved, there was no accounting recognition for the healthcare trust at December 31, 2010.

Venezuelan Exchange Regulations

Our Venezuelan subsidiaries changed their functional currency from Bolivar Fuerte (the BsF), the local currency, to the U.S. Dollar, our reporting currency, on January 1, 2010 because of the hyperinflationary status of the Venezuelan economy. Pursuant to the official devaluation of the Venezuelan currency and establishment of the dual fixed exchange rates (essential rate of BsF 2.60 to $1.00 and nonessential rate of BsF 4.30 to $1.00) in January 2010, we remeasured the BsF denominated monetary assets and liabilities held by our Venezuelan subsidiaries at the nonessential rate of 4.30 BsF to $1.00. The remeasurement resulted in a charge of $25 million recorded in Automotive cost of sales in the the year ended December 31, 2010. In the year ended December 31, 2010 all BsF denominated transactions have been remeasured at the nonessential rate of 4.30 BsF to $1.00.

In June 2010 the Venezuelan government introduced additional foreign currency exchange control regulations, which imposed restrictions on the use of the parallel foreign currency exchange market, thereby making it more difficult to convert BsF to U.S. Dollars. We periodically accessed the parallel exchange market, which historically enabled entities to obtain foreign currency for transactions that could not be processed by the Commission for the Administration of Currency Exchange (CADIVI). The restrictions on the foreign currency exchange market could affect our Venezuelan subsidiaries' ability to pay non-BsF denominated obligations that do not qualify to be processed by CADIVI at the official exchange rates as well as our ability to benefit from those operations.

In December 2010 another official devaluation of the Venezuelan currency was announced that eliminated the essential rate effective January 1, 2011. The devaluation did not have an effect on the 2010 consolidated financial statements, however, it will affect results of operations in subsequent years because our Venezuelan subsidiaries will no longer realize gains that result from favorable foreign currency exchanges processed by CADIVI at the essential rate.

Effect of Fresh-Start Reporting

The application of fresh-start reporting significantly affected certain assets, liabilities and expenses. As a result, certain financial information at and for any period after July 10, 2009 is not comparable to Old GM's financial information. Therefore, we did not combine certain financial information in the period July 10, 2009 through December 31, 2009 with Old GM's financial information in the period January 1, 2009 through July 9, 2009 for comparison to prior periods. For the purpose of the following discussion, we have combined our Total net sales and revenue in the period July 10, 2009 through December 31, 2009 with Old GM's Total net sales and revenue in the period January 1, 2009 through July 9, 2009. Total net sales and revenue was not significantly affected by fresh-start reporting and therefore we combined vehicle sales data comparing the Successor and Predecessor periods. Refer to Note 2 to our consolidated financial statements for additional information on fresh-start reporting.

Because our and Old GM's financial information is not comparable, we are providing additional financial metrics for the periods presented in addition to disclosures concerning significant transactions and trends at December 31, 2010 and 2009 and in the periods presented.

Total net sales and revenue is primarily comprised of revenue generated from the sales of vehicles, in addition to revenue from OnStar, our customer subscription service, vehicle sales accounted for as operating leases, sales of parts and accessories and GM Financial's loan purchasing and servicing activities.

Automotive cost of sales is primarily comprised of material, labor, manufacturing overhead, freight, foreign currency transaction and translation gains and losses, product engineering, design and development expenses, depreciation and amortization, policy and warranty costs, postemployment benefit costs, and separation and impairment charges. Prior to our application of fresh-start reporting on July 10, 2009, Automotive cost of sales also included gains and losses on derivative instruments. Effective July 10, 2009 gains and losses related to all nondesignated derivatives are recorded in Interest income and other non-operating income, net.

Automotive selling, general and administrative expense is primarily comprised of costs related to the advertising, selling and promotion of products, support services, including central office expenses, labor and benefit expenses for employees not considered part of the manufacturing process, consulting costs, rental expense for offices, bad debt expense and non-income based state and local taxes.

(a) Includes charge related to the purchase of Series A Preferred Stock of $677 million in the year ended December 31, 2010.

Production and Vehicle Sales Volume

Management believes that production volume and vehicle sales data provide meaningful information regarding our automotive operating results. Production volumes manufactured by our assembly facilities are generally aligned with current period net sales and revenue, as we generally recognize revenue upon the release of the vehicle to the carrier responsible for transporting it to a dealer, which is shortly after the completion of production. Vehicle sales data, which includes retail and fleet sales, does not correlate directly to the revenue we recognize during the period. However, vehicle sales data is indicative of the underlying demand for our vehicles, and is the basis for our market share.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

The following tables summarize total production volume and sales of new motor vehicles and competitive position (in thousands):

	GM	Combined GM and Old GM	Old GM
	Year Ended December 31, 2010	Year Ended December 31, 2009	Year Ended December 31, 2008
Production Volume (a)			
GMNA	2,809	1,913	3,449
GME	1,234	1,106	1,495
GMIO (b)	3,745	2,677	2,335
GMSA	926	807	865
Worldwide	8,714	6,503	8,144

(a) Production volume includes vehicles produced by certain joint ventures.

(b) The joint venture agreements with SGMW (44%) and FAW-GM (50%) allow for significant rights as a member as well as the contractual right to report SGMW and FAW-GM joint venture production in China.

	Year Ended December 31, 2010		Year Ended December 31, 2009		Year Ended December 31, 2008	
	GM	GM as a % of Industry	Combined GM and Old GM	Combined GM and Old GM as a % of Industry	Old GM	Old GM as a % of Industry
Vehicle Sales (a)(b)(c)(d)(e)						
GMNA	2,625	18.2%	2,484	18.9%	3,565	21.5%
GME	1,662	8.8%	1,668	8.9%	2,043	9.3%
GMIO (f)(g)	3,077	8.8%	2,453	8.7%	1,832	7.4%
GMSA	1,026	19.9%	872	20.0%	920	20.7%
Worldwide	8,390	11.4%	7,477	11.6%	8,359	12.3%

(a) Includes HUMMER, Saab, Saturn and Pontiac vehicle sales data.

(b) Our vehicle sales include Saab data through February 2010.

(c) Vehicle sales data may include rounding differences.

(d) Certain fleet sales that are accounted for as operating leases are included in vehicle sales at the time of delivery to the daily rental car companies.

(e) GMNA vehicle sales primarily represent sales to the ultimate customer. GME, GMIO and GMSA vehicle sales primarily represent estimated sales to the ultimate customer. In countries where end customer data is not readily available other data sources, such as wholesale volumes, are used to estimate vehicle sales.

(f) Includes SGM joint venture vehicle sales in China of 1.0 million vehicles, SGMW and FAW-GM joint venture vehicle sales in China of 1.3 million vehicles and HKJV joint venture vehicle sales in India 110,000 vehicles in the year ended December 31, 2010. Combined GM and Old GM SGM joint venture vehicle sales in China of 708,000 vehicles and combined GM and Old GM SGMW and FAW-GM joint venture vehicle sales in China of 1.1 million vehicles in the year ended December 31, 2009. Old GM SGM joint venture vehicle sales in China of 432,000 and Old GM SGMW joint venture vehicle sales in China of 647,000 vehicles in the year ended December 31, 2008. We do not record revenue from our joint ventures' vehicle sales.

(g) The joint venture agreements with SGMW (44%) and FAW-GM (50%) allow for significant rights as a member as well as the contractual right to report SGMW and FAW-GM joint venture vehicle sales in China as part of our global market share.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Reconciliation of Consolidated, Automotive and GM Financial Segment Results

Management believes EBIT provides meaningful supplemental information regarding our automotive segments' operating results because it excludes amounts that management does not consider part of operating results when assessing and measuring the operational and financial performance of the organization. Management believes these measures allow it to readily view operating trends, perform analytical comparisons and benchmark performance between periods and among geographic regions. We believe EBIT is useful in allowing for greater transparency of our core operations and it is therefore used by management in its financial and operational decision-making.

While management believes that EBIT provides useful information, it is not an operating measure under U.S. GAAP, and there are limitations associated with its use. Our calculation of EBIT may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in the method of calculation. As a result, the use of EBIT has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Net income (loss) or Net income (loss) attributable to common stockholders. Due to these limitations, EBIT is used as a supplement to U.S. GAAP measures.

Management believes income (loss) before income taxes provides meaningful supplemental information regarding GM Financial's operating results. GM Financial uses a separate measure from our automotive operations because management believes interest income and interest expense are part of operating results when assessing and measuring the operational and financial performance of the segment.

The following table summarizes the reconciliation of our automotive segments EBIT and GM Financial's income before income taxes to Net income (loss) attributable to stockholders (dollars in millions):

	Successor				Predecessor			
	Year Ended December 31, 2010		July 10, 2009 Through December 31, 2009		January 1, 2009 Through July 9, 2009		Year Ended December 31, 2008	
Automotive								
EBIT								
GMNA (a)	$ 5,748	81.4%	$(4,820)	108.8%	$ (11,092)	74.7%	$(12,203)	85.3%
GME (a)	(1,764)	(25.0)%	(814)	18.4%	(2,815)	19.0%	(2,625)	18.3%

n.m. = not meaningful

In the year ended December 31, 2010 Total net sales and revenue increased by $31.0 billion (or 29.6%), primarily due to: (1) increased wholesale sales volume of $19.8 billion in GMNA due to an improving economy and recent vehicle launches; (2) increased wholesale volumes of $3.9 billion in GMIO due to an improving global economy and recent vehicle launches; (3) favorable vehicle pricing effect of $2.9 billion in GMNA due to lower sales allowances, partially offset by less favorable adjustments for U.S. residual support programs for leased vehicles; (4) increased wholesale volumes of $2.2 billion in GMSA driven by launches of the Chevrolet Cruze and Chevrolet Spark; (5) favorable vehicle mix of $1.6 billion due to increased crossover and truck sales in GMNA; (6) favorable net foreign currency translation effect of $1.0 billion, primarily due to the strengthening of major currencies in 2010 against the U.S. Dollar in GMSA; (7) increased sales of $1.0 billion due to the acquisition of Nexteer and four domestic component manufacturing facilities in GMNA; (8) favorable net foreign currency translation effect of $0.9 billion in GMIO; (9) favorable vehicle mix of $0.8 billion driven by the launch of the Chevrolet Cruze and increased sales of sports utility vehicles in GMIO; (10) favorable net foreign currency remeasurement effect of $0.8 billion in GMNA; (11) derivative losses of $0.8 billion in 2009, that did not recur in 2010, primarily driven by the depreciation of the Korean Won against the U.S. Dollar in GMIO; (12) favorable vehicle mix of $0.5 billion in GME; (13) favorable vehicle pricing effect of $0.5 billion driven by launches of the Opel Astra and Opel Meriva in GME; (14) favorable vehicle pricing effect of $0.3 billion primarily in Venezuela driven by the hyperinflationary economy in GMSA; (15) increased revenues from OnStar of $0.3 billion in GMNA; and (16) finance charge income of $0.3 billion due to the acquisition of AmeriCredit.

These increases in Total net sales and revenue were partially offset by: (1) devaluation of the BsF in Venezuela of $0.9 billion in GMSA; (2) unfavorable net foreign currency translation effect of $0.7 billion in GME; (3) unfavorable vehicle mix of $0.4 billion in GMSA; and (4) decreased lease financing revenues of $0.3 billion related to the liquidation of the portfolio of automotive leases.

In the year ended December 31, 2009 Total net sales and revenue decreased by $44.4 billion (or 29.8%) primarily due to: (1) decreased revenue of $36.7 billion in GMNA related to volume reductions; (2) decrease in domestic wholesale volumes and lower exports of $9.1 billion in GMIO; (3) decreased domestic wholesale volumes of $4.8 billion in GME; (4) unfavorable foreign currency translation effect and transaction losses of $3.7 billion in GME, primarily due to the strengthening of the U.S. Dollar versus the Euro; (5) decreased wholesale volumes of $2.2 billion in GMSA; (6) decreased revenue of $1.2 billion in GME related to Saab; (7) unfavorable net foreign currency effect of $1.0 billion in GMIO; (8) decreased powertrain and parts and accessories revenue of $0.8 billion in GME; and (9) decreased lease financing revenue of $0.7 billion related to the continued liquidation of the portfolio of automotive retail leases.

These decreases in Total net sales and revenue were partially offset by: (1) improved pricing, lower sales incentives and improved lease residuals of $5.4 billion in GMNA; (2) favorable vehicle mix of $2.8 billion in GMNA; (3) favorable vehicle pricing of

$1.3 billion in GME; (4) decreased derivative losses of $0.9 billion in GMIO; (5) favorable pricing of $0.4 billion in GMSA, primarily due to a 60% price increase in Venezuela due to high inflation; and (6) favorable vehicle mix of $0.3 billion in GMIO driven by launches of new vehicle models at GM Daewoo.

Automotive Cost of Sales

	Successor				Predecessor			
	Year Ended December 31, 2010	Percentage of Automotives sales	July 10, 2009 Through December 31, 2009	Percentage of Automotive sales	January 1, 2009 Through July 9, 2009	Percentage of Automotive sales	Year Ended December 31, 2008	Percentage of Automotive sales
Automotive cost of sales	$118,792	87.9%	$56,381	98.3%	$55,814	119.3%	$149,257	101.0%
Automotive gross margin	$ 16,350	12.1%	$ 948	1.7%	$ (9,027)	(19.3)%	$ (1,525)	(1.0)%

GM

In the year ended December 31, 2010 Automotive cost of sales included: (1) restructuring charges of $0.8 billion in GME primarily for separation programs announced in Belgium, Spain, Germany and the United Kingdom; (2) foreign currency remeasurement losses of $0.5 billion in GMNA; (3) charges of $0.2 billion for a recall campaign on windshield fluid heaters in GMNA; (4) impairment charges related to product-specific tooling assets of $0.2 billion in GMNA; partially offset by (5) favorable adjustments of $0.4 billion to restructuring reserves primarily due to increased production capacity utilization in GMNA; and (6) foreign currency transaction gains of $0.3 billion in GMSA.

In the period July 10, 2009 through December 31, 2009 Automotive cost of sales included: (1) a settlement loss of $2.6 billion related to the termination of the UAW hourly retiree medical plan and Mitigation Plan in GMNA; (2) foreign currency remeasurement losses of $1.3 billion in GMNA; partially offset by (3) favorable adjustments of $0.7 billion in GMNA, $0.5 billion in GME and $0.1 billion in GMIO due to the sell through of inventory acquired from Old GM at July 10, 2009; and (4) foreign currency transaction gains of $0.5 billion primarily in Corporate.

Old GM

In the period January 1, 2009 through July 9, 2009 Automotive cost of sales included: (1) incremental depreciation charges of $2.1 billion in GMNA and $0.7 billion in GME; (2) a curtailment loss of $1.4 billion upon the interim remeasurement of the U.S. hourly defined benefit pension plans in GMNA; (3) separation program charges and Canadian restructuring activities of $1.1 billion in GMNA; (4) charges of $0.8 billion primarily related to the deconsolidation of Saab; (5) foreign currency translation and remeasurement losses of $0.7 billion in GMNA; (6) impairment charges of $0.4 billion in GMNA and $0.2 billion in GME primarily for product-specific tooling; (7) foreign currency transaction losses of $0.5 billion in GMSA; (8) derivative losses of $0.5 billion related to commodity and foreign currency exchange derivatives in GMNA; (9) a charge of $1.1 billion related to the Supplemental Unemployment Benefit (SUB) and the Transitional Support Program (TSP), partially offset by a favorable adjustment of $0.7 billion primarily related to the suspension of the JOBS Program, Old GM's job security provision of the collective bargaining agreement with the UAW to continue paying idled employees certain wages and benefits in GMNA; and (10) charges of $0.3 billion related to obligations associated with various Delphi agreements in GMNA.

In the period January 1, 2009 through July 9, 2009 negative gross margin reflected sales volumes at historically low levels and Automotive cost of sales, including costs that are fixed in nature, exceeding Total net sales and revenue.

In the year ended December 31, 2008 Automotive cost of sales included: (1) restructuring charges and other costs of $6.0 billion related to Old GM's special attrition programs in GMNA; (2) expenses of $1.7 billion related to the salaried post-65 healthcare settlement in GMNA; (3) impairment charges of $0.5 billion in GME and $0.4 billion in GMNA primarily related to product-specific tooling; (4) commodity and foreign currency exchange derivative losses of $0.8 billion in GMNA; (5) charges of $0.3 billion associated with the finalization of Old GM's negotiations with the CAW in GMNA; (6) restructuring charges of $0.3 billion related to separation programs announced in Belgium, France, Germany and the United Kingdom in GME; (7) foreign currency transaction losses of $0.3 billion in GMSA primarily due to foreign currency exchanges processed outside CADIVI in Venezuela; partially offset by (8) net curtailment gain of $4.9 billion in GMNA related to the February 2008 Settlement Agreement for the UAW hourly medical plan; and (9) foreign currency remeasurement gains of $2.1 billion driven by the weakening of the Canadian Dollar against the U.S. Dollar in GMNA.

Automotive Selling, General and Administrative Expense

	Successor				Predecessor			
	Year Ended December 31, 2010	Percentage of Automotive sales	July 10, 2009 Through December 31, 2009	Percentage of Automotive sales	January 1, 2009 Through July 9, 2009	Percentage of Automotive sales	Year Ended December 31, 2008	Percentage of Automotive sales
Automotive selling, general and administrative expense	$11,446	8.5%	$6,006	10.5%	$6,161	13.2%	$14,253	9.6%

GM

In the year ended December 31, 2010 Automotive selling, general and administrative expense included: (1) advertising and sales promotion expenses of $5.1 billion to support media campaigns for our products, including expenses in GMNA of $3.4 billion, in GME of $0.8 billion, in GMIO of $0.6 billion and in GMSA of $0.3 billion; (2) administrative expenses of $4.4 billion, including expenses in GMNA of $2.0 billion, in GMIO of $0.8 billion, in GME of $0.6 billion and in GMSA of $0.5 billion; and (3) selling and marketing expenses of $1.4 billion primarily to support our dealerships including expenses in GMNA of $0.6 billion, in GME of $0.5 billion, in GMIO of $0.2 billion and in GMSA of $0.1 billion.

In the period July 10, 2009 through December 31, 2009 Automotive selling, general and administrative expense included: (1) advertising and sales promotion expenses of $2.5 billion to support media campaigns for our products, including expenses in GMNA of $1.7 billion, in GME of $0.4 billion, in GMIO of $0.3 billion and in GMSA of $0.1 billion; (2) administrative expenses of $2.6 billion, including expenses in GMNA of $1.1 billion, in GMIO of $0.5 billion, in GME of $0.3 billion and in GMSA of $0.2 billion; and (3) selling and marketing expenses of $1.0 billion primarily to support our dealerships including expenses in GMNA of $0.6 billion, in GME of $0.3 billion, in GMIO of $0.1 billion and in GMSA of $0.1 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Automotive selling, general and administrative expense included: (1) charges of $0.5 billion recorded for dealer wind-down costs in GMNA; and (2) a curtailment loss of $0.3 billion upon the interim remeasurement of the U.S. salary defined benefit pension plan as a result of global salary workforce reductions. This was partially offset by the positive effects of various cost savings initiatives, the cancellation of certain sales and promotion contracts as a result of the Chapter 11 Proceedings in the U.S. and overall reductions in advertising and marketing budgets.

In the year ended December 31, 2008 Automotive selling, general and administrative expense included: (1) advertising and sales promotion expenses of $6.3 billion to support media campaigns for our products, including expenses in GMNA of $4.0 billion, in GME of $1.3 billion, in GMIO of $0.8 billion and in GMSA of $0.2 billion; (2) administrative expenses of $5.8 billion, including expenses in GMNA of $2.8 billion, in GMIO of $0.9 billion, in GME of $0.7 billion and in GMSA of $0.4 billion; and (3) selling and marketing expenses of $1.9 billion primarily to support our dealerships including expenses in GMNA of $0.9 billion, in GME of $0.7 billion, in GMIO of $0.2 billion and in GMSA of $0.1 billion.

GM

In the year ended December 31, 2010 Interest income and other non-operating income, net included; (1) interest income earned from investments of $0.5 billion; (2) dividends and royalties of $0.2 billion; (3) rental income of $0.2 billion; (4) reversal of liability related to the Adjustment Shares of $0.2 billion; (5) gain on sale of Saab of $0.1 billion; (6) gain on sale of Nexteer of $0.1 billion; (7) gain on bargain purchase and the fair value of the recognizable assets acquired and liabilities assumed of $0.1 billion related to the acquisition of GM Strasbourg (GMS); (8) gain on derivatives of $0.1 billion; and (8) Ally Financial exclusivity fee of $0.1 billion in GMNA.

In the period July 10, 2009 through December 31, 2009 Interest income and other non-operating income, net included: (1) gains on foreign currency exchange derivatives of $0.3 billion; (2) interest income earned from investments of $0.2 billion; (3) net rental and royalty income of $0.2 billion in GMNA; partially offset by (4) liability recorded related to the Adjustment Shares of $0.2 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Interest income and other non-operating income, net included: (1) interest income of $0.2 billion earned from investments; (2) gains on derivatives of $0.2 billion related to the return of warrants issued to the UST; (3) gains on foreign currency exchange derivatives of $0.1 billion; (4) dividends on the investment in Ally Financial Preferred Membership Interests of $0.1 billion; (5) net rental income of $0.1 billion in GMNA; (6) royalty income of $0.1 billion in GMNA; and (7) Ally Financial exclusivity fee income of $0.1 billion in GMNA.

In the year ended December 31, 2008 Interest income and other non-operating income, net included: (1) interest income earned from investments of $0.7 billion; (2) rental income of $0.2 billion; (3) dividends and royalties of $0.2 billion; (4) Ally Financial exclusivity fee income of $0.1 billion in GMNA; partially offset by (5) impairment charge of $1.0 billion related to our investment in Ally Financial Preferred Membership Interests.

Gain (Loss) on Extinguishment of Debt

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Gain (loss) on extinguishment of debt	$196	$(101)	$(1,088)	$43

GM

In the year ended December 31, 2010 Gain (loss) on extinguishment of debt included a gain of $0.2 billion resulting from our repayment of the outstanding amount of VEBA Notes of $2.8 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Loss on extinguishment of debt included a loss of $2.0 billion related to the UST exercising its option to convert outstanding amounts of the UST Ally Financial Loan into shares of Ally Financial's Class B Common Membership Interests. This loss was partially offset by a gain on extinguishment of debt of $0.9 billion related to an amendment to Old GM's U.S. term loan.

In the year ended December 31, 2008 Gain (loss) on extinguishment of debt included a gain of $43 million resulting from a settlement gain recorded for the issuance of 44 million shares of common stock in exchange for $498 million principal amount of Old GM's Series D debentures, which were retired and canceled.

Reorganization gains, net

	Predecessor
	January 1, 2009 Through July 9, 2009
Reorganization gains, net	$128,155

Old GM

In the period January 1, 2009 through July 9, 2009 Reorganization gains, net included: (1) the gain on conversion of debt of $37.5 billion; (2) the change in net assets resulting from the application of fresh-start reporting of $33.8 billion; (3) the gain from the settlement of net liabilities retained by MLC of $25.2 billion; and (4) the fair value of Series A Preferred stock, common shares and warrants issued in connection with the 363 Sale of $20.5 billion.

Income Tax Expense (Benefit)

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Income tax expense (benefit)	$672	$(1,000)	$(1,166)	$1,766

GM

In the year ended December 31, 2010 Income tax expense of $0.7 billion primarily resulted from current and deferred income tax provisions of $0.6 billion for profitable entities without valuation allowances, $0.3 billion withholding taxes and taxable foreign exchange gain in Venezuela, partially offset by $0.3 billion settlement of uncertain tax positions and reversal of valuation allowances.

In the period July 10, 2009 through December 31, 2009 Income tax benefit of $1.0 billion primarily resulted from a $1.4 billion income tax allocation between operations and Other comprehensive income, partially offset by income tax provisions of $0.3 billion for profitable entities without valuation allowances. Our U.S. operations incurred losses from operations with no income tax benefit due to full valuation allowances against our U.S. deferred tax assets, and we had Other comprehensive income, primarily due to remeasurement gains on our U.S. pension plans. We recorded income tax expense related to the remeasurement gains in Other comprehensive income and allocated income tax benefit to operations.

Old GM

In the period January 1, 2009 through July 9, 2009 Income tax benefit of $1.2 billion primarily resulted from the reversal of valuation allowances of $0.7 billion related to Reorganization gains, net and the resolution of a transfer pricing matter of $0.7 billion with the U.S. and Canadian governments, partially offset by income tax provisions for profitable entities without valuation allowances.

In the year ended December 31, 2008 Income tax expense of $1.8 billion primarily resulted from the recording of valuation allowances of $1.9 billion against deferred tax assets in South Korea, the United Kingdom, Spain, Australia, Texas and various non-U.S. jurisdictions.

Automotive

Current Assets

At December 31, 2010 Marketable securities of $5.6 billion increased by $5.4 billion due to investments in securities with maturities exceeding 90 days reflecting our improved liquidity and cash position.

At December 31, 2010 Restricted cash and marketable securities of $1.2 billion decreased by $12.7 billion (or 91.1%) primarily due to: (1) UST escrow funds of $6.6 billion became unrestricted upon our repayment of the UST Loans and Canadian Loan; (2) release of $4.7 billion from our UST escrow funds to repay the UST Loans; and (3) release of $1.2 billion from our UST escrow funds for quarterly payments on the UST Loans and Canadian Loan.

At December 31, 2010 Accounts and notes receivable of $8.7 billion increased by $1.2 billion (or 15.7%) primarily due to higher sales volumes in all regions.

At December 31, 2010 Inventories of $12.1 billion increased by $2.0 billion (or 20.0%) primarily due to increased production resulting from higher demand for our products and new product launches.

At December 31, 2010 Assets held for sale were reduced to $0 from $0.4 billion at December 31, 2009 due to the sale of Saab in February 2010 and the sale of Saab GB in May 2010.

At December 31, 2010 Equipment on operating leases, net of $2.6 billion decreased by $0.2 billion (or 5.8%) due to: (1) a decrease of $0.3 billion due to the continued liquidation of our portfolio of automotive retail leases; (2) a decrease of $0.1 billion in GME due to overall volume decreases in Germany; partially offset by (3) an increase of $0.2 billion in GMNA, primarily related to vehicles leased to daily rental car companies (vehicles leased to U.S. daily rental car companies increased to 118,000 vehicles at December 31, 2010 from 97,000 vehicles at December 31, 2009).

Non-Current Assets

At December 31, 2010 Restricted cash and marketable securities of $1.2 billion decreased by $0.3 billion (or 22.1%) primarily due to a reduction in required cash collateral arrangements as a result of our improved credit conditions compared to December 31, 2009.

At December 31, 2010 Equity in net assets of nonconsolidated affiliates of $8.5 billion increased by $0.6 billion (or 7.5%) due to: (1) equity income of $1.4 billion in the year ended December 31, 2010, primarily related to our China JVs; (2) investment of $0.4 billion in SGMW; (3) investment of $0.2 billion in SAIC GM Investment Limited (HKJV); partially offset by (4) dividends received or declared of $1.2 billion, primarily related to our China JVs; (5) a decrease of $0.2 billion related to the sale of our 50% interest in a joint venture; and (6) a decrease of $0.1 billion related to the sale of a 1% ownership interest in SGM to SAIC.

At December 31, 2010 Property, net of $19.2 billion increased by $0.5 billion (or 2.9%) primarily due to: (1) capital expenditures, of $4.2 billion; (2) accruals and capital leases of $0.5 billion; partially offset by (2) depreciation of $3.8 billion; (3) decreases associated with disposals of businesses of $0.3 billion; and (4) unfavorable foreign currency translation effect of $0.1 billion.

At December 31, 2010 Goodwill of $30.5 billion decreased by $0.2 billion (or 0.5%) primarily due to unfavorable foreign currency translation effect in GME resulting from the Euro weakening against the U.S. dollar.

At December 31, 2010 Intangible assets, net of $11.9 billion decreased by $2.7 billion (or 18.3%) primarily due to amortization of $2.6 billion and foreign currency translation of $0.1 billion.

At December 31, 2010 Deferred income taxes of $0.3 billion decreased by $0.3 billion (or 45.4%) primarily due to reclassifications of deferred tax assets and changes in the allocation of valuation allowances resulting from underlying changes in the timing of tax deductions.

At December 31, 2010 Assets held for sale were reduced to $0 from $0.5 billion at December 31, 2009 due to the sale of certain of our India operations (GM India) in February 2010. We classified these Assets held for sale as long-term at December 31, 2009 because we received a promissory note in exchange for GM India that does not convert to cash within one year.

At December 31, 2010 Other assets of $3.3 billion increased by $0.7 billion (or 25.3%) primarily due to: (1) increase of $0.3 billion in long-term notes receivable resulting primarily from the sale of GM India of $0.2 billion; (2) increase of $0.1 billion due to capitalization of debt issuance costs associated with the secured revolving credit facility; and (3) increase of $0.1 billion due to amounts paid into insurance funds for employees in early retirement programs.

Current Liabilities

At December 31, 2010 Accounts payable of $21.5 billion increased by $2.8 billion (or 14.8%) primarily due to higher payables for materials due to increased production volumes.

At December 31, 2010 Short-term debt and current portion of long-term debt of $1.6 billion decreased by $8.6 billion (or 84.2%) primarily due to: (1) repayment of the UST Loans and Canadian Loan of $7.0 billion; (2) repayment of the GM Daewoo credit facility of $1.2 billion; and (3) a net change in other obligations of $0.4 billion.

At December 31, 2010 Liabilities held for sale were reduced to $0 from $0.4 billion at December 31, 2009 due to the sale of Saab in February 2010 and the sale of Saab GB in May 2010 to Spyker Cars NV.

At December 31, 2010 Accrued liabilities of $23.4 billion increased by $1.1 billion (or 5.1%) primarily due to: (1) increase in GMNA due to higher customer deposits related to the increased number of vehicles leased to daily rental car companies of $0.5 billion; (2) increase due to tax related accruals reclassified from non-current to current of $0.3 billion; and (3) other miscellaneous accruals of $0.3 billion.

Non-Current Liabilities

At December 31, 2010 Long-term debt of $3.0 billion decreased by $2.5 billion (or 45.8%), primarily due to the repayment in full of the VEBA Notes composed of the outstanding amount (together with accreted interest thereon) of $2.8 billion and resulting gain of $0.2 billion, partially offset by additional net borrowings of $0.4 billion and unfavorable foreign currency translation effect of $0.1 billion.

At December 31, 2010 Liabilities held for sale were reduced to $0 from $0.3 billion at December 31, 2009 due to the sale of GM India in February 2010. We classified these Liabilities held for sale as long-term at December 31, 2009 because we received a promissory note in exchange for GM India that does not convert to cash within one year.

At December 31, 2010 our Postretirement benefits other than pensions liability of $9.3 billion increased by $0.6 billion (or 6.7%) primarily due to year-end remeasurement effects of $0.4 billion driven by discount rate reductions in the valuation assumptions and unfavorable foreign currency translation effect of $0.2 billion due to the strengthening of the Canadian dollar against the U.S dollar.

At December 31, 2010 our Pensions liability of $21.9 billion decreased by $5.2 billion (or 19.2%) primarily due to net contributions and benefit payments of $4.9 billion and favorable foreign currency translation effect of $0.3 billion. Gains from asset returns greater than expected were primarily offset by actuarial losses from discount rate decreases.

At December 31, 2010 Other liabilities and deferred income taxes of $13.0 billion decreased by $0.3 billion (or 1.9%) primarily due to: (1) decrease in plant closing liability in GMNA due to payments made in 2010 and employee related adjustments of $0.4 billion; (2) decrease due to tax related accruals classified to current of $0.3 billion; partially offset by (3) increase in deferred taxes of $0.4 billion.

Automotive Financing

Total GM Financial Assets

At December 31, 2010 Total GM Financial Assets of $10.9 billion was primarily composed of net automotive finance receivables of $8.2 billion, Goodwill of $1.3 billion related to the acquisition of AmeriCredit, including amounts recorded to reflect the changes in the valuation allowance on deferred tax assets that were not applicable to GM Financial on a stand-alone basis and restricted cash of $1.1 billion associated with GM Financial's credit facilities and securitization notes payable.

Total GM Financial Liabilities

At December 31, 2010 Total GM Financial Liabilities of $7.4 billion was primarily composed of securitization notes payable of $6.1 billion issued in the asset backed securities market and advances on credit facilities of $0.8 billion.

GMNA Total Net Sales and Revenue
(Dollars in Millions)

	Successor	Combined GM and Old GM	Successor	Predecessor		Year Ended 2010 vs. 2009 Change		Year Ended 2009 vs. 2008 Change	
	Year Ended December 31, 2010	Year Ended December 31, 2009	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008	Amount	%	Amount	%
Total net sales and revenue	$83,035	$56,617	$32,426	$24,191	$86,187	$26,418	46.7%	$(29,570)	(34.3)%

In the year ended December 31, 2010 Total net sales and revenue increased by $26.4 billion (or 46.7%) primarily due to: (1) increased wholesale volumes of $19.8 billion representing 873,000 vehicles (or 42.7%) due to an improving economy and successful recent vehicle launches of the Chevrolet Equinox, Chevrolet Cruze, GMC Terrain, Buick LaCrosse and Cadillac SRX; (2) favorable pricing of $2.9 billion due to decreased sales allowances partially offset by less favorable adjustments in the U.S. to the accrual for U.S. residual support programs for leased vehicles of $0.4 billion (favorable of $0.7 billion in 2010 compared to favorable of $1.1 billion in 2009); (3) favorable vehicle mix of $1.6 billion due to increased crossover and truck sales; (4) increased sales of $1.0 billion due to the acquisition of Nexteer and four domestic component manufacturing facilities; (5) favorable net foreign currency remeasurement effect of $0.8 billion primarily driven by the strengthening of the Canadian Dollar against the U.S. Dollar; and (6) increased revenues from OnStar of $0.3 billion primarily due to increased volumes.

In the year ended December 31, 2009 Total net sales and revenue decreased by $29.6 billion (or 34.3%) primarily due to: (1) decreased revenue of $36.7 billion related to volume reductions; partially offset by (2) improved pricing, lower sales incentives and improved lease residuals of $5.4 billion; and (3) favorable vehicle mix of $2.8 billion. The decrease in vehicle sales volumes was primarily due to tight credit markets, increased unemployment rates and a recession in North America, Old GM's well publicized liquidity issues and Chapter 11 Proceedings; partially offset by improved vehicle sales related to the CARS program and an increase in dealer showroom traffic and related vehicle sales in response to our new 60-Day satisfaction guarantee program.

GMNA Earnings Before Interest and Income Taxes
(Dollars in Millions)

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Income (loss) attributable to stockholders before interest and income taxes	$5,748	$(4,820)	$(11,092)	$(12,203)

The most significant factors which influence GMNA's profitability are industry volume (primarily U.S. seasonally adjusted annual rate (SAAR)) and market share. While not as significant as industry volume and market share, another factor affecting GMNA profitability is the relative mix of vehicles (cars, trucks, crossovers) sold. Contribution margin is a key indicator of product profitability. Contribution margin is defined as revenue less material cost, freight, and policy and warranty expense. Vehicles with higher selling prices generally have higher contribution margins. Trucks currently have a contribution margin of approximately 140% of our portfolio on a weighted-average basis. Crossover vehicles' contribution margins are in line with the overall portfolio on a weighted-average basis, and cars are approximately 60% of the portfolio on a weighted-average basis. As such, a sudden shift in consumer preference from trucks to cars would have an unfavorable effect on GMNA's EBIT and breakeven point. For example, a shift in demand such that industry market share for trucks deteriorated 10 percentage points and industry market share for cars increased by 10 percentage points, holding other variables constant, would have increased GMNA's breakeven point for the year ended December 31, 2010, as measured in terms of GMNA factory unit sales, by 200,000 vehicles. For the year ended December 31, 2010 our U.S. car market share was 14.3% and our U.S. truck market share was 23.0%. We continue to strive to achieve a product portfolio with more balanced contribution margins and less susceptibility to shifts in consumer demand.

GM

In the year ended December 31, 2010 EBIT was $5.7 billion and included: (1) favorable adjustments of $0.4 billion to restructuring reserves primarily due to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites and revisions to productivity initiatives; offset by (2) advertising and sales promotion expenses of $3.4 billion primarily to support media campaigns for our products; (3) administrative expenses of $2.0 billion; (4) selling and marketing expenses of $0.6 billion related to our dealerships; (5) foreign currency remeasurement losses of $0.5 billion primarily driven by the strengthening of the Canadian Dollar against the U.S. Dollar; (6) charges of $0.2 billion for a recall campaign on windshield fluid heaters; and (7) impairment charges related to product-specific tooling assets of $0.2 billion.

In the period July 10, 2009 through December 31, 2009 EBIT was a loss of $4.8 billion and included: (1) settlement loss of $2.6 billion related to the termination of our UAW hourly retiree medical plan and Mitigation Plan; (2) foreign currency remeasurement losses of $1.3 billion driven by the general strengthening of the Canadian Dollar versus the U.S. Dollar; (3) charges of $0.3 billion related to dealer wind-down costs for our Saturn dealers after plans to sell the Saturn brand and dealerships network were terminated; partially offset by (4) favorable adjustments in Automotive cost of sales of $0.7 billion due to the sell through of inventory acquired from Old GM at July 10, 2009. As required under U.S. GAAP, the acquired inventory was recorded at fair value as of the acquisition date using a market participant approach, which for work in process and finished goods inventory considered the estimated selling price of the inventory less the costs a market participant would incur to complete, sell and dispose of the inventory, which may be different than our costs, and the profit margin required for its completion and disposal effort.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT was a loss of $11.1 billion and included: (1) incremental depreciation charges of $2.1 billion recorded by Old GM prior to the 363 Sale for facilities included in GMNA's restructuring activities and for certain facilities that MLC retained; (2) curtailment loss of $1.7 billion upon the interim remeasurement of the U.S. hourly and U.S. salaried defined benefit pension plans as a result of the 2009 Special Attrition Programs and salaried workforce reductions; (3) U.S. hourly and salary separation program charges and Canadian restructuring activities of $1.1 billion; (4) foreign currency remeasurement losses of $0.7 billion driven by the general strengthening of the Canadian Dollar against the U.S. Dollar; (5) charges of $0.5 billion incurred for dealer wind-down costs; (6) derivative losses of $0.5 billion related to commodity and foreign currency exchange derivatives; (7) a charge of $1.1 billion related to the SUB and TSP, partially offset by a favorable adjustment of $0.7 billion primarily related to the suspension of the JOBS Program; (8) charges of $0.4 billion primarily for impairments for special-tooling and product related machinery and equipment; (9) charges of $0.3 billion related to obligations associated with various Delphi agreements; and (10) equity losses of $0.3 billion related to impairment charges at NUMMI and our proportionate share of losses at CAMI. MLC retained the investment in NUMMI, and CAMI has been consolidated since March 1, 2009.

In the year ended December 31, 2008 EBIT was a loss of $12.2 billion and included: (1) charges of $6.0 billion related to restructuring and other costs associated with Old GM's special attrition programs; (2) advertising and sales promotion expenses of $4.0 billion primarily to support media campaigns for our products; (3) administrative expenses of $2.8 billion; (4) expenses of $1.7 billion related to the salaried post-65 healthcare settlement; (5) selling and marketing expenses of $0.9 billion related to our dealerships; (6) losses of $0.8 billion related to commodity and foreign currency exchange derivatives; (7) impairment charges related to product-specific tooling assets of $0.4 billion; and (8) charges of $0.3 billion associated with the finalization of Old GM's negotiations with the CAW partially offset by (9) net curtailment gain of $4.9 billion related to the 2008 UAW Settlement Agreement; and (10) foreign currency remeasurement gains of $2.1 billion driven by the weakening of the Canadian Dollar against the U.S. Dollar.

(a) Vehicle sales primarily represent estimated sales to the ultimate customer. In countries where end customer data is not readily available other data sources, such as wholesale volumes, are used to estimate vehicle sales.

(b) The financial results (primarily Automotive sales and Automotive cost of sales) from Chevrolet brand products sold in GME are primarily reported as part of GMIO. Chevrolet brand products included in GME vehicle sales volume and market share data was 477,000 vehicles in the year ended December 31, 2010. Combined GM and Old GM Chevrolet brand products included in GME vehicle sales and market share data was 426,000 vehicles in the year ended December 31, 2009. Old GM Chevrolet brand products included in GME vehicle sales and market share data was 510,000 vehicles in the year ended December 31, 2008. Vehicle sales volume are reported in the geographical region they are sold.

(c) Our vehicle sales include Saab data through February 2010.

(d) Vehicle sales data may include rounding differences.

(e) Certain fleet sales that are accounted for as operating leases are included in vehicle sales at the time of delivery to the daily rental car companies.

GME Total Net Sales and Revenue
(Dollars in Millions)

	Successor	Combined GM and Old GM	Successor	Predecessor					
	Year Ended December 31, 2010	Year Ended December 31, 2009	July 10, 2009 Through December 31 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31 2008	Year Ended 2010 vs. 2009 Change Amount	%	Year Ended 2009 vs. 2008 Change Amount	%
Total net sales and revenue	$24,076	$24,031	$11,479	$12,552	$34,647	$45	0.2%	$(10,616)	(30.6)%

In the year ended December 31, 2010 Total net sales and revenue increased by $45 million (or 0.2%) primarily due to: (1) increased wholesale volumes of $0.5 billion representing 38,000 vehicles (or 3.1%) primarily due to 31,000 Buick Regals exported to the U.S., and increases in Turkey by 17,000 vehicles (or 68.9%), in Russia by 14,000 vehicles (or 48.9%), in the United Kingdom by 13,000 vehicles (or 5.0%), in the Netherlands by 12,000 vehicles (or 37.8%), in Portugal by 11,000 vehicles (or 103.0%), in Italy by 11,000 (or 9.0%), partially offset by a decrease in Germany of 113,000 vehicles (or 33.0%) driven by the end of the government subsidies program. The net wholesale volume increase was offset by a decrease in wholesale volumes throughout the region of $0.5 billion representing 17,000 vehicles due to the sale of Saab in February 2010; (2) favorable vehicle mix of $0.5 billion primarily due to the Opel Insignia and increased sales of other higher priced vehicles; (3) favorable vehicle pricing effect of $0.5 billion driven by launches of the Opel Astra and Opel Meriva; partially offset by (4) unfavorable net foreign currency translation effect of $0.7 billion, primarily due to the weakening of the Euro and British Pound against the U.S. Dollar; and (5) lower volumes of rental car activity and subsequent repurchases sold at auction of $0.2 billion.

In the year ended December 31, 2009 Total net sales and revenue decreased by $10.6 billion (or 30.6%) primarily due to: (1) decreased wholesale volumes of $4.8 billion representing 405,000 vehicles (or 24.8%) primarily due to decreases in the United Kingdom by 99,000 vehicles (or 26.7%), in Russia by 69,000 vehicles (or 70.2%), in Italy by 25,000 vehicles (or 16.8%), and exports to the U.S. by 33,000 vehicles (or 94.4%), partially offset by an increase in Germany by 65,000 vehicles (or 23.4%) driven by the government subsidy program. The decrease in vehicle sales volumes was primarily due to tight credit markets, increased unemployment rates, a recession in many international markets, Old GM's well publicized liquidity issues and Chapter 11 Proceedings and the announcement that Old GM was seeking a majority investor in Adam Opel; (2) unfavorable net foreign currency translation and transaction effect of $3.7 billion driven primarily by the strengthening of the U.S. Dollar against the Euro; (3) decreased sales revenue at Saab of $1.2 billion; (4) decreased powertrain and parts and accessories revenue of $0.8 billion; partially offset by (5) favorable vehicle pricing effect of $1.3 billion.

GM

In the year ended December 31, 2010 EBIT was a loss of $1.8 billion and included: (1) restructuring charges of $0.8 billion primarily related to separation programs announced in Belgium, Spain, Germany and the United Kingdom; (2) advertising and sales promotion expenses of $0.8 billion primarily related to support media campaigns for our products; (3) administrative expense of $0.6 billion; and (4) selling and marketing expenses of $0.5 billion related to our dealerships.

In the period July 10, 2009 through December 31, 2009 EBIT was a loss of $0.8 billion and included: (1) advertising and sales promotion expenses of $0.4 billion primarily related to support media campaigns for our products; (2) administrative expense of $0.3 billion; (3) selling and marketing expenses of $0.3 billion related to our dealerships; partially offset by (4) favorable adjustments in Automotive cost of sales of $0.5 billion due to the sell through of inventory acquired from Old GM at July 10, 2009. As required under U.S. GAAP, the acquired inventory was recorded at fair value as of the acquisition date using a market participant approach, which for work in process and finished goods inventory considered the estimated selling price of the inventory less the costs a market participant would incur to complete, sell and dispose of the inventory, which may be different than our costs, and the profit margin required for its completion and disposal effort.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT was a loss of $2.8 billion and included: (1) charges of $0.8 billion primarily related to the deconsolidation of Saab, which filed for reorganization protection under the laws of Sweden in February 2009; (2) incremental depreciation charges of $0.7 billion related to restructuring activities; (3) impairment charges of $0.2 billion related to product-specific tooling assets; and (4) operating losses of $0.2 billion related to Saab.

In the year ended December 31, 2008 EBIT was a loss of $2.6 billion and included: (1) advertising and sales promotion expenses of $1.3 billion primarily related to support media campaigns for our products; (2) administrative expense of $0.7 billion; (3) selling and marketing expenses of $0.7 billion related to our dealerships; (4) special tooling and product related machinery and equipment asset impairment charges of $0.5 billion; (5) goodwill impairment charges of $0.5 billion; and (6) restructuring charges of $0.3 billion primarily related to separation programs announced in Belgium, France, Germany and the United Kingdom.

Old GM Chevrolet brand products included in GME vehicle sales and market share data was 510,000 vehicles in the year ended December 31, 2008. Vehicle sales volume are reported in the geographical region they are sold.

(g) Includes SGM joint venture vehicle sales in China of 1.0 million vehicles, SGMW and FAW-GM joint venture vehicle sales in China of 1.3 million vehicles and HKJV joint venture vehicle sales in India of 110,000 vehicles in the year ended December 31, 2010. Combined GM and Old GM SGM joint venture vehicle sales in China of 708,000 vehicles and combined GM and Old GM SGMW and FAW-GM joint venture vehicle sales in China of 1.1 million vehicles in the year ended December 31, 2009. Old GM SGM joint venture vehicle sales in China of 432,000 and Old GM SGMW joint venture vehicle sales in China of 647,000 vehicles in the year ended December 31, 2008. We do not record revenue from our joint ventures' vehicle sales.

(h) The joint venture agreements with SGMW (44%) and FAW-GM (50%) allow for significant rights as a member as well as the contractual right to report SGMW and FAW-GM joint venture vehicle sales in China as part of our global market share.

GMIO Total Net Sales and Revenue
(Dollars in Millions)

	Successor	Combined GM and Old GM	Successor	Predecessor		Year Ended 2010 vs. 2009 Change		Year Ended 2009 vs. 2008 Change	
	Year Ended December 31, 2010	Year Ended December 31, 2009	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31 2008	Amount	%	Amount	%
Total net sales and revenue	$21,470	$14,785	$8,567	$6,218	$24,050	$6,685	45.2%	$(9,265)	38.5%

In the year ended December 31, 2010 Total net sales and revenue increased by $6.7 billion (or 45.2%) primarily due to: (1) increased wholesale volumes of $3.9 billion representing 118,000 vehicles (or 11.8%) primarily in the Middle East by 35,000 vehicles (or 28.2%) and in GM Daewoo by 100,000 vehicles (or 21.1%). The primary driver for the increase in wholesale volumes was the global economic recovery, together with the effect of launches of the Chevrolet Cruze and Chevrolet Spark throughout the region; (2) favorable net foreign currency translation effect of $0.9 billion, primarily due to the strengthening of the Korean Won, Australian Dollar and South African Rand against the U.S. Dollar; (3) favorable vehicle mix of $0.8 billion driven by the launch of the Chevrolet Cruze and increased sales of sports utility vehicles; (4) favorable vehicle pricing effect of $0.1 billion, primarily due to higher pricing on new model launches at GM Daewoo; and (5) derivative losses of $0.8 billion in the period January 1, 2009 through July 9, 2009, that did not recur in 2010, primarily driven by the weakening of the Korean Won against the U.S. Dollar in that period. Subsequent to July 10, 2009, all gains and losses on non-designated derivatives were recorded in Interest income and other non-operating income, net.

In the year ended December 31, 2009 Total net sales and revenue decreased by $9.3 billion (or 38.5%) primarily due to: (1) decreased wholesale volumes and lower exports of $9.1 billion representing 460,000 vehicles (or 31.6%) primarily in GM Daewoo by 247,000 vehicles (or 34.2%), in the Middle East by 103,000 vehicles (or 45.4%), in Australia by 59,000 vehicles (or 32.6%) and in Thailand by 53,000 vehicles (or 69.7%). The decrease in wholesale volumes was primarily due to tight credit markets, increased unemployment rates and Old GM's well publicized liquidity issues and Chapter 11 Proceedings. These unfavorable trends were partially offset by many countries lowering interest rates and initiating programs to provide credit to consumers, which had a positive effect on vehicle sales volumes; (2) unfavorable net foreign currency translation effect of $1.0 billion, primarily due to the strengthening of the U.S. Dollar against the Korean Won and Australian Dollar in 2009, partially offset by (3) decreased derivative losses of $0.9 billion at GM Daewoo; and (4) favorable vehicle mix of $0.3 billion driven by launches of new vehicle models at GM Daewoo.

The vehicle sales related to our China and India (GM India was deconsolidated effective February 2010) joint ventures is not reflected in Total net sales and revenue. The results of our joint ventures are recorded in Equity income, net of tax.

Income (loss) attributable to stockholders before interest and income taxes	$2,262	$789	$(486)	$(555)

GM

In the year ended December 31, 2010 EBIT was $2.3 billion and included: (1) Equity income, net of tax, of $1.3 billion from the operating results of our China JVs; (2) favorable change in fair value of $0.1 billion from derivatives driven by the stronger Korean Won versus the U.S. Dollar; partially offset by (3) administrative expenses of $0.8 billion; (4) advertising and sales promotion expenses of $0.6 billion primarily to support media campaigns for our products; (5) unfavorable non-controlling interest attributable to minority shareholders of GM Daewoo and General Motors Egypt (GM Egypt) of $0.3 billion; and (6) selling and marketing expenses of $0.2 billion related to labor costs in the selling department across GMIO and also costs incurred in the establishment of the Korean direct dealership network.

In the period July 10, 2009 through December 31, 2009 EBIT was $0.8 billion and included: (1) favorable depreciation of fixed assets of $0.3 billion resulting from lower balances; and (2) favorable adjustments of $0.1 billion in Automotive cost of sales due to the sell through of inventory acquired from Old GM at July 10, 2009. As required under U.S. GAAP, the acquired inventory was recorded at fair value as of the acquisition date using a market participant approach, which for work in process and finished goods inventory considered the estimated selling price of the inventory less the costs a market participant would incur to complete, sell and dispose of the inventory, which may be different than our costs, and the profit margin required for its completion and disposal effort; partially offset by (3) administrative expenses of $0.5 billion; (4) advertising and sales promotion expenses of $0.3 billion primarily to support media campaigns for our products; (5) selling and marketing expenses of $0.1 billion; and (6) unfavorable amortization of $0.1 billion related to intangible assets.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT was a loss of $0.5 billion and included: (1) derivative losses of $0.8 billion at GM Daewoo; (2) administrative expenses of $0.4 billion; (3) advertising and sales promotion expenses of $0.2 billion primarily to support media campaigns for our products; partially offset by (4) Equity income, net of tax, of $0.3 billion primarily from the operating results of our China JVs; and (5) favorable effect of $0.1 billion related to the net loss attributable to minority shareholders of GM Daewoo.

In the year ended December 31, 2008 EBIT was a loss of $0.6 billion and included: (1) derivative losses of $1.7 billion at GM Daewoo; (2) administrative expenses of $0.9 billion; (3) advertising and sales promotion expenses of $0.8 billion primarily to support media campaigns for our products; partially offset by (4) Equity income, net of tax, of $0.4 billion primarily from the operating results of our China JVs; (5) selling and marketing expenses of $0.2 billion; and (6) favorable effect of $0.1 billion related to the net loss attributable to minority shareholders of GM Daewoo.

GMSA Total Net Sales and Revenue
(Dollars in Millions)

	Successor	Combined GM and Old GM	Successor	Predecessor					
	Year Ended December 31, 2010	Year Ended December 31, 2009	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008	Year Ended 2010 vs. 2009 Change Amount	%	Year Ended 2009 vs. 2008 Change Amount	%
Total net sales and revenue	$15,379	$13,135	$7,399	$5,736	$14,522	$2,244	17.1%	$(1,387)	(9.6)%

In the year ended December 31, 2010 Total net sales and revenue increased by $2.2 billion (or 17.1%) primarily due to: (1) increased wholesale volumes of $2.2 billion representing 170,000 vehicles (or 19.1%) primarily in Brazil by 72,000 vehicles or (11.7%), in Argentina by 32,000 vehicles (or 41.4%) and in Colombia by 21,000 vehicles (or 32.9%) driven by launches of the Chevrolet Cruze and Chevrolet Spark throughout the region; (2) favorable net foreign currency translation effect of $1.0 billion, primarily due to the strengthening of major currencies in 2010 against the U.S. Dollar such as the Brazilian Real and Colombian Peso; (3) favorable vehicle pricing effect of $0.3 billion, primarily in Venezuela driven by the hyperinflationary economy; partially offset by (4) devaluation of the BsF in Venezuela of $0.9 billion; and (5) unfavorable vehicle mix of $0.4 billion driven by increased sales of the Chevrolet Spark and Chevrolet Aveo and decreased sales of the Chevrolet Meriva, Vectra and S-10.

In the year ended December 31, 2009 Total net sales and revenue decreased by $1.4 billion (or 9.6%) due to: (1) decreased wholesale volumes of $2.2 billion representing 30,000 vehicles (or 3.3%) primarily in Venezuela by 37,000 vehicles (or 44.1%), in Argentina by 19,000 vehicles (or 19.8%) and in Colombia by 13,000 vehicles (or 16.6%); partially offset by (2) favorable pricing effect of $0.4 billion primarily due to price increases in Venezuela driven by the hyperinflationary economy; and (3) increased wholesale volumes in Brazil of $0.2 billion representing 56,000 vehicles (or 10.0%).

Income (loss) attributable to stockholders before interest and income taxes	$818	$417	$(454)	$1,076

GM

In the year ended December 31, 2010 EBIT was $0.8 billion and included: (1) foreign currency transaction gains of $0.3 billion primarily due to foreign currency exchanges done at the preferential rate in Venezuela; offset by (2) administrative expenses of $0.5 billion; (3) advertising and sales promotion expenses of $0.3 billion primarily to support media campaigns for our products; and (4) selling and marketing expenses of $0.1 billion.

In the period July 10, 2009 through December 31, 2009 EBIT was $0.4 billion and included: (1) administrative expenses of $0.2 billion; (2) advertising and sales promotion expenses of $0.1 billion; and (3) selling and marketing expenses of $0.1 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT was a loss of $0.5 billion and included: (1) foreign currency transaction losses of $0.5 billion primarily due to foreign currency exchanges processed outside CADIVI in Venezuela; (2) administrative expenses of $0.2 billion; (3) advertising and sales promotion expenses of $0.1 billion; and (4) selling and marketing expenses of $0.1 billion.

In the year ended December 31, 2008 EBIT was $1.1 billion and included: (1) administrative expenses of $0.4 billion; (2) foreign currency transaction losses of $0.3 billion primarily due to foreign currency exchanges processed outside CADIVI in Venezuela; (3) advertising and sales promotion expenses of $0.2 billion; and (4) selling and marketing expenses of $0.1 billion.

GM Financial
(Dollars in Millions)

Three Months Ended December 31, 2010

	Successor
	Three Months Ended December 31, 2010
Total revenue	$281
Income before income taxes	$129

In the three months ended December 31, 2010 Total revenue included finance charge income of $264 million and other income of $17 million. The effective yield on GM Financial's finance receivables was 12.1% for the three months ended December 31, 2010. The effective yield represents finance charges and fees recorded in earnings and the accretion of the purchase accounting premium during the period as a percentage of average finance receivable.

Net margin is the difference between finance charge income and other income earned on GM Financial's finance receivables and the cost to fund the receivables as well as the cost of debt incurred for general corporate purposes.

The following table summarizes GM Financial's net margin and as a percentage of average finance receivables (dollars in millions):

	Successor	
	Three Months Ended December 31, 2010	
Finance charge income	$264	12.1%
Other income	17	0.8%
Interest expense	(37)	(1.7)%
Net GM Financial margin	$244	11.2%

Income Before Income Taxes

In the three months ended December 31, 2010 results included: (1) Total revenue of $281 million; partially offset by (2) operating and leased vehicle expenses of $73 million; (3) interest expense of $37 million; (4) provision for loan losses of $26 million; and (5) acquisition expenses of $16 million. GM Financial's operating expenses are primarily related to personnel costs that include base salary and wages, performance incentives and benefits as well as related employment taxes. Provisions for loan losses are charged to income to bring the allowance for loan losses to a level which management considers adequate to absorb probable credit losses inherent in the portfolio of finance receivables originated since October 1, 2010. Interest expense represents interest paid on GM Financial's warehouse credit facilities, securitization notes payable, other unsecured debt and the amortization of the purchase accounting premium.

Average debt outstanding in the three months ended December 31, 2010 was $7.3 billion and the effective rate of interest expensed was 2.0%.

Corporate
(Dollars in Millions)

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Total net sales and revenue	$ 134	$141	$ 327	$ 1,206
Net income (loss) attributable to stockholders	$(877)	$176	$123,902	$(16,677)

Nonsegment operations are classified as Corporate. Corporate includes investments in Ally Financial, certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures, certain nonsegment specific revenues and expenses, including costs related to the Delphi Benefit Guarantee Agreements and a portfolio of automotive retail leases.

Corporate Total Net Sales and Revenue

(Dollars in Millions)

	Successor	Combined GM and Old GM	Successor	Predecessor		Year Ended 2010 vs. 2009 Change		Year Ended 2009 vs. 2008 Change	
	Year Ended December 31, 2010	Year Ended December 31, 2009	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008	Amount	%	Amount	%
Total net sales and revenue	$134	$468	$141	$327	$1,206	$(334)	(71.4)%	$(738)	(61.2)%

Total net sales and revenue includes lease financing revenue from a portfolio of automotive retail leases.

In the year ended December 31, 2010 Total net sales and revenue decreased by $0.3 billion (or 71.4%) primarily due to decreased lease financing revenue related to the liquidation of the portfolio of automotive leases. Average outstanding automotive retail leases on-hand for GM and combined GM and Old GM were 7,000 and 73,000 for the years ended December 31, 2010 and 2009.

In the year ended December 31, 2009 Total net sales and revenue decreased by $0.7 billion (or 61.2%) primarily due to decreased lease financing revenue of $0.7 billion related to the liquidation of the portfolio of automotive retail leases. Average outstanding leases on-hand for combined GM and Old GM were 73,000 and 236,000 for the years ended December 31, 2009 and 2008.

Net income (loss) attributable to stockholders	$(877)	$176	$123,902	$(16,677)

GM

In the year ended December 31, 2010 results included: (1) Interest expense of $1.1 billion comprised of interest expense of $0.3 billion on the UST Loans, Canadian Loan and VEBA Notes, interest expense of $0.3 billion on GMNA debt, and interest expense of $0.4 billion on GMIO and GMSA debt; (2) income tax expense of $0.6 billion primarily related to tax expense attributable to profitable entities that do not have full valuation allowances recorded against deferred tax assets; (3) administrative expenses of $0.4 billion primarily related to consultants and services provided by outside companies; partially offset by (4) interest income of $0.4 billion earned primarily on marketable securities held in GMSA; (5) the reversal of our $0.2 billion liability for the Adjustment Shares; (6) a gain on extinguishment of debt of $0.2 billion related to our repayment of the outstanding amount of VEBA Notes of $2.8 billion; and (7) dividends of $0.1 billion on our investment in Ally Financial preferred stock.

In the period July 10, 2009 through December 31, 2009 results included: (1) foreign currency transaction gains of $0.3 billion due to the appreciation of the Canadian Dollar versus the U.S. Dollar; and (2) interest expense of $0.7 billion composed of interest expense of $0.3 billion on UST Loans and interest expense of $0.2 billion on GMIO debt.

Old GM

In the period January 1, 2009 through July 9, 2009 results included: (1) centrally recorded Reorganization gains, net of $128.2 billion which is more fully discussed in Note 2 to the consolidated financial statements; (2) amortization of discounts related to the UST Loan, EDC Loan and DIP Facilities of $3.7 billion; (3) a gain recorded on the UST Ally Financial Loan of $2.5 billion upon the UST's conversion of the UST Ally Financial Loan for Class B Common Membership Interests in Ally Financial, which gain resulted from the difference between the fair value and the carrying amount of the Ally Financial equity interests given to the UST in exchange for the UST Ally Financial Loan. The gain was partially offset by Old GM's proportionate share of Ally Financial's loss from operations of $1.1 billion; (4) a loss related to the extinguishment of the UST Ally Financial Loan of $2.0 billion when the UST exercised its option to convert outstanding amounts into shares of Ally Financial's Class B Common Membership Interests; partially offset by (5) a gain on extinguishment of debt of $0.9 billion related to an amendment to Old GM's U.S. term loan; (6) interest expense of $0.8 billion on unsecured debt balances; (7) interest expense of $0.4 billion on the UST Loan Facility; and (8) interest expense of $0.2 billion on GMIO and GMSA debt.

In the year ended December 31, 2008 results included: (1) impairment charges of $7.1 billion related to Old GM's investment in Ally Financial's Common Membership Interests; (2) charges of $4.8 billion related to the Delphi Benefit Guarantee Agreements; (3) interest expense of $2.5 billion primarily composed of interest expense of $1.6 billion on Old GM's unsecured bonds, interest expense of $0.4 billion on Old GM's Euro bonds and cross-currency swaps to hedge foreign exchange rate exposure and interest expense of $0.1 billion on Old GM's secured revolving credit facility and U.S. term loan; (4) income tax expense of $1.8 billion related to valuation allowances against deferred tax assets in South Korea, the United Kingdom, Spain, and Australia; (5) impairment charges of $1.0 billion related to Old GM's investment in Ally Financial's Preferred Membership Interests; (6) servicing fees, interest, and depreciation expenses of $1.0 billion on the portfolio of automotive retail leases; partially offset by (7) global interest income of $0.6 billion driven primarily by investments in GMSA and GME.

Liquidity and Capital Resources

Liquidity Overview

We believe that our current level of cash, marketable securities and availability under our secured revolving credit facility will be sufficient to meet our liquidity needs. However, we expect to have substantial cash requirements going forward, which we plan to fund through available liquidity and cash flow from operations. Our known material future uses of cash include, among other possible demands: (1) pension and OPEB payments; (2) continuing capital expenditures; (3) spending to implement long-term cost savings and restructuring plans such as restructuring our Opel/Vauxhall operations and potential capacity reduction programs; (4) reducing our overall debt levels; (5) increase in accounts receivable due to the termination of a wholesale advance agreement with Ally Financial; and (6) certain South American income and indirect tax-related administrative and legal proceedings may require that we deposit funds in escrow or make payments which may range from $0.8 billion to $1.0 billion.

Our liquidity plans are subject to a number of risks and uncertainties, including those described in the section of this report entitled "Risk Factors," some of which are outside our control. Macro-economic conditions could limit our ability to successfully execute our business plans and, therefore, adversely affect our liquidity plans.

Recent Initiatives

We continue to monitor and evaluate opportunities to optimize our liquidity position including actively evaluating the possible sale of non-core cost or equity method investments or other positions which could be significantly positive to our cash flow and/or earnings in the near-term.

In the year ended December 31, 2010 we made net investments of $5.4 billion in highly liquid marketable securities instruments with maturities exceeding 90 days. Previously, these funds would have been invested in short-term instruments less than 90 days and classified as a component of Cash and cash equivalents. Investments in these longer-term securities will increase the interest we earn on these investments. We continue to monitor our investment mix and may reallocate investments based on business requirements.

In June 2010 the German federal government notified us of its decision not to provide loan guarantees to Opel/Vauxhall. As a result we have decided to fund the requirements of Opel/Vauxhall internally. Opel/Vauxhall subsequently withdrew all applications for government loan guarantees from European governments. Through September 2010 we committed up to a total of Euro 3.3 billion (equivalent to $4.2 billion when committed) to fund Opel/Vauxhall's restructuring and ongoing cash requirements. This funding includes cumulative lending commitments combined into a Euro 2.6 billion intercompany facility and equity commitments of Euro 700 million.

In October 2010 we completed our acquisition of AmeriCredit for cash of approximately $3.5 billion and changed the name from AmeriCredit to GM Financial. We funded the transaction using cash on hand.

The repayment of debt remains a key strategic initiative. We continue to evaluate potential debt repayments prior to maturity. Any such repayments may negatively affect our liquidity in the short-term. In 2010 GM Daewoo repaid in full and retired its $1.2 billion revolving credit facility. In October 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion. In July 2010 our Russian subsidiary repaid a loan facility of $150 million to cure a technical default. In March and April 2010 we repaid the remaining amounts owed under the UST Loans of $5.7 billion and Canadian Loan of $1.3 billion.

As described more fully below in the section entitled "Secured Revolving Credit Facility" in October 2010 we entered into a $5.0 billion secured revolving credit facility. While we do not believe the amounts available under the secured revolving credit facility are needed to fund operating activities, the facility is expected to provide additional liquidity and financing flexibility.

In November and December 2010 we issued 100 million shares of our Series B Preferred Stock. We received net proceeds from the Series B Preferred Stock offering of $4.9 billion. Refer to the section below entitled "Series B Preferred Stock Issuance" for additional detail.

In December 2010 we purchased 84 million shares of our Series A Preferred Stock, which accrued cumulative dividends at a 9.0% annual rate, from the UST for a purchase price of $2.1 billion, which was equal to 102% of their aggregate liquidation amount pursuant to an agreement that we entered into with the UST in October 2010. We purchased the Series A Preferred Stock from the UST on the first dividend payment date for the Series A Preferred Stock after the completion of our common stock offering, December 15, 2010.

We made a voluntary contribution to our U.S. hourly and salaried defined benefit pension plans of $4.0 billion of cash in December 2010 and 61 million shares of our common stock valued at $2.2 billion for funding purposes in January 2011.

Under wholesale financing arrangements, our U.S. dealers typically borrow money from financial institutions to fund their vehicle purchases from us. Effective January 2011 we terminated a wholesale advance agreement which provided for accelerated receipt of payments made by Ally Financial on behalf of our U.S. dealers pursuant to Ally Financial's wholesale financing arrangements with dealers. Similar modifications were made in Canada. The wholesale advance agreements cover the period for which vehicles are in transit between assembly plants and dealerships. We will no longer receive payments in advance of the date vehicles purchased by dealers are scheduled to be delivered, resulting in an average increase of approximately $2.0 billion to our accounts receivable balance, depending on sales volumes and certain other factors, and the related costs under the arrangements were eliminated.

In January 2011 we withdrew our application for loans available under Section 136 of the EISA. This decision is consistent with our stated goal to minimize our outstanding debt.

Automotive

Available Liquidity

Available liquidity includes cash balances and marketable securities. At December 31, 2010 available liquidity was $26.6 billion, not including funds available under credit facilities of $5.9 billion or in the Canadian HCT escrow account of $1.0 billion. The amount of available liquidity is subject to intra-month and seasonal fluctuations and includes balances held by various business units and subsidiaries worldwide that are needed to fund their operations.

We manage our liquidity using U.S. cash investments, cash held at our international treasury centers and available liquidity at consolidated overseas subsidiaries. The following table summarizes our liquidity (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Cash and cash equivalents	$21,061	$22,679
Marketable securities	5,555	134
Available liquidity	26,616	22,813
Available under credit facilities	5,919	618
Total available liquidity	32,535	23,431
UST and HCT escrow accounts (a)	1,008	13,430
Total liquidity including UST and HCT escrow accounts	$33,543	$36,861

(a) Classified as Restricted cash and marketable securities. Refer to Note 15 to our consolidated financial statements for additional information on the classification of the escrow accounts. The remaining funds held in the UST escrow account were released in April 2010 following the repayment of the UST Loans and Canadian Loan.

GM

Total available liquidity increased by $9.1 billion in the year ended December 31, 2010 primarily due to positive cash flows from operating activities of $6.6 billion, investing activities less net marketable securities acquisitions of $6.1 billion and a $5.3 billion increase in amounts available under credit facilities, which were partially offset by negative cash flows from financing activities of $9.3 billion.

Total available liquidity increased by $2.5 billion in the period July 10, 2009 through December 31, 2009 due to positive cash flows from operating, financing and investing activities of $3.6 billion which were partially offset by a $1.1 billion reduction in our borrowing capacity on certain credit facilities. The decrease in credit facilities is primarily attributable to the November 2009 extinguishment of the German Facility.

Old GM

Total available liquidity increased by $6.0 billion in the period January 1, 2009 through July 9, 2009 due to positive cash flows from financing activities partially offset by negative cash flow from operating and investing activities for a net cash flow of $4.8 billion as well as an increase of $1.1 billion in available borrowing capacity under credit facilities. This was partially offset by repayments of secured lending facilities.

VEBA Assets

We transferred all of the remaining VEBA assets along with other consideration to the New VEBA within 10 business days after December 31, 2009, in accordance with the terms of the 2009 UAW Retiree Settlement Agreement. The VEBA assets were not consolidated after the settlement was recorded at December 31, 2009 because we did not hold a controlling financial interest in the entity that held such assets at that date. Under the terms of the 2009 UAW Retiree Settlement Agreement we had an obligation for VEBA Notes of $2.5 billion and accreted interest, at an implied interest rate of 9.0% per annum. In October 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion.

Under the terms of the 2009 UAW Retiree Settlement Agreement, we are released from UAW retiree healthcare claims incurred after December 31, 2009. All obligations of ours, the New Plan and any other entity or benefit plan of ours for retiree medical benefits for the class and the covered group arising from any agreement between us and the UAW terminated at December 31, 2009. Our obligations to the New Plan and the New VEBA are limited to the terms of the 2009 UAW Retiree Settlement Agreement.

Series B Preferred Stock Issuance

In November and December 2010 we issued 100 million shares of our Series B Preferred Stock. Each share of our Series B Preferred Stock is convertible at the option of the holder at any time prior to December 1, 2013 into 1.2626 shares of our common stock, and each share of Series B Preferred Stock will mandatorily convert on December 1, 2013 into a number of shares of our common stock ranging from 1.2626 to 1.5152 shares depending on the applicable market value of our common stock. The applicable market value of our common stock means the average of the closing prices per share of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the mandatory conversion date. The conversion ratios for optional and mandatory conversions are subject to anti-dilution, make-whole and other adjustments. We received net proceeds from the issuances of $4.9 billion. We used these proceeds, along with $1.2 billion of cash on hand, to purchase our Series A Preferred Stock held by the UST in the amount of $2.1 billion and made a cash contribution to our U.S. hourly and salary pension plans in an amount of $4.0 billion.

UST Loans and Canadian Loan

UST Loans

Old GM received total proceeds of $19.8 billion ($15.8 billion subsequent to January 1, 2009, including $361 million under the U.S. government sponsored warranty program) from the UST under the UST Loan Agreement entered into on December 31, 2008. In connection with the Chapter 11 Proceedings, Old GM obtained additional funding of $33.3 billion from the UST and EDC under its DIP Facility.

On July 10, 2009 we entered into the UST Credit Agreement and assumed debt of $7.1 billion which Old GM incurred under its DIP Facility. Proceeds of the UST Credit Agreement of $16.4 billion were deposited in escrow to be distributed to us at our request upon certain conditions as outlined in the UST Credit Agreement. Immediately after entering into the UST Credit Agreement, we made a partial repayment due to the termination of the U.S. government sponsored warranty program, reducing the UST Loans principal balance to $6.7 billion.

In November 2009 we signed an amendment to the UST Credit Agreement to provide for quarterly repayments of our UST Loans. Under this amendment, we agreed to make quarterly payments of $1.0 billion to the UST. In December 2009 and March 2010 we made quarterly payments of $1.0 billion on the UST Loans. In April 2010, we used funds from our escrow account to repay in full the outstanding amount of the UST Loans of $4.7 billion. The UST Loans were repaid prior to maturity. Amounts borrowed under the UST Credit Agreement may not be reborrowed.

At December 31, 2009 $12.5 billion of the proceeds of the UST Credit Agreement remained deposited in escrow. Any unused amounts in escrow on June 30, 2010 were required to be used to repay the UST Loans and Canadian Loan on a pro rata basis if the loans were not paid in full. At December 31, 2009 the UST Loans and Canadian Loan were classified as short-term debt based on these terms.

Following the repayment of the UST Loans and the Canadian Loan, the remaining funds that were held in escrow became unrestricted and the availability of those funds is no longer subject to the conditions set forth in the UST Credit Agreement.

The UST Loans accrued interest equal to the greater of the three month London Interbank Offering Rates (LIBOR) rate or 2.0%, plus 5.0%, per annum, unless the UST determined that reasonable means did not exist to ascertain the LIBOR rate or that the LIBOR rate would not adequately reflect the UST's cost to maintain the loan. In such a circumstance, the interest rate would have been the greatest of: (1) the prime rate plus 4%; (2) the federal funds rate plus 4.5%; or (3) the three month LIBOR rate (which will not be less than 2%) plus 5%. We were required to prepay the UST Loans on a pro rata basis (among the UST Loans, VEBA Notes and Canadian Loan), in an amount equal to the amount of net cash proceeds received from certain asset dispositions, casualty events, extraordinary receipts and the incurrence of certain debt. At December 31, 2009 the UST Loans accrued interest at 7.0%.

While we have repaid in full our indebtedness under the UST Credit Agreement, the executive compensation and corporate governance provisions of Section 111 of the Emergency Economic Stabilization Act of 2008 (EESA), including the Interim Final Rule implementing Section 111 (Interim Final Rule), will continue to apply to us for the period specified in the EESA and the Interim Final Rule. Certain of the covenants in the UST Credit Agreement will continue to apply to us until the earlier to occur of (1) our ceasing to be a recipient of Exceptional Financial Assistance, as determined pursuant to the Interim Final Rule or any successor or final rule, or (2) UST ceasing to own any direct or indirect equity interests in us, and impose obligations on us with respect to, among other things, certain expense policies, executive privileges and compensation requirements.

The UST Credit Agreement includes a vitality commitment which requires us to use our commercially reasonable best efforts to ensure that our manufacturing volume conducted in the United States is consistent with at least 90% of the projected manufacturing level (projected manufacturing level for this purpose being 1,934,000 units in 2011, 1,998,000 units in 2012, 2,156,000 units in 2013 and 2,260,000 units in 2014), absent a material adverse change in our business or operating environment which would make the commitment non-economic. In the event that such a material adverse change occurs, the UST Credit Agreement provides that we will use our commercially reasonable best efforts to ensure that the volume of United States manufacturing is the minimum variance from the projected manufacturing level that is consistent with good business judgment and the intent of the commitment. This covenant survived our repayment of the UST Loans and remains in effect through December 31, 2014 unless the UST receives total proceeds from debt repayments, dividends, interest, preferred stock redemptions and common stock sales equal to the total dollar amount of all UST invested capital.

UST invested capital totaled $49.5 billion, representing the cumulative amount of cash received by Old GM from the UST under the UST Loan Agreement and the DIP Facility, excluding $361 million which the UST loaned to Old GM under the warranty program and which was repaid on July 10, 2009. This balance also did not include amounts advanced under the UST Ally Financial Loan as the UST exercised its option to convert this loan into Ally Financial Preferred Membership Interests previously held by Old GM in May 2009. At December 31, 2010 the UST had received cumulative proceeds of $23.1 billion from debt repayments, interest payments, Series A Preferred Stock dividends, sales of our common stock and Series A Preferred Stock redemption. The UST's invested capital less proceeds received totals $26.4 billion.

To the extent we fail to comply with any of the covenants in the UST Credit Agreement that continue to apply to us, the UST is entitled to seek specific performance and the appointment of a court-ordered monitor acceptable to the UST (at our sole expense) to ensure compliance with those covenants.

Refer to Note 19 to our consolidated financial statements for additional details on the UST Loans.

Canadian Loan

On July 10, 2009, through our wholly-owned subsidiary GMCL, we entered into the Canadian Loan Agreement and assumed a CAD $1.5 billion (equivalent to $1.3 billion when entered into) term loan maturing on July 10, 2015. In November 2009 we signed an amendment to the Canadian Loan Agreement to provide for quarterly repayments of the Canadian Loan. Under this amendment, we agreed to make quarterly repayments of $192 million to EDC. In December 2009 and March 2010 we made quarterly payments of $192 million and $194 million on the Canadian Loan. In April 2010, GMCL repaid in full the outstanding amount of the Canadian Loan of $1.1 billion. The Canadian Loan was repaid prior to maturity. GMCL cannot reborrow under the Canadian Loan Agreement. The Canadian Loan accrued interest at the greater of the three-month Canadian Dealer Offered Rate or 2.0%, plus 5.0% per annum. Accrued interest was payable quarterly. At December 31, 2009 the Canadian Loan accrued interest at 7.0%.

The Canadian Loan Agreement and related agreements include certain covenants requiring GMCL to meet certain annual Canadian production volumes expressed as ratios to total overall production volumes in the U.S. and Canada and to overall production volumes in the North American Free Trade Agreement (NAFTA) region. The targets cover vehicles and specified engine and transmission production in Canada. These agreements also include covenants on annual GMCL capital expenditures and research and development expenses. In the event a material adverse change occurs that makes the fulfillment of these covenants non-economic (other than a material adverse change caused by the actions or inactions of GMCL), the lender will consider adjustments to mitigate the business effect of the material adverse change. These covenants survive GMCL's repayment of the loans and certain of the covenants have effect through December 31, 2016.

Refer to Note 19 to our consolidated financial statements for additional details on the Canadian Loan.

The following table summarizes the total funding and funding commitments we repaid to the U.S. and Canadian governments in the year ended December 31, 2010 (dollars in millions):

	Successor		
	January 1, 2010 Beginning Balance	Change in Funding and Funding Commitments (a)	December 31, 2010 Total Obligation
Description of Funding Commitment			
UST Loan	$5,712	$(5,712)	$—
Canadian Loan	1,233	(1,233)	—
Total	$6,945	$(6,945)	$—

(a) Includes an increase due to a foreign currency exchange loss on the Canadian loan of $56 million.

The following table summarizes the total funding and funding commitments we repaid to the U.S. and Canadian governments in the period July 10, 2009 through December 31, 2009 (dollars in millions):

	Successor		
	July 10, 2009 Beginning Balance	Change in Funding and Funding Commitments (a)	December 31, 2009 Total Obligation
Description of Funding Commitment			
UST Loan (b)	$7,073	$(1,361)	$5,712
Canadian Loan	1,292	(59)	1,233
Total	$8,365	$(1,420)	$6,945

(a) Includes an increase due to a foreign currency exchange loss on the Canadian Loan of $133 million.

(b) Includes $361 million which the UST loaned to Old GM under the warranty program and which was assumed by GM and repaid on July 10, 2009.

The following table summarizes the total funding and funding commitments Old GM received from the U.S. and Canadian governments and the additional notes Old GM issued in the period December 31, 2008 through July 9, 2009 (dollars in millions):

	Predecessor		
	December 31, 2008 Through July 9, 2009		
	Funding and Funding Commitments	Additional Notes Issued (a)	Total Obligation
Description of Funding Commitment			
UST Funding			
UST Loan Agreement	$19,761	$1,172	$20,933
DIP Facility — UST (b)	30,100	2,008	32,108
Total UST Funding (c)	49,861	3,180	53,041
EDC Funding			
EDC funding (d)	6,294	161	6,455
DIP Facility — EDC	3,200	213	3,413
Total EDC Funding	9,494	374	9,868
Total UST and EDC Funding	$59,355	$3,554	$62,909

(a) Old GM did not receive any proceeds from the issuance of these promissory notes, which were issued as additional compensation to the UST and EDC.

(b) Includes debt of $361 million, which the UST loaned to Old GM under the warranty program.

(c) UST invested capital totaled $49.5 billion, representing the cumulative amount of cash received by Old GM from the UST under the UST Loan Agreement and the DIP Facility, excluding $361 million which the UST loaned to Old GM under the warranty program and which was repaid on July 10, 2009. This balance also does not include amounts advanced under the UST GMAC Loan as the UST exercised its option to convert this loan into GMAC Preferred Membership Interests previously held by Old GM in May 2009.

(d) Includes approximately $2.4 billion from the EDC Loan Facility received in the period January 1, 2009 through July 9, 2009 and funding commitments of CAD $4.5 billion (equivalent to $3.9 billion when entered into) that were immediately converted into our equity. This funding was received on July 15, 2009.

The following table summarizes the effect of the 363 Sale on the amounts owed to the UST and the EDC under the UST Loan Agreement, the DIP Facility and the EDC Loan Facility (dollars in millions):

	363 Sale		
	Total Obligation	Effect of 363 Sale	GM Obligation Subsequent to 363 Sale
Description of Funding Commitment			
Total UST Funding	$53,041	$(45,968)	$7,073
Total EDC Funding	9,868	(8,576)	1,292
Total UST and EDC Funding	$62,909	$(54,544)	$8,365

Secured Revolving Credit Facility

In October 2010 we entered into a five year, $5.0 billion secured revolving credit facility, which includes a letter of credit sub-facility of up to $500 million. While we do not believe that we will draw on the secured revolving credit facility to fund operating activities, the facility is expected to provide additional liquidity and financing flexibility. Availability under the secured revolving credit facility is subject to borrowing base restrictions.

Our obligations under the secured revolving credit facility are guaranteed by certain of our domestic subsidiaries and by substantially all of our domestic assets, including accounts receivable, inventory, property, plants, and equipment, real estate, intercompany loans, intellectual property, trademarks and direct investments in Ally Financial. Obligations are also secured by the equity interests in certain of our direct domestic subsidiaries, as well as up to 65% of the voting equity interests in certain of our direct foreign subsidiaries, in each case, subject to certain exceptions. The collateral securing the secured revolving credit facility does not include, among other assets, cash, cash equivalents, marketable securities, as well as our investment in GM Financial, our investment in New Delphi and our equity interests in our China JVs and in GM Daewoo. If the secured revolving credit facility is rated investment grade by two or more of the credit rating agencies (S&P, Moody’s and Fitch) the requirement to provide collateral is eliminated.

Depending on certain terms and conditions in the secured revolving credit facility, including compliance with the borrowing base requirements and certain other covenants, we will be able to add one or more *pari passu* first lien loan facilities. We will also have the ability to secure up to $2.0 billion of certain non-loan obligations that we may designate from time to time as additional *pari passu* first lien obligations. Second-lien debt is generally allowed but second lien debt maturing prior to the final maturity date of the secured revolving credit facility is limited to $3.0 billion in outstanding obligations.

Interest rates on obligations under the secured revolving credit facility are based on prevailing per annum interest rates for Eurodollar loans or an alternative base rate plus an applicable margin, in each case, based upon the credit rating assigned to the debt evidenced by the secured revolving credit facility.

The secured revolving credit facility contains representations, warranties and covenants customary for facilities of this nature, including negative covenants restricting us and our subsidiary guarantors from incurring liens, consummating mergers or sales of assets and incurring secured indebtedness, and restricting us from making restricted payments, in each case, subject to exceptions and limitations. The secured revolving credit facility contains minimum liquidity covenants, which require us to maintain at least $4.0 billion in consolidated global liquidity and at least $2.0 billion in consolidated U.S. liquidity.

Events of default under the secured revolving credit facility include events of default customary for facilities of this nature (including customary notice and/or grace periods, as applicable) such as:

- The failure to pay principal at the stated maturity, interest or any other amounts owed under the secured revolving credit agreement or related documents;

- The failure of certain of our representations or warranties to be correct in all material respects;
- The failure to perform any term, covenant or agreement in the secured revolving credit agreement or related documents;
- The existence of certain judgments that are not vacated, discharged, stayed or bonded;
- Certain cross defaults or cross accelerations with certain other debt;
- Certain defaults under the Employment Retirement Income Security Act of 1974, as amended (ERISA);
- A change of control;
- Certain bankruptcy events; and
- The invalidation of the guarantees.

While the occurrence and continuance of an event of default will restrict our ability to borrow under the secured revolving credit facility, the lenders will not be permitted to exercise rights or remedies against the collateral unless the obligations under the secured revolving credit facility have been accelerated.

We incurred up-front fees, arrangement fees, and will incur ongoing commitment and other fees customary for facilities of this nature.

Credit Facilities

We make use of credit facilities as a mechanism to provide additional flexibility in managing our global liquidity. These credit facilities are typically held at the subsidiary level and are geographically dispersed across all regions. The following tables summarize our committed and uncommitted credit facilities at the dates indicated (dollars in millions):

	Total Credit Facilities		Amounts Available Under Credit Facilities	
	Successor		Successor	
	December 31, 2010	December 31, 2009	December 31, 2010	December 31, 2009
Committed	$6,142	$1,712	$5,475	$223
Uncommitted	490	842	444	395
Total	$6,632	$2,554	$5,919	$618

	Total Credit Facilities		Amounts Available Under Credit Facilities	
	Successor		Successor	
Credit Facilities	December 31, 2010	December 31, 2009	December 31, 2010	December 31, 2009
Secured Revolving Credit Facility	$ 5,000	$ —	$ 5,000	$ —
GM Daewoo	—	1,179	—	—
Brazil	466	425	2	77
GM Hong Kong	400	200	370	200
Other(a)	766	750	547	341
Total	$ 6,632	$ 2,554	$ 5,919	$ 618

(a) Consists of credit facilities available primarily at our foreign subsidiaries that are not individually significant.

At December 31, 2010 we had committed credit facilities of $6.1 billion, under which we had borrowed $667 million leaving $5.5 billion available. The secured revolving credit facility comprised $5.0 billion of the amounts available under committed credit facilities and other committed credit facilities had $475 million available. At December 31, 2010 we had uncommitted credit facilities of $490 million, under which we had borrowed $46 million leaving $444 million available. Uncommitted credit facilities include lines of credit which are available to us, but under which the lenders have no legal obligation to provide funding upon our request. We and our subsidiaries use credit facilities to fund working capital needs, product programs, facilities development and other general corporate purposes.

In 2010 GM Daewoo repaid in full and retired its Korean Won 1.4 trillion (equivalent to $1.2 billion) revolving credit facility.

At December 31, 2009 we had committed credit facilities of $1.7 billion, under which we had borrowed $1.5 billion leaving $223 million available. Of these committed credit facilities GM Daewoo comprised $1.2 billion and other entities had $0.5 billion. At December 31, 2009 we had uncommitted credit facilities of $842 million, under which we had borrowed $447 million leaving $395 million available.

At December 31, 2009 our largest credit facility was GM Daewoo's Korean Won 1.4 trillion (equivalent to $1.2 billion) revolving credit facility. The average interest rate on outstanding amounts under this facility at December 31, 2009 was 5.69%. At December 31, 2009 the facility was fully utilized with $1.2 billion outstanding.

Restricted Cash and Marketable Securities

Following the repayment of the UST Loans and the Canadian Loan in April 2010 as previously discussed, the remaining UST escrow funds of $6.6 billion were released from escrow and became unrestricted as the availability of those funds was no longer subject to the conditions set forth in the UST Credit Agreement.

Pursuant to an agreement among GMCL, EDC and an escrow agent we had $1.0 billion remaining in an escrow account at December 31, 2010 to fund certain of GMCL's healthcare obligations pending the satisfaction of certain preconditions which have not yet been met.

In July 2009 we subscribed for additional common shares in GMCL and paid the subscription price in cash. As required under certain agreements among GMCL, EDC, and an escrow agent, $3.6 billion of the subscription price was deposited into an escrow account to fund certain of GMCL's pension plans and HCT obligations pending completion of certain preconditions. In September 2009 GMCL contributed $3.0 billion to the Canadian hourly defined benefit pension plan and $651 million to the Canadian salaried defined benefit pension plan, of which $2.7 billion was funded from the escrow account. In accordance with the terms of the escrow agreement, $903 million was released from the escrow account to us in September 2009.

Cash Flow

Operating Activities

GM

In the year ended December 31, 2010 we had positive cash flows from operating activities of $6.6 billion primarily due to: (1) Net income of $6.4 billion, which included non-cash charges of $7.1 billion resulting from depreciation, impairment and amortization of long-lived assets and finite-lived intangible assets (including amortization of debt issuance costs and discounts); (2) dividends received of $0.7 billion primarily related to our China JVs; partially offset by (3) pension contributions and OPEB payments of $5.7 billion primarily related to voluntary contributions to U.S. hourly and salary pension plans of $4.0 billion; (4) payments on our previously announced restructuring programs of $1.3 billion partially offset by net charges of $0.6 billion; (5) dealer wind-down payments of $0.4 billion; and (6) unfavorable changes in working capital of $0.6 billion. The unfavorable changes in working capital were related to increases in accounts receivables, inventories and the completion of a change to weekly payment terms to our suppliers, partially offset by an increase in accounts payable related to increased production volumes.

In the period July 10, 2009 through December 31, 2009 we had positive cash flows from operating activities of $1.1 billion primarily due to: (1) favorable managed working capital of $5.7 billion primarily driven by the effect of increased sales and production on accounts payable and the timing of certain supplier payments; (2) OPEB expense in excess of cash payments of $1.7 billion; (3) net income of $0.6 billion excluding depreciation, impairment and amortization of long-lived assets and finite-lived intangible assets (including amortization of debt issuance costs and discounts); partially offset by (4) pension contributions of $4.3 billion primarily to our Canadian hourly and salaried defined benefit pension plans; (5) restructuring payments of $1.2 billion; (6) interest payments of $0.6 billion and (7) sales allowance payments in excess of current period accruals for sales incentives of $0.5 billion driven by a reduction in dealer stock.

Old GM

In the period January 1, 2009 through July 9, 2009 Old GM had negative cash flows from operating activities of $18.3 billion primarily due to: (1) net loss of $8.4 billion excluding Reorganization gains, net, and depreciation, impairment and amortization of long-lived assets and finite-lived intangible assets (including amortization of debt issuance costs and discounts); (2) change in accrued liabilities of $6.8 billion; (3) unfavorable managed working capital of $5.6 billion; and (4) payments of $0.4 billion for reorganization costs associated with the Chapter 11 Proceedings.

In the year ended December 31, 2008 Old GM had negative cash flows from operating activities of $12.1 billion on a Loss from continuing operations of $31.1 billion. Operating cash flows were unfavorably affected by lower volumes and the resulting losses in North America and Western Europe, including the effect that lower production volumes had on working capital balances, and postretirement benefit payments.

Investing Activities

GM

In the year ended December 31, 2010 we had positive cash flows from investing activities of $0.7 billion primarily due to: (1) a net decrease in Restricted cash and marketable securities of $13.0 billion primarily related to withdrawals from the UST Credit Agreement escrow account; (2) proceeds from the liquidation of operating leases of $0.3 billion; (3) proceeds received from the sale of Nexteer of $0.3 billion; (4) proceeds from the sale of property, plants and equipment of $0.2 billion; partially offset by (5) net investments in marketable securities with maturities greater than 90 days of $5.4 billion; (6) capital expenditures of $4.2 billion; and (7) the acquisition of AmeriCredit for $3.5 billion.

In the period July 10, 2009 through December 31, 2009 we had positive cash flows from investing activities of $2.2 billion primarily due to: (1) a reduction in Restricted cash and marketable securities of $5.2 billion primarily related to withdrawals from the UST escrow account; (2) $0.6 billion related to the liquidation of automotive retail leases; (3) an increase as a result of the consolidation of Saab of $0.2 billion; (4) tax distributions of $0.1 billion on Ally Financial common stock; partially offset by (5) net cash payments of $2.0 billion related to the acquisition of Nexteer, four domestic facilities and Class A Membership Interests in New Delphi; and (6) capital expenditures of $1.9 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Old GM had negative cash flows from investing activities of $21.1 billion primarily due to: (1) increase in Restricted cash and marketable securities of $18.0 billion driven primarily by the establishment of the UST and Canadian escrow accounts; (2) capital expenditures of $3.5 billion; and (3) investment in Ally Financial of $0.9 billion; partially offset by (4) liquidation of operating leases of $1.3 billion.

In the year ended December 31, 2008 Old GM had negative cash flows from investing activities of $1.8 billion primarily related to: (1) capital expenditures of $7.5 billion; (2) an increase in notes receivable of $0.4 billion; partially offset by (3) liquidations of operating leases of $3.6 billion; (4) net liquidations of marketable securities in an amount of $2.1 billion; (5) proceeds for the sale of real estate, plants and equipment of $0.3 billion; and (6) proceeds from the sale of business units and equity investments of $0.2 billion.

Financing Activities

GM

In the year ended December 31, 2010 we had negative cash flows from financing activities of $9.3 billion primarily due to: (1) repayments on the UST Loans and Canadian Loan of $5.7 billion and $1.3 billion; (2) principal payments on the VEBA Notes of $2.5 billion; (3) purchase of the Series A Preferred Stock shares from the UST of $2.1 billion; (4) repayment of GM Daewoo's revolving credit facility of $1.2 billion; (5) dividend payments on our Series A Preferred Stock of $0.8 billion; (6) payments on the Receivables Program of $0.2 billion; (7) debt issuance fees of $0.2 billion primarily related to establishing our secured revolving credit facility; (8) net payments on other debt of $0.2 billion; partially offset by (9) proceeds from the issuance of Series B Preferred Stock of $4.9 billion.

In the period July 10, 2009 through December 31, 2009 we had positive cash flows from financing activities of $0.3 billion primarily due to: (1) funding of $4.0 billion from the EDC which was converted to our equity; partially offset by (2) payments on the UST Loans of $1.4 billion (including payments of $0.4 billion related to the warranty program); (3) net payments on the German Facility of $1.1 billion; (4) net payments on other debt of $0.4 billion; (5) a net decrease in short-term debt of $0.4 billion; (6) payment on the Canadian Loan of $0.2 billion; (7) net payments on the program announced in March 2009 by the UST to provide financial assistance to automotive suppliers (Receivables Program) of $0.1 billion; and (8) dividend payments on our Series A Preferred Stock of $0.1 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Old GM had positive cash flows from financing activities of $44.2 billion primarily due to: (1) proceeds from the DIP Facility of $33.3 billion; (2) proceeds from the UST Loan Facility and UST Ally Financial Loan of $16.6 billion; (3) proceeds from the EDC Loan Facility of $2.4 billion; (4) proceeds from the German Facility of $1.0 billion; (5) proceeds from the issuance of long-term debt of $0.3 billion; (6) proceeds from the Receivables Program of $0.3 billion; partially offset by (7) payments on other debt of $6.1 billion; (8) a net decrease in short-term debt of $2.4 billion; and (9) cash of $1.2 billion MLC retained as part of the 363 Sale.

In the year ended December 31, 2008 Old GM had positive cash flows from financing activities of $3.8 billion primarily related to: (1) borrowings on debt facilities of $5.9 billion; (2) borrowing on the UST Loan Facility of $4.0 billion; partially offset by (3) a net decrease in short-term debt of $4.1 billion; (4) debt repayments of $1.7 billion; and (5) dividend payments on Old GM common stock of $0.3 billion.

Net Liquid Assets

Management believes the use of net liquid assets provides meaningful supplemental information regarding our liquidity. We believe net liquid assets is useful in allowing for greater transparency of supplemental information used by management in its financial and operational decision making to assist in identifying resources available to meet cash requirements. Our calculation of net liquid assets may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in the method of calculation. As a result, the use of net liquid assets has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Cash and cash equivalents and Debt. Due to these limitations, net liquid assets is used as a supplement to U.S. GAAP measures.

The following table summarizes net liquid assets balances (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Cash and cash equivalents	$21,061	$ 22,679
Marketable securities	5,555	134
UST Credit Agreement escrow and HCT escrow	1,008	13,430
Total liquid assets	27,624	36,243
Short-term debt and current portion of long-term debt	(1,616)	(10,221)
Long-term debt	(3,014)	(5,562)
Net liquid assets	$22,994	$ 20,460

Total liquid assets of $27.6 billion exceeded our debt balances by $23.0 billion at December 31, 2010. The net liquid asset balance of $23.0 billion at December 31, 2010 represented an increase of $2.5 billion compared to a net liquid assets balance of $20.5 billion at December 31, 2009. The change was due to an increase of $5.4 billion in Marketable securities and a decrease of $11.2 billion in Short-term and Long-term debt, partially offset by a reduction of $12.4 billion in the UST Credit Agreement and the HCT escrow balances and a reduction of $1.6 billion in Cash and cash equivalents. The decrease in Short-term and Long-term debt primarily related to: (1) repayment in full of the UST Loans of $5.7 billion; (2) repayment in full of the VEBA Notes (together with accrued interest thereon)of $2.8 billion; (3) repayment in full of the Canadian Loan of $1.3 billion; (4) repayment in full of the GM Daewoo revolving credit facility of $1.2 billion; and (5) repayment in full of the loans related to the Receivables Program of $0.2 billion.

Other Liquidity Issues

Receivables Program

In March 2009 the UST announced that it would provide up to $5.0 billion in financial assistance to automotive suppliers by guaranteeing or purchasing certain of the receivables payable by Old GM and Chrysler LLC. The Receivables Program was to be funded by a loan facility of up to $2.5 billion provided by the UST and by capital contributions from us up to $125 million. In connection with the 363 Sale, we assumed the obligation of the Receivables Program. At December 31, 2009 our equity contributions were $55 million and the UST had outstanding loans of $150 million to the Receivables Program. In March 2010 we repaid these loans in full. The Receivables Program was terminated in accordance with its terms in April 2010. Upon termination, we shared residual capital of $25 million in the program equally with the UST and paid a termination fee of $44 million.

Loan Commitments

We have extended loan commitments to affiliated companies and critical business partners. These commitments can be triggered under certain conditions and expire in the years ranging from 2011 to 2014. At December 31, 2010 we had a total commitment of $600 million outstanding with no amounts loaned.

Status of Credit Ratings

We have been assigned initial ratings by four independent credit rating agencies: Dominion Bond Rating Services (DBRS), Fitch Ratings (Fitch), Moody's Investor Service (Moody's), and Standard & Poor's (S&P). The ratings indicate the agencies' assessment of a company's creditworthiness such as its ability to timely pay principal and interest on debt securities, dividends on preferred securities and other contractual obligations. Lower credit ratings generally represent higher borrowing costs and reduced access to capital markets for a company. The agencies consider a number of business and financial factors when determining ratings including, but not limited to, our competitive position, sustainability of our profits and cash flows, our balance sheet and liquidity profile and our ability to meet obligations under adverse economic scenarios.

DBRS, Moody's, Fitch, and S&P currently rate our corporate credit at non-investment grade. The following table summarizes our credit ratings at February 15, 2011:

Rating Agency	Corporate	Secured Revolving Credit Facility	Senior Unsecured	Outlook
DBRS	BB	BBB (low)	N/A	Stable
Fitch	BB-	BB+	N/A	Stable
Moody's	Ba2	Baa3	N/A	Stable
S&P	BB-	BB+	N/A	Positive

Rating actions taken by each of the credit rating agencies from October 6, 2010 through February 15, 2011 were as follows:

DBRS: October 2010 — Assigned an initial Corporate rating of BB and a rating of BBB (low) to our secured revolving credit facility.

Fitch: October 2010 — Assigned an initial Corporate rating of BB- (affirmed in November 2010) and a rating of BB+ to our secured revolving credit facility.

Moody's: October 2010 — Assigned an initial Corporate rating of Ba2 and assigned a rating of Baa3 to our secured revolving credit facility.

S&P: October 2010 — Assigned an initial Corporate rating of BB- and a rating of BB+ to our secured revolving credit facility. February 2011 — Outlook revised to positive from stable.

The initial ratings assigned by the agencies are an important step towards our objective to attain an investment grade credit rating over the long-term by maintaining a strong balance sheet and reducing financial leverage.

Series A Preferred Stock

Beginning December 31, 2014 we will be permitted to redeem, in whole or in part, the shares of Series A Preferred Stock outstanding, at a redemption price per share equal to $25.00 per share plus any accrued and unpaid dividends, subject to limited exceptions. As a practical matter, our ability to redeem any portion of this $6.9 billion face amount in Series A Preferred Stock will depend upon our having sufficient liquidity.

Automotive Financing

Liquidity Overview

GM Financial's primary sources of cash are finance charge income, servicing fees, distributions from securitization trusts, borrowings under credit facilities, transfers of finance receivables to trusts in securitization transactions and collections, recoveries on finance receivables and net proceeds from senior notes and convertible senior notes transactions. GM Financial's primary uses of cash are purchases of finance receivables, repayment of credit facilities, securitization notes payable and other indebtedness, funding credit enhancement requirements for securitization transactions and credit facilities, repurchases of unsecured debt and operating expenses.

GM Financial used cash of $0.9 billion for the purchase of finance receivables in the three months ended December 31, 2010. Generally, these purchases are funded initially utilizing cash and borrowings under credit facilities and subsequently funded in securitization transactions.

Available Liquidity

The following table summarizes GM Financial's available liquidity (dollars in millions):

	Successor
	December 31, 2010
Cash and cash equivalents	$195
Borrowing capacity on unpledged eligible receivables	272
Total liquidity	$467

Credit Facilities

In the normal course of business, in addition to using available cash, GM Financial pledges receivables to and borrows under credit facilities to fund operations and repays these borrowings as appropriate under GM Financial's cash management strategy. The following table summarizes credit facilities at December 31, 2010 (dollars in millions):

	Successor	
	Facility Amount	Advances Outstanding
Syndicated warehouse facility (a)	$1,300	$278
Medium-term note facility (b)		490
Bank funding facilities (c)		64
Total		$832

(a) In February 2011 GM Financial extended the maturity date of the syndicated warehouse facility to May 2012 and increased the borrowing capacity to $2.0 billion from $1.3 billion.

(b) The revolving period under this facility has ended and the outstanding debt balance will be repaid over time based on the amortization of the receivables pledged until October 2016 when any remaining amount outstanding will be due and payable.

(c) The revolving period under this facility has ended and the outstanding debt balance under the bank funding facilities are secured by asset-backed securities of $65 million.

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under the credit facilities and securitization notes payable. GM Financial's funding agreements contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios (portfolio net loss and delinquency ratios, and pool level cumulative net loss ratios) as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements, the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements or, with respect to the syndicated warehouse facility, restrict GM Financial's ability to obtain additional borrowings.

Non-Cash Charges (Gains)

The following table summarizes significant non-cash charges (gains) (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Impairment charges related to investment in Ally Financial Common Membership Interests	$ —	$ —	$ —	$ 7,099
Impairment charges related to investment in Ally Financial common stock	—	270	—	—
Impairment charges related to investment in Ally Financial Preferred Membership Interests	—	—	—	1,001
Net curtailment gain related to finalization of the 2008 UAW Settlement Agreement	—	—	—	(4,901)
Net contingent Adjustment Shares issuable to MLC	(162)	162	—	—
Salaried post-65 healthcare settlement	—	—	—	1,704
Impairment charges related to equipment on operating leases	49	18	63	759
Impairment charges related to long-lived assets	240	2	566	1,010
Impairment charges related to investments in equity and cost method investments	—	4	28	119
Other than temporary impairments charges related to debt and equity securities	—	—	11	62
Impairment charges related to goodwill	—	—	—	610
Gain on the acquisition of GMS	(66)	—	—	—
UAW OPEB healthcare settlement	—	2,571	—	—
CAW settlement	—	—	—	340
Loss (gain) on extinguishment of debt	—	—	(906)	—
Loss on extinguishment of UST Ally Financial Loan	—	—	1,994	—
Gain on conversion of UST Ally Financial Loan	—	—	(2,477)	—
Reorganization gains, net	—	—	(128,563)	—
Valuation allowances against deferred tax assets (a)	(63)	(63)	(751)	1,450
Total significant non-cash charges (gains)	$ (2)	$2,964	$(130,035)	$ 9,253

(a) Amounts exclude changes related to income tax expense (benefit) in jurisdictions with a full valuation allowance throughout the period. Refer to Note 23 to the consolidated financial statements.

Defined Benefit Pension Plan Contributions

Plans covering eligible U.S. salaried employees hired prior to January 2001 and hourly employees hired prior to October 15, 2007 generally provide benefits of stated amounts for each year of service as well as supplemental benefits for employees who retire with 30 years of service before normal retirement age. Salaried and hourly employees hired after these dates participate in defined contribution or cash balance plans. Our and Old GM's policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulation, or to directly pay benefit payments where appropriate. At December 31, 2010 all legal funding requirements had been met.

The following table summarizes contributions made to the defined benefit pension plans or direct payments (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
U.S. hourly and salaried	$4,000	$ —	$ —	$ —
Other U.S.	95	31	57	90
Non-U.S.	777	4,287	529	977
Total contributions	$4,872	$4,318	$586	$1,067

We made a voluntary contribution to our U.S. hourly and salaried defined benefit pension plans of cash of $4.0 billion in December 2010 and 61 million shares of our common stock valued at $2.2 billion for funding purposes in January 2011. The contributed shares qualify as a plan asset for funding purposes immediately, and will qualify as a plan asset for accounting purposes when certain restrictions are removed, which is expected in 2011.

The following table summarizes the underfunded status of pension plans (dollars in billions):

	Successor	
	December 31, 2010	December 31, 2009
U.S. hourly and salaried	$11.5	$16.2
U.S. nonqualified	0.9	0.9
Total U.S. pension plans	12.4	17.1
Non-U.S.	9.8	10.3
Total underfunded	$22.2	$27.4

On a U.S. GAAP basis, the U.S. pension plans were underfunded by $12.4 billion and $17.1 billion at December 31, 2010 and 2009. The change in funded status was primarily attributable to the actual return on plan assets of $11.6 billion and contributions of $4.1 billion, partially offset by actuarial losses primarily attributable to discount rate decreases of $5.3 billion and service and interest costs of $5.7 billion.

On a U.S. GAAP basis, the non-U.S. pension plans were underfunded by $9.8 billion and $10.3 billion at December 31, 2010 and 2009. The change in funded status was primarily attributable to: (1) actual return on plan assets of $1.2 billion; (2) employer contributions and benefit payments of $0.8 billion; (3) net favorable foreign currency translations of $0.3 billion; partially offset by (4) service and interest costs of $1.6 billion; and (5) actuarial losses and other of $0.2 billion.

Hourly and salaried OPEB plans provide postretirement life insurance to most U.S. retirees and eligible dependents and postretirement health coverage to some U.S. retirees and eligible dependents. Certain of the non-U.S. subsidiaries have postretirement benefit plans, although most participants are covered by government sponsored or administered programs.

The following table summarizes the underfunded status of OPEB plans (dollars in billions):

	Successor	
	December 31, 2010	December 31, 2009
U.S. OPEB plans	$5.7	$5.8
Non-U.S. OPEB plans.	4.2	3.8
Total underfunded	$9.9	$9.6

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service, but does not reflect the effect of the 2009 CAW Agreement which provides for our independent HCT (dollars in millions):

	Successor			
	Years Ended December 31,			
	Pension Benefits(a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans(b)	Non-U.S. Plans
2011	$ 8,765	$1,460	$ 451	$ 189
2012	$ 8,463	$1,461	$ 427	$ 199
2013	$ 8,186	$1,480	$ 407	$ 209
2014	$ 7,999	$1,513	$ 391	$ 220
2015	$ 7,855	$1,534	$ 379	$ 231
2016-2020	$36,033	$7,889	$1,796	$1,287

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our cash and cash equivalents.

(b) Benefit payments presented in this table reflect the effect of the implementation of the 2009 UAW Retiree Settlement Agreement, which releases us from UAW retiree healthcare claims incurred after December 31, 2009.

Off-Balance Sheet Arrangements

We do not currently utilize off balance sheet securitization arrangements. All trade or financing receivables and related obligations subject to securitization programs are recorded on our consolidated balance sheets at December 31, 2010 and 2009.

Guarantees Provided to Third Parties

We have provided guarantees related to the residual value of operating leases, certain suppliers' commitments, certain product-related claims and commercial loans made by Ally Financial and outstanding with certain third parties excluding vehicle repurchase obligations, residual support and risk sharing related to Ally Financial. The maximum potential obligation under these commitments was $581 million at December 31, 2010. The maximum potential obligation under these commitments was $1.0 billion at December 31, 2009.

In May 2009 Old GM and Ally Financial agreed to expand repurchase obligations for Ally Financial financed inventory at certain dealers in Europe, Asia, Brazil and Mexico. In November 2008 Old GM and Ally Financial agreed to expand repurchase obligations for Ally Financial financed inventory at certain dealers in the United States and Canada. Our current agreement with Ally Financial requires the repurchase of Ally Financial financed inventory invoiced to dealers after September 1, 2008, with limited exclusions, in the event of a qualifying voluntary or involuntary termination of the dealer's sales and service agreement. Repurchase obligations exclude vehicles which are damaged, have excessive mileage or have been altered. The repurchase obligation ended in August 2010 for vehicles invoiced through August 2009, ends in August 2011 for vehicles invoiced through August 2010 and ends in August 2012 for vehicles invoiced through August 2011.

The maximum potential amount of future payments required to be made to Ally Financial under this guarantee would be based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock and is estimated to be $18.8 billion at December 31, 2010. This amount was estimated to be $14.2 billion at December 31, 2009. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer or at auction. The fair value of the guarantee was $21 million and $46 million at December 31, 2010 and 2009 which considers the likelihood of dealers terminating and estimated the loss exposure for the ultimate disposition of vehicles.

Refer to Notes 22 and 32 to our consolidated financial statements for additional information on guarantees we have provided.

Contractual Obligations and Other Long-Term Liabilities

We have the following minimum commitments under contractual obligations, including purchase obligations. A purchase obligation is defined as an agreement to purchase goods or services that is enforceable and legally binding on us and that specifies all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum, or variable price provisions; and the approximate timing of the transaction. Other long-term liabilities are defined as long-term liabilities that are recorded on our consolidated balance sheet. Based on this definition, the following table includes only those contracts which include fixed or minimum obligations. The majority of our purchases are not included in the table as they are made under purchase orders which are requirements based and accordingly do not specify minimum quantities.

The following table summarizes aggregated information about our outstanding contractual obligations and other long-term liabilities at December 31, 2010 (dollars in millions):

	Payments Due by Period				
	2011	2012-2013	2014-2015	2016 and after	Total
Automotive debt (a)	$ 1,488	$ 1,014	$ 160	$ 3,209	$ 5,871
Automotive Financing debt (b)	3,495	2,658	766	—	6,919
Capital lease obligations	127	138	99	297	661
Automotive interest payments (c)	169	280	308	683	1,440
Automotive Financing interest payments (d)	175	146	40	1	362
Postretirement benefits (e)	469	164	—	—	633
Contractual commitments for capital expenditures	1,165	2	—	—	1,167
Operating lease obligations (f)	460	609	401	492	1,962
Other contractual commitments:					
Material	1,071	1,541	322	73	3,007
Information technology	956	156	16	—	1,128
Marketing	761	393	200	136	1,490
Facilities	146	151	65	10	372
Rental car repurchases	4,309	—	—	—	4,309
Policy, product warranty and recall campaigns liability	2,884	3,151	790	206	7,031
Other	87	33	—	—	120
Total contractual commitments (g) (h) (i)	$17,762	$10,436	$3,167	$ 5,107	$36,472
Non-contractual postretirement benefits (j)	$ 171	$ 1,078	$1,221	$21,182	$23,652

(a) Projected future payments on lines of credit were based on amounts drawn at December 31, 2010.

(b) GM Financial credit facilities and securitization notes payable have been classified based on expected payoff date. Senior notes and convertible senior notes principal amounts have been classified based on maturity date.

(c) Amounts include Automotive interest payments based on contractual terms and current interest rates on our debt and capital lease obligations. Automotive interest payments based on variable interest rates were determined using the current interest rate in effect at December 31, 2010.

(d) GM Financial interest payments are calculated based on LIBOR plus the respective credit spreads and specified fees associated with the medium-term note facility and the syndicated warehouse facility, the coupon rate for the senior notes and convertible senior notes and a fixed rate of interest for securitization notes payable. GM Financial interest payments on the floating rate tranches of the securitization notes payable were converted to a fixed rate based on the floating rate plus any expected hedge payments.

(e) Amounts include other postretirement benefit payments under the current U.S. contractual labor agreements for 2011 and Canada labor agreements through 2012 and 2013. Amounts do not include pension funding obligations, which are discussed below under the caption “Required Pension Funding Obligations.”

(f) Amounts include operating lease obligations for both Automotive and Automotive Financing. Automotive is included net of sublease income.

(g) Future payments in local currency amounts were translated into U.S. Dollars using the balance sheet spot rate at December 31, 2010.

(h) Amounts do not include future cash payments for long-term purchase obligations and other accrued expenditures (unless specifically listed in the table above) which were recorded in Accounts payable or Accrued liabilities at December 31, 2010.

(i) Amounts exclude the future annual contingent obligations of Euro 265 million in the years 2011 to 2014 related to our Opel/ Vauxhall restructuring plan.

(j) Amount includes all expected future payments for both current and expected future service at December 31, 2010 for other postretirement benefit obligations for salaried employees and hourly other postretirement benefit obligations extending beyond the current North American union contract agreements. Amounts do not include pension funding obligations, which are discussed below under the caption "Required Pension Funding Obligations."

The table above does not reflect unrecognized tax benefits of $5.2 billion due to the high degree of uncertainty regarding the future cash outflows associated with these amounts. We expect to settle a contested income tax matter in GMSA for cash of $0.2 billion in 2011.

The table above also does not reflect certain contingent loan and funding commitments that we have made with suppliers, other third parties and certain joint ventures. At December 31, 2010 we had commitments of $0.6 billion under these arrangements that were undrawn.

Required Pension Funding Obligations

We do not have any required contributions due to our U.S. qualified plans in 2011. The next pension funding valuation to be prepared based on the requirements of the Pension Protection Act of 2006 (PPA) will be as of October 1, 2010. Based on the PPA, we have the option to select a funding interest rate for the valuation based on either the Full Yield Curve method or the 3-Segment method, both of which are considered to be acceptable methods. The PPA also provides the flexibility of selecting a 3-Segment rate up to the preceding five months from the valuation date of October 1, 2010, i.e., the 3-Segment rate at May 31, 2010. Therefore, for a hypothetical funding valuation at December 31, 2010 we have assumed the 3-Segment rate at May 31, 2010 as the base for funding interest rate that we could use for the actual funding valuation. Since this hypothetical election does not limit us to only using the 3-Segment rate beyond 2010, we have assumed that we retain the flexibility of selecting a funding interest rate based on either the Full Yield Curve method or the 3-Segment method. A hypothetical funding valuation at December 31, 2010 using the 3-Segment rate at May 31, 2010 for plan year beginning October 1, 2010 funding valuation, and assuming the December 31, 2010 Full Yield Curve funding interest rate for all future funding valuations projects contributions of $2.3 billion, and $1.2 billion in 2015 and 2016.

Alternatively, a hypothetical funding valuation at December 31, 2010 using the 3-Segment rate at May 31, 2010 for plan year beginning October 1, 2010 funding valuation and assuming the December 31, 2010 3-Segment interest rate for all future valuation projects contributions of $0.3 billion in 2016.

In both cases, we have assumed that the pension plans earn the expected return of 8.0% in the future and no changes in funding rates. U.S. pension funding interest rate and return on assets rate sensitivity are shown below, assuming the 3-segment rate at May 31, 2010 for plan year beginning on October 1, 2010 funding valuation and the full yield curve interest rate for all future valuations (in billions):

	Funding Interest Rate Sensitivity Table					Estimated Return on Assets–7% - 100 basis point decrease
	50 basis point increase	25 basis point increase	Base Line	25 basis point decrease	50 basis point decrease	
2011	$ —	$ —	$ —	$ —	$ —	$ —
2012	$ —	$ —	$ —	$ —	$ —	$ —
2013	$ —	$ —	$ —	$ —	$ —	$ —
2014	$ —	$ —	$ —	$ —	$0.5	$ —
2015	$ —	$0.7	$2.3	$4.0	$5.1	$3.1
2016	$0.7	$1.5	$1.2	$1.0	$0.8	$2.9

In January 2011 we completed the previously announced voluntary contribution of 61 million shares of our common stock to our U.S. hourly and salaried pension plans, valued at $2.2 billion for funding purposes. This was a voluntary contribution and the amount is reflected in the plan assets used to project the future required contributions above since the contributed shares qualify as a plan asset for funding purposes immediately. The contributed shares will qualify as a plan asset for accounting purposes when certain transfer restrictions are removed, which is expected in 2011.

The hypothetical valuations do not consider the potential election of relief provisions that are available to us under the Pension Relief Act of 2010 (PRA) for 2010 and 2011 plan year valuations.

We expect to contribute $95 million to our U.S. non-qualified plans and $740 million to our non-U.S. pension plans in 2011.

Fair Value Measurements

Automotive

At December 31, 2010 assets and liabilities classified in Level 3 were not significant. Prior to the three months ended December 31, 2010 significant assets and liabilities classified in Level 3, with the related Level 3 inputs, were as follows:

- Foreign currency derivatives — Level 3 inputs used to determine the fair value of foreign currency derivative liabilities include the appropriate credit spread to measure our nonperformance risk. Given our nonperformance risk was not observable through a liquid credit default swap market we based this measurement on an analysis of comparable industrial companies to determine the appropriate credit spread which would be applied to us and Old GM by market participants. In the three months ended December 31, 2010 we incorporated our published credit agency ratings into our credit rating conclusions. In the three months ended December 31, 2010 we determined that our nonperformance risk no longer represents a significant input in the determination of the fair value of our foreign currency derivative liabilities. We have transferred these liabilities to Level 2.

Refer to Notes 21 and 24 to our consolidated financial statements for additional information regarding fair value measurements.

Level 3 Assets and Liabilities

At December 31, 2010 we used Level 3 inputs to measure net liabilities of $14 million (or less than 0.1%) of our total liabilities. These net liabilities included $10 million (or less than 0.1%) of the total assets, and $24 million (or 16.4%) of the total liabilities that we measured at fair value.

In the year ended December 31, 2010 assets and liabilities measured using Level 3 inputs decreased $658 million from a net liability of $672 million to a net liability of $14 million. This reduction was primarily due to unrealized and realized gains on derivatives, the settlement of derivative positions according to their terms and maturities and the reclassification of outstanding derivative contracts from Level 3 to Level 2 during the three months ended December 31, 2010.

At December 31, 2010 our nonperformance risk remains unobservable through a liquid credit default swap market. During the three months ended December 31, 2010 we determined that our nonperformance risk no longer represents significant input in the determination of the fair value of our derivatives. The effect of our nonperformance risk in the valuation has been reduced due to the reduction in the remaining duration and magnitude of these net derivative liability positions. In October 2010 we transferred foreign currency derivatives with a fair market value of $183 million from Level 3 to Level 2.

At December 31, 2009 we used Level 3 inputs to measure net liabilities of $672 million (or 0.6%) of our total liabilities. These net liabilities included $33 million (or 0.1%) of the total assets, and $705 million (or 98.7%) of the total liabilities (all of which were derivative liabilities) that we measured at fair value. At December 31, 2009 we also included a nonperformance risk adjustment of $47 million in the fair value measurement of these derivatives which reflects a discount of 6.5% to the fair value before considering our credit risk.

For periods presented from June 1, 2009 through September 30, 2009 nonperformance risk for us and Old GM was not observable through a liquid credit default swap market as a result of the Chapter 11 Proceedings and lack of traded instruments for us after the 363 Sale. Foreign currency derivatives with a fair market value of $1.6 billion were transferred from Level 2 to Level 3 in the period January 1, 2009 through July 9, 2009.

In the three months ended March 31, 2009 Old GM determined the credit profile of certain foreign subsidiaries was equivalent to Old GM's nonperformance risk which was observable through the credit default swap market and bond market based on prices for recent trades. Foreign currency derivatives with a fair value of $2.1 billion were transferred from Level 3 into Level 2.

Realized gains and losses related to assets and liabilities measured using Level 3 inputs did not have a material effect on operations, liquidity or capital resources in the year ended December 31, 2010 and the periods July 10, 2009 through December 31, 2009, January 1, 2009 through July 9, 2009 and the year ended December 31, 2008.

Automotive Financing

At December 31, 2010 significant assets and liabilities classified in Level 3, with the related Level 3 inputs, are as follows:

- Interest rate swaps – Level 3 inputs are used to determine the fair value of GM Financial's interest rate swaps because they are not exchange traded but instead traded in over-the-counter markets where quoted market prices are not readily available. The fair value of derivatives is derived using models that primarily use market observable inputs, such as interest rate yield curves and credit curves. The effects of GM Financial's and the counterparties' non-performance risk to the derivative trades is considered when measuring the fair value of derivative assets and liabilities.

Refer to Notes 21 and 24 to our consolidated financial statements for additional information regarding fair value measurements.

Dividends

The declaration of any dividend on our common stock is a matter to be acted upon by our Board of Directors in its sole discretion. Since our formation, we have not paid any dividends on our common stock. We have no current plans to pay any dividends on our common stock. Our payment of dividends on our common stock in the future, if any, will be determined by our Board of Directors in its sole discretion out of funds legally available for that purpose and will depend on business conditions, our financial condition, earnings, liquidity and capital requirements, the covenants in our debt instruments, and other factors.

So long as any share of our Series A or B Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on our Series A and B Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. Our secured revolving credit facility contains certain restrictions on our ability to pay dividends, subject to exceptions, such as dividends payable solely in shares of our common stock.

So long as any share of our Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on our Series A Preferred Stock, subject to exceptions, such as dividends on our Series B Preferred Stock solely in shares of our common stock.

The following tables summarize dividends paid on our Series A and B Preferred Stock (dollars in millions):

	Three Months Ended December 31, 2010	Three Months Ended September 30, 2010	Three Months Ended June 30, 2010	Three Months Ended March 31, 2010	Year Ended December 31, 2010 Total
Series A Preferred Stock (a)	$202	$203	$202	$203	$810
Series B Preferred Stock (b)	—	—	—	—	—
Total Preferred Stock dividends paid	$202	$203	$202	$203	$810

(a) Does not include the $677 million charge related to the purchase of 84 million shares of Series A Preferred Stock from the UST.

(b) At December 31, 2010 cumulative unpaid dividends on our Series B Preferred Stock was $25 million.

	Three Months Ended December 31, 2009	July 10, 2009 Through September 30, 2009	July 10, 2009 Through December 31, 2009
Series A Preferred Stock (a)	$203	$146	$349

(a) Prior to December 31, 2009 the 260 million shares of Series A Preferred Stock issued to the New VEBA were not considered outstanding for accounting purposes due to the terms of the 2009 UAW Retiree Settlement Agreement. As a result, $105 million of the $146 million of dividends paid in the three months ended September 30, 2009 and $147 million of the $203 million dividends paid in the three months ended December 31, 2009 were recorded as a reduction of Postretirement benefits other than pensions.

Our payment of dividends in the future, if any, will be determined by our Board of Directors and will be paid out of funds legally available for that purpose.

Critical Accounting Estimates

The consolidated financial statements are prepared in conformity with U.S. GAAP, which require the use of estimates, judgments and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and resulting balances are reasonable; however, due to inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods. We have discussed the development, selection and disclosures of our critical accounting estimates with the Audit Committee of the Board of Directors, and the Audit Committee has reviewed the disclosures relating to these estimates.

The critical accounting estimates that affect the consolidated financial statements and that use judgments and assumptions are listed below. In addition, the likelihood that materially different amounts could be reported under varied conditions and assumptions is discussed.

Fresh-Start Reporting

The Bankruptcy Court did not determine a reorganization value in connection with the 363 Sale. Reorganization value is defined as the value of our assets without liabilities. In order to apply fresh-start reporting, ASC 852 requires that total postpetition liabilities and allowed claims be in excess of reorganization value and prepetition stockholders receive less than 50.0% of our common stock. Based on our estimated reorganization value, we determined that on July 10, 2009 both the criteria of ASC 852 were met and, as a result, we applied fresh-start reporting.

Our reorganization value was determined using the sum of:

- Our discounted forecast of expected future cash flows from our business subsequent to the 363 Sale, discounted at rates reflecting perceived business and financial risks;
- The fair value of operating liabilities;
- The fair value of our non-operating assets, primarily our investments in nonconsolidated affiliates and cost method investments; and
- The amount of cash we maintained at July 10, 2009 that we determined to be in excess of the amount necessary to conduct our normal business activities.

The sum of the first, third and fourth bullet items equals our Enterprise value.

Our discounted forecast of expected future cash flows included:

- Forecasted cash flows for the six months ended December 31, 2009 and the years ending December 31, 2010 through 2014, for each of Old GM's former segments including GMNA, GME, GM Latin America/Africa/Middle East (GMLAAM) and GM Asia Pacific (GMAP) and for certain subsidiaries that incorporated:
  - Industry SAAR of vehicle sales and our related market share as follows:
    - Worldwide — 59.1 million vehicles and market share of 11.9% in 2010 increasing to 81.0 million vehicles and market share of 12.2% in 2014;
    - North America — 14.2 million vehicles and market share of 17.8% in 2010 increasing to 19.8 million vehicles and decreasing market share of 17.6% in 2014;
    - Europe — 16.8 million vehicles and market share of 9.5% in 2010 increasing to 22.5 million vehicles and market share of 10.3% in 2014;
    - LAAM — 6.1 million vehicles and market share of 18.0% in 2010 increasing to 7.8 million vehicles and market share of 18.4% in 2014; and
    - AP — 22.0 million vehicles and market share of 8.4% in 2010 increasing to 30.8 million vehicles and market share of 8.6% in 2014.
  - Projected product mix, which incorporates the 2010 introductions of the Chevrolet Volt, Chevrolet/Holden Cruze, Cadillac CTS Coupe, Opel/Vauxhall Meriva and Opel/Vauxhall Astra Station Wagon;
  - Projected changes in our cost structure due to restructuring initiatives that encompass reduction of hourly and salaried employment levels by approximately 18,000;
  - The terms of the 2009 UAW Retiree Settlement Agreement, which released us from UAW retiree healthcare claims incurred after December 31, 2009;
  - Projected capital spending to support existing and future products, which range from $4.9 billion in 2010 to $6.0 billion in 2014; and
  - Anticipated changes in global market conditions.
- A terminal value, which was determined using a growth model that applied long-term growth rates ranging from 0.5% to 6.0% and a weighted-average long-term growth rate of 2.6% to our projected cash flows beyond 2014. The long-term growth rates were based on our internal projections as well as industry growth prospects; and
- Discount rates that considered various factors including bond yields, risk premiums, and tax rates to determine a weighted-average cost of capital (WACC), which measures a company's cost of debt and equity weighted by the percentage of debt and equity in a company's target capital structure. We used discount rates ranging from 16.5% to 23.5% and a weighted-average rate of 22.8%.

To estimate the value of our investment in nonconsolidated affiliates we used multiple valuation techniques, but we primarily used discounted cash flow analysis. Our excess cash of $33.8 billion, including Restricted cash and marketable securities of $21.2 billion, represents cash in excess of the amount necessary to conduct our ongoing day-to-day business activities and to keep them running as a going concern. Refer to Note 15 to our consolidated financial statements for additional discussion of Restricted cash and marketable securities.

Our estimate of reorganization value assumes the achievement of the future financial results contemplated in our forecasted cash flows, and there can be no assurance that we will realize that value. The estimates and assumptions used are subject to significant uncertainties, many of which are beyond our control, and there is no assurance that anticipated financial results will be achieved.

Assumptions used in our discounted cash flow analysis that have the most significant effect on our estimated reorganization value include:

- Our estimated WACC;
- Our estimated long-term growth rates; and
- Our estimate of industry sales and our market share in each of Old GM's former segments.

The following table reconciles our enterprise value to our estimated reorganization value and the estimated fair value of our Equity (in millions except per share amounts):

	Successor July 10, 2009
Enterprise value	$ 36,747
Plus: Fair value of operating liabilities (a)	80,832
Estimated reorganization value (fair value of assets) (b)	117,579
Adjustments to tax and employee benefit-related assets (c)	(6,074)
Goodwill (c)	30,464
Carrying amount of assets	$141,969
Enterprise value	$ 36,747
Less: Fair value of debt	(15,694)
Less: Fair value of warrants issued to MLC (additional paid-in-capital)	(2,405)
Less: Fair value of liability for Adjustment Shares	(113)
Less: Fair value of noncontrolling interests	(408)
Less: Fair value of Series A Preferred Stock (d)	(1,741)
Fair value of common equity (common stock and additional paid-in capital)	$ 16,386
Common shares outstanding (d)	1,238
Per share value	$ 13.24

(a) Operating liabilities are our total liabilities excluding the liabilities listed in the reconciliation above of our enterprise value to the fair value of our common equity.

(b) Reorganization value does not include assets with a carrying amount of $1.8 billion and a fair value of $2.0 billion at July 9, 2009 that MLC retained.

(c) The application of fresh-start reporting resulted in the recognition of goodwill. When applying fresh-start reporting, certain accounts, primarily employee benefit and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than at fair value and the difference between the U.S. GAAP and fair value amounts gives rise to goodwill, which is a residual. Further, we recorded valuation allowances against certain of our deferred tax assets, which under ASC 852 also resulted in goodwill. Our employee benefit related obligations were recorded in accordance with ASC 712, "Compensation — Nonretirement Postemployment Benefits" (ASC 712) and ASC 715 and deferred income taxes were recorded in accordance with ASC 740.

(d) The 260 million shares of Series A Preferred Stock, 263 million shares of our common stock, and warrant to acquire 46 million shares of our common stock issued to the New VEBA on July 10, 2009 were not considered outstanding until the UAW retiree medical plan was settled on December 31, 2009. The fair value of these instruments was included in the liability recognized at July 10, 2009 for this plan. The common shares issued to the New VEBA are excluded from common shares outstanding at July 10, 2009. Refer to Note 20 to our consolidated financial statements for a discussion of the termination of our UAW hourly retiree medical plan and Mitigation Plan and the resulting payment terms to the New VEBA.

The following table summarizes the approximate effects that a change in the WACC and long-term growth rate assumptions would have had on our determination of the fair value of our common equity at July 10, 2009 keeping all other assumptions constant (dollars in billions except per share amounts):

Change in Assumption	Effect on Fair Value of Common Equity at July 10, 2009	Effect on Per Share Value at July 10, 2009
Two percentage point decrease in WACC	+$2.9	+$2.35
Two percentage point increase in WACC	–$2.4	–$1.92
One percentage point increase in long-term growth rate	+$0.5	+$0.40
One percentage point decrease in long-term growth rate	–$0.5	–$0.37

In order to estimate these effects, we adjusted the WACC and long-term growth rate assumptions for each of Old GM's former segments and for certain subsidiaries. The aggregated effect of these assumption changes on each of Old GM's former segments and for certain subsidiaries does not necessarily correspond to assumption changes made at a consolidated level.

Pensions

The defined benefit pension plans are accounted for on an actuarial basis, which requires the selection of various assumptions, including an expected rate of return on plan assets and a discount rate. Due to significant events, including those discussed in Note 20 to our consolidated financial statements, certain of the pension plans were remeasured at various dates in the year ended December 31, 2010, the periods July 10, 2009 through December 31, 2009, January 1, 2009 through July 9, 2009 and in the year ended December 31, 2008.

Net pension expense is calculated based on the expected return on plan assets and not the actual return on plan assets. The expected return on U.S. plan assets that is included in pension expense is determined from periodic studies, which include a review of asset allocation strategies, anticipated future long-term performance of individual asset classes, risks using standard deviations and correlations of returns among the asset classes that comprise the plans' asset mix. While the studies give appropriate consideration to recent plan performance and historical returns, the assumptions are primarily long-term, prospective rates of return. In December 2010 an analysis of the investment policy was completed for the U.S. pension plans which reduced the expected return on assets to 8.0% from 8.5% at December 31, 2009. The decrease in expected return on assets is primarily related to lower bond yields and updated return assumptions for equities and equity-like asset classes. Differences between the expected return on plan assets and the actual return on plan assets are recorded in Accumulated other comprehensive income (loss) as an actuarial gain or loss, and subject to possible amortization into net pension expense over future periods. A market-related value of plan assets, which averages gains and losses over a period of years, is utilized in the determination of future pension expense. For substantially all pension plans, market-related value is defined as an amount that initially recognizes 60.0% of the difference between the actual fair value of assets and the expected calculated value, and 10.0% of that difference over each of the next four years. The market-related value of assets at December 31, 2010 used to determine U.S. and non-U.S. net periodic pension income for the year ending December 31, 2011 was $4.1 billion and $0.3 billion lower than the actual fair value of plan assets at December 31, 2010.

Another key assumption in determining net pension expense is the assumed discount rate to be used to discount plan obligations. We estimate this rate for U.S. plans using a cash flow matching approach, which uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate. Old GM used an iterative process to determine the discount rate based on a hypothetical investment in a portfolio of high-quality bonds rated AA or higher by a recognized rating agency and a hypothetical reinvestment of the proceeds of such bonds upon maturity using forward rates derived from a yield curve until the U.S. pension obligation was defeased. This reinvestment component was incorporated into the methodology because it was not feasible, in light of the magnitude and time horizon over which U.S. pension obligations extend, to accomplish full defeasance through direct cash flows from an actual set of bonds selected at any given measurement date.

The benefit obligation for pension plans in Canada, the United Kingdom and Germany comprise 92% of the non-U.S. pension benefit obligation at December 31, 2010. The discount rates for Canadian plans are determined using a cash flow matching approach, similar to the U.S. approach. The discount rates for plans in the United Kingdom and Germany use a curve derived from high quality corporate bonds with maturities consistent with the plans' underlying duration of expected benefit payments.

The following table summarizes rates used to determine net pension expense:

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Weighted-average expected long-term rate of return on U.S. plan assets	8.48%	8.50%	8.50%	8.50%
Weighted-average expected long-term rate of return on non-U.S. plan assets	7.42%	7.97%	7.74%	7.78%
Weighted-average discount rate for U.S. plan obligations	5.36%	5.63%	6.27%	6.56%
Weighted-average discount rate for non-U.S. plan obligations	5.19%	5.82%	6.23%	5.77%

Significant differences in actual experience or significant changes in assumptions may materially affect the pension obligations. The effect of actual results differing from assumptions and the changing of assumptions are included in unamortized net actuarial gains and losses that are subject to amortization to expense over future periods.

The following table summarizes the unamortized actuarial gain (before tax) on pension plans (dollars in billions):

	Successor	
	December 31, 2010	December 31, 2009
Unamortized actuarial gain	$2.9	$3.0

The following table summarizes the actual and expected return on pension plan assets (dollars in billions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
U.S. actual return	$11.6	$9.9	$(0.2)	$(11.4)
U.S. expected return	$ 6.6	$3.0	$ 3.8	$ 8.0
Non-U.S. actual return	$ 1.2	$1.2	$ 0.2	$ (2.9)
Non-U.S. expected return	$ 1.0	$0.4	$ 0.4	$ 1.0

GENERAL MOTORS COMPANY AND SUBSIDIARIES

The following table illustrates the sensitivity to a change in certain assumptions for the pension plans, holding all other assumptions constant (dollars in millions):

	Successor			
	U.S. Plans		Non-U.S. Plans	
	Effect on 2011 Pension Expense	Effect on December 31, 2010 PBO	Effect on 2011 Pension Expense	Effect on December 31, 2010 PBO
25 basis point decrease in discount rate	–$110	+$2,540	–$ 7	+$714
25 basis point increase in discount rate	+$ 90	–$2,470	+$10	–$677
25 basis point decrease in expected return on assets	+$210	—	+$35	—
25 basis point increase in expected return on assets	–$210	—	–$35	—

The U.S. pension plans generally provide covered U.S. hourly employees hired prior to October 15, 2007 with pension benefits of negotiated, flat dollar amounts for each year of credited service earned by an individual employee. Early retirement supplements are also provided to those who retire prior to age 62. Hourly employees hired after October 15, 2007 participate in a cash balance pension plan. Formulas providing for such stated amounts are contained in the applicable labor contract. Pension expense and the pension obligations do not consider any future benefit increases or decreases that may occur beyond current labor contracts. The usual cycle for negotiating new labor contracts is every four years. We do not have a past practice of maintaining a consistent level of benefit increases or decreases from one contract to the next.

The following data illustrates the sensitivity of changes in pension expense and pension obligation based on the last remeasurement of the U.S hourly pension plan at December 31, 2010, as a result of changes in future benefit units for U.S. hourly employees, effective after the expiration of the current contract (dollars in millions):

	Successor	
Change in future benefit units	Effect on 2011 Pension Expense	Effect on December 31, 2010 PBO
One percentage point increase in benefit units	+$81	+$240
One percentage point decrease in benefit units	–$79	–$233

We utilize a variety of pricing sources to estimate the fair value of our pension assets, including: independent pricing vendors, dealer or counterparty supplied valuations, third party appraisals, appraisals prepared by investment managers, or investment sponsor or third party administrator supplied net asset value (or its equivalent) per share (NAV) used as a practical expedient.

A significant portion of our pension assets are classified in Level 3. Pension assets for which fair value is determined through the use of NAV and for which we may not have the ability to redeem our entire investment with the investee at NAV as of the measurement date or in the near-term, are classified in Level 3. We classify pension assets that include significant unobservable inputs in Level 3.

Significant assets classified in Level 3, with the related Level 3 inputs to the valuation that may be subject to volatility and change, and additional considerations for leveling, are as follows:

- Government, agency and corporate debt securities — Pricing services and dealers often use proprietary pricing models which incorporate unobservable inputs. These inputs primarily consist of yield and credit spread assumptions. Management may consider other security attributes such as liquidity, market activity, price level, credit ratings and geo-political risk, in assessing the observability of inputs used by pricing services or dealers, which may affect classification in the fair value hierarchy.

- Group annuity contracts – The value of each group annuity contract or policy depends, in part, on the values of the units of the separately managed investment accounts backing the contract. The fair value of the separately managed investment account assets is based on the fair value of the underlying assets owned by these accounts. The separately managed investment accounts, which typically calculate NAV, and underlying assets are valued in accordance with the valuation policies of the respective insurers. Inherent restrictions that do not allow redemption of our entire investment at NAV at the measurement date or in the near-term are the primary considerations for these investments being classified in Level 3.

- Agency and non-agency mortgage and other asset-backed securities — Pricing services and dealers often use proprietary pricing models which incorporate unobservable inputs. These inputs typically consist of prepayment curves, discount rates, default assumptions and recovery rates. Management may consider other security attributes such as liquidity, market activity, price level, credit ratings and geo-political risk, in assessing the observability of inputs used by pricing services or dealers, which may affect classification in the fair value hierarchy.

- Investment funds, private equity and debt investments, and real estate assets — The funds and certain special purpose entities valued using NAV, and in which we may not have the ability to redeem our entire investment with the investee at NAV at the measurement date or in near-term, are classified in Level 3. The Level 3 inputs for these investments include NAV provided by the investment sponsor or third party administrator. When NAV was not used as a practical expedient, the fair value estimates provided by investment sponsors are used. These fair value estimates are reviewed, and in cases where these estimates do not represent fair value they may be adjusted by management based on changes in the composition or performance of the underlying investments or comparable investments, overall market conditions, and other economic factors. Such fair value adjustments at December 31, 2009 and 2010 were not significant.

Refer to Note 4 to our consolidated financial statements for a more detailed discussion of the inputs used to determine fair value for each significant asset class or category.

Other Postretirement Benefits

OPEB plans are accounted for on an actuarial basis, which requires the selection of various assumptions, including a discount rate and healthcare cost trend rates. Old GM estimated the discount rate using an iterative process based on a hypothetical investment in a portfolio of high-quality bonds rated AA or higher by a recognized rating agency and a hypothetical reinvestment of the proceeds of such bonds upon maturity using forward rates derived from a yield curve until the U.S. OPEB obligation was defeased. This reinvestment component was incorporated into the methodology because it was not feasible, in light of the magnitude and time horizon over which the U.S. OPEB obligations extend, to accomplish full defeasance through direct cash flows from an actual set of bonds selected at any given measurement date.

Beginning in September 2008, the discount rate used for the benefits to be paid from the UAW retiree medical plan during the period September 2008 through December 2009 was based on a yield curve which used projected cash flows of representative high-quality AA rated bonds matched to spot rates along a yield curve to determine the present value of cash flows to calculate a single equivalent discount rate. All other U.S. OPEB plans started using a discount rate based on a yield curve on July 10, 2009. The UAW retiree medical plan was settled on December 31, 2009 and the plan assets were contributed to the New VEBA as part of the payment terms under the 2009 UAW Retiree Settlement Agreement. We are released from UAW retiree healthcare claims incurred after December 31, 2009.

The significant non-U.S. OPEB plans cover Canadian employees. The discount rates for the Canadian plans are determined using a cash flow matching approach, similar to the U.S. OPEB plans.

The following table summarizes the weighted-average discount rate used to determine net OPEB expense for the significant plans:

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Weighted-average discount rate for U.S. plans	5.57%	6.81%	8.11%	7.02%
Weighted-average discount rate for non-U.S. plans	5.22%	5.47%	6.77%	5.90%

As a result of modifications made as part of the 363 Sale, there are no significant uncapped U.S. healthcare plans remaining at December 31, 2010 and, therefore, the healthcare cost trend rate no longer has a significant effect in the U.S. An estimate is developed of the healthcare cost trend rates used to value benefit obligations for non-U.S. plans through review of historical retiree cost data and near-term healthcare outlook which includes appropriate cost control measures that have been implemented. Changes in the healthcare cost trend rate can have significant effect on the actuarially determined obligation and related OPEB expense.

The following table summarizes the healthcare cost trend rates used in the remeasurement of the APBO:

	Successor	
	December 31, 2010	December 31, 2009
Assumed Healthcare Trend Rates	Non-U.S. Plans (a)	Non-U.S. Plans
Initial healthcare cost trend rate	5.6%	5.4%
Ultimate healthcare cost trend rate	3.4%	3.3%
Number of years to ultimate trend rate	8	8

(a) The implementation of the HCT in Canada is anticipated and will significantly reduce our exposure to changes in the healthcare cost trend rate.

The following table summarizes the effect of a one-percentage point change in the assumed healthcare trend rates based on the last remeasurement of the benefit plans at December 31, 2010 (dollars in millions):

	Successor	
	Non-U.S. Plans (a)	
Change in Assumption	Effect on 2011 Aggregate Service and Interest Cost	Effect on December 31, 2010 APBO
One percentage point increase	+$31	+$491
One percentage point decrease	–$25	–$392

(a) The implementation of the HCT in Canada is anticipated and will significantly reduce our exposure to changes in the healthcare cost trend rate.

Layoff Benefits

UAW employees are provided with reduced wages and continued coverage under certain employee benefit programs through the SUB and TSP job security programs. The number of weeks that an employee receives these benefits depends on the employee's classification as well as the number of years of service that the employee has accrued. A similar tiered benefit is provided to CAW employees. Considerable management judgment and assumptions are required in calculating the related liability, including productivity initiatives, capacity actions and federal and state unemployment payments. The assumptions for the related benefit costs include the incidence of mortality, retirement, turnover and the healthcare trend rate, which are applied on a consistent basis with other U.S. hourly benefit plans. While we believe our judgments and assumptions are reasonable, changes in the assumptions underlying these estimates, which we revise each quarter, could result in a material effect on the financial statements in a given period.

Deferred Taxes / Valuation Allowances

We establish and Old GM established valuation allowances for deferred tax assets based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. We consider and Old GM considered the following possible sources of taxable income when assessing the realization of deferred tax assets:

- Future reversals of existing taxable temporary differences;
- Future taxable income exclusive of reversing temporary differences and carryforwards;
- Taxable income in prior carryback years; and
- Tax-planning strategies.

The assessment regarding whether a valuation allowance is required or should be adjusted also considers all available positive and negative evidence factors, including but not limited to:

- Nature, frequency, and severity of recent losses;
- Duration of statutory carryforward periods;
- Historical experience with tax attributes expiring unused; and
- Near- and medium-term financial outlook.

Concluding a valuation allowance is not required is difficult when there is significant negative evidence that is objective and verifiable, such as cumulative losses in recent years. We utilize and Old GM utilized a rolling three years of actual and current year anticipated results as the primary measure of cumulative losses in recent years, as adjusted for non-recurring matters.

The valuation of deferred tax assets requires judgment in assessing the likely future tax consequences of events that have been recognized in our financial statements or tax returns and future profitability. Our accounting for deferred tax consequences represents our best estimate of those future events. Changes in our current estimates, due to unanticipated events or otherwise, could have a material impact on our financial condition and results of operations.

Though objective and verifiable negative evidence continues to outweigh positive evidence in our key valuation allowance jurisdictions, we are experiencing positive evidence trends in various jurisdictions. South Korea and Australia are farther ahead in this trend of sustained operating profits and taxable income. U.S. and Canada operations are showing early signs of this positive evidence trend, and Germany, Spain and the United Kingdom operations are not yet experiencing such a favorable shift. To the extent this trend continues, it is reasonably possible our conclusion regarding the need for full valuation allowances could change, resulting in the reversal of some or all of the valuation allowances.

Refer to Note 23 to our consolidated financial statements for additional information regarding deferred taxes and valuation allowances.

Valuation of Vehicle Operating Leases and Lease Residuals

In accounting for vehicle operating leases, a determination is made at the inception of a lease of the estimated realizable value (i.e., residual value) of the vehicle at the end of the lease. Residual value represents an estimate of the market value of the vehicle at the end of the lease term, which typically ranges from nine months to five years. A customer is obligated to make payments during the term of a lease to the contract residual. A customer is not obligated to purchase a vehicle at the end of a lease, and we are and Old GM was exposed to a risk of loss to the extent the value of a vehicle is below the residual value estimated at contract inception.

Residual values are initially determined by consulting independently published residual value guides. Realization of residual values is dependent on the future ability to market vehicles under prevailing market conditions. Over the life of a lease, the adequacy of the estimated residual value is evaluated and adjustments are made to the extent the expected value of a vehicle at lease termination declines. Adjustments may be in the form of revisions to depreciation rates or recognition of impairment charges. Impairment is determined to exist if the undiscounted expected future cash flows are lower than the carrying amount of the leased vehicle. Additionally, for automotive retail leases, an adjustment may also be made to the estimate of sales incentive accruals for residual support and risk sharing programs initially recorded when the vehicles are sold.

With respect to residual values of automotive leases to daily rental car companies, due to the short-term nature of the operating leases, Old GM historically had forecasted auction proceeds at lease termination. In the three months ended December 31, 2008 forecasted auction proceeds in the United States differed significantly from actual auction proceeds due to highly volatile economic conditions, in particular a decline in consumer confidence and available consumer credit, which affected the residual values of vehicles at auction. Due to these significant uncertainties, Old GM determined that it no longer had a reliable basis to forecast auction proceeds in the United States and began utilizing current auction proceeds to estimate the residual values in the impairment analysis for the automotive leases to daily rental car companies, which is consistent with Old GM's impairment analyses for automotive retail leases. As a result of this change in estimate, Old GM recorded an incremental impairment charge of $144 million in the three months ended December 31, 2008 related to the automotive leases to daily rental car companies.

The following table summarizes recorded impairment charges related to automotive retail leases to daily rental car companies and automotive retail leases (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Automotive retail leases to daily rental car companies	$49	$18	$47	$382
Automotive retail leases (a)	$—	$—	$16	$377

(a) The year ended December 31, 2008 includes an increase in intersegment residual support and risk sharing reserves of $220 million recorded as a reduction of revenue in GMNA.

We continue to use the lower of forecasted or current auction proceeds to estimate residual values for impairment purposes. Significant differences between the estimate of residual values and actual experience may materially affect impairment charges recorded, if any, and the rate at which vehicles in Equipment on operating leases, net are depreciated. Significant differences will also affect the residual support and risk sharing reserves established as a result of certain agreements with Ally Financial, whereby Ally Financial is reimbursed up to an agreed-upon percentage of certain residual value losses they experience on their operating lease portfolio. During the year ended December 31, 2010 we recorded favorable adjustments to our residual support and risk sharing liabilities of $0.6 billion in the U.S. due to increases in estimated residual values.

The following table illustrates the effect of changes in our estimate of vehicle sales proceeds at lease termination on residual support and risk sharing reserves related to vehicles owned by Ally Financial at December 31, 2010 and 2009 holding all other assumptions constant (dollars in millions):

	Successor	
	December 31, 2010 Effect on Residual Support and Risk Sharing Reserves	December 31, 2009 Effect on Residual Support and Risk Sharing Reserves
10% increase in vehicle sales proceeds	–$ 73	–$534
10% decrease in vehicle sales proceeds	+$196	+$381

The critical assumptions underlying the estimated carrying amount of leased vehicles included within Equipment on operating leases, net include: (1) estimated market value information obtained and used in estimating residual values; (2) proper identification and estimation of business conditions; (3) remarketing abilities; and (4) vehicle and marketing programs. Changes in these assumptions could have a significant effect on the estimate of residual values.

Due to the contractual terms of our residual support and risk sharing agreements with Ally Financial, which currently limit our maximum obligation to Ally Financial should vehicle residual values decrease, an increase in sales proceeds does not have the equivalent offsetting effect on our residual support and risk sharing reserves as a decrease in sales proceeds.

The following table summarizes the maximum obligation and recorded receivables and liabilities associated with the contractual terms of our residual support and risk sharing agreements with Ally Financial (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Maximum obligation		
Residual support	$ 523	$1,159
Risk sharing agreements	$ 692	$1,392
Outstanding receivables (liabilities)		
Residual support	$ 24	$ (369)
Risk sharing agreements	$(269)	$ (366)

When a lease vehicle is returned or repossessed by us, the asset is recorded at the lower of cost or estimated selling price, less cost to sell.

Impairment of Goodwill

Goodwill arises from the application of fresh-start reporting and acquisitions accounted for as business combinations. Goodwill is tested for impairment in the fourth quarter of each year for all reporting units, or more frequently if events occur or circumstances change that would warrant such a review. An impairment charge is recorded for the amount, if any, by which the carrying amount of goodwill exceeds its implied value. Our reporting units are GMNA, GME, GM Financial and various reporting units within the GMIO and GMSA segments. Due to the integrated nature of our manufacturing operations and the sharing of vehicle platforms among brands, assets and other resources are shared extensively within GMNA and GME and financial information by brand or country is not discrete below the operating segment level such that GMNA and GME do not contain reporting units below the operating segment level. GM Financial also does not contain reporting units below the operating segment level. GMIO and GMSA are less integrated given the lack of regional trade pacts and other unique geographical differences and thus contain separate reporting units below the operating segment level.

At December 31, 2010 we had goodwill of $31.8 billion, which predominately arose upon the application of fresh-start reporting and the acquisition of AmeriCredit. When applying fresh-start reporting, certain accounts, primarily employee benefit and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than fair value, and the difference between the U.S. GAAP and fair value amounts gives rise to goodwill, which is a residual. Our employee benefit related accounts were recorded in accordance with ASC 712 and ASC 715 and deferred income taxes were recorded in accordance with ASC 740. Further, we recorded valuation allowances against certain of our deferred tax assets, which under ASC 852 also resulted in goodwill. If all identifiable assets and liabilities had been recorded at fair value upon application of fresh-start reporting, no goodwill would have resulted. In conjunction with the acquisition of GM Financial in October 2010, we recorded $1.3 billion of acquisition related goodwill, including $153 million recorded at the acquisition-date to establish a valuation allowance for deferred taxes which was not applicable to GM Financial on a stand-alone basis.

In the future, we have an increased likelihood of measuring goodwill for possible impairment during our annual or event-driven goodwill impairment testing and in evaluating whether it is more likely than not that a goodwill impairment exists for reporting units with zero or negative carrying values. An event-driven impairment test is required if it is more likely than not that the fair value of a reporting unit is less than its net book value. Because our reporting units were recorded at their fair values upon application of fresh-start reporting, it is more likely a decrease in the fair value of our reporting units from their fresh-start reporting values could occur, and such a decrease would trigger the need to measure for possible goodwill impairments. Refer to Note 4 to our consolidated financial statements for additional information related to the adoption of ASU 2010-28, "Intangibles, Goodwill and Other: When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units."

Future goodwill impairments could occur should the fair value-to-U.S. GAAP adjustments differences decrease. Goodwill predominately resulted from our recorded liabilities for certain employee benefit obligations being higher than the fair value of these obligations because lower discount rates were utilized in determining the U.S. GAAP values compared to those utilized to determine fair values. The discount rates utilized to determine the fair value of these obligations were based on our incremental borrowing rates, which included our nonperformance risk. Our incremental borrowing rates are also affected by changes in market interest rates. Further, the recorded amounts of our assets were lower than their fair values because of the recording of valuation allowances on certain of our deferred tax assets. The difference between these fair value-to-U.S. GAAP amounts would decrease upon an improvement in our credit rating, thus resulting in a decrease in the spread between our employee benefit related obligations under U.S. GAAP and their fair values. A decrease will also occur upon reversal of our deferred tax asset valuation allowances. Should the fair value-to-U.S. GAAP adjustments differences decrease for these reasons, the implied goodwill balance will decline. Accordingly, at the next annual or event-driven goodwill impairment test, to the extent the carrying amount of a reporting unit exceeds its fair value, a goodwill impairment could occur. Future goodwill impairments could also occur should we reorganize our internal reporting structure in a manner that changes the composition of one or more of our reporting units. Upon such an event, goodwill would be reassigned to the affected reporting units using a relative-fair-value allocation approach, unless the entity was never integrated, and not based on the amount of goodwill that was originally attributable to fair value-to-U.S. GAAP differences that gave rise to goodwill.

When performing our goodwill impairment testing, the fair values of our reporting units were determined based on valuation techniques using the best available information, primarily discounted cash flow projections. We make significant assumptions and estimates about the extent and timing of future cash flows, growth rates and discount rates. The cash flows are estimated over a significant future period of time, which makes those estimates and assumptions subject to a high degree of uncertainty. Where available and as appropriate, comparative market multiples and the quoted market price of our common stock are used to corroborate the results of the discounted cash flow method. While we believe that the assumptions and estimates used to determine the estimated fair values of each of our reporting units are reasonable, a change in assumptions underlying these estimates could result in a material effect on the consolidated financial statements. Assumptions used in our discounted cash flow analysis that have the most significant effect on the estimated fair value of our reporting units include:

- Our estimated WACC;
- Our estimated long-term growth rates; and
- Our estimate of industry sales and our market share.

During the three months ended December 31, 2010 we performed our annual goodwill impairment testing for all reporting units. Based on this testing, we determined that goodwill was not impaired. The valuation methodologies utilized to perform our goodwill impairment testing were consistent with those used in our application of fresh-start reporting on July 10, 2009, as discussed in Note 2 to our consolidated financial statements, and in any subsequent annual or event-driven impairment tests and resulted in Level 3 measures. The following table summarizes the key assumptions for each of our more significant reporting units utilized in our 2010 annual goodwill impairment testing as of October 1, 2010 (dollars and volumes in millions):

	Goodwill Amount as of October 1, 2010	WACC	Long-Term Growth Rates	Industry Sales		Market Share	
				2011	2014	2011	2014
GMNA	$26,410	16.5%	1.5%	15.9	20.2	18.5%	18.2%
GME	$ 3,096	17.0%	0.5%	18.4	21.3	6.8%	7.6%
GM Daewoo (a)	$ 632	16.0%	3.0%	77.9	91.8	1.2%	1.4%
Holden	$ 186	14.5%	3.0%	1.0	1.1	12.4%	13.5%
GM Mercosur	$ 120	15.3%	4.7%	4.6	5.4	18.6%	17.0%

(a) Industry sales volume and market share for GM Daewoo are based on global industry volumes as GM Daewoo exports vehicles globally.

The WACCs considered various factors including bond yields, risk premiums, and tax rates; the terminal values were determined using a growth model that applied a reporting unit's long-term growth rate to its projected cash flows beyond 2014; and industry sales and a market share for each reporting unit included annual estimates through 2014, except for GME which is through 2015.

Our fair value estimates assume the achievement of the future financial results contemplated in our forecasted cash flows, and there can be no assurance that we will realize that value. The estimates and assumptions used are subject to significant uncertainties, many of which are beyond our control, and there is no assurance that anticipated financial results will be achieved.

In calculating the fair values of our more significant reporting units during our 2010 annual goodwill impairment testing, keeping all other assumptions constant, the carrying values of these reporting units would still exceed their estimated fair values had our WACC increased by 16.5 percentage points for GMNA, 7 percentage points for GME, 11 percentage points for GM Daewoo, 13.5 percentage points for Holden and 8.7 percentage points for GM Mercosur.

In the three months ended June 30, 2010 there were event-driven changes in circumstances within our GME reporting unit that warranted the testing of goodwill for impairment. In the three months ended June 30, 2010 anticipated competitive pressure on our margins in the near- and medium-term led us to believe that the goodwill associated with our GME reporting unit may be impaired. Utilizing the best available information at June 30, 2010, the date of impairment measurement, we performed a Step 1 goodwill impairment test for our GME reporting unit, and concluded that goodwill was not impaired. The fair value of our GME reporting unit was estimated to be approximately $325 million over its carrying amount. If we had not passed Step 1, we believe the amount of any goodwill impairment would approximate $140 million representing the net decrease, from July 9, 2009 through June 30, 2010, in the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill.

Refer to Notes 13 and 26 to our consolidated financial statements for additional information on goodwill impairments.

Impairment of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds the fair value for the asset group to be held and used. Product-specific long-lived assets are tested for impairment at the platform level. Non-product line specific long-lived assets are tested for impairment on a segment basis in GMNA, GME, and GM Financial and tested at or within our various reporting units within GMIO and GMSA segments. Assets classified as held for sale are recorded at the lower of carrying amount or fair value less cost to sell. Fair value is determined primarily using the anticipated cash flows discounted at a rate commensurate with the risk involved. We develop anticipated cash flows from historical experience and internal business plans. A considerable amount of management judgment and assumptions are required in performing the long-lived asset impairment tests, principally in determining the fair value of the asset groups and the assets' average estimated useful life. While we believe our judgments and assumptions are reasonable, a change in assumptions underlying these estimates could result in a material effect to the consolidated financial statements. Long-lived assets could become impaired in the future as a result of declines in profitability due to significant changes in volume, pricing or costs. Refer to Note 26 to our consolidated financial statements for additional information on impairments of long-lived assets and intangibles.

Valuation of Cost and Equity Method Investments

When events and circumstances warrant, equity investments accounted for under the cost or equity method of accounting are evaluated for impairment. An impairment charge would be recorded whenever a decline in value of an equity investment below its carrying amount is determined to be other than temporary. In determining if a decline is other than temporary we consider and Old GM considered such factors as the length of time and extent to which the fair value of the investment has been less than the carrying amount of the equity affiliate, the near-term and longer-term operating and financial prospects of the affiliate and the intent and ability to hold the investment for a period of time sufficient to allow for any anticipated recovery.

When available, quoted market prices are used to determine fair value. If quoted market prices are not available, fair value is based upon valuation techniques that use, where possible, market-based inputs. Generally, fair value is estimated using a combination of the income approach and the market approach because circumstances usually do not permit the use of a single approach. Under the income approach, estimated future cash flows are discounted at a rate commensurate with the risk involved using marketplace assumptions. Under the market approach, valuations are based on actual comparable market transactions and market earnings and book value multiples for the same or comparable entities. The assumptions used in the income and market approaches have a significant effect on the determination of fair value. Significant assumptions include estimated future cash flows, appropriate discount rates, and adjustments to market transactions and market multiples for differences between the market data and the investment being valued. Changes to these assumptions could have a significant effect on the valuation of cost and equity method investments.

In the three months ended December 31, 2009 we recorded impairment charges related to our investment in Ally Financial common stock of $270 million. We determined the fair value of our investment in Ally Financial common stock using a market multiple, sum-of-the-parts methodology. This methodology considered the average price/tangible book value multiples of companies deemed comparable to each of Ally Financial's operations, which were then aggregated to determine Ally Financial's overall fair value. Based on our analysis, the estimated fair value of our investment in Ally Financial common stock was determined to be $970 million, resulting in an impairment charge of $270 million. The following table illustrates the effect of a 0.1 change in the average price/ tangible book value multiple on our impairment charge (dollars in millions):

Change in Assumption	Effect on December 31, 2009 Impairment Charges
Increase in average price/tangible book value multiple	+$100
Decrease in average price/tangible book value multiple	–$100

At December 31, 2010 the balance of our investment in Ally Financial common stock was $964 million and the balance of our investment in Ally Financial preferred stock was $665 million.

Derivatives

Derivatives are used in the normal course of business to manage exposures arising from market risks resulting from changes in certain commodity prices and interest and foreign currency exchange rates. Derivatives are accounted for in the consolidated balance sheets as assets or liabilities at fair value.

Significant judgments and estimates are used in estimating the fair values of derivative instruments, particularly in the absence of quoted market prices. Internal models are used to value a majority of derivatives. The models use, as their basis, readily observable market inputs, such as time value, forward interest rates, volatility factors, and current and forward market prices for commodities and foreign currency exchange rates.

The valuation of derivative liabilities takes into account our nonperformance risk. At December 31, 2010 and December 31, 2009, our nonperformance risk was not observable through a liquid credit default swap market. Our nonperformance risk was estimated using internal analysis to develop conclusions on our implied credit rating, which we used to determine the appropriate credit spread, which would be applied to us by market participants. Prior to receiving published credit ratings we developed our credit rating conclusions using an analysis of comparable industrial companies. At December 31, 2010 we incorporated published credit agency ratings of GM into our credit rating conclusions. At December 31, 2009, all derivatives whose fair values contained a significant credit adjustment based on our nonperformance risk were classified in Level 3. At December 31, 2010, we have determined that our non-performance risk no longer represents a significant input in the determination of the fair value of our derivatives. As of December 31, 2010 all automotive operations derivatives have been classified in Level 2.

Sales Incentives

The estimated effect of sales incentives to dealers and customers is recorded as a reduction of Automotive revenue, and in certain instances, as an increase to Automotive cost of sales, at the later of the time of sale or announcement of an incentive program to dealers. There may be numerous types of incentives available at any particular time, including a choice of incentives for a specific model. Incentive programs are generally brand specific, model specific or region specific, and are for specified time periods, which may be extended. Significant factors used in estimating the cost of incentives include the volume of vehicles that will be affected by the incentive programs offered by product, product mix and the rate of customer acceptance of any incentive program, and the likelihood that an incentive program will be extended, all of which are estimated based on historical experience and assumptions concerning customer behavior and future market conditions. When an incentive program is announced, the number of vehicles in dealer inventory eligible for the incentive program is determined, and a reduction of Automotive revenue or increase to Automotive cost of sales is recorded in the period in which the program is announced. If the actual number of affected vehicles differs from this estimate, or if a different mix of incentives is actually paid, the reduction in Automotive revenue or increase to Automotive cost of sales for sales incentives could be affected. There are a multitude of inputs affecting the calculation of the estimate for sales incentives, and an increase or decrease of any of these variables could have a significant effect on recorded sales incentives.

Policy, Warranty and Recalls

The estimated costs related to policy and product warranties are accrued at the time products are sold, and the estimated costs related to product recalls based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated. These estimates are established using historical information on the nature, frequency, and average cost of claims of each vehicle line or each model year of the vehicle line. However, where little or no claims experience exists for a model year or a vehicle line, the estimate is based on long-term historical averages. Revisions are made when necessary, based on changes in these factors. These estimates are re-evaluated on an ongoing basis. We actively study trends of claims and take action to improve vehicle quality and minimize claims. Actual experience could differ from the amounts estimated requiring adjustments to these liabilities in future periods. Due to the uncertainty and potential volatility of the factors contributing to developing estimates, changes in our assumptions could materially affect our results of operations.

Accounting Standards Not Yet Adopted

Accounting standards not yet adopted are discussed in Note 4 to our consolidated financial statements.

Forward-Looking Statements

In this report and in reports we subsequently file with the SEC on Forms 10-K and 10-Q and file or furnish on Form 8-K, and in related comments by our management, we use words like “anticipate,” “believe,” “continue,” “could,” “designed,” “effect,” “estimate,” “evaluate,” “expect,” “forecast,” “goal,” “initiative,” “intend,” “may,” “objective,” “outlook,” “plan,” “potential,” “priorities,” “project,” “pursue,” “seek,” “should,” “target,” “when,” “would,” or the negative of any of those words or similar expressions to identify forward-looking statements that represent our current judgment about possible future events. In making these statements we rely on assumptions and analyses based on our experience and perception of historical trends, current conditions and expected future developments as well as other factors we consider appropriate under the circumstances. We believe these judgments are reasonable, but these statements are not guarantees of any events or financial results, and our actual results may differ materially due to a variety of important factors, both positive and negative. These factors, which may be revised or supplemented in subsequent reports on SEC Forms 10-K, 10-Q and 8-K, include among others the following:

- Our ability to realize production efficiencies and to achieve reductions in costs as a result of our restructuring initiatives and labor modifications;
- Our ability to maintain quality control over our vehicles and avoid material vehicle recalls;
- Our ability to maintain adequate liquidity and financing sources and an appropriate level of debt, including as required to fund our planned significant investment in new technology, and, even if funded, our ability to realize successful vehicle applications of new technology;
- The effect of business or liquidity difficulties for us or one or more subsidiaries on other entities in our corporate group as a result of our highly integrated and complex corporate structure and operation;
- Our ability to continue to attract customers, particularly for our new products, including cars and crossover vehicles;

- Availability of adequate financing on acceptable terms to our customers, dealers, distributors and suppliers to enable them to continue their business relationships with us;
- The financial viability and ability to borrow of our key suppliers and their ability to provide systems, components and parts without disruption;
- Our ability to take actions we believe are important to our long-term strategy, including our ability to enter into certain material transactions outside of the ordinary course of business, which may be limited due to significant covenants in our secured revolving credit facility;
- Our ability to manage the distribution channels for our products, including our ability to consolidate our dealer network;
- The ability to successfully restructure our European operations;
- The continued availability of both wholesale and retail financing from Ally Financial and its affiliates in the United States, Canada and the other markets in which we operate to support our ability to sell vehicles in those markets, which is dependent on Ally Financial's ability to obtain funding and which may be suspended by Ally Financial if Ally Financial's credit exposure to us exceeds certain limitations provided in our operating arrangements with Ally Financial;
- Our ability to develop captive financing capability, including through GM Financial and to successfully integrate GM Financial into our operations;
- Overall strength and stability of general economic conditions and of the automotive industry, both in the United States and in global markets;
- Continued economic instability or poor economic conditions in the United States and global markets, including the credit markets, or changes in economic conditions, commodity prices, housing prices, foreign currency exchange rates or political stability in the markets in which we operate;
- Shortages of and increases or volatility in the price of oil, including as a result of political instability in the Middle East and African nations;
- Significant changes in the competitive environment, including the effect of competition and excess manufacturing capacity in our markets, on our pricing policies or use of incentives and the introduction of new and improved vehicle models by our competitors;
- Significant changes in economic and market conditions in China, including the effect of competition from new market entrants, on our vehicle sales and market position in China;
- Changes in the existing, or the adoption of new, laws, regulations, policies or other activities of governments, agencies and similar organizations, including where such actions may affect the production, licensing, distribution or sale of our products, the cost thereof or applicable tax rates;
- Costs and risks associated with litigation;
- Significant increases in our pension expense or projected pension contributions resulting from changes in the value of plan assets, the discount rate applied to value the pension liabilities or other assumption changes; and
- Changes in accounting principles, or their application or interpretation, and our ability to make estimates and the assumptions underlying the estimates, which could have an effect on earnings.

We caution readers not to place undue reliance on forward-looking statements. We undertake no obligation to update publicly or otherwise revise any forward-looking statements, whether as a result of new information, future events or other factors that affect the subject of these statements, except where we are expressly required to do so by law.

Quantitative and Qualitative Disclosures About Market Risk

Automotive

We and Old GM entered into a variety of foreign currency exchange, interest rate and commodity forward contracts and options to manage exposures arising from market risks resulting from changes in foreign currency exchange rates, interest rates and certain commodity prices. We do not enter into derivative transactions for speculative purposes.

The overall financial risk management program is under the responsibility of the Risk Management Committee, which reviews and, where appropriate, approves strategies to be pursued to mitigate these risks. The Risk Management Committee is comprised of members of our Management and functions under the oversight of the Finance and Risk Committee, a committee of the Board of Directors. The Finance and Risk Committee assists and guides the Board in its oversight of our financial and risk management strategies. A risk management control framework is utilized to monitor the strategies, risks and related hedge positions, in accordance with the policies and procedures approved by the Risk Management Committee.

In August 2010 we changed our risk management policy. Our prior policy was intended to reduce volatility of forecasted cash flows primarily through the use of forward contracts and swaps. The intent of the new policy is primarily to protect against risk arising from extreme adverse market movements on our key exposures and involves a shift to greater use of purchased options.

A discussion of our and Old GM's accounting policies for derivative financial instruments is included in Note 4 to our consolidated financial statements. Further information on our exposure to market risk is included in Note 21 to our consolidated financial statements.

Old GM's credit standing and liquidity position in the first half of 2009 and the Chapter 11 Proceedings severely limited its ability to manage risks using derivative financial instruments as most derivative counterparties were unwilling to enter into transactions with Old GM. Subsequent to the 363 Sale and through December 31, 2009, we were largely unable to enter forward contracts pending the completion of negotiations with potential derivative counterparties. Since August 2010 we executed new agreements with counterparties that enable us to enter into options, forward contracts and swaps.

The following analyses provide quantitative information regarding exposure to foreign currency exchange rate risk, interest rate risk, commodity price risk and equity price risk. Sensitivity analysis is used to measure the potential loss in the fair value of financial instruments with exposure to market risk. The models used assume instantaneous, parallel shifts in exchange rates, interest rate yield curves and commodity prices. For options and other instruments with nonlinear returns, models appropriate to these types of instruments are utilized to determine the effect of market shifts. There are certain shortcomings inherent in the sensitivity analyses presented, primarily due to the assumption that interest rates and commodity prices change in a parallel fashion and that spot exchange rates change instantaneously. In addition, the analyses are unable to reflect the complex market reactions that normally would arise from the market shifts modeled and do not contemplate the effects of correlations between foreign currency pairs, or offsetting long-short positions in currency pairs which may significantly reduce the potential loss in value.

Foreign Currency Exchange Rate Risk

We have and Old GM had foreign currency exposures related to buying, selling, and financing in currencies other than the functional currencies of the operations. Derivative instruments, such as foreign currency forwards, swaps and options are used primarily to hedge exposures with respect to forecasted revenues, costs and commitments denominated in foreign currencies. At December 31, 2010 such contracts have remaining maturities of up to 12 months. At December 31, 2010 our three most significant foreign currency exposures are the Euro/British Pound, U.S. Dollar/Korean Won, and Euro/Korean Won.

At December 31, 2010 and 2009 the net fair value liability of financial instruments with exposure to foreign currency risk was $3.3 billion and $5.9 billion. This presentation utilizes a population of foreign currency exchange derivatives and foreign currency denominated debt and excludes the offsetting effect of foreign currency cash, cash equivalents and other assets. The potential loss in fair value for such financial instruments from a 10% adverse change in all quoted foreign currency exchange rates would be $513 million and $941 million at December 31, 2010 and 2009.

We are and Old GM was exposed to foreign currency risk due to the translation of the results of certain international operations into U.S. Dollars as part of the consolidation process. Fluctuations in foreign currency exchange rates can therefore create volatility in the results of operations and may adversely affect our financial position.

The following table summarizes the amounts of automotive foreign currency translation and transaction gains (losses) (dollars in millions):

	Successor		Predecessor
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Foreign currency translation gain (loss) recorded in accumulated other comprehensive income (loss)	$ 235	$ 157	$ 232
Foreign currency transaction gain (loss) recorded in earnings	$(209)	$(755)	$(1,077)

Interest Rate Risk

We are and Old GM was subject to market risk from exposure to changes in interest rates related to certain financial instruments, primarily debt, capital lease obligations and certain marketable securities.

Interest rate risk in Old GM was managed primarily with interest rate swaps. The interest rate swaps Old GM entered into usually involved the exchange of fixed for variable rate interest payments to effectively convert fixed rate debt into variable rate debt in order to achieve a target range of variable rate debt. At December 31, 2010 we did not have any interest rate swap derivative positions to manage interest rate exposures in our automotive operations.

The following table summarizes our automotive debt by fixed rate and variable rate (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Short-term debt — fixed rate	$ 305	$ 592
Short-term debt — variable rate	1,311	9,629
Total short-term debt	$1,616	$10,221
Short-term debt — fixed rate denominated in U.S. dollars	$ 96	$ 232
Short-term debt — fixed rate denominated in foreign currency	209	360
Total short-term debt — fixed rate	$ 305	$ 592
Short-term debt — variable rate denominated in U.S. dollars	$ 347	$ 6,253
Short-term debt — variable rate denominated in foreign currency	964	3,376
Total short-term debt — variable rate	$1,311	$ 9,629
Long-term debt — fixed rate	$2,519	$ 4,689
Long-term debt — variable rate	495	873
Total long-term debt	$3,014	$ 5,562
Long-term debt — fixed rate denominated in U.S. dollars	$ 601	$ 3,401
Long-term debt — fixed rate denominated in foreign currency	1,918	1,288
Total long-term debt – fixed rate	$2,519	$ 4,689
Long-term debt — variable rate denominated in U.S. dollars	$ 287	$ 551
Long-term debt — variable rate denominated in foreign currency	208	322
Total long-term debt — variable rate	$ 495	$ 873

At December 31, 2010 and 2009 the fair value liability of debt and capital leases was $4.8 billion and $16.0 billion. The potential increase in fair value resulting from a 10% decrease in quoted interest rates would be $166 million and $402 million at December 31, 2010 and 2009.

At December 31, 2010 we had $6.6 billion in marketable securities with exposure to interest rate risk. We invest in securities of various types and maturities, the value of which are subject to fluctuations in interest rates. The potential decrease in fair value from a 50 basis point increase in interest rates would be $15 million at December 31, 2010. Our exposure to interest rate risk on marketable securities at December 31, 2009 was insignificant.

Commodity Price Risk

We are and Old GM was exposed to changes in prices of commodities used in the automotive business, primarily associated with various non-ferrous and precious metals for automotive components and energy used in the overall manufacturing process. Certain commodity purchase contracts meet the definition of a derivative. Old GM entered into various derivatives, such as commodity swaps and options, to offset its commodity price exposures. We use commodity options to offset our commodity price exposures.

At December 31, 2010 and 2009 the net fair value asset of commodity derivatives was $84 million and $11 million. The potential loss in fair value resulting from a 10% adverse change in the underlying commodity prices would be $47 million and $6 million at December 31, 2010 and 2009. This amount excludes the offsetting effect of the commodity price risk inherent in the physical purchase of the underlying commodities.

Equity Price Risk

We are and Old GM was exposed to changes in prices of equity securities held. We typically do not attempt to reduce our market exposure to these equity instruments. Our exposure includes certain investments we hold in warrants of other companies. At December 31, 2010 and 2009 the fair value of these warrants was $44 million and $25 million. At December 31, 2010 and 2009 our exposure also includes investments of $43 million and $45 million in equity securities recorded at fair value. These amounts represent the maximum exposure to loss from these investments.

At December 31, 2010, the carrying amount of cost method investments was $1.7 billion, of which the carrying amounts of our investments in Ally Financial common stock and Ally Financial preferred stock were $964 million and $665 million. At December 31, 2009 the carrying amount of cost method investments was $1.7 billion, of which the carrying amounts of our investments in Ally Financial common stock and preferred stock were $970 million and $665 million. These amounts represent the maximum exposure to loss from these investments.

Counterparty Risk

We are exposed to counterparty risk on derivative contracts, which is the loss we could incur if a counterparty to a derivative contract defaulted. We enter into agreements with counterparties that allow the set-off of certain exposures in order to manage this risk.

Our counterparty risk is managed by our Risk Management Committee, which establishes exposure limits by counterparty. We monitor and report our exposures to the Risk Management Committee on a periodic basis. At December 31, 2010 a majority of all of our counterparty exposures are with counterparties that are rated A or higher.

Concentration of Credit Risk

We are exposed to concentration of credit risk primarily through holding cash and cash equivalents (which include money market funds), short- and long-term investments and derivatives. As part of our risk management process, we monitor and evaluate the credit standing of the financial institutions with which we do business. The financial institutions with which we do business are generally highly rated and geographically dispersed.

We are exposed to credit risk related to the potential inability to access liquidity in money market funds we invested in if the funds were to deny redemption requests. As part of our risk management process, we invest in large funds that are managed by reputable financial institutions. We also follow investment guidelines to limit our exposure to individual funds and financial institutions.

Automotive Financing

Fluctuations in market interest rates affect GM Financial's credit facilities and securitization transactions. GM Financial's gross interest rate spread, which is the difference between interest earned on finance receivables and interest paid, is affected by changes in interest rates as a result of GM Financial's dependence upon the issuance of variable rate securities and the incurrence of variable rate debt to fund purchases of finance receivables.

Credit Facilities

Fixed interest rate receivables purchased by GM Financial are pledged to secure borrowings under its credit facilities. Amounts borrowed under these credit facilities bear interest at variable rates that are subject to frequent adjustments to reflect prevailing market interest rates. To protect the interest rate spread within each credit facility, GM Financial is contractually required to enter into interest rate cap agreements in connection with borrowings under its credit facilities. The purchaser of the interest rate cap pays a premium in return for the right to receive the difference in the interest cost at any time a specified index of market interest rates rises above the stipulated cap rate. The purchaser of the interest rate cap bears no obligation or liability if interest rates fall below the cap rate. As part of GM Financial's interest rate risk management strategy and when economically feasible, it may simultaneously enter into a corresponding interest rate cap agreement in order to offset the premium paid by the trust to purchase the interest rate cap and thus retain the interest rate risk. The fair value of the interest rate cap purchased is included in Total GM Financial Assets and the fair value of the interest rate cap agreement sold is included in Total GM Financial Liabilities.

Securitizations

The interest rate demanded by investors in GM Financial's securitization transactions depends on prevailing market interest rates for comparable transactions and the general interest rate environment. GM Financial utilizes several strategies to minimize the effect of interest rate fluctuations on its gross interest rate margin, including the use of derivative financial instruments and the regular sale or pledging of automotive receivables to securitization trusts.

In GM Financial's securitization transactions, it transfers fixed rate finance receivables to securitization trusts that, in turn, sell either fixed rate or floating rate securities to investors. The fixed rates on securities issued by the trusts are indexed to market interest rate swap spreads for transactions of similar duration or various LIBOR rates and do not fluctuate during the term of the securitization. The floating rates on securities issued by the trusts are indexed to LIBOR and fluctuate periodically based on movements in LIBOR. Derivative financial instruments, such as interest rate swap and cap derivatives, are used to manage the gross interest rate spread on these transactions. GM Financial uses interest rate swap derivatives to convert the variable rate exposures on securities issued by its securitization trusts to a fixed rate, thereby locking in the gross interest rate spread to be earned by it over the life of a securitization. Interest rate swap derivatives purchased by GM Financial do not affect the amount of cash flows received by holders of the asset-backed securities issued by the trusts. The interest rate swap derivative serve to offset the effect of increased or decreased interest paid by the trusts on floating rate asset-backed securities on the cash flows received from the trusts. GM Financial utilizes such arrangements to modify its net interest sensitivity to levels deemed appropriate based on risk tolerance. In circumstances where the interest rate risk is deemed to be tolerable, usually if the risk is less than one year in term at inception, GM Financial may choose not to hedge potential fluctuations in cash flows due to changes in interest rates. Its special purpose entities are contractually required to purchase a derivative financial instrument to protect the net spread in connection with the issuance of floating rate securities even if GM Financial chooses not to hedge its future cash flows. Although the interest rate cap derivatives are purchased by the trusts, cash outflows from the trusts ultimately affect GM Financial's retained interests in the securitization transactions as cash expended by the securitization trusts will decrease the ultimate amount of cash to be received by GM Financial. Therefore, when economically feasible, GM Financial may simultaneously sell a corresponding interest rate cap derivative to offset the premium paid by the trust to purchase the interest rate cap derivative. The fair value of the interest rate cap derivatives purchased in connection with securitization transactions are included in Total GM Financial Assets and the fair value of the interest rate cap derivatives sold are included in Total GM Financial Liabilities. Changes in the fair value of the interest rate cap derivatives are a component of interest expense recorded in GM Financial operating expenses and other.

GM Financial has entered into interest rate swap derivatives to hedge the variability in interest payments on eight of its active securitization transactions. Portions of these interest rate swap derivatives are designated and qualify as cash flow hedges. The fair value of interest rate swap derivatives designated as hedges is included in GM Financial Other liabilities. Interest rate swap derivatives that are not designated as hedges are included in GM Financial Other assets.

The following table summarizes GM Financial's interest rate sensitive assets and liabilities by year of expected maturity and the fair value of those assets and liabilities at December 31, 2010 (dollars in millions):

	Years Ending December 31,						December 31, 2010
	2011	2012	2013	2014	2015	Thereafter	Fair Value
Assets							
Finance receivables							
Principal amounts	$3,755	$2,434	$1,287	$ 678	$ 372	$ 161	$8,186
Weighted-average annual percentage rate	15.74%	15.66%	15.57%	15.36%	15.21%	15.37%	
Interest rate swap agreements							
Notional amounts	$ 754	$ 460	$ 13	$ —	$ —	$ —	$ 23
Average pay rate	5.32%	3.53%	0.97%	—	—	—	
Average receive rate	1.03%	1.16%	0.43%	—	—	—	
Interest rate cap agreements							
Notional amounts	$ 177	$ 164	$ 144	$ 169	$ 79	$ 213	$ 8
Average strike rate	4.81%	4.73%	4.71%	4.53%	4.18%	3.47%

GM Financial estimates the realization of financing receivables in future periods using discount rate, prepayment and credit loss assumptions similar to its historical experience. Notional amounts on interest rate swap and cap derivatives are based on contractual terms. Credit facilities and securitization notes payable amounts have been classified based on expected payoff. Senior notes and convertible senior notes principal amounts have been classified based on maturity.

The notional amounts of interest rate swap and cap derivatives, which are used to calculate the contractual payments to be exchanged under the contracts, represent average amounts that will be outstanding for each of the years included in the table. Notional amounts do not represent amounts exchanged by parties and, thus, are not a measure of GM Financial's exposure to loss through its use of these derivatives.

GM Financial monitors hedging activities to ensure that the value of derivative financial instruments, their correlation to the contracts being hedged and the amounts being hedged continue to provide effective protection against interest rate risk. However, there can be no assurance that these strategies will be effective in minimizing interest rate risk or that increases in interest rates will not have an adverse effect on GM Financial's profitability. GM Financial does not enter into derivative transactions for speculative purposes.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the internal control over financial reporting of General Motors Company and subsidiaries (the Company) as of December 31, 2010, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2010, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule of General Motors Company and subsidiaries as of and for the year ended December 31, 2010 (Successor). Our report dated March 1, 2011 expressed an unqualified opinion on those financial statements and financial statement schedule and included an explanatory paragraph related to the Successor's adoption of a revised accounting standard related to consolidation principles.

Deloitte & Touche LLP

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the accompanying Consolidated Balance Sheets of General Motors Company and subsidiaries as of December 31, 2010 (Successor) and 2009 (Successor), and the related Consolidated Statements of Operations, Cash Flows and Equity (Deficit) for the year ended December 31, 2010 (Successor) and the period July 10, 2009 through December 31, 2009 (Successor), and the Consolidated Statements of Operations, Cash Flows and Equity (Deficit) of General Motors Corporation and subsidiaries for the period January 1, 2009 through July 9, 2009 (Predecessor) and the year ended December 31, 2008 (Predecessor) (Successor and Predecessor collectively, the Company). Our audits also included Schedule II - Valuation and Qualifying Accounts (the "financial statement schedule"). These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of General Motors Company and subsidiaries at December 31, 2010 (Successor) and 2009 (Successor) and the results of their operations and their cash flows for the year ended December 31, 2010 (Successor) and the period July 10, 2009 through December 31, 2009 (Successor), and the results of operations and cash flows of General Motors Corporation and Subsidiaries for the period January 1, 2009 through July 9, 2009 (Predecessor) and the year ended December 31, 2008 (Predecessor), in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 4 to the consolidated financial statements, the Successor adopted amendments to Accounting Standards Codification (ASC) Topic 810, *Consolidation*, effective January 1, 2010.

As discussed in Note 2 to the consolidated financial statements, on July 10, 2009 the Successor completed the acquisition of substantially all of the assets and assumed certain of the liabilities of the Predecessor in accordance with the Amended and Restated Master Sale and Purchase Agreement pursuant to Section 363(b) of the Bankruptcy Code and the Bankruptcy Court sale order dated July 5, 2009. Accordingly, the accompanying consolidated financial statements have been prepared in accordance with ASC Topic 852, *Reorganizations*. The Successor applied fresh-start reporting and recognized the acquired net assets at fair value, resulting in a lack of comparability with the prior period financial statements of the Predecessor.

As discussed in Note 4 to the consolidated financial statements, the Predecessor adopted amendments to ASC Topic 805, *Business Combinations*, effective January 1, 2009.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Successor's internal control over financial reporting as of December 31, 2010, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission, and our report dated March 1, 2011 expressed an unqualified opinion on the Successor's internal control over financial reporting.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Nature of Operations

General Motors Company was formed by the United States Department of the Treasury (UST) in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation (363 Sale) and changed its name to General Motors Company, is sometimes referred to in these consolidated financial statements for the periods on or subsequent to July 10, 2009 as “we,” “our,” “us,” “ourselves,” the “Company,” “General Motors,” or “GM,” and is the successor entity solely for accounting and financial reporting purposes (Successor). General Motors Corporation is sometimes referred to in these consolidated financial statements, for the periods on or before July 9, 2009, as “Old GM.” Prior to July 10, 2009 Old GM operated the business of the Company, and pursuant to the agreement with the Securities and Exchange Commission (SEC), as described in a no-action letter issued to Old GM by the SEC Staff on July 9, 2009 regarding our filing requirements and those of Motors Liquidation Company (MLC), the accompanying consolidated financial statements include the financial statements and related information of Old GM as it is our predecessor entity solely for accounting and financial reporting purposes (Predecessor). On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company, which is sometimes referred to in these consolidated financial statements for the periods on or after July 10, 2009 as “MLC.” MLC continues to exist as a distinct legal entity for the sole purpose of liquidating its remaining assets and liabilities.

On October 1, 2010 we acquired 100% of the outstanding equity interests of AmeriCredit Corp. (AmeriCredit), an automotive finance company which we subsequently renamed General Motors Financial Company, Inc. (GM Financial).

We develop, produce and market cars, trucks and parts worldwide. We also conduct finance operations through GM Financial. These financing operations consist principally of financing automobile purchases and leases for retail customers.

We analyze the results of our business through our five segments, which are GM North America (GMNA), GM Europe (GME), GM International Operations (GMIO), GM South America (GMSA) and GM Financial. Nonsegment operations are classified as Corporate. Corporate includes investments in Ally Financial, Inc. (Ally Financial) (formerly GMAC Inc.), certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures, certain nonsegment specific revenues and expenses, including costs related to the Delphi Benefit Guarantee Agreements (as subsequently defined in Note 20) and a portfolio of automotive retail leases.

We own a 9.9% equity interest in Ally Financial, which is accounted for as a cost method investment because we cannot exercise significant influence. Ally Financial provides a broad range of financial services, including consumer vehicle financing, automotive dealership and other commercial financing, residential mortgage services, and automobile service contracts.

Note 2. Chapter 11 Proceedings and the 363 Sale

Background

Over time as Old GM’s market share declined in North America, Old GM needed to continually restructure its business operations to reduce cost and excess capacity. Legacy labor costs and obligations and capacity in its dealer network made Old GM less competitive than new entrants into the U.S. market. These factors continued to strain Old GM’s liquidity. In 2005 Old GM incurred significant losses from operations and from restructuring activities such as providing support to Delphi Corporation (Delphi) and other efforts intended to reduce operating costs. Old GM managed its liquidity during this time through a series of cost reduction initiatives, capital markets transactions and sales of assets. However, the global credit market crisis had a dramatic effect on Old GM and the automotive industry. In the second half of 2008, the increased turmoil in the mortgage and overall credit markets (particularly the lack of financing for buyers or lessees of vehicles), the continued reductions in U.S. housing values, the volatility in the price of oil, recessions in the U.S. and Western Europe and the slowdown of economic growth in the rest of the world created a substantially more difficult business environment. The ability to execute capital markets transactions or sales of assets was extremely limited, vehicle sales in North America and Western Europe contracted severely, and the pace of vehicle sales in the rest of the world slowed. Old GM’s liquidity position, as well as its operating performance, were negatively affected by these economic and industry conditions and by other financial and business factors, many of which were beyond its control.

As a result of these economic conditions and the rapid decline in sales in the three months ended December 31, 2008 Old GM determined that, despite the actions it had then taken to restructure its U.S. business, it would be unable to pay its obligations in the normal course of business in 2009 or service its debt in a timely fashion, which required the development of a new plan that depended on financial assistance from the U.S. government.

In December 2008 Old GM requested and received financial assistance from the U.S. government and entered into a loan and security agreement with the UST, which was subsequently amended (UST Loan Agreement). In early 2009 Old GM's business results and liquidity continued to deteriorate, and, as a result, Old GM obtained additional funding from the UST under the UST Loan Agreement. Old GM also received funding from Export Development Canada (EDC), a corporation wholly-owned by the government of Canada, under a loan and security agreement entered into in April 2009 (EDC Loan Facility).

As a condition to obtaining the loans under the UST Loan Agreement, Old GM was required to submit a Viability Plan in February 2009 that included specific actions intended to result in the following:

- Repayment of all loans, interest and expenses under the UST Loan Agreement, and all other funding provided by the U.S. government;
- Compliance with federal fuel efficiency and emissions requirements and commencement of domestic manufacturing of advanced technology vehicles;
- Achievement of a positive net present value, using reasonable assumptions and taking into account all existing and projected future costs;
- Rationalization of costs, capitalization and capacity with respect to its manufacturing workforce, suppliers and dealerships; and
- A product mix and cost structure that is competitive in the U.S. marketplace.

The UST Loan Agreement also required Old GM to, among other things, use its best efforts to achieve the following restructuring targets:

Debt Reduction

- Reduction of its outstanding unsecured public debt by not less than two-thirds through conversion of existing unsecured public debt into equity, debt and/or cash or by other appropriate means.

Labor Modifications

- Reduction of the total amount of compensation paid to its U.S. employees so that, by no later than December 31, 2009, the average of such total amount is competitive with the average total amount of such compensation paid to U.S. employees of certain foreign-owned, U.S. domiciled automakers (transplant automakers);
- Elimination of the payment of any compensation or benefits to U.S. employees who have been fired, laid-off, furloughed or idled, other than customary severance pay; and
- Application of work rules for U.S. employees in a manner that is competitive with the work rules for employees of transplant automakers.

VEBA Modifications

- Modification of its retiree healthcare obligations arising under the 2008 UAW Settlement Agreement under which responsibility for providing healthcare for International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (UAW) retirees, their spouses and dependents would permanently shift from Old GM to the New Plan funded by the UAW Retiree Medical Benefits Trust (New VEBA), such that payment or contribution of not less than one-half of the value of each future payment was to be made in the form of Old GM common stock, subject to certain limitations.

The UST Loan Agreement provided that if, by March 31, 2009 or a later date (not to exceed 30 days after March 31, 2009) as determined by the Presidential Task Force on the Auto Industry (Auto Task Force) (Certification Deadline), the Auto Task Force had not certified that Old GM had taken all steps necessary to achieve and sustain its long-term viability, international competitiveness and energy efficiency in accordance with the Viability Plan, then the loans and other obligations under the UST Loan Agreement were to become due and payable on the thirtieth day after the Certification Deadline.

On March 30, 2009 the Auto Task Force determined that the plan was not viable and required substantial revisions. In conjunction with the March 30, 2009 announcement, the administration announced that it would offer Old GM adequate working capital financing for a period of 60 days while it worked with Old GM to develop and implement a more accelerated and aggressive restructuring that would provide a sound long-term foundation. On March 31, 2009 Old GM and the UST agreed to postpone the Certification Deadline to June 1, 2009.

Old GM made further modifications to its Viability Plan in an attempt to satisfy the Auto Task Force requirement that it undertake a substantially more accelerated and aggressive restructuring plan (Revised Viability Plan). The following is a summary of significant cost reduction and restructuring actions contemplated by the Revised Viability Plan, the most significant of which included reducing Old GM's indebtedness and VEBA obligations.

Indebtedness and VEBA obligations

In April 2009 Old GM commenced exchange offers for certain unsecured notes to reduce its unsecured debt in order to comply with the debt reduction condition of the UST Loan Agreement.

Old GM also commenced discussions with the UST regarding the terms of a potential restructuring of its debt obligations under the UST Loan Agreement, the UST Ally Financial Loan Agreement (as subsequently defined), and any other debt issued or owed to the UST in connection with those loan agreements pursuant to which the UST would exchange at least 50% of the total outstanding debt Old GM owed to it at June 1, 2009 for Old GM common stock.

In addition, Old GM commenced discussions with the UAW and the VEBA-settlement class representative regarding the terms of potential VEBA modifications.

Other Cost Reduction and Restructuring Actions

In addition to the efforts to reduce debt and modify the VEBA obligations, the Revised Viability Plan also contemplated the following cost reduction efforts:

- Extended shutdowns of certain North American manufacturing facilities in order to reduce dealer inventory;
- Refocus its resources on four core U.S. brands: Chevrolet, Cadillac, Buick and GMC;
- Acceleration of the resolution for Saab Automobile AB (Saab), HUMMER and Saturn and no planned future investment for Pontiac, which was phased out by the end of 2010;

- Acceleration of the reduction in U.S. nameplates to 34 by 2010 — there were 34 nameplates at December 31, 2010;
- A reduction in the number of U.S. dealers from 6,246 in 2008 to 3,605 in 2010 — we have completed the federal dealer arbitration process and reduced the number of U.S. dealers to 4,500 at December 31, 2010;
- A reduction in the total number of plants in the U.S. to 34 by the end of 2010 and 31 by 2012 — there were 40 plants in the U.S. at December 31, 2010; and
- A reduction in the U.S. hourly employment levels from 61,000 in 2008 to 40,000 in 2010 as a result of the nameplate reductions, operational efficiencies and plant capacity reductions — through these actions, our special attrition programs and other U.S. hourly workforce reductions, we have reduced the number of U.S. hourly employees to 49,000 at December 31, 2010.

Old GM had previously announced that it would reduce salaried employment levels on a global basis by 10,000 during 2009 and had instituted several programs to effect reductions in salaried employment levels. Old GM had also negotiated a revised labor agreement with the Canadian Auto Workers Union (CAW) to reduce its hourly labor costs to approximately the level paid to the transplant automakers; however, such agreement was contingent upon receiving longer term financial support for its Canadian operations from the Canadian federal and Ontario provincial governments.

Chapter 11 Proceedings

Old GM was not able to complete the cost reduction and restructuring actions in its Revised Viability Plan, including the debt reductions and VEBA modifications, which resulted in extreme liquidity constraints. As a result, on June 1, 2009 Old GM and certain of its direct and indirect subsidiaries filed voluntary petitions for relief under Chapter 11 (Chapter 11 Proceedings) of the U.S. Bankruptcy Code (Bankruptcy Code) in the U.S. Bankruptcy Court for the Southern District of New York (Bankruptcy Court).

In connection with the Chapter 11 Proceedings, Old GM entered into a secured superpriority debtor-in-possession credit agreement with the UST and EDC (DIP Facility) and received additional funding commitments from EDC to support Old GM's Canadian operations.

The following table summarizes the total funding and funding commitments Old GM received from the U.S. and Canadian governments and the additional notes Old GM issued related thereto in the period December 31, 2008 through July 9, 2009 (dollars in millions):

Description of Funding Commitment	Funding and Funding Commitments	Additional Notes Issued (a)	Total Obligation
UST Loan Agreement (b)	$19,761	$1,172	$20,933
EDC funding (c)	6,294	161	6,455
DIP Facility	33,300	2,221	35,521
Total	$59,355	$3,554	$62,909

(a) Old GM did not receive any proceeds from the issuance of these promissory notes, which were issued as additional compensation to the UST and EDC.

(b) Includes debt of $361 million, which the UST loaned to Old GM under the warranty program.

(c) Includes approximately $2.4 billion from the EDC Loan Facility received in the period January 1, 2009 through July 9, 2009 and funding commitments of CAD $4.5 billion (equivalent to $3.9 billion when entered into) that were immediately converted into our equity. This funding was received on July 15, 2009.

363 Sale

On July 10, 2009 we completed the acquisition of substantially all of the assets and assumed certain liabilities of Old GM and certain of its direct and indirect subsidiaries (collectively, the Sellers). The 363 Sale was consummated in accordance with the Amended and Restated Master Sale and Purchase Agreement, dated June 26, 2009, as amended, (Purchase Agreement) between us and the Sellers, and pursuant to the Bankruptcy Court's sale order dated July 5, 2009.

In connection with the 363 Sale, the purchase price paid to Old GM was composed of:

- A credit bid in an amount equal to the total of: (1) debt of $19.8 billion under Old GM's UST Loan Agreement, plus notes of $1.2 billion issued as additional compensation for the UST Loan Agreement, plus interest on such debt Old GM owed as of the closing date of the 363 Sale; and (2) debt of $33.3 billion under Old GM's DIP Facility, plus notes of $2.2 billion issued as additional compensation for the DIP Facility, plus interest Old GM owed as of the closing date, less debt of $8.2 billion owed under the DIP Facility;

- The UST's return of the warrants Old GM previously issued to it;

- The issuance to MLC of 150 million shares (or 10%) of our common stock and warrants to acquire newly issued shares of our common stock initially exercisable for a total of 273 million shares of our common stock (or 15% on a fully diluted basis); and

- Our assumption of certain specified liabilities of Old GM (including debt of $7.1 billion owed under the DIP Facility).

Under the Purchase Agreement, we are obligated to issue Adjustment Shares to MLC in the event that allowed general unsecured claims against MLC, as estimated by the Bankruptcy Court, exceed $35.0 billion. The maximum number of Adjustment Shares issuable is 30 million shares (subject to adjustment to take into account stock dividends, stock splits and other transactions). The number of Adjustment Shares to be issued is calculated based on the extent to which estimated general unsecured claims exceed $35.0 billion with the maximum number of Adjustment Shares issued if estimated general unsecured claims total $42.0 billion or more. In the period July 10, 2009 to December 31, 2009 we determined that it was probable that general unsecured claims allowed against MLC would ultimately exceed $35.0 billion by at least $2.0 billion. In the circumstance where estimated general unsecured claims equal $37.0 billion, we would have been required to issue 8.6 million Adjustment Shares to MLC as an adjustment to the purchase price. At December 31, 2009 we recorded a liability of $162 million included in Accrued liabilities. In the year ended December 31, 2010 the liability was adjusted quarterly based on available information. Based on information which became available in the three months ended December 31, 2010, we concluded it was no longer probable that general unsecured claims would exceed $35.0 billion and we reversed to income our previously recorded liability of $231 million for the contingently issuable Adjustment Shares.

Agreements with the UST, EDC and New VEBA

On July 10, 2009 we entered into the UST Credit Agreement and assumed debt of $7.1 billion maturing on July 10, 2015 that Old GM incurred under its DIP Facility (UST Loans). Immediately after entering into the UST Credit Agreement, we made a partial prepayment, reducing the UST Loans principal balance to $6.7 billion. We also entered into the VEBA Note Agreement and issued a note in the principal amount of $2.5 billion (VEBA Notes) to the New VEBA. Through our wholly-owned subsidiary General Motors of Canada Limited (GMCL), we also entered into the amended and restated Canadian Loan Agreement with EDC, as a result of which GMCL has a CAD $1.5 billion (equivalent to $1.3 billion when entered into) term loan (Canadian Loan).

In December 2009 and March 2010 we made quarterly payments of $1.0 billion and $1.0 billion on the UST Loans and GMCL made quarterly payments of $192 million and $194 million on the Canadian Loan. In April 2010, we used funds from our escrow account to repay in full the outstanding amount of the UST Loans of $4.7 billion, and GMCL repaid in full the outstanding amount of the Canadian Loan of $1.1 billion. Both loans were repaid prior to maturity. On October 26, 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion.

Refer to Note 19 for additional information on the UST Loans, VEBA Notes and the Canadian Loan.

Issuance of Common Stock, Preferred Stock and Warrants

On July 10, 2009 we issued the following securities to the UST, Canada GEN Investment Corporation (formerly 7176384 Canada Inc.), a corporation organized under the laws of Canada (Canada Holdings), the New VEBA and MLC (shares in millions):

	Common Stock	Series A Preferred Stock
UST	912	84
Canada Holdings	175	16
New VEBA (a)	263	260
MLC (a)	150	—
	1,500	360

(a) New VEBA also received a warrant to acquire 46 million shares of our common stock and MLC received two warrants, each to acquire 136 million shares of our common stock.

Preferred Stock

The shares of Series A Preferred Stock have a liquidation amount of $25.00 per share and accrue cumulative dividends at 9.0% per annum (payable quarterly on March 15, June 15, September 15 and December 15) that are payable if, as and when declared by our Board of Directors. So long as any share of the Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock or our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on the Series A Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. On or after December 31, 2014 we may redeem, in whole or in part, the shares of Series A Preferred Stock outstanding, at a redemption price per share equal to $25.00 per share plus any accrued and unpaid dividends, subject to limited exceptions.

The Series A Preferred Stock was previously classified as temporary equity because the holders of the Series A Preferred Stock, as a class, owned greater than 50% of our common stock and therefore had the ability to exert control, through the power to vote for the election of our directors, over various matters, which could include compelling us to redeem the Series A Preferred Stock in 2014 or later. In December 2010 we purchased 84 million shares of Series A Preferred Stock, held by the UST. Since the remaining holders of our Series A Preferred Stock, Canada Holdings and the New VEBA, do not own a majority of our common stock and therefore do not have the ability to exert control, through the power to vote for the election of our directors, over various matters, including compelling us to redeem the Series A Preferred Stock when it becomes callable by us on or after December 31, 2014, our classification of the Series A Preferred Stock as temporary equity is no longer appropriate. As such, upon the purchase of the Series A Preferred Stock held by the UST, the Series A Preferred Stock held by Canada Holdings and the New VEBA was reclassified to permanent equity at its carrying amount of $5.5 billion. Refer to Note 29 for additional information on the purchase of shares of Series A Preferred Stock.

Warrants

The first tranche of warrants issued to MLC is exercisable at any time prior to July 10, 2016, with an exercise price of $10.00 per share. The second tranche of warrants issued to MLC is exercisable at any time prior to July 10, 2019, with an exercise price of $18.33 per share. The warrant issued to the New VEBA is exercisable at any time prior to December 31, 2015, with an exercise price of $42.31 per share. The number of shares of our common stock underlying each of the warrants issued to MLC and the New VEBA and the per share exercise price are subject to adjustment as a result of certain events, including stock splits, reverse stock splits and stock dividends.

Additional Modifications to Pension and Other Postretirement Plans Contingent upon the Completion of the 363 Sale

We modified the U.S. hourly pension plan, the U.S. executive retirement plan, the U.S. salaried life plan, the non-UAW hourly retiree medical plan and the U.S. hourly life plan. These modifications became effective upon the completion of the 363 Sale. The key modifications were:

- Elimination of the post 65 benefits and capping the pre 65 benefits in the non-UAW hourly retiree medical plan;
- Capping the life benefit for non-UAW retirees and future retirees at $10,000 in the U.S. hourly life plan;
- Capping the life benefit for existing salaried retirees at $10,000, reduced the retiree benefit for future salaried retirees and eliminated the executive benefit for the U.S. salaried life plan;
- Elimination of a portion of nonqualified benefits in the U.S. executive retirement plan; and
- Elimination of the flat monthly special lifetime benefit of $66.70 that was to commence on January 1, 2010 for the U.S. hourly pension plan.

Accounting for the Effects of the Chapter 11 Proceedings and the 363 Sale

Chapter 11 Proceedings

Accounting Standards Codification (ASC) 852, "Reorganizations," (ASC 852) is applicable to entities operating under Chapter 11 of the Bankruptcy Code. ASC 852 generally does not affect the application of U.S. GAAP that we and Old GM followed to prepare the consolidated financial statements, but it does require specific disclosures for transactions and events that were directly related to the Chapter 11 Proceedings and transactions and events that resulted from ongoing operations.

Old GM prepared its consolidated financial statements in accordance with the guidance in ASC 852 in the period June 1, 2009 through July 9, 2009. Revenues, expenses, realized gains and losses, and provisions for losses directly related to the Chapter 11 Proceedings were recorded in Reorganization gains, net. Reorganization gains, net do not constitute an element of operating loss due to their nature and due to the requirement of ASC 852 that they be reported separately. Old GM's balance sheet prior to the 363 Sale distinguished prepetition liabilities subject to compromise from prepetition liabilities not subject to compromise and from postpetition liabilities. Cash amounts provided by or used in the Chapter 11 Proceedings are separately disclosed in the statement of cash flows.

Application of Fresh-Start Reporting

The Bankruptcy Court did not determine a reorganization value in connection with the 363 Sale. Reorganization value is defined as the value of our assets without liabilities. In order to apply fresh-start reporting, ASC 852 requires that total postpetition liabilities and allowed claims be in excess of reorganization value and prepetition stockholders receive less than 50.0% of our common stock. Based on our estimated reorganization value, we determined that on July 10, 2009 both the criteria of ASC 852 were met and, as a result, we applied fresh-start reporting.

Our reorganization value was determined using the sum of:

- Our discounted forecast of expected future cash flows from our business subsequent to the 363 Sale, discounted at rates reflecting perceived business and financial risks;
- The fair value of operating liabilities;
- The fair value of our non-operating assets, primarily our investments in nonconsolidated affiliates and cost method investments; and

- The amount of cash we maintained at July 10, 2009 that we determined to be in excess of the amount necessary to conduct our normal business activities.

The sum of the first, third and fourth bullet items equals our Enterprise value.

Our discounted forecast of expected future cash flows included:

- Forecasted cash flows for the six months ended December 31, 2009 and the years ending December 31, 2010 through 2014, for each of Old GM's former segments including GMNA, GME, GM Latin America/Africa/Middle East (GMLAAM) and GM Asia Pacific (GMAP) and for certain subsidiaries that incorporated:
  - Industry seasonally adjusted annual rate (SAAR) of vehicle sales and our related market share based on vehicle sales volumes as follows:
    - Worldwide — 59.1 million vehicles and market share of 11.9% in 2010 increasing to 81.0 million vehicles and market share of 12.2% in 2014;
    - North America — 14.2 million vehicles and market share of 17.8% in 2010 increasing to 19.8 million vehicles and decreasing market share of 17.6% in 2014;
    - Europe — 16.8 million vehicles and market share of 9.5% in 2010 increasing to 22.5 million vehicles and market share of 10.3% in 2014;
    - LAAM — 6.1 million vehicles and market share of 18.0% in 2010 increasing to 7.8 million vehicles and market share of 18.4% in 2014; and
    - AP — 22.0 million vehicles and market share of 8.4% in 2010 increasing to 30.8 million vehicles and market share of 8.6% in 2014.
  - Projected product mix, which incorporates the 2010 introductions of the Chevrolet Volt, Chevrolet/Holden Cruze, Cadillac CTS Coupe, Opel/Vauxhall Meriva and Opel/Vauxhall Astra Station Wagon;
  - Projected changes in our cost structure due to restructuring initiatives that encompass reduction of hourly and salaried employment levels by approximately 18,000;
  - The terms of the 2009 UAW Retiree Settlement Agreement, which released us from UAW retiree healthcare claims incurred after December 31, 2009;
  - Projected capital spending to support existing and future products, which range from $4.9 billion in 2010 to $6.0 billion in 2014; and
  - Anticipated changes in global market conditions.
- A terminal value, which was determined using a growth model that applied long-term growth rates ranging from 0.5% to 6.0% and a weighted-average long-term growth rate of 2.6% to our projected cash flows beyond 2014. The long-term growth rates were based on our internal projections as well as industry growth prospects; and
- Discount rates that considered various factors including bond yields, risk premiums, and tax rates to determine a weighted-average cost of capital (WACC), which measures a company's cost of debt and equity weighted by the percentage of debt and equity in a company's target capital structure. We used discount rates ranging from 16.5% to 23.5% and a weighted-average rate of 22.8%.

To estimate the value of our investment in nonconsolidated affiliates we used multiple valuation techniques, but we primarily used discounted cash flow analyses. Our excess cash of $33.8 billion, including Restricted cash and marketable securities of $21.2 billion, represents cash in excess of the amount necessary to conduct our ongoing day-to-day business activities and to keep them running as a going concern. Refer to Note 15 for additional discussion of Restricted cash and marketable securities.

Our estimate of reorganization value assumes the achievement of the future financial results contemplated in our forecasted cash flows, and there can be no assurance that we will realize that value. The estimates and assumptions used are subject to significant uncertainties, many of which are beyond our control, and there is no assurance that anticipated financial results will be achieved. Assumptions used in our discounted cash flow analysis that have the most significant effect on our estimated reorganization value include:

- Our estimated WACC;
- Our estimated long-term growth rates; and
- Our estimate of industry sales and our market share in each of Old GM's former segments.

The following table reconciles our enterprise value to our estimated reorganization value and the estimated fair value of our Equity (in millions except per share amounts):

	Successor
	July 10, 2009
Enterprise value	$ 36,747
Plus: Fair value of operating liabilities (a)	80,832
Estimated reorganization value (fair value of assets) (b)	117,579
Adjustments to tax and employee benefit-related assets (c)	(6,074)
Goodwill (c)	30,464
Carrying amount of assets	$141,969
Enterprise value	$ 36,747
Less: Fair value of debt	(15,694)
Less: Fair value of warrants issued to MLC (additional paid-in-capital)	(2,405)
Less: Fair value of liability for Adjustment Shares	(113)
Less: Fair value of noncontrolling interests	(408)
Less: Fair value of Series A Preferred Stock (d)	(1,741)
Fair value of common equity (common stock and additional paid-in capital)	$ 16,386
Common shares outstanding (d)	1,238
Per share value	$ 13.24

(a) Operating liabilities are our total liabilities excluding the liabilities listed in the reconciliation above of our enterprise value to the fair value of our common equity.

(b) Reorganization value does not include assets with a carrying amount of $1.8 billion and a fair value of $2.0 billion at July 9, 2009 that MLC retained.

(c) The application of fresh-start reporting resulted in the recognition of goodwill. When applying fresh-start reporting, certain accounts, primarily employee benefit and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than at fair value and the difference between the U.S. GAAP and fair value amounts gives rise to goodwill, which is a residual. Further, we recorded valuation allowances against certain of our deferred tax assets, which under ASC 852 also resulted in goodwill. Our employee related obligations were recorded in accordance with ASC 712, "Compensation-Nonretirement Postemployment Benefits" (ASC 712) and ASC 715, "Compensation Benefits" (ASC 715) and deferred income taxes were recorded in accordance with ASC 740, "Income Taxes" (ASC 740).

(d) The 260 million shares of Series A Preferred Stock, 263 million shares of our common stock, and warrant to acquire 46 million shares of our common stock issued to the New VEBA on July 10, 2009 were not considered outstanding until the UAW retiree medical plan was settled on December 31, 2009. The fair value of these instruments was included in the liability recognized at July 10, 2009 for this plan. The common shares issued to the New VEBA are excluded from common shares outstanding at July 10, 2009. Refer to Note 20 for a discussion of the termination of our UAW hourly retiree medical plan and Mitigation Plan and the resulting payment terms to the New VEBA.

Effect of 363 Sale Transaction and Application of Fresh-Start Reporting

The following table summarizes the adjustments to Old GM's consolidated balance sheet as a result of the 363 Sale and the application of fresh-start reporting and presents our consolidated balance sheet at July 10, 2009 (dollars in millions):

	Predecessor July 9, 2009	Reorganization via 363 Sale Adjustments	Fresh-Start Reporting Adjustments	Successor after Reorganization via 363 Sale and Fresh-Start Reporting Adjustments July 10, 2009

Total retained earnings adjustment	$(31,561)	$(5,964)	$ —	$ —	$(25,257)	$(710)	$(63,492)

(a) Liabilities owed to the UST under the UST Loan Agreement of $20.6 billion, with accrued interest of $251 million, and under the DIP Facility of $30.9 billion with accrued interest of $54 million and borrowings related to the warranty program of $361 million were extinguished in connection with the 363 Sale through the assumption of the UST Loans of $7.1 billion and the issuance of 912 million shares of our common stock with a fair value of $12.1 billion and 84 million shares of Series A Preferred Stock with a fair value of $1.5 billion.

(b) Liabilities owed to Canada Holdings under the EDC Loan Facility of $2.6 billion and under the DIP Facility of $3.4 billion were extinguished in connection with the 363 Sale through the assumption of the Canadian Loan of CAD $1.5 billion (equivalent of $1.3 billion when entered into) and the issuance of 175 million shares of our common stock with a fair value of $2.3 billion and 16 million shares of Series A Preferred Stock with a fair value of $279 million. In addition, we recorded an increase in Accounts and notes receivable, net of $3.9 billion at July 10, 2010 for amounts to be received from the EDC in exchange for the equity Canada Holdings received in connection with the 363 Sale.

(c) As a result of modifications to the UAW hourly retiree medical plan that became effective upon the 363 Sale, we recorded a reorganization gain of $7.7 billion that represented the difference between the carrying amount of our $19.7 billion plan obligation at July 9, 2009 and the July 10, 2009 actuarially determined value of $12.0 billion for our modified plan based on the revised terms of the 2009 UAW Retiree Settlement Agreement. Our obligation to the UAW hourly retiree medical plan was settled on December 31, 2009. Prior to the December 31, 2009 settlement, the VEBA Notes, Series A Preferred Stock, common stock and warrants contributed to the New VEBA were not considered outstanding. Refer to Note 20 for additional information on the 2009 UAW Retiree Settlement Agreement.

(d) As a result of modifications to benefit plans that became effective upon the 363 Sale, we recorded a reorganization gain of $4.6 billion, which represented the difference between the carrying amount of our obligations under certain plans at July 9, 2009, and our new actuarially determined obligations at July 10, 2009. Major changes include:

- For the non-UAW hourly retiree healthcare plan, we recorded a $2.7 billion gain resulting from elimination of post 65 benefits and placing a cap on pre 65 benefits;

- For retiree life insurance we recorded a $923 million gain, resulting from capping benefits at $10,000 for non-UAW hourly retirees and future retirees, capping benefits at $10,000 for existing salaried retirees, reducing benefits for future salaried retirees, and elimination of executive benefits;

- For the U.S. supplemental executive retirement plan, we recorded a $221 million gain from the elimination of a portion of nonqualified benefits; and

- For the U.S. hourly defined benefit pension plan, we recorded a $675 million gain, representing the net of a $3.3 billion obligation decrease resulting from the elimination of the flat monthly special lifetime benefit that was to commence on January 1, 2010, offset by an obligation increase of $2.6 billion from a discount rate decrease from 6.25% to 5.83% and other assumption changes.

(e) Represents the net liabilities MLC retained in connection with the 363 Sale, primarily consisting of Old GM's unsecured debt and amounts owed to the UST under the DIP Facility of $1.2 billion. These net liabilities were settled in exchange for assets retained by MLC with a carrying amount of $1.8 billion and a fair value of $2.0 billion, 150 million shares of our common stock with a fair value of $2.0 billion, warrants to acquire an additional 273 million shares of our common stock with a fair value of $2.4 billion and the right to contingently receive the Adjustment Shares. We increased Other liabilities and deferred income taxes to reflect the estimated fair value of $113 million for our obligation to issue the Adjustment Shares to MLC.

The following table summarizes the carrying amount of the assets MLC retained (dollars in millions):

	Predecessor
	Carrying amount at July 9, 2009
Cash and cash equivalents	$ 41
Restricted cash and marketable securities, current	1,175
Accounts and notes receivable, net	28
Inventories	140
Equipment on operating leases, net	(2)
Other current assets and deferred income taxes	46
Restricted cash and marketable securities, non-current	144
Equity in net assets of nonconsolidated affiliates	(4)
Property, net	137
Deferred income taxes	80
Other assets, non-current	12
Total assets	$1,797

(f) We assumed $94 million of certain employee benefit obligations that were included in Liabilities subject to compromise that are now included in Accrued liabilities ($64 million) and Other liabilities ($30 million). These primarily relate to postemployment benefits not modified as a part of the 363 Sale. In addition, in connection with the 363 Sale, we concluded that it was more likely than not that certain net deferred tax assets, primarily in Brazil, will be realized. Therefore, we reversed the existing valuation allowances related to such deferred tax assets resulting in an increase of $121 million in Other current assets and an increase of $630 million in Deferred income taxes, non-current. To record other tax effects of the 363 Sale, we recorded an increase to Other liabilities of $41 million. We recorded a net reorganization gain of $710 million in Income tax expense (benefit) as a result of these adjustments.

Fresh-Start Reporting Adjustments

In applying fresh-start reporting at July 10, 2009, which generally follows the provisions of ASC 805, "Business Combinations" (ASC 805), we recorded the assets acquired and the liabilities assumed from Old GM at fair value except for deferred income taxes and certain liabilities associated with employee benefits. These adjustments are final and no determinations of fair value are considered provisional. The significant assumptions related to the valuations of our assets and liabilities recorded in connection with fresh-start reporting are subsequently discussed.

Accounts and Notes Receivable

We recorded Accounts and notes receivable at their fair value of $12.2 billion, which resulted in a decrease of $79 million.

Inventory

We recorded Inventory at its fair value of $9.6 billion, which was determined as follows:

- Finished goods were determined based on the estimated selling price of finished goods on hand less costs to sell including disposal and holding period costs, and a reasonable profit margin on the selling and disposal effort for each specific category of finished goods being evaluated. Finished goods primarily include new vehicles, off-lease and company vehicles and service parts and accessories;

- Work in process was determined based on the estimated selling price once completed less total costs to complete the manufacturing process, costs to sell including disposal and holding period costs, a reasonable profit margin on the remaining manufacturing, selling and disposal effort; and

- Raw materials were determined based on current replacement cost.

Compared to amounts recorded by Old GM, finished goods increased by $622 million, including elimination of Old GM's LIFO reserve of $1.1 billion, work in process decreased by $555 million, raw materials decreased by $39 million and sundry items with nominal individual value decreased by $94 million.

Equipment on Operating Leases, Current and Non-Current

We recorded Equipment on operating leases, current and non-current at its fair value of $3.9 billion, which was determined as follows: (1) automotive leases to daily rental car companies were determined based on the market value of comparable vehicles; and (2) automotive retail leases were determined by discounting the expected future cash flows generated by the automotive retail leases including the estimated residual value of the vehicles when sold. Equipment on operating leases, current and non-current increased from that recorded by Old GM by $93 million as a result of our determination of fair value.

Other Current Assets and Deferred Income Taxes

We recorded Other current assets which included prepaid assets and other current assets at their fair value of $1.5 billion and deferred income taxes of $487 million. These amounts are $69 million higher than the amounts recorded by Old GM.

Equity in Net Assets of Nonconsolidated Affiliates

We recorded Equity in net assets of nonconsolidated affiliates at its fair value of $5.8 billion. Fair value of these investments was determined using discounted cash flow analyses, which included the following assumptions and estimates:

- Forecasted cash flows for the seven months ended December 31, 2009 and the years ending 2010 through 2013, which incorporated projected sales volumes, product mixes, projected capital spending to support existing and future products, research and development of new products and technologies and anticipated changes in local market conditions;

- A terminal value, which was calculated by assuming a maintainable level of after-tax debt-free cash flow and multiplying it by a capitalization factor that reflected the investor's WACC adjusted for the estimated long-term perpetual growth rate;

- A discount rate of 13.4% that considered various factors including risk premiums and tax rates to determine the investor's WACC given the assumed capital structure of comparable companies; and

- The fair value of investment property and investments in affiliates was determined using market comparables.

Equity in net assets of nonconsolidated affiliates was higher than Old GM's by $3.8 billion as a result of our determination of fair value.

Property

We recorded Property, which includes land, buildings and land improvements, machinery and equipment, construction in progress and special tools, at its fair value of $18.5 billion. Fair value was based on the highest and best use of specific properties. To determine fair value we considered and applied three approaches:

- The market or sales comparison approach which relies upon recent sales or offerings of similar assets on the market to arrive at a probable selling price. Certain adjustments were made to reconcile differences in attributes between the comparable sales and the appraised assets. This method was utilized for certain assets related to land, buildings and land improvements and information technology.

- The cost approach which considers the amount required to construct or purchase a new asset of equal utility at current prices, with adjustments in value for physical deterioration, functional obsolescence and economic obsolescence. This method was primarily utilized for certain assets related to land, buildings and land improvements, leasehold interests, and the majority of our machinery and equipment and tooling. Economic obsolescence represents a loss in value due to unfavorable external conditions such as the economics of our industry and was a factor in establishing fair value. Our machinery, equipment and special tools amounts, determined under the cost approach, were adjusted for economic obsolescence. Due to the downturn in the automotive industry, significant excess capacity exists and the application of the cost approach generally requires the replacement cost of an asset to be adjusted for physical deterioration, and functional and economic obsolescence. We estimated economic obsolescence as the difference between the discounted cash flows expected to be realized from our utilization of the assets as a group, compared to the initial estimate of value from the cost approach method. We did not reduce any fixed asset below its liquidation in place value as a result of economic obsolescence; however the effects of economic obsolescence caused some of our fixed assets to be recorded at their liquidation in place values.

- The income approach which considers value in relation to the present worth of future benefits derived from ownership, usually measured through the capitalization of a specific level of income which can be derived from the subject asset. This method assumed fair value could not exceed the present value of the cash flows the assets generate discounted at a risk related rate of return commensurate with the level of risk inherent in the subject asset. This method was used to value certain assets related to buildings and improvements, leasehold interest, machinery and equipment and tooling.

The following table summarizes the components of Property as a result of the application of fresh-start reporting at July 10, 2009 and Property, net at July 9, 2009:

	Successor	Predecessor
	July 10, 2009	**July 9, 2009**
Land	$ 2,524	$ 1,040
Buildings and land improvements, net	3,731	8,490
Machinery and equipment, net	5,915	13,597
Construction in progress	1,838	2,307
Real estate, plants, and equipment, net	14,008	25,434
Special tools, net	4,492	10,782
Total property, net	$18,500	$36,216

Goodwill

We recorded Goodwill of $30.5 billion upon application of fresh-start reporting. When applying fresh-start reporting, certain accounts, primarily employee benefit and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than fair value and the difference between the U.S. GAAP and fair value amounts gives rise to goodwill, which is a residual. Further, we recorded valuation allowances against certain of our deferred tax assets, which under ASC 852 also resulted in goodwill. Our employee benefit related accounts were recorded in accordance with ASC 712 and ASC 715 and deferred income taxes were recorded in accordance with ASC 740. None of the goodwill from this transaction is deductible for tax purposes.

Intangible Assets

We recorded Intangible assets of $16.1 billion at their fair values. The following is a summary of the approaches used to determine the fair value of our significant intangible assets:

- We recorded $7.9 billion for the fair value of technology. The relief from royalty method was used to calculate the $7.7 billion fair value of developed technology. The significant assumptions used included:
    - Forecasted revenue for each technology category by Old GM’s former segments;

        - Royalty rates based on licensing arrangements for similar technologies and obsolescence factors by technology category;
        - Discount rates ranging from 24.0% to 26.0% based on our WACC and adjusted for perceived business risks related to these developed technologies; and
        - Estimated economic lives, which ranged from seven to 20 years.
    - The excess earnings method was used to determine the fair value of in-process research and development of $175 million. The significant assumptions used in this approach included:
        - Forecasted revenue for certain technologies not yet proven to be commercially feasible;
        - The probability and cost of obtaining commercial feasibility;
        - Discount rates ranging from 4.2% (when the probability of obtaining commercial feasibility was considered elsewhere in the model) to 36.0%; and
        - Estimated economic lives ranging from approximately 10 to 20 years.
- The relief from royalty method was also used to calculate the fair value of brand names of $5.5 billion. The significant assumptions used in this method included:
    - Forecasted revenue for each brand name by Old GM's former segments;
    - Royalty rates based on licensing arrangements for the use of brands and trademarks in the automotive industry and related industries;
    - Discount rates ranging from 22.8% to 27.0% based on our WACC and adjusted for perceived business risks related to these intangible assets; and
    - Indefinite economic lives for our ongoing brands.
- Our most significant brands included Buick, Cadillac, Chevrolet, GMC, Opel/Vauxhall and OnStar. We also recorded defensive intangible assets associated with brands we eliminated, which included Pontiac, Saturn and Oldsmobile.
- A cost approach was used to calculate the fair value of our dealer networks and customer relationships of $2.1 billion. The estimated fair value of our dealer networks of $1.6 billion was determined by multiplying our estimated costs to recreate our dealer networks by our estimate of an optimal number of dealers. An income approach was used to calculate the fair value of our customer relationships of $508 million. The significant assumptions used in this approach included:
    - Forecasted revenue;
    - Customer retention rates;
    - Profit margins; and
    - A discount rate of 20.8% based on an appropriate WACC and adjusted for perceived business risks related to these customer relationships.
- We recorded other intangible assets of $560 million primarily related to existing contracts, including leasehold improvements, that were favorable relative to available market terms.

The following table summarizes the components of our intangible assets and their weighted-average amortization periods.

	Weighted-Average Amortization Period (years)	Recorded Value
Technology and related intellectual property	5	$ 7,889
Brands	38	5,476
Dealer network and customer relationships	21	2,149
Favorable contracts	28	543
Other intangible assets	3	17
Total intangible assets		$16,074

Deferred Income Taxes, Non-Current

We recorded Deferred income taxes, non-current of $672 million which was an increase of $43 million compared to that recorded by Old GM.

Other Assets, Non-Current

We recorded Other assets, non-current of $3.2 billion. Other assets, non-current differed from Old GM's primarily related to: (1) an increase of $1.3 billion and $629 million in the value of our investments in Ally Financial common stock and preferred stock; (2) an increase of $175 million in the value of our investment in Saab; partially offset by (3) an elimination of $191 million for certain prepaid rent balances and other adjustments.

We calculated the fair value of our investment in Ally Financial common stock of $1.3 billion using a market multiple sum-of-the-parts methodology, a market approach. This approach considered the average price/tangible book value multiples of companies deemed comparable to each of Ally Financial's Auto Finance, Commercial Finance and Insurance operations in determining the fair value of each of these operations, which were then aggregated to determine Ally Financial's overall fair value. The significant inputs used in our fair value analysis were as follows:

- Ally Financial's June 30, 2009 financial statements, as well as the financial statements of comparable companies in the Auto Finance, Commercial Finance and Insurance industries;
- Expected performance of Ally Financial, as well as our view on its ability to access capital markets; and
- The value of Ally Financial's mortgage operations, taking into consideration the continuing challenges in the housing markets and mortgage industry, and its need for additional liquidity to maintain business operations.

We calculated the fair value of our investment in Ally Financial preferred stock of $665 million using a discounted cash flow approach. The present value of the cash flows was determined using assumptions regarding the expected receipt of dividends on Ally Financial preferred stock and the expected call date. The discount rate of 16.9% was determined based on yields of similar Ally Financial securities.

Accounts Payable

We recorded Accounts payable at its fair value of $13.1 billion.

Debt

We recorded short-term debt, current portion of long-term debt and long-term debt at their total fair value of $15.7 billion, which was calculated using a discounted cash flow methodology using our implied credit rating of CCC for most of our debt instruments (our credit rating was not observable as a result of the Chapter 11 Proceedings), adjusted where appropriate for any security interests.

For the UST Loans and the Canadian Loan, carrying amount was determined to approximate fair value because these loans were fully collateralized by the restricted cash placed in escrow and were entered into on July 10, 2009 at market terms. Short-term debt, current portion of long-term debt and long-term debt decreased $1.5 billion as a result of our calculation of fair value. Refer to Note 15 for additional information on the escrow arrangement.

Pensions, Postretirement Benefits Other than Pensions, Current and Non-Current, and Prepaid Pensions

We recorded Pensions of $32.0 billion and Prepaid pensions of $97 million, which includes the actuarial measurement of those benefit plans that were not modified in connection with the 363 Sale. As a result of these actuarial measurements, our recorded value was $2.1 billion higher than Old GM's for Pensions and Prepaid pensions for those plans not modified in connection with the 363 Sale. When the pension plans were measured at July 10, 2009, the weighted-average return on assets was 8.5% and 8.0% for U.S. and non-U.S. plans. The weighted-average discount rate utilized to measure the plans at July 10, 2009 was 5.9% and 5.8% for U.S. and non-U.S. plans.

We also recorded Postretirement benefits other than pensions, current and non-current of $20.4 billion, which is an increase of $434 million compared to the amounts recorded by Old GM for those plans not modified in connection with the 363 Sale. When the other non-UAW postretirement benefit plans were measured at July 10, 2009, the weighted-average discount rate used was 6.0% and 5.5% for the U.S. and non-U.S. plans. For the U.S. there are no significant uncapped healthcare plans remaining at December 31, 2009, and therefore, the healthcare cost trend rate does not have a significant effect on our U.S. plans. For non-U.S. plans the initial healthcare cost trend used was 5.4% and the ultimate healthcare cost trend rate was 3.3% with eight years to the ultimate trend rate.

Accrued Liabilities, Other Liabilities, and Deferred Income Taxes, Current and Non-Current

We recorded Accrued liabilities of $24.4 billion and Other liabilities and deferred income taxes of $15.5 billion. Accrued liabilities and Other liabilities differed from those of Old GM primarily relating to:

- $1.2 billion less in deferred revenue, the fair value of which was determined based on our remaining performance obligations considering future costs associated with these obligations;

- $349 million decrease in warranty liability, the fair value of which was determined by discounting the forecasted future cash flows based on historical claims experience using rates ranging from 1.4% in 2009 to 4.3% in 2017;

- A decrease of $179 million to lease-related obligations;

- A decrease of $162 million related to certain customer deposits;

- $582 million increase in deferred income taxes; and

- $980 million of recorded unfavorable contractual obligations, primarily related to the Delphi-GM Settlement Agreements. The fair value of the unfavorable contractual obligations was determined by discounting forecasted cash flows representing the unfavorable portions of contractual obligations at our implied credit rating. Refer to Note 22 for further information on the Delphi-GM Settlement Agreements.

Equity (Deficit) and Preferred Stock

The changes to Equity (Deficit) reflect our recapitalization, the elimination of Old GM's historical equity, the issuance of our common stock, preferred stock and warrants to the UST, Canada Holdings and MLC at fair value, and the application of fresh-start reporting.

Noncontrolling Interests

We recorded the fair value of our Noncontrolling interests at $408 million which was $156 million higher than Old GM.

363 Sale and Fresh-Start Reporting Adjustments

The following table summarizes Old GM's Reorganization gains, net, arising from the 363 Sale and fresh-start reporting that primarily resulted from the adjustments previously discussed (dollars in millions):

	Predecessor
	January 1, 2009 Through July 9, 2009
Change in net assets resulting from the application of fresh-start reporting	$ 33,829
Fair value of New GM's Series A Preferred Stock, common shares and warrants issued in 363 Sale	20,532
Gain from the conversion of debt owed to UST to equity	31,561
Gain from the conversion of debt owed to EDC to equity	5,964
Gain from the modification and measurement of our VEBA obligation	7,731
Gain from the modification and measurement of other employee benefit plans	4,585
Gain from the settlement of net liabilities retained by MLC via the 363 Sale	25,177
Income tax benefit for release of valuation allowances and other tax adjustments	710
Other 363 Sale adjustments	(21)
Total adjustment from 363 Sale Transaction and fresh-start reporting	130,068
Adjustment recorded to Income tax benefit for release of valuation allowances and other tax adjustments	(710)
Other losses, net	(1,203)
Total Reorganization gains, net	$128,155

Other losses, net of $1.2 billion primarily relate to costs incurred during our Chapter 11 Proceedings, including:

- Losses of $958 million on extinguishments of debt resulting from Old GM's repayment of its secured revolving credit facility, its U.S. term loan, and its secured credit facility;
- Losses of $398 million on contract rejections, settlements of claims and other lease terminations;
- Professional fees of $38 million; and
- Gain of $247 million related to the release of Accumulated other comprehensive income (loss) associated with previously designated derivative financial instruments.

Note 3. Basis of Presentation

Principles of Consolidation

The consolidated financial statements include our accounts and those of our subsidiaries that we control due to ownership of a majority voting interest. We continually evaluate our involvement with variable interest entities (VIEs) to determine whether we have variable interests and are the primary beneficiary of the VIE. When this criteria is met, we are required to consolidate the VIE. Our share of earnings or losses of nonconsolidated affiliates is included in our consolidated operating results using the equity method of accounting when we are able to exercise significant influence over the operating and financial decisions of the affiliate. We use the cost method of accounting if we are not able to exercise significant influence over the operating and financial decisions of the affiliate. All intercompany balances and transactions have been eliminated in consolidation. Old GM utilized the same principles of consolidation in its consolidated financial statements.

Use of Estimates in the Preparation of the Financial Statements

The consolidated financial statements are prepared in conformity with U.S. GAAP, which requires the use of estimates, judgments, and assumptions that affect the amounts of assets and liabilities at the reporting date and the amounts of revenue and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and the resulting balances are reasonable; however, due to the inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods.

GM Financial

The assets and liabilities of GM Financial, our automotive finance operations, are presented on a non-classified basis. The amounts presented for GM Financial have been adjusted to include the effect of our tax attributes on GM Financial's deferred tax positions and provision for income taxes since the date of acquisition, which are not applicable to GM Financial on a stand-alone basis, and to eliminate the effect of transactions between GM Financial and the other members of the consolidated group. Accordingly, the amounts presented will differ from those presented by GM Financial on a stand-alone basis.

Change in Segments

In the year ended December 31, 2010 we changed our managerial and financial reporting structure so that certain entities geographically located within Russia and Uzbekistan were transferred from our GME segment to our GMIO segment and certain entities geographically located in Brazil, Argentina, Colombia, Ecuador, Venezuela, Bolivia, Chile, Paraguay, Peru and Uruguay were transferred from our GMIO segment to our newly created GMSA segment. We have retrospectively revised the segment presentation for all periods presented.

Change in Presentation of Financial Statements

In 2010, we changed the presentation of our consolidated balance sheet, consolidated statement of cash flows and certain footnotes to combine line items which were either of a related nature or not individually material. We have made corresponding reclassifications to the comparable information for all periods presented.

Stock Split

On October 5, 2010 our Board of Directors recommended a three-for-one stock split on shares of our common stock, which was approved by our stockholders on November 1, 2010. The stock split was effected on November 1, 2010.

Each stockholder's percentage ownership in us and proportional voting power remained unchanged after the stock split. All applicable Successor share, per share and related information in the consolidated financial statements and notes has been adjusted retroactively to give effect to the three-for-one stock split.

Increase in Authorized Shares

On October 5, 2010, our Board of Directors recommended that we amend our Certificate of Incorporation to increase the number of shares of common stock that we are authorized to issue from 2.5 billion shares to 5.0 billion shares and to increase the number of preferred shares that we are authorized to issue from 1.0 billion shares to 2.0 billion shares. Our stockholders approved these amendments on November 1, 2010, and they were effected on November 1, 2010.

Venezuelan Exchange Regulations

Our Venezuelan subsidiaries changed their functional currency from Bolivar Fuerte (the BsF), the local currency, to the U.S. Dollar, our reporting currency, on January 1, 2010 because of the hyperinflationary status of the Venezuelan economy. Pursuant to the official devaluation of the Venezuelan currency and establishment of the dual fixed exchange rates (essential rate of BsF 2.60 to $1.00 and nonessential rate of BsF 4.30 to $1.00) in January 2010, we remeasured the BsF denominated monetary assets and liabilities held by our Venezuelan subsidiaries at the nonessential rate of 4.30 BsF to $1.00. The remeasurement resulted in a charge of $25 million recorded in Automotive cost of sales in the year ended December 31, 2010. In the year ended December 31, 2010 all BsF denominated transactions have been remeasured at the nonessential rate of 4.30 BsF to $1.00.

In June 2010 the Venezuelan government introduced additional foreign currency exchange control regulations, which imposed restrictions on the use of the parallel foreign currency exchange market, thereby making it more difficult to convert BsF to U.S. Dollars. We periodically accessed the parallel exchange market, which historically enabled entities to obtain foreign currency for transactions that could not be processed by the Commission for the Administration of Currency Exchange (CADIVI). The restrictions on the foreign currency exchange market could affect our Venezuelan subsidiaries' ability to pay non-BsF denominated obligations that do not qualify to be processed by CADIVI at the official exchange rates as well as our ability to benefit from those operations.

In December 2010 another official devaluation of the Venezuelan currency was announced that eliminated the essential rate effective January 1, 2011. The devaluation did not have an effect on the 2010 consolidated financial statements, however, it will affect results of operations in subsequent years because our Venezuelan subsidiaries will no longer realize gains that result from favorable foreign currency exchanges processed by CADIVI at the essential rate.

The following tables provide financial information for our Venezuelan subsidiaries at and for the year ended December 31, 2010, which include amounts receivable from and payable to, and transactions with, affiliated entities (dollars in millions):

	Successor
	December 31, 2010
Total automotive assets (a)	$1,322
Total automotive liabilities (b)	$ 985

	Successor
	Year Ended December 31, 2010
Total net sales and revenue	$1,139
Net income (loss) attributable to stockholders (c)	$ 320

(a) Includes BsF denominated and non-BsF denominated monetary assets of $393 million and $527 million.

(b) Includes BsF denominated and non-BsF denominated monetary liabilities of $661 million and $324 million.

(c) Includes a gain of $119 million related to the devaluation of the BsF in January 2010 and a gain of $273 million in the year ended December 31, 2010 due to favorable foreign currency exchanges that were processed by CADIVI at the essential rate. The $119 million gain on the devaluation was offset by a $144 million loss recorded by U.S. entities on BsF denominated assets, which is not included in the Net income (loss) attributable to stockholders reported above.

The total amount pending government approval for settlement at December 31, 2010 is BsF 1.9 billion (equivalent to $432 million), for which some requests have been pending from 2007. The amount includes payables to affiliated entities of $263 million, which includes dividends payable of $144 million.

Note 4. Significant Accounting Policies

In connection with our application of fresh-start reporting, we established a set of accounting policies which, unless otherwise indicated, utilized the accounting policies of our predecessor entity, Old GM.

The accounting policies which follow are utilized by our automotive and automotive financing operations, unless otherwise indicated.

Revenue Recognition

Automotive

Automotive sales are primarily composed of revenue generated from the sale of vehicles. Vehicle sales are recorded when title and risks and rewards of ownership have passed, which is generally when a vehicle is released to the carrier responsible for transporting it to a dealer and when collectability is reasonably assured. Provisions for recurring dealer and customer sales and leasing incentives, consisting of allowances and rebates, are recorded as reductions to Automotive sales at the time of vehicle sales. All other incentives, allowances, and rebates related to vehicles previously sold are recorded as reductions to Automotive sales when announced.

Vehicle sales to daily rental car companies with guaranteed repurchase obligations are accounted for as operating leases. Estimated lease revenue is recorded ratably over the estimated term of the lease based on the difference between net sales proceeds and the guaranteed repurchase amount. The difference between the cost of the vehicle and estimated residual value is depreciated on a straight-line basis over the estimated term of the lease.

Sales of parts and accessories to GM dealers are recorded when the goods arrive at the dealership and when collectability is reasonably assured. Sales of aftermarket products and powertrain components are recorded when title and risks and rewards of ownership have passed, which is generally when the product is released to the carrier responsible for transporting them to the customer and when collectability is reasonably assured.

Revenue from OnStar, comprised of customer subscriptions related to comprehensive in-vehicle security, communications and diagnostic systems, is deferred and recorded on a straight-line basis over the subscription period. An OnStar subscription is provided as part of the sale or lease of certain vehicles. The fair value of the subscription is recorded as deferred revenue when a vehicle is sold, and amortized over the subscription period. Prepaid minutes for the Hands-Free Calling system are deferred and recorded on a straight-line basis over the life of the contract.

Payments received from banks for credit card programs in which there is a redemption liability are recorded on a straight-line basis over the estimated period of time the customer will accumulate and redeem their rebate points. This time period is estimated to be 60 months for the majority of the credit card programs. This redemption period is reviewed periodically to determine if it remains appropriate. The redemption liability anticipated to be paid to the dealer is estimated and accrued at the time specific vehicles are sold to the dealer. The redemption cost is classified as a reduction of Automotive sales.

Automotive Financing

Finance income earned on receivables is recognized using the effective interest method. Fees and commissions (including incentive payments) received and direct costs of originating loans are deferred and amortized over the term of the related finance receivables using the effective interest method and are removed from the consolidated balance sheets when the related finance receivables are sold, charged off or paid in full. Accrual of finance charge income is suspended on accounts that are more than 60 days delinquent, accounts in bankruptcy, and accounts in repossession.

Income from operating lease assets, which includes lease origination fees, net of lease origination costs, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement.

Finance Receivables

Automotive Financing

Pre-Acquisition Finance Receivables

Finance receivables originated prior to the acquisition of AmeriCredit were adjusted to fair value at October 1, 2010. As a result of the acquisition, the allowance for loan losses at October 1, 2010 was eliminated and a net discount was recorded on the receivables. A portion of the discount attributable to future credit losses is recorded as a non-accretable discount and utilized as such losses occur. Any deterioration in the performance of pre-acquisition receivables, indicating that the non-accretable discount has become insufficient to cover future credit losses, in the pre-acquisition portfolio, will result in an incremental allowance for loan losses being recorded. Improvements in performance of the pre-acquisition receivables, indicating that the non-accretable discount exceeds expected future credit losses will not be a direct offset to charge-offs, but will result in a transfer of the excess non-accretable discount to accretable discount, which will be recorded as finance charge income over the remaining life of the receivables.

A portion of the fair value adjustment on the finance receivables is included as an accretable premium. This premium is accreted into finance charge income over the remaining life of the receivables utilizing the effective interest method.

Post-Acquisition Finance Receivables

Finance receivables originated after the acquisition of AmeriCredit are carried at amortized cost, net of allowance for loan losses. Provisions for loan losses are charged to operations in amounts sufficient to maintain an allowance for loan losses at a level considered adequate to cover probable credit losses inherent in GM Financial's post-acquisition finance receivables.

The allowance for loan losses is established systematically based on the determination of the amount of probable credit losses inherent in the post-acquisition finance receivables as of the balance sheet date. We review charge-off experience factors, delinquency reports, historical collection rates, estimates of the value of the underlying collateral, economic trends, such as unemployment rates, and other information in order to make the necessary judgments as to probable credit losses. We also use historical charge-off experience to determine a loss confirmation period, which is defined as the time between when an event, such as delinquency status, giving rise to a probable credit loss occurs with respect to a specific account and when such account is charged off. This loss confirmation period is applied to the forecasted probable credit losses to determine the amount of losses inherent in finance receivables at the balance sheet date.

Allowance For Doubtful Accounts – Trade Receivables

Automotive

We estimate the balance of allowance for doubtful accounts by analyzing accounts receivable balances by age, and our estimate includes separately providing for specific customer balances when it is deemed probable that the balance is uncollectible. Account balances are charged off against the allowance when it is probable the receivable will not be recovered.

Inventory

Automotive

Inventories are stated at the lower of cost or market (LCM). In connection with fresh-start reporting, we elected to use the FIFO costing method for all inventories previously accounted for by Old GM using the LIFO costing method.

Market, which represents selling price less cost to sell, considers general market and economic conditions, periodic reviews of current profitability of vehicles, and the effect of current incentive offers at the balance sheet date. Market for off-lease and other vehicles is current auction sales proceeds less disposal and warranty costs. Productive material, work in process, supplies and service parts are reviewed to determine if inventory quantities are in excess of forecasted usage, or if they have become obsolete.

Advertising

The following table summarizes advertising expenditures, which are expensed as incurred (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Advertising expense	$4,259	$2,110	$1,471	$5,303

Research and Development Expenditures

Automotive

The following table summarizes research and development expenditures, which are expensed as incurred (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Research and development expense	$6,962	$3,034	$3,017	$8,012

Property, net

Property, plants and equipment, including internal use software, is recorded at cost. Major improvements that extend the useful life or add functionality of property are capitalized. Expenditures for repairs and maintenance are charged to expense as incurred. We depreciate all depreciable property using the straight-line method. Leasehold improvements are amortized over the period of lease or the life of the asset, whichever is shorter. For depreciable property placed in service before January 2001, Old GM used accelerated depreciation methods. For depreciable property placed in service after January 2001, Old GM used the straight-line method. Upon retirement or disposition of property, plants and equipment, the cost and related accumulated depreciation are removed from the accounts and any resulting gain or loss is recorded in earnings. Impairment charges related to property are recorded in Automotive cost of sales or GM Financial operating expenses and other. Refer to Notes 12 and 26 for additional information on property and impairments.

Special Tools

Automotive

Special tools represent product-specific powertrain and non-powertrain related tools, dies, molds and other items used in the vehicle manufacturing process. Expenditures for special tools are recorded at cost and are capitalized. In connection with our application of fresh-start reporting, we began amortizing all non-powertrain special tools using an accelerated amortization method. We amortize powertrain special tools over their estimated useful lives using the straight-line method. Old GM amortized all special tools using the straight-line method over their estimated useful lives. Refer to Note 12 for additional information on special tools.

Goodwill

Goodwill arises from the application of fresh-start reporting and acquisitions accounted for as business combinations. Goodwill is tested for impairment for all reporting units on an annual basis during the fourth quarter, or more frequently, if events occur or circumstances change that would warrant such a review. An impairment charge is recorded for the amount, if any, by which the carrying amount of goodwill exceeds its implied fair value. Fair values of reporting units are established using a discounted cash flow method. Our reporting units are GMNA, GME, GM Financial and various reporting units within the GMIO and GMSA segments. Due to the integrated nature of our manufacturing operations and the sharing of vehicle platforms among brands, assets and other resources are shared extensively within GMNA and GME and financial information by brand or country is not discrete below the operating segment level such that GMNA and GME do not contain reporting units below the operating segment level. GM Financial also does not contain reporting units below the operating segment level. GMIO and GMSA are less integrated given the lack of regional trade pacts and other unique geographical differences and thus contain separate reporting units below the operating segment level. Where available and as appropriate, comparative market multiples and the quoted market price for our common stock are used to corroborate the results of the discounted cash flow method. Goodwill would be reassigned on a relative-fair-value basis to a portion of a reporting unit to be disposed of or upon the reorganization of the composition of one or more of our reporting units, unless the reporting unit was never integrated. Refer to Note 26 for additional information on goodwill impairments.

Intangible Assets, net

Intangible assets, excluding Goodwill, primarily include brand names (including defensive intangibles associated with discontinued brands), technology and intellectual property, customer relationships, dealer network and favorable contracts.

All intangible assets are amortized on a straight-line or an accelerated method of amortization over their estimated useful lives. An accelerated amortization method reflecting the pattern in which the asset will be consumed is utilized if that pattern can be reliably determined. If that pattern cannot be reliably determined, a straight-line amortization method is used. We consider the period of expected cash flows and underlying data used to measure the fair value of the intangible assets when selecting a useful life.

Amortization of developed technology and intellectual property is recorded in Automotive cost of sales. Amortization of brand names, customer relationships and our dealer network is recorded in Automotive selling, general and administrative expense or GM Financial operating expenses and other. Refer to Notes 2 and 14 for additional information on intangible assets.

Valuation of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated for impairment when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds the fair value for the asset group to be held and used. Product-specific long-lived asset groups are tested for impairment at the platform level. Non-product specific long-lived assets are tested for impairment on a segment basis in GMNA, GME, and GM Financial and tested at or within our various reporting units within our GMIO and GMSA segments. Assets classified as held for sale are recorded at the lower of carrying amount or fair value less cost to sell. Fair value is determined primarily using the anticipated cash flows discounted at a rate commensurate with the risk involved. Long-lived assets to be disposed of other than by sale are considered held for use until disposition. Product-specific assets may become impaired as a result of declines in profitability due to changes in volume, pricing or costs.

We tested certain long-lived assets for impairment in the year ended December 31, 2010 and in the period July 10, 2009 through December 31, 2009 and Old GM tested certain long-lived assets for impairment in the period January 1, 2009 through July 9, 2009 and in the year ended December 31, 2008. Long-lived asset impairment charges were recorded based on the results of the analyses. Refer to Note 26 for additional information on impairment charges.

Valuation of Cost and Equity Method Investments

When events and circumstances warrant, investments accounted for under the cost or equity method of accounting are evaluated for impairment. An impairment charge is recorded whenever a decline in value of an investment below its carrying amount is determined to be other than temporary. In determining if a decline is other than temporary, factors such as the length of time and extent to which the fair value of the investment has been less than the carrying amount of the investment, the near-term and longer-term operating and financial prospects of the affiliate and the intent and ability to hold the investment for a period of time sufficient to allow for any anticipated recovery are considered. Impairment charges related to equity method investments are recorded in Equity income, net of tax. Impairment charges related to cost method investments are recorded in Interest income and other non-operating income, net.

Equipment on Operating Leases, net

Equipment on operating leases, net, including leased vehicles within Total GM Financial Assets, is reported at cost, less accumulated depreciation and net of origination fees or costs. Estimated income from operating lease assets, which includes lease origination fees, net of lease origination costs, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement. Depreciation of vehicles is provided on a straight-line basis to an estimated residual value over the term of the lease agreement.

We have and Old GM had significant investments in vehicles in operating lease portfolios, which are comprised of vehicle leases to retail customers with lease terms of up to 60 months and vehicles leased to rental car companies with lease terms that average nine months or less. We are and Old GM was exposed to changes in the residual values of those assets. For impairment purposes, the residual values represent estimates of the values of the assets at the end of the lease contracts and are determined based on the lower of forecasted or current auction proceeds in the U.S. and Canada and forecasted auction proceeds outside of the U.S. and Canada when there is a reliable basis to make such a determination. Realization of the residual values is dependent on the future ability to market the vehicles under the prevailing market conditions. The adequacy of the estimate of the residual value is evaluated over the life of the lease and adjustments may be made to the extent the expected value of the vehicle at lease termination changes. Adjustments may be in the form of revisions to the depreciation rate or recognition of an impairment charge. Impairment is determined to exist if the undiscounted expected future cash flows, which include estimated residual values, are lower than the carrying amount of the asset. If the carrying amount is considered impaired, an impairment charge is recorded for the amount by which the carrying amount exceeds the fair value. Fair value is determined primarily using the anticipated cash flows, including estimated residual values.

In our automotive operations, when a leased vehicle is returned the asset is reclassified from Equipment on operating leases, net to Inventories at the lower of cost or estimated selling price, less costs to sell. In our automotive finance operations, when a leased vehicle is returned or repossessed the asset is recorded at the lower of cost or estimated selling price, less costs to sell, and upon disposition a gain or loss is recorded for any difference between the net book value of the lease and the proceeds from the disposition of the asset.

Impairment charges related to Equipment on operating leases, net are recorded in Automotive cost of sales or GM Financial operating expenses and other. Refer to Notes 26 and 32 for additional information on impairments and operating lease arrangements with Ally Financial.

Foreign Currency Transactions and Translation

The assets and liabilities of foreign subsidiaries, that use the local currency as their functional currency, are translated to U.S. Dollars based on the current exchange rate prevailing at each balance sheet date and any resulting translation adjustments are included in Accumulated other comprehensive income (loss). The assets and liabilities of foreign subsidiaries whose local currency is not their functional currency are remeasured from their local currency to their functional currency, and then translated to U.S. Dollars. Revenues and expenses are translated into U.S. Dollars using the average exchange rates prevailing for each period presented.

Gains and losses arising from foreign currency transactions, which include the effects of remeasurements discussed in the preceding paragraph, are recorded in Automotive cost of sales and GM Financial operating expenses and other.

The following table summarizes the effects of foreign currency transactions (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Gain (loss) resulting from foreign currency transactions	$(210)	$(755)	$(1,077)	$1,705

Policy, Warranty and Recall Campaigns

Automotive

The estimated costs related to policy and product warranties are accrued at the time products are sold. These estimates are established using historical information on the nature, frequency, and average cost of claims of each vehicle line or each model year of the vehicle line. Revisions are made when necessary, based on changes in these factors. Trends of claims are actively studied and actions are taken to improve vehicle quality and minimize claims.

The estimated costs related to product recalls based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated.

Environmental Costs

Automotive

A liability for environmental remediation costs is recorded when a loss is probable and can be reasonably estimated. For environmental sites where there are potentially multiple responsible parties, a liability for the allocable share of the costs related to involvement with the site is recorded, as well as an allocable share of costs related to insolvent parties or unidentified shares, neither of which are reduced for possible recoveries from insurance carriers. For environmental sites where we and Old GM are the only potentially responsible parties, a liability is recorded for the total estimated costs of remediation before consideration of recovery from insurers or other third parties. The process of estimating environmental remediation liabilities is complex and dependent primarily on the nature and extent of historical information and physical data relating to a contaminated site, the complexity of the site, the uncertainty as to what remediation and technology will be required, and the outcome of discussions with regulatory agencies and other potentially responsible parties at multi-party sites.

We have an established process to develop environmental liabilities that is used globally. This process consists of a number of phases that begins with visual site inspections and an examination of historical site records. Once a potential problem is identified, physical sampling of the site, which may include analysis of ground water and soil borings, is performed. The evidence obtained is then evaluated and if necessary, a remediation strategy is developed and submitted to the appropriate regulatory body for approval. The final phase of this process involves the commencement of remediation activities according to the approved plan.

When applicable, estimated liabilities for costs relating to ongoing operating, maintenance, and monitoring at environmental sites where remediation has commenced are recorded. Subsequent adjustments to initial estimates are recorded as necessary based upon additional information obtained. In future periods, new laws or regulations, advances in remediation technologies and additional information about the ultimate remediation methodology to be used could significantly change our estimates.

Cash Equivalents

Cash equivalents are defined as short-term, highly-liquid investments with original maturities of 90 days or less.

Fair Value Measurements

A three-level valuation hierarchy is used for fair value measurements. The three-level valuation hierarchy is based upon observable and unobservable inputs. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect market assumptions based on the best evidence available. These three types of inputs create the following fair value hierarchy:

- Level 1 — Quoted prices for *identical* instruments in active markets;
- Level 2 — Quoted prices for *similar* instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose significant inputs are observable; and
- Level 3 — Instruments whose significant inputs are *unobservable*.

Financial instruments are transferred in and/or out of Level 3 in the valuation hierarchy at the beginning of the accounting period based upon the significance of the unobservable inputs to the overall fair value measurement. Level 3 financial instruments typically include, in addition to the unobservable inputs, observable components that are validated to external sources.

Marketable Securities

We classify marketable securities as available-for-sale or trading. Various factors, including turnover of holdings and investment guidelines, are considered in determining the classification of securities. Available-for-sale securities are recorded at fair value with unrealized gains and losses recorded, net of related income taxes, in Accumulated other comprehensive income (loss) until realized. Trading securities are recorded at fair value with changes in fair value recorded in Interest income and other non-operating income, net. We determine realized gains and losses for all securities using the specific identification method.

Old GM classified all marketable securities as available-for-sale.

Securities are classified in Level 1 when quoted prices in an active market for identical securities are available. If quoted market prices are not available, fair values of securities are determined using prices from a pricing vendor, pricing models, quoted prices of securities with similar characteristics or discounted cash flow models and are generally classified in Level 2. These prices represent non-binding quotes. U.S. government and agency securities, certificates of deposit, commercial paper, and corporate debt securities are classified in Level 2. Our pricing vendor utilizes industry-standard pricing models that consider various inputs, including benchmark yields, reported trades, broker/dealer quotes, issuer spreads and benchmark securities as well as other relevant economic measures. Securities are classified in Level 3 in certain cases where there are unobservable inputs to the valuation in the marketplace.

We conduct an annual review of our pricing vendor. This review includes discussion and analysis of the inputs used by the pricing vendor to provide prices for the types of securities we hold. These inputs included interest rate yields, bid/ask quotes, prepayment speeds and prices for comparable securities. Based on our review we believe the prices received from our pricing vendor are a reliable representation of fair value.

An evaluation is made monthly to determine if unrealized losses related to non-trading investments in debt and equity securities are other than temporary. Factors considered in determining whether a loss on a debt security is other than temporary include: (1) the length of time and extent to which the fair value has been below cost; (2) the financial condition and near-term prospects of the issuer; and (3) the intent to sell or likelihood to be forced to sell the security before any anticipated recovery. Prior to April 1, 2009 Old GM considered its ability and intent to hold the investment for a sufficient period of time to allow for any anticipated recovery. If losses are determined to be other than temporary, the loss is recorded in Interest income and other non-operating income, net and the investment carrying amount is adjusted to a revised fair value.

Derivative Instruments

We are party to a variety of foreign currency exchange rate, interest rate swap, interest rate cap and commodity derivative contracts entered into in connection with the management of exposure to fluctuations in foreign currency exchange rates, interest rates and certain commodity prices.

Our financial risk management program is under the responsibility of the Risk Management Committee, which reviews and, where appropriate, approves strategies to be pursued to mitigate these risks. The Risk Management Committee is composed of members of our management and functions under the oversight of the Finance and Risk Committee, a committee of the Board of Directors. The Finance and Risk Committee assists and guides the Board in its oversight of our financial and risk management strategies. A risk management control framework is utilized to monitor the strategies, risks and related hedge positions, in accordance with the policies and procedures approved by the Risk Management Committee.

In August 2010 we changed our automotive operations risk management policy with respect to foreign exchange and commodities. Under our prior policy we intended to reduce volatility of forecasted cash flows primarily through the use of forward contracts and swaps. The intent of the new policy is to protect against risk arising from extreme adverse market movements on our key exposures and involves a shift to greater use of purchased options.

GM Financial is exposed to market risks arising from adverse changes in interest rates due to floating interest rate exposure on its credit facilities and on certain securitization notes payable. GM Financial's special purpose entities (SPEs) are contractually required to purchase derivative instruments as credit enhancements in connection with securitization transactions and credit facilities. These financial exposures and contractual requirements are managed in accordance with corporate policies and procedures and a risk management control system is used to assist in monitoring hedging programs, derivative positions and hedging strategies. Hedging documentation includes hedging objectives, practices and procedures and the related accounting treatment.

The accounting for changes in the fair value of each derivative financial instrument depends on whether it has been designated and qualifies as an accounting hedge, as well as the type of hedging relationship identified. Derivative financial instruments entered into by our automotive operations are not designated in hedging relationships. Certain of the derivatives entered into by GM Financial have been designated in cash flow hedging relationships. Derivatives that receive hedge accounting treatment are evaluated for effectiveness at the time they are designated as well as throughout the hedging period. We do not hold derivative financial instruments for speculative purposes.

All derivatives are recorded at fair value and presented gross in the consolidated balance sheets. Internal models are used to value a majority of derivatives. The models use, as their basis, readily observable market inputs, such as time value, forward interest rates, volatility factors, and current and forward market prices for commodities and foreign currency exchange rates. Derivative contracts that are valued based upon models with significant unobservable market inputs, primarily estimated forward and prepayment rates, are classified in Level 3.

The valuation of derivative liabilities takes into account our nonperformance risk. At December 31, 2010 and 2009 our nonperformance risk was not observable through a liquid credit default swap market. Our nonperformance risk was estimated using internal analysis to develop conclusions on our implied credit rating, which we used to determine the appropriate credit spread, which would be applied to us by market participants. Prior to receiving published credit ratings we developed our credit rating conclusions using an analysis of comparable industrial companies. At December 31, 2010 we incorporated published credit agency ratings of GM into our credit rating conclusions. At December 31, 2009 all derivatives whose fair values contained a significant credit adjustment based on our nonperformance risk were classified in Level 3. At December 31, 2010 we have determined that our non-performance risk no longer represents a significant input in the determination of the fair value of our derivatives. Consequently, at December 31, 2010 all automotive operations derivatives were reclassified to Level 2.

We record the earnings effect resulting from the change in fair value of automotive operations derivative instruments in Interest income and other non-operating income, net. We record the earnings effect resulting from the change in fair value of derivative instruments entered into by GM Financial in GM Financial operating expenses and other.

Effective changes in fair value of derivatives designated as cash flow hedges are recorded in Cash flow hedging gain (losses) within a separate component of Accumulated other comprehensive income (loss). Amounts are reclassified from Accumulated other comprehensive income (loss) when the underlying hedged item affects earnings. All ineffective changes in fair value are recorded in earnings. We also discontinue hedge accounting prospectively when it is determined that a derivative instrument has ceased to be effective as an accounting hedge or if the underlying hedged cash flow is no longer probable of occurring.

Prior to October 1, 2008, Old GM recorded changes in fair value of derivatives designated as fair value hedges in earnings offset by changes in fair value of the hedged item to the extent the derivative was effective as a hedge. Old GM recorded the change in fair value of derivative instruments in the same line item in the consolidated statements of operations as the underlying exposure being hedged.

As part of Old GM's quarterly tests for hedge effectiveness in the three months ended December 31, 2008, Old GM was unable to conclude that its cash flow and fair value hedging relationships continued to be highly effective. Therefore, Old GM discontinued the application of hedge accounting for derivative instruments used in cash flow and fair value hedging relationships. Old GM recorded certain releases of deferred gains and losses arising from previously designated cash flow and fair value hedges in earnings. The earnings effect resulting from the change in fair value of derivative instruments was recorded in the same line item in the consolidated statements of operations as the underlying exposure being hedged.

We enter into contracts with counterparties that we believe are creditworthy and generally settle on a net basis. We perform a quarterly assessment of our counterparty credit risk, including a review of credit ratings, credit default swap rates and potential nonperformance of the counterparty. Based on our most recent quarterly assessment of our counterparty credit risk, we consider this risk to be low.

The cash flows from derivative instruments are classified in the same categories as the hedged items in the consolidated statement of cash flows.

Refer to Note 21 for additional information related to derivative transactions.

Income Taxes

The liability method is used in accounting for income taxes. Deferred tax assets and liabilities are recorded for temporary differences between the tax basis of assets and liabilities and their reported amounts in the consolidated financial statements, using the statutory tax rates in effect for the year in which the differences are expected to reverse. The effect on deferred tax assets and liabilities of a change in tax rates is recorded in the results of operations in the period that includes the enactment date under the law.

Deferred income tax assets are evaluated quarterly to determine if valuation allowances are required or should be adjusted. We establish and Old GM established valuation allowances for deferred tax assets based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. We consider and Old GM considered the following possible sources of taxable income when assessing the realization of deferred tax assets:

- Future reversals of existing taxable temporary differences;
- Future taxable income exclusive of reversing temporary differences and carryforwards;

- Taxable income in prior carryback years; and
- Tax-planning strategies.

The assessment regarding whether a valuation allowance is required or should be adjusted also considers all available positive and negative evidence factors, including but not limited to:

- Nature, frequency, and severity of recent losses;
- Duration of statutory carryforward periods;
- Historical experience with tax attributes expiring unused; and
- Near- and medium-term financial outlook;

Concluding a valuation allowance is not required is difficult when there is significant negative evidence that is objective and verifiable, such as cumulative losses in recent years. We utilize and Old GM utilized a rolling three years of actual and current year anticipated results as the primary measure of cumulative losses in recent years, as adjusted for non-recurring matters.

Income tax expense (benefit) for the year is allocated between continuing operations and other categories of income such as Discontinued operations or other comprehensive income (loss). In periods in which there is a pre-tax loss from continuing operations and pre-tax income in another income category, the tax benefit allocated to continuing operations is determined by taking into account the pre-tax income of other categories.

We record interest and penalties on uncertain tax positions in Income tax expense (benefit). Old GM recorded interest income on uncertain tax positions in Interest income and other non-operating income, net, interest expense in Automotive interest expense and penalties in Automotive selling, general and administrative expense.

Pension and Other Postretirement Plans

Attribution, Methods and Assumptions

The cost of benefits provided by defined benefit pension plans is recorded in the period employees provide service. The cost of pension plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be: (1) the duration of the applicable collective bargaining agreement specific to the plan; (2) expected future working lifetime; or (3) the life expectancy of the plan participants.

The cost of medical, dental, legal service and life insurance benefits provided through postretirement benefit plans is recorded in the period employees provide service. The cost of postretirement plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be the average period to full eligibility or the average life expectancy of the plan participants.

U.S. salaried retiree medical plan amendments are amortized over the period to full eligibility and actuarial gains and losses are amortized over the average remaining years of future service.

Actuarial (gains) losses and new prior service costs (credits) for the U.S. hourly healthcare plans are amortized over a time period corresponding with the average life expectancy of the plan participants.

An expected return on plan asset methodology is utilized to calculate future pension expense for certain significant funded benefit plans. A market-related value of plan assets methodology is also utilized that averages gains and losses on the plan assets over a period of years to determine future pension expense. The methodology recognizes 60.0% of the difference between the fair value of assets and the expected calculated value in the first year and 10.0% of that difference over each of the next four years.

The discount rate assumption is established for each of the retirement-related benefit plans at their respective measurement dates. In the U.S. and Canada, we use a cash flow matching approach that uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate.

In the U.S., Old GM established a discount rate assumption to reflect the yield of a hypothetical portfolio of high quality, fixed-income debt instruments that would produce cash flows sufficient in timing and amount to satisfy projected future benefits.

In countries other than the U.S. and Canada, discount rates are established depending on the local financial markets, using a high quality yield curve based on local bonds, a yield curve adjusted to reflect local conditions using foreign currency swaps or local actuarial standards.

Plan Asset Valuation

Cash Equivalents and Other Short-Term Investments

Money market funds and other similar short-term investment funds are valued using the net asset value per share (NAV) as provided by the investment sponsor or third party administrator. Prices for short-term debt securities are received from independent pricing services or from dealers who make markets in such securities. Independent pricing services utilize matrix pricing which considers readily available inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices. Cash equivalents and other short-term investments are generally classified in Level 2.

Group Annuity Contracts

Group annuity contracts are the contracts or policies issued by a life insurance company, which are used as a funding instrument for specified benefits payments to be made in accordance with the defined benefit pension plans. The contracts or policies may be backed by one or more separately managed investment accounts, which hold investments in high quality fixed income securities. The value of each contract or policy depends, in part, on the values of the units of the separately managed investment accounts backing the contract. The fair value of the separately managed investment account assets is based on the fair value of the underlying assets owned by the separately managed investment accounts. The separately managed investment accounts, which typically calculate NAV (or its equivalent), and underlying assets are valued in accordance with the valuation policies of the respective insurers. From time to time, the defined benefit pension plans' liabilities may increase as a result of these contracts when the required reserves, as estimated by an insurer under the terms of the contract or policy, exceed the fair value of contract assets. The resulting difference represents an outstanding contract asset deficiency that must be funded by the defined benefit pension plan's sponsor. Group annuity contracts are generally classified in Level 3.

Common and Preferred Stock

Equity securities for which market quotations are readily available are valued at the last reported sale price or official closing price as reported by an independent pricing service on the primary market or exchange on which they are traded and are classified in Level 1. In the event there were no sales during the five-day period before the reporting date and the five-day period after the reporting date or closing prices are not available, securities are valued at the last quoted bid price or may be valued using the last available price and are typically classified in Level 2. Common and preferred stock classified in Level 3 are typically those that are thinly traded, delisted, or privately issued securities or other issues that are priced by a dealer or pricing service using inputs such as aged (stale) pricing, and/or other qualitative factors. We may consider other security attributes such as liquidity and market activity in assessing the observability of inputs used by pricing services or dealers, which may affect classification in the fair value hierarchy.

Government, Agency and Corporate Debt Securities

U.S. government and government agency obligations, foreign government and government agency obligations, municipal securities, supranational obligations, corporate bonds, bank notes, floating rate notes, and preferred securities are valued based on quotations received from independent pricing services or from dealers who make markets in such securities. Pricing services utilize matrix pricing which considers readily available inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices and are generally classified in Level 2. Securities within this asset class that are classified in Level 3 are typically priced by dealers and pricing services that use proprietary pricing models which incorporate unobservable inputs. These inputs primarily consist of yield and credit spread assumptions. We may consider other security attributes such as liquidity, market activity, price level, credit ratings and geo-political risk in assessing the observability of inputs used by pricing services or dealers, which may affect classification.

Agency and Non-Agency Mortgage and Other Asset-Backed Securities

U.S. and foreign government agency mortgage and asset-backed securities, non-agency collateralized mortgage obligations, commercial mortgage securities, residential mortgage securities and other asset-backed securities are valued based on quotations received from independent pricing services or from dealers who make markets in such securities. Pricing services utilize matrix pricing which considers prepayment speed assumptions, attributes of the collateral, yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices and are generally classified in Level 2. Securities within this asset class that are classified in Level 3 are typically priced by dealers and pricing services that use proprietary pricing models which incorporate unobservable inputs. These inputs primarily consist of prepayment curves, discount rates, default assumptions and recovery rates. We may consider other security attributes such as liquidity, market activity, price level, credit ratings and geo-political risk in assessing the observability of inputs used by pricing services or dealers, which may affect classification.

Investment Funds, Private Equity and Debt Investments and Real Estate Investments

Exchange traded funds and real estate investment trusts, for which market quotations are readily available, are valued at the last reported sale price or official closing price as reported by an independent pricing service on the primary market or exchange on which they are traded and are classified in Level 1. Investments in non-exchange traded funds and certain SPEs (e.g., limited partnerships, limited liability companies), which may be fully redeemed at NAV in the near-term (within 90 days), are generally measured at fair value on the basis of the NAV provided by the investment sponsor or its third party administrator, and generally classified in Level 2. Investments within this asset class that are classified in Level 3 include investments in funds, which may not be fully redeemed at NAV in the near-term, and are typically measured on the basis of the NAV. Level 3 investments also include direct private equity, debt, and real estate investments, which have inherent restrictions on near-term redemption. Fair value estimates for direct private equity, private debt, and real estate investments are provided by the respective investment sponsors and are subsequently reviewed and approved by management. In the event management concludes a reported NAV or fair value estimate (collectively, external valuation) does not reflect fair value or is not determined as of the financial reporting measurement date, we will consider whether an adjustment is necessary. In determining whether an adjustment to the external valuation is required, we will review material factors that could affect the valuation, such as changes to the composition or performance of the underlying investment(s) or comparable investments, overall market conditions, and other economic factors that may possibly have a favorable or unfavorable effect on the reported external valuation. We may adjust the external valuation to ensure fair value as of the balance sheet date.

Derivatives

Exchange traded derivatives, for which market quotations are readily available, are valued at the last reported sale price or official closing price as reported by an independent pricing service on the primary market or exchange on which they are traded and are classified in Level 1. Over-the-counter derivatives are typically valued through independent pricing services and are generally classified in Level 2. Derivatives classified in Level 3 are typically priced by dealers and pricing services that use proprietary pricing models which incorporate unobservable inputs. These inputs include extrapolated or model-derived assumptions such as volatilities and yield and credit spread assumptions.

Due to the lack of timely available market information for certain investments in the asset classes described above as well as the inherent uncertainty of valuation, reported fair values may differ from fair values that would have been used had timely available market information been available.

Early Retirement Programs

An early retirement program was offered to certain German employees that allows these employees to transition from employment into retirement before their legal retirement age. Eligible employees who elect to participate in this pre-retirement leave program work full time in half of the pre-retirement period, the active period, and then do not work for the remaining half, the inactive period, and receive 50.0% of their salary in this pre-retirement period. Program related benefits are recognized over the period from when the employee signed the program contract until the end of the employee's active service period.

Extended Disability Benefits

Estimated extended disability benefits are accrued ratably over the employee's active service period using measurement provisions similar to those used to measure our other postretirement benefits (OPEB) obligations. The liability is composed of the future obligations for income replacement, healthcare costs and life insurance premiums for employees currently disabled and those in the active workforce who may become disabled. Future disabilities are estimated in the current workforce using actuarial methods based on historical experience. We record actuarial gains and losses immediately in earnings. Old GM amortized net actuarial gains and losses over the remaining duration of the obligation.

Labor Force

On a worldwide basis, we have and Old GM had a concentration of the workforce working under the guidelines of unionized collective bargaining agreements. At December 31, 2010 49,000 of our U.S. employees (or 64%) were represented by unions, of which 48,000 employees were represented by the UAW. The current labor contract with the UAW is effective for a four-year term that began in October 2007 and expires in September 2011. The contract included a $3,000 lump sum payment in the year ended December 31, 2007 and performance bonuses of 3.0%, 4.0% and 3.0% of wages in the years ended December 31, 2008, 2009 and 2010 for each UAW employee. These payments are amortized over the 12-month period following the respective payment dates. In February 2009 Old GM and the UAW agreed to suspend the 2009 and 2010 performance bonus payments.

Job Security Programs

In May 2009 Old GM and the UAW entered into an agreement that suspended the Job Opportunity Bank (JOBS) Program, modified the Supplemental Unemployment Benefit (SUB) program and added the Transitional Support Program (TSP). These job security programs provide employee reduced wages and continued coverage under certain employee benefit programs depending on the employee's classification as well as the number of years of service that the employee has accrued. A similar tiered benefit is provided to CAW employees. We recognize a liability for these SUB/TSP benefits over the expected service period of employees, based on our best estimate of the probable liability at the measurement date.

Prior to the implementation of the modified job security programs, costs for postemployment benefits to hourly employees idled on an other than temporary basis were accrued based on our best estimate of the wage, benefit and other costs to be incurred, and costs related to the temporary idling of employees were expensed as incurred.

Stock Incentive Plans

GM

We measure and record compensation expense for all share-based payment awards based on the award's estimated fair value. We grant awards to our employees through the 2009 Long Term Incentive Plan and the GM Salary Stock Plan. We record compensation expense over the applicable vesting period of an award.

In November and December 2010 we consummated a public offering of 550 million shares of our common stock. Prior to this offering, the fair value of awards granted was based on the estimated fair value of our common stock. Commencing in November 2010 the fair value of our common stock is based on the New York Stock Exchange trading price. Refer to Note 31 for additional information regarding stock incentive plans.

Salary stock awards granted are fully vested and nonforfeitable upon grant, therefore compensation cost is recorded on the date of grant.

Old GM

All of Old GM's awards for the period January 1, 2009 through July 9, 2009, and the year ended December 31, 2008 were accounted for at fair value, and compensation expense was recorded based on the award's estimated fair value. No share-based compensation expense was recorded for the top 25 most highly compensated employees in 2009, in compliance with the Loan and Security Agreement with the UST.

Stock options granted were measured on the date of grant using the Black-Scholes option-pricing model to determine fair value. Compensation expense was recorded on a graded vesting schedule. Old GM issued treasury shares upon exercise of employee stock options.

Option awards contingent on performance and market conditions were measured on the date of grant using a Monte-Carlo simulation model to determine fair value. Vesting was contingent upon a one-year service period and multiple performance and market requirements and was recorded on a graded vesting schedule over a weighted-average derived service period.

Market condition based cash-settled awards were granted to participants based on a minimum percentile ranking of Old GM's total stockholder return compared to all other companies in the S&P 500 for the same performance period. The fair value of each market condition based cash-settled award was estimated on the date of grant, and for each subsequent reporting period, remeasured using a Monte-Carlo simulation model that used multiple input variables.

Cash restricted stock units were granted to certain of Old GM's global executives that provided cash equal to the value of underlying restricted share units at predetermined vesting dates. Compensation expense was recorded on a straight-line basis over the requisite service period for each separately vesting portion of the award. The fair value of each cash-settled award was remeasured at the end of each reporting period, and the liability and related expense adjusted based on the new fair value of Old GM's common stock.

All outstanding Old GM awards remained with Old GM and we did not replace them in the 363 Sale.

Recently Adopted Accounting Principles

Variable Interest Entities

In January 2010 we adopted amendments to ASC 810, "Consolidation" (ASC 810). These amendments require an enterprise to qualitatively assess the determination of the primary beneficiary of a VIE based on whether the enterprise: (1) has the power to direct the activities of a VIE that most significantly affect the entity's economic performance; and (2) has the obligation to absorb losses of the entity or the right to receive benefits from the entity that could potentially be significant to the VIE. These amendments also require, among other considerations, an ongoing reconsideration of the primary beneficiary. In February 2010 the Financial Accounting Standard Board (FASB) issued guidance that permitted an indefinite deferral of these amendments for entities that have all the attributes of an investment company or that apply measurement principles consistent with those followed by investment companies. An entity that qualifies for the deferral will continue to be assessed under the overall guidance on the consolidation of VIE's in effect prior to the adoption of these amendments. This deferral was applicable to certain investment companies associated with our employee benefit plans and investment companies managing investments on behalf of unrelated third parties.

The amendments were adopted prospectively. Upon adoption, we consolidated General Motors Egypt (GM Egypt). Due to our application of fresh-start reporting on July 10, 2009 and because our investment in GM Egypt was accounted for using the equity method of accounting, there was no difference between the net assets added to the consolidated balance sheet upon consolidation and the amount of previously recorded interest in GM Egypt. As a result, there is no cumulative effect of a change in accounting principle to Accumulated deficit. However, the consolidation of GM Egypt resulted in an increase in Total assets of $254 million, an increase in Total liabilities of $178 million, and an increase in Noncontrolling interest of $76 million. The effect of these amendments was measured based on the amount at which the asset, liability and noncontrolling interest would have been carried or recorded in the consolidated financial statements if these amendments had been effective since inception of our relationship with GM Egypt. Refer to Note 17 for additional information regarding the effect of the adoption of these amendments.

Transfers of Financial Assets

In January 2010 we adopted certain amendments to ASC 860, "Transfer and Servicing" (ASC 860). ASC 860 eliminated the concept of a qualifying SPE, establishes a new definition of participating interest that must be met for transfers of portions of financial assets to be eligible for sale accounting, clarifies and amends the derecognition criteria for a transfer of financial assets to be accounted for as a sale, and changes the amount that can be recorded as a gain or loss on a transfer accounted for as a sale when beneficial interests are received by the transferor. The adoption of these amendments did not have an effect on the consolidated financial statements.

Accounting Standards Not Yet Adopted

In September 2009 the FASB issued Accounting Standard Update (ASU) 2009-13, "Multiple-Deliverable Revenue Arrangements" (ASU 2009-13). ASU 2009-13 addresses the unit of accounting for multiple-element arrangements. In addition, ASU 2009-13 revises the method by which consideration is allocated among the units of accounting. Specifically, the overall consideration is allocated to each deliverable by establishing a selling price for individual deliverables based on a hierarchy of evidence, involving vendor-specific objective evidence, other third party evidence of the selling price, or the reporting entity's best estimate of the selling price of individual deliverables in the arrangement. ASU 2009-13 will be effective prospectively for revenue arrangements entered into or materially modified in fiscal years beginning on or after June 15, 2010. ASU 2009-13 is not expected to have a material effect on the consolidated financial statements.

In December 2010, the FASB issued ASU 2010-28, "Intangibles—Goodwill and Other: When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts" (ASU 2010-28). The amendments in this ASU modify Step 1 of the goodwill impairment test for reporting units with zero or negative carrying amounts. For those reporting units, an entity is required to perform Step 2 of the goodwill impairment test if it is more likely than not that a goodwill impairment exists. ASU 2010-28 is effective for fiscal years, and interim periods within those years, beginning after December 15, 2010. Any resulting goodwill impairment is recorded as a cumulative-effect adjustment to beginning Retained earnings (accumulated deficit) in the period of adoption.

GME has a negative carrying amount; as such, we will apply the provisions of ASU 2010-28 effective January 1, 2011. When a reduction occurs in the fair-value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon our application of fresh-start reporting, the amount of our implied goodwill can decline. Prior to the adoption of ASU 2010-28, any such decline does not result in recognition of an impairment loss as long as Step 1 of the goodwill impairment test is passed (as was the case at our October 1, 2010 annual testing date). However, proceeding directly to Step 2 of the goodwill impairment test as required in this circumstance upon adoption of ASU 2010-28 would result in recognition of any such impairment.

We are currently in the process of valuing the amount of the implied goodwill as of January 1, 2011 for GME, and estimate the high end of the range of possible adjustment to be approximately $1.3 billion. Our estimate represents the net decrease, from July 10, 2009 through January 1, 2011, in the fair-value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon our application of fresh-start reporting resulting primarily from an overall improvement in our incremental borrowing rate and corresponding decrease in our nonperformance risk since July 10, 2009. The actual goodwill impairment determination can also be affected by other factors in the Step 2 impairment test which we have not yet finalized. As a result, the actual adjustment may be different than our current estimate upon the finalization of our valuation procedures and determination of our implied goodwill for GME at January 1, 2011.

Note 5. Acquisition and Disposal of Businesses

Acquisition of AmeriCredit Corp.

On October 1, 2010 we acquired 100% of the outstanding equity interests of AmeriCredit, an automotive finance company, renamed General Motors Financial Company, Inc., for cash of approximately $3.5 billion. The acquisition of AmeriCredit will allow us to provide a more complete range of financing options to our customers across the U.S. and Canada, specifically focusing on providing additional capabilities in leasing and sub-prime vehicle financing options.

The following table summarizes the consideration paid, acquisition-related costs, and the assets acquired and liabilities assumed recognized at the acquisition date in connection with the acquisition of AmeriCredit (dollars in millions, except per share amounts):

	Successor October 1, 2010
Consideration	
Cash paid to AmeriCredit common shareholders of $24.50 per share	$ 3,327
Cash paid to cancel outstanding stock warrants	94
Cash paid to settle equity-based compensation awards	33
Total consideration	$ 3,454
Acquisition-related costs (a)	$ 43
Assets acquired and liabilities assumed	
Cash	$ 538
Restricted cash	1,136
Finance receivables (b)	8,231
Other assets, including identifiable intangible assets	200
Securitization notes payable and other borrowings (c)	(7,564)
Other liabilities	(352)
Identifiable net assets acquired	2,189
Goodwill resulting from the acquisition of AmeriCredit	1,265
	$ 3,454

(a) Acquisition-related costs of $43 million were expensed as incurred. The acquisition related costs include $27 million recorded in Automotive selling, general and administrative expense and $16 million recorded in GM Financial operating expenses and other.

(b) The Finance receivables were recorded at fair value, which was determined using a discounted cash flow approach. The contractual cash flows were adjusted for estimated prepayments, defaults, recoveries, finance charge income and servicing costs and discounted using a discount rate commensurate with risks and maturity inherent in the finance contracts. As of the acquisition date, the contractually required payments receivable was $10.7 billion of which $9.7 billion was expected to be collected.

(c) The fair value of securitization notes payable and other borrowings was principally determined using quoted market rates.

We recorded goodwill in the amount of $1.3 billion for the excess of consideration paid over the fair value of the individual assets acquired and liabilities assumed. Goodwill includes $153 million recorded to establish a valuation allowance for deferred tax assets that was not applicable to GM Financial on a stand-alone basis. All of the goodwill was assigned to the newly formed GM Financial reporting segment. The goodwill expected to be tax deductible is $159 million and was generated from previous acquisitions by GM Financial.

The results of operations of GM Financial are included in our results beginning October 1, 2010. The following table summarizes the actual amounts of revenue and earnings of GM Financial included in our consolidated financial statements for the year ended December 31, 2010 and the supplemental pro forma revenue and earnings of the combined entity as if the acquisition had occurred on January 1, 2009 (dollars in millions):

	Successor (Unaudited)			Predecessor (Unaudited)
	GM Financial amounts included in results for Year Ended December 31, 2010	Pro Forma-Combined		Pro Forma-Combined
		Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Total net sales and revenue	$281	$136,665	$58,215	$ 48,074
Net income (loss) attributable to stockholders	$ 90	$ 6,634	$ (4,125)	$109,234

The supplemental pro forma information was adjusted to give effect to the tax effected amortization of a premium on finance receivables and a premium on securitization notes payable and other borrowings, depreciation and amortization related to other assets and acquisition related costs. The pro forma information should not be considered indicative of the results had the acquisition been consummated on January 1, 2009, nor are they indicative of future results.

Sale of Nexteer

On November 30, 2010 we completed the sale of Nexteer, a manufacturer of steering components and half-shafts, to Pacific Century Motors. The sale of the Nexteer business included the global steering business which was acquired in October 2009 as discussed under Acquisition of Delphi Businesses below. The 2009 acquisition of Nexteer included 22 manufacturing facilities, six engineering facilities and 14 customer support centers located in North and South America, Europe and Asia.

We received consideration of $426 million in cash and a $39 million promissory note in exchange for 100% of our ownership interest in Nexteer and recorded a gain of $60 million on the sale which is recorded in Interest income and other non-operating income, net. Subsequent to the sale, Nexteer became one of our third party suppliers and we remain a significant customer. During 2010 Nexteer recorded revenue of $1.8 billion, of which $939 million were sales to us. During the period from October 6, 2009, the date of acquisition, to December 31, 2009, Nexteer reported revenue of $453 million, of which $218 million were sales to us. We did not provide the pro forma financial information because we do not believe the information is material.

Acquisition of Strasbourg

On October 1, 2010 we acquired 100% of the outstanding equity interest of General Motors Strasbourg S.A.S (GMS) for cash of one Euro from MLC. GMS is an entity engaged in the business of developing and manufacturing automatic transmissions for luxury and performance light automotive vehicles which was previously owned by Old GM but retained by MLC in connection with the 363 Sale. MLC was unable to sell GMS and upon notification of their plan to liquidate GMS, we agreed to repurchase the business. We believe the repurchase of GMS allows us to maintain good relationships and to help expand our business within the European region.

We recorded the fair value of the assets acquired and liabilities assumed as of October 1, 2010, the date we obtained control, and have included GMS's results of operations and cash flows from that date forward. The following table summarizes the amounts recorded in connection with the acquisition of GMS, which are included in our GME segment (dollars in millions):

	Successor
	October 1, 2010
Assets acquired and liabilities assumed	
Cash	$ 49
Accounts receivable (a)	60
Inventory	56
Property, net	25
Other non-current assets	3
Current liabilities (b)	(116)
Non-current liabilities	(11)
Bargain purchase gain	$ 66

(a) Accounts receivable includes $32 million that is due from us.

(b) Current liabilities include $8 million that is due to us.

We determined that the excess of fair value over consideration paid was attributable to potential future restructuring scenarios made necessary due to the uncertainty in sales demand beyond in-place supply agreements. Restructuring costs, if incurred, would be expensed in future periods. As potential future restructuring activities do not qualify to be recorded as a liability in the application of the acquisition method of accounting, none was recorded, and we recorded the excess as a bargain purchase gain, classified as Interest income and other non-operating income, net. We did not provide the pro forma financial information because we do not believe the information is material. We began to record the results of GMS operations in our consolidated financial statements from the date of acquisition.

Sale of India Operations

In December 2009 we and SAIC Motor Hong Kong Investment Limited (SAIC-HK) entered into a joint venture, SAIC GM Investment Limited (HKJV) to invest in automotive projects outside of markets in China, initially focusing on markets in India. On February 1, 2010 we sold certain of our operations in India (GM India), part of our GMIO segment to HKJV, in exchange for a promissory note due in 2013. The amount due under the promissory note may be partially reduced, or increased, based on GM India's cumulative earnings before interest and taxes for the three year period ending December 31, 2012. In connection with the sale we recorded net consideration of $185 million and an insignificant gain. The sale transaction resulted in a loss of control and the deconsolidation of GM India on February 1, 2010. Accordingly, we removed the assets and liabilities of GM India from our consolidated financial statements and recorded an equity interest in HKJV to reflect cash of $50 million we contributed to HKJV and a $123 million commitment to provide additional capital that we are required to make in accordance with the terms of the joint venture agreement. We have recorded a corresponding liability to reflect our obligation to provide additional capital.

Acquisition of Delphi Businesses

In July 2009 we entered into the Delphi Master Disposition Agreement (DMDA) with Delphi and other parties. Under the DMDA, we agreed to acquire Delphi's global steering business (Nexteer), which supplies us and other original equipment manufacturers (OEMs) with steering systems and columns, and four domestic facilities that manufacture a variety of automotive components, primarily sold to us. In addition, we and several third party investors who held the Delphi Tranche DIP facilities (collectively the Investors) agreed to acquire substantially all of Delphi's remaining assets through DIP HOLDCO, LLP, subsequently named Delphi Automotive LLP (New Delphi). Certain excluded assets and liabilities were retained by a Delphi entity (DPH) to be sold or liquidated. In connection with the DMDA, we agreed to pay or assume Delphi obligations of $1.0 billion related to Delphi's senior DIP credit facility, including certain outstanding derivative instruments, its junior DIP credit facility, and other Delphi obligations, including certain administrative claims. At the closing of the transactions contemplated by the DMDA, we waived administrative claims associated with the advance agreements with Delphi, the payment terms acceleration agreement with Delphi, and the claims associated with previously transferred pension costs for hourly employees. Refer to Note 22 for additional information on the DMDA.

We agreed to acquire, prior to the consummation of the transactions contemplated by the DMDA, all Class A Membership Interests in New Delphi for a cash contribution of $1.7 billion with the Investors acquiring Class B Membership Interests and the Pension Benefit Guarantee Corporation (PBGC) receiving Class C Membership Interests. We and the Investors also agreed to establish: (1) a secured delayed draw term loan facility for New Delphi, with us and the Investors each committing to provide loans of up to $500 million; and (2) a note of $41 million to be funded at closing by the Investors. In addition, the DMDA settled outstanding claims and assessments against and from MLC, us and Delphi, including the settlement of commitments under the MRA (as defined in Note 22) with limited exceptions, and establishes an ongoing commercial relationship with New Delphi. We also agreed to continue all existing Delphi supply agreements and purchase orders for GMNA to the end of the related product program, and New Delphi agreed to provide us with access rights designed to allow us to operate specific sites on defined triggering events to provide us with protection of supply. The DMDA contains specific waterfall provisions for the allocation of distributions among the Class A, Class B and Class C New Delphi Membership Interests. Once the cumulative amount distributed by New Delphi exceeds $7.0 billion, our Class A Membership Interests will represent 35% of New Delphi with Class B representing the remaining 65%, excluding certain distributions to New Delphi directors and management and the unsecured creditors of Old Delphi. Our Class A Membership Interest entitles us to 49.12% of the first $1.0 billion of cumulative distributions and 57.78% of the next $1.0 billion of cumulative distributions excluding certain distributions to New Delphi directors and management. Additional distributions are applied to specific distribution levels until cumulative distributions reach $7.0 billion.

In October 2009 we consummated the transactions contemplated by the DMDA. The terms of the DMDA provided a means for Delphi to emerge from bankruptcy and to effectively serve its customers by focusing on its core business. The DMDA also enabled us to access essential components and steering technologies through the businesses we acquired.

We funded the acquisitions, transaction related costs and settlements of certain pre-existing arrangements through net cash payments of $2.7 billion and assumption of liabilities and wind-down obligations of $120 million. Additionally, we waived our rights to $550 million and $300 million previously advanced to Delphi under the advance agreements and the payment terms acceleration agreement and our rights to claims associated with previously transferred pension costs for hourly employees. Of these amounts, we contributed $1.7 billion to New Delphi and paid the PBGC $70 million.

The terms of the DMDA resulted in the settlement of certain obligations related to various commitments accrued as of the transaction date under the Delphi-GM Settlement Agreements. A settlement loss of $127 million was recorded upon consummation of the DMDA. Additional net charges of $49 million were recorded in the three months ended December 31, 2009 associated with the DMDA. Refer to Note 22 for additional information on the Delphi-GM Settlement Agreements.

The following table summarizes the consideration provided under the DMDA and the allocation to its various elements based on their estimated fair values (dollars in millions):

	Successor October 6, 2009
Net cash paid	$2,656
Waived advance agreements, payment terms acceleration agreement and other administrative claims (a)	966
Wind-down obligations and assumed liabilities	120
Total consideration provided	$3,742
Fair value of Nexteer and four facilities	$ 287
Fair value of Class A Membership Interests in New Delphi	1,912
Separately acquired assets of Delphi	41
Settlement of obligation to PBGC	387
Settlement of other obligations to Delphi	1,066
Expenses of the transaction	49
Allocation of fair value to DMDA elements	$3,742

(a) Previously advanced amounts of $850 million and value of other administrative claims of $116 million.

The Class A Membership Interests in New Delphi are accounted for using the equity method of accounting.

The following table summarizes the amounts allocated to the fair value of the assets acquired and liabilities assumed of Nexteer and the four domestic facilities, which are included in the results of our GMNA segment (dollars in millions):

	Successor October 6, 2009
Cash and cash equivalents	$ 40
Accounts and notes receivable, net	541
Inventories	245
Other current assets and deferred income taxes	28
Property, net	202
Deferred income taxes	39
Other assets	3
Goodwill (a)	61
Accounts payable (principally trade)	(316)
Short-term debt and current portion of long-term debt	(67)
Accrued expenses	(101)
Long-term debt	(10)
Other liabilities and deferred income taxes	(364)
Noncontrolling interests	(14)
Fair value of Nexteer and four domestic facilities	$ 287

(a) Goodwill of $61 million recorded in the GMNA reporting unit arises from the difference between the economic value of long-term employee related liabilities and their recorded amounts at the time of acquisition and deferred taxes. The total amount of goodwill deductible for tax purposes is expected to be $398 million. The difference between book goodwill and tax goodwill results from different allocations for tax purposes than that utilized for book purposes.

Nexteer and the four domestic facilities had revenue of $3.7 billion in the year ended December 31, 2008 of which 68% was related to sales to Old GM. Furthermore, through the terms of the MRA, we provided Delphi labor cost subsidies and production cash burn support to many of the facilities acquired. Refer to Note 22 for additional information on the MRA. Since we and Old GM accounted for a significant portion of Nexteer's and the four domestic facilities' sales and because we were providing subsidies to Delphi related to these facilities, the acquisition of these businesses did not have a significant effect on our consolidated financial results as the costs associated with these facilities have been recorded as inventory costs and recorded in Automotive cost of sales. We did not provide pro forma financial information because we do not believe this information would be material given the intercompany nature of Nexteer and the four domestic facilities sales activity.

Saab Bankruptcy and Sale

In February 2009 Saab, part of our GME segment, filed for protection under the reorganization laws of Sweden in order to reorganize itself into a stand-alone entity. Old GM determined that the reorganization proceeding resulted in a loss of the elements of control necessary for consolidation and therefore Old GM deconsolidated Saab in February 2009. Old GM recorded a loss of $824 million in Other automotive expenses, net related to the deconsolidation. The loss reflected the remeasurement of Old GM's net investment in Saab to its estimated fair value of $0, costs associated with commitments and obligations to suppliers and others, and a commitment to provide up to $150 million of DIP financing. We acquired Old GM's investment in Saab in connection with the 363 Sale. In August 2009 Saab exited its reorganization proceeding, and we regained the elements of control and consolidated Saab at an insignificant fair value.

Saab's assets and liabilities were classified as held for sale at December 31, 2009. Saab's total assets of $388 million included cash and cash equivalents, inventory and receivables, and its total liabilities of $355 million included accounts payable, warranty and pension obligations and other liabilities.

In February 2010 we completed the sale of Saab and in May 2010 we completed the sale of Saab Automobile GB (Saab GB) to Spyker Cars NV. Of the negotiated cash purchase price of $74 million, we received $50 million at closing and received the remaining $24 million in July 2010. We also received preference shares in Saab with a face value of $326 million and an estimated fair value that is insignificant and received $114 million as repayment of the DIP financing that we provided to Saab during 2009. In the year ended December 31, 2010 we recorded a gain of $123 million in Interest income and other non-operating income, net reflecting cash received of $166 million less net assets with a book value of $43 million.

Note 6. Finance Receivables, net

Automotive Financing

The following table summarizes the components of Finance receivables, net (dollars in millions):

	Successor December 31, 2010
Pre-acquisition finance receivables (pre-acquisition carrying amount)	$7,724
Post-acquisition finance receivables	924
Total finance receivables	8,648
Purchase price premium	423
Less non-accretable discount on pre-acquisition finance receivables	(848)
Less allowance for loan losses on post-acquisition receivables	(26)
Total finance receivables, net	$8,197

Finance contracts are purchased by GM Financial from automobile dealers without recourse, and accordingly, the dealer has no liability to GM Financial if the consumer defaults on the contract. Finance receivables are collateralized by vehicle titles and GM Financial has the right to repossess the vehicle in the event the consumer defaults on the payment terms of the contract.

At December 31, 2010 the accrual of finance charge income has been suspended on delinquent finance receivables of $491 million.

The following table summarizes purchase price premium (dollars in millions):

	Successor
	October 1, 2010 Through December 31, 2010
Balance at beginning of period	$500
Amortization of premium	(77)
Balance at end of period	$423

The following table summarizes non-accretable discount (dollars in millions):

	Successor
	October 1, 2010 Through December 31, 2010
Balance at beginning of period	$ 968
Recoveries	101
Charge-offs	(221)
Balance at end of period	$ 848

The following table summarizes the allowance for loan losses (dollars in millions):

	Successor
	October 1, 2010 Through December 31, 2010
Balance at beginning of period	$—
Provision for loan losses	26
Recoveries	—
Charge-offs	—
Balance at end of period	$26

Credit Quality

Credit bureau scores, generally referred to as FICO scores, are determined during GM Financial's automotive loan origination process. The following table summarizes the credit risk profile of finance receivables by FICO score band, determined at origination (dollars in millions):

	Successor
	December 31, 2010
FICO score less than 540	$1,328
FICO score 540 to 599	3,396
FICO score 600 to 659	2,758
FICO score greater than 660	1,166
Total finance receivables	$8,648

Delinquency

The following summarizes finance receivables more than 30 days delinquent, but not yet in repossession, and in repossession, but not yet charged off (dollars in millions):

	Successor	
	December 31, 2010	
	Amount	Percent
Delinquent contracts		
31 to 60 days	$535	6.2%
Greater-than-60 days	212	2.4%
Total finance receivables more than 30 days delinquent	747	8.6%
In repossession	28	0.3%
Total finance receivables more than 30 days delinquent and in repossession	$775	8.9%

An account is considered delinquent if a substantial portion of a scheduled payment has not been received by the date such payment was contractually due. Delinquencies may vary from period to period based upon the average age of the portfolio, seasonality within the calendar year and economic factors.

Note 7. Securitizations

Automotive Financing

The following table summarizes securitization activity and cash flows from SPEs used for securitizations (dollars in millions):

	Successor
	October 1, 2010 Through December 31, 2010
Receivables securitized	$743
Net proceeds from securitization	$700
Servicing fees	
Variable interest entities	$ 46
Distributions from Trusts	
Variable interest entities	$216

GM Financial retains servicing responsibilities for receivables transferred to certain SPEs. At December 31, 2010 GM Financial serviced finance receivables that have been transferred to certain SPEs of $7.2 billion.

Note 8. Marketable Securities

Automotive

The following table summarizes information regarding marketable securities (dollars in millions):

	Successor							
	December 31, 2010				December 31, 2009			
		Unrealized				Unrealized		
	Cost	Gains	Losses	Fair Value	Cost	Gains	Losses	Fair Value
Marketable Securities								
Available-for-sale securities								
United States government and agencies	$2,023	$—	$—	$2,023	$ 2	$—	$—	$ 2
Sovereign debt	773	—	—	773	—	—	—	—
Certificates of deposit	954	—	—	954	8	—	—	8
Corporate debt	1,670	1	2	1,669	—	—	—	—
Total available-for-sale securities	5,420	1	2	5,419	10	—	—	10
Total trading securities	129	10	3	136	122	7	5	124
Total Marketable securities	$5,549	$11	$ 5	$5,555	$132	$ 7	$ 5	$134

We maintained $89 million and $79 million of the above trading securities as compensating balances to support letters of credit of $74 million and $66 million at December 31, 2010 and 2009. We have access to these securities in the normal course of business; however, the letters of credit may be withdrawn if the minimum collateral balance is not maintained.

The following table summarizes securities classified as Cash and cash equivalents and Restricted cash and marketable securities (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Securities classified as Cash and cash equivalents	$12,964	$11,176
Securities classified as Restricted cash and marketable securities	$ 1,474	$14,178

Refer to Note 24 for classes of securities underlying Cash and cash equivalents and Restricted cash and marketable securities.

The following table summarizes proceeds from and realized gains and losses on disposals of investments in marketable securities classified as available-for-sale and sold prior to maturity (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Sales proceeds	$11	$ 3	$185	$4,001
Realized gains	$—	$—	$ 3	$ 44
Realized losses	$—	$—	$ 10	$ 88

The following table summarizes the fair value of investments classified as available-for-sale securities by contractual maturity at December 31, 2010 (dollars in millions):

	Successor	
	Amortized Cost	Fair Value
Due in one year or less	$5,059	$5,059
Due after one year through five years	361	360
Total contractual maturities of available-for-sale securities	$5,420	$5,419

Refer to Note 26 for the amounts recorded as other than temporary impairments on debt and equity securities.

Note 9. Inventories

Automotive

The following table summarizes the components of Inventories (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Productive material, supplies and work in process	$ 5,487	$ 4,201
Finished product, including service parts	6,638	5,906
Total inventories	$12,125	$10,107

In the period January 1, 2009 through July 9, 2009 and in the year ended December 31, 2008 Old GM's U.S. LIFO eligible inventory quantities were reduced. These reductions resulted in liquidations of LIFO inventory quantities, which were carried at lower costs prevailing in prior years as compared with the costs of purchases in the period January 1, 2009 through July 9, 2009 and in the year ended December 31, 2008. These liquidations decreased Old GM's Automotive cost of sales by $5 million in the period January 1, 2009 through July 9, 2009 and $355 million in the year ended December 31, 2008.

Note 10. Equipment on Operating Leases, net

Automotive

Equipment on operating leases, net is comprised of vehicle sales to daily rental car companies and to retail customers.

The following table summarizes information related to Equipment on operating leases, net and the related accumulated depreciation (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Equipment on operating leases	$2,843	$3,070
Less accumulated depreciation	(275)	(343)
Equipment on operating leases, net	$2,568	$2,727

The following table summarizes depreciation expense and impairment charges related to Equipment on operating leases, net (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Depreciation expense and impairment charges	$549	$586	$338	$1,575

Refer to Note 26 for additional information on impairment charges related to Equipment on operating leases, net.

Note 11. Equity in Net Assets of Nonconsolidated Affiliates

Automotive

Nonconsolidated affiliates are entities in which an equity ownership interest is maintained and for which the equity method of accounting is used, due to the ability to exert significant influence over decisions relating to their operating and financial affairs.

The following table summarizes information regarding equity in income (loss) of and disposition of interest in nonconsolidated affiliates (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Ally Financial	$ —	$ —	$(1,097)	$ 916
Gain on conversion of UST Ally Financial Loan	—	—	2,477	—
Ally Common Membership Interest impairment charges	—	—	—	(7,099)
Total equity in income (loss) of and disposition of interest in Ally Financial	$ —	$ —	$ 1,380	$(6,183)
China JVs (a)	$1,297	$460	$ 300	$ 315
New United Motor Manufacturing, Inc. (b)	—	—	(243)	(118)
New Delphi (c)	117	(1)	—	—
Others	24	38	4	(11)
Total equity income, net of tax	$1,438	$497	$ 61	$ 186

(a) Includes Shanghai General Motors Co., Ltd. (SGM) (49%) in the period February 1, 2010 through December 31, 2010 and (50%) in the month of January 2010, in the periods July 10, 2009 through December 31, 2009 and January 1, 2009 through July 9, 2009, and in the year ended December 31, 2008 and SAIC-GM-Wuling Automobile Co., Ltd. (SGMW) (44%) in the period November 16, 2010 through December 31, 2010 and (34%) in the periods January 1, 2010 through November 15, 2010, July 10, 2009 through December 31, 2009, January 1, 2009 through July 9, 2009, and the year ended December 31, 2008.

(b) New United Motor Manufacturing, Inc. (NUMMI) (50%) was retained by MLC as a part of the 363 Sale.

(c) New Delphi was acquired in October 2009. Refer to Note 5 for additional information on acquisition of Delphi businesses.

Investment in China JVs

Our Chinese operations, which we established beginning in 1997, are comprised of the following joint ventures: SGM, SGMW, FAW-GM Light Duty Commercial Vehicle, Ltd. (FAW-GM), Pan Asia Technical Automotive Center Co., Ltd. (PATAC), Shanghai OnStar Telematics Co. Ltd. (Shanghai OnStar) and Shanghai Chengxin Used Car Operation and Management Co., Ltd. (Used Car

JV), collectively referred to as the China JVs. Sales and income of these joint ventures are not consolidated into our financial statements; rather, our proportionate share of the earnings of each joint venture is reflected as Equity income, net of tax.

SGM is a joint venture established by Shanghai Automotive Industry Corporation (SAIC) (51%) and us (49%) in 1997. SGM has interests in three other joint ventures in China — Shanghai GM (Shenyang) Norsom Motor Co., Ltd (SGM Norsom), Shanghai GM Dong Yue Motors Co., Ltd (SGM DY) and Shanghai GM Dong Yue Powertrain (SGM DYPT). These three joint ventures are jointly held by SGM (50%), SAIC (25%) and us (25%). The four joint ventures (SGM Group) are engaged in the production, import, and sale of a comprehensive range of products under the brands of Buick, Chevrolet and Cadillac.

SGMW produces mini-commercial vehicles and passenger cars utilizing local architectures under the Wuling, Chevrolet and Baojun brands. FAW-GM, of which we own 50% and China FAW Group Corporation (FAW) owns 50%, produces light commercial vehicles under the Jiefang brand and medium vans under the FAW brand. Our joint venture agreements allow for significant rights as a member.

SAIC, one of our joint venture partners, currently produces vehicles under its own brands for sale in the Chinese market. At present vehicles that SAIC produces primarily serve markets that are different from markets served by our joint ventures.

PATAC is our China-based engineering and technical joint venture with SAIC. Shanghai OnStar is our joint venture with SAIC that provides Chinese customers with a wide array of vehicle safety and information services. Used Car JV is our joint venture with SAIC that will cooperate with current distributors of SGM products in the establishment of dedicated used car sales and service facilities across China.

In February 2010 we sold a 1% ownership interest in SGM to SAIC-HK, reducing our ownership interest to 49%. The sale of the 1% ownership interest to SAIC was predicated on our ability to work with SAIC to obtain a $400 million line of credit from a commercial bank to us. We also received a call option to repurchase the 1% which is contingently exercisable based on events which we do not unilaterally control. As part of the loan arrangement SAIC provided a commitment whereby, in the event of default, SAIC will purchase the ownership interest in SGM that we pledged as collateral for the loan. We recorded an insignificant gain on this transaction in the year ended December 31, 2010.

In November 2010 we purchased an additional 10% interest in SGMW from the Liuzhou Wuling Motors Co., Ltd. and Liuzhou Mini Vehicles Factory, collectively the Wuling Group, for cash of $52 million plus an agreement to provide technical services to the Wuling Group for a period of three years. As a result of this transaction, we own 44%, SAIC owns 50.1% and certain Liuzhou investors own 5.9% of the outstanding stock of SGMW. The fair value of the additional 10% interest in SGMW was $394 million at the date of the transaction, as determined using a discounted cash flow methodology. The difference between the cash consideration and the fair value of the 10% interest in SGMW is being deferred and amortized over the three year period we will provide technical services to the Wuling Group. During the year ended December 31, 2010 $14 million was amortized and recorded in Interest income and other non-operating income, net.

Investment in and Summarized Financial Data of Nonconsolidated Affiliates

The following table summarizes the carrying amount of investments in significant nonconsolidated affiliates (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Carrying amount of investment in China JVs	$6,133	$5,648
Carrying amount of investment in New Delphi	2,043	1,908
Carrying amount of other investments	353	380
Total equity in net assets of nonconsolidated affiliates	$8,529	$7,936

On July 10, 2009 our investments in SGM and its subsidiaries were adjusted to their fair values. Our investment in SGM was increased by fresh-start reporting adjustments of $3.5 billion. This fair value adjustment of $3.5 billion was allocated as follows: (1) goodwill of $2.9 billion; (2) intangible assets of $0.6 billion; and (3) property of $38 million. The increase in basis related to intangible assets is being amortized on a straight-line basis over the remaining useful lives of the assets ranging from seven to 25 years, with amortization expense of $24 million per year. The increase in basis related to property is being depreciated on a straight-line basis over the remaining useful lives of the assets ranging from two to 22 years, with depreciation expense of $5 million per year.

On July 10, 2009 our investment in SGMW was adjusted to its fair value. Our investment in SGMW was increased by fresh-start reporting adjustments of $265 million which were allocated as follows: (1) goodwill of $165 million; (2) intangible assets of $93 million; and (3) property of $7 million. The increase in basis related to intangible assets is being amortized on a straight-line basis over the remaining useful lives of 25 years, with amortization expense of $4 million per year. The increase in basis related to property is being depreciated on a straight-line basis over the remaining useful lives of the assets ranging from three to 22 years.

As a result of our purchase of an additional 10% interest in SGMW, our additional investment was recorded at its fair value of $394 million, an increase of $322 million from SGMW's book value. This fair value increase was allocated as follows: (1) goodwill of $231 million; (2) intangible assets of $82 million; (3) inventory of $5 million; and (4) property of $4 million. The increase in basis related to intangible assets is being amortized on a straight-line basis over the remaining useful lives of 25 years, with amortization expense of $3 million per year. The increase in basis related to property is being depreciated on a straight-line basis over the remaining useful lives of the assets ranging from three to 22 years.

The following table presents summarized financial data for all of our nonconsolidated affiliates, excluding Ally Financial (dollars in millions):

	China JVs	Others	Total	China JVs	Others	Total
	December 31, 2010	December 31, 2010	December 31, 2010	December 31, 2009	December 31, 2009	December 31, 2009
Summarized Balance Sheet Data						
Current assets	$ 9,689	$ 9,708	$19,397	$ 6,954	$ 8,507	$15,461
Non-current assets	4,147	5,001	9,148	3,794	4,874	8,668
Total assets	$13,836	$14,709	$28,545	$10,748	$13,381	$24,129
Current liabilities	$ 8,931	$ 4,745	$13,676	$ 6,695	$ 4,608	$11,303

Investment in Ally Financial

As part of the approval process for Ally Financial to obtain Bank Holding Company status in December 2008, Old GM agreed to reduce its ownership in Ally Financial to less than 10% of the voting and total equity of Ally Financial by December 24, 2011. At December 31, 2010 our equity ownership in Ally Financial was 9.9%.

In January 2009 Old GM entered into the UST Ally Financial Loan Agreement pursuant to which Old GM borrowed $884 million (UST Ally Financial Loan) and utilized those funds to purchase 190,921 Class B Common Membership Interests in Ally Financial. The UST Ally Financial Loan was scheduled to mature in January 2012 and bore interest, payable quarterly, at the same rate of interest as the UST Loans. The UST Ally Financial Loan Agreement was secured by Old GM's Common and Preferred Membership Interests in Ally Financial. The UST had the option to convert outstanding amounts into a maximum of 190,921 shares of Ally Financial's Class B Common Membership Interests on a pro rata basis.

In May 2009 the UST exercised this option, the outstanding principal and interest under the UST Ally Financial Loan was extinguished, and Old GM recorded a net gain of $483 million. The net gain was comprised of a gain on the disposition of Ally Financial Common Membership Interests of $2.5 billion recorded in Equity in income of and disposition of interest in Ally Financial and a loss on extinguishment of the UST Ally Financial Loan of $2.0 billion recorded in Loss on extinguishment of debt. After the exchange, Old GM's ownership was reduced to 24.5% of Ally Financial's Common Membership Interests.

Ally Financial converted its status to a C corporation effective June 30, 2009. At that date, Old GM began to account for its investment in Ally Financial using the cost method rather than the equity method as Old GM could not exercise significant influence over Ally Financial. Prior to converting to a C corporation, Old GM's investment in Ally Financial was accounted for in a manner similar to an investment in a limited liability partnership and the equity method was applied because Old GM's influence was more than minor. In connection with Ally Financial's conversion into a C corporation, each unit of each class of Ally Financial Membership Interests was converted into shares of capital stock of Ally Financial with substantially the same rights and preferences as such Membership Interests. On July 10, 2009 we acquired the investment in Ally Financial's common and preferred stocks in connection with the 363 Sale.

In December 2009 the UST made a capital contribution to Ally Financial of $3.8 billion. The UST also exchanged all of its existing Ally Financial non-convertible preferred stock for newly issued mandatory convertible preferred securities valued at $5.3 billion and converted mandatory convertible preferred securities valued at $3.0 billion into Ally Financial common stock. These actions resulted in the dilution of our investment in Ally Financial common stock from 24.5% to 16.6%, of which 6.7% was held directly and 9.9% was held indirectly through an independent trust.

In December 2010 the UST agreed to convert its optional conversion feature on the shares of mandatory convertible preferred securities held by the UST. Through this transaction, Ally Financial converted 110 million shares of preferred securities into 532 thousand shares of common stock. This action resulted in the dilution of our investment in Ally Financial common stock from 16.6% to 9.9%, of which 4.0% is held directly and 5.9% is held indirectly through an independent trust. Pursuant to previous commitments to reduce influence over and ownership in Ally Financial, the trustee, who is independent of us, has the sole authority to vote and is required to dispose of all Ally Financial common stock held in the trust by December 24, 2011. We can cause the trustee to return any Ally Financial common stock to us to hold directly, so long as our directly held voting and total common equity interests remain below 10%.

The following tables summarize financial information of Ally Financial for the period Ally Financial was accounted for as a nonconsolidated affiliate (dollars in millions):

	Six Months Ended June 30, 2009	Year Ended December 31, 2008
Consolidated Statement of Income (Loss)		
Total financing revenue and other interest income	$ 6,916	$18,054
Total interest expense	$ 3,936	$10,441
Depreciation expense on operating lease assets	$ 2,113	$ 5,478
Gain on extinguishment of debt	$ 657	$12,628
Total other revenue	$ 2,117	$15,271
Total noninterest expense	$ 3,381	$ 8,349
Loss from continuing operations before income tax expense	$(2,260)	$ 4,737
Income tax expense from continuing operations	$ 972	$ (136)
Net income (loss) from continuing operations	$(3,232)	$ 4,873
Loss from discontinued operations, net of tax	$(1,346)	$ (3,005)
Net income (loss)	$(4,578)	$ 1,868

	June 30, 2009
Condensed Consolidated Balance Sheet	
Loans held for sale	$ 11,440
Total finance receivables and loans, net	$ 87,520
Investment in operating leases, net	$ 21,597
Other assets	$ 22,932
Total assets	$181,248
Total debt	$105,175
Accrued expenses and other liabilities	$ 41,363
Total liabilities	$155,202

Preferred stock	$ 1,287
Total equity	$ 26,046

Ally Financial – Preferred and Common Membership Interests

The following tables summarize the activity with respect to the investment in Ally Financial Common and Preferred Membership Interests for the period Ally Financial was accounted for as a nonconsolidated affiliate (dollars in millions):

	Predecessor	
	Ally Financial Common Membership Interests	Ally Financial Preferred Membership Interests
Balance at January 1, 2009	$ 491	$43
Old GM's proportionate share of Ally Financial's losses (a)	(1,130)	(7)
Investment in Ally Financial Common Membership Interests	884	—
Gain on disposition of Ally Financial Common Membership Interests	2,477	—
Conversion of Ally Financial Common Membership Interests	(2,885)	—
Other, primarily accumulated other comprehensive loss	163	—
Balance at June 30, 2009	$ —	$36

(a) Due to impairment charges and Old GM's proportionate share of Ally Financial's losses, the carrying amount of Old GM's investments in Ally Financial Common Membership Interests was reduced to $0. Old GM recorded its proportionate share of Ally Financial's remaining losses to its investment in Ally Financial Preferred Membership Interests.

Capitalized software amortization expense (a)	$ 195	$ 132	$ 136	$ 209

(a) Included in Total depreciation, impairment charges and amortization expense.

Old GM initiated restructuring plans prior to the 363 Sale to reduce the total number of powertrain, stamping and assembly plants and to eliminate certain brands and nameplates. In addition, MLC retained certain assets that we did not acquire in connection with the 363 Sale and were deemed not to have a useful life beyond July 9, 2009. As a result, Old GM recorded incremental depreciation and amortization on certain of these assets as they were expected to be utilized over a shorter period of time than their previously estimated useful lives. We record incremental depreciation and amortization for changes in useful lives subsequent to the initial determination. We recorded incremental depreciation and amortization of $18 million and $20 million in the year ended December 31, 2010 and the period July 10, 2009 through December 31, 2009. Old GM recorded incremental depreciation and amortization of approximately $2.8 billion and $0.8 billion in the period January 1, 2009 through July 9, 2009 and the year ended December 31, 2008.

Note 13. Goodwill

Consolidated

Accumulated impairment charges	—	—	—	—	—	—
Goodwill	$26,409	$3,335	$771	$157	$30,672	$30,672

(a) Reflects the revised segment presentation for our newly created GMSA segment. Refer to Note 35 for additional information.

(b) In the year ended December 31, 2010 we changed our managerial and financial reporting structure so that certain entities geographically located within Russia and Uzbekistan were transferred from our GME segment to our GMIO segment. Goodwill was reassigned between reporting units on a relative-fair-value basis.

(c) On October 1, 2010 our acquisition of AmeriCredit became effective. Pursuant to ASC 805 we assigned fair value to all assets, including identifiable intangible assets, and liabilities acquired. Subsequent to assigning fair values and recording deferred income taxes in accordance with ASC 740, a residual amount of $1.3 billion was recorded as Goodwill. Goodwill includes $153 million that was recorded at the acquisition date to establish a valuation allowance for deferred tax assets that were not applicable to GM Financial on a stand-alone basis.

(d) We recorded Goodwill of $30.5 billion upon application of fresh-start reporting. If all identifiable assets and liabilities had been recorded at fair value upon application of fresh-start reporting, no goodwill would have resulted. However, when applying fresh-start reporting, certain accounts, primarily employee benefit plan and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than fair value and the difference between the U.S. GAAP and fair value amounts gave rise to goodwill, which is a residual. Our employee benefit related accounts were recorded in accordance with ASC 712 and 715 and deferred income taxes were recorded in accordance with ASC 740. Further, we recorded valuation allowances against certain of our deferred tax assets, which under ASC 852 also resulted in Goodwill. These valuation allowances were due in part to Old GM's history of recurring operating losses, and our projections at the 363 Sale date of continued near-term operating losses in certain jurisdictions. While the 363 Sale constituted a significant restructuring that eliminated many operating and financing costs, Old GM had undertaken significant restructurings in the past that failed to return certain jurisdictions to profitability. At the 363 Sale date, we concluded that there was significant uncertainty as to whether the recent restructuring actions would return these jurisdictions to sustained profitability, thereby necessitating the establishment of a valuation allowance against certain deferred tax assets. None of the goodwill from this transaction is deductible for tax purposes.

In the three months ended December 31, 2010 and 2009 we performed our annual goodwill impairment analysis of our reporting units at October 1, 2010 and 2009, and in the three months ended June 30, 2010 an event-driven impairment analysis for GME which resulted in no goodwill impairment charges.

The valuation methodologies utilized to perform our goodwill impairment testing were consistent with those used in our application of fresh-start reporting on July 10, 2009, as discussed in Note 2, and in any subsequent annual or event-driven impairment tests and resulted in Level 3 measures.

Our fair value estimate assumes the achievement of the future financial results contemplated in our forecasted cash flows, and there can be no assurance that we will realize that value. The estimates and assumptions used are subject to significant uncertainties, many of which are beyond our control, and there is no assurance that anticipated financial results will be achieved.

Refer to Note 26 for additional information on goodwill impairments in prior periods.

Note 14. Intangible Assets, net

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009 (a)	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Amortization expense related to intangible assets	$2,560	$1,584	$44	$83

(a) Amortization expense in the period July 10, 2009 through December 31, 2009 includes an impairment charge of $21 million related to technology and intellectual property. Refer to Note 26 for additional information on the impairment charge.

The following table summarizes estimated amortization expense related to intangible assets in each of the next five years (dollars in millions):

	Estimated Amortization Expense
2011	$1,785
2012	$1,560
2013	$1,227
2014	$ 611
2015	$ 314

Note 15. Restricted Cash and Marketable Securities

Automotive

Cash and marketable securities subject to contractual restrictions and not readily available are classified as Restricted cash and marketable securities. Restricted cash and marketable securities are invested in accordance with the terms of the underlying agreements. Funds previously held in the UST Credit Agreement and currently held in the Canadian Health Care Trust (HCT) escrow and other accounts have been invested in government securities and money market funds in accordance with the terms of the escrow agreements. At December 31, 2010 and 2009 we held securities of $1.5 billion and $14.2 billion that were classified as Restricted cash and marketable securities. Refer to Note 24 for additional information on securities classified as Restricted cash and marketable securities.

The following table summarizes the components of automotive Restricted cash and marketable securities (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Current		
UST Credit Agreement (a)	$ —	$12,475
Canadian Health Care Trust (b)	1,008	955
Receivables Program (c)	—	187
Securitization trusts	6	191
Pre-funding disbursements	32	94
Other (d)	194	15
Total current automotive Restricted cash and marketable securities	1,240	13,917
Non-current		
Collateral for insurance related activities	588	658
Other non-current (d)	572	831
Total automotive Restricted cash and marketable securities	$2,400	$15,406

(a) In April 2010 the UST Loans and Canadian Loan were paid in full and funds remaining in escrow were no longer subject to restrictions.

(b) Under the terms of an escrow agreement between GMCL, the EDC and an escrow agent, GMCL established a CAD $1.0 billion (equivalent to $893 million when entered into) escrow to fund certain of its healthcare obligations.

(c) The Receivables Program provided financial assistance to automotive suppliers by guaranteeing or purchasing certain receivables payable by us. In April 2010 the Receivable Program was terminated in accordance with its terms.

(d) Includes amounts related to various letters of credit, deposits, escrows and other cash collateral requirements.

Automotive Financing

Cash subject to contractual restrictions and not readily available is classified as restricted cash.

The following table summarizes the components of automotive financing restricted cash (dollars in millions):

	Successor
	December 31, 2010
Restricted cash — securitization notes payable (a)	$ 926
Restricted cash — credit facilities (a)	131
Restricted cash — other (b)	33
Total automotive financing restricted cash	$1,090

(a) Cash pledged to support securitization transactions and credit facilities is invested in highly liquid securities with original maturities of 90 days or less or in highly rated guaranteed investment contracts.

(b) Other restricted cash is pledged in association with derivative transactions.

Note 16. Other Assets

Automotive

The following table summarizes the components of Other assets (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Investment in Ally Financial common stock	$ 964	$ 970
Investment in Ally Financial preferred stock	665	665
Notes receivable (a)	465	149
Taxes other than income taxes	299	297
Derivative assets	44	44
Other	849	498
Total other assets	$3,286	$2,623

(a) At December 31, 2010 a note receivable of $245 million is included related to the sale of GM India. Refer to Note 5 for additional information.

Note 17. Variable Interest Entities

Consolidated VIEs

Automotive

VIEs that we do not control through a majority voting interest that are consolidated because we are or Old GM was the primary beneficiary primarily include: (1) previously divested suppliers for which we provide or Old GM provided guarantees or financial support; (2) a program announced by the UST in March 2009 to provide financial assistance to automotive suppliers (Receivables Program); (3) vehicle sales and marketing joint ventures that manufacture, market and sell vehicles in certain markets; (4) leasing SPEs which held real estate assets and related liabilities for which Old GM provided residual guarantees; and (5) an entity which manages certain private equity investments held by our and Old GM's defined benefit plans, along with seven associated general partner entities.

Certain creditors and beneficial interest holders of these VIEs have or had limited, insignificant recourse to our general credit or Old GM's general credit. In the event that creditors or beneficial interest holders were to have such recourse to our or Old GM's general credit, we or Old GM could be held liable for certain of the VIEs' obligations. GM Daewoo Auto & Technology Co. (GM Daewoo), a non-wholly owned consolidated subsidiary that we control through a majority voting interest, is also a VIE because in the future it may require additional subordinated financial support. The creditors of GM Daewoo's short-term debt of $70 million, preferred shares classified as long-term debt of $835 million and current derivative liabilities of $111 million at December 31, 2010 do not have recourse to our general credit. In February 2011 we provided a guarantee to Korean Development Bank, a minority shareholder in GM Daewoo, to redeem GM Daewoo's preferred shares should GM Daewoo not have sufficient legally distributable earnings.

The following table summarizes the carrying amount of consolidated VIEs that we do not control through a majority voting interest or are part of GM Financial's securitization transactions (dollars in millions):

	Successor	
	December 31, 2010 (a)(b)	December 31, 2009 (a)
Assets		
Cash and cash equivalents	$145	$ 15
Restricted cash and marketable securities	1	191
Accounts and notes receivable, net	121	14
Inventories	108	15

Property, net	44	5
Other assets	48	33
Total assets	$481	$273
Liabilities		
Accounts payable (principally trade)	$226	$ 17
Short-term borrowings and current portion of long-term debt	5	205
Accrued liabilities	34	10
Other liabilities	42	23
Total liabilities	$307	$255

(a) Amounts exclude GM Daewoo.

(b) At December 31, 2010 GM Egypt had Total assets of $401 million and Total liabilities of $277 million.

The following table summarizes the amounts recorded in earnings related to consolidated VIEs we do not control through a majority voting interest or are part of GM Financial's securitization transactions (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010 (a)(b)	July 10, 2009 Through December 31, 2009 (a)	January 1, 2009 Through July 9, 2009 (a)	Year Ended December 31, 2008 (a)
Total net sales and revenue	$753	$41	$ 31	$ 40
Automotive cost of sales	623	8	(1)	5
Automotive selling, general administrative expense	34	8	5	(11)
Other automotive expenses, net	3	9	10	19
Automotive interest expense	6	14	22	—
Interest income and other non-operating income, net	6	—	—	—
Reorganization loss, net	—	—	26	—
Income tax expense	11	1	—	—
Equity income, net of tax	2	—	—	—
Net income (loss)	$ 84	$ 1	$(31)	$ 27

(a) Amounts exclude GM Daewoo.

(b) In the year ended December 31, 2010 GM Egypt recorded Total net sales and revenue of $714 million.

GM Egypt

GM Egypt, of which we own 31%, is an automotive manufacturing organization that was previously accounted for using the equity method of accounting. GM Egypt was founded in March 1983 to assemble and manufacture vehicles. Certain voting and other rights permit us to direct those activities of GM Egypt that most significantly affect its economic performance. In connection with our adoption of amendments to ASC 810, we consolidated GM Egypt in January 2010.

Receivables Program

At December 31, 2009 our equity contributions were $55 million and the UST had outstanding loans of $150 million to the Receivables Program. In March 2010 we repaid these loans in full. The Receivables Program was terminated in accordance with its terms in April 2010. Upon termination, we shared residual capital of $25 million in the program equally with the UST and paid a termination fee of $44 million.

CAMI

In March 2009 Old GM determined that due to changes in contractual arrangements related to CAMI Automotive Inc. (CAMI), it was required to reconsider its previous conclusion that CAMI was not a VIE. As a result of Old GM's analysis, it determined that CAMI was a VIE and Old GM was the primary beneficiary, and therefore Old GM consolidated CAMI. The equity interests held by Old GM and held by the noncontrolling interest had a fair value of approximately $12 million. Total assets were approximately $472 million comprised primarily of property, plants, and equipment and related party accounts receivable and inventory. Total liabilities were approximately $460 million, comprised primarily of long-term debt, accrued liabilities and pension and other post-employment benefits. In December 2009 we acquired the remaining noncontrolling interest of CAMI from Suzuki Motor Corporation for $100 million, increasing our ownership interest from 50% to 100%. CAMI is a wholly-owned subsidiary and therefore not included in the previous tabular disclosure.

Automotive Financing

GM Financial finances its loan origination volume through the use of credit facilities and securitization trusts that issue asset-backed securities to investors. GM Financial retains an interest in these securitization trusts which are structured without recourse.

GM Financial's continuing involvement with the credit facilities and securitization trusts includes servicing loans held by the SPEs and holding a residual interest in the SPE. The SPEs are considered VIEs because they do not have sufficient equity at risk, and are consolidated because GM Financial is the primary beneficiary and has the power over those activities that most significantly affect the economic performance of the SPEs, and has an obligation to absorb losses or the right to receive benefits from the SPEs which are potentially significant. Refer to Notes 6, 7 and 19 for additional information on GM Financial's involvement with the SPEs.

GM Financial is not required to provide any additional financial support to its sponsored credit facilities and securitization SPEs. The finance receivables and other assets held by these subsidiaries are not available to our creditors or creditors of our other subsidiaries. Refer to Notes 6 and 7 for disclosures related to the amounts held by the SPEs as of the balance sheet dates.

Nonconsolidated VIEs

Automotive

VIEs that are not consolidated because we are not or Old GM was not the primary beneficiary primarily include: (1) troubled suppliers for which we provide or Old GM provided guarantees or financial support; (2) vehicle sales and marketing joint ventures that manufacture, market and sell vehicles and related services; (3) leasing entities for which residual value guarantees were made; (4) certain research entities for which annual ongoing funding requirements exist; and (5) Ally Financial.

Guarantees and financial support are provided to certain current or previously divested suppliers in order to ensure that supply needs for production are not disrupted due to a supplier's liquidity concerns or possible shutdowns. Types of financial support that we provide and Old GM provided include, but are not limited to: (1) funding in the form of a loan; (2) guarantees of the supplier's debt or credit facilities; (3) one-time payments to fund prior losses of the supplier; (4) indemnification agreements to fund the suppliers' future losses or obligations; (5) agreements to provide additional funding or liquidity to the supplier in the form of price increases or changes in payment terms; and (6) assisting the supplier in finding additional investors. The maximum exposure to loss related to these VIEs is not expected to be in excess of the amount of net accounts and notes receivable recorded with the suppliers and any related guarantees and loan commitments.

We have and Old GM had investments in joint ventures that manufacture, market and sell vehicles in certain markets. The majority of these joint ventures are typically self-funded and financed with no contractual terms that require us to provide future financial support. Future funding is required for HKJV, as subsequently discussed. The maximum exposure to loss is not expected to be in excess of the carrying amount of the investments recorded in Equity in net assets of nonconsolidated affiliates, and any related capital funding requirements.

The following table summarizes the amounts recorded for nonconsolidated VIEs and the related off-balance sheet guarantees and maximum exposure to loss, excluding Ally Financial that is disclosed in Note 32 (dollars in millions):

	Successor			
	December 31, 2010		December 31, 2009	
	Carrying Amount	Maximum Exposure to Loss (a)	Carrying Amount	Maximum Exposure to Loss (a)
Assets				
Accounts and notes receivable, net	$108	$108	$ 8	$ 8
Equity in net assets of nonconsolidated affiliates	274	274	96	50
Other assets	60	59	26	26
Total assets	$442	$441	$130	$ 84
Liabilities				
Accounts payable (principally trade)	$ 1	$ —	$ —	$ —
Other liabilities	44	—	—	—
Total liabilities	$ 45	$ —	$ —	$ —
Off-Balance Sheet				
Residual value guarantees		$ —		$ 32
Loan commitments (b)		100		115
Other guarantees		3		4
Other liquidity arrangements (c)		223		—
Total guarantees and liquidity arrangements		$326		$151

(a) Amounts at December 31, 2010 and 2009 included $148 million and $139 million related to troubled suppliers.

(b) Amounts at December 31, 2010 and 2009 include undrawn loan commitments, primarily $100 million related to American Axle and Manufacturing Holdings, Inc. (American Axle).

(c) Amounts at December 31, 2010 include capital funding requirements, primarily an additional contingent future funding requirement of up to $223 million related to HKJV.

Stated contractual voting or similar rights for certain of our joint venture arrangements provide various parties with shared power over the activities that most significantly affect the economic performance of certain nonconsolidated VIEs. Such nonconsolidated VIEs are operating joint ventures located in developing international markets.

American Axle

In September 2009 we paid $110 million to American Axle, a former subsidiary and current supplier, to settle and modify existing commercial arrangements and acquire warrants to purchase 4 million shares of American Axle's common stock. We also provided American Axle with a second lien term loan facility of up to $100 million. Additional warrants will be granted if amounts are drawn on the second lien term loan facility.

As a result of these transactions, we concluded that American Axle was a VIE for which we were not the primary beneficiary and we currently lack the power through voting or similar rights to direct those activities of American Axle that most significantly affect its economic performance. Our variable interests in American Axle include the warrants we received and the second lien term loan facility, which expose us to possible future losses depending on the financial performance of American Axle. At December 31, 2010 no amounts were outstanding under the second lien term loan facility. At December 31, 2010 our maximum contractual exposure to loss related to American Axle was $144 million, which represented the fair value of the warrants of $44 million and the potential exposure of $100 million related to the second lien term loan facility. In February 2011 we exercised the warrants and sold the shares and received proceeds of $48 million.

Ally Financial

We own 9.9% of Ally Financial's common stock and preferred stock with a liquidation preference of $1.0 billion. Ally Financial is a VIE as it does not have sufficient equity at risk; however, we are not the primary beneficiary and we currently lack the power through voting or similar rights to direct those activities of Ally Financial that most significantly affect its economic performance. Refer to Notes 11 and 32 for additional information on our investment in Ally Financial, our significant agreements with Ally Financial and our maximum exposure under those agreements.

Saab

Our primary variable interest in Saab is the preference shares that we received in connection with the sale, which have a face value of $326 million and were recorded at an estimated fair value that is insignificant. We concluded that Saab is a VIE as it does not have sufficient equity at risk. We also determined that we are not the primary beneficiary because we lack the power to direct those activities that most significantly affect its economic performance. We continue to be obligated to fund certain Saab related liabilities, primarily warranty obligations related to vehicles sold prior to the disposition of Saab. At December 31, 2010 our maximum exposure to loss related to Saab was $105 million. Refer to Note 5 for additional information on the sale of Saab.

HKJV

In December 2009 we established the HKJV operating joint venture to invest in automotive projects outside of China, initially focusing on markets in India. HKJV purchased GM India in February 2010. We determined that HKJV is a VIE because it will require additional subordinated financial support, and we determined that we are not the primary beneficiary because we share the power with SAIC-HK to direct those activities that most significantly affect HKJV's economic performance. Refer to Note 5 for additional information on HKJV.

Note 18. Accrued Liabilities, Other Liabilities and Deferred Income Taxes

Automotive

The following table summarizes the components of Accrued liabilities, other liabilities and deferred income taxes:

	Successor	
	December 31, 2010	December 31, 2009
Current

Ending balance	6,789	7,030	7,542	8,491
Effect of application of fresh-start reporting	—	—	(349)	—
Ending balance including effect of application of fresh-start reporting	$ 6,789	$ 7,030	$ 7,193	$ 8,491

(a) In August 2009 Saab met the criteria to be classified as held for sale and, as a result, Saab's warranty liability was classified as held for sale at December 31, 2009.

Note 19. Short-Term and Long-Term Debt

Automotive

The following table summarizes the components of automotive short-term debt and current portion of long-term debt (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
UST Loans	$ —	$ 5,712
Canadian Loan	—	1,233
GM Daewoo Revolving Credit Facility	—	1,179
Short-term debt — third parties	80	296
Short-term debt— related parties (a)	1,043	1,077
Current portion of long-term debt	493	724
Total automotive short-term debt and current portion of long-term debt	$ 1,616	$ 10,221
Available under short-term line of credit agreements (b)	$ 445	$ 220
Interest rate range on outstanding short-term debt (c)	0.0 –16.7%	0.0 –19.0%
Weighted-average interest rate on outstanding short-term debt (d)	5.7%	6.5%

(a) Primarily dealer financing from Ally Financial for dealerships we consolidate.

(b) Commitment fees are paid on credit facilities at rates negotiated in each agreement. Amounts paid and expensed for these commitment fees during the years ended December 31, 2010 and 2009 were insignificant.

(c) Includes zero coupon debt.

(d) Includes coupon rates on debt denominated in various foreign currencies.

The following table summarizes the components of automotive long-term debt (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
VEBA Notes	$ —	$2,825
Other long-term debt	3,507	3,461
Total debt	3,507	6,286
Less current portion of long-term debt	(493)	(724)
Total automotive long-term debt	$3,014	$5,562
Available under long-term line of credit agreements (a)	$5,474	$ 398

(a) Commitment fees are paid on credit facilities at rates negotiated in each agreement. Amounts paid and expensed for these commitment fees during the years ended December 31, 2010 and 2009 were insignificant.

Automotive Financing

The following table summarizes the components of GM Financial debt (dollars in millions):

	Successor
	December 31, 2010
Credit facilities	
Medium-term note facility	$ 490
Syndicated warehouse facility	278
Bank funding facilities	64
Total credit facilities	832
Securitization notes payable	6,128
Senior notes and convertible senior notes (a)	72
Total GM Financial debt	$7,032

(a) Senior notes and convertible senior notes are included in GM Financial Other liabilities.

Automotive

Secured Revolving Credit Facility

In October 2010 we entered into a five year, $5.0 billion secured revolving credit facility, which includes a letter of credit sub-facility of up to $500 million. While we do not believe that we will draw on the secured revolving credit facility to fund operating activities, the facility is expected to provide additional liquidity and financing flexibility. Availability under the secured revolving credit facility is subject to borrowing base restrictions.

Our obligations under the secured revolving credit facility are guaranteed by certain of our domestic subsidiaries and by substantially all of our domestic assets, including accounts receivable, inventory, property, plants, and equipment, real estate, intercompany loans, intellectual property, trademarks and direct investments in Ally Financial. Obligations are also secured by the equity interests in certain of our direct domestic subsidiaries, as well as up to 65% of the voting equity interests in certain of our direct foreign subsidiaries, in each case, subject to certain exceptions. The collateral securing the secured revolving credit facility does not include, among other assets, cash, cash equivalents, marketable securities, as well as our investment in GM Financial, our investment in New Delphi and our equity interests in our China JVs and in GM Daewoo.

Depending on certain terms and conditions in the secured revolving credit facility, including compliance with the borrowing base requirements and certain other covenants, we will be able to add one or more *pari passu* first lien loan facilities. We will also have the ability to secure up to $2.0 billion of certain non-loan obligations that we may designate from time to time as additional *pari passu* first lien obligations. Second-lien debt is generally allowed but second lien debt maturing prior to the final maturity date of the secured revolving credit facility is limited to $3.0 billion in outstanding obligations.

Interest rates on obligations under the secured revolving credit facility are based on prevailing per annum interest rates for Eurodollar loans or an alternative base rate plus an applicable margin, in each case, based upon the credit rating assigned to the debt evidenced by the secured revolving credit facility.

The secured revolving credit facility contains representations, warranties and covenants customary for facilities of this nature, including negative covenants restricting us and our subsidiary guarantors from incurring liens, consummating mergers or sales of assets and incurring secured indebtedness, and restricting us from making restricted payments, in each case, subject to exceptions and limitations. The secured revolving credit facility contains minimum liquidity covenants, which require us to maintain at least $4.0 billion in consolidated global liquidity and at least $2.0 billion in consolidated U.S. liquidity.

Events of default under the secured revolving credit facility include events of default customary for facilities of this nature (including customary notice and/or grace periods, as applicable) such as:

- The failure to pay principal at the stated maturity, interest or any other amounts owed under the secured revolving credit agreement or related documents;
- The failure of certain of our representations or warranties to be correct in all material respects;
- The failure to perform any term, covenant or agreement in the secured revolving credit agreement or related documents;
- The existence of certain judgments that are not vacated, discharged, stayed or bonded;
- Certain cross defaults or cross accelerations with certain other debt;
- Certain defaults under the Employee Retirement Income Security Act of 1974, as amended (ERISA);
- A change of control;
- Certain bankruptcy events; and
- The invalidation of the guarantees.

While the occurrence and continuance of an event of default will restrict our ability to borrow under the secured revolving credit facility, the lenders will not be permitted to exercise rights or remedies against the collateral unless the obligations under the secured revolving credit facility have been accelerated.

We incurred up-front fees, arrangement fees, and will incur ongoing commitment and other fees customary for a facility of this nature.

UST Loans and UST Loan Agreement

Old GM received total proceeds of $19.8 billion ($15.8 billion subsequent to January 1, 2009, including $361 million under the U.S. government sponsored warranty program) from the UST under the UST Loan Agreement entered into on December 31, 2008. In connection with the Chapter 11 Proceedings, Old GM obtained additional funding of $33.3 billion from the UST and EDC under its DIP Facility. From these proceeds, there was no deposit remaining in escrow at December 31, 2010.

On July 10, 2009 we entered into the UST Credit Agreement and assumed debt of $7.1 billion maturing on July 10, 2015 which Old GM incurred under its DIP Facility. Immediately after entering into the UST Credit Agreement, we made a partial repayment due to the termination of the U.S. government sponsored warranty program, reducing the UST Loans principal balance to $6.7 billion. In

March 2010 and December 2009 we made quarterly payments of $1.0 billion on the UST Loans. In April 2010 we repaid the full outstanding amount of $4.7 billion using funds from our escrow account.

While we have repaid the UST Loans in full, certain of the covenants in the UST Credit Agreement and the executive compensation and corporate governance provisions of Section 111 of the Emergency Stabilization Act of 2008, as amended, including the Interim Final Rule implementing Section 111 (the Interim Final Rule), remain in effect until the earlier to occur of the UST ceasing to own direct or indirect equity interests in us or our ceasing to be a recipient of Exceptional Financial Assistance, as determined pursuant to the Interim Final Rule, and impose obligations on us with respect to, among other things, certain expense policies, executive privileges and compensation requirements.

The following table summarizes interest expense and interest paid on the UST Loans, the loans under the UST Loan Agreement (UST Loan Facility) and the DIP Facility (dollars in millions):

	Successor		Predecessor
	Year Ended December 31, 2010 (a)	July 10, 2009 Through December 31, 2009 (a)	January 1, 2009 Through July 9, 2009 (b)
Interest expense	$117	$226	$4,006
Interest paid	$206	$137	$ 144

(a) UST Loans.

(b) UST Loan Facility and the DIP Facility.

VEBA Notes

In connection with the 363 Sale, we entered into the VEBA Note Agreement and issued VEBA Notes of $2.5 billion to the New VEBA. The VEBA Notes had an implied interest rate of 9.0% per annum. The VEBA Notes and accrued interest were contractually scheduled to be repaid in three equal installments of $1.4 billion on July 15 of 2013, 2015 and 2017.

The obligations under the VEBA Note Agreement were secured by substantially all of our U.S. assets, subject to certain exceptions, including our equity interests in certain of our foreign subsidiaries, limited in most cases to 65% of the equity interests of the pledged foreign subsidiaries due to tax considerations.

In October 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion, which resulted in a gain of $198 million included in Gain (loss) on extinguishment of debt.

The following table summarizes interest expense on the VEBA Notes (dollars in millions):

	Successor
	Year Ended December 31, 2010
Interest expense	$166

Canadian Loan Agreement and EDC Loan Facility

On July 10, 2009 we entered into the Canadian Loan Agreement and assumed a CAD $1.5 billion (equivalent to $1.3 billion when entered into) term loan maturing on July 10, 2015. In March 2010 and December 2009 we made quarterly payments of $194 million and $192 million on the Canadian Loan. In April 2010 GMCL repaid in full the outstanding amount of the Canadian Loan of $1.1 billion.

The following table summarizes interest expense and interest paid on the Canadian Loan and the EDC Loan Facility (dollars in millions):

	Successor		Predecessor
	Year Ended December 31, 2010 (a)	July 10, 2009 Through December 31, 2009 (a)	January 1, 2009 Through July 9, 2009 (b)
Interest expense	$26	$46	$173
Interest paid	$26	$46	$ 6

(a) Canadian Loan.

(b) EDC Loan Facility.

GM Daewoo Revolving Credit Facility

GM Daewoo's revolving credit facility was a Korean Won denominated facility secured by substantially all of GM Daewoo's property, plants, and equipment. Amounts borrowed under this facility accrued interest based on the Korean Won denominated 91-day certificate of deposit rate. The facility was used by GM Daewoo for general corporate purposes, including working capital needs. During 2010 GM Daewoo repaid in full its KRW 1.4 trillion (equivalent of $1.2 billion at the time of payment) revolving credit facility.

German Revolving Bridge Facility

In May 2009 Old GM entered into a revolving bridge facility with the German government and certain German states (German Facility) with a total commitment of up to Euro 1.5 billion (equivalent to $2.1 billion when entered into). In November 2009 the debt was paid in full and extinguished.

The following table summarizes interest expense and interest paid on the German Facility, including amortization of related discounts (dollars in millions):

	Successor	Predecessor
	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Interest expense	$32	$ 5
Interest paid	$37	$—

Other Long-Term Debt

	Successor	
	December 31, 2010	December 31, 2009
Unsecured debt	$1,985	$1,228
Secured debt	868	1,540
Capital leases	654	693
Total other long-term debt (a)	$3,507	$3,461
Weighted-average coupon rate	2.7%	5.8%

(a) Net of a $1.9 billion and $1.6 billion discount at December 31, 2010 and 2009.

Technical Defaults and Covenant Violations

Several of our loan facilities require compliance with certain financial and operational covenants as well as regular reporting to lenders, including providing certain subsidiary financial statements. Failure to meet certain of these requirements may result in a covenant violation or an event of default depending on the terms of the agreement. An event of default may allow lenders to declare amounts outstanding under these agreements immediately due and payable, to enforce their interests against collateral pledged under these agreements or restrict our ability to obtain additional borrowings. No technical defaults or covenant violations existed at December 31, 2010.

Automotive Financing

Credit Facilities

The following table summarizes details regarding terms and availability of GM Financial's credit facilities at December 31, 2010 (in millions):

	Facility Amount	Advances Outstanding	Finance Receivables Pledged	Restricted Cash Pledged (a)
Syndicated warehouse facility (b)	$1,300	$278	$409	$ 8
Medium-term note facility (c)		490	539	95
Bank funding facilities (d)		64	—	—
		$832	$948	$103

(a) These amounts do not include cash collected on finance receivables pledged of $28 million which is included in GM Financial Restricted cash at December 31, 2010.

(b) In February 2011 GM Financial extended the maturity date of the syndicated warehouse facility to May 2012 and increased the borrowing capacity to $2.0 billion from $1.3 billion.

(c) The revolving period under this facility has ended and the outstanding debt balance will be repaid over time based on the amortization of the receivables pledged until October 2016 when any remaining amount outstanding will be due and payable.

(d) The revolving period under this facility has ended and the outstanding balance under the bank funding facilities are secured by asset-backed securities of $65 million.

GM Financial's credit facilities are administered by agents on behalf of institutionally managed commercial paper or medium-term note conduits. Under these funding agreements, GM Financial transfers finance receivables to its special purpose financing trusts. These subsidiaries, in turn, issue notes to the agents, collateralized by such finance receivables and cash. The agents provide funding under the notes to the subsidiaries pursuant to an advance formula, and the subsidiaries forward the funds to GM Financial in consideration for the transfer of finance receivables. These subsidiaries are separate legal entities and the finance receivables and other assets held by these subsidiaries are legally owned by these subsidiaries and are not available to GM Financial's creditors or their other subsidiaries. Advances under the funding agreements bear interest at commercial paper, London Interbank Offered Rates (LIBOR) or prime rates plus a credit spread and specified fees depending upon the source of funds provided by the agents.

Credit Facility Covenants

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under certain of its credit facilities. The credit facilities contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios including portfolio net loss and delinquency ratios, and pool level cumulative net loss ratios, as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements, the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements or restrict GM Financial's ability to obtain additional borrowings under this facility. At December 31, 2010 GM Financial was in compliance with all covenants in its credit facilities. Refer to Note 15 for additional discussion on GM Financial's restricted cash.

Securitization Notes Payable

Securitization notes payable represents debt issued by GM Financial in securitization transactions. Debt issuance costs are amortized over the expected term of the securitizations on an effective yield basis. As a result of the acquisition, GM Financial recorded a purchase price premium of $133 million that is being amortized over the expected term of the notes. At December 31, 2010 unamortized purchase price premium of $107 million is included in Securitization notes payable.

The following table summarizes securitization notes payable at December 31, 2010 (dollars in millions):

Transaction	Maturity Dates (a)	Original Note Amounts	Original Weighted Average Interest Rates	Total Receivables Pledged	Note Balance
2006	May 2013 – January 2014	$ 945 -1,350	5.2% - 5.6%	$ 600	$ 537
2007	October 2013 – March 2016	$1,000 -1,500	5.2% - 5.5%	1,715	1,610
2008 (b)	October 2014 – April 2015	$ 500 - 750	6.0% -10.5%	911	501
2009	January 2016 – July 2017	$ 227 - 725	2.7% - 7.5%	715	494
2010	June 2016 – January 2018	$ 200 - 850	2.2% - 3.8%	3,014	2,683
BV2005 (c)	May 2012 – June 2014	$ 186 - 232	4.6% - 5.1%	27	28
LB2006 (c)	May 2013 – January 2014	$ 450 - 500	5.0% - 5.4%	174	168
				$7,156	$6,021
Purchase accounting premium					107
Total securitization notes payable					$6,128

(a) Maturity date represents final legal maturity of securitization notes payable. Securitization notes payable are expected to be paid based on amortization of the finance receivables pledged to the trusts.

(b) Note balance does not include asset-backed securities of $65 million pledged to the bank funding facilities.

(c) Transactions relate to certain special purpose financing trusts acquired by GM Financial.

At the time of securitization of finance receivables, GM Financial is required to pledge assets equal to a specified percentage of the securitization pool to support the securitization transaction. The assets pledged consist of cash deposited to a restricted account and additional receivables delivered to the trust, which create overcollateralization. The securitization transactions require the percentage of assets pledged to support the transaction to increase until a specified level is attained. Excess cash flows generated by the trusts are added to the restricted cash account or used to pay down outstanding debt in the trusts, creating overcollateralization until the targeted percentage level of assets has been reached. Once the targeted percentage level of assets is reached and maintained, excess cash flows generated by the trusts are released to GM Financial as distributions from trusts. As the balance of the securitization pool declines, the amount of pledged assets needed to maintain the required percentage level is reduced. Assets in excess of the required percentage are also released to GM Financial as distributions from trusts.

Securitization Notes Payable Covenants

With respect to GM Financial's securitization transactions covered by a financial guaranty insurance policy, agreements with the insurers provide that if portfolio performance ratios (delinquency, cumulative default or cumulative net loss) in a trust's pool of receivables exceed certain targets, the specified credit enhancement levels would be increased.

Agreements with GM Financial's financial guaranty insurance providers contain additional specified targeted portfolio performance ratios that are higher than those described in the preceding paragraph. If, at any measurement date, the targeted portfolio performance ratios with respect to any insured trust were to exceed these higher levels, provisions of the agreements permit GM Financial's financial guaranty insurance providers to declare the occurrence of an event of default and terminate GM Financial's servicing rights to the receivables transferred to that trust. At December 31, 2010 no such servicing right termination events have occurred with respect to any of the trusts formed by GM Financial.

Senior Notes and Convertible Senior Notes

As a result of the acquisition of AmeriCredit, the holders of the senior notes and the convertible senior notes had the right to require GM Financial to repurchase some or all of their notes as provided in the indentures for such notes. The repurchase dates for any notes tendered to GM Financial pursuant to procedures previously delivered to holders of senior notes and convertible senior notes were December 3, 2010 with respect to the senior notes, and December 10, 2010 with respect to the convertible senior notes. The repurchase price with respect to the senior notes is 101% of the principal amount of the notes plus accrued interest, and the repurchase price with respect to the convertible senior notes is the principal amount of the notes plus accrued interest. Pursuant to the terms of the convertible senior notes indentures a payment of $0.69 per $1,000 of principal amount of the convertible senior notes due in 2011 and $0.81 per $1,000 of principal amount of the convertible senior notes due in 2013 was made to those who elected to convert as a result of the acquisition. During the three months ended December 31, 2010 GM Financial repurchased convertible senior notes of $461 million and senior notes of $2 million.

Long-Term Debt Maturities

Consolidated

The following table summarizes long-term debt maturities including capital leases (dollars in millions):

	At December 31,		
	Automotive	Automotive Financing (a)	Total
2011	$ 493	$3,495	$ 3,988
2012	752	1,998	2,750
2013	400	660	1,060
2014	132	423	555
2015	128	343	471
Thereafter	3,506	—	3,506
	$5,411	$6,919	$12,330

(a) GM Financial credit facilities and securitization notes payable are based on expected payoff date. Senior notes and convertible senior notes principal amounts are based on maturity.

At December 31, 2010 future interest payments on automotive capital lease obligations was $564 million. GM Financial does not have capital lease obligations at December 31, 2010.

Old GM

Secured Revolving Credit Facility, U.S. Term Loan and Secured Credit Facility

In March 2009 Old GM entered into an agreement to amend its $1.5 billion U.S. term loan. Because the terms of the amended U.S. term loan were substantially different than the original terms, primarily due to the revised borrowing rate, Old GM accounted for the amendment as a debt extinguishment. As a result, Old GM recorded the amended U.S. term loan at fair value and recorded a gain on the extinguishment of the original loan facility of $906 million in the period January 1, 2009 through July 9, 2009.

In connection with the Chapter 11 Proceedings, Old GM's $4.5 billion secured revolving credit facility, $1.5 billion U.S. term loan and $125 million secured credit facility were paid in full on June 30, 2009. Old GM recorded a loss of $958 million in Reorganization gains, net related to the extinguishments of the debt primarily due to the face value of the U.S. term loan exceeding the carrying amount.

Contractual interest expense not accrued or recorded on pre-petition debt was $200 million in the period January 1, 2009 through July 9, 2009 (includes contractual interest expense related to contingent convertible debt of $44 million).

Contingent Convertible Debt

Old GM adopted the provisions of ASC 470-20, "Debt with Conversion and Other Options" (ASC 470-20) in January 2009, with retrospective application to prior periods. At July 9, 2009 Old GM's contingent convertible debt outstanding was $7.4 billion, comprised of principal of $7.9 billion and unamortized discounts of $551 million. Upon adoption of ASC 470-20, the effective interest rate on Old GM's outstanding contingent convertible debt ranged from 7.0% to 7.9%. In connection with the 363 Sale, MLC retained the contingent convertible debt.

The following table summarizes the components of Interest expense related to contingent convertible debt (dollars in millions):

	Predecessor	
	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Interest accrued or paid (a)	$176	$427
Amortization of discounts	51	136
Interest expense	$227	$563

(a) Contractual interest expense not accrued or recorded on pre-petition debt as a result of the Chapter 11 Proceedings totaled $44 million in the period January 1, 2009 through July 9, 2009.

Note 20. Pensions and Other Postretirement Benefits

Consolidated

Employee Pension and Other Postretirement Benefit Plans

Defined Benefit Pension Plans

Defined benefit pension plans covering eligible U.S. hourly employees (hired prior to October 15, 2007) and Canadian hourly employees generally provide benefits of negotiated, stated amounts for each year of service and supplemental benefits for employees who retire with 30 years of service before normal retirement age. Non-skilled trades hourly U.S. employees hired after October 15, 2007 participate in a defined benefit cash balance plan. In September 2010 the U.S. hourly defined benefit pension plan was amended to create a legally separate new defined benefit pension plan for the participants who are covered by the cash balance benefit formula. The underlying benefits offered to plan participants were unchanged. The benefits provided by the defined benefit pension plans covering eligible U.S. (hired prior to January 1, 2001) and Canadian salaried employees and employees in certain other non-U.S. locations are generally based on years of service and compensation history. There is also an unfunded nonqualified pension plan covering certain U.S. executives for service prior to January 1, 2007, and it is based on an "excess plan" for service after that date.

Defined Contribution Plans

The Savings-Stock Purchase Plan (S-SPP) is a defined contribution retirement savings plan for eligible U.S. salaried employees. The S-SPP provides discretionary matching contributions up to certain predefined limits based upon eligible base salary. The matching contribution for the S-SPP was suspended by Old GM in November 2008, and we reinstated the matching contribution for the S-SPP in October 2009. The contribution equal to 1.0% of eligible base salary for U.S. salaried employees with a service commencement date on or after January 1, 1993 was discontinued effective on January 1, 2010. For eligible U.S. salaried employees with a service commencement date on or after January 1, 2001 a retirement contribution to the S-SPP equal to 4.0% of eligible base salary is provided. Contributions are also made to certain non-U.S. defined contribution plans. Certain U.S. hourly employees are not eligible for postretirement healthcare. Such employees receive a $1.00 per compensated hour contribution into their Personal Saving Plan account.

The following table summarizes contributions to defined contribution plans (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Total contributions	$241	$100	$70	$297

Other Postretirement Benefit Plans

Certain hourly and salaried defined benefit plans provide postretirement medical, dental, legal service and life insurance to eligible U.S. and Canadian retirees and their eligible dependents. Certain other non-U.S. subsidiaries have postretirement benefit plans, although most non-U.S. employees are covered by government sponsored or administered programs.

Significant Plan Amendments, Benefit Modifications and Related Events

Remeasurements

Significant interim remeasurements are included in the change in benefit obligation for the year ended December 31, 2010. There were no significant remeasurements, curtailments or settlements as a result of changes to the underlying benefits offered to the plan participants.

Patient Protection and Affordable Care Act

The Patient Protection and Affordable Care Act was signed into law in March 2010 and contains provisions that require all future reimbursement receipts under the Medicare Part D retiree drug subsidy program to be included in taxable income. This taxable income inclusion will not significantly affect us because effective January 1, 2010 we no longer provide prescription drug coverage to post-age 65 Medicare-eligible participants and we have a full valuation allowance against our net deferred tax assets in the U.S. We have assessed the other provisions of this new law, based on information known at this time and we have included the effect, which is not significant, in our benefit obligations at December 31, 2010.

Expected Contributions

In January 2011 we completed the previously announced voluntary contribution of 61 million shares of our common stock to our U.S. hourly and salaried pension plans, valued at approximately $2.2 billion for funding purposes. This was a voluntary contribution that is above our minimum funding requirements of the pension plans. The contributed shares qualify as a plan asset for funding purposes immediately, and will qualify as a plan asset for accounting purposes when certain transfer restrictions are removed, which is expected in 2011. We are evaluating whether we will make additional voluntary contributions to our U.S. pension plans in 2011. We expect to contribute $95 million to our U.S. non-qualified pension plans and $740 million to our non-U.S. pension plans in 2011.

The following tables summarize the significant defined benefit plan interim remeasurements, the related changes in accumulated postretirement benefit obligations (APBO), projected benefit obligations (PBO) and the associated curtailments, settlements and termination benefits recorded in our earnings in the period July 10, 2009 through December 31, 2009 and the period January 1, 2009 through July 9, 2009, which are subsequently discussed (dollars in millions):

		Successor					
		July 10, 2009 Through December 31, 2009					
		Change in Discount Rate		Increase (Decrease) Since the Most Recent Remeasurement Date (a)	Gain (Loss)		
Event and Remeasurement Date When Applicable	Affected Plans	From	To	PBO/APBO	Curtailments	Settlements	Termination Benefits and Other
2009 Special Attrition Programs (b)	U.S. hourly defined benefit pension plan	—	—	$ 58	$—	$ —	$ (58)
Global salaried workforce reductions (b)	U.S. salaried defined benefit pension plan	—	—	175	—	—	(175)
2009 UAW Retiree Settlement Agreement — December	UAW hourly retiree medical plan	—	—	(22,654)	—	(2,571)	—
IUE-CWA and USW Settlement Agreement — November (c)	U.S. hourly defined benefit pension plan	5.58%	5.26%	1,897	—	—	—
	Non-UAW hourly retiree healthcare plan	6.21%	5.00%	360	—	—	—
	U.S. hourly life plan	5.41%	5.56%	53	—	—	—
Delphi Benefit Guarantee Agreements — August (c)	U.S. hourly defined benefit pension plan	5.83%	5.58%	2,548	—	—	—
Total				$(17,563)	$—	$(2,571)	$(233)

(a) The increase (decrease) includes effect of the event, gain or loss from remeasurement, net periodic benefit cost and benefit payments. Excludes effect of asset returns that are higher or lower than expected.

(b) Reflects the effect on PBO. There was no remeasurement.

(c) Includes reclassification of contingent liability to benefit plan obligation.

		Predecessor					
		January 1, 2009 Through July 9, 2009					
		Change in Discount Rate		Increase (Decrease) Since the Most Recent Remeasurement Date (a)	Gain (Loss)		
Event and Remeasurement Date When Applicable	Affected Plans	From	To	PBO/APBO	Curtailments	Settlements	Termination Benefits and Other
2009 Special Attrition Programs — June	U.S. hourly defined benefit pension plan	6.15%	6.25%	$ 7	$(1,390)	$—	$(12)
Global salaried workforce reductions — June	U.S. salaried defined benefit pension plan			24	(327)	—	—
U.S. salaried benefits changes — February	U.S. salaried retiree life insurance plan	7.25%	7.15%	(420)	—	—	—
U.S. salaried benefits changes — June	U.S. salaried retiree healthcare program			(265)	—	—	—
2009 CAW Agreement — June	Canadian hourly defined benefit pension plan	6.75%	5.65%	340	—	—	(26)
2009 CAW Agreement — June	CAW hourly retiree healthcare plan and CAW retiree life plan	7.00%	5.80%	(143)	93	—	—
Total				$(457)	$(1,624)	$—	$(38)

(a) The increase (decrease) includes effect of the event, gain or loss from remeasurement, net periodic benefit cost, benefit payments and effect of foreign currency translation. Excludes effect of asset returns that are higher or lower than expected.

During 2009 we and Old GM implemented various programs which reduced the hourly and salary workforce. Significant workforce reductions, settlements of pre-bankruptcy claims with various represented employee groups and plan amendments resulted in plan remeasurements as follows:

- Special attrition programs resulted in a reduction in the hourly workforce;
- Global salaried workforce actions reduced employment;
- The Delphi Benefit Guarantee Agreements were affected by the settlement of the PBGC claims from the termination of the hourly Delphi pension plan. We maintained the obligation to provide the difference between the pension benefits paid by the PBGC and those originally guaranteed by Old GM under the Delphi Benefit Guarantee Agreements; and
- U.S. salaried benefit changes reduced the salaried life benefits and a negative amendment to the U.S. salaried retiree healthcare program reduced coverage and increased cost sharing.

2009 UAW Retiree Settlement Agreement

In 2009 we and the UAW agreed to a 2009 UAW Retiree Settlement Agreement which permanently shifted responsibility for providing retiree healthcare to the new plan funded by the New VEBA. Under the terms of the settlement agreement, we are released from UAW retiree healthcare claims incurred after December 31, 2009. All obligations of ours and any other entity or benefit plan of ours for retiree medical benefits for the class and the covered group arising from any agreement between us and the UAW terminated at December 31, 2009. Our obligations to the new healthcare plan and the New VEBA are limited to the terms of the settlement agreement.

At December 31, 2009 we accounted for the termination of our UAW hourly retiree medical plan and Mitigation Plan as a settlement. The resulting settlement loss of $2.6 billion recorded on December 31, 2009 represented the difference between the sum of the accrued OPEB liability of $10.6 billion and the existing internal VEBA assets of $12.6 billion, and $25.8 billion representing the fair value of the consideration transferred on December 31, 2009, including the contribution of the existing internal VEBA assets. Upon the settlement of the UAW hourly retiree medical plan at December 31, 2009 the VEBA Notes, Series A Preferred Stock, common stock, and warrants contributed to the New VEBA were recorded at fair value and classified as outstanding debt and equity instruments.

Prior to December 31, 2009 the 260 million shares of Series A Preferred Stock issued to the New VEBA were not considered outstanding for accounting purposes due to the terms of the settlement agreement with the UAW. As a result, $105 million of the $146 million of dividends paid on September 15, 2009 and $147 million of the $203 million of dividends paid on December 15, 2009 were recorded as employer contributions resulting in a reduction of Postretirement benefits other than pensions.

IUE-CWA and USW Settlement Agreement

In September 2009 we entered into a settlement agreement with MLC, The International Union of Electronic, Electrical, Salaried, Machine and Furniture Workers — Communication Workers of America (IUE-CWA) and United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union (USW). The approved settlement agreement resulted in remeasurements of the U.S. hourly defined benefit pension plan, the non-UAW hourly retiree healthcare plan and the U.S. hourly life plan to reflect the terms of the agreement. The settlement agreement was expressly conditioned upon and did not become effective until approved by the Bankruptcy Court in MLC's Chapter 11 proceedings, which occurred in November 2009. Several additional unions representing MLC hourly retirees joined the IUE-CWA and USW settlement agreement with respect to healthcare and life insurance. The remeasurement of these plans resulted in a decrease in a contingent liability accrual and an offsetting increase in the PBO or APBO of the benefit plan.

2009 CAW Agreement

In March 2009 Old GM announced that the members of the CAW had ratified an agreement intended to reduce costs in Canada through introducing co-payments for healthcare benefits, increasing employee healthcare cost sharing, freezing pension benefits and eliminating cost of living adjustments to pensions for retired hourly workers. The 2009 CAW Agreement was conditioned on Old GM receiving longer term financial support from the Canadian and Ontario governments and those governments agreed to the terms of a loan agreement, approved the GMCL viability plan and provided funding to GMCL. The Canadian hourly defined benefit pension plan was remeasured in June 2009.

The CAW hourly retiree healthcare plan and the CAW retiree life plan were also remeasured in June 2009. Additionally, as a result of the termination of employees from the former Oshawa, Ontario truck facility, GMCL recorded a curtailment gain associated with the CAW hourly retiree healthcare plan.

In June 2009 GMCL and the CAW agreed to the terms of an independent HCT to provide retiree healthcare benefits to certain active and retired employees and it will be implemented when certain preconditions are achieved. Certain of the preconditions have not been achieved and the HCT is not yet implemented at December 31, 2010. GMCL is obligated to make a payment of CAD $1.0 billion on the HCT implementation date which it will fund out of its CAD $1.0 billion escrow funds, adjusted for the net difference between the amount of retiree monthly contributions received during the period January 1, 2010 through the HCT implementation date less the cost of benefits paid for claims incurred by covered employees during this period. GMCL will provide a CAD $800 million note payable to the HCT on the HCT implementation date which will accrue interest at an annual rate of 7.0% with five equal annual installments of CAD $256 million due December 31 of 2014 through 2018. Concurrent with the implementation of the HCT,

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

GMCL will be legally released from all obligations associated with the cost of providing retiree healthcare benefits to CAW active and retired employees bound by the class action process, and we will account for the related termination of CAW hourly retiree healthcare benefits as a settlement, based upon the difference between the fair value of the notes and cash contributed and the healthcare plan obligation at the settlement date. As a result of the conditions precedent to this agreement not having yet been achieved, there was no accounting recognition for the healthcare trust at December 31, 2010.

The following tables summarize the change in benefit obligations and related plan assets (dollars in millions):

	Successor			
	Year Ended December 31, 2010

In the year ended December 31, 2010 we experienced actual return on plan assets on our U.S. pension plan assets of $11.6 billion compared to expected returns of $6.6 billion that were recognized as a component of our net pension expense. As a result of the U.S. hourly defined benefit pension plan interim remeasurement, a portion of the effect of the actual plan asset gains was recognized in the market-related value of plan assets during the remainder of the period subsequent to the interim remeasurement. The market related value of plan assets used in the calculation of expected return on pension plan assets at December 31, 2010 is $4.1 billion lower than the actual fair value of plan assets for U.S. pension plans and $319 million lower than the actual fair value of plan assets for non-U.S. pension plans. Therefore, the effect of the improvement in the financial markets will not be fully reflected in net pension expense in the year ending December 31, 2011. Refer to Note 4 for additional information on our use of the market-related value of plan assets accounting policy.

The following table summarizes the total accumulated benefit obligations (ABO), the fair value of plan assets for defined benefit pension plans with ABO in excess of plan assets, and the PBO and fair value of plan assets for defined benefit pension plans with PBO in excess of plan assets (dollars in millions):

	Successor			
	December 31, 2010		December 31, 2009	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
ABO	$103,110	$24,371	$101,397	$23,615
Plans with ABO in excess of plan assets				
ABO	$103,090	$23,519	$101,397	$22,708
Fair value of plan assets	$ 90,983	$13,959	$ 84,500	$12,721
Plans with PBO in excess of plan assets				
PBO	$103,375	$24,350	$101,571	$23,453
Fair value of plan assets	$ 90,983	$14,419	$ 84,500	$13,008

The following tables summarize the components of net periodic pension and OPEB expense along with the assumptions used to determine benefit obligations (dollars in millions):

Assumptions

Healthcare Trend Rate

As a result of modifications made to healthcare plans in connection with the 363 Sale, there are no significant uncapped U.S. healthcare plans remaining, therefore, the healthcare cost trend rate does not have a significant effect on our U.S. plans.

	Successor	
	December 31, 2010	December 31, 2009
Assumed Healthcare Trend Rates	Non-U.S. Plans(a)	Non-U.S. Plans
Initial healthcare cost trend rate	5.6%	5.4%
Ultimate healthcare cost trend rate	3.4%	3.3%
Number of years to ultimate trend rate	8	8

(a) The implementation of the HCT in Canada is anticipated and will significantly reduce our exposure to changes in the healthcare cost trend rate.

Healthcare trend rate assumptions are determined for inclusion in healthcare OPEB valuation at each remeasurement. The healthcare trend rates are developed using historical cash expenditures and near-term outlook for retiree healthcare. This information is supplemented with information gathered from actuarial based models, information obtained from healthcare providers and known significant events.

The following table summarizes the effect of a one-percentage point change in the assumed healthcare trend rates (dollars in millions):

	Successor	
	Non-U.S. Plans (a)	
Change in Assumption	Effect on 2011 Aggregate Service and Interest Cost	Effect on December 31, 2010 APBO
One percentage point increase	+$31	+$491
One percentage point decrease	-$25	-$392

(a) The implementation of the HCT in Canada is anticipated and will significantly reduce our exposure to changes in the healthcare cost trend rate.

Investment Strategies and Long-Term Rate of Return

Detailed periodic studies conducted by outside actuaries and an internal asset management group, consisting of an analysis of capital market assumptions and employing Monte-Carlo simulations, are used to determine the long-term strategic mix among asset classes, risk mitigation strategies, and the expected return on asset assumptions for U.S. pension plans. The U.S. study includes a review of alternative asset allocation and risk mitigation strategies, anticipated future long-term performance of individual asset classes, risks evaluated using standard deviation techniques and correlations among the asset classes that comprise the plans' asset mix. Similar studies are performed for the significant non-U.S. pension plans with the assistance of outside actuaries and asset managers. While the studies incorporate data from recent fund performance and historical returns, the expected return on plan asset assumptions are determined based on long-term, prospective rates of return.

The strategic asset mix and risk mitigation strategies for the U.S. and non-U.S. pension plans are tailored specifically for each plan. Individual plans have distinct liabilities, liquidity needs, and regulatory requirements. Consequently, there are different investment policies set by individual plan fiduciaries. Although investment policies and risk mitigation strategies may differ among certain U.S. and non-U.S. pension plans, each investment strategy is considered to be optimal in the context of the specific factors affecting each plan.

In setting a new strategic asset mix, consideration is given to the likelihood that the selected mix will effectively fund the projected pension plan liabilities, while aligning with the risk tolerance of the plans' fiduciaries. The strategic asset mix for U.S. defined benefit pension plans is intended to reduce exposure to equity market risks, to utilize asset classes which reduce volatility and to utilize asset classes where active management has historically generated above market returns.

In December 2010 an analysis of the investment policy was completed for the U.S. pension plans which reduced the expected return on assets to 8.0% from 8.5% at December 31, 2009. The decrease in expected return on assets is primarily related to lower bond yields and updated assumptions for equities and equity-like asset classes. This analysis included a study of capital market assumptions and the selection of a policy portfolio that is optimal in the context of the plans' fiduciaries objectives. The selected portfolio is composed of a number of asset classes with favorable return characteristics including: a significant allocation to debt securities with credit exposure, some of which have expected returns that are similar to that of equities, significant exposures to private market securities (equity, debt, and real estate) and absolute return strategies (i.e., hedge fund strategies with low exposure to market risks). The expected long-term rate of return assumption is enhanced by these diversified strategies and is consistent with the long-term historical return for the U.S. plans.

The expected return on plan asset assumptions used in determining pension expense for non-U.S. pension plans is determined in a similar manner to the U.S. plans, and the rate of 7.42% for the year ended December 31, 2010 is a weighted-average of all of the funded non-U.S. plans.

Target Allocation Percentages

Minor changes were made to the U.S. target allocation percentages by asset category as a result of the asset and liability study that was approved in December 2010.

An asset and liability study conducted of the Canadian plans' target allocation percentages was approved by GMCL's Board of Directors and became effective in July 2010. Significant changes were made to the target allocation percentages by asset category as a result of this study. The study was generated following a contribution to the Canadian plans in September 2009 of CAD $4.0 billion which improved the funded position. A less aggressive asset mix was implemented to preserve this position by shifting the target allocation away from return seeking equity type assets toward a liability hedging strategy that utilizes more fixed income assets.

The following table summarizes the target allocations by asset category for U.S. and non-U.S. defined benefit pension plans:

	Successor			
	December 31, 2010		December 31, 2009	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans

Transfers In and/or Out of Level 3

In the year ended December 31, 2010, fixed income funds of $4.2 billion within the U.S. plan assets were transferred out of Level 3 to Level 2. This resulted from management's ability to validate certain liquidity and redemption restrictions that permit the plans to redeem their interest in these investment funds in the near-term (generally within 90 days) at NAV.

There were no significant transfers in and/or out of Level 3 within the non-U.S. plan assets.

Fund Investment Strategies

Cash equivalent funds asset class includes funds that primarily invest in short-term, high quality securities including U.S. government securities, U.S. dollar-denominated obligations of U.S. and foreign depository institutions, commercial paper, corporate bonds and asset-backed securities.

Equity funds asset class includes funds that primarily invest in U.S. equities as well as equity securities issued by companies incorporated, listed or domiciled in developed and/or emerging markets countries. Certain fund managers may attempt to profit from security mispricing in equity markets. Equity long/short managers typically construct portfolios consisting of long and short positions, which may be determined by a variety of techniques including fundamental, quantitative, and technical analysis. Index funds, exchange traded funds and derivatives may be used for hedging purposes to limit exposure to various risk factors.

Fixed income funds asset class includes investments in high quality and high yield funds as well as in credit arbitrage funds. High quality fixed income funds primarily invest in U.S. government securities, investment-grade corporate bonds, mortgages and asset-backed securities. High yield fixed income funds primarily invest in U.S. high yield fixed income securities issued by corporations which are rated below investment grade by one or more nationally recognized rating agencies, are unrated but are believed by the investment manager to have similar risk characteristics or are rated investment grade or higher but are priced at yields comparable to securities rated below investment grade and believed to have similar risk characteristics. Credit arbitrage funds typically invest in a variety of credit and credit-related instruments that allow fund managers to profit from mispricing of these credit instruments. Certain derivatives may be used for hedging purposes by some fixed income fund managers to limit exposure to various risk factors.

Funds of hedge funds asset class includes funds that primarily invest in a portfolio of alternative investment funds. Funds of hedge fund managers typically seek to achieve their objectives by allocating capital across a broad array of alternative investment funds and/or investment managers.

Global macro funds asset class includes funds that primarily enter into leveraged transactions utilizing a variety of equity, fixed income and derivative instruments to benefit from anticipated price movements of stock, interest rates, foreign exchange currencies, and physical commodities markets while minimizing downside risk. Global macro managers employ a global approach and may invest in a variety of markets to participate in expected market movements.

Multi-strategy funds asset class includes funds that invest in broadly diversified portfolios of equity, fixed income and derivative instruments. Certain funds may also employ multiple alternative investment strategies, in combination, such as global macro, event-driven (which seeks to profit from opportunities created by significant transactional events such as spin-offs, mergers and acquisitions, bankruptcy reorganizations, recapitalizations and share buybacks), and relative value (which seeks to take advantage of pricing discrepancies between instruments including equities, debt, options and futures).

Real estate funds asset class includes funds that primarily invest in entities which are principally engaged in the ownership, acquisition, development, financing, sale and/or management of income-producing real estate properties, both commercial and residential. These funds typically seek long-term growth of capital and current income that is above average relative to public equity funds.

Other investment funds generally consist of funds that employ broad-ranging strategies and styles. The objective of such funds is to deliver returns having relatively low volatility and correlation to movements in major equity and bond markets. Funds in this category typically employ single strategies such as event-driven or relative value.

Investment Trusts

A significant portion of the U.S. hourly and salaried pension plan assets are invested through a series of group trusts (Investment Trusts) which permit the commingling of assets from more than one employer. The group trust structure permitted the formation of a series of group trust investment accounts. Each group trust has a beneficial interest in the assets of the underlying investment accounts which are invested to achieve an investment strategy based on the desired plan asset targeted allocations. For purposes of fair value measurement, each plan's interests in the group trusts are classified as a plan asset.

A plan's interest in an Investment Trust is determined based on the Investment Trust's beneficial interest in the underlying net assets. Beneficial interests in the individual Investment Trusts owned by the plans were 99.0% and 97.4% on a combined basis at December 31, 2010 and 2009.

The following table summarizes the U.S. plans' interest in certain net assets of the Investment Trusts (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
U.S. pension plans' funded beneficial interest	$66,918	$53,043

Investment Trusts Transfers In and/or Out of Level 3

During the year ended December 31, 2010 significant transfers out of Level 3 to Level 2 included government and agency debt securities of $1.3 billion, corporate debt securities of $0.7 billion and non-agency mortgage and asset-backed securities of $0.7 billion. These transfers were primarily the result of improved pricing transparency of these securities, which allowed management to corroborate observable pricing inputs received from independent pricing services.

During the year ended December 31, 2010 investment funds of $0.6 billion were transferred out of Level 3 to Level 2. This resulted from management's ability to validate certain liquidity and redemption restrictions that permit the Investment Trusts to redeem their interest in these investment funds in the near-term (generally within 90 days) at NAV.

OPEB Plan Assets and Fair Value Measurements

As a result of the December 31, 2009 UAW hourly retiree medical plan settlement, there were no significant OPEB plan assets at December 31, 2010.

The following table summarizes the fair value of OPEB plan assets by asset category (dollars in millions):

Significant Concentrations of Risk

The pension plans' Investment Trusts include investments in certain investment funds, equity, debt and real estate investments and derivative instruments. Some or all of these investments may be illiquid. The investment managers may be unable to quickly liquidate some or all of these investments at an amount close or equal to fair value in order to meet a plan's liquidity requirements or to respond to specific events such as deterioration in the creditworthiness of any particular issuer or counterparty.

Illiquid investments held in the Investment Trusts are generally long-term investments that complement the long-term nature of pension obligations and are not used to fund benefit payments when currently due. Plan management monitors liquidity risk on an ongoing basis and has procedures in place that are designed to maintain flexibility in addressing plan-specific, broader industry and market liquidity events.

Certain assets held by the Investment Trusts represent investments in group annuity contracts. We entered into group annuity contracts with various life insurance companies to provide pension benefits to certain of our salaried workforce and backed these obligations by high quality fixed income securities. We, as the plans' sponsor, might be exposed to counterparty risk if any or all of the life insurance companies fail to perform in accordance with the terms and conditions stipulated in the contracts, or any or all of the life insurance companies become insolvent or experience other forms of financial distress. We and the plans might also be exposed to liquidity risk due to the funding obligation that may arise under these contracts. The plans' management monitors counterparty and liquidity risks on an on-going basis and has procedures in place that are designed to monitor the financial performance of the life insurance companies that are parties to these contracts and maintain flexibility in addressing contract-specific and broader market events.

The pension plans' Investment Trusts may contain financial instruments denominated in foreign currencies. Consequently, the plans might be exposed to risks that the foreign currency exchange rates might change in a manner that has an adverse effect on the value of the Investment Trusts' foreign currency denominated assets or liabilities. The Investment Trusts use forward currency contracts to manage foreign currency risk.

The pension plans' Investment Trusts may invest in fixed income securities for which any change in the relevant interest rates for particular securities might result in an investment manager being unable to secure similar returns upon the maturity or the sale of securities. In addition, changes to prevailing interest rates or changes in expectations of future interest rates might result in an increase or decrease in the fair value of the securities held. The plans' Investment Trusts may use interest rate swaps and other financial derivative instruments to manage interest rate risk.

Counterparty credit risk is the risk that a counterparty to a financial instrument held by the Investment Trusts will default on its commitment. Counterparty risk is primarily related to over-the-counter derivative instruments used to manage risk exposures related to interest rates on long-term debt securities and foreign currency exchange rate fluctuations. The risk of default can be influenced by various factors including macro-economic conditions, market liquidity, fiscal and monetary policies and counterparty-specific characteristics and activities. Certain agreements with counterparties employ set-off, collateral support arrangements and other risk mitigating procedures designed to reduce the net exposure to credit risk in the event of counterparty default. Credit policies and processes are in place to manage concentrations of counterparty risk by seeking to undertake transactions with large well-capitalized counterparties and by monitoring the creditworthiness of these counterparties.

Plan Funding Policy and Contributions

The funding policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulations or to directly pay benefit payments where appropriate. At December 31, 2010, all legal funding requirements had been met.

The following table summarizes pension contributions to the defined benefit pension plans or direct payments to plan beneficiaries (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
U.S. hourly and salaried	$4,000	$ —	$ —	$ —
Other U.S.	95	31	57	90
Non-U.S.	777	4,287	529	977
Total contributions	$4,872	$4,318	$586	$1,067

Required Pension Funding Obligations

We do not have any required contributions due to our U.S. qualified plans in 2011. The next pension funding valuation to be prepared based on the requirements of the Pension Protection Act (PPA) of 2006 will be as of October 1, 2010. Based on the PPA, we have the option to select a funding interest rate for the valuation based on either the Full Yield Curve method or the 3-Segment method, both of which are considered to be acceptable methods. A hypothetical funding valuation at December 31, 2010, using the 3-Segment rate at May 31, 2010 for the funding plan year beginning October 1, 2010 and assuming the December 31, 2010 Full Yield Curve funding interest rate for all future funding valuations projects contributions of $2.3 billion, and $1.2 billion in 2015 and 2016. Alternatively, a hypothetical funding valuation at December 31, 2010 using the 3-Segment rate at May 31, 2010 for the funding plan year beginning October 1, 2010 and assuming the December 31, 2010 3-Segment interest rate for all future funding valuations projects contributions of $0.3 billion in 2016. In both cases, we have assumed that the pension plans earn the expected return of 8.0%. In addition to the discount rate and return on assets, the pension contributions could be affected by various other factors including the effect of any legislative changes. We are evaluating whether we will make additional voluntary contributions in 2011.

In July 2009 $862 million was deposited into an escrow account pursuant to an agreement among Old GM, EDC and an escrow agent. In July 2009 we subscribed for additional common shares in GMCL and paid the subscription price in cash. As required under certain agreements among GMCL, EDC, and an escrow agent, $3.6 billion of the subscription price was deposited into an escrow account to fund certain of GMCL's pension plans and HCT obligations pending completion of certain preconditions. In September 2009 GMCL contributed $3.0 billion to the Canadian hourly defined benefit pension plan and $651 million to the Canadian salaried defined benefit pension plan, of which $2.7 billion was funded from the escrow account. In accordance with the terms of the escrow agreement, $903 million was released from the escrow account to us in September 2009. At December 31, 2010 $1.0 billion remained in the escrow account.

OPEB Contributions

The following table summarizes contributions (withdrawals) to the U.S. OPEB plans (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008 (a)
Employer contributions (withdrawals)	$651	$1,528	$1,947	$(1,356)
Plan participants' contributions	53	172	169	401
Total contributions (withdrawals)	$704	$1,700	$2,116	$ (955)

(a) Both the U.S. non-UAW hourly and salaried VEBAs were effectively liquidated by December 31, 2008 resulting in withdrawals from plan assets.

Benefit Payments

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service, but does not reflect the effect of the 2009 CAW Agreement which provides for our independent HCT (dollars in millions):

	Successor			
	Years Ended December 31,			
	Pension Benefits (a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans (b)	Non-U.S. Plans
2011	$ 8,765	$1,460	$ 451	$ 189
2012	$ 8,463	$1,461	$ 427	$ 199
2013	$ 8,186	$1,480	$ 407	$ 209
2014	$ 7,999	$1,513	$ 391	$ 220
2015	$ 7,855	$1,534	$ 379	$ 231
2016-2020	$36,033	$7,889	$1,796	$1,287

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our cash and cash equivalents.

(b) Benefit payments presented in this table reflect the effect of the implementation of the 2009 UAW Retiree Settlement Agreement which releases us from UAW retiree healthcare claims incurred after December 31, 2009.

Note 21. Derivative Financial Instruments and Risk Management

Automotive

Derivatives and Hedge Accounting

We are party to a variety of foreign currency exchange rate and commodity derivative contracts entered into in connection with the management of exposure to fluctuations in foreign currency exchange rates and certain commodity prices.

Our derivative instruments consist of derivative contracts or economic hedges, including forward contracts and options that we acquired from Old GM or purchased directly from counterparties. At December 31, 2010 and 2009 no outstanding derivative contracts were designated in hedging relationships other than those derivative contracts designated in a hedging relationship by GM Financial.

Refer to Note 24 for additional information on the fair value measurements of our derivative instruments. Refer to Note 4 for additional information on our derivatives accounting policy.

Counterparty Credit Risk

Derivative financial instruments contain an element of credit risk attributable to the counterparties' ability to meet the terms of the agreements. Since August 2010 we executed new agreements with counterparties that will require, under certain circumstances, that the counterparty post collateral with us for net asset positions. At December 31, 2010 we held collateral of $74 million from counterparties and recorded the related obligation in Accrued liabilities. The maximum amount of loss due to credit risk that we would incur if the counterparties to the derivative instruments failed completely to perform according to the terms of the contract was $143 million at December 31, 2010. Agreements are entered into with counterparties that allow the set-off of certain exposures in order to manage the risk. At December 31, 2010 the total net derivative asset position for all counterparties with which we were in a net asset position, less the collateral we held, was $108 million.

At December 31, 2010 a majority of all derivative counterparty exposures were with counterparties that were rated A or higher.

Credit Risk Related Contingent Features

Certain of our agreements with counterparties require that we provide cash collateral for net liability positions that we may have with such counterparty. At December 31, 2010 no collateral was posted related to derivative instruments, and we did not have any agreements with counterparties to derivative instruments containing covenants requiring the maintenance of certain credit rating levels or credit risk ratios that would require the posting of collateral in the event that such covenants are violated.

Fair Value of Derivatives

The following table summarizes the fair value of our derivative instruments (dollars in millions):

	Successor			
	December 31, 2010		December 31, 2009	
	Asset Derivatives (a)(b)	Liability Derivatives (c)(d)	Asset Derivatives (a)(b)	Liability Derivatives (c)(d)
Derivative Instruments				
Current Portion				
Foreign currency exchange	$ 80	$113	$104	$568
Commodity	93	2	11	—
Total current portion	$173	$115	$115	$568
Non-Current Portion				
Foreign currency exchange	$ —	$ —	$ 19	$146
Commodity	—	7	—	—
Warrants	44	—	25	—
Total non-current portion	$ 44	$ 7	$ 44	$146

(a) Current portion recorded in Other current assets and deferred income taxes

(b) Non-current portion recorded in Other assets.

(c) Current portion recorded in Accrued liabilities.

(d) Non-current portion recorded in Other liabilities and deferred income taxes.

Gains and (Losses) on Derivatives

The following table summarizes derivative gains and (losses) recorded in earnings (dollars in millions):

	Successor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009
Foreign Currency Exchange Derivatives		
Interest income and other non-operating income, net	$ 82	$279
Interest Rate Swap Derivatives		
Automotive interest expense	—	(1)
Commodity Derivatives		
Interest income and other non-operating income, net	(33)	—
Warrants		
Interest income and other non-operating income, net	19	—
Total gains (losses) recorded in earnings	$ 68	$278

Commodity Notionals

The following table summarizes the notional amounts of our commodity derivative contracts (units in thousands):

		Successor	
Commodity	Units	December 31, 2010	December 31, 2009
Aluminum and aluminum alloy	Metric tons	448	39
Copper	Metric tons	44	4
Lead	Metric tons	69	7
Heating oil	Gallons	125,160	10,797
Natural gas	MMBTU	—	1,355
Natural gas	Gigajoules	—	150
Palladium	Troy ounce	444	—
Platinum	Troy ounce	91	—
Electricity (embedded derivative)	MWh	1,304	—

Foreign Currency Exchange Notionals

The following table summarizes the total notional amounts of our foreign currency exchange derivatives (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Foreign currency exchange derivatives	$5,910	$6,333
Embedded foreign currency exchange derivatives	$1,421	$ —

In 2010 we entered into a long-term supply agreement which provides for pricing to be partially denominated in a currency other than the functional currency of the parties to the contract. This pricing feature was determined to be an embedded derivative which we have bifurcated for valuation and accounting purposes. The fair value of this embedded derivative was insignificant as of December 31, 2010.

Other Derivatives

In September 2009 in connection with an agreement with American Axle, we received warrants to purchase 4 million shares of American Axle common stock exercisable at $2.76 per share. Gains and losses related to these warrants were recorded in Interest income and other non-operating income, net. At December 31, 2010 the fair value of these warrants was $44 million. In February 2011 we exercised the warrants and sold the shares and received proceeds of $48 million.

In connection with our investment in New Delphi, which we account for using the equity method, we record our share of New Delphi's Other comprehensive income (loss) in Accumulated other comprehensive income (loss). In the years ended December 31, 2010 and 2009 we recorded cash flow hedge losses of $22 million and $1 million related to our share of New Delphi's hedging losses.

Automotive Financing

GM Financial is exposed to market risks arising from adverse changes in interest rates due to floating interest rate exposure on its credit facilities and on certain securitization notes payable.

The effect of derivative instruments on earnings and Accumulated other comprehensive income was insignificant for the three months ended December 31, 2010.

The following table summarizes interest rate swaps, caps and foreign currency exchange derivatives (dollars in millions):

	Successor	
	December 31, 2010	
	Notional	Fair Value
Assets (a)		
Interest rate swaps	$1,227	$23
Interest rate caps	946	8
Total assets	$2,173	$31
Liabilities (b)		
Interest rate swaps	$1,227	$47
Interest rate caps	832	8
Foreign currency exchange (c)	49	2
Total liabilities	$2,108	$57

(a) Recorded in GM Financial Other assets.

(b) Recorded in GM Financial Other liabilities.

(c) Notional has been translated from Canadian dollars to U.S. dollars at the December 31, 2010 rate.

Credit Risk Related Contingent Features

Under the terms of our derivative financial instruments, GM Financial is required to pledge certain funds to be held in restricted cash accounts as collateral for the outstanding derivative transactions. As of December 31, 2010, these restricted cash accounts totaled $33 million and are included in GM Financial Restricted cash.

Old GM

Derivatives and Hedge Accounting

Derivatives Not Designated for Hedge Accounting

Old GM previously entered into a variety of foreign currency exchange, interest rate and commodity forward contracts and options to maintain a desired level of exposure arising from market risks resulting from changes in foreign currency exchange rates, interest rates and certain commodity prices.

In May 2009 Old GM reached agreements with certain of the counterparties to its derivative contracts to terminate the derivative contracts prior to stated maturity. Commodity, foreign currency exchange and interest rate forward contracts were settled for cash of $631 million, resulting in a loss of $537 million. The loss was recorded in Automotive sales, Automotive cost of sales and Automotive interest expense in the amounts of $22 million, $457 million and $58 million.

When an exposure economically hedged with a derivative contract was no longer forecasted to occur, in some cases a new derivative instrument was entered into to offset the exposure related to the existing derivative instrument. In some cases, counterparties were unwilling to enter into offsetting derivative instruments and, as such, there was exposure to future changes in the fair value of these derivatives with no underlying exposure to offset this risk.

The following table summarizes gains and (losses) recorded for derivatives originally entered into to hedge exposures that subsequently became probable not to occur (dollars in millions):

	Predecessor
	January 1, 2009 Through July 9, 2009
Interest income and other non-operating income, net	$91

Gains and (Losses) on Derivatives

The following table summarizes derivative gains and (losses) recorded in earnings (dollars in millions):

	Predecessor
	January 1, 2009 Through July 9, 2009
Foreign Currency Exchange Derivatives	
Automotive sales	$ (688)
Automotive cost of sales	(211)
Interest income and other non-operating income, net	91
Interest Rate Swap Derivatives	
Automotive interest expense	(38)
Commodity Derivatives	
Automotive cost of sales	(332)
Warrants	
Interest income and other non-operating income, net	164
Total gains (losses) recorded in earnings	$(1,014)

In connection with the UST Loan Agreement, Old GM granted warrants to the UST for 122 million shares of its common stock exercisable at $3.57 per share. Old GM recorded the warrants as a liability and recorded gains and losses related to this derivative in Interest income and other non-operating income, net. In connection with the 363 Sale, the UST returned the warrants and they were cancelled.

Cash Flow Hedges

Old GM previously designated certain financial instruments as cash flow hedges to manage its exposure to certain foreign currency exchange risks. For foreign currency transactions, Old GM typically hedged forecasted exposures for up to three years in the future. For foreign currency exposure on long-term debt, Old GM typically hedged exposures for the life of the debt.

On October 1, 2008 Old GM ceased hedge accounting treatment for derivatives that were previously designated as qualifying cash flow hedges. Subsequent to that date Old GM recorded gains and losses arising from changes in the fair value of the derivative instruments in earnings, resulting in a net gain of $157 million in the three months ended December 31, 2008. This gain was recorded in Automotive sales and Automotive cost of sales in the amounts of $127 million and $30 million.

The following table summarizes financial statement classification and amounts reclassified from Accumulated other comprehensive income (loss) into earnings related to effective cash flow hedging relationships (dollars in millions):

	Predecessor	
	Gain (Loss) Reclassified	Gain (Loss) Reclassified
	January 1, 2009 Through July, 9, 2009	Year Ended December 31, 2008
Automotive sales	$(351)	$198
Automotive cost of sales	19	205
Reorganization gains, net	247	—
Total gains (losses) reclassified from accumulated other comprehensive income (loss)	$ (85)	$403

Hedge ineffectiveness related to instruments designated as cash flow hedges was insignificant in the year ended December 31, 2008.

In connection with the Chapter 11 Proceedings, at June 1, 2009 Accumulated other comprehensive income (loss) balances of $247 million associated with previously designated financial instruments were reclassified into Reorganization gains, net because the underlying forecasted debt and interest payments were probable not to occur.

The following table summarizes gains and (losses) that were reclassified from Accumulated other comprehensive income (loss) for cash flow hedges associated with previously forecasted transactions that subsequently became probable not to occur (dollars in millions):

	Predecessor
	Gain (Loss) Reclassified
	January 1, 2009 Through July 9, 2009
Automotive sales	$(182)
Reorganization gains, net	247
Total gains (losses) reclassified from accumulated other comprehensive income (loss)	$ 65

Net Change in Accumulated Other Comprehensive Income (Loss)

The following table summarizes the net change in Accumulated other comprehensive income (loss) related to cash flow hedging activities (dollars in millions):

	Predecessor	
	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Beginning net unrealized gain (loss) on derivatives	$(490)	$ 321
Change in fair value	—	(1,054)
Reclassification to earnings	99	243
Ending net unrealized gain (loss) on derivatives	$(391)	$ (490)

In connection with our application of fresh-start reporting, the remaining previously deferred cash flow hedging gains and losses of $391 million in Accumulated other comprehensive income (loss) were adjusted to $0 at July 10, 2009.

Fair Value Hedges

Old GM previously used interest rate swaps designated as fair value hedges to manage certain of its exposures associated with its borrowings. Old GM hedged its exposures to the maturity date of the underlying interest rate exposure.

Gains and losses on derivatives designated and qualifying as fair value hedges, as well as the offsetting gains and losses on the debt attributable to the hedged interest rate risk, were recorded in Automotive interest expense to the extent the hedge was effective. The gains and losses related to the hedged interest rate risk were recorded as an adjustment to the carrying amount of the debt. Previously recorded adjustments to the carrying amount of the debt were amortized to Automotive interest expense over the remaining debt term. In the period January 1, 2009 through July 9, 2009 Old GM amortized an insignificant amount of previously deferred fair value hedge gains and losses to Automotive interest expense. Old GM recorded no hedging ineffectiveness in the year ended December 31, 2008.

On October 1, 2008 Old GM ceased hedge accounting treatment for derivatives that were previously designated as qualifying fair value hedges. Subsequent to this date Old GM recorded gains and losses arising from changes in the fair value of the derivative instruments in earnings, resulting in a net gain of $279 million recorded in Automotive interest expense in the three months ended December 31, 2008.

In connection with the Chapter 11 Proceedings, at June 1, 2009 Old GM had basis adjustments of $18 million to the carrying amount of debt that ceased to be amortized to Automotive interest expense. At June 1, 2009 the debt related to these basis adjustments was classified as Liabilities subject to compromise and no longer subject to interest accruals or amortization. We did not assume this debt from Old GM in connection with the 363 Sale.

Net Investment Hedges

Old GM was subject to foreign currency exposure related to net investments in certain foreign operations and used foreign currency denominated debt to hedge this exposure. For nonderivative instruments that were designated as, and qualified as, a hedge of a net investment in a foreign operation, the effective portion of the unrealized and realized gains and losses were recorded as a Foreign currency translation adjustment in Accumulated other comprehensive income (loss). In connection with the 363 Sale, MLC retained the foreign currency denominated debt and it ceased to operate as a hedge of net investments in foreign operations. In connection with our application of fresh-start reporting, the effective portions of unrealized gains and losses previously recorded to Accumulated other comprehensive income (loss) were adjusted to $0 at July 10, 2009.

The following table summarizes the gains related to net investment hedges recorded as a Foreign currency translation adjustment in Accumulated other comprehensive income (loss) (dollars in millions):

	Predecessor	
	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Effective portion of net investment hedges	$5	$106

Derivatives Not Meeting a Scope Exception from Fair Value Accounting

Old GM previously entered into purchase contracts that were accounted for as derivatives with changes in fair value recorded in Automotive cost of sales, as these contracts did not qualify for the normal purchases and normal sales scope exception in ASC 815, "Derivatives and Hedging." Certain of these contracts were terminated in the period January 1, 2009 through July 9, 2009. MLC retained the remainder of these purchase contracts in connection with the 363 Sale.

Note 22. Commitments and Contingencies

Consolidated

The following tables summarize information related to commitments and contingencies (dollars in millions):

	Successor			
	December 31, 2010		December 31, 2009	
	Liability Recorded	Maximum Liability (a)	Liability Recorded	Maximum Liability (a)
Guarantees (b)				
Operating lease residual values	$ 7	$ 59	$—	$ 79
Ally Financial commercial loans (c)	$—	$ 17	$ 2	$167
Supplier commitments and other obligations	$—	$ 63	$ 3	$218
Other product-related claims	$50	$442	$54	$553

(a) Calculated as future undiscounted payments.

(b) Excludes residual support and risk sharing programs and vehicle repurchase obligations related to Ally Financial.

(c) At December 31, 2009 includes $127 million related to a guarantee provided to Ally Financial in Brazil in connection with dealer floor plan financing. This guarantee is collateralized by an interest in certificates of deposit of $127 million purchased from Ally Financial to which we have title and which were recorded in Restricted cash and marketable securities. The purchase of the certificates of deposit was funded in part by contributions from dealers for which we had recorded a corresponding deposit liability of $104 million, which was recorded in Other liabilities. In the year ended December 31, 2010 this guarantee was terminated.

	Successor	
	December 31, 2010	December 31, 2009
	Liability Recorded	Liability Recorded
Credit card programs (a)		
Redemption liability (b)	$ 167	$ 140
Deferred revenue(c)	$ 408	$ 464
Environmental liability (d)	$ 195	$ 190
Product liability	$ 365	$ 319
Liability related to contingently issuable shares	$ —	$ 162
Other litigation-related liability and tax administrative matters (e)	$1,471	$1,192

(a) At December 31, 2010 and 2009 qualified cardholders had rebates available, net of deferred program revenue, of $2.8 billion and $3.1 billion.

(b) Redemption liabilities are recorded in Accrued liabilities.

(c) Deferred revenue is recorded in Other liabilities and deferred income taxes. At December 31, 2010 and 2009 deferred revenue includes an unfavorable contract liability recorded in applying fresh-start reporting at July 10, 2009.

(d) Includes $45 million and $28 million recorded in Accrued liabilities at December 31, 2010 and 2009, and the remainder was recorded in Other liabilities and deferred income taxes.

(e) Consists primarily of tax related litigation not recorded pursuant to ASC 740 as well as various non-U.S. labor related matters.

Guarantees

We have provided guarantees related to the residual value of certain operating leases. These guarantees terminate in years ranging from 2011 to 2035. Certain leases contain renewal options.

We have agreements with third parties that guarantee the fulfillment of certain suppliers' commitments and other obligations. These guarantees expire in years ranging from 2011 to 2015, or upon the occurrence of specific events.

In some instances, certain assets of the party whose debt or performance we have guaranteed may offset, to some degree, the cost of the guarantee. The offset of certain of our payables to guaranteed parties may also offset certain guarantees, if triggered.

We also provide payment guarantees on commercial loans made by Ally Financial and outstanding with certain third parties, such as dealers or rental car companies. These guarantees either expire in years ranging from 2012 to 2029 or are ongoing. We determined the value ascribed to the guarantees to be insignificant based on the credit worthiness of the third parties. Refer to Note 32 for additional information on guarantees that we provide to Ally Financial.

In connection with certain divestitures of assets or operating businesses, we have entered into agreements indemnifying certain buyers and other parties with respect to environmental conditions pertaining to real property we owned. We have provided guarantees with respect to benefits to be paid to former employees of divested businesses relating to pensions, postretirement healthcare and life insurance. We periodically enter into agreements that incorporate indemnification provisions in the normal course of business. It is not possible to estimate our maximum exposure under these indemnifications or guarantees due to the conditional nature of these obligations. No amounts have been recorded for such obligations as they are not probable or estimable at this time, and the fair value of the guarantees at issuance was insignificant.

In addition to the guarantees and indemnifying agreements mentioned previously, we periodically enter into agreements that incorporate indemnification provisions in the normal course of business. Due to the nature of these agreements, the maximum potential amount of future undiscounted payments to which we may be exposed cannot be estimated. No amounts have been recorded for such indemnities as our obligations under them are not probable or estimable at this time, and the fair value of the guarantees at issuance was insignificant.

In addition to the guarantees and indemnifying agreements previously discussed, we indemnify dealers for certain product liability related claims as subsequently discussed.

With respect to other product-related claims involving products manufactured by certain joint ventures, we believe that costs incurred are adequately covered by recorded accruals. These guarantees expire in 2020.

Credit Card Programs

Credit card programs offer rebates that can be applied primarily against the purchase or lease of our vehicles.

Environmental Liability

In connection with the 363 Sale, we acquired certain properties that are subject to environmental remediation.

Automotive operations, like operations of other companies engaged in similar businesses, are subject to a wide range of environmental protection laws, including laws regulating air emissions, water discharges, waste management and environmental remediation. We are in various stages of investigation or remediation for sites where contamination has been alleged. We are and Old GM was involved in a number of actions to remediate hazardous wastes as required by federal and state laws. Such statutes require that responsible parties fund remediation actions regardless of fault, legality of original disposal or ownership of a disposal site.

The future effect of environmental matters, including potential liabilities, is often difficult to estimate. An environmental reserve is recorded when it is probable that a liability has been incurred and the amount of the liability can be reasonably estimated. This practice is followed whether the claims are asserted or unasserted. Liabilities have been recorded for the expected costs to be paid over the periods of remediation for the applicable sites, which typically range from 5 to 30 years.

For many sites, the remediation costs and other damages for which we ultimately may be responsible may vary because of uncertainties with respect to factors such as the connection to the site or to materials there, the involvement of other potentially responsible parties, the application of laws and other standards or regulations, site conditions, and the nature and scope of investigations, studies and remediation to be undertaken (including the technologies to be required and the extent, duration and success of remediation).

The final outcome of environmental matters cannot be predicted with certainty at this time. Accordingly, it is possible that the resolution of one or more environmental matters could exceed the amounts accrued in an amount that could be material to our financial condition and results of operations. At December 31, 2010 we estimate the remediation losses could range from $150 million to $370 million.

Product Liability

With respect to product liability claims involving our and Old GM's products, it is believed that any judgment against us for actual damages will be adequately covered by our recorded accruals and, where applicable, excess insurance coverage. Although punitive damages are claimed in some of these lawsuits, and such claims are inherently unpredictable, accruals incorporate historic experience with these types of claims. Liabilities have been recorded for the expected cost of all known product liability claims plus an estimate of the expected cost for all product liability claims that have already been incurred and are expected to be filed in the future for which we are self-insured. These amounts were recorded in Accrued liabilities and exclude Old GM's asbestos claims, which are discussed separately.

In accordance with our assumption of dealer sales and service agreements, we indemnify dealers for certain product liability related claims. Our experience related to dealer indemnification obligations where we are not a party arising from incidents prior to July 10, 2009 is limited. We monitor actual claims experience for consistency with this estimate and make periodic adjustments as appropriate. Since July 10, 2009, the volume of product liability claims against us has been less than projected. In addition, as of this time due to the relatively short period for which we have been directly responsible for such claims, we have fewer pending matters than Old GM had in the past and than we expect in the future. Based on both management judgments concerning the projected number and value of both dealer indemnification obligations and product liability claims against us, we have estimated the associated liability. We have lowered our overall product liability estimate for dealer indemnifications and our exposure in the year ended December 31, 2010 resulting in a $132 million favorable adjustment driven primarily by a lower than expected volume of claims. We expect our product liability reserve to rise in future periods as new claims arise from incidents subsequent to July 9, 2009.

Liability Related to Contingently Issuable Shares

We are obligated to issue Adjustment Shares of our common stock to MLC in the event that allowed general unsecured claims against MLC, as estimated by the Bankruptcy Court, exceed $35.0 billion. The maximum number of Adjustment Shares issuable is 30 million shares (subject to adjustment to take into account stock dividends, stock splits and other transactions). The number of Adjustment Shares to be issued is calculated based on the extent to which estimated general unsecured claims exceed $35.0 billion with the maximum number of Adjustment Shares issued if estimated general unsecured claims total $42.0 billion or more. In the period July 10, 2009 to December 31, 2009 we determined that it was probable that general unsecured claims allowed against MLC would ultimately exceed $35.0 billion by at least $2.0 billion. In that circumstance, we would have been required to issue 8.6 million Adjustment Shares to MLC as an adjustment to the purchase price. At December 31, 2009 we recorded a liability of $162 million included in Accrued liabilities. In the year ended December 31, 2010 the liability was adjusted quarterly based on available information. Based on information which became available in the three months ended December 31, 2010, we concluded it was no longer probable that general unsecured claims would exceed $35.0 billion, and we reversed to income our previously recorded liability of $231 million for the contingently issuable Adjustment Shares which is recorded in Interest income and other non-operating income, net. We believe it is reasonably possible that general unsecured claims allowed against MLC will range between $32.5 billion and $36.0 billion.

Other Litigation-Related Liability and Tax Administrative Matters

Various legal actions, governmental investigations, claims and proceedings are pending against us or MLC including a number of shareholder class actions, bondholder class actions and class actions under ERISA and other matters arising out of alleged product defects, including asbestos-related claims; employment-related matters; governmental regulations relating to safety, emissions, and fuel economy; product warranties; financial services; dealer, supplier and other contractual relationships; tax-related matters not recorded pursuant to ASC 740 and environmental matters.

With regard to the litigation matters discussed in the previous paragraph, reserves have been established for matters in which it is believed that losses are probable and can be reasonably estimated, the majority of which are associated with tax-related matters not recorded pursuant to ASC 740 as well as various non-U.S. labor-related matters. Tax related matters not recorded pursuant to ASC 740 (indirect tax-related matters) are items being litigated globally pertaining to value added taxes, customs, duties, sales, property taxes and other non-income tax related tax exposures. The various non-U.S. labor-related matters include claims from current and former employees related to alleged unpaid wage, benefit, severance, and other compensation matters. Certain South American administrative proceedings are indirect tax-related and may require that we deposit funds in escrow; such escrow deposits may range from $560 million to $760 million. Some of the matters may involve compensatory, punitive, or other treble damage claims, environmental remediation programs, or sanctions, that if granted, could require us to pay damages or make other expenditures in amounts that could not be reasonably estimated at December 31, 2010. We believe that appropriate accruals have been established for such matters based on information currently available. Reserves for litigation losses are recorded in Accrued liabilities and Other liabilities and deferred income taxes. These accrued reserves represent the best estimate of amounts believed to be our liability in a range of expected losses. Litigation is inherently unpredictable, however, and unfavorable resolutions could occur. Accordingly, it is possible that an adverse outcome from such proceedings could exceed the amounts accrued in an amount that could be material to our financial condition, results of operations and cash flows in any particular reporting period.

Commencing on or about September 29, 2010, current and former hourly employees of GM Daewoo, our majority-owned affiliate in the Republic of Korea, filed six separate group actions in the Incheon District Court in Incheon, Korea. The cases allege that GM Daewoo failed to include certain allowances in its calculation of Ordinary Wages due under the Presidential Decree of the Korean Labor Standards Act. Similar cases have been brought against other large employers in the Republic of Korea. At December 31, 2010 GM Daewoo accrued 122 billion Korean Won (equivalent to $110 million) in connection with these cases (70% of which was recorded in Net income attributable to stockholders, based on our ownership interest in GM Daewoo). The current estimate of the value of plaintiffs' claim, if allowed in full, exceeds the accrual by 395 billion Korean Won (equivalent to $344 million). GM Daewoo believes the claims in excess of the accrual are without merit but, given the inherent uncertainties of the litigation process and further uncertainties arising because this litigation is at its earliest stages, this amount represents the high end of the range of reasonably possible liability exposure. Both the scope of claims asserted and GM Daewoo's assessment of any or all of individual claim elements may change. This accrual is included in the reserves for non-U.S. labor-related matters.

In July 2008 Old GM reached a tentative settlement of the General Motors Securities Litigation suit and recorded an additional charge of $277 million, of which $139 million was paid in the year ended December 31, 2008. Also in the year ended December 31, 2008, Old GM recorded $215 million as a reduction to Automotive selling, general and administrative expense associated with insurance-related indemnification proceeds for previously recorded litigation related costs, including the cost incurred to settle the General Motors Securities Litigation suit.

GME Planned Spending Guarantee

As part of our Opel/Vauxhall restructuring plan, agreed to with European labor representatives, we have committed to achieve specified milestones associated with planned spending from 2011 to 2014 on certain product programs. If we fail to accomplish the requirements set out under the agreement, we will be required to pay certain amounts up to Euro 265 million for each of those years, and/or interest on those amounts, to our employees. Certain inventory with a carrying amount of $193 million at December 31, 2010 was pledged as collateral under the agreement. Management has the intent and believes it has the ability to meet the requirements under the agreement.

Asset Retirement Obligations

Conditional asset retirement obligations relate to legal obligations associated with retirement of tangible long-lived assets that result from acquisition, construction, development, or normal operation of a long-lived asset. An analysis is performed of such obligations associated with all real property owned or leased, including facilities, warehouses, and offices. Estimates of conditional asset retirement obligations relate, in the case of owned properties, to costs estimated to be necessary for the legally required removal or remediation of various regulated materials, primarily asbestos. Asbestos abatement was estimated using site-specific surveys where available and a per square foot estimate where surveys were unavailable. For leased properties, such obligations relate to the estimated cost of contractually required property restoration.

Recording conditional asset retirement obligations results in increased fixed asset balances with a corresponding increase to liabilities. Asset balances, net of accumulated depreciation, of $36 million and $53 million at December 31, 2010 and 2009 are recorded in Property, net, while the related liabilities are included in Other liabilities. The following table summarizes the activity related to asset retirement obligations (dollars in millions):

	Successor		Predecessor
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Beginning balance	$102	$ 97	$ 237
Accretion expense	6	4	12
Liabilities incurred	6	21	5
Liabilities settled or disposed	(12)	(9)	(2)
Effect of foreign currency translation	2	3	5
Revisions to estimates	(1)	(14)	1
Reclassified to liabilities subject to compromise (a)	—	—	(121)
Ending balance	103	102	137
Effect of application of fresh-start reporting	—	—	(40)
Ending balance including effect of application of fresh-start reporting	$103	$102	$ 97

(a) Represents the asset retirement obligations associated with assets MLC retained.

Noncancelable Operating Leases

The following table summarizes our minimum commitments under noncancelable operating leases having remaining terms in excess of one year, primarily for property (dollars in millions):

	2011	2012	2013	2014	2015	2016 and after
Minimum commitments (a)	$520	$406	$318	$266	$232	$ 851
Sublease income	(60)	(60)	(55)	(51)	(46)	(359)
Net minimum commitments	$460	$346	$263	$215	$186	$ 492

(a) Certain of the leases contain escalation clauses and renewal or purchase options.

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Rental expense under operating leases	$604	$255	$369	$934

Asbestos-Related Liability

In connection with the 363 Sale, MLC retained substantially all of the asbestos-related claims outstanding.

Like most automobile manufacturers, Old GM had been subject to asbestos-related claims in recent years.

Old GM recorded the estimated liability associated with asbestos personal injury claims where the expected loss was both probable and could reasonably be estimated. Old GM retained a firm specializing in estimating asbestos claims to assist Old GM in determining the potential liability for pending and unasserted future asbestos personal injury claims.

Old GM reviewed a number of factors, including the analyses provided by the firm specializing in estimating asbestos claims in order to determine a reasonable estimate of the probable liability for pending and future asbestos-related claims projected to be asserted over the subsequent 10 years, including legal defense costs. Old GM monitored actual claims experience for consistency with this estimate and made periodic adjustments as appropriate. Old GM recorded asbestos-related expenses of $18 million and $51 million in the period January 1, 2009 through July 9, 2009 and the year ended December 31, 2008.

Delphi Corporation

Benefit Guarantee

In 1999, Old GM spun-off Delphi Automotive Systems Corporation, which became Delphi. Prior to the consummation of the DMDA, Delphi was our and Old GM's largest supplier of automotive systems, components and parts, and we and Old GM were Delphi's largest customer. From 2005 to 2008 Old GM's annual purchases from Delphi ranged from approximately $6.5 billion to approximately $10.2 billion. At the time of the spin-off, employees of Delphi Automotive Systems Corporation became employees of Delphi. As part of the separation agreements, Delphi assumed the pension and other postretirement benefit obligations for the transferred U.S. hourly employees who retired after January 1, 2000 and Old GM retained pension and other postretirement obligations for U.S. hourly employees who retired on or before January 1, 2000. Additionally at the time of the spin-off, Old GM entered into the Delphi Benefit Guarantee Agreements with the UAW, the IUE-CWA and the USW providing contingent benefit guarantees whereby, under certain conditions, Old GM would make payments for certain pension and OPEB benefits to certain former U.S. hourly employees that became employees of Delphi. The Delphi Benefit Guarantee Agreements provided, in general, that in the event that Delphi or its successor companies ceased doing business, terminated its pension plan or ceased to provide credited service or OPEB benefits at certain levels due to financial distress, Old GM could be liable to provide the corresponding benefits at the required level. With respect to pension benefits, the guarantee arises only to the extent the pension benefits Delphi and the PBGC provided fall short of the guaranteed amount.

In October 2005 Old GM received notice from Delphi that it was more likely than not that Old GM would become obligated to provide benefits pursuant to the Delphi Benefit Guarantee Agreements, in connection with Delphi's commencement in October 2005 of Chapter 11 proceedings under the Bankruptcy Code. In June 2007 Old GM entered into a memorandum of understanding with Delphi and the UAW (Delphi UAW MOU) that included terms relating to the consensual triggering, under certain circumstances, of the Delphi Benefit Guarantee Agreements as well as additional terms relating to Delphi's restructuring. Under the Delphi UAW MOU, Old GM also agreed to pay for certain healthcare costs of Delphi retirees and their beneficiaries in order to provide a level of benefits consistent with those provided to Old GM's retirees and their beneficiaries under the Mitigation Plan, if Delphi terminated OPEB benefits. In August 2007 Old GM also entered into memoranda of understanding with Delphi and the IUE-CWA and with Delphi and the USW containing terms consistent with the comprehensive Delphi UAW MOU.

Delphi-GM Settlement Agreements

In September 2007 and as amended at various times through September 2008, Old GM and Delphi entered into the Delphi-GM Settlement Agreements consisting of the Global Settlement Agreement (GSA), the Master Restructuring Agreement (MRA) and the Implementation Agreements with the UAW, IUE-CWA and the USW (Implementation Agreements). The GSA was intended to resolve outstanding issues between Delphi and Old GM that arose before Delphi's emergence from its Chapter 11 proceedings. The MRA was intended to govern certain aspects of Old GM's ongoing commercial relationship with Delphi. The Implementation Agreements addressed a limited transfer of pension assets and liabilities, and the triggering of the benefit guarantees on the basis set forth in term sheets to the Implementation Agreements. In September 2008 the Bankruptcy Court entered an order in Delphi's Chapter 11 proceedings approving the Amended Delphi-GM Settlement Agreements which then became effective.

The more significant items contained in the Amended Delphi-GM Settlement Agreements included Old GM's commitment to:

- Reimburse Delphi for its costs to provide OPEB to certain of Delphi's hourly retirees from December 31, 2006 through the date that Delphi ceases to provide such benefits and assume responsibility for OPEB going forward;

- Reimburse Delphi for the normal cost of credited service in Delphi's pension plan between January 1, 2007 and the date its pension plans are frozen;

- First hourly pension transfer — Transfer net liabilities of $2.1 billion from the Delphi Hourly Rate Plan (Delphi HRP) to Old GM's U.S. hourly pension plan in September 2008;

- Second hourly pension transfer — Transfer the remaining Delphi HRP net liabilities upon Delphi's substantial consummation of its plan of reorganization (POR) subject to certain conditions being met;

- Reimburse Delphi for all retirement incentives and half of the buyout payments made pursuant to the various attrition program provisions and to reimburse certain U.S. hourly buydown payments made to certain hourly employees of Delphi;

- Award certain future product programs to Delphi, provide Delphi with ongoing preferential sourcing for other product programs, eliminate certain previously agreed upon price reductions, and restrict the ability to re-source certain production to alternative suppliers;

- Labor cost subsidy — Reimburse certain U.S. hourly labor costs incurred to produce systems, components and parts for GM vehicles from October 2006 through September 2015 at certain U.S. facilities owned or to be divested by Delphi;

- Production cash burn support — Reimburse Delphi's cash flow deficiency attributable to production at certain U.S. facilities that continue to produce systems, components and parts for GM vehicles until the facilities are either closed or sold by Delphi;

- Facilitation support — Pay Delphi $110 million in both 2009 and 2010 in quarterly installments in connection with certain U.S. facilities owned by Delphi until Delphi's emergence from its Chapter 11 proceedings;

- Temporarily accelerate payment terms for Delphi's North American sales to Old GM upon substantial consummation of its POR, until 2012;

- Reimburse Delphi, beginning in January 2009, for actual cash payments related to workers compensation, disability, supplemental unemployment benefits and severance obligations for all current and former UAW-represented hourly active and inactive employees; and

- Guarantee a minimum recovery of the net working capital that Delphi has invested in certain businesses held for sale.

The GSA also resolved all claims in existence at its effective date (with certain limited exceptions) that either Delphi or Old GM had or may have had against the other. The GSA and related agreements with Delphi's unions released us, Old GM and our related parties (as defined), from any claims of Delphi and its related parties (as defined), as well as any employee benefit related claims of Delphi's unions and hourly employees. Additionally, the GSA provided that Old GM would receive certain administrative claims against the Delphi bankruptcy estate or preferred stock in the emerged entity.

As a result of the September 2008 implementation of the Delphi-GM Settlement Agreements Old GM paid $1.0 billion and $1.4 billion to Delphi in the period January 1, 2009 through July 9, 2009 and the year ended December 31, 2008 in settlement of amounts accrued to date against Old GM commitments. We paid $288 million in 2009 prior to the consummation of the DMDA in settlement of amounts accrued to date against our commitments.

Upon consummation of the DMDA, the MRA was terminated with limited exceptions, and we and Delphi waived all claims against each other under the GSA.

IUE-CWA and USW Settlement Agreement

As more fully discussed in Note 20, in September 2009 we entered into a settlement agreement with MLC, the IUE-CWA and the USW that resolved the Delphi Benefit Guarantee Agreements with these unions. The settlement agreement provides for a measure of retiree healthcare and life insurance to be provided to certain retirees represented by these unions. The agreement also provides certain IUE-CWA and USW retirees from Delphi a pension "top up" equal to the difference between the amount of PBGC pension payments and the amount of pension benefits that otherwise would have been paid by the Delphi HRP according to its terms had it not been terminated. Further, the settlement agreement provided certain current employees of Delphi or Delphi divested units up to seven years credited service in Old GM's U.S. hourly defined benefit pension plan, commencing November 30, 2008, the date that Delphi froze the Delphi HRP. The agreement was approved by the Bankruptcy Court in November 2009.

Advance Agreements

In the period January 1, 2009 to July 9, 2009 and the year ended December 31, 2008 Old GM entered into various agreements and amendments to such agreements to advance a maximum of $950 million to Delphi, subject to Delphi's continued satisfaction of certain conditions and milestones. Through the consummation of the DMDA, we entered into further amendments to the agreements, primarily to extend the deadline for Delphi to satisfy certain milestones, which if not met, would have prevented Delphi from continued access to the credit facility. At October 6, 2009 $550 million had been advanced under the credit facility. Upon consummation of the DMDA, we waived our rights to the advanced amounts that became consideration to Delphi and other parties under the DMDA. Refer to Note 5 for additional information on the consummation of the DMDA.

Payment Terms Acceleration Agreement

In October 2008 subject to Delphi obtaining an extension or other accommodation of its DIP financing through June 30, 2009, Old GM agreed to temporarily accelerate payment of North American payables to Delphi in the three months ended June 30, 2009. In January 2009 Old GM agreed to immediately accelerate $50 million in advances towards the temporary acceleration of North American payables. Additionally, Old GM agreed to accelerate $150 million and $100 million of North American payables to Delphi in March and April of 2009 bringing the total amount accelerated to the total agreed upon $300 million. Upon consummation of the DMDA, we waived our rights to the accelerated payments that became consideration to Delphi and other parties under the DMDA.

Delphi Master Disposition Agreement

In July 2009 we, Delphi and the PBGC negotiated an agreement to be effective upon consummation of the DMDA regarding the settlement of PBGC's claims from the termination of the Delphi pension plans and the release of certain liens with the PBGC against Delphi's foreign assets. In return, the PBGC received a payment of $70 million from us and was granted a 100% interest in Class C Membership Interests in New Delphi which provide for the PBGC to participate in predefined equity distributions. We maintain the obligation to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the Delphi Benefit Guarantee Agreements.

In October 2009 we consummated the transaction contemplated by the DMDA with Delphi, New Delphi, Old GM and other sellers and other buyers that are party to the DMDA, as more fully described in Note 5. Upon consummation of the DMDA, the MRA was terminated with limited exceptions, and we and Delphi waived all claims against each other under the GSA. Upon consummation of the DMDA we settled our commitments to Delphi accrued to date except for the obligation to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the Delphi Benefit Guarantee Agreements that we continue to maintain. In addition, the DMDA establishes an ongoing commercial relationship with New Delphi. We also agreed to continue all existing Delphi supply agreements and purchase orders for GMNA to the end of the related product program, and New Delphi agreed to provide us with access rights designed to allow us to operate specific sites on defined triggering events to provide us with protection of supply.

Delphi Charges

The following table summarizes charges that have been recorded with respect to the various agreements with Delphi (dollars in millions):

	Successor	Predecessor	
	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Other automotive expenses, net	$ 8	$184	$4,797
Automotive cost of sales	193	142	555
Reorganization gains, net	—	662	—
Total Delphi charges	$201	$988	$5,352

These charges reflect the best estimate of obligations associated with the various Delphi agreements, including obligations under the Delphi Benefit Guarantee Agreements, updated to reflect the DMDA. At July 9, 2009 these charges reflect the obligation to the PBGC upon consummation of the DMDA, consisting of the estimated fair value of the PBGC Class C Membership Interests in New Delphi of $317 million and the payment of $70 million due from us. Further, at July 9, 2009 these charges reflect an estimated value of $966 million pertaining to claims we have against Delphi that were waived upon consummation of the DMDA. The estimated value of the claims represents the excess after settlement of certain pre-existing commitments to Delphi of the fair value of Nexteer, the four domestic facilities and the investment in New Delphi over the cash consideration paid under the DMDA. Refer to Note 5 for additional information on the total consideration paid under the DMDA and the allocation of such consideration to the various units of account.

The charges recorded in the year ended December 31, 2008 primarily related to estimated losses associated with the guarantee of Delphi's hourly pension plans and the write off of any estimated recoveries from Delphi. The charges also reflected a benefit of $622 million due to a reduction in the estimated liability associated with Delphi OPEB related costs for Delphi active employees and retirees, based on the terms of the New VEBA, who were not previously participants in Old GM's plans. The terms of the New VEBA also reduced Old GM's OPEB obligation for Delphi employees who returned to Old GM and became participants in the UAW hourly medical plan primarily in 2006. Such benefit is included in the actuarial gain recorded in our UAW hourly medical plan. Refer to Note 22 for additional information on the Delphi benefit plans.

Note 23. Income Taxes

Consolidated

The following table summarizes Income (loss) before income taxes and equity income (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
U.S. income (loss)	$2,648	$(6,647)	$105,420	$(26,742)
Non-U.S. income (loss)	3,089	1,364	2,356	(2,729)
Income (loss) before income taxes and equity income	$5,737	$(5,283)	$107,776	$(29,471)

Provision (Benefit) for Income Taxes

The following table summarizes the provision (benefit) for income taxes (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Current income tax expense (benefit)				
U.S. federal	$ (10)	$ 7	$ (60)	$ (31)
Non-U.S.	441	421	(522)	668
U.S. state and local	(1)	(1)	16	(34)
Total current	430	427	(566)	603
Deferred income tax expense (benefit)				
U.S. federal	(25)	(1,204)	110	(163)
Non-U.S.	259	(52)	(716)	1,175
U.S. state and local	8	(171)	6	151
Total deferred	242	(1,427)	(600)	1,163
Total income tax expense (benefit)	$672	$(1,000)	$(1,166)	$1,766

Annual tax provisions include amounts considered sufficient to pay assessments that may result from examination of prior year tax returns.

The following table summarizes the cash paid (received) for income taxes (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Cash paid (received) for income taxes	$357	$(65)	$(1,011)	$718

Provisions are made for estimated U.S. and non-U.S. income taxes, less available tax credits and deductions, which may be incurred on the remittance of our and Old GM's share of basis differences in investments in foreign subsidiaries and corporate joint ventures not deemed to be permanently reinvested. Taxes have not been provided on basis differences in investments in foreign subsidiaries and corporate joint ventures which are deemed permanently reinvested of $6.9 billion and $5.5 billion at December 31, 2010 and 2009. Quantification of the deferred tax liability, if any, associated with permanently reinvested earnings is not practicable.

The following table summarizes a reconciliation of the provision (benefit) for income taxes compared with the amounts at the U.S. federal statutory rate (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Tax at U.S. federal statutory income tax rate	$ 2,008	$(1,849)	$ 37,721	$(10,315)
State and local tax expense	334	(559)	(260)	(1,151)
Foreign income taxed at other than 35%	1,579	64	(119)	1,229
Taxes on unremitted earnings of subsidiaries	(10)	(151)	(12)	(235)
Change in valuation allowance	(2,903)	1,338	6,609	13,064
Change in statutory tax rates	—	163	1	151
Research and development incentives	(235)	(14)	(113)	(367)
Medicare prescription drug benefit	—	—	18	(104)
Settlements of prior year tax matters	(170)	—	—	—
VEBA contribution	—	(328)	—	—
Non-taxable reorganization gain	—	—	(45,564)	—
Foreign currency remeasurement	143	340	207	(608)
Other adjustments	(74)	(4)	346	102
Total income tax expense (benefit)	$ 672	$(1,000)	$ (1,166)	$ 1,766

Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities at December 31, 2010 and 2009 reflect the effect of temporary differences between amounts of assets, liabilities and equity for financial reporting purposes and the bases of such assets, liabilities and equity as measured by tax laws, as well as tax loss and tax credit carryforwards.

The following table summarizes the components of temporary differences and carryforwards that give rise to deferred tax assets (liabilities) (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Deferred tax assets		
Postretirement benefits other than pensions	$ 3,884	$ 5,231
Pension and other employee benefit plans	7,127	8,951
Warranties, dealer and customer allowances, claims and discounts	4,276	4,255
Property, plants and equipment	2,275	3,333
Capitalized research expenditures	5,033	4,693
Tax carryforwards	20,109	18,880
Miscellaneous U.S.	2,387	2,693
Miscellaneous non-U.S.	357	1,049
Total deferred tax assets before valuation allowances	45,448	49,085
Less: Valuation allowances	(42,979)	(45,281)
Net deferred tax assets	2,469	3,804
Deferred tax liabilities		
Intangible assets	2,609	3,642
Total deferred tax liabilities	2,609	3,642
Net deferred tax assets (liabilities)	$ (140)	$ 162

The following table summarizes deferred tax assets (liabilities) (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Current deferred tax assets	$ 782	$ 462
Current deferred tax liabilities	(23)	(57)
Non-current deferred tax assets	308	564
Non-current deferred tax liabilities	(1,207)	(807)
Net deferred tax assets (liabilities)	$ (140)	$ 162

The following table summarizes the amount and expiration dates of our operating loss and tax credit carryforwards at December 31, 2010 (dollars in millions):

	Successor	
	Expiration Dates	Amounts
U.S. federal and state loss carryforwards	2011-2030	$11,050
Non-U.S. loss and tax credit carryforwards	Indefinite	1,088
Non-U.S. loss and tax credit carryforwards	2011-2030	4,173
U.S. alternative minimum tax credit	Indefinite	699
U.S. general business credits (a)	2011-2030	1,956
U.S. foreign tax credits	2011-2018	1,143
Total loss and tax credit carryforwards		$20,109

(a) The general business credits are principally composed of research and experimentation credits.

Valuation Allowances

The valuation allowances recognized relate to certain net deferred tax assets in U.S. and non-U.S. jurisdictions. The following table summarizes the change in the valuation allowance (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Beginning balance	$45,281	$42,666	$ 59,777	$42,208
Additions (Reversals)				
U.S.	(2,196)	2,226	(14,474)	14,146
Canada	63	405	(802)	759
Germany	(139)	67	(792)	140

Brazil	1	1	(442)	(135)
South Korea	(121)	(221)	321	724
Australia	(39)	7	190	340
U.K.	(121)	109	62	330
Sweden	(58)	33	(1,057)	(58)
Other	(70)	28	83	214
Ending balance	$42,979	$45,281	$ 42,666	$59,777

In July 2009 Old GM recorded adjustments resulting in a net decrease in valuation allowances of $20.7 billion as a result of the 363 Sale and fresh-start reporting. The net decrease primarily resulted from U.S. federal and state tax attribute reduction of $12.2 billion related to debt cancellation income, a net difference of $5.5 billion between fresh-start reporting and historical U.S. GAAP bases of assets and liabilities at entities with valuation allowances, net valuation allowances of $1.7 billion associated with assets and liabilities retained by Old GM, a foreign tax attribute reduction of $0.9 billion and release of valuation allowances of $0.7 billion. After the deconsolidation of our Saab unit in February 2009, corresponding deferred taxes and valuation allowances in Sweden were no longer recorded in Old GM financial statements.

Old GM established or released the following significant valuation allowances for jurisdictions not on a full valuation allowance throughout the applicable period (dollars in millions):

	Predecessor	
Jurisdiction(s)	Valuation Allowance Charge/(Release)	Period Ended
Brazil	$(465)	July 9, 2009
Various non-U.S.	$(286)	July 9, 2009
South Korea	$ 725	December 31, 2008
Various non-U.S.	$ 329	December 31, 2008
Australia	$ 284	December 31, 2008
Texas	$ 152	December 31, 2008
Spain	$ 206	March 31, 2008
United Kingdom	$ 173	March 31, 2008

Over the past several years, we and Old GM have accumulated pre-tax losses in the U.S. and various non-U.S. jurisdictions. These historical pre-tax losses were driven by several factors including but not limited to instability of the global economic environment, automotive price competition, relatively high cost structure, unfavorable commodity prices, unfavorable regulatory and tax environments and a challenging foreign currency exchange environment. By December 31, 2008, after weighing these objective and verifiable negative evidence factors with all other available positive and negative evidence, Old GM determined it was more likely than not it would not realize its net deferred tax assets, and established valuation allowances for major jurisdictions including the U.S., Canada, Brazil, Australia, South Korea, Germany, Spain and the United Kingdom. Additional concerns arose related to the U.S. parent company's liquidity which led us to establish valuation allowances for Texas and various non-U.S. jurisdictions, even though many of these jurisdictions had historical profits and no other significant negative evidence factors.

In 2009 the U.S. parent company liquidity concerns were resolved in connection with the Chapter 11 Proceedings and the 363 Sale, and many non-U.S. jurisdictions, including Brazil, were generating and projecting U.S. GAAP and local taxable income. To the extent there were no other significant negative evidence factors, Old GM determined it was more likely than not it would realize its net deferred tax assets and reversed valuation allowances in Brazil and various non-U.S. jurisdictions.

Although we are a new company, and our ability to achieve future profitability was enhanced by the cost and liability reductions that occurred as a result of the Chapter 11 Proceedings and 363 Sale, Old GM's historic operating results remain relevant as they are reflective of the industry and the effect of economic conditions. The fundamental businesses and inherent risks in which we globally operate did not change from those in which Old GM operated. As such, subsequent to the Chapter 11 Proceedings and the 363 Sale, due to objective and verifiable negative evidence including cumulative and current losses, we determined it was still more likely than not the net deferred tax assets would not be realized in major jurisdictions including the U.S., Canada, Australia, South Korea, Germany, Spain and the United Kingdom.

At December 31, 2010 objective and verifiable negative evidence continues to outweigh positive evidence in our key valuation allowance jurisdictions. If, in the future, we generate taxable income in jurisdictions where we have recorded full valuation allowances, on a sustained basis, our conclusion regarding the need for full valuation allowances in these tax jurisdictions could change, resulting in the reversal of some or all of the valuation allowances. If our operations generate taxable income prior to reaching profitability on a sustained basis, we would reverse a portion of the valuation allowance related to the corresponding realized tax benefit for that period, without changing our conclusions on the need for a full valuation allowance against the remaining net deferred tax assets.

Uncertain Tax Positions

The following table summarizes gross unrecognized tax benefits before valuation allowances and the amount that would favorably affect the effective tax rate in future periods after valuation allowances (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Gross unrecognized tax benefits before valuation allowances	$5,169	$5,410
Amount that would favorably affect effective tax rate in future	$ 785	$ 618
Amount of liability for uncertain tax positions benefits netted against deferred tax assets in the same jurisdiction (a)	$3,605	$4,007

(a) The remaining uncertain tax positions are classified as current and non-current liabilities.

The following table summarizes activity of the total amounts of unrecognized tax benefits (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Beginning balance	$5,410	$4,096	$2,803	$2,754
Additions to tax positions in the current year	195	1,454	1,493	208
Additions to tax positions in prior years	803	22	594	751
Reductions to tax positions in the current year	—	(44)	(25)	(47)
Reductions to tax positions in prior years	(475)	(128)	(626)	(725)
Reductions in tax positions due to lapse of statutory limitations	(18)	—	(281)	—
Settlements	(761)	(111)	(16)	(275)
Other	15	121	154	137
Ending balance	$5,169	$5,410	$4,096	$2,803

The following tables summarize information regarding income tax related interest and penalties (dollars in millions):

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Interest income	$13	$—	$249	$26
Interest expense (benefit)	$20	$30	$ (31)	$13
Penalties	$ 1	$—	$ 30	$ 4

	Successor	
	December 31, 2010	December 31, 2009
Accrued interest receivable	$ —	$ 10
Accrued interest payable	$250	$275
Accrued penalties	$119	$137

Other Matters

Most of the tax attributes generated by Old GM and its domestic and foreign subsidiaries (net operating loss carryforwards and various income tax credits) survived the Chapter 11 Proceedings, and we are using or expect to use the tax attributes to reduce future tax liabilities. The ability to utilize certain of the U.S. tax attributes in future tax periods could be limited by Section 382(a) of the Internal Revenue Code. On November 1, 2010, we amended our certificate of incorporation to minimize the likelihood of an ownership change occurring for Section 382 purposes. In Germany, we have net operating loss carryforwards for corporate income tax and trade tax purposes through November 30, 2009 that, as a result of reorganizations that took place in 2008 and 2009, were not recorded as deferred tax assets. Although we received a ruling from the German tax authorities confirming the availability of these losses for carry over on January 26, 2011, a European Union Commission review concluded the German law on which the ruling was based is void and therefore reaffirmed these loss carryforwards are not available. We are evaluating options that would allow these loss carryforwards to reduce future taxable income. In Australia, we have net operating loss carryforwards which are subject to meeting a “Same Business Test” requirement that we assess on a quarterly basis.

In the U.S., we have continuing responsibility for Old GM’s open tax years. Old GM’s federal income tax returns for 2004 through 2006 were audited by the Internal Revenue Service (IRS), and the review was concluded in February 2010. The IRS is currently auditing Old GM’s federal 2007 and 2008 tax years. The IRS is also reviewing the January 1 through July 9, 2009 Old GM tax year as part of the IRS Compliance Assurance Process (CAP), the objective of which is to reach early issue resolution and increase audit efficiency. Our July 10, 2009 through December 31, 2009 and 2010 tax years are also under IRS CAP review. In addition to the U.S., income tax returns are filed in multiple jurisdictions and are subject to examination by taxing authorities throughout the world. We have open tax years from 2001 to 2009 with various significant tax jurisdictions. These open years contain matters that could be subject to differing interpretations of applicable tax laws and regulations as they relate to the amount, character, timing or inclusion of revenue and expenses or the sustainability of income tax credits for a given audit cycle. Given the global nature of our operations, there is a risk that transfer pricing disputes may arise.

In May 2009 the U.S. and Canadian governments resolved a transfer pricing matter for Old GM which covered the tax years 2001 through 2007. In the three months ended June 30, 2009 this resolution resulted in a tax benefit of $692 million and interest of $229 million. Final administrative processing of the Canadian case closing occurred in late 2009, and final administrative processing of the U.S. case closing occurred in February 2010.

In June 2010 a Mexican income tax audit covering the 2002 and 2003 years was concluded and an assessment of 2.0 billion pesos (equivalent to $165 million) including tax, interest and penalties was issued. We do not agree with the assessment and intend to appeal. We believe we have adequate reserves established and collection of the assessment will be suspended during the appeal period and any subsequent proceedings through U.S. and Mexican competent authorities.

In November 2010 an agreement was reached with the Canadian government to resolve various income tax matters in the years 2003 through 2009. In the three months ended December 31, 2010, this resolution resulted in a tax benefit of $140 million including interest.

Based on an unfavorable Brazilian Supreme court decision rendered to a separate Brazilian taxpayer on a similar income tax matter, it is likely we will settle a contested income tax matter for $242 million in the next twelve months. This amount was fully reserved in a prior period.

At December 31, 2010, aside from the Brazilian matter, it is not possible to reasonably estimate the expected change to the total amount of unrecognized tax benefits in the next twelve months.

Transfers In and/or Out of Level 3

At December 31, 2010 our non-performance risk remains unobservable through a liquid credit default swap market. In the three months ended December 31, 2010 we determined that our non-performance risk no longer represents a significant input in the determination of the fair value of our derivatives. The effect of our non-performance risk in the valuation has been reduced due to the reduction in the remaining duration and magnitude of these net derivative liability positions. In October 2010 we transferred foreign currency derivatives with a fair market value of $183 million out of Level 3 to Level 2.

In the period January 1, 2009 through July 9, 2009 Old GM's mortgage- and asset-backed securities were transferred out of Level 3 to Level 2 as the significant inputs used to measure fair value and quoted prices for similar instruments were determined to be observable in an active market.

For periods presented from June 1, 2009 through September 30, 2010 nonperformance risk for us and Old GM was not observable through a liquid credit default swap market as a result of the Chapter 11 Proceedings and lack of traded instruments for us after the 363 Sale. As a result, foreign currency derivatives with a fair market value of $1.6 billion were transferred into Level 3 from Level 2 in the period January 1, 2009 through July 9, 2009.

In the three months ended March 31, 2009 Old GM determined the credit profile of certain foreign subsidiaries was equivalent to Old GM's nonperformance risk which was observable through the credit default swap market and bond market based on prices for recent trades. Foreign currency derivatives with a fair value of $2.1 billion were transferred from Level 3 into Level 2.

The following tables summarize the activity for financial instruments classified in Level 3 (dollars in millions):

	Successor

Short-Term and Long-Term Debt

We determined the fair value of debt based on a discounted cash flow model which used benchmark yield curves plus a spread that represented the yields on traded bonds of companies with comparable credit ratings and risk profiles.

The following table summarizes the carrying amount and estimated fair values of short-term and long-term debt (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Carrying amount (a)	$4,630	$15,783
Fair value (a)	$4,840	$16,024

(a) Accounts and notes receivable, net and Accounts payable (principally trade) are not included because the carrying amount approximates fair value due to their short-term nature.

Ally Financial Common and Preferred Stock

At December 31, 2010 we estimated the fair value of Ally Financial common stock using a market approach that applies the average price to tangible book value multiples of comparable companies to the consolidated Ally Financial tangible book value. This approach provides our best estimate of the fair value of our investment in Ally Financial common stock at December 31, 2010 due to Ally Financial's transition to a bank holding company and less readily available information with which to value Ally Financial's business operations individually. The significant inputs used in our fair value analysis were Ally Financial's December 31, 2010 financial statements, as well as the financial statements and price to tangible book value multiples of comparable companies in the banking and finance industry.

At December 31, 2009 we estimated the fair value of our investment in Ally Financial common stock using a market approach based on the average price to tangible book value multiples of comparable companies to each of Ally Financial's Auto Finance, Commercial Finance, Mortgage, and Insurance operations to determine the fair value of the individual operations. These values were aggregated to estimate the fair value of Ally Financial's common stock. The significant inputs used to determine the appropriate multiple for Ally Financial and used in our analysis were as follows:

- Ally Financial's December 31, 2009 financial statements, as well as the financial statements and price to tangible book value multiples of comparable companies in the Auto Finance, Commercial Finance and Insurance industries;

- Historical segment equity information separately provided by Ally Financial;

- Expected performance of Ally Financial, as well as our view on its ability to access capital markets; and
- The value of Ally Financial's mortgage operations, taking into consideration the continuing challenges in the housing markets and mortgage industry, and its need for additional liquidity to maintain business operations.

At December 31, 2010 and 2009 we calculated the fair value of our investment in Ally Financial's preferred stock using a discounted cash flow approach. The present value of the cash flows was determined using assumptions regarding the expected receipt of dividends on Ally Financial's preferred stock and the expected call date.

The following table summarizes the carrying amount and estimated fair value of Ally Financial common and preferred stock (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Common stock		
Carrying amount (a)	$ 964	$970
Fair value	$1,031	$970
Preferred stock		
Carrying amount	$ 665	$665
Fair value	$1,055	$989

(a) Investment in Ally Financial common stock at December 31, 2010 and 2009 includes the 9.9% and 16.6% held directly and indirectly through an independent trust.

Automotive Financing

Fair Value Measurements on a Recurring Basis

The following table summarizes the financial instruments measured at fair value on a recurring basis (dollars in millions):

	Successor			
	Fair Value Measurements on a Recurring Basis at December 31, 2010			
	Level 1	Level 2	Level 3	Total
Assets				
Cash equivalents (a)				
Money market funds	$ 167	$—	$—	$ 167
Restricted cash (a)				
Money market funds	952	—	—	952
Derivatives				
Interest rate swaps (b)	—	—	23	23
Interest rate caps (b)	—	8	—	8
Total assets	$1,119	$ 8	$23	$1,150
Liabilities				
Derivatives				
Interest rate swaps (b)	$ —	$—	$47	$ 47
Interest rate caps (b)	—	8	—	8
Foreign currency contracts	—	2	—	2
Total liabilities	$	$10	$47	$ 57

(a) Cash deposits and cash held in Guaranteed Investment Contracts have been excluded.

(b) The fair value of interest rate cap and swap derivatives are based upon quoted market prices when available. If quoted prices are not available, the fair value is estimated by discounting future net cash flows expected to be settled using a current risk adjusted rate.

Transfers In and/or Out of Level 3

The following table summarizes the activity for financial instruments classified in Level 3 (dollars in millions):

	Successor	
	Assets	(Liabilities)
	Interest Rate Swap Derivatives	Interest Rate Swap Derivatives
Balance at October 1, 2010	$27	$(61)
Transfers in and/or out of Level 3	—	—
Total realized/unrealized gains (losses)		
Included in earnings	1	(1)
Included in other comprehensive income (loss)	—	—
Settlements	(5)	15
Balance at December 31, 2010	$23	$(47)

The following table summarizes estimated fair values, carrying amounts and various methods and assumptions used in valuing GM Financial's financial instruments (dollars in millions):

	December 31, 2010	
	Carrying Amount	Estimated Fair Value
Financial assets		
Finance receivables, net (a)	$8,197	$8,186
Financial liabilities		
Credit facilities(b)	$ 832	$ 832
Securitization notes payable (c)	$6,128	$6,107
Senior notes and convertible senior notes (c)	$ 72	$ 72

(a) The fair value of the finance receivables is estimated based upon forecasted cash flows discounted using a pre-tax weighted-average cost of capital. The forecast includes among other things items such as prepayment, defaults, recoveries and fee income assumptions.

(b) Credit facilities have variable rates of interest and maturities of three years or less. The carrying amount is considered to be a reasonable estimate of fair value.

(c) The fair values of the securitization notes payable and senior notes and convertible senior notes are based on quoted market prices, when available. If quoted market prices are not available, the fair value is estimated by discounting future net cash flows expected to be settled using a current risk-adjusted rate.

Note 25. Restructuring and Other Initiatives

Automotive

We have and Old GM had previously executed various restructuring and other initiatives, and we plan to execute additional initiatives in the future, if necessary, in order to preserve adequate liquidity, to align manufacturing capacity and other costs with prevailing global automotive production and to improve the utilization of remaining facilities. Related charges are recorded in Automotive cost of sales and Automotive selling, general and administrative expense.

Refer to Note 26 for asset impairment charges related to our restructuring initiatives and Note 20 for pension and other postretirement benefit charges resulting from our hourly and salaried employee separation initiatives, including special attrition programs.

GM Financial did not execute any new restructuring initiatives in the three months ended December 31, 2010. Charges and payments for restructuring activities in the three months ended December 31, 2010 related to previously announced programs are not significant.

The following table summarizes Automotive restructuring reserves (excluding restructuring reserves related to dealer wind-down agreements) and charges by segment, including postemployment benefit reserves and charges (dollars in millions):

	Successor				
	GMNA	GME	GMIO	GMSA	Total
Balance at July 10, 2009	$2,905	$ 433	$ 32	$ 16	$ 3,386
Additions	44	37	76	9	166

Ending balance including effect of application of fresh-start reporting	$ 2,905	$ 433	$ 32	$ 16	$ 3,386

(a) The remaining cash payments related to these restructuring reserves primarily relate to postemployment benefits to be paid.

GM

GMNA recorded charges, interest accretion and other, and revisions to estimates that decreased the restructuring reserves by $275 million in the year ended December 31, 2010. The decreases were primarily related to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites and revisions to productivity initiatives, partially offset by Canadian restructuring activities.

GME recorded charges, interest accretion and other, and revisions to estimates of $840 million in the year ended December 31, 2010 for separation programs primarily related to the following initiatives:

- Separation charges of $527 million related to the closure of the Antwerp, Belgium facility which affects 2,600 employees.
- Separation charges of $72 million and revisions to estimates to decrease the reserve by $9 million related to separation/layoff plans and an early retirement plan in Spain which affects 1,200 employees.
- Separation charges of $31 million related to a voluntary separation program in the United Kingdom.
- Separation charges of $95 million and interest accretion and other of $104 million related to a voluntary separation program and previously announced programs in Germany.

We have committed to a restructuring plan for GME, and as of December 31, 2010 we expect to expend up to $1.4 billion. Of this amount $0.8 billion was recorded in 2010 as charges for the separation programs described above. We expect to incur an additional $0.6 billion primarily in 2011 and 2012 to complete these programs. Because these programs involve voluntary separations, no liabilities are recorded until offers to employees are accepted.

GMNA recorded charges, interest accretion and other, and revisions to estimates of $89 million in the period July 10, 2009 through December 31, 2009 for separation programs primarily related to the following initiatives:

- The restructuring reserves were increased by $213 million due to an increase in the SUB and TSP accrual of $183 million related to capacity actions, productivity initiatives, acquisition of Nexteer and four domestic facilities and Canadian restructuring activities of $30 million.

- The salaried and hourly workforce severance accruals were reduced by $146 million as a result of elections subsequently made by terminating employees. Such amounts were reclassified as special termination benefits and were funded from the U.S. defined benefit pension plans and other applicable retirement benefit plans.

GME recorded charges, interest accretion and other, and revisions to estimates of $72 million in the period July 10, 2009 through December 31, 2009 primarily related to separation charges for early retirement programs and additional liability adjustments, primarily in Germany.

GMIO recorded charges, interest accretion and other, and revisions to estimates of $77 million in the period July 10, 2009 through December 31, 2009, primarily related to separation charges of $72 million related to restructuring programs in Australia for salaried and hourly employees.

Dealer Wind-downs

We market vehicles worldwide through a network of independent retail dealers and distributors. As part of achieving and sustaining long-term viability and the viability of our dealer network, we determined that a reduction in the number of GMNA dealerships was necessary. At December 31, 2010 there were 5,200 dealers in GMNA compared to 6,500 at December 31, 2009. Certain dealers in the U.S. that had signed wind-down agreements with us elected to file for reinstatement through a binding arbitration process. At December 31, 2010 the arbitration process had been resolved. As a result of the arbitration process we offered 332 dealers reinstatement in their entirety and 460 existing dealers reinstatement of certain brands.

The following table summarizes GMNA's restructuring reserves related to dealer wind-down agreements in the period July 10, 2009 through December 31, 2009 and in the year ended December 31, 2010 (dollars in millions):

	Successor		
	U.S.	Canada and Mexico	Total
Balance at July 10, 2009	$ 398	$ 118	$ 516
Additions	229	46	275
Payments	(167)	(118)	(285)
Transfer to legal reserve	—	(17)	(17)
Effect of foreign currency	—	12	12
Balance at December 31, 2009	460	41	501
Revisions to estimates	(2)	9	7
Payments	(323)	(43)	(366)
Effect of foreign currency	—	2	2
Balance at December 31, 2010	$ 135	$ 9	$ 144

Restructuring reserves related to dealer wind-down agreements in the period July 10, 2009 through December 31, 2009 increased primarily due to additional accruals recorded for wind-down payments to Saturn dealerships in accordance with the deferred termination agreements that Saturn dealers signed.

Old GM

GMNA recorded charges, interest accretion and other, and revisions to estimates of $1.5 billion in the period January 1, 2009 through July 9, 2009 for separation programs related to the following initiatives:

- Postemployment benefit charges in the U.S. of $825 million related to 13,000 hourly employees who participated in the 2009 Special Attrition Programs.
- SUB and TSP related charges in the U.S. of $707 million, recorded as an additional liability determined by an actuarial analysis at the implementation of the SUB and TSP and related suspension of the JOBS Program.
- Revisions to estimates of $401 million to decrease the reserve, primarily related to $335 million for the suspension of the JOBS Program and $141 million for estimated future wages and benefits due to employees who participated in the 2009 Special Attrition Programs; offset by a net increase of $86 million related to Canadian salaried workforce reductions and other restructuring initiatives in Canada.
- Separation charges of $250 million for a U.S. salaried severance program to allow 6,000 terminated employees to receive ongoing wages and benefits for up to 12 months.
- Postemployment benefit charges in Canada of $38 million related to 380 hourly employees who participated in a special attrition program at the Oshawa Facility.

GME recorded charges, interest accretion and other, and revisions to estimates of $31 million in the period January 1, 2009 through July 9, 2009 primarily related to separation charges for early retirement programs and additional liability adjustments, primarily in Germany.

GMIO recorded charges, interest accretion and other, and revisions to estimates of $27 million in the period January 1, 2009 through July 9, 2009 primarily related to separation charges in Australia of $19 million related to a facility idling. The program affects employees who left through December 2009.

GMSA recorded charges, interest accretion and other, and revisions to estimates of $47 million in the period January 1, 2009 through July 9, 2009 related to voluntary and involuntary separation programs in South America affecting 3,300 salaried and hourly employees.

GMNA recorded charges, interest accretion and other, and revisions to estimates of $2.5 billion in the year ended December 31, 2008 for separation programs related to the following initiatives:

- Postemployment benefit costs in the U.S. and Canada of $2.1 billion, which was comprised of $1.7 billion related to previously announced capacity actions and $407 million for special attrition programs.
- Revisions to estimates that increased the reserve of $320 million.
- Separation charges of $40 million for a U.S. salaried severance program, which allowed terminated employees to receive ongoing wages and benefits for up to 12 months.

GME recorded charges, interest accretion and other, and revisions to estimates of $286 million in the year ended December 31, 2008 for separation programs related to the following initiatives:

- Separation charges in Germany of $107 million related to early retirement programs, along with additional minor separations under other current programs.
- Separation charges in Belgium of $92 million related to current and previously announced programs.
- Separation charges of $43 million related to separation programs and the cost of previously announced initiatives, which include voluntary separations, in Sweden, the United Kingdom, Spain and France.

GMIO recorded charges, interest accretion and other, and revisions to estimates of $96 million in the year ended December 31, 2008 primarily related to separation charges of $76 million related to a facility idling in Australia.

GMSA recorded charges, interest accretion and other, and revisions to estimates of $31 million in the year ended December 31, 2008 related to separation charges in South America.

Dealer Wind-downs

The following table summarizes GMNA's restructuring reserves related to dealer wind-down agreements in the period January 1, 2009 through July 9, 2009 (dollars in millions):

(a) The year ended December 31, 2008 includes an increase in intersegment residual support and risk sharing reserves of $220 million recorded as a reduction of revenue in GMNA.

(b) Refer to Note 8 and Note 24 for additional information on marketable securities and financial instruments measured at fair value on a recurring basis.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Fair value measurements, excluding vehicles leased to rental car companies and automotive retail leases, utilized projected cash flows discounted at a rate commensurate with the perceived business risks related to the assets involved. Fair value measurements of vehicles leased to rental car companies utilized projected cash flows from vehicle sales at auction. Fair value measurements of automotive retail leases utilized discounted projected cash flows from lease payments and anticipated future auction proceeds.

The following tables summarize assets measured at fair value (all of which utilized Level 3 inputs) on a nonrecurring basis subsequent to initial recognition (dollars in millions):

GM

	Successor				
		Fair Value Measurements Using			
	Year Ended December 31, 2010 (a)	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Year Ended December 31, 2010 Total Losses

Equity and cost method investments (other than Ally Financial)	$ 1	$—	$—	$ 1	(4)
Vehicles leased to rental car companies (b)	$543 - 567	$—	$—	$543 - 567	(18)
Ally Financial common stock	$ 970	$—	$—	$ 970	(270)
Intangible assets	$ —	$—	$—	$ —	(21)
					$(315)

(a) Amounts represent the fair value measure (or range of measures) during the period.

(b) In the period July 10, 2009 through September 30, 2009 we recorded impairment charges of $12 million to write down vehicles leased to rental car companies to their fair value of $543 million. In the three months ended December 31, 2009 we recorded an impairment charge of $6 million to write down vehicles leased to rental car companies to their fair value of $567 million.

At December 31, 2009 we determined that indicators were present that suggested our investments in Ally Financial common and preferred stock could be impaired. Such indicators included the continuing deterioration in Ally Financial's mortgage operations, as evidenced by the strategic actions Ally Financial took in December 2009 to position itself to sell certain mortgage assets. These actions resulted in Ally Financial recording an increase in its provision for loan losses of $2.4 billion in the three months ended December 31, 2009. These indicators also included Ally Financial's receipt of $3.8 billion of additional financial support from the UST on December 30, 2009.

As a result of these impairment indicators, we evaluated the fair value of our investments in Ally Financial common and preferred stock and recorded an impairment charge of $270 million related to our Ally Financial common stock to record the investment at its estimated fair value of $970 million. We determined the fair value of these investments using valuation methodologies that were consistent with those we used in our application of fresh-start reporting. In applying these valuation methodologies at December 31, 2009, however, we updated the analyses to reflect changes in market comparables and other relevant assumptions.

(a) Amounts for the year ended December 31, 2010 include a gain on the reversal of an accrual for contingently issuable Adjustment Shares of $162 million, a gain on the sale of Saab of $123 million, a gain on the acquisition of GMS of $66 million and a gain on the sale of Nexteer of $60 million. Amounts for the period July 10, 2009 through December 31, 2009 include impairment charges related to Ally Financial common stock of $270 million. Amounts for the year ended December 31, 2008 include impairment charges related to Ally Financial Preferred Membership Interests of $1.0 billion.

Note 29. Stockholders' Equity (Deficit) and Noncontrolling Interests

Consolidated

Preferred Stock

We have 2.0 billion shares of preferred stock authorized, with a par value of $0.01 per share.

Series A Preferred Stock

At December 31, 2010 we had 276 million shares of Series A Preferred Stock issued and outstanding. The Series A Preferred Stock ranks senior with respect to liquidation preference and dividend rights to our common stock and Series B Preferred Stock and any other class or series of stock that we may issue. In the event of any voluntary or involuntary liquidation, dissolution, or winding up of our affairs, a holder of Series A Preferred Stock will be entitled to be paid, before any distribution or payment may be made to any holders of common stock or Series B Preferred Stock, the liquidation amount of $25.00 per share and the amount of any accrued and unpaid dividends, if any, whether or not declared, prior to such distribution or payment date. Holders of the Series A Preferred Stock are entitled to receive dividends at the sole discretion of our Board of Directors at a rate of 9.0% per annum. Unless all accrued and unpaid dividends on the Series A Preferred Stock are paid in full, no dividends or distributions may be paid on common stock or Series B Preferred Stock and no shares of common stock or Series B Preferred Stock may be purchased or redeemed by us (subject to certain exceptions that are specified in the certificate of designations for the Series A Preferred Stock). Dividends, if declared, will be payable on March 15, June 15, September 15 and December 15 of each year. In the year ended December 31, 2010 we paid dividends on our Series A Preferred Stock of $810 million or $2.25 per share. In the year ended December 31, 2009 we paid dividends on our Series A Preferred Stock of $349 million or $0.97 per share. We may not redeem the Series A Preferred Stock prior to December 31, 2014. On or after December 31, 2014, the Series A Preferred Stock may be redeemed, in whole or in part, for cash at a price per share equal to the $25.00 per share liquidation amount, plus any accrued and unpaid dividends.

The Series A Preferred Stock was originally classified as temporary equity because the holders of Series A Preferred Stock, as a class, owned greater than 50% of our common stock and therefore had the ability to exert control, through its power to vote for the election of our directors, over various matters, including compelling us to redeem the Series A Preferred Stock when it becomes callable by us on or after December 31, 2014. In December 2010 we purchased 84 million shares of Series A Preferred Stock, held by the UST, at a price equal to 102% of the aggregate liquidation amount, for $2.1 billion. The purchase of the UST's Series A Preferred Stock resulted in a charge of $0.7 billion recorded in Cumulative dividends on and charge related to purchase of preferred stock. Upon the purchase of the Series A Preferred Stock held by the UST, the Series A Preferred Stock held by Canada Holdings and the New VEBA was reclassified to permanent equity at its carrying amount of $5.5 billion because the remaining holders of our Series A Preferred Stock, Canada Holdings and the New VEBA, do not own a majority of our common stock and therefore do not have the ability to exert control, through the power to vote for the election of our directors, over various matters, including compelling us to redeem the Series A Preferred Stock when it becomes callable by us on or after December 31, 2014. Upon a redemption or purchase of any or all Series A Preferred Stock, the difference, if any, between the recorded amount of the Series A Preferred Stock being redeemed or purchased and the consideration paid would be recorded as a charge to Net income attributable to common stockholders. If all of the Series A preferred Stock were to be redeemed or purchased at its par value, the amount of the charge would be $1.4 billion.

Series B Preferred Stock

At December 31, 2010 we had 100 million shares of Series B Preferred Stock issued and outstanding. The Series B Preferred Stock, with respect to dividend rights and rights upon our liquidation, winding-up or dissolution, ranks: (1) senior to our common stock and to each other class of capital stock or series of preferred stock the terms of which do not expressly provide that such class or series ranks senior to, or on a parity with, the Series B Preferred Stock; (2) on a parity with any class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank on a parity with the Series B Preferred Stock; (3) junior to our Series A Preferred Stock and to each class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank senior to the Series B Preferred Stock; and (4) junior to all of our existing and future debt obligations. Holders of our Series B Preferred Stock are entitled to dividends that accumulate at a rate of 4.75% per annum. Dividends, if declared based on the sole discretion of our Board of Directors, will be payable on March 1, June 1, September 1 and December 1. The Series B Preferred Stock is not redeemable and has a liquidation preference in the amount of $50.00 per share. The holders of the Series B Preferred Stock do not have voting rights, except with respect to certain fundamental changes in the terms of the Series B Preferred Stock, in the case of certain dividend arrearages and as required under Delaware law. Each share of the Series B Preferred Stock, unless previously converted, will automatically convert on December 1, 2013 (mandatory conversion date) into a number of shares of our common stock. The number of shares of our common stock issuable upon conversion of each share of Series B Preferred Stock on the mandatory conversion date, is determined based on the applicable market value of our common stock subject to anti-dilution adjustments and accumulated and unpaid dividends. The applicable market value of our common stock is the average of the closing prices of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the mandatory conversion date. Holders of the Series B Preferred Stock have the right to convert their shares at any time prior to the mandatory conversion date at a conversion ratio of 1.2626 shares of our common stock for each share of the Series B Preferred Stock that is optionally converted, subject to anti-dilution, make-whole and other adjustments.

If the applicable market value of our common stock upon mandatory conversion falls within a price range of $33.00 to $39.60 per common share, the holder receives a variable number of shares of our common stock with a value equal to the security's liquidation value of $50.00 per share (plus accumulated dividends on the Series B Preferred Stock). If the applicable market value of our common stock upon mandatory conversion is above or below the price range of $33.00 to $39.60 per common share, the Series B Preferred Stock converts into a fixed number of shares of our common stock based on a fixed conversion ratio. The fixed conversion ratio will be 1.2626 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is greater than $39.60. The fixed conversion ratio will be 1.5152 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is less than $33.00. The fixed conversion ratios will be adjusted for events that would otherwise dilute a Series B Preferred Stock holder's interest. These anti-dilution provisions provide a holder of the Series B Preferred Stock a right to participate in our undistributed earnings because a dividend, if declared, would result in a transfer of value to the holder through an adjustment to the fixed conversion ratios. Based on the nature of the Series B Preferred Stock and the nature of these anti-dilution provisions, we have concluded that the Series B Preferred Stock is a participating security and, as such, the application of the two-class method for computing earnings per share is required. Under the two-class method for computing earnings per share, undistributed earnings will be allocated to the Series B Preferred Stock in each period in which the applicable market value of our common stock is above or below the price range of $33.00 to $39.60 per common share. The amount of the undistributed earnings to be allocated to the Series B Preferred Stock is based on the terms of the anti-dilution provisions and reflects the incremental value above the $50.00 per share liquidation value that the holder would receive if the market value of our common stock falls outside the price range of $33.00 to $39.60. When the applicable market value of our common stock falls within the price range of $33.00 to $39.60 per common share, no undistributed earnings will be allocated to the Series B Preferred Stock for earnings per share purposes because a holder of Series B Preferred Stock is entitled only to the security's liquidation value of $50.00 per share (plus accumulated dividends on the Series B Preferred Stock) upon mandatory conversion and therefore does not participate in earnings. For purposes of computing diluted earnings per share, the if-converted method will be used to the extent that the result is more dilutive than the application of the two-class method.

Common Stock

We have 5.0 billion shares of common stock authorized, with a par value of $0.01 per share. At December 31, 2010 and 2009 we had 1.5 billion shares issued and outstanding. Holders of our common stock are entitled to dividends at the sole discretion of our Board of Directors. However, the terms of the Series A Preferred Stock and Series B Preferred Stock prohibit, subject to exceptions, the payment of dividends on our common stock, unless all accrued and unpaid dividends on the Series A Preferred Stock and Series B Preferred Stock are paid in full. Holders of common stock are entitled to one vote per share on all matters submitted to our stockholders for a vote. The liquidation rights of holders of our common stock are secondary to the payment or provision for payment of all our debts and liabilities and to holders of our Series A Preferred Stock and Series B Preferred Stock, if any such shares are then outstanding.

Warrants

In connection with the 363 Sale, we issued two warrants, each to acquire 136 million shares of common stock, to MLC and one warrant to acquire 46 million shares of common stock to the New VEBA. The first of the MLC warrants is exercisable at any time prior to July 10, 2016 at an exercise price of $10.00 per share, and the second of the MLC warrants is exercisable at any time prior to July 10, 2019 at an exercise price of $18.33 per share. The New VEBA warrant is exercisable at any time prior to December 31, 2015 at an exercise price of $42.31 per share. The number of shares of common stock underlying each of the warrants and the per share exercise price thereof are subject to adjustment as a result of certain events, including stock splits, reverse stock splits and stock dividends.

Noncontrolling Interests

In October 2009 we completed our participation in an equity rights offering in GM Daewoo, a majority-owned and consolidated subsidiary, for Korean Won 491 billion (equivalent to $417 million when entered into). As a result of the participation in the equity rights offering, our ownership interest in GM Daewoo increased from 50.9% to 70.1%. Funds from our UST escrow account were utilized for this rights offering.

In December 2009 we acquired the remaining noncontrolling interest of CAMI from Suzuki Motor Corporation for $100 million increasing our ownership interest from 50% to 100%. This transaction resulted in no charge to Capital surplus.

The table below summarizes the changes in equity resulting from Net loss attributable to common stockholders and transfers from (to) noncontrolling interests (dollars in millions):

	Successor
	July 10, 2009 Through December 31, 2009
Net loss attributable to common stockholders	$(4,428)
Increase in capital surplus resulting from GM Daewoo equity rights offering	108
Changes from net loss attributable to common stockholders and transfers from (to) noncontrolling interests	$(4,320)

Accumulated Other Comprehensive Income (Loss)

Note 30. Earnings (Loss) Per Share

Basic and diluted earnings (loss) per share was computed by dividing Net income (loss) attributable to common stockholders by the weighted-average common shares outstanding in the period. Diluted earnings (loss) per share was computed by giving effect to all potentially dilutive securities that were outstanding.

The following table summarizes basic and diluted earnings (loss) per share (in millions, except for per share amounts):

	Successor		Predecessor	
	Year Ended December 31, 2010 (a)	July 10, 2009 Through December 31, 2009 (b)	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Basic				
Net income (loss) attributable to common stockholders — basic	$4,668	$(4,428)	$109,118	$(30,943)
Addition of preferred dividends to holders of Series B Preferred Stock	25	—	—	—
Net income (loss) attributable to common stockholders-diluted	$4,693	$(4,428)	$109,118	$(30,943)
Basic and Diluted shares				
Weighted-average common shares outstanding-basic	1,500	1,238	611	579
Dilutive effect of warrants	106	—	—	—
Dilutive effect of conversion of Series B Preferred Stock	17	—	—	—
Dilutive effect of RSUs	1	—	—	—
Weighted-average common shares outstanding-diluted	1,624	1,238	611	579
Basic earnings per share	$ 3.11	$ (3.58)	$ 178.63	$ (53.47)
Diluted earnings per share	$ 2.89	$ (3.58)	$ 178.55	$ (53.47)

(a) The year ended December 31, 2010 includes earned but undeclared dividends of $26 million on our Series A Preferred Stock and $25 million on our Series B Preferred Stock, which decreases Net income attributable to common stockholders.

(b) The period July 10, 2009 through December 31, 2009 includes accumulated but undeclared dividends of $34 million on Series A Preferred Stock, which increases Net loss attributable to common stockholders, and excludes dividends of $252 million on Series A Preferred Stock, which were paid to the New VEBA prior to December 31, 2009. The 260 million shares of Series A Preferred Stock issued to the New VEBA were not considered outstanding until December 31, 2009 due to the terms of the 2009 UAW Retiree Settlement Agreement.

GM

In the year ended December 31, 2010 we considered potentially dilutive securities in our diluted earnings per share computation under the treasury stock method. In periods prior to our public offering, we utilized an average stock price based upon estimates of the fair value of our common stock. Subsequent to our public offering, we used the New York Stock Exchange price.

In the year ended December 31, 2010 because the market value of our common stock was within the price range of $33.00 to $39.60 per common share no undistributed earnings were allocated to our Series B Preferred Stock under the two-class method for purposes of calculating basic earnings per share. The dilutive effect of these securities was determined by assuming conversion of the securities at issuance resulting in an increase to the weighted-average common shares outstanding and an increase to Net income attributable to common stockholders for accumulated dividends on our Series B Preferred Stock.

In the year ended December 31, 2010 warrants to purchase 318 million shares were outstanding, of which 46 million were not included in the computation of diluted earnings per share because the warrants' exercise price was greater than the average market price of the common shares. Under the treasury stock method, the assumed exercise of the remaining 272 million warrants resulted in 106 million dilutive shares for the year ended December 31, 2010.

In the year ended December 31, 2010 diluted earnings per share included the assumed issuance of unvested restricted stock units (RSUs) granted to certain global executives. The dilutive effect of the RSUs was included only for the period subsequent to our public offering as the RSUs prior were accounted for as liability awards prior to that date. At December 31, 2010 there were 11 million unvested RSUs outstanding.

In the period July 10, 2009 through December 31, 2009, outstanding warrants to purchase 272 million shares of common stock were not included in the computation of diluted loss per share because the effect would have been antidilutive and RSUs were excluded from the computation of diluted earnings per share as these awards were payable in cash during that time. At December 31, 2009 there were 1 million RSUs outstanding.

In the year ended December 31, 2010 and the period July 10, 2009 through December 31, 2009 the Adjustment Shares were excluded from the computation of basic and diluted earnings per share as the condition that would result in the issuance of the Adjustment Shares was not satisfied.

The 61 million shares of common stock contributed to our pension plan in January 2011 will not be included in the computation of earnings per share until they meet the criteria to qualify as plan assets for accounting purposes.

Old GM

In the period January 1, 2009 through July 9, 2009 diluted earnings per share included the potential effect of the assumed exercise of certain stock options. Old GM excluded 208 million of stock options and warrants in the computation of diluted earnings per share because the exercise price was greater than the average market price of the common shares.

Due to Old GM's net losses in the year ended December 31, 2008, the assumed exercise of stock options and warrants had an antidilutive effect and therefore was excluded from the computation of diluted loss per share. Old GM excluded 101 million such options and warrants in the computation of diluted loss per share.

No shares potentially issuable to satisfy the in-the-money amount of Old GM's convertible debentures have been included in the computation of diluted income (loss) per share for the period January 1, 2009 through July 9, 2009 and in the year ended December 31, 2008 as the conversion options in various series of convertible debentures were not in-the-money.

Note 31. Stock Incentive Plans

Consolidated

GM

Our stock incentive plans consist of the 2009 Long-Term Incentive Plan as amended December 22, 2010 (2009 GMLTIP) and the Salary Stock Plan as amended October 5, 2010 (GMSSP). Both plans are administered by the Executive Compensation Committee of our Board of Directors. The aggregate number of shares with respect to which awards may be granted under these plans shall not exceed 75 million.

The following table summarizes compensation expense and total Income tax expense recorded for our stock incentive plans (dollars in millions):

	Successor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009
Compensation expense (a)	$235	$23
Income tax expense (b)	$ —	$ 8

(a) Includes an insignificant amount of restricted stock granted in December 2010.

(b) Income tax expense does not include U.S. and non-U.S. jurisdictions which have full valuation allowances.

Long-Term Incentive Plan

In 2010 we granted RSUs to certain global executives under the 2009 GMLTIP. We granted 15 million RSUs valued at the grant date fair value of our common stock in the year ended December 31, 2010 and no RSUs under this plan in the period June 10, 2009 through December 31, 2009. Awards granted under the 2009 GMLTIP will generally vest over a three year service period. Compensation cost for these awards are recorded on a straight-line basis over the vesting period. Our policy is to issue new shares upon settlement of RSUs.

The awards for the Top 25 highest compensated employees will settle three years from the grant date in 25% increments in conjunction with each 25% of our Troubled Asset Relief Program (TARP) obligations that are repaid. The awards for the non-top 25 highest compensated employees will settle after three years in 25% increments in conjunction with each 25% of the U.S. and Canadian government loans that are repaid. The U.S. and Canadian government loans were fully repaid in April 2010, thus these awards will be settled upon completion of the remaining three year service period.

Retirement eligible participants that are non-top 25 highest compensated employees who retire during the service period will retain and vest in a pro-rata portion of RSUs earned. The vested award will be payable on the third anniversary date of the grant. Compensation cost for these employees is recognized on a straight-line basis over the requisite service period.

Prior to our public offering, all RSU awards were classified as liability awards as they were payable in cash. On November 18, 2010 we reclassified all of the RSU liability awards to equity for those awards that became payable in shares in accordance with the plan terms.

Salary Stock

In November 2009 we initiated a salary stock program for certain global executives under the GMSSP whereby, a portion of each participant's total annual compensation was accrued and converted to RSUs at each salary payment date. In 2010 a portion of each participant's salary accrued on each salary payment date converted to RSUs on a quarterly basis. Our policy is to issue new shares upon settlement of these awards.

The awards are fully vested and nonforfeitable upon grant, therefore compensation cost is fully recognized on the date of grant. The awards are settled quarterly over a three year period commencing on the first anniversary date of grant. Under the terms of the plan, each installment is now redeemable one year earlier from the original settlement date as we have repaid the financial assistance we received from the UST under the TARP program in 2010. Prior to our public offering, all RSU awards were classified as liability awards as they were payable in cash. On November 18, 2010 we reclassified all of the RSU liability awards to equity for those awards that became payable in shares in accordance with the plan terms.

The compensation cost of each RSU granted under the 2009 GMLTIP and GMSSP that will be settled in equity is based on the fair value of our common stock on the date of grant or, for those RSUs reclassified from liability to equity-based awards, the fair value of our common stock as of the date of the public offering.

The following table summarizes our RSU activity under the 2009 GMLTIP and GMSSP in the period July 10, 2009 through December 31, 2010 (RSUs in millions):

	Successor		
	RSUs		
	Shares	Weighted-Average Grant Date Fair Value	Weighted-Average Remaining Contractual Term
RSUs outstanding at July 10, 2009	—	$ —	
Granted	1.1	$16.39	
Settled	—	$ —	
Forfeited or expired	—	$ —	
RSUs outstanding at December 31, 2009	1.1	$16.39	
Granted	17.2	$19.17	
Settled	(0.3)	$16.39	
Forfeited or expired	(0.8)	$18.80	
RSUs outstanding at December 31, 2010	17.2	$19.03	1.8
RSUs unvested and expected to vest at December 31, 2010	11.9	$18.82	2.2
RSUs vested and payable at December 31, 2010	4.7	$19.58	—

At December 31, 2010 the total unrecognized compensation expense for nonvested equity awards granted under the 2009 GMLTIP was $313 million. This expense is expected to be recorded over a weighted-average period of 2.2 years.

In the year ended December 31, 2010 total payments for 291,753 RSUs settled under the GMSSP was $5 million.

Old GM

Old GM had various stock incentive plans which were administered by either its Executive Compensation Committee of its Board of Directors or its Vice President of Human Resources. Stock incentive awards consisted of stock options, market-contingent stock options, stock performance awards and cash-based restricted stock units. Stock incentive awards, some of which were subject to performance conditions, were granted at fair value and were subject to various vesting conditions. In connection with the 363 Sale, MLC retained the responsibility for administering Old GM's stock incentive plans. We have recorded no compensation expense related to Old GM's stock incentive plans subsequent to July 9, 2009.

The following table summarizes compensation expense (benefit) and total Income tax expense (benefit) recorded for the Old GM Stock Incentive Plans (dollars in millions):

	Predecessor	
	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Compensation expense (benefit)	$(10)	$(65)
Income tax expense (benefit) (a)	$ —	$ 3

(a) Income tax expense (benefit) does not include U.S. and non-U.S. jurisdictions which have full valuation allowances.

Note 32. Transactions with Ally Financial

Automotive

Old GM entered into various operating and financing arrangements with Ally Financial, a related party, and in connection with the 363 Sale we assumed the terms and conditions of these arrangements. The following tables describe the financial statement effects of and maximum obligations under these agreements (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Operating lease residuals		
Residual support (a)		
Liabilities (receivables) recorded	$ (24)	$ 369
Maximum obligation	$ 523	$ 1,159
Risk sharing (a)		
Liabilities recorded	$ 269	$ 366
Maximum obligation	$ 692	$ 1,392
Note payable to Ally Financial	$ —	$ 35
Vehicle repurchase obligations		
Maximum obligations	$18,807	$14,249
Fair value of guarantee	$ 21	$ 46

(a) Represents liabilities (receivables) recorded and maximum obligations for agreements entered into prior to December 31, 2008. Agreements entered into in 2010 and 2009 do not include residual support or risk sharing programs. In the year ended December 31, 2010 favorable adjustments to our residual support and risk sharing liabilities of $0.6 billion were recorded in the U.S. due to increases in estimated residual values.

	Successor		Predecessor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Marketing incentives and operating lease residual payments (a)	$1,111	$695	$601	$3,400
Exclusivity fee revenue	$ 99	$ 47	$ 52	$ 105
Royalty income	$ 15	$ 7	$ 8	$ 16

(a) Payments to Ally Financial related to U.S. marketing incentive and operating lease residual programs. Excludes payments to Ally Financial related to the contractual exposure limit, as subsequently discussed.

Marketing Incentives and Operating Lease Residuals

As a marketing incentive, interest rate support, residual support, risk sharing, capitalized cost reduction and lease pull-ahead programs are initiated as a way to lower customers' monthly lease and retail contractual payments.

Under an interest rate support program, Ally Financial is paid an amount at the time of lease or retail contract origination to adjust the interest rate in the retail contract or implicit in the lease below Ally Financial's standard interest rate. Such marketing incentives are referred to as rate support or subvention and the amount paid at contract origination represents the present value of the difference between the customer's contractual rate and Ally Financial's standard rate for a given program.

Under a residual support program, a customer's contract residual value is adjusted above Ally Financial's standard residual value. Ally Financial is reimbursed to the extent that sales proceeds are less than the customer's contract residual value, limited to Ally

Financial's standard residual value. As it relates to Ally Financial's U.S. lease originations and U.S. balloon retail contract originations occurring after April 30, 2006, Old GM agreed to pay the present value of the expected residual support owed to Ally Financial at the time of contract origination as opposed to after contract termination when the off-lease vehicles are sold. The actual residual support amount owed to Ally Financial is calculated as the contracts terminate and, in cases where the actual amount differs from the expected amount paid at contract origination, the difference is paid to or paid by Ally Financial, depending if sales proceeds are lower or higher than estimated at contract origination.

Under a risk-sharing arrangement, residual losses are shared equally with Ally Financial to the extent that remarketing proceeds are below Ally Financial's standard residual value (limited to a floor). As a result of revisions to the risk-sharing arrangement, Old GM agreed to pay Ally Financial a quarterly fee through 2014.

In the event it is publicly announced that a GM vehicle brand will be discontinued, phased-out, sold or other strategic options are being considered, the residual value of the related vehicles may change. If such an announcement in the U.S. or Canada results in an estimated decrease in the residual value of the related vehicles, Ally Financial will be reimbursed for the estimated decrease for certain vehicles for a certain period of time. If such an announcement results in an increase in the residual value of the related vehicles, Ally Financial will pay the increase in the sale proceeds received at auction.

Under a capitalized cost reduction program, Ally Financial is paid an amount at the time of lease or retail contract origination to reduce the principal amount implicit in the lease or retail contract below the standard manufacturers' suggested retail price.

Under a lease pull-ahead program, a customer is encouraged to terminate their lease early and buy or lease a new GM vehicle. As part of such a program, Ally Financial waives the customer's remaining payment obligation under their current lease, and Ally Financial is compensated for any foregone revenue from the waived payments. Since these programs generally accelerate the resale of the vehicle, the proceeds are typically higher than if the vehicle had been sold at contract maturity. The reimbursement to Ally Financial for the foregone payments is reduced by the amount of this benefit. Anticipated payments are made to Ally Financial each month based on the estimated number of customers expected to participate in a lease-pull ahead program. These estimates are adjusted once all vehicles that could have been pulled-ahead have terminated and the vehicles have been sold. Any differences between the estimates and the actual amounts owed to or from Ally Financial are subsequently settled.

In May 2009 Old GM entered into the Amended and Restated United States Consumer Financing Services Agreement (Amended Financing Agreement) with an effective date of December 29, 2008. The terms of the Amended Financing Agreement included conditions of interest rate support, residual support, risk sharing, capitalized cost reduction, and lease pull-ahead programs.

Exclusivity Arrangement

In November 2006 Old GM granted Ally Financial exclusivity for U.S., Canadian and international GM-sponsored consumer and wholesale marketing incentives for products in specified markets around the world, with the exception of Saturn branded products. In return for exclusivity, Ally Financial paid an annual exclusivity fee of $105 million ($75 million for the U.S. retail business, $15 million for the Canadian retail business, $10 million for the international operations retail business, and $5 million for the dealer business).

As a result of the Amended Financing Agreement, Old GM and Ally Financial agreed to modify certain terms related to the exclusivity arrangements: (1) for a two-year period, retail financing incentive programs can be offered through a third party financing source under certain specified circumstances, and in some cases subject to the limitation that pricing offered by such third party meets certain restrictions, and after such two-year period any such incentive programs can be offered on a graduated basis through third parties on a non-exclusive, side-by-side basis with Ally Financial provided that pricing with such third parties meets certain requirements; (2) Ally Financial has no obligation to provide financing; and (3) Ally Financial has no targets against which it could be assessed penalties. After December 24, 2013 we will have the right to offer retail financing incentive programs through any third party financing source, including Ally Financial, without any restrictions or limitations.

Beginning in 2009 under the Amended Financing Agreement, Old GM agreed to pro-rate the exclusivity fee in the U.S. and Canada under certain circumstances if incentives were offered through a third party financing source. The international exclusivity fee arrangement remains unchanged and the dealer exclusivity fee was terminated.

In December 2008 Old GM and FIM Holdings entered into the Ally Financial Exchange Agreement with Ally Financial. Pursuant to the Ally Financial Exchange Agreement, Old GM and FIM Holdings exchanged their respective amounts funded under the Ally Financial Participation Agreement for 79,368 Class B Common Membership Interests and 82,608 Class A Common Membership Interests. As the carrying amount of the amount funded under the Ally Financial Participation Agreement approximated fair value, Old GM did not recognize a gain or loss on the exchange.

Contractual Exposure Limit

An agreement between Ally Financial and Old GM limited certain unsecured obligations arising from service agreements to Ally Financial in the U.S. to $1.5 billion. In accordance with the Amended Financing Agreement, Old GM and Ally Financial agreed to increase the probable potential unsecured exposure limit from $1.5 billion in the United States to $2.1 billion globally. Ally Financial's maximum potential unsecured exposure to us cannot exceed $4.1 billion globally. Old GM and Ally Financial also agreed to reduce the global unsecured obligation limit from $2.1 billion to $1.5 billion at December 31, 2010. Old GM and Ally Financial agreed that the sum of the maximum unsecured and committed secured exposures at December 31, 2010 will not exceed the greater of $3.0 billion or 15% of Ally Financial's capital.

Vehicle Repurchase Obligations

In May 2009 Old GM and Ally Financial agreed to expand Old GM's repurchase obligations for Ally Financial financed inventory at certain dealers in Europe, Asia, Brazil and Mexico. In November 2008 Old GM and Ally Financial agreed to expand repurchase obligations for Ally Financial financed inventory at certain dealers in the United States and Canada. The current agreement with Ally Financial requires the repurchase of Ally Financial financed inventory invoiced to dealers after September 1, 2008, with limited exclusions, in the event of a qualifying voluntary or involuntary termination of the dealer's sales and service agreement. Repurchase obligations exclude vehicles which are damaged, have excessive mileage or have been altered. The repurchase obligation ended in August 2010 for vehicles invoiced through August 2009, ends in August 2011 for vehicles invoiced through August 2010 and ends August 2012 for vehicles invoiced through August 2011.

The maximum potential amount of future payments required to be made to Ally Financial under this guarantee is based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer. The fair value of the guarantee, which considers the likelihood of dealers terminating and estimated loss exposure for ultimate disposition of vehicles, was recorded as a reduction of revenue.

Automotive Retail Leases

In November 2006 Ally Financial transferred automotive retail leases to Old GM, along with related debt and other assets. Ally Financial retained an investment in a note, which is secured by the automotive retail leases. Ally Financial continues to service the portfolio of automotive retail leases and related debt and receives a servicing fee. Ally Financial is obligated, as servicer, to repurchase any equipment on operating leases that are in breach of any of the covenants in the securitization agreements. In addition, in a number of the transactions securitizing the equipment on operating leases, the trusts issued one or more series of floating rate debt obligations and entered into derivative transactions to eliminate the market risk associated with funding the fixed payment lease assets with floating interest rate debt. To facilitate these securitization transactions, Ally Financial entered into secondary derivative transactions with the primary derivative counterparties, essentially offsetting the primary derivatives. As part of the transfer, Old GM assumed the rights and obligations of the primary derivative while Ally Financial retained the secondary, leaving both companies exposed to market value movements of their respective derivatives. Old GM subsequently entered into derivative transactions with Ally Financial that are intended to offset the exposure each party has to its component of the primary and secondary derivatives.

Royalty Arrangement

For certain insurance products, Old GM entered into 10-year intellectual property license agreements with Ally Financial giving Ally Financial the right to use the GM name on certain products. In exchange, Ally Financial pays a royalty fee of 3.25% of revenue, net of cancellations, related to these products with a minimum annual guarantee of $15 million in the United States.

Balance Sheet

The following table summarizes the balance sheet effects of transactions with Ally Financial (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Assets		
Accounts and notes receivable, net (a)	$ 290	$ 404
Restricted cash and marketable securities (b)	$ —	$ 127
Other assets (c)	$ 26	$ 27
Liabilities		
Accounts payable (d)	$ 168	$ 131
Short-term debt and current portion of long-term debt (e)	$1,043	$1,077
Accrued liabilities and other liabilities (f)	$1,167	$ 817
Long-term debt (g)	$ 43	$ 59
Other non-current liabilities (h)	$ 84	$ 383

(a) Represents wholesale settlements due from Ally Financial, amounts owed by Ally Financial with respect to automotive retail leases and receivables for exclusivity fees and royalties.

(b) Represents certificates of deposit purchased from Ally Financial that are pledged as collateral for certain guarantees provided to Ally Financial in Brazil in connection with dealer floor plan financing.

(c) Primarily represents distributions due from Ally Financial on our investments in Ally Financial preferred stock.

(d) Primarily represents amounts billed to us and payable related to incentive programs.

(e) Represents wholesale financing, sales of receivable transactions and the short-term portion of term loans provided to certain dealerships which we own or in which we have an equity interest. It includes borrowing arrangements with various foreign locations and arrangements related to Ally Financial's funding of company-owned vehicles, rental car vehicles awaiting sale at auction and funding of the sale of vehicles to which title is retained while the vehicles are consigned to Ally Financial or dealers, primarily in the United Kingdom. Financing remains outstanding until the title is transferred to the dealers. This amount also includes the short-term portion of a note payable related to automotive retail leases.

(f) Primarily represents accruals for marketing incentives on vehicles which are sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial in North America. This includes the estimated amount of residual support accrued under the residual support and risk sharing programs, rate support under the interest rate support programs, operating lease and finance receivable capitalized cost reduction incentives paid to Ally Financial to reduce the capitalized cost in automotive lease contracts and retail automotive contracts, and amounts owed under lease pull-ahead programs. In addition it includes interest accrued on the transactions in (e) above.

(g) Primarily represents the long-term portion of term loans from Ally Financial to certain consolidated dealerships.

(h) Primarily represents long-term portion of liabilities for marketing incentives on vehicles financed by Ally Financial.

Statement of Operations

The following table summarizes the income statement effects of transactions with Ally Financial (dollars in millions):

	Successor		Successor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended December 31, 2008
Total net sales and revenue (reduction) (a)	$(1,383)	$(259)	$207	$(2,350)
Automotive cost of sales and other automotive expenses (b)	$ 36	$ 113	$180	$ 688
Interest income and other non-operating income, net (c)	$ 228	$ 127	$166	$ 192
Automotive interest expense (d)	$ 243	$ 121	$100	$ 221
Servicing expense (e)	$ 2	$ 22	$ 16	$ 144
Derivative losses (f)	$ —	$ 1	$ 2	$ 4

(a) Primarily represents the increase (reduction) in Total net sales and revenue for marketing incentives on vehicles which were sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial. This includes the estimated amount of residual support accrued under residual support and risk sharing programs, rate support under the interest rate support programs, operating lease and finance receivable capitalized cost reduction incentives paid to Ally Financial to reduce the capitalized cost in automotive lease contracts and retail automotive contracts, and costs under lease pull-ahead programs. This amount is offset by net sales for vehicles sold to Ally Financial for employee and governmental lease programs and third party resale purposes.

(b) Primarily represents cost of sales on the sale of vehicles to Ally Financial for employee and governmental lease programs and third party resale purposes. Also includes miscellaneous expenses on services performed by Ally Financial.

(c) Represents income on investments in Ally Financial preferred stock and Preferred Membership Interests, exclusivity and royalty fee income and reimbursements by Ally Financial for certain services provided to Ally Financial. Included in this amount is rental income related to Ally Financial's primary executive and administrative offices located in the Renaissance Center in Detroit, Michigan. The lease agreement expires in November 2016.

(d) Represents interest incurred on term loans, notes payable and wholesale settlements.

(e) Represents servicing fees paid to Ally Financial on certain automotive retail leases.

(f) Represents amounts recorded in connection with a derivative transaction entered into with Ally Financial as the counterparty.

Note 33. Transactions with MLC

Automotive

In connection with the 363 Sale, we and MLC entered into a Transition Services Agreement (TSA), pursuant to which, among other things, we provided MLC with certain transition services and support functions in connection with their operation and ultimate liquidation in bankruptcy. MLC is required to pay the applicable usage fees specified with respect to various types of services under the TSA. Types of services provided under the TSA included: (1) property management; (2) assistance in idling certain facilities; (3) provisions of access rights and storage of personal property at certain facilities; (4) security; (5) administrative services including accounting, treasury and tax; (6) purchasing; (7) information systems and services support; (8) communication services to the public; and (9) splinter union services including payroll and benefits administration. Services MLC provides to us under the TSA include: (1) provisions of access rights and storage of personal property at certain facilities; (2) assistance in obtaining certain permits and consents to permit us to own and operate purchased assets in connection with the 363 Sale; (3) allowing us to manage and exercise our rights under the TSA; and (4) use of certain real estate and equipment while we are in negotiation to assume or renegotiate certain leases or enter into agreements to purchase certain lease-related assets. At December 31, 2010 we are not obligated to provide any services under the TSA.

On October 1, 2010 we completed the acquisition of the Strasbourg transmission business from MLC. The purchase price was one Euro. Refer to Note 5 for additional information on the acquisition of GMS.

Statement of Operations

The following table summarizes the income statements effect of transactions with MLC (dollars in millions):

	Successor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009
Automotive cost of sales (a)	$(19)	$(8)
Interest income and other non-operating income, net	$ —	$ 1

(a) Primarily related to royalty income partially offset by reimbursements for engineering expenses incurred by MLC.

Balance Sheet

The following table summarizes the balance sheets effect of transactions with MLC (dollars in millions):

	Successor	
	December 31, 2010	December 31, 2009
Accounts and notes receivable, net (a)	$—	$16
Other assets	$—	$ 1
Accounts payable (a)	$ 1	$59
Accrued liabilities	$—	$ (1)

(a) Primarily related to the purchase and sale of component parts.

Cash Flow

The following table summarizes the cash flow effects of transactions with MLC (dollars in millions):

	Successor	
	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009
Operating — Automotive (a)	$(148)	$(88)
Financing — Automotive (b)	$ 5	$ 25

(a) Primarily includes payments to MLC related to the purchase and the sale of component parts.

(b) Payments received from a facility in Strasbourg, France that MLC retained and we subsequently acquired in October 2010.

Note 34. Supplementary Quarterly Financial Information (Unaudited)

Consolidated

The following tables summarize supplementary quarterly financial information (dollars in millions, except per share amounts):

	Successor			
	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
2010

Net income (loss) attributable to common stockholders, per share, basic	$ (0.73)	$ (2.84)	$ (9.78)	$ (21.12)	$ 209.49
Net income (loss) attributable to common stockholders, per share, diluted	$ (0.73)	$ (2.84)	$ (9.78)	$ (21.12)	$ 209.38

GM

Results for the three months ended December 31, 2010 included:

- A charge of $677 million related to our purchase of 84 million shares of Series A Preferred Stock from the UST.
- A reversal of our $231 million liability for contingently issuable Adjustment Shares based on a revised assessment of the estimate of allowed general unsecured claims against MLC.
- A gain of $198 million related to our repayment of the VEBA Notes of $2.8 billion.
- Restructuring reserve decrease of $183 million in GMNA primarily related to capacity actions and revisions to productivity initiatives.
- Restructuring charges and interest accretion and other of $154 million in GME primarily related to separation programs announced in Belgium, Spain, Germany and the United Kingdom.
- Income before income taxes and equity income and net income of $129 million and $90 million related to the October 1, 2010 acquisition of GM Financial including net income of $10 million related to amounts recorded to reflect the changes in the valuation allowance on deferred tax assets that were not applicable to GM Financial on a stand-alone basis.

Results for the three months ended September 30, 2010 included:

- Restructuring charges and interest accretion and other of $153 million in GME primarily related to separation programs announced in Belgium, Spain, Germany and the United Kingdom.

- Impairment charges of $140 million related to product-specific tooling assets in GMNA.

Results for the three months ended June 30, 2010 included:

- Restructuring charges and interest accretion and other of $235 million in GME primarily related to separation programs announced in Belgium, the United Kingdom and Germany.

- Charge of $200 million relating to a recall campaign on windshield fluid heaters.

Results for the three months ended March 31, 2010 included:

- Restructuring charges and interest accretion and other of $305 million in GME primarily related to separation programs announced in Belgium and Spain. These charges were partially offset by a favorable adjustment of $104 million related to GMNA restructuring reserves due to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites.

Results for the three months ended December 31, 2009 included:

- Impairment charges of $270 million related to our investment in Ally Financial common stock.

- Settlement loss of $2.6 billion related to the 2009 UAW Settlement Agreement.

Results for the period July 10, 2009 through September 30, 2009 included:

- Charges of $195 million related to dealer wind-down agreements.

Old GM

Results for the period July 1, 2009 through July 9, 2009 included:

- Accelerated debt discount amortization of $600 million on the DIP Facility.

- Reorganization gains, net of $129.3 billion. Refer to Note 2 for additional information on these gains.

- Charges of $398 million related to dealer wind-down agreements.

Results for the three months ended June 30, 2009 included:

- Gain of $2.5 billion on the disposition of Ally Financial Common Membership Interests partially offset by a loss on extinguishment of the UST Ally Financial Loan of $2.0 billion.

- Accelerated debt discount amortization of $1.6 billion on the DIP Facility.

- Charges of $1.9 billion related to U.S. salaried and hourly headcount reduction programs.

- Restructuring charges of $1.1 billion related to SUB and TSP.
- Reorganization costs of $1.1 billion, primarily related to loss on extinguishment of debt of $958 million.
- Impairment charges of $239 million related to product-specific tooling assets.

Results for the three months ended March 31, 2009 included:

- Old GM amended the terms of its U.S. term loan and recorded a gain of $906 million on the extinguishment of the original loan facility.
- Upon Saab's filing for reorganization, Old GM recorded charges of $618 million related to its net investment in, and advances to, Saab and other commitments and obligations.
- Impairment charges of $327 million related to product-specific tooling assets and cancelled powertrain programs.

Note 35. Segment Reporting

Consolidated

We design, build and sell cars, trucks and parts worldwide. We also conduct our automotive finance operations through GM Financial. We manage our operations through our five segments: GMNA, GME, GMIO, GMSA and GM Financial. Each segment has a manager responsible for executing our strategies. Our automotive manufacturing operations are integrated within the segments, benefit from broad-based trade agreements and are subject to regulatory requirements, such as Corporate Average Fuel Economy (CAFE) regulations. While not all vehicles within a segment are individually profitable on a fully loaded cost basis, those vehicles are needed in our product mix in order to attract customers to dealer showrooms and to maintain sales volumes for other, more profitable vehicles. Because of these factors, we do not manage our business on an individual brand or vehicle basis. The chief operating decision maker evaluates the operating results and performance of our automotive segments through Income (loss) before interest and income taxes and evaluates GM Financial through Income (loss) before income taxes.

In the year ended December 31, 2010 we changed our managerial and financial reporting structure so that certain entities geographically located within Russia and Uzbekistan were transferred from our GME segment to our GMIO segment, and certain entities geographically located in Brazil, Argentina, Colombia, Ecuador, Venezuela, Bolivia, Chile, Paraguay, Peru and Uruguay were transferred from our GMIO segment to our newly created GMSA segment. We have retrospectively revised the segment presentation for all periods presented.

Substantially all of the cars, trucks and parts produced are marketed through retail dealers in North America, and through distributors and dealers outside of North America, the substantial majority of which are independently owned.

In addition to the products sold to dealers for consumer retail sales, cars and trucks are also sold to fleet customers, including daily rental car companies, commercial fleet customers, leasing companies and governments. Sales to fleet customers are completed through the network of dealers and in some cases sold directly to fleet customers. Retail and fleet customers can obtain a wide range of aftersale vehicle services and products through the dealer network, such as maintenance, light repairs, collision repairs, vehicle accessories and extended service warranties.

GMNA primarily meets the demands of customers in North America with vehicles developed, manufactured and/or marketed under the following four brands:

- Buick
- Cadillac
- Chevrolet
- GMC

The demands of customers outside of North America are primarily met with vehicles developed, manufactured and/or marketed under the following brands:

- Buick
- Cadillac
- Chevrolet
- Daewoo
- GMC
- Holden
- Isuzu
- Opel
- Vauxhall

At December 31, 2010 we also had equity ownership stakes directly or indirectly in entities through various regional subsidiaries, including GM Daewoo, SGM, SGMW, FAW-GM and HKJV. In January 2011 GM Daewoo announced it will be changing its name to GM Korea and will sell most of its cars under the Chevrolet brand. These companies design, manufacture and market vehicles under the following brands:

- Buick
- Cadillac
- Chevrolet
- Daewoo
- FAW
- GMC
- Holden
- Jiefang
- Wuling

Nonsegment operations are classified as Corporate and Corporate assets, liabilities and results of operations are a component of Total Automotive in our consolidated financial statements. Corporate includes investments in Ally Financial, certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures, certain nonsegment specific revenues and expenses, including costs related to the Delphi Benefit Guarantee Agreements and a portfolio of automotive retail leases.

All intersegment balances and transactions have been eliminated in consolidation.

Automotive revenue is attributed to geographic areas based on the country in which the product is sold, except for revenue from certain joint ventures. In such case, the revenue is attributed based on the geographic location of the joint venture. Automotive Financing revenue is attributed to the geographic area where the financing is originated. The following table summarizes information concerning principal geographic areas (dollars in millions):

Disclosure Controls and Procedures

We maintain disclosure controls and procedures designed to provide reasonable assurance that information required to be disclosed in reports filed under the Securities Exchange Act of 1934, as amended (Exchange Act) is recorded, processed, summarized and reported within the specified time periods and accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Our management, with the participation of our Chairman and CEO and our Vice Chairman and CFO, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) or 15d-15(e) promulgated under the Exchange Act) at December 31, 2010. Based on these evaluations, our CEO and CFO concluded that our disclosure controls and procedures required by paragraph (b) of Rules 13a-15 or 15d-15 were effective as of December 31, 2010.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining effective internal control over financial reporting. This system is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with U.S. GAAP.

Our internal control over financial reporting includes those policies and procedures that: (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect our transactions and dispositions of our assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of consolidated financial statements in accordance with U.S. GAAP, and that our receipts and expenditures are being made only in accordance with authorizations of our management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on the consolidated financial statements.

Our management performed an assessment of the effectiveness of our internal control over financial reporting at December 31, 2010, utilizing the criteria discussed in the "Internal Control — Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission. The objective of this assessment was to determine whether our internal control over financial reporting was effective at December 31, 2010.

Based on management's assessment, we have concluded that our internal control over financial reporting was effective at December 31, 2010. The effectiveness of our internal control over financial reporting has been audited by Deloitte & Touche LLP, an independent registered public accounting firm, as stated in its report which is included herein.

Remediation and Changes in Internal Controls

In our 2009 Annual Report on Form 10-K, we identified a material weakness because we did not maintain effective controls over the period-end financial reporting process. A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our annual or interim consolidated financial statements will not be prevented or detected on a timely basis.

In 2009, significant activities were performed in remediating the material weakness. However, we were not able to sufficiently test the operating effectiveness of certain remediated internal controls given the limited time that controls were in operation. During 2010, management led various initiatives to further enhance our controls over period-end financial reporting, including training and enhanced procedures related to the preparation of the statement of cash flows, to help ensure controls over the period-end financial reporting process would operate as they had been designed and deployed during the 2009 material weakness remediation efforts. Based upon the actions taken and our testing and evaluation of the effectiveness of our internal controls, we have concluded the material weakness related to controls over the period-end financial reporting process no longer existed as of December 31, 2010.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Other than as previously discussed, there have not been any other changes in our internal control over financial reporting in the three months ended December 31, 2010, which have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

/s/ DANIEL F. AKERSON
Daniel F. Akerson

Limitations on the Effectiveness of Controls

Our management, including our CEO and CFO, does not expect that our disclosure controls and procedures or internal control over financial reporting will prevent or detect all errors and all fraud. A control system cannot provide absolute assurance due to its inherent limitations; it is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. A control system also can be circumvented by collusion or improper management override. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of such limitations, disclosure controls and procedures and internal control over financial reporting cannot prevent or detect all misstatements, whether unintentional errors or fraud. However, these inherent limitations are known features of the financial reporting process, therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

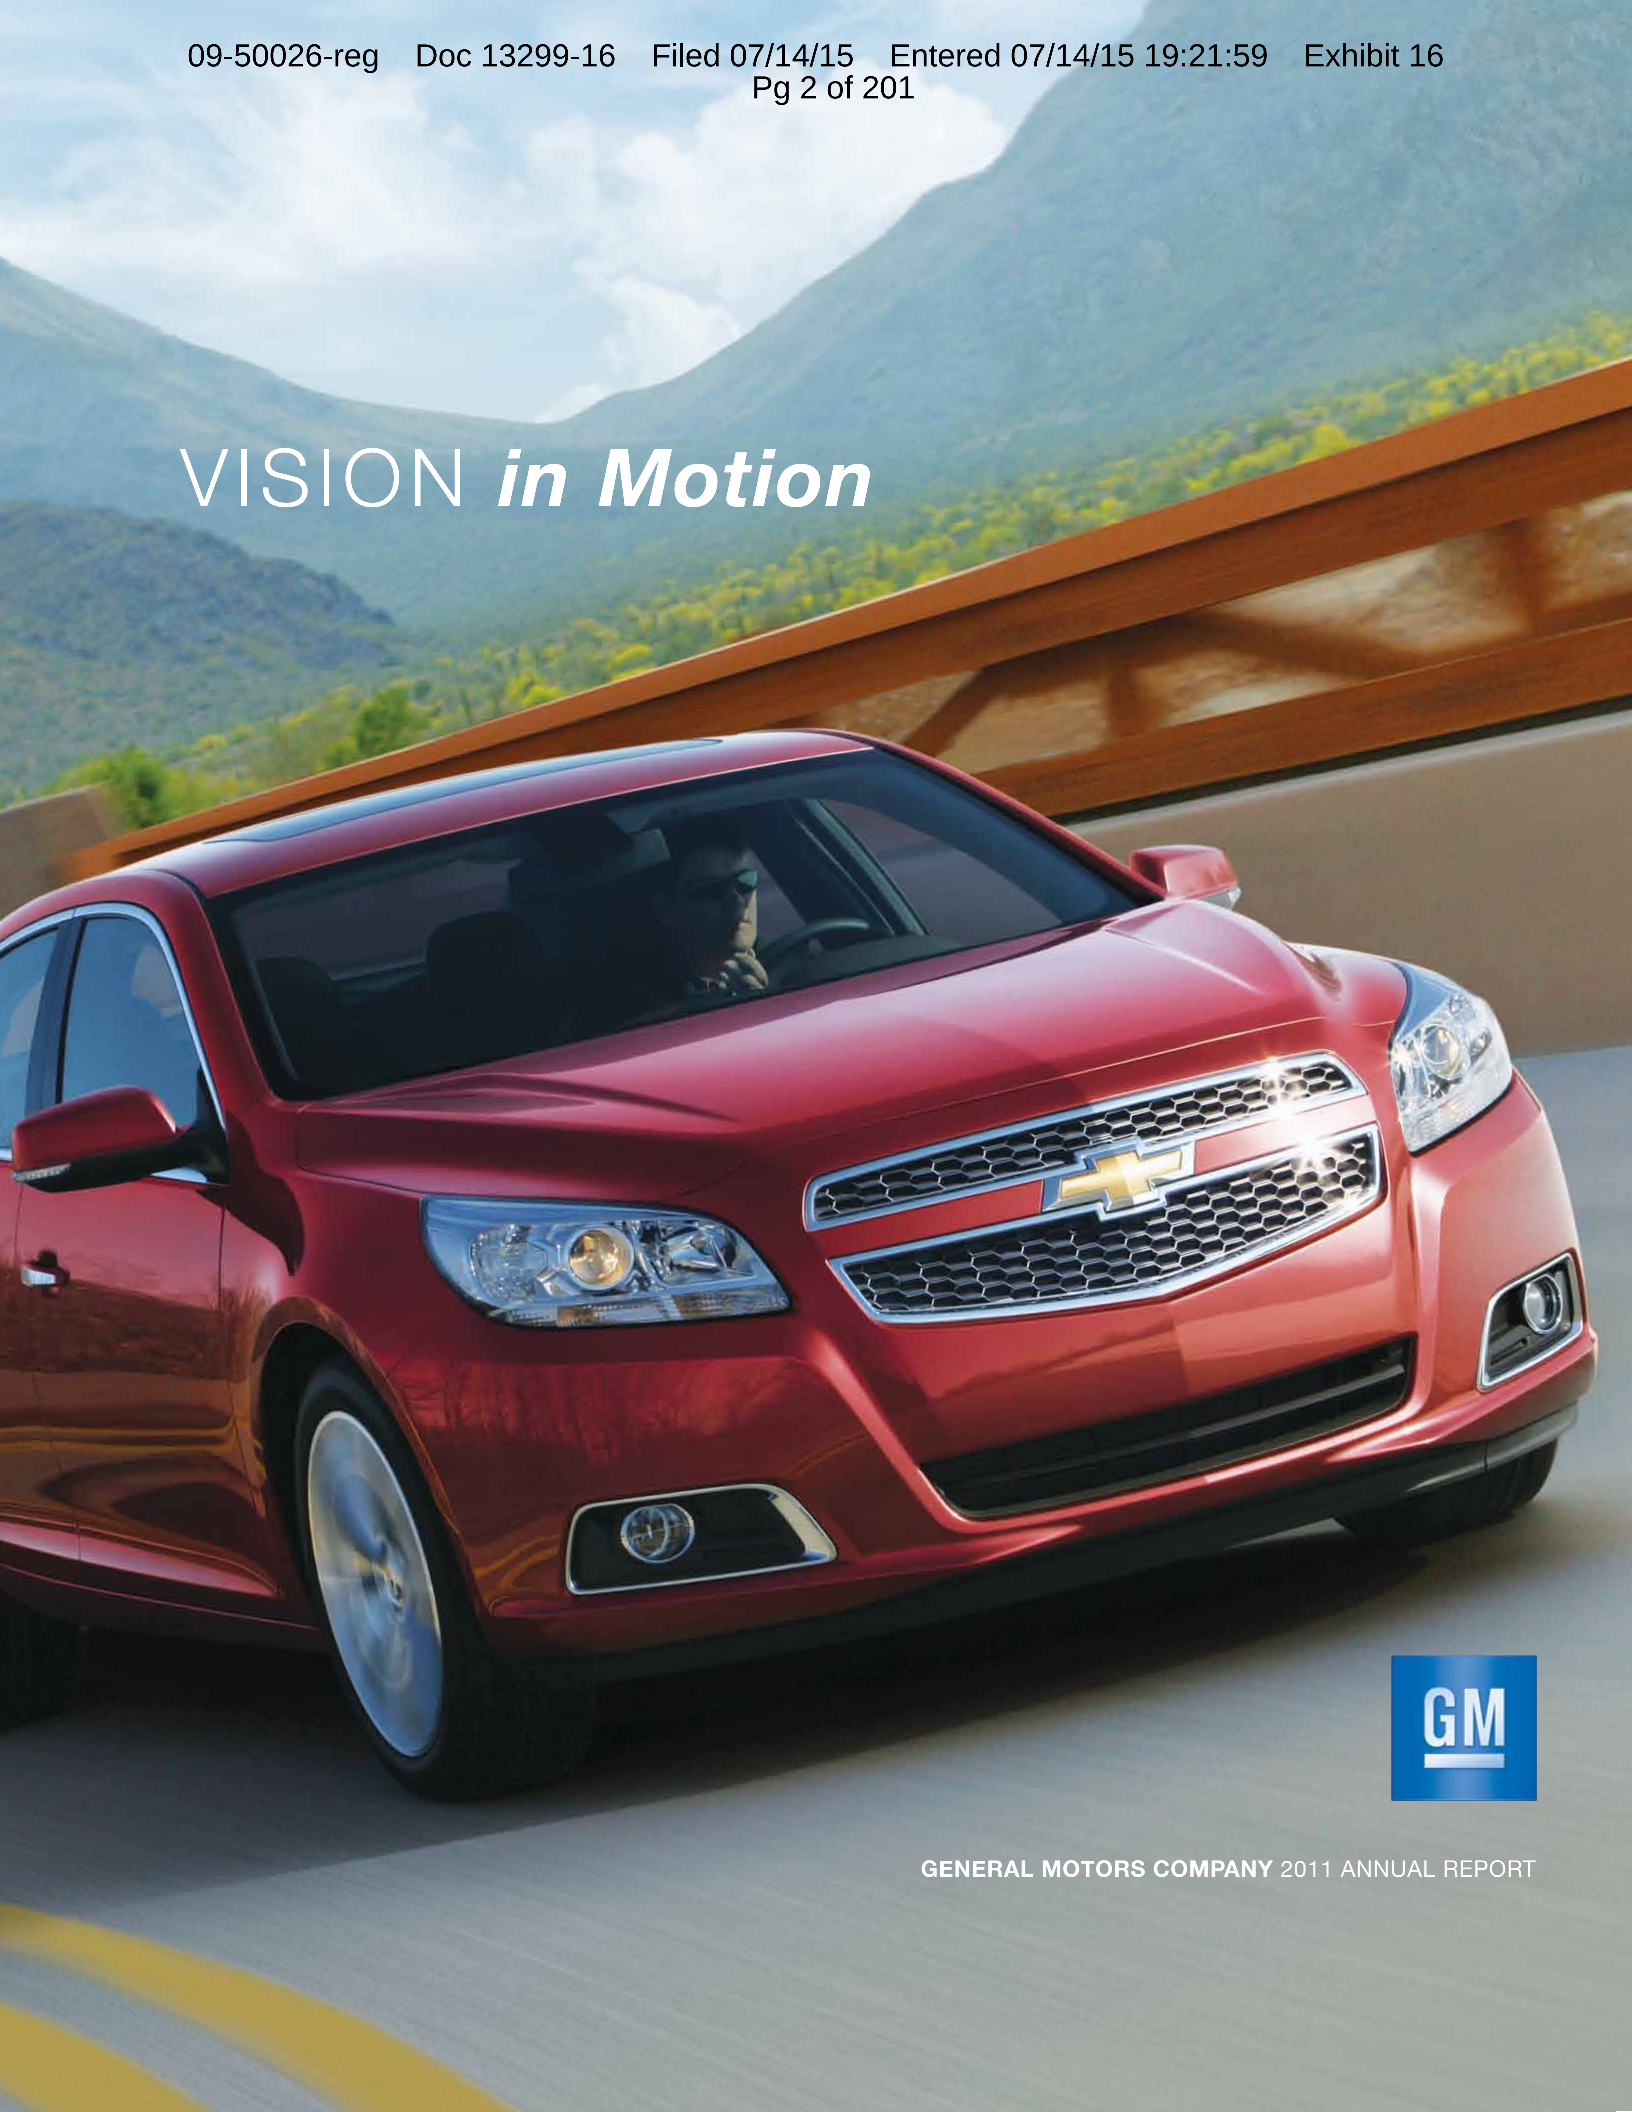
EXHIBIT 16

VISION *in Motion*



GENERAL MOTORS COMPANY 2011 ANNUAL REPORT

Every driver of a GM car, crossover or truck is a driver of our growth. We're putting our vision in motion by putting our customers first—executing our strategy to attract and delight more of them every day, all over the world.

Please go to www.gmannualreport.com to view our new online annual report—a view of our year, our strategy, our vehicles and more.

Dear Stockholder:

On behalf of all of us at today's General Motors, thank you for investing in GM. The team here has been working very hard to earn the business of customers around the world and to win the confidence of investors like you.

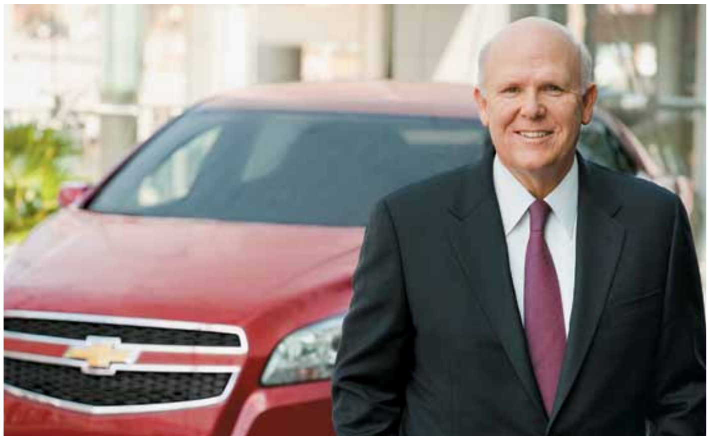
Your company is on the move once again. While there were highs and lows in 2011, our overall report card shows very solid marks, including record net income attributable to common stockholders of $7.6 billion and EBIT-adjusted income of $8.3 billion.

What's just as compelling to me is the story behind the numbers. It shows how we are addressing our challenges and positioning this company for sustained profitable growth around the world.

Here are just some of the highlights from 2011:

- GM increased its global market share by 0.4 percentage points from 2010 to 11.9 percent in 2011.
- GM's overall momentum, including a 13 percent sales increase in the United States, created new jobs and drove investments. We have announced investments in 29 U.S. facilities totaling more than $7.1 billion since July 2009, with more than 17,500 jobs created or retained.
- Our suppliers and dealers are investing for the future right alongside us. In fact, more than 3,400 dealerships in the United States are undergoing upgrades and renovations to improve the customer sales and service experience.
- In China, GM is the clear market leader and we continued to outpace the competition in 2011. Sales by GM and our joint venture partners increased more than 8 percent compared with 2010, and our market share was up 0.7 percentage points to 13.6 percent.
- We managed our way through the aftermath of the Japanese earthquake and tsunami without any material impact on our operations thanks to great teamwork between GM and our supplier partners.
- We sold our equity interest in Delphi Automotive and our preferred stock holdings in Ally Financial for a combined $4.8 billion to simplify and further strengthen our "fortress" balance sheet.
- GM and the UAW negotiated a new four-year labor agreement that protects our low break-even level in the United States, preserves our fortress balance sheet and creates a more transparent and aligned profit sharing plan. We are also giving employees the opportunity to benefit financially when they improve the initial quality of GM vehicles.
- We strengthened our global leadership team, with new leaders in finance, product development, human resources and other critical areas.

Both Moody's Investors Service and Standard & Poor's recognize just how far we've come, and have upgraded our corporate credit ratings to one notch below investment grade. Achieving investment grade status is something we will earn by remaining focused on our four guiding principles, and executing them with passion, relentless attention to detail and true accountability.



DANIEL F. AKERSON
Chairman & Chief Executive Officer

The four principles I'm talking about have not changed since GM's initial public offering:

Design, Build and Sell the World's Best Vehicles

This pillar is intended to keep the customer at the center of everything we do, and success is pretty easy to define. It means creating vehicles that people desire, value and are proud to own. When we get this right, it transforms our reputation and the company's bottom line.

Just look at the performance of the 2012 Chevrolet Cruze in the United States and compare it to the 2010 Chevrolet Cobalt. The average transaction price for a Cruze is about 28 percent higher, its projected resale value after three years is about 32 percent higher and it gets up to 14 percent better highway fuel economy, according to EPA estimates. This is the kind of success we plan to replicate every opportunity we get.

The Chevrolet Volt and Opel Ampera extended-range electric vehicles are two other great examples. Between them, they have won nearly every major product award, including both the North American and European Car of the Year. More meaningfully, a respected third-party survey found that nearly every Volt customer would buy the same car again. When the final word on these products is written, they are going to be viewed as milestones for the industry – not just for GM.

In 2012, we're moving even faster and more aggressively on the product front. In the United States, we will have all-new or redesigned cars and crossovers in segments that represent 60 percent of the retail light vehicle industry. This includes the new Cadillac XTS and ATS luxury sedans and the Chevrolet Spark minicar – all of which enter segments where we don't compete today.

Each of these new products is part of an aggressive cadence of more than 20 major vehicle launches around the world, including the Opel Mokka in Europe, the Chevrolet Sail in Asia and the Chevrolet Colorado in South America.

In some markets, these vehicles will help expand our leadership. In other regions, they will give us new momentum. In every market, they will be noticed.

Strengthen Brand Value

Clarity of purpose and consistency of execution are the cornerstones of our product strategy, and two brands will drive our global growth. They are Chevrolet, which embodies the qualities of value, reliability, performance and expressive design; and Cadillac, which creates luxury vehicles that are provocative and powerful. At the same time, the Holden, Buick, GMC, Baojun, Opel and Vauxhall brands are being carefully cultivated to satisfy as many customers as possible in select regions.

Grow Profitably Around the World

Between 2012 and 2016, industry analysts forecast growth of approximately 12.8 million units in just four large developing markets – Brazil, Russia, India and China. I believe that GM is clearly the best-positioned automaker to take advantage of the trend. We are the market leader in the United States and China; we are increasingly well-positioned in Russia, Brazil and India; and we have sizable operations throughout Europe, the rest of South America and Asia.

We are not yet reaping the full financial benefits of this scale. But we expect to – by taking decisive action to eliminate complexity and reduce cost. Delivering permanent solutions to these challenges is a priority for the leadership team, and I'll outline our plans to address them later in this letter.

Becoming far more efficient in our operations is a priority in order to fund our global growth. Today, roughly 70 percent of our sales are outside the United States and that percentage is expected to grow over time. Already, three of GM's five best-selling vehicles in 2011 – the Chevrolet Cruze, the Wuling Sunshine and the Wuling Rongguang – derived all or a significant share of their volume from China.

Maintain a Fortress Balance Sheet

We call our balance sheet a fortress because we want it to be impregnable so we can meet all of our obligations and create value even in the toughest economy.

We're already there in terms of reduced automotive debt, which was \$5.3 billion at the end of 2011, and we have built total liquidity of \$37.5 billion, including \$31.6 billion in cash and marketable securities. To keep the fortress balance sheet secure we are committed to maintaining minimal automotive debt and a low break-even level.

We continuously reinforce this strategy at all levels of the organization to make sure everyone understands the direct linkage between a strong balance sheet and a stable, robust product plan. A strong balance sheet enables us to invest in product development even during a down economic cycle. This allows us to take advantage of future growth opportunities when the economic cycle recovers. Over time, the incremental revenue generated by an optimized product plan is going to help us achieve another important objective, which is to return excess cash to stockholders.

As confident as we are in our plan, and with all that's going right, we still have a lot of work to do in 2012 and beyond. At the top of the list is fixing our businesses in Europe and South America.

We accomplished a lot in Europe in 2010 and 2011 with new products and concrete actions that reduced our break-even level. However, issues like industry-wide overcapacity and high fixed costs remain, and that left the business vulnerable as key economies got weaker.

While our issues in Europe have been intractable, they are not insurmountable. Our new leadership team in Europe is already finding creative opportunities to reduce costs and complexity, which is the aim of our alliance with PSA Peugeot Citroën. We'll continue to work on both revenue and cost opportunities until we have restored the region to consistent profitability.

We are also in the process of launching seven new vehicles in Brazil as part of a comprehensive strategy to return our South America region to profitability after a disappointing loss in 2011.

Another issue that we are aggressively managing is our U.S. pension liability. Our pension derisking is well underway. We ended the year with our qualified U.S. plans 88 percent funded; we have capped the number of hourly and salaried participants; our UAW contract contains no pension increase, and in September accrued benefits for the salaried employees who remain in the plan will be frozen.

All of these initiatives will help improve GM's EBIT-adjusted margins over time and will better leverage our global scale, which is one of our fundamental challenges.

Quite simply, we have too many vehicle and powertrain architectures relative to our global volume and customer needs. We have had too many ad agencies and media buyers for our tightly focused collection of brands, and I can cite many more examples of complexity and waste up and down and throughout the organization. Rest assured we are systematically rooting them out.

For example, we are implementing plans to reduce the number of vehicle and powertrain architectures by half in less than a decade, we have consolidated our global Chevrolet advertising account and GM's global media planning and buying services, and there's more to come as we change the culture of the organization to instill an unwavering commitment to peak performance.

This commitment to peak performance is part of a broader culture change underway at GM – change that goes a long way toward explaining why we accomplished so much in our first full year as a public company.

Each day the cultural change underway at GM becomes more striking. The old internally focused, consensus-driven and overly complicated GM is being reinvented brick by brick, by truly accountable executives who know how to take calculated risks and lead global teams that are committed to building the best vehicles in the world as efficiently as we can.

That's the crux of our plan. The plan is something we can control. We like the results we're starting to see and we're going to stick to it – always.

That's my commitment to you.

Sincerely,

Daniel F. Akerson
Chairman & Chief Executive Officer

General Motors Company and Subsidiaries Reconciliation of Non-GAAP Measures

The accompanying Letter to Stockholders includes earnings before interest and taxes adjusted for special items (EBIT-adjusted) and Automotive free cash flow, which are not prepared in accordance with Accounting Principles Generally Accepted in the United States of America (U.S. GAAP) and have not been audited or reviewed by GM's independent auditors. EBIT-adjusted and Automotive free cash flow are considered non-GAAP financial measures.

Management believes these non-GAAP financial measures provide meaningful supplemental information regarding GM's operating results because they exclude amounts that management does not consider part of operating results when assessing and measuring the operational and financial performance of the organization. Management believes these measures allow it to readily view operating trends, perform analytical comparisons and benchmark performance between periods and among geographic regions. Accordingly, GM believes these non-GAAP financial measures are useful in allowing for greater transparency of GM's core operations and they are therefore used by management in its financial and operational decision-making.

While management believes that these non-GAAP financial measures provide useful information, they are not operating measures under U.S. GAAP, and there are limitations associated with their use. GM's calculation of these non-GAAP financial measures may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in their method of calculation. As a result, the use of these non-GAAP financial measures has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Net income or Net income attributable to common stockholders. Due to these limitations, these non-GAAP financial measures are used as a supplement to U.S. GAAP measures.

The following table summarizes the reconciliation of EBIT-adjusted to its most comparable U.S. GAAP measure (in millions):

	2011	2010
Operating segments		
GMNA (a)	$7,194	$5,688
GME (a)	(747)	(1,953)
GMIO (a)	1,897	2,262
GMSA (a)	(122)	818
GM Financial (b)	622	129
Total operating segments (b)	8,844	6,944
Corporate and eliminations	(540)	86
EBIT-adjusted (b)	**$8,304**	**$7,030**
Special items (c)	861	447
Corporate interest income	455	465
Automotive interest expense	540	1,098
Income tax expense (benefit)	(110)	672
Net income attributable to stockholders	**$9,190**	**$6,172**

(a) Interest and income taxes are recorded centrally in Corporate and therefore are not reconciling items for GM's automotive operating segments between EBIT-adjusted and Net income attributable to stockholders.
(b) GM Financial amounts represent income before income taxes.
(c) The following summarizes the special items:

In the year ended December 31, 2011, special items included the following:
- Gain of $1.6 billion in GMNA related to the sale of GM's Class A Membership Interests in Delphi Automotive LLP;
- Goodwill impairment charges of $1.0 billion in GME and $258 million in GMIO;
- Gain of $749 million in GMNA related to Canadian Health Care Trust settlement;
- Impairment charges of $555 million in Corporate related to GM's investments in Ally Financial common stock;
- Gain of $339 million in Corporate related to the sale of 100% of the Ally Financial preferred stock;
- Charge of $106 million in GMIO related to GM's India joint venture; and
- Gain of $63 million in GMSA related to extinguishment of debt.

In the year ended December 31, 2010, special items included the following:
- Gain of $198 million in Corporate related to extinguishment of the VEBA Notes;
- Gain of $123 million in GME related to the sale of Saab Automobile AB to Spyker Cars NV;
- Gain of $66 million in GME related to the acquisition of General Motors Strasbourg S.A.S.; and
- Gain of $60 million in GMNA related to the sale of Nexteer Automotive Corporation, a manufacturer of steering components and half-shafts.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Market Information

Shares of our common stock have been publicly traded since November 18, 2010 when our common stock was listed and began trading on the New York Stock Exchange and the Toronto Stock Exchange. As a result the table below for the year ended December 31, 2010 only provides data with respect to the fourth quarter of 2010.

Quarterly price ranges based on high and low prices from intraday trades of our common stock on the New York Stock Exchange, the principal market in which the stock is traded, are as follows:

	Year Ended December 31, 2011		Year Ended December 31, 2010	
	High	Low	High	Low
Quarter				
First	$39.48	$30.20	N/A	N/A
Second	$33.47	$28.17	N/A	N/A
Third	$32.08	$19.77	N/A	N/A
Fourth	$26.55	$19.00	$36.98	$33.07

Holders

At February 15, 2012 we had a total of 1.6 billion issued and outstanding shares of common stock held by 276 holders of record.

Dividends

Since our formation, we have not paid any dividends on our common stock. We have no current plans to pay any dividends on our common stock. So long as any share of our Series A or Series B Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on our Series A and Series B Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. Our secured revolving credit facility contains certain restrictions on our ability to pay dividends on our common stock, subject to exceptions, such as dividends payable solely in shares of our common stock. So long as any share of our Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on our Series A Preferred Stock, subject to exceptions, such as dividends on our Series B Preferred Stock payable solely in shares of our common stock.

Our payment of dividends in the future, if any, will be determined by our Board of Directors and will be paid out of funds legally available for that purpose. Our payment of dividends in the future will depend on business conditions, our financial condition, earnings, liquidity and capital requirements, the covenants in our secured revolving credit facility and other factors.

(a) At July 10, 2009 we applied fresh-start reporting following the guidance in Accounting Standards Codification (ASC) 852, "Reorganizations" (ASC 852). The consolidated financial statements for the periods ended on or before July 9, 2009 do not include the effect of any changes in the fair value of assets or liabilities as a result of the application of fresh-start reporting. Our financial information at and for any period after July 10, 2009 is not comparable to Old GM's financial information.

(b) General Motors Financial Company, Inc. (GM Financial) was consolidated effective October 1, 2010.

(c) In the period January 1, 2009 through July 9, 2009 Old GM recorded Reorganization gains, net of $128.2 billion directly associated with filing of certain of its direct and indirect subsidiaries voluntary petitions for relief under Chapter 11 of the U.S. Bankruptcy Code (Bankruptcy Code) in the Bankruptcy Court, the 363 Sale of Old GM and certain of its direct and indirect subsidiaries (collectively the Sellers) and the application of fresh-start reporting. Refer to Note 32 to our consolidated financial statements for additional detail.

(d) In the year ended December 31, 2011 we used the two-class method for calculating earnings per share as the Series B Preferred Stock is a participating security due to the applicable market value of our common stock being below $33.00 per common share. Refer to Note 26 to our consolidated financial statements for additional detail.

(e) In December 2008 Old GM entered into a loan agreement, as amended, with the United States Treasury (UST) in December 2008 (UST Loan Agreement), pursuant to which the UST agreed to provide a $13.4 billion borrowing facility.

(f) In December 2010 GM Korea Company (GM Korea) terminated $1.2 billion credit facility following the repayment of the remaining $1.0 billion under the facility.

(g) Series A preferred stock was reclassified from temporary equity to permanent equity in the year ended December 31, 2010.

(h) In December 2010 we purchased 84 million shares of our Series A Preferred Stock from the UST for $2.1 billion.

(i) Series B Preferred Stock was issued in a public offering in November and December 2010.

* * * * * * *

General Motors Company was formed in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation (363 Sale) and changed its name to General Motors Company, is sometimes referred to in this management's discussion and analysis of financial condition and results of operations (MD&A) for the periods on or subsequent to July 10, 2009 as "we," "our," "us," "ourselves," the "Company," "General Motors," or "GM," and is the successor entity solely for accounting and financial reporting purposes (Successor). General Motors Corporation is sometimes referred to in this MD&A, for the periods on or before July 9, 2009, as "Old GM" and is the predecessor entity solely for accounting and financial reporting purposes (Predecessor). On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company, which is sometimes referred to in this MD&A for the periods after July 10, 2009 as "MLC." On December 15, 2011 MLC was dissolved and the Motors Liquidation Company GUC Trust (GUC Trust) assumed responsibility for the affairs of and certain claims against MLC and its debtor subsidiaries that were not concluded prior to MLC's dissolution. MLC transferred to the GUC Trust all of MLC's remaining undistributed shares of our common stock and warrants to acquire our common stock.

Presentation and Estimates

Basis of Presentation

This MD&A should be read in conjunction with the accompanying consolidated financial statements.

We analyze the results of our business through our five segments, namely GM North America (GMNA), GM Europe (GME), GM International Operations (GMIO), GM South America (GMSA) and GM Financial.

Consistent with industry practice, market share information includes estimates of industry sales in certain countries where public reporting is not legally required or otherwise available on a consistent basis.

Use of Estimates in the Preparation of the Financial Statements

The consolidated financial statements are prepared in conformity with U.S. GAAP, which requires the use of estimates, judgments and assumptions that affect the reported amounts of assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and the resulting balances are reasonable; however, due to the inherent uncertainties in making estimates, actual results could differ from the original estimates, requiring adjustments to these balances in future periods.

Prior Period Financial Statements Conformed to Current Period Presentation

We changed the presentation of our consolidated balance sheet, consolidated statement of cash flows and certain footnotes to combine line items which were either of a related nature or not individually material. We have made corresponding reclassifications to the comparable information for all periods presented.

In the year ended December 31, 2011 we have recorded foreign currency exchange gains and losses on debt as non-operating items. This is a change from prior period presentations in which foreign currency exchange gains and losses on debt were recorded in Automotive cost of sales. We have reclassified all the successor prior periods to conform to our current presentation. The effects of this reclassification decreased Automotive cost of sales and Interest income and other non-operating income, net by $24 million for the year ended December 31, 2010 and $65 million for the period July 10, 2009 through December 31, 2009.

Overview

Our Company commenced operations on July 10, 2009 when we completed the acquisition of substantially all of the assets and assumption of certain liabilities of Old GM through a 363 Sale under the Bankruptcy Code. By commencing operations following the 363 Sale, we were able to take advantage of a competitive labor agreement with our unions, a restructured dealer network and a reduced and refocused brand strategy in the U.S. focused on four brands.

In November and December of 2010 we consummated a public offering of 550 million shares of our common stock and 100 million shares of Series B Preferred Stock and listed both of these securities on the New York Stock Exchange and the common stock on the Toronto Stock Exchange. In April 2011 in connection with MLC's distribution of warrants for our common stock to its unsecured creditors, we listed the warrants expiring July 10, 2016 and the warrants expiring July 10, 2019 on the New York Stock Exchange.

Automotive

We offer a global vehicle portfolio of cars, crossovers and trucks. We are committed to leadership in vehicle design, quality, reliability, telematics and infotainment and safety, as well as to developing key energy efficiency, energy diversity and advanced propulsion technologies, including electric vehicles with range extending capabilities such as the Chevrolet Volt. Our business is diversified across products and geographic markets. We meet the local sales and service needs of our retail and fleet customers with a global network of independent dealers. Of our total 2011 vehicle sales volume, 72.3% was generated outside the U.S., including 43.4% from emerging markets, such as Brazil, Russia, India and China (collectively BRIC), which have recently experienced the industry's highest volume growth.

Our automotive business is organized into four geographically-based segments:

- GMNA, with sales, manufacturing and distribution operations in the U.S., Canada and Mexico and sales and distribution operations in Central America and the Caribbean, represented 32.4% of our vehicle sales volume in 2011 and we had the largest market share in this market at 18.4%.

- GME has sales, manufacturing and distribution operations across Western and Central Europe. GME's vehicle sales volume, which in addition to Western and Central Europe, includes Eastern Europe (including Russia and the other members of the Commonwealth of Independent States among others) represented 19.2% of our vehicle sales volume in 2011. In 2011 we had the number four market share in this market at 8.8%. GMIO distributes Chevrolet brand vehicles which, when sold in Europe, are included in GME vehicle sales volume and market share data.

- GMIO has sales, manufacturing and distribution operations in Asia-Pacific, Eastern Europe (including Russia and the other members of the Commonwealth of Independent States among others), Africa and the Middle East. GMIO's vehicle sales volume, which includes Asia-Pacific, Africa and the Middle East is our largest segment by vehicle sales volume. GMIO represented 36.6% of our global vehicle sales volume including sales through our joint ventures in 2011. In 2011 we had the number two market share for this market at 9.5% and the number one market share in China. In 2011 GMIO derived 77.1% of its vehicle sales volume from China. GMIO records the financial results of Chevrolet brand vehicles that it distributes and sells in Europe.

- GMSA, with sales, manufacturing and distribution operations in Brazil, Argentina, Colombia, Ecuador and Venezuela as well as sales and distribution operations in Bolivia, Chile, Paraguay, Peru and Uruguay represented 11.8% of our vehicle sales volume in 2011. In 2011 we had the largest market share for this market at 18.8% and the number three market share in Brazil. In 2011 GMSA derived 59.4% of its vehicle sales volume from Brazil.

Automotive Financing — GM Financial

GM Financial specializes in purchasing retail automobile installment sales contracts originated by GM and non-GM franchised and select independent dealers in connection with the sale of used and new automobiles. GM Financial also offers lease products through GM dealerships in connection with the sale of used and new automobiles that target customers with sub-prime and prime credit bureau scores. GM Financial primarily generates revenue and cash flows through the purchase, retention, subsequent securitization and servicing of finance receivables. To fund the acquisition of receivables prior to securitization, GM Financial uses available cash and borrowings under its credit facilities. GM Financial earns finance charge income on finance receivables and pays interest expense on borrowings under its credit facilities. GM Financial periodically transfers receivables to securitization trusts that issue asset-backed securities to investors. The securitization trusts are special purpose entities (SPEs) that are also variable interest entities that meet the requirements to be consolidated in the financial statements.

Our Strategy

Our vision is to design, build and sell the world's best vehicles. The primary elements of our strategy to achieve this vision are to:

- Deliver a product portfolio of the world's best vehicles, allowing us to maximize sales under any market conditions;
- Sell our vehicles globally by targeting developed markets, which are projected to have increases in vehicle demand as the global economy recovers, and further strengthening our position in high growth emerging markets;
- Improve revenue realization and maintain a competitive cost structure to allow us to remain profitable at lower industry volumes and across the lifecycle of our product portfolio; and
- Maintain a strong balance sheet by reducing financial leverage given the high operating leverage of our business model.

Chapter 11 Proceedings and the 363 Sale

Background

Over time as Old GM's market share declined in North America, Old GM needed to continually restructure its business operations to reduce cost and excess capacity. Legacy labor costs and obligations and capacity in its dealer network made Old GM less competitive than new entrants into the U.S. market. These factors continued to strain Old GM's liquidity. In 2005 Old GM incurred significant losses from operations and from restructuring activities such as providing support to Delphi Corporation (Delphi) and other efforts intended to reduce operating costs. Old GM managed its liquidity during this time through a series of cost reduction initiatives, capital markets transactions and sales of assets. However, the global credit market crisis had a dramatic effect on Old GM and the automotive industry. In the second half of 2008, the increased turmoil in the mortgage and overall credit markets (particularly the lack of financing for buyers or lessees of vehicles), the continued reductions in U.S. housing values, the volatility in the price of oil, recessions in the U.S. and Western Europe and the slowdown of economic growth in the rest of the world created a substantially more difficult business environment. The ability to execute capital markets transactions or sales of assets was extremely limited, vehicle sales in North America and Western Europe contracted severely, and the pace of vehicle sales in the rest of the world slowed. Old GM's liquidity position, as well as its operating performance, were negatively affected by these economic and industry conditions and by other financial and business factors, many of which were beyond its control.

As a result of these economic conditions and the rapid decline in sales in the three months ended December 31, 2008 Old GM determined that, despite the actions it had then taken to restructure its U.S. business, it would be unable to pay its obligations in the normal course of business in 2009 or service its debt in a timely fashion, which required the development of a new plan that depended on financial assistance from the U.S. government.

In December 2008 Old GM requested and received financial assistance from the U.S. government and entered into the UST Loan Agreement. In early 2009 Old GM's business results and liquidity continued to deteriorate, and, as a result, Old GM obtained additional funding from the UST under the UST Loan Agreement. Old GM also received funding from Export Development Canada (EDC), a corporation wholly-owned by the government of Canada, under a loan and security agreement entered into in April 2009 (EDC Loan Facility).

As a condition to obtaining continued 2009 funding under the UST Loan Agreement, Old GM was required to submit a plan in February 2009 that included specific actions (Viability Plan) intended to result in the following:

- Repayment of all loans, interest and expenses under the UST Loan Agreement, and all other funding provided by the U.S. government;
- Compliance with federal fuel efficiency and emissions requirements and commencement of domestic manufacturing of advanced technology vehicles;
- Achievement of a positive net present value, using reasonable assumptions and taking into account all existing and projected future costs;

- Rationalization of costs, capitalization and capacity with respect to its manufacturing workforce, suppliers and dealerships; and
- A product mix and cost structure that is competitive in the U.S. marketplace.

The UST Loan Agreement also required Old GM to, among other things, use its best efforts to achieve the following restructuring targets: (1) debt reduction of at least two-thirds; (2) labor modifications to achieve an average compensation competitive with that of foreign-owned U.S. domiciled automakers, and; (3) modification of certain retiree healthcare obligations.

The UST Loan Agreement provided that if, by March 31, 2009 or a later date (not to exceed 30 days after March 31, 2009) as determined by the Presidential Task Force on the Auto Industry (Auto Task Force) (Certification Deadline), the Auto Task Force had not certified that Old GM had taken all steps necessary to achieve and sustain its long-term viability, international competitiveness and energy efficiency in accordance with the Viability Plan, then the loans and other obligations under the UST Loan Agreement were to become due and payable on the thirtieth day after the Certification Deadline.

On March 30, 2009 the Auto Task Force determined that the plan was not viable and required substantial revisions. On March 31, 2009 Old GM and the UST agreed to postpone the Certification Deadline to June 1, 2009. Old GM made further modifications to its Viability Plan in an attempt to satisfy the Auto Task Force requirement that it undertake a substantially more accelerated and aggressive restructuring plan (Revised Viability Plan), the most significant of which included reducing Old GM's indebtedness and certain retiree healthcare (VEBA) obligations.

Chapter 11 Proceedings

Old GM was not able to complete the cost reduction and restructuring actions in its Revised Viability Plan, including the debt reductions and VEBA modifications, which resulted in extreme liquidity constraints. As a result, on June 1, 2009 Old GM and certain of its direct and indirect subsidiaries filed voluntary petitions for relief under Chapter 11 (Chapter 11 Proceedings) of the Bankruptcy Code in the Bankruptcy Court.

In connection with the Chapter 11 Proceedings, Old GM entered into a secured superpriority debtor-in-possession credit agreement with the UST and EDC (DIP Facility) and received additional funding commitments from EDC to support Old GM's Canadian operations.

The following table summarizes the total funding and funding commitments Old GM received from the U.S. and Canadian governments and the additional notes Old GM issued related thereto in the period December 31, 2008 through July 9, 2009 (dollars in millions):

	Predecessor		
	Funding and Funding Commitments	**Additional Notes Issued (a)**	**Total Obligation**
Description of Funding Commitment			
UST Loan Agreement (b)	$19,761	$1,172	$20,933
EDC funding (c)	6,294	161	6,455
DIP Facility	33,300	2,221	35,521
Total	$59,355	$3,554	$62,909

(a) Old GM did not receive any proceeds from the issuance of these promissory notes, which were issued as additional compensation to the UST and EDC.

(b) Includes debt of $361 million, which UST loaned to Old GM under the warranty program.

(c) Includes approximately $2.4 billion from the EDC Loan Facility received in the period January 1, 2009 through July 9, 2009 and funding commitments of $3.9 billion that were immediately converted into our equity. This funding was received on July 15, 2009.

363 Sale

On July 10, 2009, we completed the acquisition of substantially all of the assets and assumed certain liabilities of Old GM from the Sellers. The 363 Sale was consummated in accordance with a purchase agreement, dated June 26, 2009, as amended, between us and the Sellers, and pursuant to the Bankruptcy Court's sale order dated July 5, 2009.

In connection with the 363 Sale, the purchase price we paid to Old GM equaled the sum of:

- A credit bid in an amount equal to the total of: (1) debt of $19.8 billion under Old GM's UST Loan Agreement, plus notes of $1.2 billion issued as additional compensation for the UST Loan Agreement, plus interest on such debt Old GM owed as of the closing date of the 363 Sale; and (2) debt of $33.3 billion under Old GM's DIP Facility, plus notes of $2.2 billion issued as additional compensation for the DIP Facility, plus interest Old GM owed as of the closing date, less debt of $8.2 billion owed under the DIP Facility;
- UST's return of the warrants Old GM previously issued to it;
- The issuance to MLC of shares of our common stock and warrants to acquire newly issued shares of our common stock as presented in the following section entitled "Issuance of Common Stock, Preferred Stock and Warrants;" and
- Our assumption of certain specified liabilities of Old GM (including debt of $7.1 billion owed under the DIP Facility).

Under the purchase agreement, we are obligated to issue additional shares of our common stock (Adjustment Shares) to the GUC Trust following the dissolution of MLC in the event that allowed general unsecured claims against MLC, as approved by the Bankruptcy Court, exceed $35.0 billion. Refer to Note 20 to our consolidated financial statements for a description of the contingently issuable Adjustment Shares.

Agreements with the UST, EDC and New VEBA

On July 10, 2009 we entered into the UST Credit Agreement and assumed debt of $7.1 billion that Old GM incurred under its DIP Facility. Immediately after entering into the UST Credit Agreement, we made a partial prepayment, reducing the loan principal balance to $6.7 billion. We issued notes in the principal amount of $2.5 billion (VEBA Notes) to the UAW Retiree Medical Benefits Trust (New VEBA). Through our wholly-owned subsidiary General Motors of Canada Limited (GMCL), we also entered into the amended and restated loan agreement with EDC (Canadian Loan Agreement), as a result of which GMCL had a $1.3 billion term loan (Canadian Loan).

In December 2009 and March 2010 we made quarterly payments of $1.0 billion and $1.0 billion on the UST Credit Agreement and GMCL made quarterly payments of $192 million and $194 million on the Canadian Loan. In April 2010 we used funds from our escrow account to repay in full the outstanding amount of the UST Credit Agreement of $4.7 billion, and GMCL repaid in full the outstanding amount of the Canadian Loan of $1.1 billion. Both loans were repaid prior to maturity. On October 26, 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion.

Refer to Note 17 to our consolidated financial statements for additional information on the UST Credit Agreement, VEBA Notes and the Canadian Loan.

Issuance of Common Stock, Preferred Stock and Warrants

On July 10, 2009 we issued the following securities to the UST, Canada GEN Investment Corporation, a corporation organized under the laws of Canada (Canada Holdings), the New VEBA and MLC (shares in millions):

	Common Stock	Series A Preferred Stock (b)
UST	912	84
Canada Holdings	175	16
New VEBA (a)	263	260
MLC (a)	150	—
	1,500	360

(a) New VEBA also received a tranche of warrants to acquire 46 million shares of our common stock and MLC received two tranches of warrants, each to acquire 136 million shares of our common stock. Refer to Note 25 to our consolidated financial statements for additional description of warrants.

(b) Refer to Note 25 to our consolidated financial statements for a description of the Series A Preferred Stock.

Additional Modifications to Pension and Other Postretirement Plans Contingent upon Completion of the 363 Sale

We modified the U.S. hourly pension plan, the U.S. executive retirement plan, the U.S. salaried life plan, the non-UAW hourly retiree medical plan and the U.S. hourly life plan. These modifications became effective upon the completion of the 363 Sale. Refer to Note 18 to our consolidated financial statements for a description of the changes to these plans.

Accounting for the Effects of the Chapter 11 Proceedings and the 363 Sale

ASC 852 is applicable to entities operating under Chapter 11 of the Bankruptcy Code. ASC 852 generally does not affect the application of U.S. GAAP that Old GM followed to prepare the consolidated financial statements, but it does require specific disclosures for transactions and events that were directly related to the Chapter 11 Proceedings and transactions and events that resulted from ongoing operations.

Old GM prepared its consolidated financial statements in accordance with the guidance in ASC 852 in the period June 1, 2009 through July 9, 2009. Revenues, expenses, realized gains and losses, and provisions for losses directly related to the Chapter 11 Proceedings were recorded in Reorganization gains, net. Reorganization gains, net do not constitute an element of operating loss due to their nature and due to the requirement that they be reported separately. Cash amounts provided by or used in the Chapter 11 Proceedings are separately disclosed in the statement of cash flows.

Effect of Fresh-Start Reporting

The application of fresh-start reporting significantly affected certain assets, liabilities and expenses. As a result, certain financial information at and for any period after July 10, 2009 is not comparable to Old GM's financial information. Therefore, we did not combine certain financial information in the period July 10, 2009 through December 31, 2009 with Old GM's financial information in the period January 1, 2009 through July 9, 2009 for comparison to other periods. For the purpose of the following discussion, we have combined our Total net sales and revenue in the period July 10, 2009 through December 31, 2009 with Old GM's Total net sales and revenue in the period January 1, 2009 through July 9, 2009. Total net sales and revenue was not significantly affected by fresh-start reporting and therefore we combined Automotive Total net sales and revenue data comparing the Total net sales and revenue between years presented.

Total net sales and revenue is primarily comprised of revenue generated from the sales of vehicles, in addition to revenue from OnStar, our customer subscription service, vehicle sales accounted for as operating leases, sales of parts and accessories and GM Financial's loan purchasing and servicing activities.

Automotive cost of sales is primarily comprised of material, labor, manufacturing overhead, freight, foreign currency transaction and translation gains and losses, product engineering, design and development expenses, depreciation and amortization, policy and warranty costs, postemployment benefit costs, and separation and impairment charges. Prior to our application of fresh-start reporting on July 10, 2009, Automotive cost of sales also included gains and losses on derivative instruments. Effective July 10, 2009 gains and losses related to all nondesignated derivatives are recorded in Interest income and other non-operating income, net.

Automotive selling, general and administrative expense is primarily comprised of costs related to the advertising, selling and promotion of products, support services, including central office expenses, labor and benefit expenses for employees not considered part of the manufacturing process, consulting costs, rental expense for offices, bad debt expense and non-income based state and local taxes.

Focus on Chinese Market

We view the Chinese market, the fastest growing global market by volume of vehicles sold, as important to our global growth strategy and are employing a multi-brand strategy, led by our Buick and Chevrolet brands. In the coming years, we plan to increasingly leverage our global architectures to increase the number of nameplates under the Buick, Chevrolet and Cadillac brands in China and continue to grow our business under the Baojun, Jiefang and Wuling brands. We operate in Chinese markets through a number of joint ventures and maintaining good relations with our joint ventures partners, which are affiliated with the Chinese government, is an important part of our China growth strategy.

The following table summarizes our direct ownership interests in our Chinese joint ventures, collectively referred to as China JVs:

	Successor	
	December 31, 2011	December 31, 2010
Shanghai General Motors Co., Ltd. (SGM) (a)	49%	49%
Shanghai GM Norsom Motor Co., Ltd.	25%	25%
Shanghai GM Dong Yue Motors Co., Ltd.	25%	25%
Shanghai GM Dong Yue Powertrain	25%	25%
SAIC-GM-Wuling Automobile Co., Ltd. (SGMW) (b)	44%	44%
FAW-GM Light Duty Commercial Vehicle Co., Ltd. (FAW-GM)	50%	50%
Pan Asia Technical Automotive Center Co., Ltd.	50%	50%
Shanghai OnStar Telematics Co., Ltd.	40%	40%
Shanghai Chengxin Used Car Operation and Management Co., Ltd.	33%	33%
SAIC General Motors Sales Co., Ltd.	49%	

(a) Ownership interest in SGM was 49% in the period February 1, 2010 through December 31, 2011 and 50% in the month of January 2010.

(b) Ownership interest in SGMW was 44% in the period November 16, 2010 through December 31, 2010 and 34% in the period January 1, 2010 through November 15, 2010.

The following tables summarize certain key operational and financial data for the China JVs (dollars in millions, vehicles in thousands):

	Year Ended December 31, 2011	Year Ended December 31, 2010	Year Ended December 31, 2009
Total wholesale vehicles (a)	2,573	2,348	1,824
Market share (b)	13.6%	12.8%	13.3%
Total net sales and revenue	$30,511	$25,395	$18,098
Net income	$ 3,203	$ 2,808	$ 1,636

	December 31, 2011	December 31, 2010
Cash and cash equivalents	$ 4,679	$ 5,247
Debt	$ 106	$ 61

(a) Including vehicles exported to markets outside of China.

(b) Market share for China market.

Automotive Financing Strategy

Our automotive financing strategy centers around ensuring that our dealers and customers have consistently available, transparent and competitive financing options throughout the business and credit cycles.

Historically Ally Financial, Inc. (Ally Financial) has provided a majority of the financing for our dealers and a significant portion of the financing for our customers in the U.S., Canada and other major international markets where we operate. Ally Financial historically has been our exclusive financing partner for incentivized retail financing programs in our major markets. Ally Financial continues to provide the majority of the financing needs of our dealers and customers.

The market disruption of 2008 and 2009 highlighted the need to ensure certainty of availability of credit throughout economic cycles in specific segments of the automotive financing market. In the U.S. and Canada we identified leasing and sub-prime lending as underserved areas that could benefit from increased financing sources and competition. In 2009 we partnered with a bank to offer incentivized leasing programs and with GM Financial to offer incentivized sub-prime retail financing in the U.S. We also partnered with a bank to offer incentivized retail financing programs in Canada.

In October 2010 we acquired GM Financial to further bolster our offerings in the leasing and sub-prime financing segments in the U.S. and Canada. We believe that by having our own capabilities in key segments of the market we will be able to achieve more competition and better service from the market, while ensuring certainty of availability through the business cycles.

In April 2011 GM Financial began originating leases for our customers in Canada. Given the importance of leasing and the current lack of availability of leasing offerings to our customers in the Canadian market (due to regulatory restrictions preventing banks and bank holding companies from offering leasing in Canada), we believe having a captive financing offering in Canada is strategically important to our business. GM Financial began originating leases for GM customers in Canada via FinanciaLinx Corporation in April 2011.

We will continue to expand the business of GM Financial in targeted areas, including wholesale lending, that we view as strategic and to otherwise evaluate opportunities in specific segments of the automotive financing market, both in the U.S. and internationally. We expect any expansion of GM Financial or any arrangements with other financing providers will complement our important relationship with Ally Financial.

Restructuring Activities

Restructuring and early retirement programs in Spain, the U.K. and Belgium were essentially completed in 2010 and we also initiated a program in Germany in 2010. Through December 31, 2011 these programs had a total cost of $1.1 billion and affected a total of 6,700 employees and included the closure of the Antwerp, Belgium facility. We expect to incur an additional $0.1 billion, primarily in 2012, to complete these programs, which will affect an additional 500 employees.

We implemented a voluntary separation program in Brazil in the three months ended December 31, 2011. A total of 900 employees participated in the program at a total cost of $0.1 billion. At December 31, 2011 a majority of the 900 employees have left the Company with the remainder expected to leave by March 31, 2012. All charges and liabilities related to this program were recorded in the three months ended December 31, 2011 as employees accepted offers.

Special Attrition Programs, Labor Agreements and Benefit Plan Changes

2011 GM-UAW Labor Agreement

In September 2011 we entered into a collectively bargained labor agreement with the International Union, United Automobile, Aerospace and Agriculture Implement Workers of America (UAW). The agreement covers the wages, hours, benefits and other terms and conditions of employment for our UAW represented employees. The key terms and provisions of the agreement are:

- Lump sum payments to eligible U.S. hourly employees of $5,000 were paid in October 2011 totaling $0.2 billion. Additional lump sum payments of $1,000 will be paid annually in June of 2012, 2013 and 2014 totaling $0.1 billion. These lump sum payments are being amortized over the four year agreement period.

- An annual payment of $250 per U.S. hourly employee upon attainment of specific U.S. vehicle quality targets.

- An increase in wages for certain entry level employees hired on or after October 1, 2007.

- A cash balance pension plan for entry level employees will be frozen on January 2, 2012 and terminated on June 30, 2012, or as soon as practicable thereafter, subject to required regulatory approvals. Participants in this plan and all employees hired on or after October 1, 2007 will participate in a defined contribution plan when this plan is frozen.

- A plan which provides legal services to U.S. hourly employees and retirees will be terminated on December 31, 2013. In September 2011 we remeasured this plan resulting in a decrease of $0.3 billion in the other postretirement benefits (OPEB) liability and a pre-tax increase in the prior service credit component of Accumulated other comprehensive income, which will be amortized through December 31, 2013.

- The profit sharing plan formula will be based on GMNA earnings before interest and taxes (EBIT) adjusted and is effective for the 2011 plan year. The profit sharing payment is capped at $12,000 per employee per year.

- Cash severance incentive programs which may range up to $0.1 billion for skilled trade employees will be included in our restructuring liability upon irrevocable acceptances by both parties.

- We plan to make additional manufacturing investments of more than $2.0 billion to create or retain more than 6,300 UAW jobs during the four year agreement period.

Canadian Health Care Trust

In October 2011 pursuant to a June 2009 agreement between GMCL and the Canadian Auto Workers Union (CAW) an independent Canadian Health Care Trust (HCT) was implemented to provide retiree healthcare benefits to certain active and retired employees. Concurrent with the implementation of the HCT, GMCL was legally released from all obligations associated with the cost of providing retiree healthcare benefits to CAW retirees and surviving spouses by the class action process and to CAW active employees as of June 8, 2009. We accounted for the related termination of CAW hourly retiree healthcare benefits as a settlement, and recorded a gain of $749 million. Refer to Note 18 to our consolidated financial statements for further details regarding the implementation of the HCT.

Pensions

As part of our long-term derisking strategy, changes in the pension portfolio mix resulted in a decrease in the U. S. pension expected weighted-average rate of return on assets from 8.0% in 2011 to 6.5% for the hourly pension plan and 5.7% for the salary pension plan starting on January 1, 2012. GMNA pension income will decline by an estimated $0.8 billion in 2012, due to the reduced expected rate of return on plan assets of $1.4 billion, offset by net decreases to other components of pension expense of $0.6 billion, primarily interest cost.

2009 Special Attrition Programs

In 2009 Old GM announced special attrition programs for eligible UAW represented employees, offering cash and other incentives for individuals who elected to retire or voluntarily terminate employment.

U.S. Salaried Workforce Reductions

In 2009 U.S. salaried workforce reductions were accomplished primarily through a salaried retirement program or through a severance program funded from operating cash flows.

Delphi Benefit Guarantee Agreements

The Delphi Benefit Guarantee Agreements (DBGA) provided contingent benefit guarantees for certain pension and OPEB benefits to certain former U.S. hourly employees that became employees of Delphi. DBGA were affected by the settlement of the Pension

Benefit Guarantee Corporation (PBGC) claims from the termination of the Delphi pension plan. We maintained the obligation to provide the difference between the pension benefits paid by the PBGC and those originally guaranteed by Old GM under the DBGA.

U.S. Salaried Benefit Changes

In January 2012 we amended the U.S. salaried pension plan to cease the accrual of additional benefits effective September 30, 2012. Active plan participants will receive additional contributions in the defined contribution plan starting in October 2012.

In 2009 U.S. salaried benefit changes reduced the salaried life benefits and a negative amendment to the U.S. salaried retiree healthcare program reduced coverage and increased cost sharing.

2009 UAW Retiree Settlement Agreement

In 2009 Old GM and the UAW entered into an agreement which permanently shifted responsibility for providing retiree healthcare to the new plan funded by the New VEBA. Under the terms of the agreement, we are released from UAW retiree healthcare claims incurred after December 31, 2009.

At December 31, 2009 we accounted for the termination of our UAW hourly retiree medical plan as a settlement, and recorded a settlement loss of $2.6 billion.

IUE-CWA and USW Settlement Agreement

In September 2009 we entered into a settlement agreement with MLC, The International Union of Electronic, Electrical, Salaried, Machine and Furniture Workers — Communication Workers of America (IUE-CWA) and United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union (USW). The approved settlement agreement resulted in remeasurements of the U.S. hourly defined benefit pension plan, the non-UAW hourly retiree healthcare plan and the U.S. hourly life plan to reflect the terms of the agreement. The settlement agreement was expressly conditioned upon and did not become effective until approved by the Bankruptcy Court in MLC's Chapter 11 proceedings, which occurred in November 2009. Several additional unions representing MLC hourly retirees joined the IUE-CWA and USW settlement agreement with respect to healthcare and life insurance. The remeasurement of these plans resulted in a decrease in a contingent liability accrual and an offsetting increase in the projected benefit obligation (PBO) or accumulated postretirement benefit obligation (APBO) of the benefit plan.

2009 CAW Agreement

In March 2009 members of the CAW ratified an agreement intended to reduce costs in Canada through introducing co-payments for healthcare benefits, increasing employee healthcare cost sharing, freezing pension benefits and eliminating cost of living adjustments to pensions for retired hourly workers. The 2009 CAW Agreement was conditioned on Old GM receiving longer term financial support from the Canadian and Ontario governments and those governments agreed to the terms of a loan agreement, approved the GMCL viability plan and provided funding to GMCL. The Canadian hourly defined benefit pension plan was remeasured in June 2009.

The CAW hourly retiree healthcare plan and the CAW retiree life plan were also remeasured in June 2009. Additionally, as a result of the termination of employees from the former Oshawa, Ontario truck facility, GMCL recorded a curtailment gain associated with the CAW hourly retiree healthcare plan.

Venezuelan Exchange Regulations

Our Venezuelan subsidiaries changed their functional currency from Bolivar Fuerte (BsF), the local currency, to the U.S. Dollar, our reporting currency, on January 1, 2010 because of the hyperinflationary status of the Venezuelan economy. In January 2010 there was a devaluation of the Venezuelan currency and establishment of dual fixed exchange rates, an essential rate and a nonessential rate.

In June 2010 the Venezuelan government introduced additional foreign currency exchange control regulations, which imposed restrictions on the use of the parallel foreign currency exchange market, thereby making it more difficult to convert BsF to U.S. Dollars. The restrictions on the foreign currency exchange market affect our Venezuelan subsidiaries' ability to pay non-BsF denominated obligations that do not qualify to be processed by the Venezuela currency exchange agency at the official exchange rates.

Effective January 1, 2011 the BsF was further devalued and the essential rate was eliminated. The devaluation has affected results of operations in 2011 because our Venezuelan subsidiaries no longer realize gains that result from favorable foreign currency exchanges processed by the Venezuela currency exchange agency at the essential rate.

Refer to Note 2 to our consolidated financial statements for additional details regarding amounts pending government approval for settlement and the net assets of our Venezuelan subsidiaries. Refer to "Management's Discussion and Analysis — GM South America — GMSA EBIT (Loss)-Adjusted" for impact of Venezuela exchange restrictions on our operations.

Resolution of Delphi Matters

In October 2009 we consummated the transaction contemplated in the Delphi Master Disposition Agreement (DMDA) with Delphi and other parties. Under the DMDA, we agreed to acquire Nexteer Automotive Corporation (Nexteer) and four domestic facilities that manufacture steering systems and a variety of automotive components, primarily sold to us. We, along with several third party investors (collectively, the Investors), agreed to acquire substantially all of Delphi's remaining assets through Delphi Automotive LLP (New Delphi).

We agreed to acquire, prior to the consummation of the transactions contemplated by the DMDA, all Class A Membership Interests in New Delphi for a cash contribution of $1.7 billion with the Investors acquiring Class B Membership Interests. We and the Investors also agreed to establish: (1) a secured delayed draw term loan facility for New Delphi, with us and the Investors each committing to provide loans of up to $500 million; and (2) a note of $41 million to be funded at closing by the Investors. The DMDA settled outstanding claims and assessments against and from MLC, us and Delphi, including the termination of the master restructuring agreement with limited exceptions, and established an ongoing commercial relationship with New Delphi. We agreed to continue all existing Delphi supply agreements and purchase orders for GMNA to the end of the related product program, and New Delphi agreed to provide us with access rights designed to allow us to operate specific sites on defined triggering events to provide us with protection of supply. Refer to Note 4 to our consolidated financial statements for further details on the acquisition of New Delphi Class A membership interests.

In separate agreements, we, Delphi and the PBGC negotiated the settlement of the PBGC's claims from the termination of the Delphi pension plans and the release of certain liens with the PBGC against Delphi's foreign assets. In return, the PBGC was granted a 100% interest in Class C Membership Interests in New Delphi which provides for the PBGC to participate in predefined equity distributions and received a payment of $70 million from us. We maintain certain obligations relating to Delphi hourly employees to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the DBGA.

In March 2011 we sold 100% of our Class A Membership Interests in New Delphi. Refer to Note 10 to our consolidated financial statements for details regarding the sale of our equity interests in New Delphi.

Production and Vehicle Sales Volume

Management believes that production volume and vehicle sales data provide meaningful information regarding our automotive operating results. Production volumes manufactured by our assembly facilities are generally aligned with current period net sales and revenue, as we generally recognize revenue upon the release of the vehicle to the carrier responsible for transporting it to a dealer, which is shortly after the completion of production. Vehicle sales data, which includes retail and fleet sales, does not correlate directly to the revenue we recognize during the period. However, vehicle sales data is indicative of the underlying demand for our vehicles, and is the basis for our market share.

Reconciliation of Consolidated, Automotive and GM Financial Segment Results

Management believes EBIT-adjusted provides meaningful supplemental information regarding our automotive segments' operating results because it excludes interest income, expense and income taxes as well as certain additional amounts. Management does not consider these excluded items when assessing and measuring the operational and financial performance of the organization, its management teams and when making decisions to allocate resources, such as capital investment, among business units and for internal reporting and as part of its forecasting and budgeting processes. Such adjustments include impairment charges related to goodwill and certain investments, gains or losses on the settlement/extinguishment of obligations and gains or losses on the sale of non-core investments. Management believes this measure allows it to readily view operating trends, perform analytical comparisons and benchmark performance between periods and among geographic regions. We believe EBIT-adjusted is useful in allowing for greater transparency of our core operations and are therefore used by management in its financial and operational decision-making.

While management believes that EBIT-adjusted provides useful information, it is not an operating measure under U.S. GAAP, and there are limitations associated with its use. Our calculation of EBIT-adjusted may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in the method of calculation. As a result, the use of EBIT-adjusted has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Net income (loss) or Net income (loss) attributable to stockholders. Due to these limitations, EBIT-adjusted is used as a supplement to U.S. GAAP measures.

Management believes income before income taxes provides meaningful supplemental information regarding GM Financial's operating results. GM Financial uses a separate measure from our automotive operations because management believes interest income and interest expense are part of operating results when assessing and measuring the operational and financial performance of the segment. EBIT-adjusted is not presented for the period January 1, 2009 through July 9, 2009 as Old GM did not identify adjustments to EBIT during this period.

The following tables summarize the reconciliation of our automotive segments EBIT-adjusted and GM Financial's income before income taxes to Net income (loss) attributable to stockholders and provides supplemental detail of the adjustments (dollars in millions):

n.m. = not meaningful

In the year ended December 31, 2011 Total net sales and revenue increased by $14.7 billion (or 10.8%) due primarily to: (1) increased wholesale volumes of $8.6 billion representing 403,000 vehicles; (2) net foreign currency translation and remeasurement gains of $2.6 billion due to the strengthening of major currencies against the U.S. Dollar; (3) favorable vehicle pricing effect of $1.6 billion due to model year price increases and reduced sales allowances; (4) increased finance income of $1.1 billion due to the acquisition of GM Financial; (5) increased revenues from powertrain and parts sales of $1.1 billion due to increased volumes; (6) favorable vehicle mix of $0.6 billion; and (7) increased revenue of $0.4 billion due to the acquisition of General Motors Strasbourg S.A.S. (GMS); partially offset by (8) decreased revenue of $1.0 billion due to the sale of Nexteer in November 2010.

In the year ended December 31, 2010 Total net sales and revenue increased by $31.0 billion (or 29.6%) due primarily to: (1) increased wholesale sales volume of $21.8 billion representing 1.1 million vehicles; (2) favorable vehicle pricing effect of $3.7 billion; (3) favorable vehicle mix of $2.6 billion; (4) net foreign currency translation and remeasurement gains of $1.8 billion; (5) increased sales of $1.0 billion due to the acquisition of Nexteer and four domestic component manufacturing facilities; (6) derivative losses of $0.8 billion in 2009 that did not recur in 2010; (7) increased revenues from OnStar of $0.3 billion; and (8) finance charge income of $0.3 billion due to the acquisition of AmeriCredit Corp. (AmeriCredit); partially offset by (9) devaluation of the BsF of $0.9 billion; and (10) decreased lease financing revenues of $0.3 billion related to the liquidation of the portfolio of automotive leases.

Automotive Cost of Sales

	Successor			Predecessor		
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended 2011 vs. 2010 Change Amount	%
Automotive cost of sales	$130,386	$118,768	$56,316	$55,814	$11,618	9.8%
Automotive gross margin	$ 18,480	$ 16,543	$ 1,158	$ (8,699)	$ 1,937	11.7%

GM

The most significant element of our Automotive cost of sales is material cost which makes up approximately two-thirds of the total amount. The remaining portion includes labor costs, depreciation and amortization, engineering, and policy, warranty and recall campaigns.

In the year ended December 31, 2011 Automotive cost of sales increased by $11.6 billion (or 9.8%), in line with Total net sales and revenue, due primarily to: (1) increased costs related to wholesale volume increases of $6.3 billion; (2) net foreign currency translation, remeasurement and transaction losses of $2.4 billion due to the strengthening of major currencies against the U.S. Dollar; (3) unfavorable vehicle mix of $2.3 billion; (4) increased material, freight and manufacturing costs of $1.7 billion due to higher commodity prices and to support new vehicle launches; (5) increased costs of $0.8 billion related to powertrain and parts sales; (6) increased engineering costs of $0.7 billion to support new product development; (7) revisions to restructuring reserves of $0.4 billion related to higher than planned employee utilization in 2010 which did not recur in 2011; and (8) increased costs of $0.3 billion due to the acquisition of GMS; partially offset by (9) decreased costs of $0.9 billion due to the sale of Nexteer in November 2010; (10) decreased depreciation and amortization expense of $0.8 billion related to the amortization of technology intangibles and impairment charges for long-lived assets; (11) a gain of $0.7 billion related to the settlement of the HCT in 2011; (12) decreased restructuring charges of $0.5 billion related to our European operations; and (13) increased net pension and OPEB income of $0.3 billion due to plan remeasurements.

In the year ended December 31, 2010 Automotive cost of sales included: (1) net restructuring charges of $0.6 billion; (2) net foreign currency translation and remeasurement losses of $0.4 billion; (3) charges of $0.2 billion for a recall campaign on windshield fluid heaters; and (4) impairment charges related to long-lived assets of $0.2 billion; partially offset by (5) net foreign currency transaction gains of $0.2 billion.

In the period July 10, 2009 through December 31, 2009 Automotive cost of sales included: (1) a settlement loss of $2.6 billion related to the termination of our UAW hourly retiree medical plan; (2) net foreign currency translation and remeasurement losses of $0.8 billion; partially offset by (3) favorable adjustments of $1.3 billion due to the sell through of inventory acquired from Old GM at July 10, 2009; and (4) net foreign currency transaction gains of $0.1 billion.

As required under U.S. GAAP, the acquired inventory from Old GM on July 10, 2009 was recorded at fair value as of the acquisition date using a market participant approach, which for work in process and finished goods inventory considered the estimated selling price of the inventory less the costs a market participant would incur to complete, sell and dispose of the inventory, which may be different than our costs, and the profit margin required for its completion and disposal effort.

Old GM

In the period January 1, 2009 through July 9, 2009 Automotive cost of sales included: (1) incremental depreciation charges of $2.8 billion; (2) net restructuring charges of $1.6 billion; (3) a curtailment loss of $1.4 billion upon the interim remeasurement of the U.S. hourly defined benefit pension plans; (4) charges of $0.8 billion related to the deconsolidation of Saab Automobile AB (Saab); (5) net foreign currency remeasurement losses of $0.7 billion; (6) impairment charges related to long-lived assets of $0.6 billion; (7) derivative losses of $0.5 billion related to commodity and foreign currency exchange derivatives; (8) net foreign currency transaction losses of $0.3 billion; and (9) charges of $0.3 billion related to obligations associated with various Delphi agreements.

In the period January 1, 2009 through July 9, 2009 negative gross margin reflected sales volumes at historically low levels and Automotive cost of sales, including costs that are fixed in nature, exceeding Total net sales and revenue.

Automotive Selling, General and Administrative Expense

	Successor			Predecessor	Year Ended 2011 vs. 2010 Change	
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Amount	%
Automotive selling, general and administrative expense	$12,105	$11,446	$6,006	$6,161	$659	5.8%

GM

In the year ended December 31, 2011 Automotive selling, general and administrative expense increased by $0.7 billion (or 5.8%) due primarily to: (1) increased advertising and sales promotion expenses of $0.5 billion to support media campaigns and new product launches; (2) net foreign exchange translation and remeasurement losses of $0.2 billion due to the strengthening of major currencies against the U.S. Dollar; and (3) charges of $0.1 billion related to a single customer's default under various commercial supply agreements; partially offset by (4) legal and other expenses of $0.1 billion primarily related to dealer litigation in 2010 which did not recur in 2011.

In the year ended December 31, 2010 Automotive selling, general and administrative expense included: (1) advertising and sales promotion expenses of $5.1 billion to support media campaigns for our products; (2) administrative expenses of $4.4 billion; and (3) selling and marketing expenses primarily related to dealerships of $1.4 billion.

In the period July 10, 2009 through December 31, 2009 Automotive selling, general and administrative expense included: (1) administrative expenses of $2.6 billion; (2) advertising and sales promotion expenses of $2.5 billion to support media campaigns for our products; and (3) selling and marketing expenses primarily related to dealerships of $1.0 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Automotive selling, general and administrative expense included: (1) charges of $0.5 billion recorded for dealer wind-down costs; and (2) a curtailment loss of $0.3 billion related to the interim remeasurement of the U.S. salary defined benefit pension plan; partially offset by (3) positive effects of various cost savings initiatives, the cancellation of certain sales and promotion contracts as a result of the Chapter 11 Proceedings in the U.S. and overall reductions in advertising and marketing expenditures.

Other Automotive Expenses, net

	Successor			Predecessor	Year Ended 2011 vs. 2010 Change	
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Amount	%
Other automotive expenses, net	$58	$118	$15	$1,235	$(60)	(50.8)%

GM

In the year ended December 31, 2011 Other automotive expenses, net was insignificant.

In the year ended December 31, 2010 Other automotive expenses, net included depreciation expense of $0.1 billion related to our portfolio of automotive retail leases.

In the period July 10, 2009 through December 31, 2009 Other automotive expenses, net included: (1) depreciation expense and realized losses of $89 million related to the portfolio of automotive retail leases; (2) pension management expenses of $38 million; partially offset by (3) gains for changes in liabilities related to Saab of $60 million; and (4) recovery of amounts written off of $51 million related to the portfolio of automotive retail leases.

Old GM

In the period January 1, 2009 through July 9, 2009 Other automotive expenses, net included: (1) charges of $0.8 billion primarily related to the deconsolidation of Saab; (2) charges of $0.2 billion related to Delphi; and (3) depreciation expense of $0.1 billion related to the portfolio of automotive retail leases.

Equity in Income of and Disposition of Interest in Ally Financial

Old GM

In the period January 1, 2009 through July 9, 2009 Equity in income of and disposition of interest in Ally Financial of $1.4 billion included: (1) gain of $2.5 billion recorded on the UST's conversion of the loan from the UST to purchase membership interests in Ally Financial (UST Ally Financial Loan) for Class B Membership Interests in Ally Financial; partially offset by (2) Old GM's proportionate share of Ally Financial's loss from operations on $1.1 billion.

Goodwill Impairment Charges

Goodwill impairment charges increased by $1.3 billion as we recorded charges of $1.0 billion and $0.3 billion in GME and GMIO. Refer to Note 12 to our consolidated financial statements for additional information related to our Goodwill impairment charges.

Automotive Interest Expense

	Successor			Predecessor	Year Ended 2011 vs. 2010 Change	
	Year Ended December 31, 2011	**Year Ended December 31, 2010**	**July 10, 2009 Through December 31, 2009**	**January 1, 2009 Through July 9, 2009**	**Amount**	**%**
Automotive interest expense	$540	$1,098	$694	$5,428	$(558)	(50.8)%

GM

In the year ended December 31, 2011 Automotive interest expense decreased by $0.6 billion (or 50.8%) due primarily to: (1) decreased interest expense related to the UST Credit Agreement, Canadian Loan and VEBA Notes of $0.3 billion in 2010 which did not recur in 2011; and (2) decreased interest expense related to obligations with Ally Financial of $0.2 billion in 2010.

In the year ended December 31, 2010 Automotive interest expense included: (1) interest expense related to the UST Credit Agreement, Canadian Loan and VEBA Notes of $0.3 billion; (2) interest expense on obligations due to Ally Financial of $0.2 billion; and (3) interest expense on other debt obligations of $0.6 billion, which included amortization of debt discounts of $0.2 billion.

In the period July 10, 2009 through December 31, 2009 Automotive interest expense included: (1) interest expense related to the UST Credit Agreement and Canadian Loan of $0.3 billion; (2) interest expense on obligations due to Ally Financial of $0.1 billion; and (3) interest expense on other debt obligations of $0.3 billion, which included amortization of debt discounts of $0.1 billion.

Old GM

In the period January 1, 2009 through July 9, Automotive interest expense included: (1) discount amortization related to the UST Loan Agreement and DIP Facility of $3.6 billion; (2) interest expense related to the UST Loan Agreement and DIP Facility of $0.4 billion; (3) interest expense related to the EDC Loan Facility of $0.2 billion; and (4) interest expense on other obligations of $1.2 billion related to Old GM's debt obligations including unsecured and contingent convertible debt obligations. Old GM ceased accruing and paying interest on most of its unsecured U.S. and foreign denominated debt on June 1, 2009 as a result of its Chapter 11 Proceedings.

Interest Income and Other Non-Operating Income, net

	Successor			Predecessor	Year Ended 2011 vs. 2010 Change	
	Year Ended December 31, 2011	**Year Ended December 31, 2010**	**July 10, 2009 Through December 31, 2009**	**January 1, 2009 Through July 9, 2009**	**Amount**	**%**
Interest income and other non-operating income, net	$851	$1,531	$375	$852	$(680)	(44.4)%

GM

In the year ended December 31, 2011 Interest income and other non-operating income, net decreased by $0.7 billion (or 44.4%) due primarily to: (1) an impairment charge of $0.6 billion related to our investment in Ally Financial common stock; (2) reversal of the liability related to Adjustment Shares of $0.2 billion in 2010 which did not recur in 2011; (3) gains on the sale of Saab and Nexteer of $0.2 billion in 2010 which did not recur in 2011; and (4) a gain on the acquisition of GMS of $0.1 in 2010 which did not recur in 2011; partially offset by (5) a gain of $0.3 billion related to the sale of our Ally Financial preferred stock.

In the year ended December 31, 2010 Interest income and other non-operating income, net included; (1) interest income earned from investments of $0.5 billion; (2) dividends and royalties of $0.2 billion; (3) rental income of $0.2 billion; (4) reversal of the liability related to the Adjustment Shares of $0.2 billion; (5) gain on sale of Saab and Nexteer of $0.2 billion; (6) gain on bargain purchase and the fair value of the recognizable assets acquired and liabilities assumed of $0.1 billion related to the acquisition of GMS; (7) gains on derivatives of $0.1 billion; and (8) Ally Financial exclusivity fee of $0.1 billion.

In the period July 10, 2009 through December 31, 2009 Interest income and other non-operating income, net included: (1) gains on derivatives of $0.3 billion; (2) interest income earned from investments of $0.2 billion; (3) rental and royalty income of $0.2 billion; partially offset by (4) liability recorded related to the Adjustment Shares of $0.2 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Interest income and other non-operating income, net included: (1) interest income earned from investments of $0.2 billion; (2) gains on derivatives of $0.2 billion related to the return of warrants issued to the UST; (3) rental and royalty income of $0.2 billion; (4) gains on foreign currency exchange derivatives of $0.1 billion; (5) dividends on the investment in Ally Financial Preferred Membership Interests of $0.1 billion; and (6) Ally Financial exclusivity fee income of $0.1 billion.

Gain (Loss) on Extinguishment of Debt

	Successor			Predecessor		
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Year Ended 2011 vs. 2010 Change Amount	%
Gain (loss) on extinguishment of debt	$18	$196	$(101)	$(1,088)	$(178)	(90.8)%

GM

In the year ended December 31, 2010 Gain on extinguishment of debt included a gain of $0.2 billion resulting from our repayment of the outstanding amount of VEBA Notes of $2.8 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Loss on extinguishment of debt included a loss of $2.0 billion related to the UST exercising its option to convert outstanding amounts of the UST Ally Financial Loan into shares of Ally Financial's Class B Common Membership Interests; partially offset by a gain on extinguishment of debt of $0.9 billion related to an amendment to Old GM's U.S. term loan.

Reorganization gains, net

Old GM

In the period January 1, 2009 through July 9, 2009 Reorganization gains, net of $128.2 billion included: (1) the gain on conversion of debt of $37.5 billion; (2) the change in net assets resulting from the application of fresh-start reporting of $33.8 billion; (3) the gain from the settlement of net liabilities retained by MLC of $25.2 billion; and (4) the fair value of Series A Preferred stock, common shares and warrants issued in connection with the 363 Sale of $20.5 billion.

Income Tax Expense (Benefit)

	Successor			Predecessor	Year Ended 2011 vs. 2010 Change	
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009	Amount	%
Income tax expense (benefit)	$(110)	$672	$(1,000)	$(1,166)	$(782)	n.m.

n.m. = not meaningful

GM

In the year ended December 31, 2011 Income tax benefit of $0.1 billion decreased by $0.8 billion compared to Income tax expense of $0.7 billion in 2010 due primarily to: (1) a $0.5 billion valuation allowance reversal in Australia; and (2) an increase in recognition of previously unrecognized tax benefits of $0.2 billion which included reductions to interest expense and associated valuation allowances.

In the year ended December 31, 2010 Income tax expense primarily resulted from current and deferred income tax provisions of $0.6 billion for profitable entities without valuation allowances, withholding taxes and taxable foreign exchange gains in Venezuela of $0.3 billion, partially offset by settlement of uncertain tax positions and reversal of valuation allowances of $0.3 billion.

In the period July 10, 2009 through December 31, 2009 Income tax benefit primarily resulted from a $1.4 billion income tax allocation between income (loss) from operations and Other comprehensive income (loss), partially offset by income tax provisions of $0.3 billion for profitable entities without valuation allowances. Our U.S. operations incurred losses from operations with no income tax benefit due to full valuation allowances against our U.S. deferred tax assets, and we had Other comprehensive income, due primarily to remeasurement gains on our U.S. pension plans. We recorded income tax expense related to the remeasurement gains in Other comprehensive income and allocated income tax benefit to operations.

Old GM

In the period January 1, 2009 through July 9, 2009 Income tax benefit primarily resulted from the reversal of valuation allowances of $0.7 billion related to Reorganization gains, net and the resolution of a transfer pricing matter of $0.7 billion with the U.S. and Canadian governments, partially offset by income tax provisions for profitable entities without valuation allowances.

Equity Income, Net of Tax and Gain on Disposal of Investments

Others	(46)	24	38	(239)	(70)	n.m.
Total equity income, net of tax and gain on disposal of investments	$3,192	$1,438	$497	$ 61	$1,754	122.0%

n.m. = not meaningful

GM

In the year ended December 31, 2011 Equity income, net of tax and gain on disposal of investments increased by $1.8 billion (or 122.0%) due primarily to a gain of $1.6 billion related to the sale of our New Delphi Class A Membership Interests and increased equity income related to our China JVs of $0.2 billion.

In the year ended December 31, 2010 Equity income, net of tax and gain on disposal of investments included equity income of $1.3 billion related to our China JVs and equity income of $0.1 billion related to New Delphi.

In the period July 10, 2009 through December 31, 2009 Equity income, net of tax and gain on disposal of investments included equity income of $0.5 billion related to our China JVs.

Old GM

In the period January 1, 2009 through July 9, 2009 Equity income, net of tax and gain on disposal of investments included equity income of $0.3 billion related to our China JVs, partially offset by equity losses of $0.2 billion primarily related to impairment charges and our proportionate share of losses at other joint ventures.

Automotive

Current Assets

Marketable securities increased by $10.6 billion (or 190.7%) due to our improved liquidity primarily related to positive operating cash flows and proceeds received from the sale of our investments in New Delphi and Ally Financial.

Restricted cash and marketable securities decreased by $1.0 billion (or 83.4%) due primarily to the release of restricted cash escrow funds of $1.0 billion, of which $0.8 billion was used to fund a payment to the HCT and the $0.2 billion remaining funds held in escrow were no longer subject to restrictions and released to us.

Accounts and notes receivable increased by $1.3 billion (or 14.4%) due primarily to: (1) the termination and modification of wholesale advance agreements with Ally Financial in GMNA, which provided for accelerated receipt of payment on dealer sales financed through Ally Financial of $1.1 billion; and (2) increase of $0.2 billion due to increased sales volume.

Inventories increased by $2.2 billion (or 18.1%) due primarily to: (1) increased raw materials and finished products of $2.4 billion in anticipation of forecasted demand, new product launches and vehicles returned from lease and not yet sold at auction; partially offset by (2) net foreign currency translation of $0.4 billion due to the weakening of major currencies against the U.S. Dollar.

Non-Current Assets

Equity in net assets of nonconsolidated affiliates decreased by $1.7 billion (or 20.4%) due primarily to: (1) a decrease of $2.0 billion resulting from the sale of our interest in New Delphi; and (2) dividends declared in 2011 of $1.4 billion primarily by the China JVs; partially offset by (3) equity income of $1.5 billion related to our China JVs.

Property, net increased by $3.7 billion (or 19.4%) due primarily to: (1) capital expenditures of $7.8 billion; and (2) new capital leases of $0.4 billion; partially offset by (3) depreciation of $3.7 billion; (4) net foreign currency translation of $0.5 billion due to the weakening of major currencies against the U.S. Dollar; (5) decreases of $0.2 billion associated with disposals; and (6) decreases of $0.1 billion associated with the deconsolidation of VM Motori (VMM).

Goodwill decreased by $2.8 billion (or 9.1%) due primarily to: (1) impairment charges of $1.5 billion in GME recorded in retained earnings; and (2) impairment charges of $1.3 billion in GME and GMIO.

Intangible assets, net decreased by $1.9 billion (or 15.7%) due primarily to: (1) amortization of $1.8 billion; and (2) net foreign currency translation of $0.1 billion due to the weakening of major currencies against the U.S. Dollar.

Other assets and deferred income taxes decreased by $0.7 billion (or 19.3%) due primarily to: (1) the sale of our investment in Ally Financial preferred stock of $0.7 billion; and (2) the impairment of our investment in Ally Financial common stock of $0.6 billion; partially offset by (3) an increase in net deferred tax assets of $0.2 billion; and (4) an increase in derivative assets of $0.1 billion.

Current Liabilities

Accounts payable increased by $3.0 billion (or 13.9%) due primarily to: (1) higher payables of $1.9 billion for materials due to increased production volumes and higher production costs; (2) an increase in accounts payable for capital projects of $1.4 billion as we prepare for new vehicle launches; and (3) an increase in engineering and product development payables of $0.1 billion; partially offset by (4) net foreign currency translation of $0.8 billion due to the weakening of major currencies against the U.S. Dollar.

Short-term debt and current portion of long-term debt increased by $0.1 billion (or 4.1%) due primarily to: (1) reclassifications from long-term debt to short-term debt for payments to be made in the next 12 months of $1.0 billion; and (2) net increases to short-term facilities with original maturities less than 90 days of $0.1 billion; partially offset by (3) payments on debt of $1.1 billion.

Non-Current Liabilities

Long-term debt increased by $0.6 billion (or 19.9%) due primarily to: (1) issuance of notes to the HCT of $1.1 billion; (2) net increases to capital leases of $0.3 billion; and (3) amortization of debt discounts of $0.2 billion; partially offset by (4) reclassifications of long-term debt to short-term debt for payments to be made in the next 12 months of $1.0 billion.

Postretirement benefits other than pensions liability decreased by $2.5 billion (or 26.4%) primarily in GMNA due to: (1) settlement of the CAW retiree healthcare liability of $2.9 billion; (2) benefit payments of $0.6 billion; and (3) remeasurement of a U.S. hourly legal service plan of $0.3 billion; partially offset by (4) actuarial losses primarily from discount rate decreases of $0.9 billion; and (5) service and interest costs of $0.5 billion.

Pension liabilities increased by $3.2 billion (or 14.5%) due primarily to: (1) net actuarial losses of $10.0 billion; partially offset by (2) gains from asset returns greater than expected of $3.3 billion related to U.S. plans; (3) contributions and benefits payments of $2.8 billion, including contributions of common stock to our U.S. hourly and salaried pension plans of $1.9 billion; (4) expected return on assets in excess of service and interest costs of $0.5 billion; and (5) net foreign currency translation of $0.2 billion due to the weakening of major currencies against the U.S. Dollar.

Automotive Financing

Total GM Financial Assets

Finance receivables, net increased by $1.0 billion (or 11.8%) due primarily to new loan originations of $5.1 billion partially offset by principal collections, gross charge offs and the change in the carrying amount adjustment on pre-acquisition receivables of $4.0 billion.

Other assets increased by $1.1 billion (or 291.6%) due primarily to an increase in new leased vehicles of $0.7 billion and an increase in cash and cash equivalents of $0.4 billion.

Total GM Financial Liabilities

Securitization notes payable increased by $0.8 billion (or 13.2%) due primarily to the issuance of new securitization notes payable of $4.6 billion partially offset by a normal principal amortization of $3.7 billion.

Credit facilities increased by $0.3 billion (or 32.1%) due primarily to higher utilization of the credit facilities as a result of an increase in loan and lease originations.

Other liabilities increased by $0.4 billion (or 96.2%) due primarily to the issuance of 6.75% senior notes of $0.5 billion in June 2011.

GMNA Total Net Sales and Revenue

In the year ended December 31, 2011 Total net sales and revenue increased by $7.2 billion (or 8.7%) due primarily to: (1) increased wholesale volumes of $7.3 billion representing 299,000 vehicles (or 10.3%) due to increased industry demand and successful recent vehicle launches such as the Chevrolet Cruze, Chevrolet Equinox and GMC Terrain; (2) favorable vehicle pricing of $1.1 billion; (3) increased revenues from Customer Care and Aftersales of $0.4 billion due to increased volumes; and (4) favorable net foreign currency remeasurement of $0.3 billion due to the strengthening of the Canadian Dollar against the U.S. Dollar; partially offset by (5) unfavorable vehicle mix of $1.1 billion; and (6) decreased revenue of $1.0 billion due to the sale of Nexteer in November 2010.

In the year ended December 31, 2010 Total net sales and revenue increased by $26.4 billion (or 46.7%) due primarily to: (1) increased wholesale volumes of $19.8 billion representing 873,000 vehicles (or 42.7%) due to an improving economy and successful recent vehicle launches of the Chevrolet Equinox, Chevrolet Cruze, GMC Terrain, Buick LaCrosse and Cadillac SRX; (2) favorable pricing of $2.9 billion due to decreased sales allowances partially offset by less favorable adjustments in the U.S. to the accrual for U.S. residual support programs for leased vehicles of $0.4 billion (favorable of $0.7 billion in the year ended December 31, 2010 compared to favorable of $1.1 billion in 2009); (3) favorable vehicle mix of $1.6 billion due to increased crossover and truck sales; (4) increased sales of $1.0 billion due to the acquisition of Nexteer and four domestic component manufacturing facilities; (5) favorable net foreign currency remeasurement of $0.8 billion due to the strengthening of the Canadian Dollar against the U.S. Dollar; and (6) increased revenues from OnStar of $0.3 billion due to increased volumes.

GMNA EBIT (Loss)-Adjusted

In the year ended December 31, 2011 EBIT-adjusted increased by $1.5 billion (or 26.5%) due primarily to: (1) increased net wholesale volumes of $1.9 billion due to increased industry demand and successful recent vehicle launches; (2) favorable vehicle pricing effect of $1.1 billion; (3) decreased amortization expense of $0.7 billion due to the effect of double-declining amortization of technology intangibles which were recorded on July 10, 2009 and impairment charges for long-lived assets in 2010; (4) favorable foreign currency remeasurement of $0.5 billion due to the weakening of the Canadian Dollar against the U.S. Dollar; and (5) increase in net pension and OPEB income of $0.3 billion due to December 31, 2010 plan remeasurements; partially offset by (6) unfavorable net vehicle mix of $1.8 billion; (7) increased engineering expense and other technology fees of $0.5 billion to support new product development; (8) increased material prices and freight of $0.4 billion; and (9) reduction in favorable adjustments of $0.4 billion to restructuring reserves due to increased production capacity utilization and revisions to productivity initiatives in 2010.

In the year ended December 31, 2010 EBIT-adjusted was $5.7 billion and included: (1) favorable adjustments of $0.4 billion to restructuring reserves due primarily to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites and revisions to productivity initiatives; offset by (2) advertising and sales promotion expenses of $3.4 billion to support media campaigns for our products; (3) administrative expenses of $2.0 billion; (4) selling and marketing expenses of $0.6 billion related to our dealerships; (5) foreign currency remeasurement losses of $0.5 billion due to the strengthening of the Canadian Dollar against the U.S. Dollar; (6) charges of $0.2 billion for a recall campaign on windshield fluid heaters; and (7) impairment charges related to long-lived assets of $0.2 billion.

In the period July 10, 2009 through December 31, 2009 EBIT-adjusted was a loss of $2.1 billion and included: (1) foreign currency remeasurement losses of $1.3 billion due to the strengthening of the Canadian Dollar against the U.S. Dollar; (2) charges of $0.3 billion related to dealer wind-down costs for our Saturn dealers after plans to sell the Saturn brand and dealerships network were terminated; partially offset by (3) favorable adjustments in Automotive cost of sales of $0.7 billion due to the sell through of inventory acquired from Old GM at July 10, 2009.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT-adjusted was a loss of $11.1 billion and included: (1) incremental depreciation charges of $2.1 billion for facilities included in GMNA's restructuring activities and for certain facilities that MLC retained; (2) curtailment loss of $1.7 billion upon the interim remeasurement of the U.S. hourly and U.S. salaried defined benefit pension plans as a result of the 2009 Special Attrition Programs and salaried workforce reductions; (3) U.S. hourly and salary separation program charges and Canadian restructuring activities of $1.1 billion; (4) foreign currency remeasurement losses of $0.7 billion due to the strengthening of the Canadian Dollar against the U.S. Dollar; (5) charges of $0.5 billion incurred for dealer wind-down costs; (6) derivative losses of $0.5 billion related to commodity and foreign currency exchange derivatives; (7) a net charge of $0.4 billion related to the modification of UAW job security programs; (8) charges of $0.4 billion primarily for impairments of long-lived assets; (9) charges of $0.3 billion related to obligations associated with various Delphi agreements; and (10) equity losses of $0.3 billion related to impairment charges and our proportionate share of losses at joint ventures.

GME Total Net Sales and Revenue

In the year ended December 31, 2011 Total net sales and revenue increased by $2.7 billion (or 11.1%) due primarily to: (1) favorable foreign currency translation effect of $1.1 billion, due to the strengthening of the Euro, British Pound and Swiss Franc against the U.S. Dollar; (2) favorable vehicle mix of $1.1 billion due to the new generation Opel Meriva and Opel Astra and increased sales of other higher priced vehicles; (3) revenue from GMS of $0.4 billion, which we acquired in 2010; (4) increased powertrain engine and transmission sales of $0.3 billion, in support of the Chevrolet Cruze and Chevrolet Volt; (5) increased components sales of $0.2 billion; and (6) increased volumes of $0.1 billion due primarily to a 16,000 vehicles (or 1.3%) increase in wholesales; partially offset by (7) a reduction in Saab brand sales of $0.2 billion related to the sale of Saab in 2010; and (8) a decrease of $0.1 billion due to the deconsolidation of VMM in June 2011.

In the year ended December 31, 2010 Total net sales and revenue increased by $45 million (or 0.2%) due primarily to: (1) increased volumes of $0.3 billion due primarily to a 38,000 vehicles (or 3.1%) increase in wholesales, which included a decrease of $0.5 billion representing 17,000 vehicles due to the sale of Saab in February 2010; (2) favorable vehicle mix of $0.5 billion due to the Opel Insignia and increased sales of other higher priced vehicles; (3) favorable vehicle pricing effect of $0.5 billion due to launches of the Opel Astra and Opel Meriva; partially offset by (4) unfavorable net foreign currency translation effect of $0.7 billion, due to the weakening of the Euro and British Pound against the U.S. Dollar.

GME EBIT (Loss)-Adjusted

GM

In the year ended December 31, 2011 EBIT (loss)-adjusted decreased by $1.2 billion (or 61.8%) due primarily to: (1) higher restructuring charges of $0.5 billion recorded in 2010 for separation programs in Belgium, Spain, Germany and the United Kingdom; (2) decreased manufacturing costs of $0.3 billion related to the closing of the Antwerp, Belgium facility and European wide labor savings; (3) favorable net vehicle mix of $0.2 billion; (4) an increase of $0.2 billion in an embedded foreign currency exchange derivative asset associated with a long-term supply agreement entered into in 2010; (5) EBIT-adjusted from GMS of $0.1 billion; offset by (6) unfavorable net foreign currency effects of $0.1 billion; and (7) charges of $0.1 billion related to a single customer's default under various commercial supply agreements.

In the year ended December 31, 2010 EBIT-adjusted was a loss of $2.0 billion and included: (1) restructuring charges of $0.8 billion related to separation programs in Belgium, Spain, Germany and the United Kingdom; (2) advertising and sales promotion expenses of $0.8 billion related to support media campaigns for our products; (3) administrative expense of $0.6 billion; and (4) selling and marketing expenses of $0.5 billion related to our dealerships.

In the period July 10, 2009 through December 31, 2009 EBIT-adjusted was a loss of $0.8 billion and included: (1) advertising and sales promotion expenses of $0.4 billion related to support media campaigns for our products; (2) administrative expense of $0.3 billion; (3) selling and marketing expenses of $0.3 billion related to our dealerships; partially offset by (4) favorable adjustments in Automotive cost of sales of $0.5 billion due to the sell through of inventory acquired from Old GM at July 10, 2009.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT-adjusted was a loss of $2.8 billion and included: (1) charges of $0.8 billion related to the deconsolidation of Saab, which filed for reorganization protection under the laws of Sweden in February 2009; (2) incremental depreciation charges of $0.7 billion related to restructuring activities; and (3) operating losses of $0.2 billion related to Saab.

GMIO Total Net Sales and Revenue

In the year ended December 31, 2011 Total net sales and revenue increased by $4.2 billion (or 20.4%) due primarily to: (1) increased wholesale volume of $2.7 billion representing 113,000 vehicles due to strong industry growth across the region; (2) favorable net foreign currency translation of $0.8 billion due to the strengthening of major currencies such as the Australian Dollar, the Korean Won and the Euro against the U.S. Dollar; (3) favorable vehicle mix of $0.5 billion due to launches of the Alpheon and Chevrolet Orlando; and (4) favorable vehicle pricing effect of $0.2 billion due to higher pricing on new models launched and lower sales incentives.

In the year ended December 31, 2010 Total net sales and revenue increased by $6.2 billion (or 43.3%) due primarily to: (1) increased wholesale volumes of $3.9 billion representing 118,000 vehicles (or 11.8%) due to the global economic recovery; (2) favorable net foreign currency translation effect of $0.9 billion, due to the strengthening of the Korean Won, Australian Dollar and South African Rand against the U.S. Dollar; (3) favorable vehicle mix of $0.8 billion due to the launch of the Chevrolet Cruze and increased sales of sports utility vehicles; (4) derivative losses of $0.8 billion in the period January 1, 2009 through July 9, 2009, that did not recur in 2010, due to the weakening of the Korean Won against the U.S. Dollar; and (5) favorable vehicle pricing effect of $0.1 billion, due to higher pricing on new model launches at GM Korea. Subsequent to July 10, 2009, all gains and losses on non-designated derivatives were recorded in Interest income and other non-operating income, net.

The vehicle sales related to our China and India (Our operations in India were deconsolidated effective February 2010) joint ventures is not reflected in Total net sales and revenue. The results of our joint ventures are recorded in Equity income, net of tax and gain on disposal of investments.

GMIO EBIT (Loss)-Adjusted

GM

In the year ended December 31, 2011 EBIT-adjusted decreased by $0.4 billion (or 16.1%) due primarily to: (1) increased engineering expenses and other technology fees of $0.5 billion to support new product development; (2) increased material, depreciation and amortization and other manufacturing costs of $0.3 billion; (3) unfavorable net vehicle mix of $0.2 billion; (4) increased advertising and sales promotion expenses of $0.2 billion to support media campaigns for launches of new products and the launch of the Chevrolet brand in Korea; (5) unfavorable net foreign currency translation of $0.1 billion; partially offset by (6) favorable net wholesale volumes of $0.5 billion; (7) favorable pricing effect of $0.2 billion due to higher pricing on new models launched and lower sales incentives; (8) increased equity income, net of tax, $0.2 billion from the operating results of our China JVs; and (9) decreased non-controlling interest attributable to minority shareholders of $0.2 billion.

In the year ended December 31, 2010 EBIT-adjusted was $2.3 billion and included: (1) Equity income, net of tax and gain on disposal of investments of $1.3 billion; (2) favorable change in fair value of $0.1 billion from derivatives due to the strengthening Korean Won versus the U.S. Dollar; partially offset by (3) administrative expenses of $0.8 billion; (4) advertising and sales promotion expenses of $0.6 billion to support media campaigns for our products; (5) unfavorable non-controlling interest attributable to minority shareholders of $0.3 billion; and (6) selling and marketing expenses of $0.2 billion.

In the period July 10, 2009 through December 31, 2009 EBIT-adjusted was $0.8 billion and included: (1) favorable effect of fresh-start reporting of $0.4 billion due to decreased depreciation of fixed assets of $0.3 billion and reduced Automotive cost of sales due to the sell through of inventory acquired from Old GM at July 10, 2009 of $ 0.1 billion; partially offset by (2) administrative expenses of $0.5 billion; (3) advertising and sales promotion expenses of $0.3 billion; (4) selling and marketing expenses of $0.1 billion; and (5) unfavorable amortization of $0.1 billion related to intangible assets.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT-adjusted was a loss of $0.5 billion and included: (1) derivative losses of $0.8 billion at GM Korea; (2) administrative expenses of $0.4 billion; (3) advertising and sales promotion expenses of $0.2 billion; partially offset by (4) Equity income, net of tax and gain on disposal of investments of $0.3 billion; and (5) favorable effect of $0.1 billion related to the net loss attributable to minority shareholders.

GMSA Total Net Sales and Revenue

In the year ended December 31, 2011 Total net sales and revenue increased by $1.5 billion (or 9.7%) due primarily to: (1) increased wholesale volumes of $0.6 billion representing 59,000 vehicles (or 5.7%) due to improved macroeconomic conditions and industry growth throughout the region (2) favorable net foreign currency translation effect of $0.5 billion, due to the strengthening of major currencies such as the Brazilian Real and Colombian Peso against the U.S. Dollar; (3) favorable vehicle pricing effect of $0.3 billion, due to the hyperinflationary economy in Venezuela; and (4) favorable vehicle mix of $0.1 billion due mainly to increased sales of the Chevrolet Cruze.

In the year ended December 31, 2010 Total net sales and revenue increased by $2.2 billion (or 17.1%) due primarily to: (1) increased wholesale volumes of $2.2 billion representing 170,000 vehicles (or 19.1%) due to launches of the Chevrolet Cruze and Chevrolet Spark throughout the region; (2) favorable net foreign currency translation effect of $1.0 billion, due to the strengthening of major currencies such as the Brazilian Real and Colombian Peso against the U.S. Dollar; (3) favorable vehicle pricing effect of $0.3 billion, due to the hyperinflationary economy in Venezuela; partially offset by (4) devaluation of the BsF of $0.9 billion; and (5) unfavorable vehicle mix of $0.4 billion due to increased sales of the Chevrolet Spark and Chevrolet Aveo and decreased sales of the Chevrolet Meriva, Vectra and S-10.

GMSA EBIT (Loss)-Adjusted

GM

In the year ended December 31, 2011 EBIT-adjusted was a loss of $0.1 billion as compared to EBIT-adjusted of $0.8 billion in the year ended December 31, 2010 due primarily to: (1) increased material and freight of $0.7 billion; (2) increased manufacturing costs of $0.3 billion; and (3) foreign currency transaction gains of $0.3 billion recorded in 2010 due to preferential foreign currency exchange rates in Venezuela, which were discontinued in 2011; and (4) unfavorable $0.1 billion related to separation costs; partially offset by (5) favorable vehicle pricing effect of $0.3 billion due to the hyperinflationary economy in Venezuela.

In the year ended December 31, 2010 EBIT-adjusted was $0.8 billion and included: (1) foreign currency transaction gains of $0.3 billion due to foreign currency exchanges processed at the preferential rate in Venezuela; offset by (2) administrative expenses of $0.5 billion; (3) advertising and sales promotion expenses of $0.3 billion to support media campaigns for our products; and (4) selling and marketing expenses of $0.1 billion.

In January 2010 the Venezuelan government announced that the official fixed exchange rate of 2.15 BsF to $1.00 would be changed to a dual rate system that includes a 2.60 BsF to $1.00 essentials rate for food, technology and heavy machine importers and a 4.30 BsF to $1.00 non-essentials rate for all others. This devaluation required remeasurement of our Venezuelan subsidiaries' non-U.S. Dollar denominated monetary assets and liabilities. We used a rate of 4.30 BsF to $1.00 to determine the remeasurement, which resulted in a charge of $25 million recorded in Automotive cost of sales in the year ended December 31, 2010.

In the period July 10, 2009 through December 31, 2009 EBIT-adjusted was $0.4 billion and included: (1) administrative expenses of $0.2 billion; (2) advertising and sales promotion expenses of $0.1 billion; and (3) selling and marketing expenses of $0.1 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 EBIT-adjusted was a loss of $0.5 billion and included: (1) foreign currency transaction losses of $0.5 billion due to foreign currency exchanges processed outside the Venezuela currency exchange agency; (2) administrative expenses of $0.2 billion; (3) advertising and sales promotion expenses of $0.1 billion; and (4) selling and marketing expenses of $0.1 billion.

GM Financial
(Dollars in Millions)

	Successor	
	Year Ended December 31, 2011	Three Months Ended December 31, 2010
Total revenue	$1,410	$281
Income before income taxes	$ 622	$129

GM Financial Revenue

In the year ended December 31, 2011 Total revenue included finance charge income of $1.2 billion and other income of $0.2 billion. The effective yield on GM Financial's finance receivables was 13.7% for the year ended December 31, 2011. The effective yield represents finance charges and fees recorded in earnings and the accretion of the accretable yield as a percentage of average finance receivable.

In the three months ended December 31, 2010 Total revenue included finance charge income of $0.3 billion. The effective yield on GM Financial's finance receivables was 12.1% for the three months ended December 31, 2010.

Net margin is the difference between finance charge income and other income earned on GM Financial's finance receivables and the cost to fund the receivables as well as the cost of debt incurred for general corporate purposes.

The following table summarizes GM Financial's net margin and as a percentage of average earning assets (dollars in millions):

	Successor			
	Year Ended December 31, 2011		Three Months Ended December 31, 2010	
Finance charge income and other income	$1,410	14.8%	$ 281	12.8%
Interest expense	(204)	(2.2)%	(37)	(1.7)%
Net GM Financial margin	$1,206	12.6%	$ 244	11.1%

GM Financial Income Before Income Taxes

In the year ended December 31, 2011 results included: (1) Total revenue of $1.4 billion; partially offset by (2) operating and leased vehicle expenses of $0.4 billion; (3) interest expense of $0.2 billion; and (4) provision for loan losses of $0.2 billion. GM Financial's operating expenses are primarily related to personnel costs that include base salary and wages, performance incentives and benefits as well as related employment taxes. Provisions for loan losses are charged to income to bring the allowance for loan losses to a level which management considers adequate to absorb probable credit losses inherent in the portfolio of finance receivables originated since October 1, 2010. Interest expense represents interest paid on GM Financial's warehouse credit facilities, securitization notes payable, and other unsecured debt.

Average debt outstanding in the year ended December 31, 2011 was $7.6 billion and the effective rate of interest expensed was 2.7%.

In the three months ended December 31, 2010 results included: (1) Total revenue of $0.3 billion; partially offset by (2) operating and leased vehicle expenses of $0.1 billion; and; (3) other collectively insignificant items.

Average debt outstanding in the three months ended December 31, 2010 was $7.3 billion and the effective rate of interest expensed was 2.0%.

Nonsegment operations are classified as Corporate. Corporate includes investments in Ally Financial, certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures, certain nonsegment specific revenues and expenses, including costs related to the DBGA and a portfolio of automotive retail leases.

Corporate Total Net Sales and Revenue

Total net sales and revenue includes lease financing revenue from a portfolio of automotive retail leases.

In the year ended December 31, 2011 Total net sales and revenue decreased by $0.1 billion (or 54.5%) due primarily to decreased revenue earned on portfolio management services performed for third parties due to the planned reduction of third party assets managed and decreased lease financing revenues related to the liquidation of the portfolio of automotive retail leases. Average outstanding retail leases on-hand decreased to a de minimus level at December 31, 2011 compared to 7,000 at December 31, 2010.

In the year ended December 31, 2010 Total net sales and revenue decreased by $0.3 billion (or 71.4%) due primarily to decreased lease financing revenue related to the liquidation of the portfolio of automotive leases. Average outstanding automotive retail leases on-hand for GM and combined GM and Old GM were 7,000 and 73,000 for the years ended December 31, 2010 and 2009.

Corporate Net Income (Loss) Attributable to Stockholders

GM

In the year ended December 31, 2011 Net loss attributable to stockholders decreased by $0.4 billion (or 48.3%) due primarily to: (1) an income tax benefit of $0.3 billion compared to income tax expense of $0.6 billion in 2010; (2) decreased interest expense of $0.6 billion due to lower debt balances; and (3) a gain of $0.3 billion related to the sale of our Ally Financial preferred stock; offset by (4) an impairment charge of $0.6 billion on our investment in Ally Financial common stock; (5) gains on the extinguishment of debt of $0.2 billion related to the repayment of the VEBA Notes and the elimination of the liability for the Adjustment Shares of $0.2 billion in 2010; and (6) other collectively insignificant items.

In the year ended December 31, 2010 results included: (1) interest expense of $1.1 billion; (2) income tax expense of $0.6 billion related to tax expense attributable to profitable entities that do not have full valuation allowances recorded against deferred tax assets; (3) administrative expenses of $0.4 billion related to consulting services; partially offset by (4) interest income of $0.4 billion earned on marketable securities held in GMSA; (5) the reversal of our $0.2 billion liability for the Adjustment Shares; (6) a gain on extinguishment of debt of $0.2 billion related to our repayment of the outstanding amount of VEBA Notes of $2.8 billion; and (7) dividends of $0.1 billion on our investment in Ally Financial preferred stock.

In the period July 10, 2009 through December 31, 2009 results included: (1) foreign currency transaction gains of $0.3 billion due to the strengthening of the Canadian Dollar against the U.S. Dollar; partially offset by (2) interest expense of $0.7 billion composed of interest expense of $0.3 billion on UST Credit Agreement and interest expense of $0.2 billion on GMIO debt.

Old GM

In the period January 1, 2009 through July 9, 2009 results included: (1) centrally recorded Reorganization gains, net of $128.2 billion which is more fully discussed in Note 32 to our consolidated financial statements; (2) amortization of discounts related to the UST Loan Agreement, EDC Loan Facility and DIP Facility of $3.7 billion; (3) a gain of $2.5 billion recorded on the UST's conversion of the UST Ally Financial Loan for Class B Common Membership Interests which was partially offset by Old GM's proportionate share of Ally Financial's loss from operations of $1.1 billion; and (4) a gain on extinguishment of debt of $0.9 billion related to an amendment to Old GM's U.S. term loan; partially offset by (5) a loss related to the extinguishment of the UST Ally Financial Loan of $2.0 billion when the UST exercised its option to convert outstanding amounts into shares of Ally Financial's Class B Common Membership Interests; (6) interest expense of $0.8 billion on unsecured debt balances; (7) interest expense of $0.4 billion on the UST Loan Agreement; and (8) interest expense of $0.2 billion on GMIO and GMSA debt.

Liquidity and Capital Resources

Liquidity Overview

We believe that our current level of cash and cash equivalents, marketable securities and availability under our secured revolving credit facility will be sufficient to meet our liquidity needs. However, we expect to have substantial cash requirements going forward which we plan to fund through available liquidity and cash flow from operations. Our known material future uses of cash include, among other possible demands: (1) reinvestment in our business through capital expenditures, engineering and product development activities; (2) pension contributions and OPEB payments; (3) payments to reduce debt and other long-term obligations; (4) dividend payments on our Series A and Series B Preferred Shares; and (5) certain South American income and indirect tax-related administrative proceedings may require that we deposit funds in escrow or make payments which may range up to $0.8 billion.

Our liquidity plans are subject to a number of risks and uncertainties, including those described in the section of this report entitled "Risk Factors," some of which are outside our control. Macroeconomic conditions could limit our ability to successfully execute our business plans and therefore adversely affect our liquidity plans.

Recent Management Initiatives

We continue to monitor and evaluate opportunities to optimize our liquidity position and capital structure in order to strengthen our balance sheet.

Reduction of Financial Leverage

Reducing our financial leverage remains a key strategic initiative. We continue to evaluate potential repayments of long-term obligations prior to maturity. Any such repayments may negatively affect our liquidity in the short-term.

In the year ended December 31, 2011 we made prepayments on debt facilities of $1.0 billion held by certain of our foreign subsidiaries, primarily in GMNA and GMSA. However, our overall debt balances increased to $5.3 billion at December 31, 2011 as these prepayments were more than offset primarily by the issuance of the HCT notes that were incurred as part of an agreement to settle certain retiree healthcare obligations and increases to other debt facilities.

We made a voluntary contribution in January 2011 to our U.S. hourly and salaried defined benefit pension plans of 61 million shares of our common stock valued at $2.2 billion for funding purposes at the time of contribution. The contributed shares qualified as a plan asset for funding purposes at the time of contribution and as a plan asset valued at $1.9 billion for accounting purposes in July 2011. This contribution was made as part of our continuing efforts to mitigate risk in our balance sheet.

Under wholesale financing arrangements, our U.S. dealers typically borrow money from financial institutions to fund their vehicle purchases from us. Effective January 2011 we terminated a wholesale advance agreement which provided for accelerated receipt of payments made by Ally Financial on behalf of our U.S. dealers pursuant to Ally Financial's wholesale financing arrangements with dealers. Similar modifications were made in Canada and Mexico in the year ended December 31, 2011. The wholesale advance agreements covered the period for which vehicles are in transit between assembly plants and dealerships. We no longer receive payments in advance of the date vehicles purchased by dealers are scheduled to be delivered in GMNA resulting in an increase to our accounts receivable balance of $1.1 billion at December 31, 2011. The amount of the increase to our accounts receivable balance depends on sales volumes, seasonal fluctuations and certain other factors.

In January 2011 we withdrew our application for loans available under Section 136 of the EISA. This decision is consistent with our stated goal to reduce our financial leverage.

Investment Actions

We accumulated Canadian Dollar denominated deposits and investments of $6.4 billion in the year ended December 31, 2011. These deposits and investments will incur foreign exchange gains or losses based on the movement of the Canadian Dollar in relation to the U.S. Dollar and will therefore reduce our net Canadian Dollar foreign exchange exposure, which primarily relates to pension and OPEB liabilities. We expect to maintain a sufficient amount of Canadian Dollar deposits and investments to offset the liabilities denominated in Canadian Dollars. These funds continue to be available to fund our normal ongoing operations and are included in our available liquidity.

We continue to monitor and explore the sale of other non-core assets. In March 2011 we sold our Class A Membership Interests in New Delphi to New Delphi for $3.8 billion. Also in March 2011 we sold our Ally Financial preferred stock for $1.0 billion. Proceeds from these asset sales were used to strengthen liquidity and are to be used for general corporate purposes.

From time to time we consider the possibility of acquisitions, dispositions and strategic alliances that we believe would generate significant advantages and substantially strengthen our business. This may include additional loans or investments with our joint venture partners and may negatively impact our liquidity in the short-term.

Automotive

Available Liquidity

Available liquidity includes cash, cash equivalents and marketable securities balances. At December 31, 2011 our available liquidity was $31.6 billion, excluding funds available under credit facilities of $5.9 billion. The amount of available liquidity is subject to intra-month and seasonal fluctuations and includes balances held by various business units and subsidiaries worldwide that are needed to fund their operations.

We manage our liquidity primarily at our treasury centers as well as at certain of our significant consolidated overseas subsidiaries. Our cash equivalents and marketable securities balances include investments in U.S. government and agency obligations, foreign government securities, time deposits and certificates of deposits and corporate debt securities, and are primarily denominated in U.S. Dollars. Our investment guidelines, which we may change from time to time, prescribe certain minimum credit rating thresholds and limit our exposures to any particular sector, asset class, issuance or security type. Substantially all of our current investments in debt securities are with A/A2 or better rated issuers. We maintain cash balances and investments in certain foreign currencies, such as the Canadian Dollar, to fund future payments on foreign currency denominated obligations thereby reducing a portion of the related foreign currency exposure. We actively monitor and manage our liquidity exposure to Europe which is related primarily to short-term bank deposits and short-term debt securities of high-quality European issuers. A portion of our total liquidity includes amounts deemed indefinitely reinvested in our foreign subsidiaries. We have used and will continue to use other methods including inter-company loans to utilize these funds across our global operations as needed. The following table summarizes our liquidity (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Cash and cash equivalents	$15,499	$21,061
Marketable securities	16,148	5,555
Available liquidity	31,647	26,616
Available under credit facilities	5,867	5,919
Total available liquidity	37,514	32,535
HCT escrow account (a)	—	1,008
Total liquidity including HCT escrow account	$37,514	$33,543

(a) Classified as Restricted cash and marketable securities.

Upon implementation of the HCT, we used funds in an escrow account to fund a payment to the HCT of $0.8 billion. Following implementation the remaining funds held in escrow of $0.2 billion were no longer subject to restrictions and were released to us. Refer to Note 18 to our consolidated financial statements for additional information on the HCT settlement.

GM

Total available liquidity increased by $5.0 billion in the year ended December 31, 2011 due primarily to: (1) positive operating cash flows of $7.4 billion; (2) proceeds received from the sale of investments in New Delphi and Ally Financial of $4.8 billion; and (3) decreases to restricted cash balances of $1.4 billion, partially offset by (4) capital expenditures of $6.2 billion; and (5) negative cash from financing activities of $1.9 billion related primarily to debt prepayments and dividend payments.

Total available liquidity increased by $9.1 billion in the year ended December 31, 2010 due to: (1) positive operating and investing cash flows of $7.3 billion; (2) increased marketable securities balances of $5.4 billion; and (3) additional amounts available under credit facilities of $5.3 billion due to a $5.0 billion secured credit facility; partially offset by (4) negative cash flows from financing activities of $9.3 billion related to prepayments on debt obligations.

UST Credit Agreement and Canadian Loan

UST Credit Agreement

Old GM received total proceeds of $19.8 billion from the UST under the UST Loan Agreement and additional funding of $33.3 billion from the UST and EDC under its DIP Facility. On July 10, 2009 we entered into the UST Credit Agreement and assumed debt of $7.1 billion which Old GM incurred under its DIP Facility. We repaid the final remaining amounts outstanding on the UST Credit Agreement in April 2010. Amounts repaid under the agreement may not be reborrowed.

While we have repaid in full our indebtedness under the UST Credit Agreement, the executive compensation and corporate governance provisions of Section 111 of the EESA, including the Interim Final Rule, will continue to apply to us for the period specified in the EESA and the Interim Final Rule. Certain of the covenants in the UST Credit Agreement will continue to apply to us until the earlier to occur of (1) our ceasing to be a recipient of Exceptional Financial Assistance, or (2) UST ceasing to own any direct or indirect equity interests in us, and impose obligations on us with respect to, among other things, certain expense policies, executive privileges and compensation requirements.

The UST Credit Agreement includes a vitality commitment which requires us to use our commercially reasonable best efforts to ensure that our manufacturing volume conducted in the U.S. is consistent with at least 90% of the projected manufacturing level (projected manufacturing level for this purpose being 1,934,000 units in 2011, 1,998,000 units in 2012, 2,156,000 units in 2013 and 2,260,000 units in 2014), absent a material adverse change in our business or operating environment which would make the commitment non-economic. In the event that such a material adverse change occurs, the UST Credit Agreement provides that we will use our commercially reasonable best efforts to ensure that the volume of U.S. manufacturing is the minimum variance from the projected manufacturing level that is consistent with good business judgment and the intent of the commitment. This covenant survived our repayment of the UST Credit Agreement and remains in effect through December 31, 2014 unless the UST receives total proceeds from debt repayments, dividends, interest, preferred stock redemptions and common stock sales equal to the total dollar amount of all UST invested capital.

UST invested capital totaled $49.5 billion, representing the cumulative amount of cash received by Old GM from the UST under the UST Loan Agreement and the DIP Facility, excluding $0.4 billion which the UST loaned to Old GM under the warranty program and which was repaid on July 10, 2009. This balance also did not include amounts advanced under the UST Ally Financial Loan as the UST exercised its option to convert this loan into Ally Financial preferred membership interests previously held by Old GM in May 2009. At December 31, 2011 the UST had received cumulative proceeds of $23.1 billion from debt repayments, interest payments, Series A Preferred Stock dividends, sales of our common stock and Series A Preferred Stock redemption. The UST's invested capital less proceeds received totals $26.4 billion.

To the extent we fail to comply with any of the covenants in the UST Credit Agreement that continue to apply to us, the UST is entitled to seek specific performance and the appointment of a court-ordered monitor acceptable to the UST (at our sole expense) to ensure compliance with those covenants.

Canadian Loan

On July 10, 2009 through our wholly-owned subsidiary GMCL, we entered into the Canadian Loan Agreement and assumed a $1.3 billion term loan. GMCL repaid the final remaining amounts outstanding on the Canadian Loan in April 2010. Amounts repaid under the agreement may not be reborrowed.

The Canadian Loan Agreement and related agreements include certain covenants requiring GMCL to meet certain annual Canadian production volumes expressed as ratios to total overall production volumes in the U.S. and Canada and to overall production volumes in the North American Free Trade Agreement region. The targets cover vehicles and specified engine and transmission production in Canada. These agreements also include covenants on annual GMCL capital expenditures and research and development expenses. In the event a material adverse change occurs that makes the fulfillment of these covenants non-economic (other than a material adverse change caused by the actions or inactions of GMCL), the lender will consider adjustments to mitigate the business effect of the material adverse change. These covenants survive GMCL's repayment of the loans and certain of the covenants have effect through December 31, 2016.

Refer to Note 17 to our consolidated financial statements for additional details on the Canadian Loan.

Credit Facilities

We use credit facilities as a mechanism to provide additional flexibility in managing our global liquidity. Our primary borrowing capacity under these credit facilities comes from our $5.0 billion secured revolving credit facility. The balance of our credit facilities are geographically dispersed across all regions. The following tables summarize our committed and uncommitted credit facilities (dollars in millions):

	Total Credit Facilities		Amounts Available Under Credit Facilities	
	Successor		Successor	
	December 31, 2011	December 31, 2010	December 31, 2011	December 31, 2010
Committed	$5,338	$6,142	$5,308	$5,475
Uncommitted	629	490	559	444
Total	$5,967	$6,632	$5,867	$5,919

	Total Credit Facilities		Amounts Available Under Credit Facilities	
	Successor		Successor	
	December 31, 2011	December 31, 2010	December 31, 2011	December 31, 2010
Secured revolving credit facility	$5,000	$5,000	$5,000	$5,000
Brazil	—	466	—	2
GM Hong Kong (a)	200	400	200	370
Other (b)	767	766	667	547
Total	$5,967	$6,632	$5,867	$5,919

(a) Includes credit facilities of $200 million at December 31, 2010 which we terminated in July 2011 following the repayment of $30 million which was outstanding under the facility.

(b) Consists of credit facilities available at our foreign subsidiaries that are not individually significant.

Our largest credit facility is our five year, $5.0 billion secured revolving credit facility which includes a letter of credit sub-facility of up to $500 million. Additionally, we can use collateral under the revolving credit facility to support up to $2.0 billion of other obligations. We continue to evaluate potential uses for this collateral which may strengthen our overall liquidity position without impacting our financial leverage. We entered into the secured revolving credit facility agreement in October 2010. While we do not believe that we will draw on the secured revolving credit facility to fund operating activities, the facility provides additional liquidity and financing flexibility. Availability under the secured revolving credit facility is subject to borrowing base restrictions. Our obligations under the secured revolving credit facility are guaranteed by certain of our domestic subsidiaries and secured by a substantial portion of our domestic assets excluding cash, cash equivalents, marketable securities and GM Financial. If we receive an investment grade corporate rating from two or more of the credit rating agencies: Fitch Ratings (Fitch), Moody's Investor Service (Moody's) and Standard & Poor's (S&P), we may no longer have to post collateral under the terms of the facility.

Uncommitted credit facilities include lines of credit which are available to us but under which the lenders have no legal obligation to provide funding upon our request. We and our subsidiaries use credit facilities to fund working capital needs, product programs, facilities development and other general corporate purposes.

Cash Flow

Operating Activities

GM

In the year ended December 31, 2011 cash flows from operating activities increased by $0.8 billion due primarily to: (1) increased net income excluding depreciation, impairment charges and amortization of $2.9 billion; (2) decreased pension cash contributions and OPEB payments in excess of expense of $2.3 billion; partially offset by (3) unfavorable changes in working capital of $1.6 billion due to the termination of the advance wholesale agreements and increased production; and (4) other activities of $2.7 billion which include non-cash gains relating to the sale of our investments in New Delphi and Ally Financial preferred stock of $1.9 billion. Significant pension and OPEB related activity included a cash contribution as part of the HCT settlement of $0.8 billion in 2011 and a voluntary contribution made to our U.S. pension plans of $4.0 billion in 2010. Refer to Note 18 to our consolidated financial statements for additional information on the HCT settlement.

In the year ended December 31, 2010 we had positive cash flows from operating activities of $6.6 billion due primarily to: (1) Net income of $6.4 billion, which included non-cash charges of $7.1 billion resulting from depreciation, impairment and amortization of long-lived assets and finite-lived intangible assets (including amortization of debt issuance costs and discounts); (2) dividends received of $0.7 billion related to our China JVs; partially offset by (3) pension contributions and OPEB payments of $5.7 billion related to voluntary contributions to U.S. hourly and salary pension plans of $4.0 billion; (4) payments on our previously announced restructuring programs of $1.3 billion partially offset by net charges of $0.6 billion; (5) dealer wind-down payments of $0.4 billion; and (6) unfavorable changes in working capital of $0.6 billion. The unfavorable changes in working capital were related to increases in accounts receivables, inventories and the completion of a change to weekly payment terms to our suppliers, partially offset by an increase in accounts payable related to increased production volumes.

In the period July 10, 2009 through December 31, 2009 we had positive cash flows from operating activities of $1.1 billion due primarily to: (1) favorable managed working capital of $5.7 billion due to the effect of increased sales and production on accounts payable and the timing of certain supplier payments; (2) OPEB expense in excess of cash payments of $1.7 billion; (3) net income of $0.6 billion excluding depreciation, impairment and amortization of long-lived assets and finite-lived intangible assets (including amortization of debt issuance costs and discounts); partially offset by (4) pension contributions of $4.3 billion to our Canadian hourly and salaried defined benefit pension plans; (5) restructuring payments of $1.2 billion; (6) interest payments of $0.6 billion; and (7) sales allowance payments in excess of current period accruals for sales incentives of $0.5 billion due to a reduction in dealer stock.

Old GM

In the period January 1, 2009 through July 9, 2009 Old GM had negative cash flows from operating activities of $18.3 billion due primarily to: (1) net loss of $8.4 billion excluding Reorganization gains, net, and depreciation, impairment and amortization of long-lived assets and finite-lived intangible assets (including amortization of debt issuance costs and discounts); (2) change in accrued liabilities of $6.8 billion; (3) unfavorable managed working capital of $5.6 billion; and (4) payments of $0.4 billion for reorganization costs associated with the Chapter 11 Proceedings.

Investing Activities

GM

In the year ended December 31, 2011 cash flows from investing activities decreased by $11.3 billion due primarily to: (1) a reduction in restricted cash returned from escrow accounts of $11.6 billion; (2) an increase in net acquisitions of marketable securities with maturities exceeding 90 days of $5.2 billion; and (3) increased capital expenditures of $2.0 billion as we continue to reinvest in our business; partially offset by (4) proceeds from the sale of our investments in New Delphi and preferred stock in Ally Financial of $4.8 billion in 2011; and (5) the acquisition of AmeriCredit for $3.5 billion in 2010. The decrease in restricted cash was due to the release of $1.0 billion following the implementation of the HCT in 2011 and the release of funds held in an escrow account relating to the UST Credit Agreement of $12.5 billion in 2010.

In the year ended December 31, 2010 we had positive cash flows from investing activities of $0.7 billion due primarily to: (1) a net decrease in Restricted cash and marketable securities of $13.0 billion related to withdrawals from an escrow account relating to the UST Credit Agreement; (2) proceeds from the liquidation of operating leases of $0.3 billion; (3) net proceeds received from the sale of Nexteer of $0.3 billion; (4) proceeds from the sale of property, plants and equipment of $0.2 billion; partially offset by (5) net investments in marketable securities with maturities greater than 90 days of $5.4 billion; (6) capital expenditures of $4.2 billion; and (7) the acquisition of AmeriCredit for $3.5 billion.

In the period July 10, 2009 through December 31, 2009 we had positive cash flows from investing activities of $2.2 billion due primarily to: (1) a reduction in Restricted cash and marketable securities of $5.2 billion related to withdrawals from an escrow account relating to the UST Credit Agreement; (2) $0.6 billion related to the liquidation of automotive retail leases; (3) an increase as a result of the consolidation of Saab of $0.2 billion; (4) tax distributions of $0.1 billion on Ally Financial common stock; partially offset by (5) net cash payments of $2.0 billion related to the acquisition of Nexteer, four domestic facilities and Class A Membership Interests in New Delphi; and (6) capital expenditures of $1.9 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Old GM had negative cash flows from investing activities of $21.1 billion due primarily to: (1) increase in Restricted cash and marketable securities of $18.0 billion due to the establishment of the UST and Canadian escrow accounts; (2) capital expenditures of $3.5 billion; and (3) investment in Ally Financial of $0.9 billion; partially offset by (4) liquidation of operating leases of $1.3 billion.

Financing Activities

GM

In the year ended December 31, 2011 cash flows from financing activities increased by $7.4 billion due primarily to: (1) a reduction in payments made in excess of proceeds received from debt obligations of $10.0 billion related to the repayment of our indebtedness under the UST Credit Agreement of $5.7 billion, Canadian Loan of $1.3 billion, principal payments of the VEBA Notes of $2.5 billion and repayment of GM Korea's credit facility of $1.2 billion in 2010; and (2) purchase of the Series A Preferred Stock shares held by the UST of $2.1 billion in 2010; partially offset by (3) proceeds received from the issuance of our Series B Preferred Stock of $4.9 billion in 2010.

In the year ended December 31, 2010 we had negative cash flows from financing activities of $9.3 billion due primarily to: (1) repayments on the UST Credit Agreement and Canadian Loan of $5.7 billion and $1.3 billion; (2) principal payments on the VEBA Notes of $2.5 billion; (3) purchase of the Series A Preferred Stock shares from the UST of $2.1 billion; (4) repayment of GM Korea's revolving credit facility of $1.2 billion; (5) dividend payments on our Series A Preferred Stock of $0.8 billion; (6) payments on the program announced in March 2009 by the UST to provide financial assistance to automotive suppliers (Receivables Program) of $0.2 billion; (7) debt issuance fees of $0.2 billion related to establishing our secured revolving credit facility; (8) net payments on other debt of $0.2 billion; partially offset by (9) proceeds from the issuance of Series B Preferred Stock of $4.9 billion.

In the period July 10, 2009 through December 31, 2009 we had positive cash flows from financing activities of $0.3 billion due primarily to: (1) funding of $4.0 billion from the EDC which was converted to our equity; partially offset by (2) payments on the UST Credit Agreement of $1.4 billion (including payments of $0.4 billion related to the warranty program); (3) net payments on the revolving bridge facility with the German federal government and certain German states (German Facility) of $1.1 billion; (4) net payments on other debt of $0.4 billion; (5) a net decrease in short-term debt of $0.4 billion; (6) payment on the Canadian Loan of $0.2 billion; (7) net payments on Receivables Program of $0.1 billion; and (8) dividend payments on our Series A Preferred Stock of $0.1 billion.

Old GM

In the period January 1, 2009 through July 9, 2009 Old GM had positive cash flows from financing activities of $44.2 billion due primarily to: (1) proceeds from the DIP Facility of $33.3 billion; (2) proceeds from the UST Loan Agreement of $16.6 billion;

(3) proceeds from the EDC Loan Facility of $2.4 billion; (4) proceeds from the German Facility of $1.0 billion; (5) proceeds from the issuance of long-term debt of $0.3 billion; (6) proceeds from the Receivables Program of $0.3 billion; partially offset by (7) payments on other debt of $6.1 billion; (8) a net decrease in short-term debt of $2.4 billion; and (9) cash of $1.2 billion MLC retained as part of the 363 Sale.

Free Cash Flow

Management believes free cash flow provides meaningful supplemental information regarding the liquidity of our automotive operations and its ability to generate sufficient cash flow above those required in our business to sustain our operations. We measure free cash flow as cash flow from operations adjusted for capital expenditures. While management believes that free cash flow provides useful information, it is not an operating measure under U.S. GAAP, and there are limitations associated with its use. Our calculation of free cash flow may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in the method of calculation. As a result the use of free cash flow has limitations and should not be considered in isolation from, or as a substitute for, other measures such as cash flows from operating activities. Due to these limitations, free cash flow is used as a supplement to U.S. GAAP measures. The following table summarizes free cash flow (dollars in millions):

	Successor	
	Year Ended December 31, 2011	Year Ended December 31, 2010
Operating cash flow	$ 7,429	$ 6,589
Less: capital expenditures	(6,241)	(4,200)
Free cash flow	$ 1,188	$ 2,389

Other Liquidity Issues

Status of Credit Ratings

We have been assigned initial ratings by four independent credit rating agencies: Dominion Bond Rating Services (DBRS), Fitch, Moody's and S&P.

DBRS, Moody's, Fitch and S&P currently rate our corporate credit at non-investment grade. The following table summarizes our credit ratings at February 15, 2012:

Rating Agency	Corporate	Secured Revolving Credit Facility	Senior Unsecured	Outlook
DBRS	BB (high)	BBB (low)	N/A	Stable
Fitch	BB	BBB-	N/A	Positive
Moody's	Ba1	Baa2	N/A	Positive
S&P	BB+	BBB	N/A	Stable

Rating actions taken by each of the credit rating agencies from January 1, 2011 through February 15, 2012 were as follows:

DBRS: November 2011 — Upgraded corporate rating to BB (high) from BB.

Fitch: October 2011 — Upgraded corporate rating to BB from BB- and upgraded secured revolving credit facility rating to BBB- from BB+. Outlook revised to positive from stable.

Moody's: October 2011 — Upgraded corporate rating to Ba1 from Ba2 and upgraded secured revolving credit facility rating to Baa2 from Baa3. Outlook revised to positive from stable.

S&P: September 2011 — Upgraded corporate rating to BB+ from BB- and upgraded our secured revolving credit facility rating to BBB from BB+. Outlook revised to stable from positive. February 2011 — Outlook revised to positive from stable.

We continue to pursue investment grade status by maintaining a balance sheet with minimal financial leverage and demonstrating continued operating performance. Achieving investment grade status will provide us with greater financial flexibility, lower our cost of borrowing and may release collateral from certain agreements including our secured revolving credit facility.

Series A Preferred Stock

Beginning December 31, 2014 we will be permitted to redeem, in whole or in part, the shares of Series A Preferred Stock outstanding at a redemption price equal to $25.00 per share plus any accrued and unpaid dividends, subject to limited exceptions. Our ability to redeem any portion of this $6.9 billion face amount in Series A Preferred Stock will depend upon our having sufficient liquidity.

Automotive Financing

Liquidity Overview

GM Financial's primary sources of cash are finance charge income, servicing fees, net distributions from securitization trusts, borrowings under credit facilities, transfers of finance receivables to trusts in securitization transactions, collections and recoveries on finance receivables and net proceeds from senior notes transactions. GM Financial's primary uses of cash are purchases of finance receivables and leased assets, repayment of credit facilities, securitization notes payable and other indebtedness, funding credit enhancement requirements for securitization transactions and credit facilities and operating expenses.

GM Financial used cash of $5.0 billion for the purchase of finance receivables and $0.8 billion for the purchase of leased vehicles in the year ended December 31, 2011. These purchases were funded initially utilizing cash and borrowings under credit facilities and subsequently funded in securitization transactions. GM Financial received cash of $3.7 billion from collections and recoveries on receivables in the year ended December 31, 2011.

GM Financial used cash of $0.9 billion for the purchase of finance receivables in the three months ended December 31, 2010. These purchases were funded initially utilizing cash and borrowings under credit facilities and subsequently funded in securitization transactions.

Available Liquidity

The following table summarizes GM Financial's available liquidity (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Cash and cash equivalents	$ 572	$195
Borrowing capacity on unpledged eligible receivables	387	272
Borrowing capacity on unpledged eligible leased assets	294	—
Available liquidity	$1,253	$467

Senior Notes

In June 2011 GM Financial issued 6.75% senior notes of $500 million which are due in June 2018 with interest payable semiannually. In July 2011 proceeds of $71 million from this offering were used to redeem all of GM Financial's outstanding 8.50% senior notes due in 2015. The remaining proceeds are to be used for general corporate purposes.

Credit Facilities

In the normal course of business, in addition to using available cash, GM Financial pledges receivables to and borrows under credit facilities to fund operations and repays these borrowings as appropriate under GM Financial's cash management strategy.

The following table summarizes those credit facilities (dollars in millions):

	December 31, 2011		December 31, 2010	
	Facility Amount	Advances Outstanding	Facility Amount	Advances Outstanding
Syndicated warehouse facility (a)	$2,000	$ 621	$1,300	$278
U.S. lease warehouse facility (b)	$ 600	—		—
Canada lease warehouse facility (c)	$ 589	181		—
Medium-term note facility (d)		294		490
Bank funding facility		3		64
Total		$1,099		$832

(a) In February 2011 GM Financial extended the maturity date of the syndicated warehouse facility to May 2012 and increased the borrowing capacity to $2.0 billion from $1.3 billion.

(b) In January 2012 GM Financial extended the maturity date of the lease warehouse facility for lease originations in the U.S. to January 2013. Borrowings on the facility are collateralized by leased assets.

(c) In July 2011 GM Financial Canada Leasing Ltd., a subsidiary of GM Financial entered into a lease warehouse facility for lease originations in Canada that matures in July 2012. Borrowings on this facility are collateralized by leased assets. The facility amount represents CAD $600 million at December 31, 2011.

(d) The revolving period under this facility has ended and the outstanding debt balance will be repaid over time based on the amortization of the receivables pledged until October 2016 when any remaining amount outstanding will be due and payable.

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under the credit facilities and securitization notes payable. GM Financial's funding agreements contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios (portfolio net loss and delinquency ratios, and pool level cumulative net loss ratios) as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements, the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements or, with respect to the syndicated warehouse facility, restrict GM Financial's ability to obtain additional borrowings.

Defined Benefit Pension Plan Contributions

Plans covering eligible U.S. salaried employees hired prior to January 2001 and hourly employees hired prior to October 15, 2007 generally provide benefits of stated amounts for each year of service as well as supplemental benefits for employees who retire with 30 years of service before normal retirement age. Salaried and hourly employees hired after these dates participate in defined contribution or cash balance plans. Our and Old GM's policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulation, or to directly pay benefit payments where appropriate. At December 31, 2011 all legal funding requirements had been met.

The following table summarizes contributions made to the defined benefit pension plans or direct payments (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
U.S. hourly and salaried	$1,962	$4,095	$ 31	$ 57
Non-U.S.	836	777	4,287	529
Total contributions	$2,798	$4,872	$4,318	$586

We made a voluntary contribution in January 2011 to our U.S. hourly and salaried defined benefit pension plans of 61 million shares of our common stock, valued at $2.2 billion for funding purposes at the time of contribution. The contributed shares qualified as a plan asset for funding purposes at the time of contribution and as a plan asset valued at $1.9 billion for accounting purposes in July 2011. This was a voluntary contribution above our funding requirements for the pension plans.

The following table summarizes the underfunded status of pension plans on a U.S. GAAP basis (dollars in billions):

	Successor	
	December 31, 2011	December 31, 2010
U.S. hourly and salaried	$13.3	$11.5
U.S. nonqualified	0.9	0.9
Total U.S. pension plans	14.2	12.4
Non-U.S.	11.2	9.8
Total underfunded	$25.4	$22.2

The U.S. pension plans were underfunded by $14.2 billion and $12.4 billion at December 31, 2011 and 2010. The change in funded status was due primarily to: (1) actuarial losses due primarily to discount rate decreases of $8.5 billion; and (2) service and interest costs of $5.4 billion; partially offset by (3) actual return on plan assets of $10.1 billion; and (4) contributions of $2.0 billion.

The non-U.S. pension plans were underfunded by $11.2 billion and $9.8 billion at December 31, 2011 and 2010. The change in funded status was due primarily to: (1) actuarial losses of $1.5 billion; and (2) service and interest costs of $1.6 billion; partially offset by (3) actual return on plan assets of $0.7 billion; (4) contributions and benefit payments of $0.8 billion; and (5) net favorable foreign currency translation effect of $0.2 billion.

Hourly and salaried OPEB plans provide postretirement life insurance to most U.S. retirees and eligible dependents and postretirement health coverage to some U.S. retirees and eligible dependents. Certain of the non-U.S. subsidiaries have postretirement benefit plans, although most participants are covered by government sponsored or administered programs.

The following table summarizes the unfunded status of OPEB plans (dollars in billions):

	Successor	
	December 31, 2011	December 31, 2010
U.S. OPEB plans	$5.8	$5.7
Non-U.S. OPEB plans	1.5	4.2
Total unfunded	$7.3	$9.9

The change in unfunded status for the non-U.S. plans was due primarily to the implementation of the independent HCT, which was accounted for as a plan settlement reducing the OPEB obligation by $3.1 billion.

Refer to Note 18 to our consolidated financial statements for the change in benefit obligations and related plan assets.

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service (dollars in millions):

	Successor			
	Years Ended December 31,			
	Pension Benefits (a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans (b)
2012	$ 8,514	$1,437	$ 419	$ 55
2013	$ 8,262	$1,441	$ 403	$ 58
2014	$ 8,065	$1,475	$ 367	$ 61
2015	$ 7,918	$1,505	$ 357	$ 65
2016	$ 7,645	$1,528	$ 350	$ 68
2017-2021	$35,435	$7,725	$1,678	$381

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our Cash and cash equivalents.

(b) Benefit payments presented in this table reflect the effect of the implementation of the HCT which releases us from certain CAW retiree healthcare claims incurred after October 31, 2011.

Off-Balance Sheet Arrangements

We do not currently utilize off-balance sheet securitization arrangements. All trade or financing receivables and related obligations subject to securitization programs are recorded on our consolidated balance sheets at December 31, 2011 and 2010.

Guarantees Provided to Third Parties

We have provided guarantees related to the residual value of operating leases, certain suppliers' commitments, certain product-related claims and commercial loans made by Ally Financial and outstanding with certain third parties excluding vehicle repurchase obligations, residual support and risk sharing related to Ally Financial. The maximum potential obligation under these commitments was $1.1 billion and $1.0 billion at December 31, 2011 and 2010.

Our current agreement with Ally Financial requires the repurchase of Ally Financial financed inventory invoiced to dealers with limited exclusions, in the event of a qualifying voluntary or involuntary termination of the dealer's sales and service agreement. The repurchase obligation ended in August 2010 for vehicles invoiced through August 2009, ended in August 2011 for vehicles invoiced through August 2010, ends in August 2012 for vehicles invoiced through August 2011 and ends in August 2013 for vehicles invoiced through August 2012.

The maximum potential amount of future payments required to be made to Ally Financial under this guarantee would be based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock and is estimated to be $19.8 billion and $18.8 billion at December 31, 2011 and 2010. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer or at auction. The fair value of the guarantee was $17 million and $21 million at December 31, 2011 and 2010 which considers the likelihood of dealers terminating and estimating the loss exposure for the ultimate disposition of vehicles.

Refer to Notes 20 and 28 to our consolidated financial statements for additional information on guarantees we have provided.

Contractual Obligations and Other Long-Term Liabilities

We have the following minimum commitments under contractual obligations, including purchase obligations. A purchase obligation is defined as an agreement to purchase goods or services that is enforceable and legally binding on us and that specifies all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum, or variable price provisions; and the approximate timing of the transaction. Other long-term liabilities are defined as long-term liabilities that are recorded on our consolidated balance sheet. Based on this definition, the following table includes only those contracts which include fixed or minimum obligations. The majority of our purchases are not included in the table as they are made under purchase orders which are requirements based and accordingly do not specify minimum quantities.

The following table summarizes aggregated information about our outstanding contractual obligations and other long-term liabilities at December 31, 2011 (dollars in millions):

	Payments Due by Period				
	2012	2013-2014	2015-2016	2017 and after	Total
Automotive debt (a)	$ 1,530	$ 245	$ 605	$ 3,478	$ 5,858
Automotive Financing debt (b)	4,263	2,504	1,142	586	8,495
Capital lease obligations	134	188	94	560	976
Automotive interest payments (c)	122	588	451	512	1,673
Automotive Financing interest payments (d)	193	236	117	49	595
Postretirement benefits (e)	267	450	214	—	931
Contractual commitments for capital expenditures	1,233	91	—	—	1,324
Operating lease obligations (f)	363	466	284	368	1,481
Other contractual commitments:					
Material	1,038	749	347	175	2,309
Marketing	933	508	220	54	1,715
Rental car repurchases	4,265	—	—	—	4,265
Policy, product warranty and recall campaigns liability	3,159	2,767	679	207	6,812
Other	1,185	310	86	68	1,649
Total contractual commitments (g) (h) (i)	$18,685	$9,102	$4,239	$ 6,057	$38,083
Non-contractual postretirement benefits (j)	$ 215	$ 437	$ 626	$14,154	$15,432

(a) Projected future payments on lines of credit were based on amounts drawn at December 31, 2011.

(b) GM Financial credit facilities and securitization notes payable have been classified based on expected payoff date. Senior notes and convertible senior notes principal amounts have been classified based on maturity date.

(c) Amounts include Automotive interest payments based on contractual terms and current interest rates on our debt and capital lease obligations. Automotive interest payments based on variable interest rates were determined using the interest rate in effect at December 31, 2011.

(d) GM Financial interest payments are calculated based on LIBOR plus the respective credit spreads and specified fees associated with the medium-term note facility and the syndicated warehouse facility, the coupon rate for the senior notes and convertible senior notes and a fixed rate of interest for securitization notes payable. GM Financial interest payments on the floating rate tranches of the securitization notes payable were converted to a fixed rate based on the floating rate plus any expected hedge payments.

(e) Amounts include other postretirement benefit payments under the current U.S. contractual labor agreements through 2015 and Canada labor agreements through 2012 and 2013. Amounts do not include pension funding obligations, which are discussed below under the caption "Pension Funding Requirements."

(f) Amounts include operating lease obligations for both Automotive and Automotive Financing. Automotive is included net of sublease income.

(g) Future payments in local currency amounts were translated into U.S. Dollars using the balance sheet spot rate at December 31, 2011.

(h) Amounts do not include future cash payments for long-term purchase obligations and other accrued expenditures (unless specifically listed in the table above) which were recorded in Accounts payable or Accrued liabilities at December 31, 2011.

(i) Amounts exclude the future annual contingent obligations of Euro 265 million in the years 2012 to 2014 related to our Opel/ Vauxhall restructuring plan.

(j) Amount includes all expected future payments for both current and expected future service at December 31, 2011 for other postretirement benefit obligations for salaried employees and hourly other postretirement benefit obligations extending beyond the current North American union contract agreements. Amounts do not include pension funding obligations, which are discussed below under the caption "Pension Funding Requirements."

The table above does not reflect unrecognized tax benefits of $2.4 billion due to the high degree of uncertainty regarding the future cash outflows associated with these amounts.

Pension Funding Requirements

The next pension funding valuation to be prepared based on the requirements of the Pension Protection Act of 2006 (PPA) will be as of October 1, 2011. Based on the PPA, we have the option to select a funding interest rate for the valuation based on either the Full Yield Curve method or the 3-Segment method, both of which are considered to be acceptable methods. A hypothetical valuation at December 31, 2011 using the 3-Segment rate at May 31, 2011 for the plan year beginning October 1, 2011 and assuming either the Full Yield Curve rate or the 3-Segment rate at December 31, 2011 for all future valuations, projects no funding requirements through 2017. We have assumed that the pension plans in the future earn the expected return on assets of 5.7% for the salaried plan and 6.5% for the hourly plan. The valuation projections also assume that additional benefit accruals in the salaried plan will cease effective September 30, 2012. Refer to Note 18 of our consolidated financial statements for additional information.

The funding interest rate and return on assets rate sensitivities for projected pension funding requirements are shown below (in billions):

	Funding Interest Rate Sensitivity Table					Estimated Return on Assets - 100 basis point decrease
	50 basis point increase	25 basis point increase	Base Line	25 basis point decrease	50 basis point decrease	
2012-2015	$—	$—	$—	$ —	$ —	$ —
2016	$—	$—	$—	$ —	$1.5	$ —
2017	$—	$—	$—	$1.5	$3.3	$0.9

The funding interest rate and return on assets rate sensitivities in the hypothetical valuation consider our 2010 plan year election of relief for certain of our U.S. pension plans but do not consider the potential election of relief provisions that are available to us for the 2011 plan year under the Pension Relief Act of 2010 for our U.S. qualified pension plans. Refer to Note 18 to our consolidated financial statements for additional information regarding our pension funding requirements.

We do not have any required contributions payable to our U.S. qualified plans in 2012. We expect to contribute $100 million to our U.S. non-qualified plans and $740 million to our non-U.S. pension plans in 2012.

Fair Value Measurements

Automotive

At December 31, 2011 and 2010 assets and liabilities classified in Level 3 were not significant. Prior to the three months ended December 31, 2010 significant assets and liabilities classified in Level 3, with the related Level 3 inputs, were as follows:

- Foreign currency derivatives — Level 3 inputs used to determine the fair value of foreign currency derivative liabilities include the appropriate credit spread to measure our nonperformance risk. Given our nonperformance risk was not observable through a liquid credit default swap market we based this measurement on an analysis of comparable industrial companies to determine the appropriate credit spread which would be applied to us and Old GM by market participants. In the three months ended December 31, 2010 we incorporated our published credit agency ratings into our credit rating conclusions. In the three months ended December 31, 2010 we determined that our nonperformance risk no longer represents a significant input in the determination of the fair value of our foreign currency derivative liabilities. The effect of our nonperformance risk in the valuation has been reduced due to the reduction in the remaining duration and magnitude of these net derivative liability positions. We transferred these liabilities to Level 2. At December 31, 2011 our nonperformance risk remains unobservable through a liquid credit default swap market.

Refer to Note 19 to our consolidated financial statements for additional information regarding Level 3 measurements.

Level 3 Assets and Liabilities

At December 31, 2011 assets and liabilities measured using Level 3 inputs increased $64 million from a net liability of $14 million to a net asset of $50 million. This increase was due to unrealized and realized gains on embedded derivatives, partially offset by unrealized losses on options.

At December 31, 2010 assets and liabilities measured using Level 3 inputs decreased $658 million from a net liability of $672 million to a net liability of $14 million. This reduction was due to unrealized and realized gains on derivatives, the settlement of derivative positions according to their terms and maturities and the reclassification of outstanding derivative contracts from Level 3 to Level 2 during the three months ended December 31, 2010. In October 2010 we transferred foreign currency derivatives with a fair market value of $183 million from Level 3 to Level 2.

Realized gains and losses related to assets and liabilities measured using Level 3 inputs did not have a material effect on operations, liquidity or capital resources in the years ended December 31, 2011 and 2010 and the periods July 10, 2009 through December 31, 2009 and January 1, 2009 through July 9, 2009.

Automotive Financing — GM Financial

At December 31, 2011 and 2010 assets and liabilities classified in Level 3, with the related Level 3 inputs, are as follows:

- Interest rate swaps — Level 3 inputs are used to determine the fair value of GM Financial's interest rate swaps because they are traded in over-the-counter markets where quoted market prices are not readily available. The fair value of derivatives is derived using models that primarily use market observable inputs, such as interest rate yield curves and credit curves. The effects of GM Financial's and the counterparties' non-performance risk to the derivative trades is considered when measuring the fair value of derivative assets and liabilities.

Refer to Note 19 to our consolidated financial statements for additional information regarding fair value measurements.

Dividends

The declaration of any dividend on our common stock is a matter to be acted upon by our Board of Directors in its sole discretion. Since our formation we have not paid any dividends on our common stock and have no current plans to pay any dividends on our common stock. Our payment of dividends on our common stock in the future, if any, will be determined by our Board of Directors in its sole discretion out of funds legally available for that purpose and will depend on business conditions, our financial condition, earnings, liquidity and capital requirements, the covenants in our debt instruments and other factors.

So long as any share of our Series A or B Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on our Series A and B Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. Our secured revolving credit facility contains certain restrictions on our ability to pay dividends, subject to exceptions, such as dividends payable solely in shares of our common stock. So long as any share of our Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on our Series A Preferred Stock, subject to exceptions, such as dividends on our Series B Preferred Stock solely in shares of our common stock.

The following tables summarize dividends paid on our Series A and B Preferred Stock (dollars in millions):

	Successor		
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009
Series A Preferred Stock (a)	$621	$810	$349
Series B Preferred Stock (b)	243	—	
Total Preferred Stock dividends paid	$864	$810	$349

(a) Does not include the $677 million charge related to the purchase of 84 million shares of Series A Preferred Stock from the UST in the year ended December 31, 2010. Prior to December 31, 2009 the 260 million shares of Series A Preferred Stock issued to the New VEBA were not considered outstanding for accounting purposes due to the terms of the 2009 UAW Retiree Settlement Agreement. As a result $105 million of the $146 million of dividends paid in the period July 10, 2009 through September 30, 2009 and $147 million of the $203 million dividends paid in the three months ended December 31, 2009 were recorded as a reduction of Postretirement benefits other than pensions.

(b) Cumulative unpaid dividends on our Series B Preferred Stock was $20 million and $25 million at December 31, 2011 and 2010.

Critical Accounting Estimates

The consolidated financial statements are prepared in conformity with U.S. GAAP, which require the use of estimates, judgments and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and resulting balances are reasonable; however, due to inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods. We have discussed the development, selection and disclosures of our critical accounting estimates with the Audit Committee of the Board of Directors, and the Audit Committee has reviewed the disclosures relating to these estimates.

The critical accounting estimates that affect the consolidated financial statements and that use judgments and assumptions are listed below. In addition, the likelihood that materially different amounts could be reported under varied conditions and assumptions is discussed.

Pensions

The defined benefit pension plans are accounted for on an actuarial basis, which requires the selection of various assumptions, including an expected rate of return on plan assets and a discount rate. The expected return on U.S. plan assets that is utilized in determining pension expense is derived from periodic studies, which include a review of asset allocation strategies, anticipated future long-term performance of individual asset classes, risks using standard deviations and correlations of returns among the asset classes that comprise the plans' asset mix. While the studies give appropriate consideration to recent plan performance and historical returns, the assumptions are primarily long-term, prospective rates of return.

In December 2011 an analysis of the investment policy was completed for the U.S. pension plans considering: (1) our overall balance sheet derisking strategy; (2) the plans are closed to new participants; and (3) the 2011 UAW negotiations did not increase pension benefits. Separate long-term strategies were developed for the salaried and hourly U.S. pension plans which represent 35% and 65% of total U.S. pension plans' assets. Using an approach which matches plan assets and liability cash flows to minimize risk of funded status volatility, the expected weighted-average return on assets was reduced from 8.0% at December 31, 2010 to 5.7% for the salaried pension plan and to 6.5% for the hourly pension plan. The resulting weighted-average return is 6.2%. The overall decrease is primarily due to a different asset mix consisting of a higher proportion of fixed income investments compared to last year. The salaried pension plan has a higher target proportion of fixed income investments than the hourly pension plan and therefore, a lower expected return on assets than the hourly pension plan.

Another key assumption in determining net pension expense is the assumed discount rate to be used to discount plan obligations. We estimate this rate for U.S. plans using a cash flow matching approach, which uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate.

Significant differences in actual experience or significant changes in assumptions may materially affect the pension obligations. The effect of actual results differing from assumptions and the changing of assumptions are included in unamortized net actuarial gains and losses that are subject to amortization to expense over future periods.

The following table summarizes the unamortized actuarial gain (loss) (before tax) on pension plans (dollars in billions):

	Successor	
	December 31, 2011	December 31, 2010
Unamortized actuarial gain (loss)	$(3.8)	$2.9

The following table illustrates the sensitivity to a change in certain assumptions for the pension plans, holding all other assumptions constant (dollars in millions):

	Successor			
	U.S. Plans		Non-U.S. Plans	
	Effect on 2012 Pension Expense	Effect on December 31, 2011 PBO	Effect on 2012 Pension Expense	Effect on December 31, 2011 PBO
25 basis point decrease in discount rate	− $130	+$2,730	+$45	+$ 774
25 basis point increase in discount rate	+$110	− $2,660	− $ 6	− $ 735
25 basis point decrease in expected return on assets	+$210	N/A	+$34	N/A
25 basis point increase in expected return on assets	− $210	N/A	− $34	N/A

The following data illustrates the sensitivity of changes in pension expense and pension obligation based on the last remeasurement of the U.S hourly pension plan at December 31, 2011 (dollars in millions):

	Successor	
Change in future benefit units	Effect on 2012 Pension Expense	Effect on December 31, 2011 PBO
One percentage point increase in benefit units	+$101	+$308
One percentage point decrease in benefit units	− $ 98	− $299

Refer to Note 18 to our consolidated financial statements for the weighted-average expected long-term rate of return on plan assets, weighted-average discount rate on plan obligations, actual and expected return on plan assets, and for a discussion of the inputs used to determine fair value for each significant asset class or category.

Other Postretirement Benefits

OPEB plans are accounted for on an actuarial basis, which requires the selection of various assumptions, including a discount rate and healthcare cost trend rates. In the U.S. Old GM established a discount rate assumption to reflect the yield of a hypothetical portfolio of high quality, fixed-income debt instruments that would produce cash flows sufficient in timing and amount to satisfy projected future benefits.

Refer to Note 18 to our consolidated financial statements for the weighted-average discount rate used to determine net OPEB expense.

Valuation of Deferred Tax Assets

We establish and Old GM established valuation allowances for deferred tax assets based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. We consider and Old GM considered the following possible sources of taxable income when assessing the realization of deferred tax assets:

- Future reversals of existing taxable temporary differences;
- Future taxable income exclusive of reversing temporary differences and carryforwards;
- Taxable income in prior carryback years; and
- Tax-planning strategies.

The assessment regarding whether a valuation allowance is required or should be adjusted also considers all available positive and negative evidence factors, including but not limited to:

- Nature, frequency, and severity of recent losses;
- Duration of statutory carryforward periods;
- Historical experience with tax attributes expiring unused; and
- Near- and medium-term financial outlook.

It is difficult to conclude a valuation allowance is not required when there is significant objective and verifiable negative evidence, such as cumulative losses in recent years. We utilize a rolling three years of actual and current year anticipated results as the primary measure of cumulative losses in recent years.

The evaluation of deferred tax assets requires judgment in assessing the likely future tax consequences of events that have been recognized in our financial statements or tax returns and future profitability. Our accounting for deferred tax consequences represents our best estimate of those future events. Changes in our current estimates, due to unanticipated events or otherwise, could have a material effect on our financial condition and results of operations.

Though objective and verifiable negative evidence continues to outweigh positive evidence in jurisdictions with significant valuation allowances, we are experiencing positive evidence trends in certain of these jurisdictions. South Korea operations have overcome adjusted three-year cumulative losses due to recent profitability. However, a number of negative evidence factors continue to affect the need for a valuation allowance such as economic and industry uncertainty and limited carryforward lives of key tax attributes. After reviewing all factors, if additional positive evidence becomes available, we may reverse some or all of our South Korean valuation allowance in the future. At December 31, 2011 the deferred tax valuation allowance for South Korea was $0.8 billion.

U.S. and Canadian operations are also experiencing current profitability, but these operations remain in cumulative three-year loss position at December 31, 2011. To the extent this profitability trend continues, it is reasonably possible our conclusion regarding the need for full valuation allowances could change, resulting in the reversal of some or all of the valuation allowances. At December 31, 2011 deferred tax asset valuation allowances for the U.S. and Canada were $36.4 billion and $3.2 billion.

In a valuation allowance environment, utilization of tax attributes to offset taxable income reduces the overall level of deferred tax assets subject to valuation allowance. Additionally, our recorded effective tax rate is lower than the applicable statutory tax rate, due primarily to income earned in jurisdictions for which a full valuation allowance is recorded. Our effective tax rate will approach the statutory tax rate in periods after valuation allowances are reversed. In the quarter in which valuation allowances are released, we will record a material tax benefit reflecting the release, which could result in a negative effective tax rate. Valuation allowance releases could result in goodwill impairment. Refer to Note 12 to our consolidated financial statements for additional information related to goodwill impairment charges.

Valuation of Vehicle Operating Leases and Valuation of Residual Support and Risk Sharing Reserve

Valuation of Vehicle Operating Leases

In accounting for vehicle operating leases, a determination is made at the inception of a lease of the estimated realizable value (i.e., residual value) of the vehicle at the end of the lease. Residual value represents an estimate of the market value of the vehicle at the end of the lease term, which typically ranges from six months to five years. A retail lease customer is obligated to make payments during the term of a lease to the contract residual. A retail lease customer is not obligated to purchase a vehicle at the end of a lease. Sales to daily rental car companies with guaranteed repurchase obligations are accounted for as operating leases. Generally, the terms under these arrangements are up to 24 months, however, the daily rental car companies can and do return the vehicles earlier, averaging nine months. We are and Old GM was exposed to a risk of loss to the extent the value of a vehicle is below the residual value estimated at contract inception.

Realization of residual values is dependent on the future ability to market vehicles under prevailing market conditions. Over the life of a lease, the adequacy of the estimated residual value is evaluated and adjustments are made to the extent the expected value of a vehicle at lease termination declines. Adjustments may be in the form of revisions to depreciation rates or recognition of impairment charges. Impairment is determined to exist if the undiscounted expected future cash flows are lower than the carrying amount of the leased vehicle.

The critical assumptions underlying the estimated carrying amount of leased vehicles included within Equipment on operating leases, net include: (1) estimated market value information obtained and used in estimating residual values; (2) proper identification and estimation of business conditions; (3) remarketing abilities; and (4) vehicle and marketing programs. Changes in these assumptions could have a significant effect on the estimate of residual values.

We continue to use forecasted auction proceeds to estimate residual values for impairment purposes. Significant differences between the estimate of residual values and actual experience may materially affect impairment charges recorded, if any, and the rate at which vehicles in Equipment on operating leases, net are depreciated.

The following table summarizes recorded impairment charges related to leases to daily rental car companies and automotive retail leases (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Automotive retail leases to daily rental car companies	$151	$49	$18	$47
Automotive retail leases	$ —	$—	$—	$16

Valuation of Residual Support and Risk Sharing Reserve

Significant differences between estimated and actual residual values will also affect the residual support and risk sharing reserves established as a result of certain agreements with Ally Financial, whereby Ally Financial is reimbursed up to an agreed-upon percentage of certain residual value losses they experience on their operating lease portfolio.

During the year ended December 31, 2011 we recorded favorable adjustments to our residual support and risk sharing liabilities of $0.5 billion in the U.S. due to increases in estimated and actual residual values at contract termination.

Due to the contractual terms of our residual support and risk sharing agreements with Ally Financial, which currently limit our maximum obligation to Ally Financial should vehicle residual values decrease, an increase in sales proceeds does not have the equivalent offsetting effect on our residual support and risk sharing reserves as a decrease in sales proceeds.

The following table summarizes the maximum obligation and recorded receivables and liabilities associated with the contractual terms of our residual support and risk sharing agreements with Ally Financial (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Maximum obligation		
Residual support	$ 40	$ 523
Risk sharing agreements	$ 88	$ 692
Outstanding receivables (liabilities)		
Residual support	$ 6	$ 24
Risk sharing agreements	$(66)	$(269)

The decrease in risk sharing and residual amounts is due to liquidation of the lease portfolio for which we have obligations.

Impairment of Goodwill

At December 31, 2011 we had goodwill of $29.0 billion, which predominately arose upon the application of fresh-start reporting and the acquisition of AmeriCredit. When applying fresh-start reporting, certain accounts, primarily employee benefit and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than fair value, and the difference between the U.S. GAAP and fair value amounts gives rise to goodwill, which is a residual. Our employee benefit related accounts were recorded in accordance with ASC 712, "Compensation — Nonretirement Postemployment Benefits" and ASC 715, "Compensation — Retirement Benefits" and deferred income taxes were recorded in accordance with ASC 740, "Income Taxes". Further, we recorded valuation allowances against certain of our deferred tax assets, which under ASC 852 also resulted in goodwill. If all identifiable assets and liabilities had been recorded at fair value upon application of fresh-start reporting, no goodwill would have resulted.

In the three months ended December 31, 2011, 2010 and 2009 we performed our annual goodwill impairment testing as of October 1 for all reporting units, which are GMNA, GME, GM Financial and various reporting units within the GMIO and GMSA segments. Based on this testing we determined that goodwill was impaired for our GM Korea reporting unit at October 1, 2011. Subsequent to our 2011 annual impairment testing we reversed a valuation allowance for our Holden reporting unit that resulted in the carrying amount of this reporting unit exceeding its fair value and determined that there was an event-driven impairment in our GM Korea reporting unit. As such we recorded goodwill impairment charges of $270 million in the three months ended December 31, 2011 within our GMIO segment. We recorded goodwill impairment charges of $395 million in the three months ended March 31, 2011 and $621 million in the three months ended December 31, 2011 pertaining to our GME reporting unit. Refer to Notes 3 and 12 to our consolidated financial statements for additional information on these Goodwill impairment charges, including disclosure on our adoption of Accounting Standard Update 2010-28, "Intangibles — Goodwill and Other: When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts".

When performing our goodwill impairment testing, the fair values of our reporting units were determined based on valuation techniques using the best available information, primarily discounted cash flow projections. We make significant assumptions and estimates about the extent and timing of future cash flows, growth rates, market share and discount rates. The cash flows are estimated over a significant future period of time, which makes those estimates and assumptions subject to a high degree of uncertainty. Where available and as appropriate, comparative market multiples and the quoted market price of our common stock are used to corroborate the results of the discounted cash flow method. While we believe that the assumptions and estimates used to determine the estimated fair values of each of our reporting units are reasonable, a change in assumptions underlying these estimates could result in a material effect on the consolidated financial statements. Assumptions used in our discounted cash flow analysis that have the most significant effect on the estimated fair value of our reporting units (excluding GM Financial) include:

- Our estimated weighted-average cost of capital (WACC);

- Our estimated long-term growth rates; and
- Our estimate of industry sales and our market share.

The valuation methodologies utilized to perform our goodwill impairment testing were consistent with those used in our application of fresh-start reporting on July 10, 2009 and in any subsequent annual or event-driven impairment tests and utilized Level 3 measures.

The following table summarizes the goodwill balances and key assumptions for each of our more significant reporting units (excluding GM Financial) utilized in our 2011 and 2010 annual goodwill impairment tests (dollars and volumes in millions):

				Industry Sales (a)		Market Share (a)	
	Goodwill (c)	WACC	Long-Term Growth Rates	2011/2012	2014/2015	2011/2012	2014/2015
GMNA							
At October 1, 2010	$26,410	16.5%	1.5%	15.9	20.2	18.5%	18.2%
At October 1, 2011	$26,395	18.0%	1.5%	16.7	20.1	19.2%	19.2%
GME							
At October 1, 2010	$ 3,096	17.0%	0.5%	18.4	21.3	6.8%	7.6%
At October 1, 2011	$ 1,246	17.5%	0.5%	19.4	21.7	6.7%	7.0%
GM Korea (b)							
At October 1, 2010	$ 632	16.0%	3.0%	77.9	91.8	1.2%	1.4%
At October 1, 2011	$ 615	15.5%	3.0%	81.0	97.1	1.4%	1.1%
Holden							
At October 1, 2010	$ 186	14.5%	3.0%	1.0	1.1	12.4%	13.5%
At October 1, 2011	$ 188	14.0%	2.0%	1.2	1.3	12.5%	12.6%
GM Mercosur							
At October 1, 2010	$ 120	15.3%	4.7%	4.6	5.4	18.6%	17.0%
At October 1, 2011	$ 110	14.8%	4.0%	5.1	6.0	18.1%	18.2%

(a) Amounts at October 1, 2010 are for 2011 through 2014 and amounts at October 1, 2011 are for 2012 through 2015.

(b) Industry sales and market share are based on global industry volumes because GM Korea exports vehicles globally.

(c) Goodwill balance is before any adjustments, if any, for goodwill impairments.

The WACCs considered various factors including bond yields, risk premiums and tax rates; the terminal values were determined using a growth model that applied a reporting unit's long-term growth rate to its projected cash flows beyond the forecast period; and industry sales and a market share for each reporting unit included annual estimates through the forecast period. In addition, minimum operating cash needs that incorporate specific business, economic and regulatory factors giving rise to varying cash needs were estimated.

With regard to GM Financial with goodwill of $1.3 billion at October 1, 2011, key assumptions impacting our 2011 annual impairment testing procedures include forecasted asset composition and growth and equity to managed asset retention ratios. Forecasted equity to managed asset retention ratio by 2014 was 12.5% and held constant thereafter.

Our fair value estimates assume the achievement of the future financial results contemplated in our forecasted cash flows and there can be no assurance that we will realize that value. The estimates and assumptions used are subject to significant uncertainties, many of which are beyond our control, and there is no assurance that anticipated financial results will be achieved.

For purposes of our 2011 annual impairment testing procedures, the estimated fair values of our more significant reporting units exceeded their carrying values by 12.3% for GMNA, 24.7% for Holden, 56.8% for GM Mercosur and 10.3% for GM Financial. In calculating the fair values of our more significant reporting units during our 2011 annual goodwill impairment testing, keeping all other assumptions constant, the estimated fair values of our more significant reporting units would still exceed their carrying amounts had our WACC increased by 150 basis points for GMNA, 410 basis points for Holden and 430 basis points for GM Mercosur. For GM Financial, fair value would still exceed its carrying amount had equity to managed assets retention ratio increased 230 basis points by 2014.

Based on the fair value measures determined during our 2011 annual and event-driven impairment tests we determined the fair values of those reporting units requiring a Step 2 analysis (GME, GM Korea and Holden) had not increased sufficiently to give rise to an implied goodwill amount other than the goodwill arising from the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon application of fresh-start reporting.

The key assumptions utilized in determining the fair value-to-U.S. GAAP differences giving rise to the implied goodwill for the reporting units requiring a Step 2 analysis are the determination of our nonperformance risk, interest rates, estimates of our employee benefit related obligations and/or the estimated timing of the utilization of our deferred tax assets, including our determination whether it is more likely than not that the deferred tax assets will be utilized. Of these factors, the amount of implied goodwill within GME is most sensitive to changes in our nonperformance risk, interest rates and estimates of our employee benefit related obligations. GM Korea and Holden are most sensitive to our determination of whether it is more likely than not that their deferred tax assets will or will not be utilized.

In the future, we have an increased likelihood of measuring goodwill for possible impairment during our annual or event-driven goodwill impairment testing and in evaluating whether it is more likely than not that a goodwill impairment exists for reporting units with zero or negative carrying amounts. An event-driven impairment test is required if it is more likely than not that the fair value of a reporting unit is less than its carrying amount. Because our reporting units were recorded at their fair values upon application of fresh-start reporting, it is more likely a decrease in the fair value of our reporting units from their fresh-start reporting values could occur, and such a decrease would trigger the need to measure for possible goodwill impairments. GME has a negative carrying amount and GM Korea's fair value is less than its carrying amount, which increases the likelihood of measuring goodwill for further impairment in the near-term.

Upon the application of fresh-start reporting goodwill predominately resulted from our recorded liabilities for certain employee benefit obligations being higher than the fair value of these obligations because lower discount rates were utilized in determining the U.S. GAAP values compared to those utilized to determine fair values. The discount rates utilized to determine the fair value of these obligations were based on our incremental borrowing rates, which included our nonperformance risk. Our incremental borrowing rates are also affected by changes in market interest rates. Further, upon the application of fresh-start reporting, the recorded amounts of our assets were lower than their fair values because of the recording of valuation allowances on certain of our deferred tax assets. The difference between these fair value-to-U.S. GAAP amounts (1) would decrease upon a decrease in credit spreads between high quality corporate bond rates and market interest rates for companies with similar nonperformance risk; (2) could decrease upon an improvement in our credit rating, thus resulting in a decrease in the spread between our employee benefit related obligations under U.S. GAAP and their fair values; and/or (3) could decrease upon a change in the fair values of our estimated employee benefit obligations. A decrease will also occur upon reversal of our deferred tax asset valuation allowances. Should the fair value-to-U.S. GAAP differences decrease for these reasons, the implied goodwill balance will decline. Accordingly, at the next annual or event-driven goodwill impairment test, to the extent the carrying amount of a reporting unit exceeds its fair value or the reporting unit has a negative carrying amount, a goodwill impairment could occur. Future goodwill impairments could also occur should we reorganize our internal reporting structure in a manner that changes the composition of one or more of our reporting units. Upon such an event, goodwill would be reassigned to the affected reporting units using a relative-fair-value allocation approach, unless the entity was never integrated, and not based on the amount of goodwill that was originally attributable to fair value to-U.S. GAAP differences that gave rise to goodwill upon application of fresh-start reporting.

Refer to Note 12 to our consolidated financial statements for additional information on goodwill impairments, including risks of future goodwill impairment charges.

Impairment of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds the fair value for the asset group to be held and used. Product-specific long-lived assets are tested for impairment at the platform or vehicle line level. Non-product line specific long-lived assets are tested for impairment on a reporting unit basis in GMNA, GME, and GM Financial and tested at or within our various reporting units within GMIO and GMSA segments. Assets classified as held for sale are recorded at the lower of carrying amount or fair value less cost to sell. Fair value is determined primarily using the anticipated cash flows discounted at a rate commensurate with the risk involved. We develop anticipated cash flows from historical experience and internal business plans. A considerable amount of management judgment and assumptions are required in performing the long-lived asset impairment tests, principally in determining the fair value of the asset groups and the assets' average estimated useful life. While we believe our judgments and assumptions are reasonable, a change in assumptions underlying these estimates could result in a material effect to the consolidated financial statements. Long-lived assets could become impaired in the future as a result of declines in profitability due to significant changes in volume, pricing or costs.

Sales Incentives

The estimated effect of sales incentives to dealers and customers is recorded as a reduction of Automotive sales and revenue, and in certain instances, as an increase to Automotive cost of sales, at the later of the time of sale or announcement of an incentive program to dealers. There may be numerous types of incentives available at any particular time, including a choice of incentives for a specific model. Incentive programs are generally brand specific, model specific or region specific, and are for specified time periods, which may be extended. Significant factors used in estimating the cost of incentives include the volume of vehicles that will be affected by the incentive programs offered by product, product mix and the rate of customer acceptance of any incentive program, and the likelihood that an incentive program will be extended, all of which are estimated based on historical experience and assumptions concerning customer behavior and future market conditions. When an incentive program is announced, the number of vehicles in dealer inventory eligible for the incentive program is determined, and a reduction of Automotive sales and revenue or increase to Automotive cost of sales is recorded in the period in which the program is announced. If the actual number of affected vehicles differs from this estimate, or if a different mix of incentives is actually paid, the reduction in Automotive sales and revenue or increase to Automotive cost of sales for sales incentives could be affected. There are a multitude of inputs affecting the calculation of the estimate for sales incentives, and an increase or decrease of any of these variables could have a significant effect on recorded sales incentives.

Policy, Warranty and Recalls

The estimated costs related to policy and product warranties are accrued at the time products are sold, and the estimated costs related to product recalls based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated. These estimates are established using historical information on the nature, frequency, and average cost of claims of each vehicle line or each model year of the vehicle line and assumptions about future activity and events. However, where little or no claims experience exists for a model year or a vehicle line, the estimate is based on long-term historical averages. Revisions are made when necessary, based on changes in these factors. These estimates are re-evaluated on an ongoing basis. We actively study trends of claims and take action to improve vehicle quality and minimize claims. Actual experience could differ from the amounts estimated requiring adjustments to these liabilities in future periods. Due to the uncertainty and potential volatility of the factors contributing to developing estimates, changes in our assumptions could materially affect our results of operations.

Accounting Standards Not Yet Adopted

Accounting standards not yet adopted are discussed in Note 3 to our consolidated financial statements.

Forward-Looking Statements

In this report and in reports we subsequently file and have previously filed with the Securities and Exchange Commission (SEC) on Forms 10-K and 10-Q and file or furnish on Form 8-K, and in related comments by our management, we use words like "anticipate," "believe," "continue," "could," "designed," "effect," "estimate," "evaluate," "expect," "forecast," "goal," "initiative," "intend," "may," "objective," "outlook," "plan," "potential," "priorities," "project," "pursue," "seek," "should," "target," "when," "would," or the negative of any of those words or similar expressions to identify forward-looking statements that represent our current judgment about possible future events. In making these statements we rely on assumptions and analyses based on our experience and perception of historical trends, current conditions and expected future developments as well as other factors we consider appropriate under the circumstances. We believe these judgments are reasonable, but these statements are not guarantees of any events or financial results, and our actual results may differ materially due to a variety of important factors, both positive and negative. These factors, which may be revised or supplemented in subsequent reports on SEC Forms 10-K, 10-Q and 8-K, include among others the following:

- Our ability to realize production efficiencies and to achieve reductions in costs as a result of our restructuring initiatives and labor modifications;
- Our ability to maintain quality control over our vehicles and avoid material vehicle recalls;
- Our ability to maintain adequate liquidity and financing sources and an appropriate level of debt, including as required to fund our planned significant investment in new technology, and, even if funded, our ability to realize successful vehicle applications of new technology;
- The effect of business or liquidity difficulties for us or one or more subsidiaries on other entities in our corporate group as a result of our highly integrated and complex corporate structure and operation;
- Our ability to continue to attract customers, particularly for our new products, including cars and crossover vehicles;
- Availability of adequate financing on acceptable terms to our customers, dealers, distributors and suppliers to enable them to continue their business relationships with us;
- The ability of our suppliers to deliver parts, systems and components without disruption and at such times to allow us to meet production schedules;
- Our ability to take actions we believe are important to our long-term strategy;
- Our ability to manage the distribution channels for our products;
- Our ability to successfully restructure our European operations;
- The continued availability of both wholesale and retail financing from Ally Financial and its affiliates and other finance companies in markets in which we operate to support our ability to sell vehicles, which is dependent on those entities' ability to obtain funding and their continued willingness to provide financing, which may be reduced or suspended;
- Our ability to develop captive financing capability, including through GM Financial;
- Overall strength and stability of general economic conditions and of the automotive industry, both in the U.S. and in global markets;
- Continued economic instability or poor economic conditions in the U.S., Europe and other global markets, including the credit markets, or changes in economic conditions, commodity prices, housing prices, foreign currency exchange rates or political stability in the markets in which we operate;

- Shortages of and increases or volatility in the price of oil, including as a result of political instability in the Middle East and African nations;

- Significant changes in the competitive environment, including the effect of competition and excess manufacturing capacity in our markets, on our pricing policies or use of incentives and the introduction of new and improved vehicle models by our competitors;

- Significant changes in economic and market conditions in China, including the effect of competition from new market entrants, on our vehicle sales and market position in China;

- Changes in the existing, or the adoption of new, laws, regulations, policies or other activities of governments, agencies and similar organizations, including where such actions may affect the production, licensing, distribution or sale of our products, the cost thereof or applicable tax rates;

- Costs and risks associated with litigation;

- Significant increases in our pension expense or projected pension contributions resulting from changes in the value of plan assets, the discount rate applied to value the pension liabilities or other assumption changes; and

- Changes in accounting principles, or their application or interpretation, and our ability to make estimates and the assumptions underlying the estimates, which could have an effect on earnings.

We caution readers not to place undue reliance on forward-looking statements. We undertake no obligation to update publicly or otherwise revise any forward-looking statements, whether as a result of new information, future events or other factors that affect the subject of these statements, except where we are expressly required to do so by law.

Quantitative and Qualitative Disclosures About Market Risk

Automotive

We enter into a variety of foreign currency exchange and commodity forward contracts and options to manage exposures arising from market risks resulting from changes in certain foreign currency exchange rates and commodity prices. We do not enter into derivative transactions for speculative purposes.

The overall financial risk management program is under the responsibility of the Risk Management Committee, which reviews and, where appropriate, approves strategies to be pursued to mitigate these risks. The Risk Management Committee is composed of members of our Management and functions under the oversight of the Finance and Risk Committee, a committee of the Board of Directors. The Finance and Risk Committee assists and guides the Board in its oversight of our financial and risk management strategies. A risk management control framework is utilized to monitor the strategies, risks and related hedge positions, in accordance with the policies and procedures approved by the Risk Management Committee. Our risk management policy intends to protect against risk arising from extreme adverse market movements on our key exposures.

Further information on our exposure to market risk is included in Note 19 to our consolidated financial statements.

The following analyses provide quantitative information regarding exposure to foreign currency exchange rate risk, interest rate risk, commodity price risk and equity price risk. Sensitivity analysis is used to measure the potential loss in the fair value of financial instruments with exposure to market risk. The models used assume instantaneous, parallel shifts in exchange rates, interest rate yield curves and commodity prices. For options and other instruments with nonlinear returns, models appropriate to these types of instruments are utilized to determine the effect of market shifts. There are certain shortcomings inherent in the sensitivity analyses presented, due primarily to the assumption that interest rates and commodity prices change in a parallel fashion and that spot exchange rates change instantaneously. In addition, the analyses are unable to reflect the complex market reactions that normally would arise from the market shifts modeled and do not contemplate the effects of correlations between foreign currency pairs, or offsetting long-short positions in currency pairs which may significantly reduce the potential loss in value.

Foreign Currency Exchange Rate Risk

We have foreign currency exposures related to buying, selling, and financing in currencies other than the functional currencies of the operations. Derivative instruments, such as foreign currency forwards, swaps and options are used primarily to hedge exposures with respect to forecasted revenues, costs and commitments denominated in foreign currencies. At December 31, 2011 such contracts have remaining maturities of up to 12 months. At December 31, 2011 our three most significant foreign currency exposures are the Euro/British Pound, U.S. Dollar/Korean Won and Euro/Korean Won.

At December 31, 2011 and 2010 the net fair value liability of financial instruments with exposure to foreign currency risk was $4.2 billion and $3.3 billion. This presentation utilizes a population of foreign currency exchange derivatives, embedded derivatives and foreign currency denominated debt and excludes the offsetting effect of foreign currency cash, cash equivalents and other assets. The potential loss in fair value for such financial instruments from a 10% adverse change in all quoted foreign currency exchange rates would be $637 million and $513 million at December 31, 2011 and 2010.

We are exposed to foreign currency risk due to the translation and remeasurement of the results of certain international operations into U.S. Dollars as part of the consolidation process. Fluctuations in foreign currency exchange rates can therefore create volatility in the results of operations and may adversely affect our financial position.

The following table summarizes the amounts of automotive foreign currency translation and transaction and remeasurement gains (losses) (dollars in millions):

	Successor	
	Year Ended December 31, 2011	Year Ended December 31, 2010
Foreign currency translation gain (loss) recorded in Accumulated other comprehensive income (loss)	$(167)	$ 235
Gain (loss) resulting from foreign currency transactions and remeasurements recorded in earnings	$ (56)	$(209)

Interest Rate Risk

We are subject to market risk from exposure to changes in interest rates related to certain financial instruments, primarily debt, capital lease obligations and certain marketable securities.

At December 31, 2011 we did not have any interest rate swap positions to manage interest rate exposures in our automotive operations.

The following table summarizes our automotive debt by fixed rate and variable rate (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Short-term debt — fixed rate	$ 573	$ 305
Short-term debt — variable rate	1,109	1,311
Total short-term debt	$1,682	$1,616
Short-term debt — fixed rate denominated in U.S. dollars	$ 135	$ 96
Short-term debt — fixed rate denominated in foreign currency	438	209
Total short-term debt — fixed rate	$ 573	$ 305
Short-term debt — variable rate denominated in U.S. dollars	$ 192	$ 347
Short-term debt — variable rate denominated in foreign currency	917	964
Total short-term debt — variable rate	$1,109	$1,311
Long-term debt — fixed rate	$3,536	$2,519
Long-term debt — variable rate	77	495
Total long-term debt	$3,613	$3,014
Long-term debt — fixed rate denominated in U.S. dollars	$ 525	$ 601
Long-term debt — fixed rate denominated in foreign currency	3,011	1,918
Total long-term debt — fixed rate	$3,536	$2,519
Long-term debt — variable rate denominated in U.S. dollars	$ 32	$ 287
Long-term debt — variable rate denominated in foreign currency	45	208
Total long-term debt — variable rate	$ 77	$ 495

At December 31, 2011 and 2010 the fair value liability of debt and capital leases was $5.5 billion and $4.8 billion. The potential increase in fair value resulting from a 10% decrease in quoted interest rates would be $152 million and $166 million at December 31, 2011 and 2010.

We invest in marketable securities of various types and maturities, the value of which are subject to fluctuations in interest rates. Our marketable securities portfolio includes marketable securities classified as Available-for-sale and Trading.

At December 31, 2011 and 2010 we had marketable securities of $10.1 billion and $5.4 billion classified as Available-for sale with exposure to interest rate risk. The potential decrease in fair value from a 50 basis point increase in interest rates would be $28 million and $9 million at December 31, 2011 and 2010.

At December 31, 2011 and 2010 we had marketable securities of $6.0 billion and $107 million classified as Trading with exposure to interest rate risk. The potential decrease in fair value from a 50 basis point increase in interest rates would be $20 million and $6 million at December 31, 2011 and 2010.

Commodity Price Risk

We are exposed to changes in prices of commodities primarily associated with various non-ferrous and precious metals for automotive components and energy used in the overall manufacturing process. Certain commodity purchase contracts meet the definition of a derivative. We use commodity options to offset our commodity price exposures.

At December 31, 2011 and 2010 the net fair value (liability) asset of commodity derivatives and commodity related embedded derivatives was $(11) million and $84 million. The potential loss in fair value resulting from a 10% adverse change in the underlying commodity prices would be $24 million and $47 million at December 31, 2011 and 2010. This amount excludes the offsetting effect of the commodity price risk inherent in the physical purchase of the underlying commodities.

Equity Price Risk

At December 31, 2011 the carrying amount of cost method investments was $439 million, of which the carrying amount of our investment in Ally Financial common stock was $403 million. In March 2011 we sold our investment in Ally Financial preferred stock for net proceeds of $1.0 billion. At December 31, 2010, the carrying amount of cost method investments was $1.7 billion, of which the carrying amounts of our investments in Ally Financial common stock and Ally Financial preferred stock were $964 million and $665 million. These amounts represent the maximum exposure to loss from these investments. Refer to Note 10 to our consolidated financial statements for further details on the sale of the Ally Financial preferred stock.

Automotive Financing — GM Financial

Fluctuations in market interest rates affect GM Financial's credit facilities and securitization transactions. GM Financial's gross interest rate spread, which is the difference between interest earned on finance receivables and interest paid, is affected by changes in interest rates as a result of GM Financial's dependence upon the issuance of variable rate securities and the incurrence of variable rate debt to fund purchases of finance receivables.

Credit Facilities

Fixed interest rate receivables purchased by GM Financial are pledged to secure borrowings under its credit facilities. Amounts borrowed under these credit facilities bear interest at variable rates that are subject to frequent adjustments to reflect prevailing market interest rates. To protect the interest rate spread within each credit facility, GM Financial is contractually required to enter into interest rate cap agreements in connection with borrowings under its credit facilities. The purchaser of the interest rate cap pays a premium in return for the right to receive the difference in the interest cost at any time a specified index of market interest rates rises above the stipulated cap or "strike" rate. The purchaser of the interest rate cap bears no obligation or liability if interest rates fall below the cap or "strike" rate. As part of GM Financial's interest rate risk management strategy and when economically feasible, it may simultaneously enter into a corresponding interest rate cap agreement in order to offset the premium paid by the trust to purchase the interest rate cap and thus retain the interest rate risk. The fair value of the interest rate cap agreement purchased is included in GM Financial Other assets and the fair value of the interest rate cap agreement sold is included in GM Financial Other liabilities.

Securitizations

In GM Financial's securitization transactions, it transfers fixed rate finance receivables to securitization trusts that, in turn, sell either fixed rate or floating rate securities to investors. Derivative financial instruments, such as interest rate swaps and caps, are used to manage the gross interest rate spread on the floating rate transactions. GM Financial uses interest rate swaps to convert the variable rate exposures on securities issued by its securitization trusts to a fixed rate ("pay rate") and receive a floating or variable rate ("receive rate"), thereby locking in the gross interest rate spread to be earned by it over the life of a securitization. Interest rate swaps purchased by GM Financial do not affect the amount of cash flows received by holders of the asset-backed securities issued by the trusts. The interest rate swaps serve to offset the effect of increased or decreased interest paid by the trusts on floating rate asset-backed securities on the cash flows received from the trusts. GM Financial utilizes such arrangements to modify its net interest sensitivity to levels deemed appropriate based on risk tolerances. Its SPEs are contractually required to purchase a derivative financial instrument to protect the net spread in connection with the issuance of floating rate securities. The fair value of the interest rate caps purchased in connection with securitization transactions are included in GM Financial Other assets and the fair value of the interest rate caps sold are included in GM Financial Other liabilities. Changes in the fair value of the interest rate cap derivatives are a component of interest expense recorded in GM Financial operating and other expenses.

GM Financial has entered into interest rate swaps to hedge the variability in interest payments on seven of its active securitization transactions. Portions of these interest rate swaps are designated and qualify as cash flow hedges. The fair value of interest rate swaps designated as hedges is included in GM Financial Other liabilities. Interest rate swaps that are not designated as hedges are included in GM Financial Other assets.

The following table summarizes GM Financial's interest rate sensitive assets and liabilities by year of expected maturity and the fair value of those assets and liabilities at December 31, 2011 (dollars in millions):

GM Financial estimates the realization of financing receivables in future periods using discount rate, prepayment and credit loss assumptions similar to its historical experience. Notional amounts on interest rate swaps and caps are based on contractual terms. Credit facilities and securitization notes payable amounts have been classified based on expected payoff. Senior notes and convertible senior notes principal amounts have been classified based on maturity.

The notional amounts of interest rate swaps and caps, which are used to calculate the contractual payments to be exchanged under the contracts, represent average amounts that will be outstanding for each of the years included in the table. Notional amounts do not represent amounts exchanged by parties and, thus, are not a measure of GM Financial's exposure to loss through its use of these derivatives.

GM Financial monitors hedging activities to ensure that the value of derivative financial instruments, their correlation to the contracts being hedged and the amounts being hedged continue to provide effective protection against interest rate risk. However, there can be no assurance that these strategies will be effective in minimizing interest rate risk or that increases in interest rates will not have an adverse effect on GM Financial's profitability. GM Financial does not enter into derivative transactions for speculative purposes.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the internal control over financial reporting of General Motors Company and subsidiaries (the Company) as of December 31, 2011, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2011, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule of General Motors Company and subsidiaries as of and for the year ended December 31, 2011 (Successor). Our report dated February 27, 2012 expressed an unqualified opinion on those financial statements and financial statement schedule and included an explanatory paragraph related to the Successor's adoption of revised accounting standards related to goodwill.

Deloitte & Touche LLP

Detroit, Michigan
February 27, 2012

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the accompanying Consolidated Balance Sheets of General Motors Company and subsidiaries as of December 31, 2011 (Successor) and 2010 (Successor), and the related Consolidated Statements of Operations, Cash Flows and Equity (Deficit) for the years ended December 31, 2011 (Successor) and 2010 (Successor) and the period July 10, 2009 through December 31, 2009 (Successor), and the Consolidated Statements of Operations, Cash Flows and Equity (Deficit) of General Motors Corporation and subsidiaries for the period January 1, 2009 through July 9, 2009 (Predecessor) (Successor and Predecessor collectively, the Company). Our audits also included Schedule II — Valuation and Qualifying Accounts (the “financial statement schedule”). These financial statements and financial statement schedule are the responsibility of the Company’s management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of General Motors Company and subsidiaries at December 31, 2011 (Successor) and 2010 (Successor), and the results of their operations and their cash flows for the years ended December 31, 2011 (Successor) and 2010 (Successor) and the period July 10, 2009 through December 31, 2009 (Successor), and the results of operations and cash flows of General Motors Corporation and subsidiaries for the period January 1, 2009 through July 9, 2009 (Predecessor), in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 3 to the consolidated financial statements, the Successor adopted amendments in Accounting Standards Update (ASU) 2010-28 and 2011-08 to Accounting Standards Codification (ASC) Topic 350, *Intangibles-Goodwill and Other*, effective January 1, 2011 and October 1, 2011, respectively.

As discussed in Note 15 to the consolidated financial statements, the Successor adopted amendments to Accounting Standards Codification (ASC) Topic 810, *Consolidation*, effective January 1, 2010.

As discussed in Note 32 to the consolidated financial statements, on July 10, 2009 the Successor completed the acquisition of substantially all of the assets and assumed certain of the liabilities of the Predecessor in accordance with the Amended and Restated Master Sale and Purchase Agreement pursuant to Section 363(b) of the Bankruptcy Code and the Bankruptcy Court sale order dated July 5, 2009. Accordingly, the accompanying consolidated financial statements have been prepared in accordance with ASC Topic 852, *Reorganizations*. The Successor applied fresh-start reporting and recognized the acquired net assets at fair value, resulting in a lack of comparability with the prior period financial statements of the Predecessor.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Successor’s internal control over financial reporting as of December 31, 2011, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 27, 2012 expressed an unqualified opinion on the Successor’s internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Nature of Operations

General Motors Company was formed in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation (363 Sale) and changed its name to General Motors Company, is sometimes referred to in these consolidated financial statements for the periods on or subsequent to July 10, 2009 as “we,” “our,” “us,” “ourselves,” the “Company,” “General Motors,” or “GM,” and is the successor entity solely for accounting and financial reporting purposes (Successor). General Motors Corporation is sometimes referred to in these consolidated financial statements, for the periods on or before July 9, 2009, as “Old GM.” Prior to July 10, 2009 Old GM operated the business of the Company, and pursuant to the agreement with the Securities and Exchange Commission (SEC), as described in a no-action letter issued to Old GM by the SEC Staff on July 9, 2009 regarding our filing requirements and those of Motors Liquidation Company (MLC), the accompanying consolidated financial statements include the financial statements and related information of Old GM as it is the predecessor entity solely for accounting and financial reporting purposes (Predecessor). On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company. On December 15, 2011 MLC was dissolved and the Motors Liquidation Company GUC Trust (GUC Trust) assumed responsibility for the affairs of and certain claims against MLC and its debtor subsidiaries that were not concluded prior to MLC’s dissolution. MLC transferred to the GUC Trust all of MLC’s remaining undistributed shares of our common stock and warrants to acquire our common stock.

We design, build and sell cars, trucks and automobile parts worldwide. We also provide automotive financing services through General Motors Financial Company, Inc. (GM Financial).

We analyze the results of our business through our five segments: GM North America (GMNA), GM Europe (GME), GM International Operations (GMIO), GM South America (GMSA) and GM Financial. Nonsegment operations are classified as Corporate. Corporate includes investments in Ally Financial, Inc. (Ally Financial), certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures and certain nonsegment specific revenues and expenses.

Note 2. Basis of Presentation

Principles of Consolidation

The consolidated financial statements include our accounts and those of our subsidiaries that we control due to ownership of a majority voting interest. These also include the accounts of the variable interest entities (VIEs) of which we are the primary beneficiary. We continually evaluate our involvement with VIEs to determine whether we have variable interests and are the primary beneficiary of the VIE. When these criteria are met, we are required to consolidate the VIE. Our share of earnings or losses of nonconsolidated affiliates is included in our consolidated operating results using the equity method of accounting when we are able to exercise significant influence over the operating and financial decisions of the affiliate. We use the cost method of accounting if we are not able to exercise significant influence over the operating and financial decisions of the affiliate. All intercompany balances and transactions have been eliminated in consolidation. Old GM utilized the same principles of consolidation in its consolidated financial statements.

Use of Estimates in the Preparation of the Financial Statements

The consolidated financial statements are prepared in conformity with U.S. GAAP, which requires the use of estimates, judgments, and assumptions that affect the amounts of assets and liabilities at the reporting date and the amounts of revenue and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and the resulting balances are reasonable; however, due to the inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods.

GM Financial

The assets and liabilities of GM Financial, our automotive finance operations, are presented on a non-classified basis. The amounts presented for GM Financial have been adjusted to include the effect of our tax attributes on GM Financial's deferred tax positions and provision for income taxes since the date of acquisition, which are not applicable to GM Financial on a stand-alone basis, and to eliminate the effect of transactions between GM Financial and the other members of the consolidated group. Accordingly, the amounts presented will differ from those presented by GM Financial on a stand-alone basis.

Change in Presentation of Financial Statements

We changed the presentation of our consolidated balance sheet, consolidated statement of cash flows and certain footnotes to combine line items which were either of a related nature or not individually material. We have made corresponding reclassifications to the comparable information for all periods presented.

In the year ended December 31, 2011 we have recorded foreign currency exchange gains and losses on debt as non-operating items. This is a change from prior period presentations in which foreign currency exchange gains and losses on debt were recorded in Automotive cost of sales. We have reclassified all the successor prior periods to conform to our current presentation. The effects of this reclassification decreased Automotive cost of sales and Interest income and other non-operating income, net by $24 million for the year ended December 31, 2010 and $65 million for the period July 10, 2009 through December 31, 2009.

Venezuelan Exchange Regulations

Our Venezuelan subsidiaries changed their functional currency from Bolivar Fuerte (BsF), the local currency, to the U.S. Dollar, our reporting currency, on January 1, 2010 because of the hyperinflationary status of the Venezuelan economy. In January 2010 there was a devaluation of the Venezuelan currency and establishment of dual fixed exchange rates, an essential rate and a nonessential rate.

In June 2010 the Venezuelan government introduced additional foreign currency exchange control regulations, which imposed restrictions on the use of the parallel foreign currency exchange market, thereby making it more difficult to convert BsF to U.S. Dollars. The restrictions on the foreign currency exchange market affect our Venezuelan subsidiaries' ability to pay non-BsF denominated obligations that do not qualify to be processed by the Venezuela currency exchange agency at the official exchange rates as well as our ability to fully benefit from these operations.

Effective January 1, 2011 the BsF was further devalued and the essential rate was eliminated. The devaluation has affected results of operations in 2011 because our Venezuelan subsidiaries no longer realize gains that result from favorable foreign currency exchanges processed by the Venezuela currency exchange agency at the essential rate.

The aggregate net assets of our Venezuelan subsidiaries at December 31, 2011 and 2010 were $438 million and $337 million. At December 31, 2011 and 2010 other consolidated entities have receivables from our Venezuelan subsidiaries of $380 million and $283 million. The total amounts pending government approval for settlement at December 31, 2011 and 2010 were BsF 2.3 billion (equivalent to $535 million) and BsF 1.9 billion (equivalent to $432 million), for which some requests have been pending from 2007.

Note 3. Significant Accounting Policies

In connection with our application of fresh-start reporting, we established a set of accounting policies which, unless otherwise indicated, utilized the accounting policies of our predecessor entity, Old GM. The accounting policies which follow are utilized by our automotive and automotive financing operations, unless otherwise indicated.

Revenue Recognition

Automotive

Automotive sales and revenue are primarily composed of revenue generated from the sale of vehicles. Vehicle sales are recorded when title and risks and rewards of ownership have passed, which is generally when a vehicle is released to the carrier responsible for transporting it to a dealer and when collectability is reasonably assured. Provisions for recurring dealer and customer sales and leasing incentives, consisting of allowances and rebates, are recorded as reductions to Automotive sales and revenue at the time of vehicle sales. All other incentives, allowances, and rebates related to vehicles previously sold are recorded as reductions to Automotive sales and revenue when announced.

Vehicle sales to daily rental car companies with guaranteed repurchase obligations are accounted for as operating leases. Estimated lease revenue is recorded ratably over the estimated term of the lease based on the difference between net sales proceeds and the guaranteed repurchase amount. The difference between the cost of the vehicle and estimated residual value is depreciated on a straight-line basis over the estimated term of the lease.

Payments received from banks for credit card programs in which there is a redemption liability are recorded on a straight-line basis over the estimated period of time the customer will accumulate and redeem their rebate points. This time period is estimated to be 60 months for the majority of the credit card programs. The redemption liability anticipated to be paid to the dealer is estimated and accrued at the time specific vehicles are sold to the dealer. The redemption cost is classified as a reduction of Automotive sales.

Automotive Financing — GM Financial

Finance income earned on receivables is recognized using the effective interest method. Fees and commissions (including incentive payments) received and direct costs of originating loans are deferred and amortized over the term of the related finance receivables using the effective interest method and are removed from the consolidated balance sheets when the related finance receivables are sold, charged off or paid in full. Accrual of finance charge income is suspended on accounts that are more than 60 days delinquent, accounts in bankruptcy, and accounts in repossession. Payments received on nonaccrual loans are first applied to any fees due, then to any interest due and then any remaining amounts are recorded to principal. Interest accrual resumes once an account has received payments bringing the delinquency to less than 60 days past due.

Income from operating lease assets, which includes lease origination fees, net of lease origination costs and incentives, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement.

Advertising

The following table summarizes advertising expenditures, which are expensed as incurred (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Advertising expense	$4,478	$4,259	$2,110	$1,471

Research and Development Expenditures

The following table summarizes research and development expenditures, which are expensed as incurred (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Research and development expense	$8,124	$6,962	$3,034	$3,017

Cash Equivalents

Cash equivalents are defined as short-term, highly-liquid investments with original maturities of 90 days or less.

Fair Value Measurements

A three-level valuation hierarchy, based upon observable and unobservable inputs, is used for fair value measurements. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect market assumptions based on the best evidence available. These two types of inputs create the following fair value hierarchy:

- Level 1 — Quoted prices for *identical* instruments in active markets;
- Level 2 — Quoted prices for *similar* instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose significant inputs are observable; and
- Level 3 — Instruments whose significant inputs are *unobservable*.

Financial instruments are transferred in and/or out of Level 1, 2 or 3 at the beginning of the accounting period in which there is a change in the valuation inputs.

Marketable Securities

We classify marketable securities as available-for-sale or trading. Various factors, including turnover of holdings and investment guidelines, are considered in determining the classification of securities. Available-for-sale securities are recorded at fair value with unrealized gains and losses recorded, net of related income taxes, in Accumulated other comprehensive income until realized. Trading securities are recorded at fair value with changes in fair value recorded in Interest income and other non-operating income, net. We determine realized gains and losses for all securities using the specific identification method.

Securities are classified in Level 1 when quoted prices in an active market for identical securities are available. If quoted market prices are not available, fair values of securities are determined using prices from a pricing service, pricing models, quoted prices of securities with similar characteristics or discounted cash flow models and are generally classified in Level 2. These prices represent non-binding quotes. U.S. government and agency securities, sovereign debt, certificates of deposit, and corporate debt securities are classified as Level 2. Our pricing vendor utilizes industry-standard pricing models that consider various inputs, including benchmark yields, reported trades, broker/dealer quotes, issuer spreads and benchmark securities as well as other relevant economic measures. Securities are classified in Level 3 in certain cases where there are unobservable inputs to the valuation in the marketplace. Level 3 financial instruments typically include, in addition to the unobservable inputs, observable components that are validated to external sources.

We measure fair value of our marketable securities using a market approach where identical or comparable prices are available, and an income approach in other cases. We obtain the majority of the prices used in this valuation from a pricing service. We conduct an annual review of our pricing service. This review includes discussion and analysis of the inputs used by the pricing service to provide prices for the types of securities we hold. These inputs include prices for comparable securities, bid/ask quotes, interest rate yields, and prepayment speeds. Based on our review we believe the prices received from our pricing service are a reliable representation of exit prices.

An evaluation is made monthly to determine if unrealized losses related to non-trading investments in securities are other than temporary. Factors considered in determining whether a loss on a marketable security is other than temporary include: (1) the length of time and extent to which the fair value has been below cost; (2) the financial condition and near-term prospects of the issuer; and (3) the intent to sell or likelihood to be forced to sell the security before any anticipated recovery.

Finance Receivables

Pre-Acquisition Finance Receivables

Finance receivables originated prior to the acquisition of AmeriCredit Corp. (AmeriCredit) were adjusted to fair value at October 1, 2010. As a result of the acquisition the allowance for loan losses at October 1, 2010 was eliminated and a net discount was recorded on the receivables. The fair value of the receivables was less than the principal amount of those receivables, thus resulting in a discount to par. This discount was attributable, in part, to future credit losses that did not exist at the origination of the receivables.

A non-accretable difference is the excess between a loan's contractually required payments (undiscounted amount of all uncollected principal and contractual interest payments, both past due and scheduled for the future) and the amount of the loan's cash flows expected to be collected. An accretable yield is the excess in the loan's cash flows expected to be collected over the initial investment in the loan, which at October 1, 2010 was fair value.

As a result of purchase accounting GM Financial evaluated the common risk characteristics of the loan portfolio and split it into several pools. GM Financial's policy is to remove a charged off loan individually from a pool based on comparing any amount received with its contractual amount. Any difference between these amounts is absorbed by the non-accretable difference. This removal method assumes that the amount received approximates pool performance expectations. The remaining accretable yield balance is unaffected and any material change in remaining effective yield caused by this removal method is addressed by GM Financial's quarterly cash flow evaluation process for each pool. For loans that are resolved by payment in full there is no release of the non-accretable difference for the pool because there is no difference between the amount received and the contractual amount of the loan.

Any deterioration in the performance of the pre-acquisition receivables will result in recording an incremental provision for loan losses. Improvements in the performance of the pre-acquisition receivables which results in a significant increase in actual or expected cash flows will result first in the reversal of any incremental related allowance for loan losses and then in a transfer of the excess from the non-accretable difference to accretable yield, which will be recorded as finance charge income over the remaining life of the receivables.

Post-Acquisition Finance Receivables and Allowance for Loan Losses

Finance receivables originated after the acquisition of AmeriCredit are carried at amortized cost, net of allowance for loan losses. Provisions for loan losses are charged to operations in amounts sufficient to maintain an allowance for loan losses at a level considered adequate to cover probable credit losses inherent in GM Financial's post-acquisition finance receivables.

The allowance for loan losses is established systematically based on the determination of the amount of probable credit losses inherent in the post-acquisition finance receivables as of the balance sheet date. GM Financial reviews charge-off experience factors, delinquency reports, historical collection rates, estimates of the value of the underlying collateral, economic trends, such as unemployment rates, and other information in order to make the necessary judgments as to probable credit losses. GM Financial also uses historical charge-off experience to determine a loss confirmation period, which is defined as the time between when an event, such as delinquency status, giving rise to a probable credit loss occurs with respect to a specific account and when such account is charged off. This loss confirmation period is applied to the forecasted probable credit losses to determine the amount of losses inherent in finance receivables at the balance sheet date. Assumptions regarding credit losses and loss confirmation periods are reviewed periodically and may be impacted by actual performance of finance receivables and changes in any of the factors discussed above. Should the credit loss assumption or loss confirmation period increase, there would be an increase in the amount of allowance for loan losses required, which would decrease the net carrying value of finance receivables and increase the amount of provision for loan losses recorded on the consolidated statements of operations.

Inventory

Inventories are stated at the lower of cost or market. In connection with fresh-start reporting, we elected to use the FIFO costing method for all inventories previously accounted for by Old GM using the LIFO costing method.

Market, which represents selling price less cost to sell, considers general market and economic conditions, periodic reviews of current profitability of vehicles, product warranty costs and the effect of current incentive offers at the balance sheet date. Market for off-lease and other vehicles is current auction sales proceeds less disposal and warranty costs. Productive material, work in process, supplies and service parts are reviewed to determine if inventory quantities are in excess of forecasted usage, or if they have become obsolete.

Equipment on Operating Leases, net

Equipment on operating leases, net, including leased vehicles within Total GM Financial Assets, is reported at cost, less accumulated depreciation, net of origination fees or costs, and lease incentives. Estimated income from operating lease assets, which includes lease origination fees, net of lease origination costs, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement. Depreciation of vehicles is provided on a straight-line basis to an estimated residual value over the term of the lease agreement.

We have and Old GM had significant investments in vehicles in operating lease portfolios, which are comprised of vehicle leases to retail customers with lease terms of up to 60 months and vehicles leased to rental car companies with lease terms that average nine months or less. We are and Old GM was exposed to changes in the residual values of those assets. For impairment purposes, the residual values represent estimates of the values of the assets at the end of the lease contracts and are determined based on forecasted auction proceeds when there is a reliable basis to make such a determination. Realization of the residual values is dependent on the future ability to market the vehicles under the prevailing market conditions. The adequacy of the estimate of the residual value is evaluated over the life of the lease and adjustments may be made to the extent the expected value of the vehicle at lease termination changes. Adjustments may be in the form of revisions to the depreciation rate or recognition of an impairment charge. Impairment is determined to exist if the undiscounted expected future cash flows, which include estimated residual values, are lower than the carrying amount of the asset. If the carrying amount is considered impaired, an impairment charge is recorded for the amount by which the carrying amount exceeds the fair value. Fair value is determined primarily using the anticipated cash flows, including estimated residual values.

In our Automotive operations when a leased vehicle is returned the asset is reclassified from Equipment on operating leases, net to Inventories at the lower of cost or estimated selling price, less cost to sell. In our Automotive Finance operations when a leased vehicle is returned or repossessed the asset is recorded in Other assets at the lower of cost or estimated selling price, less costs to sell, and upon disposition a gain or loss is recorded for any difference between the net book value of the lease and the proceeds from the disposition of the asset.

Impairment charges related to Equipment on operating leases, net are recorded in Automotive cost of sales or GM Financial operating and other expenses.

Valuation of Cost and Equity Method Investments

When events and circumstances warrant, investments accounted for under the cost or equity method of accounting are evaluated for impairment. An impairment charge is recorded whenever a decline in value of an investment below its carrying amount is determined to be other than temporary. In determining if a decline is other than temporary, factors such as the length of time and extent to which the fair value of the investment has been less than the carrying amount of the investment, the near-term and longer-term operating and financial prospects of the affiliate and the intent and ability to hold the investment for a period of time sufficient to allow for any anticipated recovery are considered. Impairment charges related to equity method investments are recorded in Equity income, net of tax. Impairment charges related to cost method investments are recorded in Interest income and other non-operating, net.

Property, net

Property, plant and equipment, including internal use software, is recorded at cost. Major improvements that extend the useful life or add functionality of property are capitalized. The gross amount of assets under capital leases is included in property, plant and equipment. Expenditures for repairs and maintenance are charged to expense as incurred. We depreciate all depreciable property using the straight-line method. Leasehold improvements are amortized over the period of lease or the life of the asset, whichever is shorter. For depreciable property placed in service before January 2001, Old GM used accelerated depreciation methods. For depreciable property placed in service after January 2001, Old GM used the straight-line method. The amortization of the assets under capital leases is included in depreciation expense. Upon retirement or disposition of property, plant and equipment, the cost and related accumulated depreciation are removed from the accounts and any resulting gain or loss is recorded in earnings. Impairment charges related to property are recorded in Automotive cost of sales or GM Financial operating and other expenses.

Special Tools

Special tools represent product-specific powertrain and non-powertrain related tools, dies, molds and other items used in the vehicle manufacturing process. Expenditures for special tools are recorded at cost and are capitalized. In connection with our application of fresh-start reporting, we began amortizing all non-powertrain special tools over their estimated useful lives using an accelerated amortization method. We amortize powertrain special tools over their estimated useful lives using the straight-line method. Old GM amortized all special tools using the straight-line method over their estimated useful lives.

Goodwill

Goodwill arises from the application of fresh-start reporting and acquisitions accounted for as business combinations. Goodwill is tested for impairment for all reporting units on an annual basis during the fourth quarter, or more frequently, if events occur or circumstances change that would warrant such a review. An impairment charge is recorded for the amount, if any, by which the carrying amount of goodwill exceeds its implied fair value. Fair values of reporting units are established using a discounted cash flow method. Where available and as appropriate, comparative market multiples and the quoted market price for our common stock are used to corroborate the results of the discounted cash flow method. Our reporting units are GMNA, GME, GM Financial and various reporting units within the GMIO and GMSA segments. Due to the integrated nature of our manufacturing operations and the sharing of assets, other resources and vehicle platforms among brands within GMNA and GME and because financial information by brand or country is not discrete below the operating segment level, GMNA and GME do not contain reporting units below the operating segment level. GM Financial also does not contain reporting units below the operating segment level. GMIO and GMSA are less integrated given the lack of regional trade pacts and other unique geographical differences and thus contain separate reporting units below the operating segment level. Goodwill would be reassigned on a relative-fair-value basis to a portion of a reporting unit to be disposed of or upon the reorganization of the composition of one or more of our reporting units, unless the reporting unit was never integrated.

Intangible Assets, net

Intangible assets, excluding Goodwill, primarily include brand names (including defensive intangibles associated with discontinued brands), technology and intellectual property, customer relationships and dealer networks.

Intangible assets are amortized on a straight-line or an accelerated method of amortization over their estimated useful lives. An accelerated amortization method reflecting the pattern in which the asset will be consumed is utilized if that pattern can be reliably determined. If that pattern cannot be reliably determined, a straight-line amortization method is used. We consider the period of expected cash flows and underlying data used to measure the fair value of the intangible assets when selecting a useful life.

Amortization of developed technology and intellectual property is recorded in Automotive cost of sales. Amortization of brand names, customer relationships and our dealer networks is recorded in Automotive selling, general and administrative expense or GM Financial operating and other expenses.

Valuation of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated for impairment when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds the fair value for the asset group to be held and used. Product-specific long-lived asset groups are tested for impairment at the platform or vehicle line level. Non-product specific long-lived assets are tested for impairment on a reporting unit basis in GMNA, GME, and GM Financial and tested at or within our various reporting units within our GMIO and GMSA segments. Fair value is determined primarily using the anticipated cash flows discounted at a rate commensurate with the risk involved. Long-lived assets to be disposed of other than by sale are considered held for use until disposition. Product-specific assets may become impaired as a result of declines in profitability due to changes in volume, pricing or costs.

Pension and Other Postretirement Plans

Attribution, Methods and Assumptions

The cost of benefits provided by defined benefit pension plans is recorded in the period employees provide service. The cost of pension plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be: (1) the duration of the applicable collective bargaining agreement specific to the plan; (2) expected future working lifetime; or (3) the life expectancy of the plan participants.

The cost of medical, dental, legal service and life insurance benefits provided through postretirement benefit plans is recorded in the period employees provide service. The cost of postretirement plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be the average period to full eligibility or the average life expectancy of the plan participants, or the period to the plan's termination date for the plan which provides legal services.

An expected return on plan asset methodology is utilized to calculate future pension expense for certain significant funded benefit plans. A market-related value of plan assets methodology is also utilized that averages gains and losses on the plan assets over a period of years to determine future pension expense. The methodology recognizes 60% of the difference between the fair value of assets and the expected calculated value in the first year and 10% of that difference over each of the next four years.

The discount rate assumption is established for each of the retirement-related benefit plans at their respective measurement dates. In the U.S. we use a cash flow matching approach that uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate.

The benefit obligation for pension plans in Canada, the United Kingdom and Germany comprise 92% of the non-U.S. pension benefit obligation at December 31, 2011. The discount rates for plans in Canada, the United Kingdom and Germany are determined using a cash flow matching approach, similar to the U.S. approach.

In countries other than the U.S., Canada, United Kingdom and those located in the Eurozone discount rates are established depending on the local financial markets, using a high quality yield curve based on local bonds, a yield curve adjusted to reflect local conditions using foreign currency swaps or local actuarial standards.

In the U.S., Old GM established a discount rate assumption to reflect the yield of a hypothetical portfolio of high quality, fixed-income debt instruments that would produce cash flows sufficient in timing and amount to satisfy projected future benefits.

Plan Asset Valuation

Cash Equivalents and Other Short-Term Investments

Money market funds and other similar short-term investment funds are valued using the net asset value per share (NAV) as provided by the investment sponsor or third party administrator. Prices for short-term debt securities are received from independent pricing services or from dealers who make markets in such securities. Independent pricing services utilize matrix pricing which considers readily available inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices. Money market mutual funds which provide investors with the ability to redeem their interests on a daily basis and for which NAVs are publicly available are classified in Level 1. Other cash equivalents and short-term investments are classified in Level 2.

Group Annuity Contracts

Group annuity contracts are the contracts entered into with a life insurance company, which are used as a funding instrument for specified benefits payments to be made in accordance with the defined benefit pension plans. The contracts may be backed by one or more separately managed investment accounts, which generally hold investments in high quality fixed income securities. The fair value of each contract depends, to a significant extent, on the values of the units of the separately managed investment accounts backing the contract. The fair value of the separately managed investment account assets is based on the fair value of the underlying securities held which are determined by each of the insurance companies. From time to time, the defined benefit pension plans' liabilities may increase when certain contractually required reserves, as estimated by an insurer under the terms of the contract, exceed the fair value of contract assets. The resulting difference represents an outstanding contract asset deficiency that must be funded by the defined benefit pension plan's sponsor. Group annuity contracts are unallocated arrangements and are classified in Level 3.

Common and Preferred Stock

Common and preferred stock securities for which market prices are readily available by the Company at the measurement date, are valued at the last reported sale price or official closing price on the primary market or exchange on which they are actively traded and are classified in Level 1. Such equity securities for which the market is not considered to be active are valued via the use of observable inputs, which may include, among others, the use of adjusted market prices last available, bids or last available sales prices and/or other observable inputs and are classified in Level 2. Common and preferred stock classified in Level 3 are those privately issued securities or other issues that are valued via the use of valuation models using significant unobservable inputs that generally consider among others, aged (stale) pricing, earnings multiples, discounted cash flows and/or other qualitative and quantitative factors. We may consider other security attributes such as liquidity and market activity in assessing the observability of inputs used by pricing services or dealers, which may affect classification in the fair value hierarchy.

Government, Agency and Corporate Debt Securities

U.S. government and government agency obligations, foreign government and government agency obligations, municipal securities, supranational obligations, corporate bonds, bank notes, floating rate notes, and preferred securities are valued based on quotations received from independent pricing services or from dealers who make markets in such securities. Debt securities which are priced via the use of pricing services that utilize matrix pricing which considers readily observable inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices, are classified in Level 2. Securities within this category that are typically priced by dealers and pricing services via the use of proprietary pricing models which incorporate significant unobservable inputs are classified in Level 3. These inputs primarily consist of yield and credit spread assumptions. We may consider other security attributes such as liquidity, market activity, price level, credit ratings and geo-political risk in assessing the observability of inputs used by pricing services or dealers, which may affect classification.

Agency and Non-Agency Mortgage and Other Asset-Backed Securities

U.S. and foreign government agency mortgage and asset-backed securities, non-agency collateralized mortgage obligations, commercial mortgage securities, residential mortgage securities and other asset-backed securities are valued based on quotations received from independent pricing services or from dealers who make markets in such securities. Securities which are priced via the use of pricing services that utilize matrix pricing which considers readily observable inputs such as prepayment speed assumptions, attributes of the collateral, yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices are classified in Level 2. Securities within this category that are typically priced by dealers and pricing services via the use of proprietary pricing models which incorporate significant unobservable inputs are classified in Level 3. These inputs primarily consist of prepayment curves, discount rates, default assumptions and recovery rates. We may consider other security attributes such as liquidity, market activity, price level and other factors in assessing the observability of inputs used by pricing services or dealers, which may affect classification.

Investment Funds, Private Equity and Debt Investments and Real Estate Investments

Investments in exchange traded funds, real estate investment trusts and mutual funds, for which market quotations are generally readily available, are valued at the last reported sale price, official closing price or publicly available NAV (or its equivalent) on the primary market or exchange on which they are traded, and are classified in Level 1. Investments in private investment funds (including hedge funds, private equity funds and real estate funds) are generally valued based on their respective NAV (or its equivalent), as a practical expedient to estimate fair value due to the absence of readily available market prices. Investments which may be fully redeemed at NAV in the near-term are generally classified in Level 2. Investments in funds, which may not be fully redeemed at NAV in the near-term, are generally classified in Level 3.

Investments in private equity, private debt and real estate securities, are generally valued in good faith via the use of the market approach (earnings multiples from comparable companies) or the income approach (discounted cash flow techniques), and consider inputs such as revenue growth and gross margin assumptions, discount rates, discounts for lack of liquidity, market capitalization rates, and the selection of comparable companies. As these valuations incorporate significant unobservable inputs they are classified as Level 3.

Fair value estimates for private investment funds, private equity, private debt, and real estate investments are provided by the respective investment sponsors or investment advisers and are subsequently reviewed and approved by management. In the event management concludes a reported NAV or fair value estimate (collectively, external valuation) does not reflect fair value or is not determined as of the financial reporting measurement date, we will consider whether an adjustment is necessary. In determining whether an adjustment to the external valuation is required, we will review material factors that could affect the valuation, such as changes to the composition or performance of the underlying investment(s) or comparable investments, overall market conditions, expected sale prices for private investments which are probable of being sold in the short term, and other economic factors that may possibly have a favorable or unfavorable effect on the reported external valuation. We may adjust the external valuation to ensure fair value as of the balance sheet date.

Derivatives

Exchange traded derivatives, such as options and futures, for which market quotations are readily available, are valued at the last reported sale price or official closing price on the primary market or exchange on which they are traded and are classified in Level 1. Over-the-counter derivatives, including but not limited to swaps, swaptions and forwards, which are typically valued through independent pricing services with observable inputs are generally classified in Level 2. Derivatives classified in Level 3 are typically valued via the use of pricing models which incorporate significant unobservable inputs, but may also include derivatives which are valued with the use of significant observable inputs which are not subject to corroboration. The inputs part of the model based valuations may include extrapolated or model-derived assumptions such as volatilities and yield and credit spread assumptions.

Due to the lack of timely available market information for certain investments in the asset classes described above as well as the inherent uncertainty of valuation, reported fair values may differ from fair values that would have been used had timely available market information been available.

Extended Disability Benefits

Estimated extended disability benefits are accrued ratably over the employee's active service period using measurement provisions similar to those used to measure our other postretirement benefits (OPEB) obligations. The liability is composed of the future obligations for income replacement, healthcare costs and life insurance premiums for employees currently disabled and those in the active workforce who may become disabled. Future disabilities are estimated in the current workforce using actuarial methods based on historical experience. We record actuarial gains and losses immediately in earnings. Old GM amortized net actuarial gains and losses over the remaining duration of the obligation.

Labor Force

On a worldwide basis, we have and Old GM had a concentration of the workforce working under the guidelines of unionized collective bargaining agreements. At December 31, 2011 48,000 of our U.S. employees (or 62%) were represented by unions, of which 47,000 employees were represented by the International Union, United Automobile, Aerospace and Agriculture Implement Workers of America (UAW). The current labor contract with the UAW is effective for a four-year term that began in October 2011 and expires in September 2015. The contract included a $5,000 lump sum payment to each eligible UAW employee in the year ended December 31, 2011 and three additional lump sum payments of $1,000 to be paid annually in the years ending December 31, 2012, 2013 and 2014. These lump sum payments totaling $381 million are being amortized over the four-year contract period.

Job Security Programs

Effective with our current labor agreement the Job Opportunity Bank (JOBS) Program was eliminated and the Supplemental Unemployment Benefit (SUB) program and the Transitional Support Program (TSP) were retained. These modified job security programs provide employees reduced wages and continued coverage under certain employee benefit programs depending on the employee's classification as well as the number of years of service that the employee has accrued. A similar tiered benefit is provided to Canadian Auto Workers Union (CAW) employees. We recognize a liability for these SUB/TSP benefits over the expected service period of employees, based on our best estimate of the probable liability at the measurement date.

Prior to the implementation of the modified job security programs in May 2009, costs for postemployment benefits to hourly employees idled on an other than temporary basis were accrued based on the best estimate of the wage, benefit and other costs to be incurred, and costs related to the temporary idling of employees were expensed as incurred.

Stock Incentive Plans

We measure and record compensation expense for all share-based payment awards based on the award's estimated fair value. We grant awards to our employees through the 2009 Long Term Incentive Plan and the GM Salary Stock Plan. We record compensation expense over the applicable vesting period of an award.

Prior to our public offering in November and December 2010, the fair value of awards granted was based on the estimated fair value of our common stock. Commencing in November 2010 the fair value of our common stock is based on the New York Stock Exchange trading price.

Salary stock awards granted are fully vested and nonforfeitable upon grant, therefore, compensation cost is recorded on the date of grant.

Policy, Warranty and Recall Campaigns

The estimated costs related to policy and product warranties are accrued at the time products are sold and are charged to Automotive cost of sales. These estimates are established using historical information on the nature, frequency and average cost of claims of each vehicle line or each model year of the vehicle line and assumptions about future activity and events. Revisions are made when necessary, based on changes in these factors. Trends of claims are actively studied and actions are taken to improve vehicle quality and minimize claims.

The estimated costs related to product recalls based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated.

Income Taxes

The liability method is used in accounting for income taxes. Deferred tax assets and liabilities are recorded for temporary differences between the tax basis of assets and liabilities and their reported amounts in the consolidated financial statements, using the statutory tax rates in effect for the year in which the differences are expected to reverse. The effect on deferred tax assets and liabilities of a change in tax rates is recorded in the results of operations in the period that includes the enactment date under the law.

Deferred income tax assets are evaluated quarterly to determine if valuation allowances are required or should be adjusted. We establish and Old GM established valuation allowances for deferred tax assets based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. We consider and Old GM considered the following possible sources of taxable income when assessing the realization of deferred tax assets:

- Future reversals of existing taxable temporary differences;
- Future taxable income exclusive of reversing temporary differences and carryforwards;
- Taxable income in prior carryback years; and
- Tax-planning strategies.

The assessment regarding whether a valuation allowance is required or should be adjusted also considers all available positive and negative evidence factors, including but not limited to:

- Nature, frequency, and severity of recent losses;
- Duration of statutory carryforward periods;
- Historical experience with tax attributes expiring unused; and
- Near- and medium-term financial outlook;

It is difficult to conclude a valuation allowance is not required when there is significant objective and verifiable negative evidence, such as cumulative losses in recent years. We utilize and Old GM utilized a rolling three years of actual and current year anticipated results as the primary measure of cumulative losses in recent years.

Income tax expense (benefit) for the year is allocated between continuing operations and other categories of income such as Discontinued operations or Other comprehensive income (loss). In periods in which there is a pre-tax loss from continuing operations and pre-tax income in another income category, the tax benefit allocated to continuing operations is determined by taking into account the pre-tax income of other categories.

We record uncertain tax positions on the basis of a two-step process whereby: (1) we determine whether it is more likely than not that the tax positions will be sustained based on the technical merits of the position; and (2) for those tax positions that meet the more likely than not recognition, we recognize the largest amount of tax benefit that is greater than 50% likely to be realized upon ultimate settlement with the related tax authority.

We record interest and penalties on uncertain tax positions in Income tax expense (benefit). Old GM recorded interest income on uncertain tax positions in Interest income and other non-operating income, net, interest expense in Automotive interest expense and penalties in Automotive selling, general and administrative expense.

Derivative Instruments

We are party to a variety of foreign currency exchange rate, commodity, interest rate swap and interest rate cap derivative contracts entered into in connection with the management of exposure to fluctuations in certain foreign currency exchange rates, commodity prices and interest rates.

In connection with certain long-term supply contracts that we have entered into, we have identified embedded derivatives which we have bifurcated for valuation and accounting purposes.

GM Financial is exposed to market risks arising from adverse changes in interest rates due to floating interest rate exposure on its credit facilities and on certain securitization notes payable. GM Financial's special purpose entities (SPEs) are contractually required to purchase derivative instruments as credit enhancements in connection with securitization transactions and credit facilities. These financial exposures and contractual requirements are managed in accordance with corporate policies and procedures and a risk management control system is used to assist in monitoring hedging programs, derivative positions and hedging strategies. Hedging documentation includes hedging objectives, practices and procedures and the related accounting treatment.

The accounting for changes in the fair value of each derivative financial instrument depends on whether it has been designated and qualifies as an accounting hedge, as well as the type of hedging relationship identified. Derivative financial instruments entered into by our automotive operations are not designated in hedging relationships. Certain of the derivatives entered into by GM Financial have been designated in cash flow hedging relationships. Derivatives that receive hedge accounting treatment are evaluated for effectiveness at the time they are designated as well as throughout the hedging period. We do not hold derivative financial instruments for speculative purposes.

All derivatives are recorded at fair value and presented gross in the consolidated balance sheets. Internal models are used to value a majority of derivatives. The models use, as their basis, readily observable market inputs, such as time value, forward interest rates, volatility factors and current and forward market prices for foreign currency exchange rates and commodities. Derivative contracts that are valued based upon models with significant unobservable market inputs, primarily price, are classified in Level 3.

The valuation of derivative liabilities takes into account our nonperformance risk. At December 31, 2011 and 2010 our nonperformance risk was not observable through a liquid credit default swap market. Our nonperformance risk was estimated using internal analysis to develop conclusions on our implied unsecured credit rating, which we used to determine the appropriate credit spread, which would be applied to us by market participants. Prior to receiving published credit ratings we developed our credit rating conclusions using an analysis of comparable industrial companies. At December 31, 2011 and 2010 we incorporated our published credit agency ratings into our credit rating conclusions. Beginning in December 2010 we determined that our non-performance risk no longer represents a significant input in the determination of the fair value of our foreign currency exchange derivatives. Consequently, all automotive operations foreign currency exchange derivative liabilities were reclassified to Level 2.

We record the earnings effect resulting from the change in fair value of automotive operations derivative instruments in Interest income and other non-operating income, net. We record the earnings effect resulting from the change in fair value of derivative instruments entered into by GM Financial in GM Financial operating and other expenses.

Effective changes in fair value of derivatives designated as cash flow hedges are recorded in Cash flow hedging gains (losses), net within a separate component of Accumulated other comprehensive income. Amounts are reclassified from Accumulated other comprehensive income when the underlying hedged item affects earnings. All ineffective changes in fair value are recorded in earnings. We also discontinue hedge accounting prospectively when it is determined that a derivative instrument has ceased to be effective as an accounting hedge or if the underlying hedged cash flow is no longer probable of occurring.

We enter into contracts with counterparties that we believe are creditworthy and generally settle on a net basis. We perform a quarterly assessment of our counterparty credit risk, including a review of credit ratings, credit default swap rates and potential nonperformance of the counterparty. Based on our most recent quarterly assessment of our counterparty credit risk, we consider this risk to be low.

The cash flows from derivative instruments are classified in the same categories as the hedged items in the consolidated statement of cash flows.

Foreign Currency Transactions and Translation

The assets and liabilities of foreign subsidiaries, that use the local currency as their functional currency, are translated to U.S. Dollars based on the current exchange rate prevailing at each balance sheet date and any resulting translation adjustments are included in Accumulated other comprehensive income. The assets and liabilities of foreign subsidiaries whose local currency is not their functional currency are remeasured from their local currency to their functional currency, and then translated to U.S. Dollars. Revenues and expenses are translated into U.S. Dollars using the average exchange rates prevailing for each period presented.

Gains and losses arising from foreign currency transactions and the effects of remeasurements discussed in the preceding paragraph, are recorded in Automotive cost of sales and GM Financial operating and other expenses unless related to Automotive debt which are recorded in Interest income and other non-operating income, net.

The following table summarizes the effects of foreign currency transactions and remeasurement (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Gain (loss) resulting from foreign currency transactions and remeasurement	$(55)	$(210)	$(755)	$(1,077)

Recently Adopted Accounting Principles

In December 2010 the Financial Accounting Standards Board (FASB) issued Accounting Standard Update (ASU) 2010-28, "Intangibles — Goodwill and Other: When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts" (ASU 2010-28). The amendments in ASU 2010-28 modify Step 1 of the goodwill impairment test for reporting units with zero or negative carrying amounts. For those reporting units, an entity is required to perform Step 2 of the goodwill impairment test if it is more likely than not that a goodwill impairment exists. ASU 2010-28 is effective for fiscal years, and interim periods within those years, beginning after December 15, 2010. Any resulting goodwill impairment is recorded as a cumulative-effect adjustment to beginning Retained earnings at the date of adoption with future impairments recorded to earnings. Refer to Note 12 for additional information on the adoption of ASU 2010-28 and its effect on the consolidated financial statements.

In September 2011 the FASB issued ASU 2011-08, "Testing Goodwill for Impairment" (ASU 2011-08). Under the revised guidance entities testing for goodwill impairment have an option of performing a qualitative assessment before calculating the fair value for the reporting unit, i.e., Step 1 of the goodwill impairment test. If an entity determines on a basis of qualitative factors that the fair value of the reporting unit is more likely than not less than the carrying amount the first step of the two-step impairment test would be required. If it is not more likely than not that the fair value of the reporting unit is less than the carrying amount, then goodwill is not considered to be impaired. ASU 2011-08 does not change how goodwill is calculated or assigned to reporting units, nor does it revise the requirement to test goodwill at least annually for impairment. We adopted ASU 2011-08 effective October 1, 2011. The adoption of this ASU did not have an effect on the conclusions reached during our goodwill impairment assessments performed in the three months ended December 31, 2011.

Accounting Standards Not Yet Adopted

In May 2011 the FASB issued ASU 2011-04, "Fair Value Measurement: Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRSs" (ASU 2011-04). Key provisions of the amendments in ASU 2011-04 include: (1) a prohibition on grouping financial instruments for purposes of determining fair value, except in limited cases; (2) an extension of the prohibition against the use of a blockage factor to all fair value measurements; and (3) a requirement that for recurring Level 3 fair value measurements, entities disclose quantitative information about unobservable inputs, a description of the valuation process used and qualitative details about the sensitivity of the measurements. For items not carried at fair value but for which fair value is disclosed, entities will be required to disclose the level within the fair value hierarchy that applies to the fair value measurement disclosed. This ASU is effective for interim and annual periods beginning after December 15, 2011. The adoption of ASU 2011-04 is not expected to have a significant effect on our fair value measurements utilized within the consolidated financial statements.

Note 4. Acquisition and Disposal of Businesses

Acquisition of Additional GM Korea Interests

In March 2011 we completed the acquisition of an additional 6.9% interest in GM Korea Company (GM Korea) for cash of $100 million. The transaction was accounted for as an equity transaction as we retain the controlling financial interest in GM Korea. This transaction reduced our equity attributable to Noncontrolling interests by $134 million and our Accumulated other comprehensive income by $7 million and increased our Capital surplus by $41 million. We now own 77.0% of the outstanding shares of GM Korea.

Acquisition of AmeriCredit

In October 2010 we acquired 100% of the outstanding equity interests of AmeriCredit, an automotive finance company, renamed General Motors Financial Company, Inc., for cash of $3.5 billion. This acquisition allows us to provide a more complete range of financing options to our customers across the U.S. and Canada, specifically focusing on providing additional capabilities in leasing and sub-prime vehicle financing options.

The following table summarizes the consideration paid, acquisition-related costs, and the assets acquired and liabilities assumed recognized at the acquisition date in connection with the acquisition of AmeriCredit (dollars in millions, except per share amounts):

	Successor
	October 1, 2010
Consideration	
Cash paid to AmeriCredit common shareholders of $24.50 per share	$ 3,327
Cash paid to cancel outstanding stock warrants	94
Cash paid to settle equity-based compensation awards	33
Total consideration	$ 3,454
Acquisition-related costs (a)	$ 43
Assets acquired and liabilities assumed	
Cash	$ 538
Restricted cash	1,136
Finance receivables (b)	8,231
Other assets, including identifiable intangible assets	200
Securitization notes payable and other borrowings (c)	(7,564)
Other liabilities	(352)
Identifiable net assets acquired	2,189
Goodwill resulting from the acquisition of AmeriCredit	1,265
	$ 3,454

(a) Acquisition-related costs of $43 million were expensed as incurred. The acquisition related costs include $27 million recorded in Automotive selling, general and administrative expense and $16 million recorded in GM Financial operating expenses and other.

(b) The fair value of Finance receivables was determined using a discounted cash flow approach. The contractual cash flows were adjusted for estimated prepayments, defaults, recoveries, finance charge income and servicing costs and discounted using a discount rate commensurate with risks and maturity inherent in the finance contracts. As of the acquisition date, the contractually required payments receivable was $10.7 billion of which $9.7 billion was expected to be collected.

(c) The fair value of securitization notes payable and other borrowings was principally determined using quoted market rates.

We recorded goodwill in the amount of $1.3 billion for the excess of consideration paid over the fair value of the individual assets acquired and liabilities assumed. Goodwill includes $153 million recorded to establish a valuation allowance for deferred tax assets that was not applicable to GM Financial on a stand-alone basis. All of the goodwill was assigned to the GM Financial reporting unit. The goodwill expected to be tax deductible is $159 million and was generated from previous acquisitions by GM Financial.

The results of operations of GM Financial are included in our results beginning October 1, 2010. The following table summarizes the actual amounts of revenue and earnings of GM Financial included in our consolidated financial statements for the years ended December 31, 2011 and 2010, as well as the supplemental pro forma revenue and earnings of the combined entity for the year ended December 31, 2010 as if the acquisition had occurred on January 1, 2010 and for the periods July 10, 2009 through December 31, 2009 and January 1, 2009 through July 9, 2009, as if the acquisition had occurred on January 1, 2009 (dollars in millions):

	Successor				Predecessor
			Pro Forma-Combined (Unaudited)		Pro Forma-Combined (Unaudited)
	GM Financial Amounts For Year Ended December 31, 2011	GM Financial Amounts For Year Ended December 31, 2010	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Total net sales and revenue	$1,410	$281	$136,645	$58,215	$ 48,074
Net income (loss) attributable to stockholders	$ 440	$ 90	$ 6,651	$ (4,125)	$109,234

The supplemental pro forma information was adjusted to give effect to the tax effected amortization of a premium on finance receivables and a premium on securitization notes payable and other borrowings, depreciation and amortization related to other assets and acquisition related costs. The pro forma information should not be considered indicative of the results had the acquisition been consummated on January 1, 2010 and January 1, 2009, nor are they indicative of future results.

Sale of Nexteer

In November 2010 we completed the sale of Nexteer Automotive Corporation (Nexteer), a manufacturer of steering components and half-shafts, to Pacific Century Motors. The sale of the Nexteer business included the global steering business which was acquired in October 2009 as discussed under Acquisition of Delphi Businesses below. The 2009 acquisition of Nexteer included 22 manufacturing facilities, six engineering facilities and 14 customer support centers located in North and South America, Europe and Asia.

We received consideration of $426 million in cash and a $39 million promissory note in exchange for 100% of our ownership interest in Nexteer and recorded a gain of $60 million on the sale which is recorded in Interest income and other non-operating income, net. Subsequent to the sale, Nexteer became one of our third party suppliers and we remain a significant customer. During the year ended December 31, 2010 Nexteer recorded revenue of $1.8 billion, of which $939 million were sales to us. During the period from October 6, 2009, the date of acquisition, to December 31, 2009, Nexteer reported revenue of $453 million, of which $218 million were sales to us. We did not provide the pro forma financial information because we do not believe the information was material.

Acquisition of General Motors Strasbourg

In October 2010 we acquired 100% of the outstanding equity interest of General Motors Strasbourg S.A.S. (GMS) for cash of one Euro from MLC. GMS is an entity engaged in the business of developing and manufacturing automatic transmissions for luxury and performance light automotive vehicles which was previously owned by Old GM but retained by MLC in connection with the 363 Sale. MLC was unable to sell GMS and upon notification of their plan to liquidate GMS, we agreed to repurchase the business.

We recorded the fair value of the assets acquired and liabilities assumed as of October 1, 2010 and have included GMS's results of operations and cash flows from that date forward. The following table summarizes the amounts recorded in connection with the acquisition of GMS, which are included in our GME segment (dollars in millions):

	Successor
	October 1, 2010
Assets acquired and liabilities assumed	
Cash	$ 49
Accounts receivable (a)	60
Inventory	56
Property, net	25
Other non-current assets	3
Current liabilities	(116)
Non-current liabilities	(11)
Bargain purchase gain	$ 66

(a) Accounts receivable includes $32 million that is due from us.

We determined that the excess of fair value over consideration paid was attributable to potential future restructuring scenarios made necessary due to the uncertainty in sales demand beyond in-place supply agreements. Restructuring costs, if incurred, would be expensed in future periods. As potential future restructuring activities do not qualify to be recorded as a liability in the application of the acquisition method of accounting, none was recorded, and we recorded the excess as a bargain purchase gain, recorded in Interest income and other non-operating income, net. We did not provide the pro forma financial information because we do not believe the information was material.

Sale of India Operations

In December 2009 we and SAIC Motor Hong Kong Investment Limited (SAIC-HK) entered into a joint venture, SAIC GM Investment Limited (HKJV) to invest in automotive projects outside of markets in China, initially focusing on markets in India. In February 2010 we sold certain of our operations in India (GM India), part of our GMIO segment to HKJV, in exchange for a promissory note due in 2013. The amount due under the promissory note may be partially reduced, or increased, based on GM India's cumulative earnings before interest and taxes for the three year period ending December 31, 2012. In connection with the sale we recorded net consideration of $185 million and an insignificant gain. The sale transaction resulted in a loss of control and the deconsolidation of GM India on February 1, 2010. Accordingly, we removed the assets and liabilities of GM India from our consolidated balance sheets and recorded an equity interest in HKJV to reflect cash of $50 million we contributed to HKJV and a $123 million commitment to provide additional capital that we are required to make in accordance with the terms of the joint venture agreement. We recorded a corresponding liability to reflect our obligation to provide additional capital.

In connection with this transaction, we provided an option to SAIC-HK to not participate in future capital injections, which would otherwise be required under certain circumstances. SAIC-HK still held this option at December 31, 2011. The related option liability was $88 million and $24 million at December 31, 2011 and 2010, measured utilizing Level 3 inputs. Total unrealized losses related to this option were $64 million and $3 million in the years ended December 31, 2011 and 2010.

Acquisition of Delphi Businesses

In July 2009 we entered into the Delphi Master Disposition Agreement (DMDA) with Delphi Corporation (Delphi) and other parties. The terms of the DMDA provided a means for Delphi to emerge from bankruptcy and to effectively serve its customers by focusing on its core business. The DMDA settled outstanding claims and assessments against and from MLC, us and Delphi, including the settlement of commitments under the Delphi-GM Settlement Agreements (as defined in Note 20) with limited exceptions, and establishes an ongoing commercial relationship with New Delphi (as subsequently defined). The DMDA also enabled us to access essential components and steering technologies through the businesses we acquired.

We agreed to acquire Nexteer, Delphi's global steering business, which supplied us and other original equipment manufacturers with steering systems and columns, and four domestic facilities that manufacture a variety of automotive components. We and several third party investors agreed to acquire substantially all of Delphi's remaining assets through a newly formed entity, subsequently named Delphi Automotive LLP (New Delphi). We agreed to acquire all the Class A Membership Interests in New Delphi with the other investors acquiring Class B Membership Interests and the Pension Benefit Guarantee Corporation (PBGC) receiving Class C Membership Interests. We also agreed to pay or assume certain Delphi obligations of $1.0 billion.

In October 2009 we consummated the transactions contemplated by the DMDA. We funded the acquisitions, transaction related costs and settlements of certain pre-existing arrangements through net cash payments of $2.7 billion and assumption of liabilities and wind-down obligations of $120 million. We waived our rights to $850 million previously advanced to Delphi and our rights to claims associated with previously transferred pension costs for hourly employees. Of these amounts, we contributed $1.7 billion to New Delphi and paid the PBGC $70 million.

The terms of the DMDA resulted in the settlement of certain obligations related to various commitments accrued as of the transaction date under the Delphi-GM Settlement Agreements. A settlement loss of $127 million was recorded upon consummation of the DMDA. Additional net charges of $49 million were recorded in the three months ended December 31, 2009 associated with the DMDA. Refer to Note 20 for additional information on the Delphi-GM Settlement Agreements.

The following table summarizes the consideration provided under the DMDA and the allocation to its various elements based on their estimated fair values (dollars in millions):

	Successor
	October 6, 2009
Net cash paid	$2,656
Waived advance agreements, payment terms acceleration agreement and other administrative claims	966
Wind-down obligations and assumed liabilities	120
Total consideration provided	$3,742
Fair value of Nexteer and four facilities	$ 287
Fair value of Class A Membership Interests in New Delphi	1,912
Separately acquired assets of Delphi	41
Settlement of obligation to PBGC	387
Settlement of other obligations to Delphi	1,066
Expenses of the transaction	49
Allocation of fair value to DMDA elements	$3,742

The following table summarizes the amounts allocated to the fair value of the assets acquired and liabilities assumed of Nexteer and the four domestic facilities, which are included in the results of our GMNA segment (dollars in millions):

	Successor
	October 6, 2009
Total current assets, primarily accounts and notes receivable, net of $541	$ 854
Total non-current assets, primarily property, net of $202 (a)	305
Total current liabilities, primarily accounts payable of $316	(484)
Total non-current liabilities, primarily other liabilities and deferred income taxes	(374)
Noncontrolling interests	(14)
Fair value of Nexteer and four domestic facilities	$ 287

(a) Includes goodwill of $61 million recorded in the GMNA reporting unit that arises from the difference between the economic value of long-term employee related liabilities and their recorded amounts at the time of acquisition and deferred taxes. The total amount of goodwill deductible for tax purposes is expected to be $398 million. The difference between book goodwill and tax goodwill results from different allocations for tax purposes than that utilized for book purposes.

Since we and Old GM historically accounted for a significant portion of Nexteer's and the four domestic facilities' sales and because we were providing subsidies to Delphi related to these facilities, the acquisition of these businesses did not have a significant effect on our consolidated financial results as the costs associated with these facilities have been recorded as inventory costs and recorded in Automotive cost of sales. We did not provide pro forma financial information because we do not believe this information would be material given the intercompany nature of Nexteer and the four domestic facilities sales activity. Refer to Note 20 for additional information on the Nexteer acquisition.

In March 2011 we sold our Class A Membership Interest in New Delphi for $3.8 billion. Refer to Note 10 for additional information.

Saab Bankruptcy and Sale

In February 2009 Saab Automobile AB (Saab), part of our GME segment, filed for protection under the reorganization laws of Sweden. Old GM determined that the reorganization proceeding resulted in a loss of the elements of control necessary for consolidation and therefore Old GM deconsolidated Saab in February 2009. Old GM recorded a loss of $824 million in Other automotive expenses, net related to the deconsolidation. The loss reflected the remeasurement of Old GM's net investment in Saab to its estimated fair value of $0, costs associated with commitments and obligations to suppliers and others, and a commitment to provide up to $150 million of debtor-in-possession (DIP) financing. We acquired Old GM's investment in Saab in connection with the 363 Sale. In August 2009 Saab exited its reorganization proceeding, and we regained the elements of control and consolidated Saab at an insignificant fair value.

In February 2010 we completed the sale of Saab and in May 2010 we completed the sale of Saab Automobile GB to Spyker Cars NV. Of the negotiated cash purchase price of $74 million, we received $50 million at closing and received the remainder in July 2010. We also received preference shares in Saab with a face value of $326 million and an estimated fair value that is insignificant and received $114 million as repayment of the DIP financing that we provided to Saab during 2009. In the year ended December 31, 2010 we recorded a gain of $123 million in Interest income and other non-operating income, net reflecting cash received of $166 million less net assets with a book value of $43 million.

Note 5. Finance Receivables, net

Automotive Financing — GM Financial

The following table summarizes the components of Finance receivables, net (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Pre-acquisition finance receivables, outstanding balance	$4,366	$7,724
Less: carrying amount adjustment	(339)	(425)
Pre-acquisition finance receivables, carrying amount	4,027	7,299
Post-acquisition finance receivables, net of fees	5,314	924
Total finance receivables	9,341	8,223
Less: allowance for loan losses on post-acquisition finance receivables	(179)	(26)
Total finance receivables, net	$9,162	$8,197

The following table summarizes activity for finance receivables (dollars in millions):

	Successor	
	Year Ended December 31, 2011	October 1, 2010 Through December 31, 2010
Pre-acquisition finance receivables, carrying amount, beginning of period	$ 7,299	$8,231
Post-acquisition finance receivables, beginning of period	924	—
Loans purchased	5,085	935
Charge-offs	(66)	—
Principal collections and other	(3,418)	(765)
Change in carrying amount adjustment on the pre-acquisition finance receivables	(483)	(178)
Balance at end of period	$ 9,341	$8,223

The following table summarizes the estimated fair value, carrying amount and various methods and assumptions used in valuing GM Financial's finance receivables (dollars in millions):

	Successor			
	December 31, 2011		December 31, 2010	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Finance receivables, net (a)	$9,162	$9,386	$8,197	$8,186

(a) The fair value is estimated based upon forecasted cash flows discounted using a pre-tax weighted-average cost of capital (WACC). The forecast includes factors such as prepayment, defaults, recoveries and fee income assumptions.

Finance contracts are purchased by GM Financial from automobile dealers without recourse, and accordingly, the dealer has no liability to GM Financial if the consumer defaults on the contract. Finance receivables are collateralized by vehicle titles and GM Financial has the right to repossess the vehicle in the event the consumer defaults on the payment terms of the contract.

At December 31, 2011 and 2010 the accrual of finance charge income has been suspended on delinquent finance receivables based on contractual amounts due of $439 million and $491 million.

GM Financial reviews its pre-acquisition portfolio for differences between contractual cash flows and the cash flows expected to be collected from its initial investment in the pre-acquisition portfolio to determine if the difference is attributable, at least, in part to credit quality. At December 31, 2011 as a result of improvements in the credit performance of the pre-acquisition portfolio, which resulted in an increase of expected cash flows of $261 million, GM Financial transferred the excess non-accretable discount to accretable yield. GM Financial will recognize this excess as finance charge income over the remaining life of the portfolio.

The following table summarizes accretable yield (dollars in millions):

	Successor	
	Year Ended December 31, 2011	October 1, 2010 Through December 31, 2010
Balance at beginning of period	$1,201	$1,436
Accretion of accretable yield	(725)	(235)
Transfer from non-accretable discount	261	—
Balance at end of period	$ 737	$1,201

The following table summarizes activity for the allowance for post-acquisition loan losses (dollars in millions):

	Successor	
	Year Ended December 31, 2011	October 1, 2010 Through December 31, 2010
Balance at beginning of period	$ 26	$—
Provision for loan losses	178	26
Charge-offs	(66)	—
Recoveries	41	—
Balance at end of period	$179	$26

Credit Quality

Credit bureau scores, generally referred to as FICO scores, are determined during GM Financial's automotive loan origination process. The following table summarizes the credit risk profile of finance receivables by FICO score band, determined at origination (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
FICO score less than 540	$2,133	$1,328
FICO score 540 to 599	4,167	3,396
FICO score 600 to 659	2,624	2,758
FICO score greater than 660	756	1,166
Balance at end of period (a)	$9,680	$8,648

(a) Balance at end of period is the sum of pre-acquisition finance receivables — outstanding balance and post-acquisition finance receivables, net of fees.

Delinquency

The following summarizes the contractual amount of finance receivables, which is not materially different than the recorded investment, more than 30 days delinquent, but not yet in repossession, and in repossession, but not yet charged off (dollars in millions):

	Successor			
	December 31, 2011		December 31, 2010	
	Amount	Percent of Contractual Amount Due	Amount	Percent of Contractual Amount Due
Delinquent contracts				
31-to-60 days	$517	5.3%	$535	6.2%
Greater-than-60 days	182	1.9%	212	2.4%
Total finance receivables more than 30 days delinquent	699	7.2%	747	8.6%
In repossession	27	0.3%	28	0.3%
Total finance receivables more than 30 days delinquent and in repossession	$726	7.5%	$775	8.9%

An account is considered delinquent if a substantial portion of a scheduled payment has not been received by the date such payment was contractually due. Delinquencies may vary from period to period based upon the average age of the portfolio, seasonality within the calendar year and economic factors.

Note 6. Securitizations

Automotive Financing — GM Financial

The following table summarizes securitization activity and cash flows from consolidated SPEs used for securitizations (dollars in millions):

	Successor	
	Year Ended December 31, 2011	October 1, 2010 Through December 31, 2010
Receivables securitized	$4,828	$743
Net proceeds from securitization	$4,550	$700
Servicing Fees		
Variable interest entities	$ 201	$ 46
Net Distributions from Trusts		
Variable interest entities	$ 852	$216

GM Financial retains servicing responsibilities for receivables transferred to certain securitization SPEs. At December 31, 2011 and 2010 GM Financial serviced finance receivables that have been transferred to certain SPEs of $7.9 billion and $7.2 billion.

Note 7. Marketable Securities

Automotive

The following tables summarize information regarding marketable securities (dollars in millions):

	Successor						
	December 31, 2011						
		Unrealized			Fair Value Measurements on a Recurring Basis		
	Cost	Gains	Losses	Fair Value	Level 1	Level 2	Level 3
Available-for-sale securities							
U.S. government and agencies	$ 5,214	$ 2	$—	$ 5,216	$—	$ 5,216	$—

Total marketable securities	$5,549	$11	$ 5	$5,555	$21	$5,534	$—

We maintained trading securities of $84 million and $89 million as compensating balances to support letters of credit of $70 million and $74 million at December 31, 2011 and 2010. We have access to these securities in the normal course of business; however, the letters of credit may be withdrawn if the minimum collateral balance is not maintained.

The following table summarizes sales proceeds from investments in marketable securities classified as available-for-sale and sold prior to maturity (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Sales proceeds	$1,556	$11	$3	$185

The following table summarizes the fair value of investments classified as available-for-sale securities by contractual maturity at December 31, 2011 (dollars in millions):

	Successor	
	Amortized Cost	Fair Value
Due in one year or less	$ 8,413	$ 8,414

Year ended December 31, 2010	$537-668	$ —	$ —	$537-668
Period July 10, 2009 through December 31, 2009	$543-567	$ —	$ —	$543-567

	Predecessor			
		Fair Value Measurements Using		
	Fair Value Range of Measures	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Period January 1, 2009 through July 9, 2009	$539-2,057	$ —	$ —	$539-2,057

Fair value measurements of vehicles leased to rental car companies utilized projected cash flows from anticipated future auction proceeds. Fair value measurements of automotive retail leases utilized discounted projected cash flows from lease payments and anticipated future auction proceeds.

Automotive Financing — GM Financial

GM Financial originates leases in the U.S. and Canada that are recorded as operating leases. A Canadian subsidiary of GM Financial originates and sells leases to a third party with servicing retained. At December 31, 2011 this subsidiary was servicing leased vehicles of $1.0 billion for this third-party.

The following table summarizes equipment on operating leases, net (dollars in millions):

	Successor
	December 31, 2011

The following table summarizes minimum rental payments due to GM Financial as lessor under operating leases (dollars in millions):

	2012	2013	2014	2015	2016
Minimum rental receipts under operating leases	$153	$147	$100	$36	$5

Note 10. Equity in Net Assets of Nonconsolidated Affiliates

Automotive

Nonconsolidated affiliates are entities in which an equity ownership interest is maintained and for which the equity method of accounting is used, due to the ability to exert significant influence over decisions relating to their operating and financial affairs.

The following tables summarizes information regarding equity in income (loss), net of tax and gain on disposal of investments and disposition of interest in nonconsolidated affiliates (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Ally Financial				$(1,097)
Gain on conversion of UST Ally Financial Loan				2,477
Total equity in income of and disposition of interest in Ally Financial				$ 1,380
China JVs	$1,511	$1,297	$460	$ 300
New Delphi (including gain on disposition)	1,727	117	(1)	—
Others	(46)	24	38	(239)
Total equity income, net of tax and gain on disposal of investments	$3,192	$1,438	$497	$ 61

We received dividends from nonconsolidated affiliates of $1.2 billion, $685 million and $134 million in the years ended December 31, 2011 and 2010 and the period July 10, 2009 through December 31, 2009, and Old GM received dividends of $220 million in the period January 1, 2009 through July 9, 2009. At December 31, 2011 we had undistributed earnings including dividends declared but not received, of $1.6 billion related to our nonconsolidated affiliates.

Investment in China JVs

The following table summarizes our direct ownership interests in our Chinese joint ventures, collectively referred to as China JVs:

	Successor	
	December 31, 2011	December 31, 2010
Shanghai General Motors Co., Ltd. (SGM)	49%	49%
Shanghai GM Norsom Motor Co., Ltd. (SGM Norsom)	25%	25%
Shanghai GM Dong Yue Motors Co., Ltd. (SGM DY)	25%	25%
Shanghai GM Dong Yue Powertrain (SGM DYPT)	25%	25%
SAIC-GM-Wuling Automobile Co., Ltd. (SGMW)	44%	44%
FAW-GM Light Duty Commercial Vehicle Co., Ltd. (FAW-GM)	50%	50%
Pan Asia Technical Automotive Center Co., Ltd.	50%	50%
Shanghai OnStar Telematics Co., Ltd. (Shanghai OnStar)	40%	40%
Shanghai Chengxin Used Car Operation and Management Co., Ltd. (Shanghai Chengxin Used Car)	33%	33%
SAIC General Motors Sales Co., Ltd. (SGMS)	49%	

Sales and income of our China JVs are not consolidated into our financial statements; rather, our proportionate share of the earnings of each joint venture is reflected as Equity income, net of tax and gain on disposal of investments.

SGM is a joint venture established in 1997 by SAIC (51%) and us (49%). SGM has interests in three other joint ventures in China: SGM Norsom, SGM DY and SGM DYPT. These three joint ventures are jointly held by SGM (50%), SAIC (25%) and us (25%). These four joint ventures are engaged in the production, import, and sale of a comprehensive range of products under the brands of Buick, Chevrolet and Cadillac. SGM also has interests in Shanghai OnStar (20%) and Shanghai Chengxin Used Car (33%).

SGMS is a joint venture established in November 2011 by SAIC (51%) and us (49%) to engage in the sales of the imported brands of Buick, Chevrolet and Cadillac and the sales of automobiles manufactured by SGM.

In February 2010 we sold a 1% ownership interest in SGM to SAIC-HK, reducing our ownership interest to 49%. The sale of the 1% ownership interest to SAIC was predicated on our ability to work with SAIC to obtain a $400 million line of credit from a commercial bank to us. We also received a call option to repurchase the 1% which is contingently exercisable based on events which we do not unilaterally control. As part of the loan arrangement SAIC provided a commitment whereby, in the event of default, SAIC will purchase the ownership interest in SGM that we pledged as collateral for the loan. We recorded an insignificant gain on this transaction.

In November 2010 we purchased an additional 10% interest in SGMW from the Liuzhou Wuling Motors Co., Ltd. and Liuzhou Mini Vehicles Factory, collectively the Wuling Group, for cash of $52 million plus an agreement to provide technical services to the Wuling Group for a period of three years. As a result of this transaction we own 44%, SAIC owns 50.1% and certain Liuzhou investors own 5.9% of the outstanding stock of SGMW.

Sale of New Delphi

In March 2011 we sold our Class A Membership Interests in New Delphi to New Delphi for $3.8 billion. The Class A Membership Interests sold represented 100% of our direct and indirect interests in New Delphi and 100% of New Delphi's Class A Membership

Interests issued and outstanding. The sale terminated any direct and indirect obligation to loan New Delphi up to $500 million under a term loan facility established in October 2009 when New Delphi was created and the Class A Membership Interests were issued. New Delphi had not borrowed under this loan facility. In March 2011 we recorded a gain of $1.6 billion related to the sale in Equity income, net of tax and gain on disposal of investments. Our existing supply contracts with New Delphi were not affected by this transaction.

Impairment of Investment in HKJV

In March 2011 there was a change in the local tax regulations which significantly extended the period of time over which GM India will receive certain value added tax based investment incentives. The delay in recovery of these incentives significantly affected GM India's cash flow and earnings before interest and income taxes forecasts, resulting in a decrease in the fair value of HKJV. The fair value of our investment in HKJV at March 31, 2011 was determined to be $112 million compared to a carrying amount of $151 million. The loss in value was determined to be other than temporary and, therefore, we recorded an impairment charge of $39 million in the three months ended March 31, 2011. In addition we recorded other charges totaling $67 million related to our investment in the HKJV in the three months ended March 31, 2011. Refer to Note 4 for additional information related to HKJV.

VMM Deconsolidation

In June 2011 we entered into a new shareholder agreement with Fiat Powertrain Technologies SPA related to VM Motori (VMM) in Italy. Under the new shareholder agreement, we retain 50% ownership but no longer have control. Accordingly, we removed the assets and liabilities of VMM, which included allocated goodwill of $36 million from our GME reporting unit, from our consolidated balance sheets and recorded an equity interest in the amount of $46 million.

Investment in and Summarized Financial Data of Nonconsolidated Affiliates

The following table summarizes the carrying amount of investments in nonconsolidated affiliates (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
China JVs	$6,452	$6,133
New Delphi	—	2,043
Other investments	338	353
Total equity in net assets of nonconsolidated affiliates	$6,790	$8,529

At December 31, 2011 and 2010 the carrying amount of our investments in certain joint ventures exceeded our share of the underlying net assets by $3.8 billion. These differences are primarily related to the application of fresh-start reporting, of which $3.3 billion was allocated to goodwill and the remainder was allocated to the underlying assets and liabilities, primarily intangibles, and are being amortized over their useful lives.

The following table presents summarized financial data for all of our nonconsolidated affiliates, excluding Ally Financial (dollars in millions):

	Successor					
	China JVs December 31, 2011	Others December 31, 2011	Total December 31, 2011	China JVs December 31, 2010	Others December 31, 2010	Total December 31, 2010

Ally Financial Common and Preferred Stock

GM

On July 10, 2009 we acquired the investment in Ally Financial's common and preferred stocks in connection with the 363 Sale.

In December 2009 the United States Department of the Treasury (UST) made a capital contribution to Ally Financial of $3.8 billion. The UST also exchanged all of its existing Ally Financial non-convertible preferred stock for mandatory convertible preferred securities valued at $5.3 billion and converted mandatory convertible preferred securities valued at $3.0 billion into Ally Financial common stock. These actions resulted in the dilution of our investment in Ally Financial common stock from 24.5% to 16.6%, of which 6.7% was held directly and 9.9% was held indirectly through an independent trust.

In December 2010 the UST agreed to convert 110 million shares of preferred securities into 532 thousand shares of common stock. This resulted in the dilution of our investment in Ally Financial common stock from 16.6% to 9.9%, of which 4.0% was held directly and 5.9% was held indirectly through an independent trust. In May 2011 we transferred the 4.0% of shares we owned directly to the independent trust. In December 2011, in response to a letter from the trustee requesting that the life of the trust be extended, the Federal Reserve agreed to extend the trust from December 2011 to December 2013. Pursuant to previous commitments to reduce influence over and ownership in Ally Financial, the trustee, who is independent of us, has the sole authority to vote and is required to dispose of all Ally Financial common stock held in the trust by December 24, 2013. We can cause the trustee to return any Ally Financial common stock to us to hold directly, so long as our directly held voting and total common equity interests remain below 10.0%. At December 31, 2011 and 2010 our equity ownership in Ally Financial was 9.9%.

Fair Value and Impairment of Ally Financial Common and Preferred Stock

We estimated the fair value of Ally Financial common stock using a market approach that applies the average price to tangible book value multiples of comparable companies to the consolidated Ally Financial tangible book value. The significant inputs used in our fair value analyses included Ally Financial's December 31, 2011 and 2010 financial statements, financial statements and price to tangible book value multiples of comparable companies in the banking and finance industry, and the effects of certain Ally Financial Shareholder rights described below. The measurement of Ally Financial common stock is a Level 3 fair value measurement.

At December 31, 2011 we determined the carrying amount of our investment in Ally Financial common stock exceeded our estimate of its fair value. Our current estimate of fair value results from broader macroeconomic uncertainties and volatility in the financial markets including the eurozone debt crisis, continued heightened risk of recession and concerns about Ally Financial's mortgage related operations. Our estimate considered the potential effect of contractual provisions held by the UST who may receive incremental ownership interest in Ally Financial depending upon Ally Financial's equity value at the time of a successful public offering or private sale. These contractual provisions could result in significant dilution of our ownership interest. Based on an evaluation of the duration and severity of this decline in fair value, we have concluded the impairment is other than temporary. As a result we have recorded an impairment charge of $555 million in Interest income and other non-operating income, net to reduce our investment to its current estimated fair value of $403 million.

In March 2011 our investment in Ally Financial preferred stock was sold through a public offering for net proceeds of $1.0 billion. The gain of $0.3 billion related to the sale was recorded in Interest income and other non-operating income, net.

We calculated the fair value of our investment in Ally Financial preferred stock as of December 31, 2010 using a discounted cash flow approach. The present value of the cash flows was determined using assumptions regarding the expected receipt of dividends on Ally Financial preferred stock and the expected call date.

The following table summarizes the carrying amount and estimated fair value of Ally Financial common and preferred stock (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Common stock		
Carrying amount	$403	$ 964
Fair value	$403	$1,031
Preferred stock		
Carrying amount		$ 665
Fair value		$1,055

At December 31, 2009 we determined that indicators were present that suggested our investments in Ally Financial common and preferred stock could be impaired. Such indicators included the continuing deterioration in Ally Financial's mortgage operations, as evidenced by the strategic actions Ally Financial took in December 2009 to position itself to sell certain mortgage assets. These actions resulted in Ally Financial recording an increase in its provision for loan losses of $2.4 billion in the three months ended December 31, 2009. These indicators also included Ally Financial's receipt of $3.8 billion of additional financial support from the UST on December 30, 2009. As a result of these impairment indicators, we evaluated the fair value of our investments in Ally Financial common and preferred stock and recorded an impairment charge of $270 million related to our Ally Financial common stock to record the investment at its estimated fair value of $970 million.

Old GM

In January 2009 Old GM received a loan from the UST to purchase 190,921 Class B Common Membership Interests in Ally Financial. The UST had the option to convert outstanding amounts under the loan into a maximum of 190,921 shares of Ally Financial's Class B Common Membership Interests on a pro rata basis. In May 2009 the UST exercised this option, the outstanding principal and interest under the loan was extinguished, and Old GM recorded a net gain of $483 million. The net gain was comprised of a gain on the disposition of Ally Financial Common Membership Interests of $2.5 billion recorded in Equity in income of and disposition of interest in Ally Financial and a loss on extinguishment of the loan of $2.0 billion recorded in Loss on extinguishment of debt. After the exchange, Old GM's ownership was reduced to 24.5% of Ally Financial's Common Membership Interests.

Ally Financial converted its status to a C corporation effective June 30, 2009. At that date, Old GM began to account for its investment in Ally Financial using the cost method rather than the equity method as Old GM could not exercise significant influence over Ally Financial. Prior to converting to a C corporation, Old GM's investment in Ally Financial was accounted for in a manner similar to an investment in a limited liability partnership and the equity method was applied because Old GM's influence was more than minor. In connection with Ally Financial's conversion into a C corporation, each unit of each class of Ally Financial Membership Interests was converted into shares of capital stock of Ally Financial with substantially the same rights and preferences as such Membership Interests.

The following table summarizes financial information of Ally Financial for the period Ally Financial was accounted for as a nonconsolidated affiliate (dollars in millions):

	Six Months Ended June 30, 2009
Consolidated Statement of Income (Loss)	
Total financing revenue and other interest income	$ 6,916
Total interest expense	$ 3,936
Depreciation expense on operating lease assets	$ 2,113
Gain on extinguishment of debt	$ 657
Total other revenue	$ 2,117
Total noninterest expense	$ 3,381
Loss from continuing operations before income tax expense	$(2,260)
Income tax expense from continuing operations	$ 972
Net loss from continuing operations	$(3,232)
Loss from discontinued operations, net of tax	$(1,346)
Net loss	$(4,578)

Ally Financial — Preferred and Common Membership Interests

The following table summarizes the activity with respect to the investment in Ally Financial Common and Preferred Membership Interests for the period Ally Financial was accounted for as a nonconsolidated affiliate (dollars in millions):

	Predecessor	
	Ally Financial Common Membership Interests	Ally Financial Preferred Membership Interests
Balance at January 1, 2009	$ 491	$43
Old GM's proportionate share of Ally Financial's losses (a)	(1,130)	(7)
Investment in Ally Financial Common Membership Interests	884	—
Gain on disposition of Ally Financial Common Membership Interests	2,477	—
Conversion of Ally Financial Common Membership Interests	(2,885)	—
Other, primarily accumulated other comprehensive loss	163	—
Balance at June 30, 2009	$ —	$36

(a) Due to impairment charges and Old GM's proportionate share of Ally Financial's losses, the carrying amount of Old GM's investments in Ally Financial Common Membership Interests was reduced to $0. Old GM recorded its proportionate share of Ally Financial's remaining losses to its investment in Ally Financial Preferred Membership Interests.

Capitalized software in use, net	$276	$287
Capitalized software in the process of being developed	$111	$ 96

The following table summarizes depreciation, impairment charges and amortization expense related to Property, net, recorded in Automotive cost of sales, Automotive selling, general and administrative expense and Other automotive expenses, net (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Depreciation and amortization of long-lived assets	$3,596	$3,574	$2,218	$5,925
Impairment charges of long-lived assets (a)	81	240	2	566
Total depreciation, impairment charges and amortization expense	$3,677	$3,814	$2,220	$6,491
Capitalized software amortization expense (b)	$ 202	$ 195	$ 132	$ 136

(a) The fair value of related assets was determined to be $0 in the years ended December 31, 2011 and 2010 and the period from July 10, 2009 through December 31, 2009 and $0 to $85 million in the period from January 1, 2009 through July 9, 2009 measured utilizing level 3 inputs. Fair value measurements of long-lived assets utilized projected cash flows discounted at a rate commensurate with the perceived business risks related to the assets involved.

(b) Included in Total depreciation, impairment charges and amortization expense.

Old GM initiated restructuring plans prior to the 363 Sale to reduce the total number of powertrain, stamping and assembly plants and to eliminate certain brands and nameplates. In addition, MLC retained certain assets that we did not acquire in connection with the 363 Sale and were deemed not to have a useful life beyond July 9, 2009. Old GM recorded incremental depreciation and amortization on certain of these assets as they were expected to be utilized over a shorter period of time than their previously estimated useful lives. We record incremental depreciation and amortization for changes in useful lives subsequent to the initial determination. Old GM recorded incremental depreciation and amortization of approximately $2.8 billion in the period January 1, 2009 through July 9, 2009.

Note 12. Goodwill

Consolidated

The following table summarizes the changes in the carrying amounts of Goodwill (dollars in millions):

	Successor

Accumulated impairment charges at December 31, 2010	$ —	$ —	$ —	$ —	$ —	$ —	$ —
Accumulated impairment charges at December 31, 2011 (c)	$ —	$(2,482)	$(270)	$ —	$ (2,752)	$ —	$ (2,752)

(a) Refer to Note 4 for additional information concerning the acquisition of AmeriCredit.

(b) Refer to Note 10 for additional information concerning the deconsolidation of VMM.

(c) Includes impairment charges of $1.5 billion recorded as a cumulative-effect adjustment to beginning Retained earnings due to the adoption of ASU 2010-28.

We adopted the provisions of ASU 2010-28 on January 1, 2011 and performed Step 2 of the goodwill impairment testing analysis for our GME reporting unit which had a negative carrying amount resulting in the recognition of a cumulative-effect adjustment to beginning Retained earnings. GME continued to have a negative carrying amount and because it was more likely than not further goodwill impairment existed at December 31, 2011 and at March 31, 2011 we recorded impairment charges of $1.0 billion in the year ended December 31, 2011. Refer to Note 3 for additional information on ASU 2010-28.

In the three months ended December 31, 2011, 2010 and 2009 we performed our annual goodwill impairment testing as of October 1 for all reporting units. Based on this testing we determined that goodwill was impaired for our GM Korea reporting unit at October 1, 2011. Subsequent to our 2011 annual impairment testing we reversed a deferred tax asset valuation allowance for our GM Holden, Ltd. (Holden) reporting unit that resulted in the carrying amount of this reporting unit exceeding its fair value and determined that there was an event-driven impairment in our GM Korea reporting unit. As such we recorded Goodwill impairment charges of $270 million in the three months ended December 31, 2011 within our GMIO segment. These goodwill impairment charges primarily represent the decrease in the fair value-to-U.S. GAAP differences (which originated upon our application of fresh-start reporting in 2009) resulting from the reversal of valuation allowances in Holden.

The impairment charges recorded as a result of the initial adoption of ASU 2010-28 and the annual and event-driven goodwill impairment tests in the year ended December 31, 2011 represent the net decreases in implied goodwill resulting primarily from decreases in the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon our application of fresh-start reporting. The net decreases resulted primarily from a decrease in our nonperformance risk and an improvement in our incremental borrowing rates since July 10, 2009. At certain of the testing dates the net decrease also resulted from an increase in the high quality corporate bond rates utilized to measure our employee benefit obligations and a decrease in credit spreads between high quality corporate bond rates and market interest rates for companies with similar nonperformance risk. In addition, for the purpose of deriving an implied goodwill balance, deterioration in the business outlook for certain reporting units resulted in a reduction in the amount of deferred taxes giving rise to goodwill through the application of Accounting Standards Codification (ASC) 805, “Business Combinations” (ASC 805) and an increase in estimated employee benefit obligations.

In the year ended December 31, 2011 our market capitalization (including the fair value of our preferred stock and warrants) declined and at times it approximated our recorded Total equity. The fair values of our reporting units determined in our annual goodwill impairment test decreased from the prior year, with the fair values of our GME and GM Korea reporting units decreasing below their carrying amounts. The decrease in GME was driven primarily by a higher level of anticipated economic weakness in Europe in the near- and medium-term. The decrease in GM Korea was driven by a higher level of anticipated economic weakness in certain markets to which GM Korea exports coupled with lower forecasted margins resulting from higher raw material costs and unfavorable foreign exchange rates.

The valuation methodologies utilized to perform our goodwill impairment testing were consistent with those used in our application of fresh-start reporting on July 10, 2009 and in any subsequent annual or event-driven goodwill impairment tests and utilized Level 3 measures. Because the fair value of goodwill can be measured only as a residual amount and cannot be determined directly we calculated the implied goodwill for those reporting units failing Step 1 in the same manner that goodwill is recognized in a business combination pursuant to ASC 805.

The following table summarizes the goodwill balances and key assumptions utilized for each of our reporting units that required a Step 2 analysis (dollars and vehicles in millions):

				Industry Sales (c)		Market Share (c)	
	Goodwill (b)	WACC	Long-Term Growth Rates	2011/2012	2015/2016	2011/2012	2015/2016
GME — At January 1, 2011	$3,053	17.0%	0.5%	18.4	22.0	6.6%	7.4%
GME — At March 31, 2011	$1,661	16.5%	0.5%	18.4	22.0	6.6%	7.4%
GME — At October 1, 2011	$1,246	17.5%	0.5%	19.4	21.7	6.7%	7.0%
GME — At December 31, 2011	$1,193	18.5%	0.5%	19.4	22.3	6.3%	6.9%
GM Korea — At October 1, 2011 (a)	$ 615	15.5%	3.0%	81.0	97.1	1.4%	1.1%
GM Korea — At December 31, 2011 (a)	$ 596	15.5%	3.0%	81.0	97.1	1.4%	1.1%
Holden — At December 31, 2011	$ 197	14.0%	2.0%	1.2	1.3	12.5%	12.6%

(a) Industry sales and market share are based on global industry volumes because GM Korea exports vehicles globally.

(b) Goodwill balance is before any adjustments, if any, for goodwill impairments.

(c) GME amounts at January 1, 2011 and March 31, 2011 are 2011 through 2015 and GME amounts at December 31, 2011 are 2012 through 2016. All others amounts are 2012 through 2015.

During our Step 2 analyses we determined the fair values of these reporting units had not increased sufficiently to give rise to implied goodwill other than the goodwill arising from the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon application of fresh-start reporting. On certain of our testing dates our Step 2 analyses indicated GME's, GM Korea's and Holden's implied goodwill was less than their recorded goodwill; therefore, goodwill was adjusted at various dates in the year ended December 31, 2011.

Future goodwill impairments that may be material could be recognized should the recent economic uncertainty continue, our equity price decline on a sustained basis, global economies enter into another recession and industry growth stagnates, or should we release deferred tax asset valuation allowances in certain tax jurisdictions (which could occur in the near future if additional positive evidence becomes available).

In these circumstances future goodwill impairments would largely be affected by decreases in the fair value-to-U.S.-GAAP differences that have occurred subsequent to our application of fresh-start reporting. The decrease may occur upon; (1) an improvement in our credit rating; (2) a decrease in credit spreads between high quality corporate bond rates and market interest rates thus resulting in a decrease in the spread between our employee benefit related obligations under U.S. GAAP and their fair values; and/or (3) a change in the fair values of our estimated employee benefit obligations. A decrease would also occur upon reversal of our deferred tax asset valuation allowances. Any declines would have a negative effect on our earnings that could be material.

Our fair value estimates for annual and event-driven impairment tests assume the achievement of the future financial results contemplated in our forecasted cash flows and there can be no assurance that we will realize that value. The estimates and assumptions used are subject to significant uncertainties, many of which are beyond our control, and there is no assurance that anticipated financial results will be achieved.

Note 13. Intangible Assets, net

Automotive

The following table summarizes the components of Intangible assets, net (dollars in millions):

	Successor							
	December 31, 2011				December 31, 2010			
	Weighted-Average Remaining Amortization Period (Years)	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Weighted-Average Remaining Amortization Period (Years)	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount

Total intangible assets		$15,997	$5,984	$10,013		$16,082	$4,200	$11,882

The following table summarizes the amortization expense related to intangible assets (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Amortization expense related to intangible assets	$1,799	$2,560	$1,584	$44

The following table summarizes estimated amortization expense related to intangible assets in each of the next five years (dollars in millions):

	Estimated Amortization Expense
2012	$1,561
2013	$1,228
2014	$ 611
2015	$ 313
2016	$ 314

Note 14. Restricted Cash and Marketable Securities

Cash and marketable securities subject to contractual restrictions and not readily available are classified as Restricted cash and marketable securities. Restricted cash and marketable securities are invested in accordance with the terms of the underlying agreements.

Automotive

At December 31, 2011 and 2010 we held securities of $0.6 billion and $1.5 billion that were classified as Restricted cash and marketable securities. Refer to Note 7 for additional information on securities classified as Restricted cash and marketable securities.

The following table summarizes the components of Restricted cash and marketable securities (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Current		
Canadian Health Care Trust (HCT) (a)	$ —	$1,008
Other (b)	206	232
Total current restricted cash and marketable securities	206	1,240
Non-current		
Collateral for insurance related activities	407	588
Other (b)	505	572
Total non-current restricted cash and marketable securities	912	1,160
Total restricted cash and marketable securities	$1,118	$2,400

(a) Under the terms of an escrow agreement between General Motors of Canada Limited (GMCL), the Export Development Canada (EDC) and an escrow agent, GMCL established an $893 million escrow to fund certain of its healthcare obligations. In the year ended December 31, 2011 $772 million of the escrow funds were used to fund the healthcare obligations and the escrow arrangement was terminated. The remaining funds held in escrow of $225 million were no longer subject to restrictions and were released to us.

(b) Includes amounts related to various letters of credit, deposits, escrows and other cash collateral requirements.

Automotive Financing — GM Financial

The following table summarizes the components of Restricted cash (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Securitization notes payable and credit facilities	$1,056	$1,057
Other (a)	59	33
Total restricted cash	$1,115	$1,090

(a) Pledged in association with derivative transactions and cash collections related to leases serviced for a third party.

Note 15. Variable Interest Entities

Consolidated VIEs

Automotive

VIEs that we do not control through a majority voting interest that are consolidated because we are the primary beneficiary include certain vehicle assembling, manufacturing, and selling venture arrangements, the most significant of which is GM Egypt. We consolidated GM Egypt in January 2010 in connection with our adoption of amendments to ASC 810, "Consolidation". GM Egypt, a 31% owned operating entity, assembles and manufactures vehicles. Certain voting and other rights permit us to direct those activities of GM Egypt that most significantly affect its economic performance. At December 31, 2011 and 2010 (1) Total assets recognized for these consolidated VIEs were $463 million and $481 million, which were comprised of Cash and cash equivalents, Accounts and notes receivables, net, Inventories, and Property, net; and (2) Total liabilities were $298 million and $307 million, which were comprised of Accounts payable (principally trade), and Accrued and other liabilities. Liabilities recognized as a result of consolidating VIEs generally do not represent claims against us or our other subsidiaries and assets recognized generally are for the benefit of the VIEs' operations and cannot be used to satisfy our obligations. In the years ended December 31, 2011 and 2010 Total net sales and revenue recorded for these consolidated VIEs were $748 million and $753 million and Net income was $61 million and $84 million, the most significant of which were attributable to GM Egypt. Prior to 2010, Total assets and liabilities recognized were not significant.

GM Korea, a non-wholly owned consolidated subsidiary that we control through a majority voting interest, is also a VIE because in the future it may require additional subordinated financial support. The creditors of GM Korea's short-term debt of $171 million and $70 million, current derivative liabilities of $44 million and $111 million and long-term debt of $7 million and $835 million at December 31, 2011 and 2010 do not have recourse to our general credit. In February 2011 we provided a guarantee to a minority shareholder in GM Korea to repurchase GM Korea's preferred shares according to the redemption schedule should GM Korea not repurchase the shares. This guarantee decreased the amount of long-term debt which did not have recourse to our general credit in the year ended December 31, 2011.

Automotive Financing — GM Financial

GM Financial finances its loan and lease origination volume through the use of credit facilities and securitization trusts that issue asset-backed securities to investors. GM Financial retains a residual interest in these entities and is not required to provide any additional financial support to its sponsored credit facilities and securitization SPEs. The SPEs are considered VIEs because they do not have sufficient equity at risk and are consolidated because GM Financial has the power over those activities that most significantly affect the economic performance of the SPEs. Refer to Notes 5, 6 and 17 for additional information on GM Financial's involvement with the SPEs. The finance receivables, leased assets and other assets held by these subsidiaries are not available to our creditors or creditors of our other subsidiaries.

Nonconsolidated VIEs

Automotive

VIEs that are not consolidated include certain vehicle assembling, manufacturing, and selling venture arrangements and other automotive related entities to which we provide financial support, including American Axle and Manufacturing Holdings, Inc. (American Axle), Ally Financial and HKJV. We concluded these entities are VIEs because they do not have sufficient equity at risk or will require additional subordinated financial support. We currently lack the power through voting or similar rights to direct those activities of these entities that most significantly affect their economic performance. Our variable interests in these nonconsolidated VIEs include accounts and notes receivable, equity in net assets, guarantees and financial support, some of which were provided to certain current or previously divested suppliers in order to ensure that supply needs for production were not disrupted due to a supplier's liquidity concerns or possible shutdowns.

The following table summarizes the amounts recorded for nonconsolidated VIEs and the related off-balance sheet guarantees and maximum exposure to loss, excluding Ally Financial that is disclosed in Note 28 (dollars in millions):

	December 31, 2011		December 31, 2010	
	Carrying Amount	Maximum Exposure to Loss	Carrying Amount	Maximum Exposure to Loss
Assets				
Accounts and notes receivable, net	$ 1	$ 1	$108	$108
Equity in net assets of nonconsolidated affiliates	190	186	274	274
Other assets	1	1	60	59
Total assets	$192	$188	$442	$441
Liabilities				
Accounts payable (principally trade)	$ —	$ —	$ 1	$ —
Other liabilities	198	—	44	—
Total liabilities	$198	$ —	$ 45	$ —
Off-Balance Sheet				
Loan commitments		$ 15		$100
Other guarantees		—		3
Other liquidity arrangements		220		223
Total guarantees and liquidity arrangements		$235		$326

Refer to Notes 10 and 28 for additional information on Ally Financial, including our maximum exposure to loss under agreements with Ally Financial and our recorded investment in Ally Financial. Refer to Notes 4 and 10 for additional information on our investment in HKJV.

Note 16. Accrued Liabilities and Other Liabilities and Deferred Income Taxes

Automotive

The following table summarizes the components of Accrued liabilities and Other liabilities and deferred income taxes (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Current		
Dealer and customer allowances, claims and discounts	$ 6,820	$ 6,885
Deposits from rental car companies	4,883	5,037
Deferred revenue	1,128	1,104
Policy, product warranty and recall campaigns	3,061	2,587
Payrolls and employee benefits excluding postemployment benefits	1,993	2,141
Taxes other than income taxes	782	1,083
Other	4,089	5,207

Policy, product warranty and recall campaigns	3,539	4,202
Employee benefits excluding postemployment benefits	1,380	1,549
Postemployment benefits including facility idling reserves	1,674	1,574
Deferred income taxes	913	1,207
Other	3,546	3,736
Total other liabilities and deferred income taxes	$12,336	$13,021

The following table summarizes activity for policy, product warranty, recall campaigns and certified used vehicle warranty liabilities (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Beginning balance	$ 6,789	$ 7,030	$ 7,193	$ 8,491
Warranties issued and assumed in period	3,062	3,204	1,388	1,069
Payments	(3,740)	(3,662)	(1,797)	(1,851)
Adjustments to pre-existing warranties	565	210	66	(153)
Effect of foreign currency translation	(76)	7	180	63
Liability adjustment, net due to the deconsolidation of Saab (a)	—	—	—	(77)
Ending balance	$ 6,600	$ 6,789	$ 7,030	7,542
Effect of application of fresh-start reporting				(349)
Ending balance including effect of application of fresh-start reporting				$ 7,193

(a) In August 2009 Saab's warranty liability was classified as held for sale at December 31, 2009.

Note 17. Short-Term and Long-Term Debt

Automotive

Short-Term Debt and Long-Term Debt

The following table summarizes the components of our short-term debt and long-term debt (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Short-term debt		
Wholesale financing (a)	$ 1,081	$ 1,054
Korea mandatorily redeemable preferred shares	312	—
Capital leases	139	129
Other short-term debt and current portion of long-term debt	150	433
Total automotive short-term debt and current portion of long-term debt	1,682	1,616
Long-term debt		
HCT Notes	1,141	—
Korea mandatorily redeemable preferred shares	666	835
Capital leases	853	532
Other long-term debt (a)	953	1,647
Total long-term debt	3,613	3,014
Total automotive debt (b)	$ 5,295	$ 4,630
Fair value of debt (c)	$ 5,467	$ 4,840
Available under short-term line of credit agreements	$ 560	$ 445
Available under long-term line of credit agreements	$ 5,307	$ 5,474
Interest rate range on outstanding debt (d)	0.0–19.0%	0.0–16.7%
Weighted-average interest rate on outstanding short-term debt (d)	5.0%	5.7%
Weighted-average interest rate on outstanding long-term debt (d)	3.6%	2.7%

(a) Includes debt obligations to Ally Financial of $1.1 billion at December 31, 2011 and 2010.

(b) Net of a $1.6 billion and $1.9 billion discount at December 31, 2011 and 2010.

(c) We determined the fair value of debt based on a discounted cash flow model which used benchmark yield curves plus a spread that represented the yields on traded bonds of companies with comparable credit ratings and risk profiles.

(d) Includes coupon rates on debt denominated in various foreign currencies and interest free loans.

The following table summarizes our short-term and long-term debt by collateral type (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Unsecured debt	$3,065	$2,011
Secured debt (a)	1,238	1,958
Capital leases	992	661
Total automotive debt	$5,295	$4,630

(a) Includes wholesale financing of dealer inventory.

Wholesale Financing

Wholesale financing represents arrangements, primarily with Ally Financial, where cash is received in advance of the final sale of vehicles, parts and accessories to our dealers or ultimate consumer. These obligations typically settle through the sale and delivery of our product and generally do not require cash outflows to settle. Balances under these facilities fluctuate period to period based on the volume of vehicles financed.

HCT Notes

As part of the establishment of the Health Care Trust (HCT) to provide retiree healthcare benefits to certain active and retired employees in Canada, we issued notes to the HCT with a fair value of $1.1 billion in October 2011. We recorded a premium of $42 million at issuance. The notes accrue interest at an annual rate of 7.0%. The notes are due in periodic installments through 2018. We may prepay these notes at any time. Refer to Note 18 for additional information on the HCT settlement.

Korea Preferred Shares

GM Korea has non-convertible mandatorily redeemable preferred shares outstanding of $978 million and $835 million at December 31, 2011 and December 31, 2010. Dividends accrue at a rate of 2.5% through October 2012 at which time the rate increases to 7.0% and remains in effect through 2017. The preferred shares are redeemable in periodic installments through 2017. In February 2011 we provided a guarantee to repurchase the preferred shares according to the redemption schedule if GM Korea does not have sufficient legally distributable earnings to redeem the shares. GM Korea has the option to redeem the shares early provided sufficient legally distributable earnings exist.

Secured Revolving Credit Facility

In October 2010 we entered into a five year, $5.0 billion secured revolving credit facility which includes a letter of credit sub-facility of up to $500 million. Additionally, we can use collateral under the revolving credit facility to support up to $2.0 billion of other obligations. While we do not believe that we will draw on the secured revolving credit facility to fund operating activities, the facility is expected to provide additional liquidity and financing flexibility. Availability under the secured revolving credit facility is subject to borrowing base restrictions.

Our obligations under the secured revolving credit facility are guaranteed by certain of our domestic subsidiaries and by substantially all of our domestic assets, including accounts receivable, inventory, property, plants, and equipment, real estate, intercompany loans, intellectual property and trademarks. Obligations are also secured by the equity interests in certain of our direct domestic subsidiaries, as well as up to 65% of the voting equity interests in certain of our direct foreign subsidiaries, in each case, subject to certain exceptions. The collateral securing the secured revolving credit facility does not include, among other assets, cash, cash equivalents, marketable securities, as well as our investment in GM Financial and our equity interests in our China JVs and in GM Korea. If we receive an investment grade corporate rating from two or more of the credit rating agencies: Fitch Ratings, Moody's Investor Service and Standard & Poor's, we may no longer have to post collateral under the terms of the facility.

Interest rates on obligations under the secured revolving credit facility are based on prevailing per annum interest rates for Eurodollar loans or an alternative base rate plus an applicable margin, in each case, based upon the credit rating assigned to the debt evidenced by the secured revolving credit facility.

UST Credit Agreement

On July 10, 2009 we entered into a loan agreement with the UST, as amended (UST Credit Agreement) and assumed debt of $7.1 billion maturing on July 10, 2015 which Old GM incurred under its secured superpriority debtor-in-possession credit agreement with the UST and EDC (DIP Facility). In April 2010 we repaid the full outstanding amount of $4.7 billion using funds from our escrow account. Amounts repaid under the agreement may not be reborrowed.

While we have repaid the loans from the UST in full, certain of the covenants in the UST Credit Agreement and the executive compensation and corporate governance provisions of Section 111 of the Emergency Economic Stabilization Act of 2008, as amended, including the Interim Final Rule implementing Section 111 (the Interim Final Rule), remain in effect until the earlier to occur of the UST ceasing to own direct or indirect equity interests in us or our ceasing to be a recipient of exceptional financial assistance, as determined pursuant to the Interim Final Rule, and impose obligations on us with respect to, among other things, certain expense policies, executive privileges and compensation requirements.

VEBA Notes

In 2009 in connection with the 363 Sale, we entered into the VEBA Note Agreement and issued notes (VEBA Notes) of $2.5 billion to the UAW Retiree Medical Benefits Trust (New VEBA). The VEBA Notes had an implied interest rate of 9.0% per annum. In October 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion, which resulted in a gain of $198 million included in Gain (loss) on extinguishment of debt.

Canadian Loan Agreement and EDC Loan Facility

On July 10, 2009 we entered into the amended and restated loan agreement with the EDC and assumed a $1.3 billion term loan (Canadian Loan) from the EDC under a loan and security agreement entered into in April 2009 (EDC Loan Facility) maturing on July 10, 2015. In March 2010 and December 2009 we made quarterly payments of $194 million and $192 million on the Canadian Loan. In April 2010 we repaid in full the outstanding amount of the Canadian Loan of $1.1 billion. Amounts repaid under the agreement may not be reborrowed.

Technical Defaults and Covenant Violations

Several of our loan facilities, including our secured revolving credit facility require compliance with certain financial and operational covenants as well as regular reporting to lenders, including providing certain subsidiary financial statements. Failure to meet certain of these requirements may result in a covenant violation or an event of default depending on the terms of the agreement. An event of default may allow lenders to declare amounts outstanding under these agreements immediately due and payable, to enforce their interests against collateral pledged under these agreements or restrict our ability to obtain additional borrowings. No technical defaults or covenant violations existed at December 31, 2011.

Automotive Financing — GM Financial

The following table summarizes the estimated fair value, carrying amount and various methods and assumptions used in valuing GM Financial's debt (dollars in millions):

	Successor			
	December 31, 2011		December 31, 2010	
	Carrying Amount	Estimated Fair Value (a)	Carrying Amount	Estimated Fair Value (a)
Credit facilities				
Medium-term note facility	$ 294	$ 294	$ 490	$ 490
Syndicated warehouse facility	621	621	278	278
Lease funding facilities	181	181	—	—
Bank funding facility	3	3	64	64
Total credit facilities	1,099	1,099	832	832
Securitization notes payable	6,938	6,946	6,128	6,107
Senior notes and convertible senior notes (b)	501	511	72	72
Total GM Financial debt	$8,538	$8,556	$7,032	$7,011

(a) Credit facilities have variable rates of interest and maturities of three years or less. The carrying amount is considered to be a reasonable estimate of fair value. The fair values of the securitization notes payable and senior notes and convertible senior notes are based on quoted market prices, when available. If quoted market prices are not available, the fair value is estimated by discounting future net cash flows expected to be settled using a current risk-adjusted rate.

(b) Senior notes and convertible senior notes are included in GM Financial Other liabilities.

Senior Notes and Convertible Senior Notes

In June 2011 GM Financial issued 6.75% senior notes of $500 million which are due in June 2018 with interest payable semiannually. In July 2011 proceeds of $71 million from this offering were used to redeem all of GM Financial's outstanding 8.50% senior notes due in 2015. The remaining proceeds are to be used for general corporate purposes.

As a result of the acquisition of AmeriCredit, the holders of previous senior notes and convertible senior notes had the right to require GM Financial to repurchase some or all of their notes as provided in the indentures for such notes. During the three months ended December 31, 2010 GM Financial repurchased convertible senior notes and senior notes of $463 million.

Credit Facilities

The following table summarizes further details regarding terms and availability of GM Financial's credit facilities at December 31, 2011 (dollars in millions):

	Successor			
	Facility Amount	Advances Outstanding	Assets Pledged	Restricted Cash Pledged (a)
Syndicated warehouse facility (b)	$2,000	$ 621	$ 821	$ 17
U.S. lease warehouse facility (c)	$ 600	—	—	—
Canada lease warehouse facility (d)	$ 589	181	274	1
Medium-term note facility (e)		294	322	84
Bank funding facility		3	—	—
		$1,099	$1,417	$102

(a) These amounts do not include cash collected on finance receivables pledged of $35 million which is included in GM Financial Restricted cash at December 31, 2011.

(b) In February 2011 GM Financial extended the maturity date of the syndicated warehouse facility to May 2012 and increased the borrowing capacity to $2.0 billion from $1.3 billion.

(c) In January 2012 GM Financial extended the maturity date of the lease warehouse facility for lease originations in the U.S. to January 2013. Borrowings on the facility are collateralized by leased assets.

(d) In July 2011 GM Financial Canada Leasing Ltd., a subsidiary of GM Financial entered into a lease warehouse facility for lease originations in Canada that matures in July 2012. Borrowings on the facility are collateralized by leased assets. The facility amount represents CAD $600 million at December 31, 2011.

(e) The revolving period under this facility has ended and the outstanding debt balance will be repaid over time based on the amortization of the receivables pledged until October 2016 when any remaining amount outstanding will be due and payable.

Credit Facility Covenants

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under certain of its credit facilities. The credit facilities contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios including portfolio net loss and delinquency ratios, and pool level cumulative net loss ratios, as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements, the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements or restrict GM Financial's ability to obtain additional borrowings under this facility. At December 31, 2011 GM Financial was in compliance with all covenants in its credit facilities. Refer to Note 14 for additional discussion on GM Financial's restricted cash.

Securitization Notes Payable

Securitization notes payable represents debt issued by GM Financial in securitization transactions. Debt issuance costs are amortized over the expected term of the securitizations on an effective yield basis. As a result of the acquisition, GM Financial recorded a purchase accounting premium of $133 million that is being amortized over the expected term of the notes. At December 31, 2011 and 2010 unamortized purchase accounting premium of $43 million and $107 million is included in Securitization notes payable.

The following table summarizes Securitization notes payable (dollars in millions):

	Successor					
	December 31, 2011					December 31, 2010
Year of Transactions	Maturity Dates (a)	Original Note Amounts	Original Weighted-Average Interest Rates	Total Receivables Pledged	Note Balance	Note Balance
2006	January 2014	$ 1,200	5.4%	$ 69	$ 63	$ 537
2007	October 2013 – March 2016	$1,000 - 1,500	5.2% - 5.5%	844	794	1,610
2008	October 2014 – April 2015	$ 500 - 750	6.0% - 10.5%	503	171	501
2009	January 2016 – July 2017	$ 227 - 725	2.7% - 7.5%	416	298	494
2010	June 2016 – January 2018	$ 200 - 850	2.2% - 3.8%	2,015	1,756	2,683
2011	February 2017 – March 2019	$ 800 - 1,000	2.4% - 2.9%	4,078	3,813	N/A
BV2005				N/A	N/A	28
LB2006				N/A	N/A	168
				$7,925	6,895	6,021
Purchase accounting premium					43	107
Total securitization notes payable					$6,938	$6,128

(a) Maturity dates represent final legal maturity of securitization notes payable. Securitization notes payable are expected to be paid based on amortization of the finance receivables pledged to the trusts.

At the time of securitization of finance receivables, GM Financial is required to pledge assets equal to a specified percentage of the securitization pool to support the securitization transaction. The assets pledged consist of cash deposited to a restricted account and additional receivables delivered to the trust, which create overcollateralization. The securitization transactions require the percentage of assets pledged to support the transaction to increase until a specified level is attained. Excess cash flows generated by the trusts are added to the restricted cash account or used to pay down outstanding debt in the trusts, creating overcollateralization until the targeted percentage level of assets has been reached. Once the targeted percentage level of assets is reached and maintained, excess cash flows generated by the trusts are released to GM Financial as distributions from trusts. As the balance of the securitization pool declines, the amount of pledged assets needed to maintain the required percentage level is reduced. Assets in excess of the required percentage are also released to GM Financial as distributions from trusts.

Securitization Notes Payable Covenants

With respect to GM Financial's securitization transactions covered by a financial guaranty insurance policy, agreements with the insurers provide that if portfolio performance ratios (delinquency, cumulative default or cumulative net loss) in a trust's pool of receivables exceed certain targets, the specified credit enhancement levels would be increased.

Agreements with GM Financial's financial guaranty insurance providers contain additional specified targeted portfolio performance ratios that are higher than those described in the preceding paragraph. If, at any measurement date, the targeted portfolio performance ratios with respect to any insured trust were to exceed these higher levels, provisions of the agreements permit GM Financial's financial guaranty insurance providers to declare the occurrence of an event of default and terminate GM Financial's servicing rights to the receivables transferred to that trust. At December 31, 2011 no such servicing right termination events have occurred with respect to any of the trusts formed by GM Financial.

Interest Expense

Consolidated

The following table summarizes interest expense (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Loans from UST (a)	$ —	$ 117	$226	$4,006
Canadian loan (b)	—	26	46	173
VEBA Notes	—	166	—	—
Old GM contingent convertible debt	—	—	—	176
Ally Financial, primarily wholesale financing	63	243	121	100
Other	477	546	301	973
Total Automotive interest expense	540	1,098	694	5,428
GM Financial interest expense	204	37		
Total interest expense	$744	$1,135	$694	$5,428

(a) Includes Old GM's borrowings under the UST Loan Agreement, as amended, entered into in December 2008 (UST Loan Agreement) and DIP Facility.

(b) Includes Old GM's EDC Loan Facility.

Long-Term Debt Maturities

Consolidated

The following table summarizes contractual long-term debt maturities including capital leases (dollars in millions):

	At December 31, 2011		
	Automotive	Automotive Financing (a)	Total
2012	$ 493	$4,263	$ 4,756
2013	164	1,482	1,646
2014	269	1,022	1,291
2015	404	720	1,124
2016	295	422	717
Thereafter	4,038	586	4,624
	$5,663	$8,495	$14,158

(a) GM Financial credit facilities and securitization notes payable are based on expected payoff date. Senior notes and convertible senior notes principal amounts are based on maturity.

At December 31, 2011 future interest payments on automotive capital lease obligations were $755 million. GM Financial does not have capital lease obligations at December 31, 2011.

Old GM

Secured Revolving Credit Facility, U.S. Term Loan and Secured Credit Facility

In March 2009 Old GM entered into an agreement to amend its $1.5 billion U.S. term loan. Because the terms of the amended U.S. term loan were substantially different than the original terms, due primarily to the revised borrowing rate, Old GM accounted for the amendment as a debt extinguishment. As a result, Old GM recorded the amended U.S. term loan at fair value and recorded a gain on the extinguishment of the original loan facility of $906 million in the period January 1, 2009 through July 9, 2009.

In connection with the relief sought under U.S. bankruptcy laws (Chapter 11 Proceedings), Old GM's $4.5 billion secured revolving credit facility, $1.5 billion U.S. term loan and $125 million secured credit facility were paid in full on June 30, 2009. Old GM recorded a loss of $958 million in Reorganization gains, net related to the extinguishments of the debt due primarily to the face value of the U.S. term loan exceeding the carrying amount.

Contractual interest expense not accrued or recorded on pre-petition debt was $200 million in the period January 1, 2009 through July 9, 2009 (includes contractual interest expense related to contingent convertible debt of $44 million).

Contingent Convertible Debt

Old GM adopted the provisions of ASC 470-20, "Debt with Conversion and Other Options" (ASC 470-20) in January 2009, with retrospective application to prior periods. At July 9, 2009 Old GM's contingent convertible debt outstanding was $7.4 billion, comprised of principal of $7.9 billion and unamortized discounts of $551 million. Upon adoption of ASC 470-20, the effective interest rate on Old GM's outstanding contingent convertible debt ranged from 7.0% to 7.9%. In connection with the 363 Sale, MLC retained the contingent convertible debt.

The following table summarizes the components of interest expense related to contingent convertible debt (dollars in millions):

	Predecessor
	January 1, 2009 Through July 9, 2009
Interest accrued or paid (a)	$176
Amortization of discounts	51
Interest expense	$227

(a) Contractual interest expense not accrued or recorded on pre-petition debt as a result of the Chapter 11 Proceedings totaled $44 million in the period January 1, 2009 through July 9, 2009.

Note 18. Pensions and Other Postretirement Benefits

Consolidated

Employee Pension and Other Postretirement Benefit Plans

Defined Benefit Pension Plans

Defined benefit pension plans covering eligible U.S. hourly employees (hired prior to October 15, 2007) and Canadian hourly employees generally provide benefits of negotiated, stated amounts for each year of service and supplemental benefits for employees who retire with 30 years of service before normal retirement age. Non-skilled trade hourly U.S. employees hired after October 15, 2007 participate in a defined benefit cash balance plan which was frozen on January 2, 2012 and will be terminated in 2012 subject to regulatory approvals. In September 2010 the U.S. hourly defined benefit pension plan was amended to create a legally separate new defined benefit pension plan for entry level participants who are covered by the cash balance benefit formula. The underlying benefits offered to plan participants were unchanged. The benefits provided by the defined benefit pension plans covering eligible U.S. (hired prior to January 1, 2001) and Canadian salaried employees and employees in certain other non-U.S. locations are generally based on years of service and compensation history. There is also an unfunded nonqualified pension plan covering certain U.S. executives for service prior to January 1, 2007, and it is based on an "excess plan" for service after that date.

In January 2012 we amended the U.S. salaried pension plan to cease the accrual of additional benefits effective September 30, 2012. Active plan participants will receive additional contributions in the defined contribution plan starting in October 2012. This amendment will result in a curtailment, with an insignificant expense effect, and reduce the projected benefit obligation by approximately $300 million.

Pension Contributions

The funding policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulations or to directly pay benefit payments where appropriate. At December 31, 2011 all legal funding requirements had been met. We expect to contribute $100 million to our U.S. non-qualified plans and $740 million to our non-U.S. pension plans in 2012.

The following table summarizes contributions made to the defined benefit pension plans or direct payments to plan beneficiaries (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
U.S. hourly and salaried	$1,962	$4,095	$ 31	$ 57
Non-U.S.	836	777	4,287	529
Total	$2,798	$4,872	$4,318	$586

We made a contribution in January 2011 to our U.S. hourly and salaried defined benefit pension plans of 61 million shares of our common stock valued at $2.2 billion for funding purposes at the time of contribution. The contributed shares qualified as a plan asset for funding purposes at the time of contribution and as a plan asset valued at $1.9 billion for accounting purposes in July 2011. This was a voluntary contribution above our funding requirements for the pension plans.

Other Postretirement Benefit Plans

Certain hourly and salaried defined benefit plans provide postretirement medical, dental, legal service and life insurance to eligible U.S. and Canadian retirees and their eligible dependents. Certain other non-U.S. subsidiaries have postretirement benefit plans, although most non-U.S. employees are covered by government sponsored or administered programs.

OPEB Contributions

The following table summarizes contributions to the U.S. OPEB plans (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Employer contributions	$426	$651	$1,528	$1,947
Plan participants' contributions	13	53	172	169
Total contributions	$439	$704	$1,700	$2,116

For the year ended December 31, 2011 we also contributed $1.9 billion to the independent HCT consisting of restricted cash of $0.8 billion and notes payable of $1.1 billion.

Defined Contribution Plans

We have a defined contribution plan for eligible U.S. salaried employees. This plan provides discretionary matching contributions which we instituted in October 2009. U.S. hourly employees hired after October 1, 2007 participate in a defined contribution plan. Contributions are also made to certain non-U.S. defined contribution plans.

The following table summarizes our consolidated contributions to defined contribution plans (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Total contributions	$297	$241	$100	$70

Significant Plan Amendments, Benefit Modifications and Related Events

Remeasurements

The change in benefit obligation for the years ended December 31, 2011 and 2010 include interim remeasurements. For the year ended December 31, 2010 there were no significant remeasurements, curtailments or settlements as a result of changes to the underlying benefits offered to the plan participants.

In the three months ended September 30, 2011 a plan which provides legal services to U.S. hourly employees and retirees was remeasured as a result of our current labor agreement provisions which terminate the plan effective December 31, 2013. The termination has been accounted for as a negative plan amendment resulting in a decrease in the OPEB liability and a pre-tax increase of $266 million in the prior service credit component of Accumulated other comprehensive income, which will be amortized through December 31, 2013.

Canadian Health Care Trust

In October 2011 pursuant to a June 2009 agreement between GMCL and the CAW an independent HCT was implemented to provide retiree healthcare benefits to certain active and retired employees. Concurrent with the implementation of the HCT, GMCL was legally released from all obligations associated with the cost of providing retiree healthcare benefits to CAW retirees and surviving spouses by the class action process and to CAW active employees as of June 8, 2009. We accounted for the related termination of CAW hourly retiree healthcare benefits as a settlement, and recorded a gain of $749 million as a component of Automotive cost of sales. The settlement gain represents the difference between the healthcare plan obligation of $3.1 billion (as of the implementation date) and the fair value of the notes and restricted cash contributed totaling $1.9 billion, and recognition of $414 million of accumulated other comprehensive losses.

Pension and OPEB Obligations and Plan Assets

The following tables summarize the change in benefit obligations and related plan assets (dollars in millions):

	Successor			
	Year Ended December 31, 2011

U.S. pension plan service cost include administrative expenses of $138 million, $97 million, and $38 million for the years ended December 31, 2011 and 2010, and the period July 10, 2009 through December 31, 2009. Weighted-average assumptions used to determine net expense are determined at the beginning of the period and updated for remeasurements.

Assumptions

Healthcare Trend Rate

As a result of modifications made to healthcare plans in connection with the 363 Sale, there are no significant uncapped U.S. healthcare plans remaining, therefore, the healthcare cost trend rate does not have a significant effect on our U.S. plans. The implementation of the HCT at October 31, 2011 eliminated significant exposure to changes in the healthcare cost trend rate for non-U.S. plans.

	Successor
	December 31, 2010
Assumed Healthcare Trend Rates	Non-U.S. Plans
Initial healthcare cost trend rate	5.6%
Ultimate healthcare cost trend rate	3.4%
Number of years to ultimate trend rate	8

Healthcare trend rate assumptions are determined for inclusion in healthcare OPEB valuation at each remeasurement. The healthcare trend rates are developed using historical cash expenditures and near-term outlook for retiree healthcare. This information is supplemented with information gathered from actuarial based models, information obtained from healthcare providers and known significant events.

The following table summarizes the effect of a one-percentage point change in the assumed healthcare trend rates (dollars in millions):

	Successor	
	Non-U.S. Plans	
Change in Assumption	Effect on 2011 Aggregate Service and Interest Cost	Effect on December 31, 2010 APBO
One percentage point increase	$ 31	$ 491
One percentage point decrease	$(25)	$(392)

Investment Strategies and Long-Term Rate of Return

Detailed periodic studies conducted by outside actuaries and an internal asset management group, consisting of an analysis of capital market assumptions and employing Monte-Carlo simulations, are used to determine the long-term strategic mix among asset classes, risk mitigation strategies, and the expected return on asset assumptions for U.S. pension plans. The U.S. study includes a review of alternative asset allocation and risk mitigation strategies, anticipated future long-term performance of individual asset classes, risks evaluated using standard deviation techniques and correlations among the asset classes that comprise the plans' asset mix. Similar studies are performed for the significant non-U.S. pension plans with the assistance of outside actuaries and asset managers. While the studies incorporate data from recent fund performance and historical returns, the expected return on plan asset assumptions are determined based on long-term, prospective rates of return.

The strategic asset mix and risk mitigation strategies for the plans are tailored specifically for each plan. Individual plans have distinct liabilities, liquidity needs, and regulatory requirements. Consequently, there are different investment policies set by individual plan fiduciaries. Although investment policies and risk mitigation strategies may differ among plans, each investment strategy is considered to be optimal in the context of the specific factors affecting each plan.

In setting new strategic asset mixes, consideration is given to the likelihood that the selected mixes will effectively fund the projected pension plan liabilities, while aligning with the risk tolerance of the plans' fiduciaries. The strategic asset mixes for U.S. defined benefit pension plans are increasingly designed to satisfy the complementary objectives of reaching fully funded positions (market value of assets equal to or greater than the present value of the liabilities) and mitigating the possibility of a deterioration in funded status.

Derivatives may be used to provide cost effective solutions for rebalancing investment portfolios, increasing or decreasing exposure to various asset classes and for mitigating risks, primarily interest rate and currency risks. Equity and fixed income managers are permitted to utilize derivatives as efficient substitutes for traditional physical securities. Interest rate derivatives may be used to adjust portfolio duration to align with a plan's targeted investment policy. Alternative investment managers are permitted to employ leverage, including through the use of derivatives, which may alter economic exposure.

In December 2011 an analysis of the investment policy was completed for the U.S. pension plans considering: (1) our overall balance sheet derisking strategy; (2) the plans are closed to new participants; and (3) the 2011 UAW negotiations did not increase pension benefits. Separate long-term strategies were developed for the salaried and hourly U.S. pension plans which represent 35% and 65% of total U.S. pension plans' assets. Using an approach which matches plan assets and liability cash flows to minimize risk of funded status volatility, the expected weighted-average return on assets was reduced from 8.0% at December 31, 2010 to 5.7% for the salaried pension plan and to 6.5% for the hourly pension plan. The resulting weighted-average return is 6.2% The overall decrease is primarily due to a different asset mix consisting of a higher proportion of fixed income investments compared to last year. The salaried pension plan has a higher target proportion of fixed income investments than the hourly pension plan and therefore, a lower expected return on assets than the hourly pension plan.

The expected return on plan assets used in determining pension expense for non-U.S. plans is determined in a similar manner to the U.S. plans. The rates of 6.5% and 7.4% for the years ended December 31, 2011 and 2010 represent weighted-average rates of all of the funded non-U.S. plans.

Target Allocation Percentages

The following table summarizes the target allocations by asset category for U.S. and non-U.S. defined benefit pension plans:

	Successor			
	December 31, 2011		December 31, 2010	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
Asset Categories				
Equity	14%	34%	29%	36%
Debt	66%	45%	41%	48%
Real estate	5%	9%	8%	9%
Other (a)	15%	12%	22%	7%
Total	100%	100%	100%	100%

(a) Includes private equity and absolute return strategies which primarily consist of hedge funds.

Investment in Trusts

The assets of the U.S. hourly and salaried pension plans are held by various master trusts and group trusts (collectively "Trusts"). The master trusts hold only GM sponsored pension plan assets. The group trusts permit the commingling of the assets of more than one employee benefit plan, including plans of unrelated sponsors. The plans that participate in the Trusts own an undivided beneficial interest in the underlying assets and changes therein of the respective Trusts. During 2011 certain assets held by several group trusts for the benefit of unrelated plan sponsors were liquidated which resulted in the beneficial interest in the remaining assets within these group trusts becoming solely owned by the GM sponsored pension plans. The residual beneficial interest of unrelated benefit plan sponsors in the other group trusts is not significant. The following fair value measurement tables reflect the underlying assets held by the Trusts for the benefit of our U.S. pension plans on a combined basis and exclude the remaining beneficial interest in the assets within the group trusts owned by unrelated benefit plan sponsors.

Assets and Fair Value Measurements

The following tables summarize the fair value of defined benefit pension plan assets by asset class (dollars in millions):

Transfers In and/or Out of Level 3

There were no significant transfers of U.S. plan assets into and/or out of Level 3 during the year ended December 31, 2011.

Significant transfers of U.S. plan assets out of Level 3 into Level 2 for the year ended December 31, 2010 included $1.3 billion, of government and agency debt securities, $0.7 billion of corporate debt securities, $0.7 billion of non-agency mortgage and asset-backed securities and $4.7 billion of investment funds. Except for investment funds, these transfers were the result of improved pricing transparency of these securities which allowed management to corroborate observable pricing inputs received from independent pricing services. Investment fund transfers were the result of management's ability to validate certain liquidity and redemption restrictions that permit the plans to redeem their interests at NAV in the near-term (generally within 90 days).

There were no significant transfers of non-U.S. plan assets into and /or out of Level 3 during the years ended December 31, 2011 and 2010.

Investment Fund Strategies

Equity funds include funds that invest in U.S. common and preferred stocks as well as similar equity securities issued by companies incorporated, listed or domiciled in developed and/or emerging markets countries. Certain fund managers may attempt to profit from security mispricing in equity markets. Equity long/short managers typically construct portfolios consisting of long and short positions, which may be determined by a variety of techniques including fundamental, quantitative and technical analysis. Index funds, exchange traded funds and derivatives may be used for hedging purposes to limit exposure to various risk factors.

Fixed income funds include investments in high quality and high yield funds as well as in credit arbitrage funds. High quality fixed income funds invest in U.S. government securities, investment-grade corporate bonds, mortgages and asset-backed securities. High yield fixed income funds invest in U.S. high yield fixed income securities issued by corporations which are rated below investment grade, are unrated but are believed by the investment manager to have similar risk characteristics or are rated investment grade or higher but are priced at yields comparable to securities rated below investment grade and believed to have similar risk characteristics. Credit arbitrage funds invest in a variety of credit and credit-related instruments that allow fund managers to profit from mispricing of these credit instruments. Certain derivatives may be used for hedging purposes by some fixed income fund managers to limit exposure to various risk factors.

Funds of hedge funds include funds that invest in a portfolio of hedge funds. Funds of hedge fund managers typically seek to achieve their objectives by allocating capital across a broad array of funds and/or investment managers.

Global macro funds include funds that enter into leveraged transactions utilizing a variety of equity, fixed income and derivative instruments to benefit from anticipated price movements of stock, interest rates, foreign exchange currencies and physical commodities markets while minimizing downside risk. Global macro managers may invest in a variety of markets to participate in expected market movements.

Multi-strategy funds include funds that invest in broadly diversified portfolios of equity, fixed income and derivative instruments. Certain funds may also employ multiple alternative investment strategies, in combination, such as global macro, event-driven (which seeks to profit from opportunities created by significant transactional events such as spin-offs, mergers and acquisitions, bankruptcy reorganizations, recapitalizations and share buybacks) and relative value (which seeks to take advantage of pricing discrepancies between instruments including equities, debt, options and futures).

Other investment funds generally consist of funds that employ broad-ranging strategies and styles. The objective of such funds is to deliver returns having relatively low volatility and correlation to movements in major equity and bond markets. Funds in this category employ single strategies such as event-driven or relative value.

Private equity and debt investments principally consists of investments in private equity and debt funds. These investments are made to gain exposure to and benefit from long-term equity investments in private companies, including leveraged buy-outs, venture capital and distressed debt strategies.

Real estate investments include funds that invest in entities which are principally engaged in the ownership, acquisition, development, financing, sale and/or management of income-producing real estate properties, both commercial and residential. These funds typically seek long-term growth of capital and current income that is above average relative to public equity funds.

Significant Concentrations of Risk

The pension plans' assets include certain private investment funds, private equity and debt securities, real estate investments and derivative instruments. Investment managers may be unable to quickly sell or redeem some or all of these investments at an amount close or equal to fair value in order to meet a plan's liquidity requirements or to respond to specific events such as deterioration in the creditworthiness of any particular issuer or counterparty.

Illiquid investments held by the plans are generally long-term investments that complement the long-term nature of pension obligations and are not used to fund benefit payments when currently due. Plan management monitors liquidity risk on an ongoing basis and has procedures in place that are designed to maintain flexibility in addressing plan-specific, broader industry and market liquidity events.

Certain plan assets represent investments in group annuity contracts. We entered into group annuity contracts with various life insurance companies to provide pension benefits to certain of our salaried workforce and backed these obligations by high quality fixed income securities. We, as the plans' sponsor, might be exposed to counterparty risk if any or all of the life insurance companies fail to perform in accordance with the terms and conditions stipulated in the contracts, or any or all of the life insurance companies become insolvent or experience other forms of financial distress. We and the plans might also be exposed to liquidity risk due to the funding obligation that may arise under these contracts. The plans' management monitors counterparty and liquidity risks on an on-going basis and has procedures in place that are designed to monitor the financial performance of the life insurance companies that are parties to these contracts and maintain flexibility in addressing contract-specific and broader market events.

The pension plans may invest in financial instruments denominated in foreign currencies and may be exposed to risks that the foreign currency exchange rates might change in a manner that has an adverse effect on the value of the foreign currency denominated assets or liabilities. Forward currency contracts are used to manage and mitigate foreign currency risk.

The pension plans may invest in fixed income securities for which any change in the relevant interest rates for particular securities might result in an investment manager being unable to secure similar returns upon the maturity or the sale of securities. In addition, changes to prevailing interest rates or changes in expectations of future interest rates might result in an increase or decrease in the fair value of the securities held. Interest rate swaps and other financial derivative instruments may be used to manage interest rate risk.

Counterparty credit risk is the risk that a counterparty to a financial instrument will default on its commitment. Counterparty risk is primarily related to over-the-counter derivative instruments used to manage risk exposures related to interest rates on long-term debt securities and foreign currency exchange rate fluctuations. The risk of default can be influenced by various factors including macro-economic conditions, market liquidity, fiscal and monetary policies and counterparty-specific characteristics and activities. Certain agreements with counterparties employ set-off, collateral support arrangements and other risk mitigating procedures designed to reduce the net exposure to credit risk in the event of counterparty default. Credit policies and processes are in place to manage concentrations of counterparty risk by seeking to undertake transactions with large well-capitalized counterparties and by monitoring the creditworthiness of these counterparties. The majority of our derivatives at December 31, 2011 were fully collateralized and therefore, the related counterparty credit risk was significantly reduced.

Pension Funding Requirements

We are subject to a variety of U.S. federal rules and regulations, including the Employee Retirement Income Security Act of 1974, as amended and the Pension Protection Act of 2006 (PPA), which govern the manner in which we fund and administer our pensions for our retired employees and their spouses. The Pension Relief Act of 2010 provides us with options to amortize any shortfall amortization base for U.S. qualified pension plans either (1) over seven years with amortization starting two years after the election of this relief or (2) over 15 years.

We also maintain pension plans for employees in a number of countries outside the U.S. which are subject to local laws and regulations. We have elected the 15-year amortization funding relief option for certain of our U.S. pension plans for the most recent pension funding valuation as of October 1, 2010. The election of the 15-year amortization option has enabled us to defer the funding requirements to future years. No election is required at this time for the plan year beginning October 1, 2011, and we plan to evaluate these options in the future for our U.S. qualified pension plans. We have no funding requirements for our U.S. qualified plans in 2012.

Benefit Payments

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service (dollars in millions):

	Successor			
	Years Ended December 31,			
	Pension Benefits (a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans (b)
2012	$ 8,514	$1,437	$ 419	$ 55
2013	$ 8,262	$1,441	$ 403	$ 58
2014	$ 8,065	$1,475	$ 367	$ 61
2015	$ 7,918	$1,505	$ 357	$ 65
2016	$ 7,645	$1,528	$ 350	$ 68
2017-2021	$35,435	$7,725	$1,678	$381

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our Cash and cash equivalents.

(b) Benefit payments presented in this table reflect the effect of the implementation of the HCT, which releases us from certain CAW retiree healthcare claims incurred after October 31, 2011.

Note 19. Derivative Financial Instruments and Risk Management

Automotive

Derivatives and Hedge Accounting

In accordance with our risk management policy, we enter into a variety of foreign currency exchange rate and commodity derivative contracts in connection with the management of exposure to fluctuations in certain foreign currency exchange rates and commodity prices. At December 31, 2011 our derivative instruments consisted primarily of forward contracts and options.

At December 31, 2011 and 2010 no outstanding derivative contracts were designated in hedging relationships.

Counterparty Credit Risk

Derivative financial instruments contain an element of credit risk attributable to the counterparties' ability to meet the terms of the agreements. Certain of our agreements with counterparties require, under certain circumstances, that the counterparty post collateral with us for net asset positions. Agreements are entered into with counterparties that allow the set-off of certain exposures in order to manage the risk. Collateral held from counterparties was insignificant and $74 million at December 31, 2011 and December 31, 2010.

At December 31, 2011 substantially all derivative counterparty exposures were with counterparties that were rated A- or higher.

Credit Risk Related Contingent Features

Certain of our agreements with counterparties require that we provide cash collateral for net liability positions that we may have with such counterparty. At December 31, 2011 no collateral was posted related to derivative instruments, and we did not have any agreements with counterparties to derivative instruments containing covenants requiring the maintenance of certain credit rating levels or credit risk ratios that would require the posting of collateral in the event that such covenants are violated.

Fair Value of Derivatives

The following tables summarize fair value measurements of our derivative instruments measured on a recurring basis (dollars in millions):

	Successor				
	December 31, 2011

Total	$—	$122	$—	$122

At December 31, 2011 and 2010, our non-performance risk was not observable through a liquid credit default swap market. In the three months ended December 31, 2010 we determined that our non-performance risk no longer represented a significant input in the determination of the fair value of our foreign currency exchange derivatives. The effect of our non-performance risk in the valuation was reduced due to the reduction in the remaining duration and magnitude of these net derivative liability positions. In October 2010 we transferred foreign currency derivatives with a fair market value of $183 million out of Level 3 to Level 2.

Fair Value Measurements on a Recurring Basis using Level 3 Inputs

The following table summarizes the activity for our derivative investments classified in Level 3 (dollars in millions):

	Successor			
	Level 3 Net Assets and (Liabilities) (a)			
	Year Ended December 31, 2011			Year Ended December 31, 2010
	Embedded	Commodity	Total	Foreign Currency
Balance at beginning of period	$ —	$ —	$ —	$(672)

Total gains (losses) recorded in earnings	$ 41	$ 68	$278

Other Derivatives

In September 2009 in connection with an agreement with American Axle, we received warrants to purchase 4 million shares of American Axle common stock exercisable at $2.76 per share. At December 31, 2010 the fair value of these warrants was $44 million. In February 2011 we exercised the warrants and sold the shares and received proceeds of $48 million.

In 2010 we entered into a long-term supply agreement which provides for pricing to be partially denominated in a currency other than the functional currency of the parties to the contract. This pricing feature was determined to be an embedded derivative which we have bifurcated for valuation and accounting purposes. The fair value of this embedded derivative was an asset of $148 million at December 31, 2011 and insignificant at December 31, 2010.

In connection with our investment in New Delphi, which we accounted for using the equity method, we recorded our share of New Delphi's other comprehensive income (loss) in Accumulated other comprehensive income. In the three months ended March 31, 2011 we recorded cash flow hedging gains of $13 million; and in the year ended December 31, 2010 and the period July 10, 2009 through December 31, 2009 we recorded cash flow hedge losses of $22 million and $1 million related to our share of New Delphi's hedging losses. In March 2011 we sold our interests in New Delphi. As a result previously recorded cash flow hedging losses of $10 million in Accumulated other comprehensive income were reclassified to earnings and recorded in the gain on sale of New Delphi. Refer to Note 4 for additional information on the sale of New Delphi.

Derivatives Not Meeting a Scope Exception from Fair Value Accounting

We entered into purchase contracts that were accounted for as derivatives with changes in fair value recorded in Interest income and other non-operating income, net, as these contracts do not qualify for the normal purchases and normal sales scope exception in ASC 815, "Derivatives and Hedging" (ASC 815).

Automotive Financing — GM Financial

GM Financial is exposed to market risks arising from adverse changes in interest rates due to floating interest rate exposure on its credit facilities and on certain securitization notes payable.

The effect of derivative instruments on earnings and Accumulated other comprehensive income was insignificant for the years ended December 31, 2011 and 2010.

The following table summarizes interest rate swaps, caps and foreign currency exchange derivatives (dollars in millions):

	Successor			
	December 31, 2011		December 31, 2010	
	Notional	Fair Value	Notional	Fair Value

Credit Risk Related Contingent Features

Under the terms of the derivative financial instruments, GM Financial is required to pledge certain funds to be held in restricted cash accounts as collateral for the outstanding derivative transactions. At December 31, 2011 and 2010 these restricted cash accounts totaled $36 million and $33 million and were recorded in GM Financial Restricted cash.

Old GM

Derivatives and Hedge Accounting

Derivatives Not Designated for Hedge Accounting

Old GM previously entered into a variety of foreign currency exchange, interest rate and commodity forward contracts and options to maintain a desired level of exposure arising from market risks resulting from changes in foreign currency exchange rates, interest rates and certain commodity prices.

In May 2009 Old GM reached agreements with certain of the counterparties to its derivative contracts to terminate the derivative contracts prior to stated maturity. Commodity, foreign currency exchange and interest rate forward contracts were settled for cash of $631 million, resulting in a loss of $537 million. The loss was recorded in Automotive sales and revenue, Automotive cost of sales and Automotive interest expense in the amounts of $22 million, $457 million and $58 million.

When an exposure economically hedged with a derivative contract was no longer forecasted to occur, in some cases a new derivative instrument was entered into to offset the exposure related to the existing derivative instrument. In some cases, counterparties were unwilling to enter into offsetting derivative instruments and, as such, there was exposure to future changes in the fair value of these derivatives with no underlying exposure to offset this risk. In the period January 1, 2009 through July 9, 2009, Old GM recorded gains of $91 million related to derivatives originally entered into to hedge exposures that subsequently became probable not to occur. These gains were recorded to Interest income and other non-operating income, net.

Gains (Losses) on Derivatives

The following table summarizes derivative gains (losses) recorded in earnings (dollars in millions):

	Predecessor
	January 1, 2009 Through July 9, 2009
Foreign Currency	
Automotive sales	$ (688)
Automotive cost of sales	(211)
Interest income and other non-operating income, net	91
Interest Rate Swap	
Automotive interest expense	(38)
Commodity	
Automotive cost of sales	(332)
Warrants	
Interest income and other non-operating income, net	164
Net losses recorded in earnings	$(1,014)

In connection with the UST Loan Agreement, Old GM granted warrants to the UST for 122 million shares of its common stock exercisable at $3.57 per share. Old GM recorded the warrants as a liability and recorded gains and losses related to this derivative in Interest income and other non-operating income, net. In connection with the 363 Sale, the UST returned the warrants and they were canceled.

Cash Flow Hedges

Old GM previously designated certain financial instruments as cash flow hedges to manage its exposure to certain foreign currency exchange risks.

The following table summarizes financial statement classification and amounts of gains (losses) that were reclassified from Accumulated other comprehensive income (loss) into earnings related to effective cash flow hedging relationships (dollars in millions):

	Predecessor January 1, 2009 Through July 9, 2009
Automotive sales	$(351)
Automotive cost of sales	19
Reorganization gains, net	247
Net losses reclassified from Accumulated other comprehensive income (loss)	$ (85)

The following table summarizes financial statement classification and amounts of gains (losses) that were reclassified from Accumulated other comprehensive income (loss) for cash flow hedges associated with previously forecasted transactions that subsequently became probable not to occur (dollars in millions):

	Predecessor January 1, 2009 Through July 9, 2009
Automotive sales	$(182)
Reorganization gains, net	247
Net gains reclassified from Accumulated other comprehensive income (loss)	$ 65

Net Change in Accumulated Other Comprehensive Income (Loss)

The following table summarizes the net change in Accumulated other comprehensive income (loss) related to cash flow hedging activities (dollars in millions):

	Predecessor January 1, 2009 Through July 9, 2009
Beginning net unrealized loss on derivatives	$(490)
Reclassification to earnings	99
Ending net unrealized loss on derivatives	$(391)

In connection with our application of fresh-start reporting, the remaining previously deferred cash flow hedging gains and losses of $391 million in Accumulated other comprehensive income (loss) were adjusted to $0 at July 10, 2009.

Derivatives Not Meeting a Scope Exception from Fair Value Accounting

Old GM previously entered into purchase contracts that were accounted for as derivatives with changes in fair value recorded in Automotive cost of sales, as these contracts did not qualify for the normal purchases and normal sales scope exception in ASC 815. Certain of these contracts were terminated in the period January 1, 2009 through July 9, 2009. MLC retained the remainder of these purchase contracts in connection with the 363 Sale.

Note 20. Commitments and Contingencies

Consolidated

The following tables summarize information related to commitments and contingencies (dollars in millions):

	Liability Recorded	Liability Recorded
Credit card programs (a)		
Redemption liability (b)	$ 123	$ 167
Deferred revenue (c)	$ 345	$ 408
Environmental liability (d)	$ 169	$ 195
Product liability	$ 514	$ 365
Other litigation-related liability and tax administrative matters (e)	$1,196	$1,471

(a) At December 31, 2011 and 2010 qualified cardholders had rebates available, net of deferred program revenue, of $2.3 billion and $2.8 billion.

(b) Recorded in Accrued liabilities.

(c) Recorded in Other liabilities and deferred income taxes. At December 31, 2011 and 2010 deferred revenue includes an unfavorable contract liability recorded in applying fresh-start reporting at July 10, 2009.

(d) Includes $34 million and $45 million recorded in Accrued liabilities at December 31, 2011 and 2010, and the remainder was recorded in Other liabilities and deferred income taxes.

(e) Consists primarily of indirect tax-related litigation as well as various non-U.S. labor related matters.

Guarantees

We have provided guarantees related to the residual value of certain operating leases. These guarantees terminate in years ranging from 2016 to 2035. Certain leases contain renewal options.

We provide payment guarantees on commercial loans made by Ally Financial and outstanding with certain third parties, such as dealers or rental car companies. These guarantees either expire in 2029 or are ongoing. We determined the fair value ascribed to the guarantees at inception and subsequent to inception to be insignificant based on the credit worthiness of the third parties. Refer to Note 28 for additional information on guarantees that we provide to Ally Financial.

We have agreements with third parties that guarantee the fulfillment of certain suppliers' commitments and other obligations. These guarantees expire in years ranging from 2012 or are ongoing, or upon the occurrence of specific events.

In some instances, certain assets of the party whose debt or performance we have guaranteed may offset, to some degree, the cost of the guarantee. The offset of certain of our payables to guaranteed parties may also offset certain guarantees, if triggered. At December 31, 2011 any proceeds we would receive from collateral were insignificant.

In connection with certain divestitures of assets or operating businesses, we have entered into agreements indemnifying certain buyers and other parties with respect to environmental conditions pertaining to real property we owned. We periodically enter into agreements that incorporate indemnification provisions in the normal course of business. It is not possible to estimate our maximum exposure under these indemnifications or guarantees due to the conditional nature of these obligations. Immaterial amounts have been recorded for such obligations as the majority of them are not probable or estimable at this time, and the fair value of the guarantees at issuance was insignificant.

In addition to the guarantees and indemnifying agreements previously discussed, we indemnify dealers for certain product liability related claims as subsequently discussed.

With respect to other product-related claims involving products manufactured by certain joint ventures, we believe that costs incurred are adequately covered by recorded accruals. These guarantees terminate in years ranging from 2020 to 2026.

Credit Card Programs

Credit card programs offer rebates that can be applied primarily against the purchase or lease of our vehicles.

Environmental Liability

Automotive operations, like operations of other companies engaged in similar businesses, are subject to a wide range of environmental protection laws, including laws regulating air emissions, water discharges, waste management and environmental remediation. We are in various stages of investigation or remediation for sites where contamination has been alleged. We are involved in a number of actions to remediate hazardous wastes as required by federal and state laws. Such statutes require that responsible parties fund remediation actions regardless of fault, legality of original disposal or ownership of a disposal site.

The future effect of environmental matters, including potential liabilities, is often difficult to estimate. An environmental reserve is recorded when it is probable that a liability has been incurred and the amount of the liability can be reasonably estimated. This practice is followed whether the claims are asserted or unasserted. Recorded liabilities are not reduced for possible recoveries from insurance carriers or other parties. Liabilities have been recorded for the expected costs to be paid over the periods of remediation for the applicable sites, which typically range from five to 30 years.

For many sites, the remediation costs and other damages for which we ultimately may be responsible may vary because of uncertainties with respect to factors such as the connection to the site or to materials there, the involvement of other potentially responsible parties, the application of laws and other standards or regulations, site conditions and the nature and scope of investigations, studies and remediation to be undertaken (including the technologies to be required and the extent, duration and success of remediation).

The final outcome of environmental matters cannot be predicted with certainty at this time. Subsequent adjustments to initial estimates are recorded as necessary based upon additional information obtained. In future periods, new laws or regulations, advances in remediation technologies and additional information about the ultimate remediation methodology to be used could significantly change our estimates. It is possible that the resolution of one or more environmental matters could exceed the amounts accrued in an amount that could be material to our financial condition, results of operations and cash flows. At December 31, 2011 we estimate the remediation losses could range from $140 million to $310 million.

Product Liability

With respect to product liability claims involving our and Old GM's products, we believe that any judgment against us for actual damages will be adequately covered by our recorded accruals and, where applicable, excess liability insurance coverage. Although punitive damages are claimed in some of these lawsuits, and such claims are inherently unpredictable, accruals incorporate historic experience with these types of claims. Liabilities have been recorded for the expected cost of all known product liability claims plus an estimate of the expected cost for product liability claims that have already been incurred and are expected to be filed in the future for which we are self-insured. These amounts were recorded in Accrued liabilities.

We indemnify dealers for certain product liability related claims including products sold by Old GM. We monitor actual claims experience and make periodic adjustments to our estimates. Based on both management's judgment concerning the projected number and value of both dealer indemnification obligations and product liability claims, we have applied actuarial methodologies and estimated the liability. We expect our product liability reserve to rise in future periods as new claims arise from incidents subsequent to July 9, 2009.

Other Litigation-Related Liability and Tax Administrative Matters

Various legal actions, governmental investigations, claims and proceedings are pending against us including matters arising out of alleged product defects; employment-related matters; governmental regulations relating to safety, emissions, and fuel economy; product warranties; financial services; dealer, supplier and other contractual relationships; tax-related matters not recorded pursuant to ASC 740, "Income Taxes" (indirect tax-related matters) and environmental matters.

With regard to the litigation matters discussed in the previous paragraph, reserves have been established for matters in which we believe that losses are probable and can be reasonably estimated, the majority of which are associated with indirect tax-related matters as well as various non-U.S. labor-related matters. Indirect tax-related matters are being litigated globally pertaining to value added taxes, customs, duties, sales, property taxes and other non-income tax related tax exposures. The various non-U.S. labor-related matters include claims from current and former employees related to alleged unpaid wage, benefit, severance, and other compensation matters. Certain South American administrative proceedings are indirect tax-related and may require that we deposit funds in escrow; such escrow deposits may range from $530 million to $730 million. Some of the matters may involve compensatory, punitive, or other treble damage claims, environmental remediation programs, or sanctions, that if granted, could require us to pay damages or make other expenditures in amounts that could not be reasonably estimated at December 31, 2011. We believe that appropriate accruals have been established for such matters based on information currently available. Reserves for litigation losses are recorded in Accrued liabilities and Other liabilities and deferred income taxes. Litigation is inherently unpredictable, however, and unfavorable resolutions could occur. Accordingly, it is possible that an adverse outcome from such proceedings could exceed the amounts accrued in an amount that could be material to our financial condition, results of operations and cash flows in any particular reporting period.

Commencing on or about September 29, 2010, current and former hourly employees of GM Korea, our non-wholly owned consolidated subsidiary, filed six separate group actions in the Incheon District Court in Incheon, Korea. The cases allege that GM Korea failed to include certain allowances in its calculation of Ordinary Wages due under the Presidential Decree of the Korean Labor Standards Act. Although GM Korea intends to vigorously defend the claims asserted, at December 31, 2011 we have an accrual of 130 billion Korean Won (equivalent to $113 million) in connection with these cases. The current estimate of the value of plaintiffs' claims, if allowed in full, exceeds the accrual by 604 billion Korean Won (equivalent to $523 million) which represents the reasonably possible liability exposure. Both the scope of claims asserted and GM Korea's assessment of any or all of individual claim elements may change.

On February 12, 2010 a claim was filed in the Ontario Superior Court of Justice against GMCL on behalf of a purported class of over 200 former GMCL dealers (the Plaintiff Dealers) which had entered into wind-down agreements with GMCL. In May 2009, in the context of the global restructuring of the business and the possibility that GMCL might be required to initiate insolvency proceedings, GMCL offered the Plaintiff Dealers the wind-down agreements to assist with their exit from the GMCL dealer network and to facilitate winding down their operations in an orderly fashion by December 31, 2009 or such other date as GMCL approved but no later than on October 31, 2010. The Plaintiff Dealers allege that the Dealer Sales and Service Agreements were wrongly terminated by GMCL and that GMCL failed to comply with certain disclosure obligations, breached its statutory duty of fair dealing and unlawfully interfered with the Plaintiff Dealers' statutory right to associate in an attempt to coerce the Plaintiff Dealers into accepting the wind-down agreements. The Plaintiff Dealers seek damages and assert that the wind-down agreements are rescindable. The Plaintiff Dealers' initial pleading makes reference to a claim "not exceeding" CAD $750 million, without explanation of any specific measure of damages. On March 1, 2011 the Court approved certification of a class for the purpose of deciding a number of specifically defined issues, including: (1) whether GMCL breached its obligation of "good faith" in offering the wind-down agreements; (2) whether GMCL interfered with the Plaintiff Dealers' rights of free association; (3) whether GMCL was obligated to provide a disclosure statement and/or disclose more specific information regarding its restructuring plans in connection with proffering the wind-down agreements; and (4) assuming liability, whether the Plaintiff Dealers can recover damages in the aggregate (as opposed to proving individual damages). On June 22, 2011 the court granted GMCL permission to appeal the class certification decision. The current prospects for liability are uncertain, but because liability is not deemed probable, we have no accrual relating to this litigation. We cannot estimate the range of reasonably possible loss in the event of liability, as the case presents a variety of different legal theories, none of which GMCL believes are valid.

On April 6, 2010 the UAW filed suit against us in the U.S. District Court for the Eastern District of Michigan claiming that we breached an obligation to contribute $450 million to the New VEBA. The UAW alleges that we were contractually required to make this contribution. The reasonably possible loss as defined by ASC 450 "Contingencies" is $450 million, which is the amount claimed, but we believe that the claim is without merit and we have no accrual relating to this litigation. We filed a motion in the U.S. Bankruptcy Court for the Southern District of New York (Bankruptcy Court) asserting that the UAW's claim is barred by the Bankruptcy Court approved 2009 UAW Retiree Settlement Agreement and by other orders issued by the Bankruptcy Court that preclude additional GM contributions to the New VEBA. We also maintain that Delphi's bankruptcy plan of reorganization did not fulfill the applicable conditions of the relevant agreement and therefore payment would not be due even in the absence of the 2009 UAW Retiree Settlement Agreement. On August 23, 2011, the Bankruptcy Court issued an opinion abstaining from hearing the case, which will accordingly be litigated in Federal Court in U.S. District Court for the Eastern District of Michigan.

Liability Related to Contingently Issuable Shares

Under the Amended and Restated Master Sale and Purchase Agreement, as amended between us and Old GM and certain of its direct and indirect subsidiaries, we were obligated to issue additional shares of our common stock to MLC (Adjustment Shares) in the event that allowed general unsecured claims against MLC, as estimated by the Bankruptcy Court, exceed $35.0 billion. Following the dissolution of MLC on December 15, 2011, any Adjustment Shares we are obligated to issue will be issuable to the GUC Trust. The maximum number of Adjustment Shares issuable is 30 million shares (subject to adjustment to take into account stock dividends, stock splits and other transactions). The number of Adjustment Shares to be issued is calculated based on the extent to which estimated general unsecured claims exceed $35.0 billion with the maximum number of Adjustment Shares issued if estimated general unsecured claims total $42.0 billion or more. At December 31, 2011 and 2010 we concluded it was not probable that general unsecured claims would exceed $35.0 billion. We believe it is reasonably possible that general unsecured claims allowed against MLC will range between $32.5 billion and $36.0 billion.

GME Planned Spending Guarantee

As part of our Opel/Vauxhall restructuring plan agreed to with European labor representatives, we have committed to achieving specified milestones associated with planned spending from 2011 to 2014 on certain product programs. If we fail to accomplish the requirements set out under the agreement, we will be required to pay certain amounts up to Euro 265 million for each of those years, and/or interest on those amounts, to our employees. Certain inventory with a carrying amount of $209 million and $193 million at December 31, 2011 and 2010 was pledged as collateral under the agreement. Through December 31, 2011 spending was sufficient to meet the current requirements under the agreement and the specified milestones have been accomplished. Management has the intent and believes it has the ability to meet the future requirements under the agreement.

Asset Retirement Obligations

Asset retirement obligations relate to legal obligations associated with retirement of tangible long-lived assets that result from acquisition, construction, development, or normal operation of a long-lived asset. An analysis is performed of such obligations associated with all real property owned or leased, including facilities, warehouses, and offices. Estimates of conditional asset retirement obligations relate, in the case of owned properties, to costs estimated to be necessary for the legally required removal or remediation of various regulated materials, primarily asbestos. Asbestos abatement was estimated using site-specific surveys where available and a per square foot estimate where surveys were unavailable. For leased properties, such obligations relate to the estimated cost of contractually required property restoration. At December 31, 2011 and 2010 accruals for asset retirement obligations were $99 million and $103 million.

Contract Cancellations

The following table summarizes contract cancellation charges primarily related to the cancellation of product programs (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
GMNA (a)	$38	$30	$80	$157
GME	8	3	—	12
GMIO	43	—	2	8
GMSA	4	—	—	—
Total contract cancellations	$93	$33	$82	$177

(a) The year ended December 31, 2010 includes favorable changes in estimate on contract cancellations of $30 million.

Noncancelable Operating Leases

The following table summarizes our minimum commitments under noncancelable operating leases having remaining terms in excess of one year, primarily for property (dollars in millions):

	2012	2013	2014	2015	2016	2017 and after
Minimum commitments (a)	$422	$325	$252	$207	$169	$ 682
Sublease income	(59)	(58)	(53)	(47)	(45)	(314)
Net minimum commitments	$363	$267	$199	$160	$124	$ 368

(a) Certain of the leases contain escalation clauses and renewal or purchase options.

The following table summarizes our rental expense under operating leases (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Rental expense under operating leases	$556	$604	$255	$369

Delphi Corporation

Benefit Guarantee

In 1999, Old GM spun-off Delphi Automotive Systems Corporation, which became Delphi. Prior to the consummation of the DMDA, Delphi was our and Old GM's largest supplier of automotive systems, components and parts, and we and Old GM were Delphi's largest customer. From 2005 to 2008 Old GM's annual purchases from Delphi ranged from approximately $6.5 billion to approximately $10.2 billion. At the time of the spin-off, employees of Delphi Automotive Systems Corporation became employees of Delphi, and Old GM entered into the Delphi Benefit Guarantee Agreements (DBGA) with the UAW, the International Union of Electronic, Electrical, Salaried, Machine and Furniture Workers – Communication Workers of America (IUE-CWA) and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union (USW) providing contingent benefit guarantees whereby, under certain conditions, Old GM would make payments for certain pension and OPEB benefits to certain former U.S. hourly employees that became employees of Delphi. The DBGA provided that in the event that Delphi or its successor companies ceased doing business, terminated its pension plan or ceased to provide credited service or OPEB benefits at certain levels due to financial distress, Old GM could be liable to provide the corresponding benefits at the required level. With respect to pension benefits, the guarantee arises only to the extent the pension benefits Delphi and the PBGC provided fall short of the guaranteed amount.

In October 2005 Old GM received notice from Delphi that it was more likely than not that Old GM would become obligated to provide benefits pursuant to the DBGA, in connection with Delphi's commencement in October 2005 of Chapter 11 proceedings under the U.S. Bankruptcy Code (Bankruptcy Code).

Delphi-GM Settlement Agreements

In September 2007 and as amended at various times through September 2008, Old GM and Delphi entered into the Delphi-GM Settlement Agreements intended to: (1) resolve outstanding issues between Delphi and Old GM that arose before Delphi's emergence from its Chapter 11 proceedings; (2) govern certain aspects of Old GM's ongoing commercial relationship with Delphi; and (3) address a limited transfer of pension assets and liabilities, and the triggering of the benefit guarantees on the basis set forth in term sheets to the Delphi-GM Settlement Agreements.

The Amended Delphi-GM Settlement Agreements included Old GM's commitments to reimburse Delphi for certain: (1) employee benefit related costs, including OPEB and pension cost; (2) employee termination related costs; (3) ongoing labor costs; and (4) production and other facilitation related costs. In addition, Old GM committed to transfers, subject to certain conditions, of net liabilities from the Delphi Hourly Rate Plan to Old GM's U.S. hourly pension plan.

In September 2008 the Bankruptcy Court entered an order in Delphi's Chapter 11 proceedings approving the Amended Delphi-GM Settlement Agreements which then became effective. As a result of the September 2008 implementation of the Delphi-GM Settlement Agreements Old GM paid $1.0 billion to Delphi in the period January 1, 2009 through July 9, 2009 in settlement of amounts accrued to date against Old GM commitments. We paid $288 million in 2009 prior to the consummation of the DMDA in settlement of amounts accrued to date against our commitments.

Upon consummation of the DMDA, we settled and terminated commitments with limited exceptions under the Delphi-GM Settlement Agreements, and we and Delphi waived all claims against each other under the Delphi-GM Settlement Agreements.

IUE-CWA and USW Settlement Agreement

In September 2009 we entered into a settlement agreement with MLC, the IUE-CWA and the USW that resolved the DBGA with these unions. The agreement was approved by the Bankruptcy Court in November 2009.

Delphi Master Disposition Agreement

In July 2009 we, Delphi and the PBGC negotiated an agreement to be effective upon consummation of the DMDA regarding the settlement of PBGC's claims from the termination of the Delphi pension plans and the release of certain liens with the PBGC against Delphi's foreign assets. In return, the PBGC received a payment of $70 million from us and was granted a 100% interest in Class C Membership Interests in New Delphi which provide for the PBGC to participate in predefined equity distributions. We maintain the obligation to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the DBGA.

In October 2009 we consummated the transaction contemplated by the DMDA with Delphi, New Delphi, Old GM and other sellers and other buyers that are party to the DMDA, as more fully described in Note 4. Upon consummation of the DMDA we settled our commitments to Delphi accrued to date except for the obligation to provide the difference between pension benefits paid by the PBGC according to regulation and those originally guaranteed by Old GM under the DBGA that we continue to maintain.

Delphi Charges

The following table summarizes charges that have been recorded with respect to the various agreements with Delphi (dollars in millions):

	Successor	Predecessor
	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Other automotive expenses, net	$ 8	$184
Automotive cost of sales	193	142
Reorganization gains, net	—	662
Total Delphi charges	$201	$988

These charges reflect the best estimate of obligations associated with the various Delphi agreements, including obligations under the DBGA, updated to reflect the DMDA. At July 9, 2009 these charges reflect the obligation to the PBGC upon consummation of the DMDA, consisting of the estimated fair value of the PBGC Class C Membership Interests in New Delphi of $317 million and the payment of $70 million due. Further, at July 9, 2009 these charges reflect an estimated value of $966 million pertaining to claims against Delphi that were waived upon consummation of the DMDA. The estimated value of the claims represents the excess after settlement of certain pre-existing commitments to Delphi of the fair value of Nexteer, the four domestic facilities and the investment in New Delphi over the cash consideration paid under the DMDA. Refer to Note 4 for additional information on the total consideration paid under the DMDA and the allocation of such consideration to the various units of account.

Note 21. Income Taxes

Consolidated

The following table summarizes Income (loss) before income taxes and equity income (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
U.S. income (loss)	$2,883	$2,648	$(6,647)	$105,420
Non-U.S. income	3,102	3,089	1,364	2,356
Income (loss) before income taxes and equity income	$5,985	$5,737	$(5,283)	$107,776

Income Tax Expense (Benefit)

The following table summarizes Income tax expense (benefit) (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Current income tax expense (benefit)				
U.S. federal	$(134)	$ (10)	$ 7	$ (60)
Non-U.S.	275	441	421	(522)
U.S. state and local	58	(1)	(1)	16
Total current	199	430	427	(566)
Deferred income tax expense (benefit)				
U.S. federal	8	(25)	(1,204)	110
Non-U.S.	(289)	259	(52)	(716)
U.S. state and local	(28)	8	(171)	6
Total deferred	(309)	242	(1,427)	(600)
Total income tax expense (benefit)	$(110)	$672	$(1,000)	$(1,166)

Annual tax provisions include amounts considered sufficient to pay assessments that may result from examination of prior year tax returns.

Provisions are made for estimated U.S. and non-U.S. income taxes, less available tax credits and deductions, which may be incurred on the remittance of our and Old GM's share of basis differences in investments in foreign subsidiaries and corporate joint ventures not deemed to be indefinitely reinvested. Taxes have not been provided on basis differences in investments in foreign subsidiaries and corporate joint ventures which are deemed indefinitely reinvested of $6.2 billion and $6.9 billion at December 31, 2011 and 2010. Quantification of the deferred tax liability, if any, associated with indefinitely reinvested earnings is not practicable.

The following table summarizes a reconciliation of Income tax expense (benefit) compared with the amounts at the U.S. federal statutory rate (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Tax at U.S. federal statutory income tax rate	$ 2,094	$ 2,008	$(1,849)	$ 37,721
State and local tax expense	215	334	(559)	(260)
Foreign income taxed at other than 35%	243	1,579	64	(119)
Taxes on unremitted earnings of subsidiaries	(537)	(10)	(151)	(12)
Change in valuation allowance	(2,386)	(2,903)	1,338	6,609
Change in tax laws	(33)	—	163	1
Research and development incentives	(45)	(235)	(14)	(113)
Gain on sale of Delphi equity interests	599	—	—	—
Goodwill impairment	377	—	—	—
Settlements of prior year tax matters	(56)	(170)	—	—
VEBA contribution	(476)	—	(328)	—
Non-taxable reorganization gain	—	—	—	(45,564)
Foreign currency remeasurement	59	143	340	207
Pension contribution	(127)	—	—	—
Other adjustments	(37)	(74)	(4)	364
Total income tax expense (benefit)	$ (110)	$ 672	$(1,000)	$ (1,166)

Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities at December 31, 2011 and 2010 reflect the effect of temporary differences between amounts of assets, liabilities and equity for financial reporting purposes and the bases of such assets, liabilities and equity as measured by tax laws, as well as tax loss and tax credit carryforwards.

The following table summarizes the components of temporary differences and carryforwards that give rise to deferred tax assets (liabilities) (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Deferred tax assets		
Postretirement benefits other than pensions	$ 3,672	$ 3,884
Pension and other employee benefit plans	8,357	7,127
Warranties, dealer and customer allowances, claims and discounts	4,015	4,276
Property, plants and equipment	1,547	2,275
Capitalized research expenditures	5,152	5,033
Tax carryforwards	21,199	20,109
Miscellaneous U.S.	3,017	2,387
Miscellaneous non-U.S.	243	357
Total deferred tax assets before valuation allowances	47,202	45,448
Less: valuation allowances	(45,191)	(42,979)
Net deferred tax assets	2,011	2,469
Deferred tax liabilities		
Intangible assets	1,933	2,609
Total deferred tax liabilities	1,933	2,609
Net deferred tax assets (liabilities)	$ 78	$ (140)

The following table summarizes deferred tax assets (liabilities) (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Current deferred tax assets	$ 525	$ 782
Current deferred tax liabilities	(48)	(23)
Non-current deferred tax assets	514	308
Non-current deferred tax liabilities	(913)	(1,207)
Net deferred tax assets (liabilities)	$ 78	$ (140)

The following table summarizes the amount and expiration dates of our operating loss and tax credit carryforwards at December 31, 2011 (dollars in millions):

	Successor	
	Expiration Dates	Amounts
U.S. federal and state loss carryforwards	2012-2030	$11,220
Non-U.S. loss and tax credit carryforwards	Indefinite	1,058
Non-U.S. loss and tax credit carryforwards	2012-2031	4,118
U.S. alternative minimum tax credit	Indefinite	669
U.S. general business credits (a)	2017-2031	1,908
U.S. foreign tax credits	2012-2021	2,226
Total loss and tax credit carryforwards		$21,199

(a) The general business credits are principally composed of research and experimentation credits.

Valuation Allowances

The valuation allowances recognized relate to certain net deferred tax assets in U.S. and non-U.S. jurisdictions. The following table summarizes the change in the valuation allowance (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Beginning balance	$42,979	$45,281	$42,666	$ 59,777
Additions (Reversals)				
U.S.	2,411	(2,196)	2,226	(14,474)
Canada	(158)	63	405	(802)
Germany	1	(139)	67	(792)
Spain	463	378	(40)	(200)
Brazil	(1)	1	1	(442)
South Korea	27	(121)	(221)	321
Australia	(498)	(39)	7	190
U.K.	141	(121)	109	62
Sweden	6	(58)	33	(1,057)
Other	(180)	(70)	28	83
Ending balance	$45,191	$42,979	$45,281	$ 42,666

In July 2009 Old GM recorded adjustments resulting in a net decrease in valuation allowances of $20.7 billion as a result of the 363 Sale and fresh-start reporting. The net decrease primarily resulted from U.S. federal and state tax attribute reduction of $12.2 billion related to debt cancellation income, a net difference of $5.5 billion between fresh-start reporting and historical U.S. GAAP bases of assets and liabilities at entities with valuation allowances, net valuation allowances of $1.7 billion associated with assets and liabilities retained by MLC, a foreign tax attribute reduction of $0.9 billion and release of valuation allowances of $0.7 billion. In the year ended December 31, 2011 we recorded an adjustment to the debt cancellation income that resulted from the 363 Sale. The adjustment resulted in a $2.1 billion increase in valuation allowances related to U.S. Federal and state tax attributes.

We and Old GM established or released the following significant valuation allowances as a result of a change in our evaluation of deferred tax asset realizability (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Established (released) by jurisdiction				
Brazil	$ —	$—	$—	$(465)
Various non-U.S.	$ —	$—	$—	$(286)
Australia	$(502)	$—	$—	$ —

Old GM accumulated pre-tax losses in the U.S. and various non-U.S. jurisdictions. These historical pre-tax losses were driven by several factors including but not limited to instability of the global economic environment, automotive price competition, relatively high cost structure, unfavorable commodity prices, unfavorable regulatory and tax environments and a challenging foreign currency exchange environment. By December 31, 2008, after weighing this objective and verifiable negative evidence with all other available positive and negative evidence, Old GM determined it was more likely than not it would not realize its deferred tax assets, and established valuation allowances for major jurisdictions including the U.S., Canada, Brazil, Australia, South Korea, Germany, Spain and the United Kingdom. Additional concerns arose related to the U.S. parent company's liquidity which led us to establish valuation allowances for Texas and various non-U.S. jurisdictions, even though many of these jurisdictions had historical profits and no other significant negative evidence factors.

In 2009 the U.S. parent company liquidity concerns were resolved in connection with the Chapter 11 Proceedings and the 363 Sale, and many non-U.S. jurisdictions, including Brazil, were generating and projecting taxable income. To the extent there were no other significant negative evidence factors, Old GM determined it was more likely than not it would realize its deferred tax assets and reversed valuation allowances in Brazil and various non-U.S. jurisdictions.

Although we have a short history as a new company, and our ability to achieve future profitability was enhanced by the cost and liability reductions that occurred as a result of the Chapter 11 Proceedings and 363 Sale, Old GM's historic operating results remain relevant as they are reflective of the industry and the effect of economic conditions. The fundamental businesses and inherent risks in which we globally operate did not change from those in which Old GM operated. As such, subsequent to the Chapter 11 Proceedings and the 363 Sale, due primarily to historical pre-tax losses, at December 31, 2011 we determined it was still more likely than not the deferred tax assets would not be realized in major jurisdictions including the U.S., Canada, South Korea, Germany, Spain and the United Kingdom. If additional positive evidence becomes available our conclusion regarding the need for full valuation allowances in these jurisdictions could change, resulting in the reversal of some or all of the valuation allowances.

At December 31, 2011 we determined in Australia it was more likely than not we would realize deferred tax assets in the future due primarily to sustained profitability and projected taxable income in an unlimited carryforward jurisdiction; accordingly, we reversed the valuation allowance in this jurisdiction.

Uncertain Tax Positions

The following table summarizes gross unrecognized tax benefits before valuation allowances and the amount that would favorably affect the effective tax rate in future periods after valuation allowances (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Gross unrecognized tax benefits before valuation allowances	$2,370	$5,169
Amount of unrecognized tax benefit that would favorably affect effective tax rate in future	$ 326	$ 785
Amount of liability for uncertain tax positions benefits netted against deferred tax assets in the same jurisdiction (a)	$1,285	$3,605

(a) The remaining uncertain tax positions are classified as current and non-current liabilities.

The following table summarizes activity of the total amounts of unrecognized tax benefits (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Beginning balance	$ 5,169	$5,410	$4,096	$2,803
Additions to current year tax positions	129	195	1,454	1,493
Additions to prior years' tax positions	562	803	22	594
Reductions to current year tax positions	—	—	(44)	(25)
Reductions to prior years' tax positions	(1,002)	(475)	(128)	(626)
Reductions in tax positions due to lapse of statutory limitations	(64)	(18)	—	(281)
Settlements	(2,399)	(761)	(111)	(16)
Other	(25)	15	121	154
Ending balance	$ 2,370	$5,169	$5,410	$4,096

The following tables summarize information regarding income tax related interest and penalties (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Interest income	$ 7	$13	$—	$249
Interest expense (benefit) (a)	$(113)	$20	$30	$ (31)
Penalties (a)	$ (25)	$ 1	$—	$ 30

(a) The interest and penalty benefit for the year ended December 31, 2011 is due primarily to remeasurements, settlements and statute expirations.

	Successor	
	December 31, 2011	December 31, 2010
Accrued interest payable	$103	$250
Accrued penalties	$ 89	$119

Other Matters

Most of the tax attributes generated by Old GM and its domestic and foreign subsidiaries (net operating loss carryforwards and various income tax credits) survived the Chapter 11 Proceedings, and we are using or expect to use the tax attributes to reduce future tax liabilities. The ability to utilize certain of the U.S. tax attributes in future tax periods could be limited by Section 382 of the Internal Revenue Code. On November 1, 2010 we amended our certificate of incorporation to minimize the likelihood of an ownership change occurring for Section 382 purposes. We have net operating loss carryforwards in Germany through November 30, 2009 that, as a result of reorganizations that took place in 2008 and 2009, were not recorded as deferred tax assets. Depending on the outcome of European court decisions these loss carryforwards may be available to reduce future taxable income in Germany. In Australia, we have net operating loss carryforwards which are subject to meeting a "Same Business Test" requirement that we assess on a quarterly basis.

In the U.S., we have continuing responsibility for Old GM's open tax years. Old GM's federal income tax returns for 2007 and 2008 were audited by the Internal Revenue Service and the review was substantially concluded in the year ended December 31, 2011. Income tax returns are filed in multiple jurisdictions and are subject to examination by taxing authorities throughout the world. We have open tax years from 2002 to 2011 with various significant tax jurisdictions. These open years contain matters that could be subject to differing interpretations of applicable tax laws and regulations as they relate to the amount, character, timing or inclusion of revenue and expenses or the sustainability of income tax credits for a given audit cycle. Given the global nature of our operations, there is a risk that transfer pricing disputes may arise.

In May 2009 the U.S. and Canadian governments resolved a transfer pricing matter for Old GM which covered the tax years 2001 through 2007. In the three months ended June 30, 2009 this resolution resulted in a tax benefit of $692 million and interest of $229 million. Final administrative processing of the Canadian case closing occurred in late 2009, and final administrative processing of the U.S. case closing occurred in February 2010.

In June 2010 a Mexican income tax audit covering the 2002 and 2003 tax years was concluded and an assessment of $146 million including tax, interest and penalties was issued. We believe we have adequate reserves established. Collection of any assessment will be suspended until a revised assessment is issued and during any subsequent proceedings through U.S. and Mexican competent authorities. We expect a revised assessment to be issued no earlier than March 2012.

In November 2010 an agreement was reached with the Canadian government to resolve various income tax matters in the years 2003 through 2009. In the three months ended December 31, 2010 this resolution resulted in a tax benefit of $140 million including interest.

In June 2011 we settled a Brazilian income tax matter for $241 million that was reserved and disclosed in a prior period.

In the year ended December 31, 2011 certain issues were resolved relating to uncertain tax positions in jurisdictions which have full valuation allowances. The resolution of these matters resulted in a $2.7 billion reduction to gross uncertain positions. No tax benefit was recognized with respect to these reductions because the entities were in full valuation allowance jurisdictions or the amounts were reserved in a prior period.

At December 31, 2011 it is not possible to reasonably estimate the expected change to the total amount of unrecognized tax benefits in the next twelve months.

Note 22. Restructuring and Other Initiatives

Automotive

We have and Old GM had previously executed various restructuring and other initiatives, and we plan to execute additional initiatives in the future, if necessary, in order to align manufacturing capacity and other costs with prevailing global automotive production and to improve the utilization of remaining facilities. Related charges are recorded in Automotive cost of sales and Automotive selling, general and administrative expense.

The following table summarizes the reserves related to restructuring and other initiatives (excluding restructuring reserves related to dealer wind-down agreements) and charges by segment, including postemployment benefit reserves and charges (dollars in millions):

GM

	Successor

Balance at December 31, 2011 (a)	$ 884	$ 687	$ 1	$ 12	$ 1,584

(a) The remaining cash payments related to these reserves for restructuring and other initiatives, including temporary layoff benefits for GMNA, primarily relate to postemployment benefits to be paid.

Year Ended December 31, 2011

GMNA recorded charges, interest accretion and other and revisions to estimates primarily related to special attrition programs for skilled trade U.S. hourly employees, service cost for hourly layoff benefits and Canadian restructuring activities.

Our labor agreement includes cash severance incentive programs which may range up to $100 million through March 31, 2012 for skilled trade U.S. hourly employees that will be included in our restructuring liability upon irrevocable acceptances by both parties.

GME recorded charges, interest accretion and other for separation programs primarily related to previously announced programs in Germany. Restructuring and early retirement programs in Spain, the U.K. and Belgium were essentially completed in 2010 and we also initiated a program in Germany in 2010. Through December 31, 2011 these programs had a total cost of $1.1 billion and affected a total of 6,700 employees and included the December 2010 closure of the Antwerp, Belgium facility. We expect to incur an additional $100 million to complete these programs, which will affect an additional 500 employees. To the extent these programs involve voluntary separations, no liabilities are recorded until offers to employees are accepted. If employees are involuntarily terminated, a liability is recorded at the communication date.

GMSA recorded charges, interest accretion and other for separation programs primarily related to the voluntary separation program in Brazil implemented in the three months ended December 31, 2011. A total of 900 employees in Brazil participated in the separation program at a total cost of $74 million. Liabilities were recorded as offers to the employees were irrevocably accepted.

Year Ended December 31, 2010

GMNA recorded charges, interest accretion and other, and revisions to estimates primarily related to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites and revisions to productivity initiatives, partially offset by Canadian restructuring activities.

GME recorded charges, interest accretion and other, and revisions to estimates for separation programs primarily related to the following initiatives:

- Separation charges of $527 million related to the closure of the Antwerp, Belgium facility which affected 2,600 employees.
- Separation charges of $63 million related to separation/layoff plans and an early retirement plan in Spain which ultimately affected 1,200 employees.
- Separation charges of $31 million related to a voluntary separation program in the United Kingdom.
- Separation charges of $95 million and interest accretion and other of $104 million related to a voluntary separation program in Germany.

Period July 10, 2009 through December 31, 2009

GMNA recorded charges, interest accretion and other, and revisions to estimates for separation programs primarily related to the following:

- The restructuring reserves were increased by $213 million due to an increase in the SUB and TSP accrual of $183 million related to capacity actions, productivity initiatives, acquisition of Nexteer and four domestic facilities and Canadian restructuring activities of $30 million.
- The salaried and hourly workforce severance accruals were reduced by $146 million as a result of elections subsequently made by terminating employees. Such amounts were reclassified as special termination benefits and were funded from the U.S. defined benefit pension plans and other applicable retirement benefit plans.

GME recorded charges, interest accretion and other, and revisions to estimates primarily related to separation charges for early retirement programs and additional liability adjustments, primarily in Germany.

GMIO recorded charges, interest accretion and other, and revisions to estimates primarily related to separation charges of $72 million for restructuring programs in Australia for salaried and hourly employees.

Old GM

The following table summarizes the reserves related to restructuring and other initiatives (excluding restructuring reserves related to dealer wind-down agreements) and charges by segment, including postemployment benefit reserves and charges (dollars in millions):

	Predecessor				
	GMNA	GME	GMIO	GMSA	Total
Balance at January 1, 2009	$ 2,456	$468	$ 45	$ 13	$ 2,982
Additions	1,835	20	27	38	1,920
Interest accretion and other	16	11	—	—	27
Payments	(1,014)	(65)	(43)	(48)	(1,170)
Revisions to estimates	(401)	—	—	9	(392)
Effect of foreign currency	50	(1)	3	4	56
Balance at July 9, 2009	2,942	433	32	16	3,423
Effect of application of fresh-start reporting	(37)	—	—	—	(37)
Ending balance including effect of application of fresh-start reporting (a)	$ 2,905	$433	$ 32	$ 16	$ 3,386

(a) The remaining cash payments related to these reserves for restructuring and other initiatives, including temporary layoff benefits for GMNA, primarily relate to postemployment benefits to be paid.

GMNA recorded charges, interest accretion and other, and revisions to estimates for separation programs related to the following initiatives:

- Postemployment benefit charges in the U.S. of $825 million related to 13,000 hourly employees who participated in the 2009 special attrition programs.

- SUB and TSP related charges in the U.S. of $707 million, recorded as an additional liability determined by an actuarial analysis at the implementation of the SUB and TSP and related suspension of the JOBS Program.

- Revisions to estimates of $401 million to decrease the reserve, primarily related to $335 million for the suspension of the JOBS Program and $141 million for estimated future wages and benefits due to employees who participated in the 2009 special attrition programs; offset by a net increase of $86 million related to Canadian salaried workforce reductions and other restructuring initiatives in Canada.

- Separation charges of $250 million for a U.S. salaried severance program to allow 6,000 terminated employees to receive ongoing wages and benefits for up to 12 months.

- Postemployment benefit charges in Canada of $38 million related to 380 hourly employees who participated in a special attrition program.

GME recorded charges, interest accretion and other, and revisions to estimates primarily related to separation charges for early retirement programs and additional liability adjustments, primarily in Germany.

GMIO recorded charges, interest accretion and other, and revisions to estimates primarily related to separation charges in Australia of $19 million related to a facility idling. The program affects employees who left through December 2009.

GMSA recorded charges, interest accretion and other, and revisions to estimates related to voluntary and involuntary separation programs in South America affecting 3,300 salaried and hourly employees.

Dealer Wind-downs

GM and Old GM

We market vehicles worldwide through a network of independent retail dealers and distributors. We determined that a reduction in the number of GMNA dealerships was necessary.

The following table summarizes GMNA's restructuring reserves related to dealer wind-down agreements (dollars in millions):

	Successor			Predecessor
	December 31, 2011	December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Balance at beginning of period	$ 144	$ 501	$ 516	$ —
Additions and revisions to estimates	(8)	7	275	518
Payments	(111)	(366)	(285)	(2)
Transfer to legal reserve	—	—	(17)	—
Effect of foreign currency	—	2	12	—
Balance at end of period	$ 25	$ 144	$ 501	$516

Note 23. Other Automotive Expenses, net

The following table summarizes the components of Other automotive expenses, net (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Operating and other expenses (income)	$56	$ (7)	$(35)	$ 22
Expenses related to Saab deconsolidation, net (Note 4)	—	—	(60)	824
Saab impairment charges	—	—	—	88
Delphi related charges (Note 20)	—	—	8	184
Depreciation and amortization expense	2	125	89	101
Interest expense	—	—	13	16
Total other automotive expenses, net	$58	$118	$ 15	$1,235

Interest expense and depreciation and amortization expense recorded in Other automotive expenses, net relates to a portfolio of automotive retail leases.

Note 24. Interest Income and Other Non-Operating Income, net

Automotive

The following table summarizes the components of Interest income and other non-operating income, net (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Interest income	$455	$ 465	$ 184	$183
Net gains on derivatives	41	68	278	—
Rental income	149	164	88	100
Dividends and royalties	153	213	105	145
Other (a)	53	621	(280)	424
Total interest income and other non-operating income, net	$851	$1,531	$ 375	$852

(a) Amounts in the year ended December 31, 2011 include impairment charges related to the cost method investment in Ally Financial of $555 million, a gain on the sale of Ally Financial preferred shares of $339 million, and recognition of deferred income from technology agreements with SGMW of $113 million. Amounts in the year ended December 31, 2010 include a gain on the reversal of an accrual for contingently issuable Adjustment Shares of $162 million, a gain on the sale of Saab of $123 million, a gain on the acquisition of GMS of $66 million and a gain on the sale of Nexteer of $60 million. Amounts in the period July 10, 2009 through December 31, 2009 include impairment charges related to Ally Financial common stock of $270 million.

Note 25. Stockholders' Equity and Noncontrolling Interests

Consolidated

Preferred Stock

The following table summarizes significant features relating to our preferred stock (dollars in millions, except for per share amounts):

			Successor		
			Dividends Paid		
	Liquidation Preference Per Share	Dividend Rate Per Annum	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009
Series A Preferred Stock	$25.00	9.00%	$621	$810	$349
Series B Preferred Stock	$50.00	4.75%	$243	$ —	

Series A Preferred Stock

The Series A Preferred Stock ranks senior with respect to liquidation preference and dividend rights to our common stock and Series B Preferred Stock and any other class or series of stock that we may issue. In the event of any voluntary or involuntary liquidation, dissolution, or winding up of our affairs, a holder of Series A Preferred Stock will be entitled to be paid, before any distribution or payment may be made to any holders of common stock or Series B Preferred Stock, the liquidation amount and the amount of any accrued and unpaid dividends, if any, whether or not declared, prior to such distribution or payment date. On or after December 31, 2014, the Series A Preferred Stock may be redeemed, in whole or in part, for cash at a price per share equal to the $25.00 per share liquidation amount, plus any accrued and unpaid dividends. Upon a redemption or purchase of any or all Series A

Preferred Stock, the difference, if any, between the recorded amount of the Series A Preferred Stock being redeemed or purchased and the consideration paid would be recorded as a charge to Net income attributable to common stockholders. If all of the Series A Preferred Stock were to be redeemed or purchased at its par value, the amount of the charge would be $1.4 billion.

In December 2010 we purchased 84 million shares of Series A Preferred Stock, held by the UST, at a price equal to 102% of the aggregate liquidation amount, for $2.1 billion. The purchase of the UST's Series A Preferred Stock resulted in a charge of $0.7 billion recorded in Cumulative dividends on and charge related to purchase of preferred stock.

Series B Preferred Stock

The Series B Preferred Stock, with respect to dividend rights and rights upon our liquidation, winding-up or dissolution, ranks: (1) senior to our common stock and to each other class of capital stock or series of preferred stock the terms of which do not expressly provide that such class or series ranks senior to, or on a parity with, the Series B Preferred Stock; (2) on a parity with any class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank on a parity with the Series B Preferred Stock; and (3) junior to our Series A Preferred Stock and to each class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank senior to the Series B Preferred Stock.

Each share of the Series B Preferred Stock, unless previously converted, will automatically convert on December 1, 2013 into shares of our common stock. The number of shares of our common stock issuable upon mandatory conversion of each share of Series B Preferred Stock, is determined based on the applicable market value of our common stock subject to anti-dilution adjustments and accumulated and unpaid dividends. The applicable market value of our common stock is the average of the closing prices of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the mandatory conversion date. Holders of the Series B Preferred Stock have the right to convert their shares at any time prior to the mandatory conversion date at a conversion ratio of 1.2626 shares of our common stock for each share of the Series B Preferred Stock that is optionally converted, subject to anti-dilution, make-whole and other adjustments.

If the applicable market value of our common stock upon mandatory conversion falls within a range of $33.00-$39.60 per common share, the holder receives a variable number of shares of our common stock with a value equal to the liquidation preference plus accumulated dividends. If the applicable market value is not within this range, there is a fixed conversion ratio equaling 1.2626 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is greater than $39.60, and 1.5152 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is less than $33.00. The fixed conversion ratios will be adjusted for events that would otherwise dilute a Series B Preferred Stockholder's interest. These anti-dilution provisions provide a holder of the Series B Preferred Stock a right to participate in our undistributed earnings because a dividend, if declared, would result in a transfer of value to the holder through an adjustment to the fixed conversion ratios. Based on the nature of the Series B Preferred Stock and the nature of these anti-dilution provisions, we have concluded that the Series B Preferred Stock is a participating security and, as such, the application of the two-class method for computing earnings per share is required when the applicable market value of our common stock is below $33.00 or above $39.60 per share. For purposes of calculating earnings per share, the applicable market value is calculated as the average of the closing prices of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the date of our financial statements. The calculation of the applicable market value at the date of our financial statements will apply to the full year, irrespective of the applicable market value computed during the prior quarters of the current year. Refer to Note 26 for a description of the effect of the two-class method on earnings per share.

Common Stock

Holders of our common stock are entitled to dividends at the sole discretion of our Board of Directors. However, the terms of the Series A Preferred Stock and Series B Preferred Stock prohibit, subject to exceptions, the payment of dividends on our common stock, unless all accrued and unpaid dividends on the Series A Preferred Stock and Series B Preferred Stock are paid in full. Holders of common stock are entitled to one vote per share on all matters submitted to our stockholders for a vote. The liquidation rights of holders of our common stock are secondary to the payment or provision for payment of all our debts and liabilities and to holders of our Series A Preferred Stock and Series B Preferred Stock, if any such shares are then outstanding. In the year ended December 31, 2011 we issued 61 million shares of common stock to the U.S. hourly and salaried pension plans, four million shares for exercised warrants, and 500 thousand shares for the settlement of salary and other restricted stock awards. In the year ended December 31, 2010 we issued 100 thousand shares of restricted common stock.

Warrants

In connection with the 363 Sale we issued two tranches of warrants, each to acquire 136 million shares of common stock, to MLC which have been substantially distributed to creditors of Old GM by MLC and one tranche of warrants to acquire 46 million shares of common stock to the New VEBA. The first tranche of MLC warrants is exercisable at any time prior to July 10, 2016 at an exercise price of $10.00 per share and the second tranche of MLC warrants is exercisable at any time prior to July 10, 2019 at an exercise price of $18.33 per share. In April 2011 MLC began distribution of its warrants for our common stock to its unsecured creditors. Upon exercise of the warrants, the shares issued will be included in the number of basic shares outstanding used in the computation of earnings per share. The New VEBA warrants are exercisable at any time prior to December 31, 2015 at an exercise price of $42.31 per share. The number of shares of common stock underlying each of the warrants and the per share exercise price are subject to adjustment as a result of certain events, including stock splits, reverse stock splits and stock dividends. The outstanding balance of warrants at December 31, 2011 and 2010 is 313 million and 318 million.

Noncontrolling Interests

In October 2009 we completed our participation in an equity rights offering in GM Korea for $417 million. As a result of the participation in the equity rights offering our ownership interest in GM Korea increased from 50.9% to 70.1%. In March 2011 we completed the acquisition of an additional 6.9% in GM Korea. After completing this transaction we now own 77.0% of the outstanding shares.

In December 2009 we acquired the remaining noncontrolling interest of a joint venture for $100 million increasing our ownership interest from 50% to 100%. This transaction resulted in no charge to Capital surplus.

The table below summarizes the changes in equity resulting from Net income (loss) attributable to common stockholders and transfers from (to) noncontrolling interests changes (dollars in millions):

	Successor	
	For The Year Ended December 31, 2011	July 10, 2009 Through December 31, 2009
Net income (loss) attributable to common stockholders	$7,585	$(4,428)
Increase in capital surplus resulting from GM Korea equity rights offering	—	108
Increase in capital surplus resulting from acquisition of additional interest in GM Korea	41	—
Changes from net income (loss) attributable to common stockholders and transfers from (to) noncontrolling interests	$7,626	$(4,320)

Accumulated Other Comprehensive Income (Loss)

Note 26. Earnings (Loss) Per Share

In the year ended December 31, 2011 we were required to use the two-class method for calculating earnings per share, as further discussed below, as the applicable market value of our common stock was below $33.00 per common share in the period ended December 31, 2011.

Basic and diluted earnings (loss) per share are computed by dividing Net income (loss) attributable to common stockholders by the weighted-average common shares outstanding in the period. Diluted earnings (loss) per share is computed by giving effect to all potentially dilutive securities that were outstanding.

The following table summarizes basic and dilutive earnings (loss) per share (in millions, except for per share amounts):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Basic earnings (loss) per share				
Net income (loss) attributable to stockholders (a)	$9,190	$6,172	$(4,297)	$109,118
Less: cumulative dividends on and charge related to purchase of preferred stock and undistributed earnings allocated to Series B Preferred Stock participating security (b)	1,605	1,504	131	—
Net income (loss) attributable to common stockholders	$7,585	$4,668	$(4,428)	$109,118
Weighted-average common shares outstanding — basic	1,536	1,500	1,238	611
Basic earnings (loss) per share	$ 4.94	$ 3.11	$ (3.58)	$ 178.63
Diluted earnings (loss) per share				
Net income (loss) attributable to stockholders (a)	$9,190	$6,172	$(4,297)	$109,118
Add: preferred dividends to holders of Series B Preferred Stock	—	25	—	—
Less: cumulative dividends on and charge related to purchase of preferred stock and undistributed earnings allocated to Series B Preferred Stock participating security (c)	1,552	1,504	131	—
Net income (loss) attributable to common stockholders	$7,638	$4,693	$(4,428)	$109,118
Weighted-average shares outstanding — diluted				
Weighted-average common shares outstanding — basic	1,536	1,500	1,238	611
Dilutive effect of warrants	130	106	—	—
Dilutive effect of conversion of Series B Preferred Stock	—	17	—	—
Dilutive effect of restricted stock units (RSUs)	2	1	—	—
Weighted-average common shares outstanding — diluted	1,668	1,624	1,238	611
Diluted earnings (loss) per share	$ 4.58	$ 2.89	$ (3.58)	$ 178.55

(a) Includes earned but undeclared dividends of $26 million, $26 million and $34 million on our Series A Preferred Stock and $20 million, $25 million and $0 on our Series B Preferred Stock in the years ended December 31, 2011 and 2010 and in the period July 10, 2009 through December 31, 2009.

(b) Includes cumulative dividends on preferred stock of $859 million and earnings of $746 million that have been allocated to the Series B Preferred Stock holders in the year ended December 31, 2011; cumulative dividends on preferred stock of $827 million and a charge related to the purchase of Series A Preferred Stock of $677 million in the year ended December 31, 2010; and cumulative dividends on preferred stock of $131 million in the period July 10, 2009 through December 31, 2009, which excludes dividends of $252 million which were paid to the New VEBA prior to December 31, 2009, as these shares were not considered outstanding until December 31, 2009 due to the terms of the 2009 UAW Retiree Settlement Agreement. Payments made to the New VEBA were recorded as employer contributions and included in Net income (loss) attributable to stockholders.

(c) Includes cumulative dividends on preferred stock of $859 million and earnings of $693 million that have been allocated to the Series B Preferred Stock holders in the year ended December 31, 2011; cumulative dividends on preferred stock of $827 million and a charge related to the purchase of Series A Preferred Stock of $677 million in the year ended December 31, 2010; and cumulative dividends on preferred stock of $131 million in the period July 10, 2009 through December 31, 2009.

GM

Year Ended December 31, 2011

We applied the two-class method to calculate basic earnings per share and the more dilutive of the two-class or the if-converted method to calculate diluted earnings per share. Under the two-class method for computing earnings per share, undistributed earnings are allocated to common stock and the Series B Preferred Stock according to their respective participation rights in undistributed earnings, as if all the earnings for the period had been distributed. This allocation to the Series B Preferred Stock holders reduced Net income attributable to common stockholders, resulting in a lower basic and dilutive earnings per share amount. Variability may result in our calculation of earnings per share from period to period depending on whether the application of the two-class method is required. Refer to Note 25 for a description of the Series B Preferred Stock and the application of the two-class method.

The application of the two-class method resulted in an allocation of undistributed earnings to our Series B Preferred Stock holders and, accordingly, 152 million common stock equivalents from the assumed conversion of the Series B Preferred Stock are not considered outstanding for purposes of determining the weighted-average common shares outstanding in the computation of diluted earnings per share.

MLC distributed all of its 272 million warrants for our common stock to its unsecured creditors and the GUC Trust. The warrant holders may exercise the warrants at any time prior to their respective expiration dates. Upon exercise of the warrants the shares issued will be included in the number of basic shares outstanding used in the computation of earnings per share.

Warrants to purchase 313 million shares of our common stock were outstanding at December 31, 2011, of which 46 million shares were not included in the computation of diluted earnings per share because the warrants' exercise price was greater than the average market price of the common shares. Under the treasury stock method, the assumed exercise of the remaining warrants resulted in 130 million dilutive shares.

Diluted earnings per share included the effect of 13 million unvested RSUs granted to certain global executives. The Adjustment Shares were excluded from the computation of basic and diluted earnings per share as the condition that would result in the issuance of the Adjustment Shares was not satisfied.

In July 2011 the 61 million shares of common stock contributed to our pension plans in January 2011 met the criteria to qualify as plan assets for accounting purposes. These shares were considered outstanding for earnings per share purposes beginning in July 2011.

Year Ended December 31, 2010

Warrants to purchase 318 million shares of our common stock were outstanding, of which 46 million shares were not included in the computation of diluted earnings per share because the warrants' exercise price was greater than the average market price of our common stock. Under the treasury stock method, the assumed exercise of warrants to purchase the remaining warrants resulted in 106 million dilutive shares.

Diluted earnings per share included the effect of 11 million unvested RSUs granted to certain global executives. The dilutive effect of the RSUs was included only for the period subsequent to our public offering as the RSUs prior were accounted for as liability awards prior to that date. The Adjustment Shares were excluded from the computation of basic and diluted earnings per share as the condition that would result in the issuance of the Adjustment Shares was not satisfied.

Period July 10, 2009 through December 31, 2009

Outstanding warrants to purchase 272 million shares of common stock were not included in the computation of diluted loss per share because the effect would have been antidilutive and 1 million RSUs were excluded from the computation of diluted loss per share as these awards were payable in cash during that time. The Adjustment Shares were excluded from the computation of basic and diluted loss per share as the condition that would result in the issuance of the Adjustment Shares was not satisfied.

Old GM

Period January 1, 2009 through July 9, 2009

Diluted earnings per share included the potential effect of the assumed exercise of certain stock options. Old GM excluded 208 million stock options and warrants in the computation of diluted earnings per share because the exercise price was greater than the average market price of the common shares. No shares potentially issuable to satisfy the in-the-money amount of Old GM's convertible debentures were included in the computation of diluted earnings per share as the conversion options in various series of convertible debentures were not in the money.

Note 27. Stock Incentive Plans

Consolidated

GM

Our stock incentive plans consist of the 2009 Long-Term Incentive Plan as amended December 22, 2010 (2009 GMLTIP) and the Salary Stock Plan as amended October 5, 2010 (GMSSP). Both plans are administered by the Executive Compensation Committee of our Board of Directors. The aggregate number of shares with respect to which awards may be granted under these amended plans shall not exceed 75 million.

Long-Term Incentive Plan

We granted 5 million and 15 million RSUs valued at the grant date fair value of our common stock in the years ended December 31, 2011 and 2010 and no RSUs in the period July 10, 2009 through December 31, 2009. These awards granted either cliff vest or ratably vest generally over a three-year service period, as defined in the terms of each award. We have elected to record compensation cost for these awards on a straight-line basis over the entire vesting period. Our policy is to issue new shares upon settlement of RSUs.

The 2011 awards granted to the Top 25 highest compensated employees will settle three years from the grant date in 25% increments in conjunction with each 25% of our Troubled Asset Relief Program (TARP) obligations that are repaid. The awards for the Next 75 highest compensated employees will settle either: (1) three years from the date of grant; or (2) on the first and third anniversary dates of grant. The awards to the non-Top 100 highest compensated employees will settle on the first, second and third anniversary dates of grant. Vesting and subsequent settlement will generally occur based upon employment at the end of each specified service period.

The 2010 awards granted to the Top 25 highest compensated employees will settle three years from the grant date in 25% increments in conjunction with each 25% of our TARP obligations that are repaid. The awards for the non-top 25 highest compensated employees will settle after three years in 25% increments in conjunction with each 25% of the U.S. and Canadian government loans that are repaid. The U.S. and Canadian government loans were fully repaid in April 2010, thus these awards will be settled upon completion of the remaining three year service period.

Retirement eligible participants that are non-Top 25 highest compensated employees who retire during the service period will retain and vest in a pro-rata portion of RSUs earned. The vested award will be payable on the settlement date. Compensation cost for these employees is recognized on a straight-line basis over the requisite service period.

Salary Stock

In November 2009 we initiated a salary stock program whereby a portion of each participant's total annual compensation was accrued and converted to RSUs at each salary payment date. In the years ended December 31, 2011 and 2010 a portion of each participant's salary accrued on each salary payment date converted to RSUs on a quarterly basis. The awards are fully vested and nonforfeitable upon grant therefore compensation cost is fully recognized on the date of grant. The awards are settled quarterly over a three year period commencing on the first anniversary date of grant. Our policy is to issue new shares upon settlement of these awards.

RSUs

Prior to our public offering, all RSU awards were classified as liability awards as they were payable in cash. In November 2010 we reclassified all of the RSU liability awards to equity for those awards that became payable in shares in accordance with the plan terms.

The following table summarizes information about our RSUs under the 2009 GMLTIP and GMSSP (RSUs in millions):

	Successor		
	Shares	Weighted-Average Grant Date Fair Value	Weighted-Average Remaining Contractual Term
RSUs outstanding at December 31, 2010	17.2	$19.03	1.8
Granted	7.6	$31.18	
Settled	(1.2)	$18.85	
Forfeited or expired	(1.1)	$22.01	
RSUs outstanding at December 31, 2011	22.5	$23.01	1.1
RSUs unvested and expected to vest at December 31, 2011	14.0	$23.47	1.5
RSUs vested and payable at December 31, 2011	8.1	$22.07	—
RSUs granted in the year ended December 31, 2010		$19.17	
RSUs granted in the period July 10, 2009 through December 31, 2009		$16.39	

We recorded compensation expense of $233 million, $235 million and $23 million for our stock incentive plans in the years ended December 31, 2011 and 2010 and in the period July 10, 2009 through December 31, 2009. The compensation cost of each RSU granted under the 2009 GMLTIP and GMSSP that will be settled in equity is based on the fair value of our common stock on the date of grant or, for those RSUs reclassified from liability to equity-based awards, the fair value of our common stock as of the date of the public offering.

At December 31, 2011 the total unrecognized compensation expense for nonvested equity awards granted under the 2009 GMLTIP was $263 million. This expense is expected to be recorded over a weighted-average period of 1.5 years.

The total fair value of RSUs vested was $105 million, $78 million and $19 million in the years ended December 31, 2011 and 2010 and in the period July 10, 2009 through December 31, 2009.

Old GM

Old GM had various stock incentive plans which were administered by either its Executive Compensation Committee of its Board of Directors or its Vice President of Human Resources. Stock incentive awards consisted of stock options, market-contingent stock options, stock performance awards and cash-based RSUs. Stock incentive awards, some of which were subject to performance conditions, were granted at fair value and were subject to various vesting conditions. In connection with the 363 Sale, MLC retained the responsibility for administering Old GM's stock incentive plans. We have recorded no compensation expense related to Old GM's stock incentive plans subsequent to July 9, 2009.

Note 28. Transactions with Ally Financial

Automotive

The following tables summarize the financial statement effects of and maximum obligations under agreements with Ally Financial (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Residual support (a)		
Liabilities (receivables) recorded	$ (6)	$ (24)
Maximum obligation	$ 40	$ 523
Risk sharing (a)		
Liabilities recorded	$ 66	$ 269
Maximum obligation	$ 88	$ 692
Vehicle repurchase obligations (b)		
Maximum obligations	$19,779	$18,807
Fair value of guarantee	$ 17	$ 21

(a) Represents liabilities (receivables) recorded and maximum obligations for agreements entered into prior to December 31, 2008. Agreements entered into after December 31, 2008 have not included residual support or risk sharing programs. In the years ended December 31, 2011 and 2010 favorable adjustments to our residual support and risk sharing liabilities of $0.5 billion and $0.6 billion were recorded in the U.S. due to increases in estimated residual values.

(b) The maximum potential amount of future payments required to be made to Ally Financial under this guarantee is based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold.

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
U.S. marketing incentives and operating lease residual payments	$1,428	$1,111	$695	$601
Exclusivity fee income	$ 76	$ 99	$ 47	$ 52

Marketing Incentives and Operating Lease Residuals

Under an interest rate support program, we pay an amount at the time of lease or retail contract origination to adjust the interest rate in the retail contract or implicit in the lease below Ally Financial's standard interest rate. The amount paid at contract origination represents the present value of the difference between the customer's contractual rate and Ally Financial's standard rate for a given program.

Under a residual support program, a customer's contract residual value is adjusted above Ally Financial's standard residual value. We reimburse Ally Financial to the extent sales proceeds are less than the customer's contract residual value, limited to Ally Financial's standard residual value. The residual support amount owed is calculated at contract termination and, in cases where the amount differs from the expected amount paid at contract origination, the difference is paid to or paid by Ally Financial.

Under a risk-sharing arrangement, residual losses are shared equally with Ally Financial to the extent remarketing proceeds are below Ally Financial's standard residual value (limited to a floor).

Under a capitalized cost reduction program, we pay an amount at the time of lease or retail contract origination to reduce the principal amount implicit in the lease or retail contract below the standard manufacturers' suggested retail price.

Under a lease pull-ahead program, a customer is encouraged to terminate their lease early and buy or lease a new GM vehicle. Ally Financial waives the customer's remaining payment obligation under their current lease and Ally Financial is compensated for any foregone revenue from the waived payments. Since these programs generally accelerate the resale of the vehicle, the proceeds are typically higher than if the vehicle had been sold at contract maturity. The reimbursement to Ally Financial for the foregone payments is reduced by the amount of this benefit.

Exclusivity Arrangements

We have entered into exclusivity agreements with Ally Financial whereby: (1) for a two-year period, retail financing incentive programs can be offered through a third party financing source under certain specified circumstances, and after such two-year period beginning in January 2011 any such incentive programs can be offered on a graduated basis through third parties on a non-exclusive basis, or if Ally Financial matches the rates offered by such third party on a side-by-side basis with Ally Financial; (2) Ally Financial has no obligation to provide financing; and (3) Ally Financial has no targets against which it could be assessed penalties. After December 24, 2013 we will have the right to offer retail financing incentive programs through any third party financing source, including Ally Financial, without any restrictions or limitations.

Contractual Exposure Limit

We have an agreement with Ally Financial that limits certain unsecured obligations arising from service agreements to Ally Financial to $1.5 billion and limits the sum of maximum unsecured exposure and maximum secured exposure to the greater of $3.0 billion or 15% of Ally Financial's capital from and after December 30, 2010.

Vehicle Repurchase Obligations

Our agreement with Ally Financial requires the repurchase of Ally Financial financed inventory invoiced to dealers with limited exclusions, in the event of a qualifying voluntary or involuntary termination of the dealer's sales and service agreement. The repurchase obligation ended in August 2010 for vehicles invoiced through August 2009, ended in August 2011 for vehicles invoiced through August 2010, ends in August 2012 for vehicles invoiced through August 2011 and ends in August 2013 for vehicles invoiced through August 2012.

The maximum potential amount of future payments under this guarantee is based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer. The fair value of the guarantee, which considers the likelihood of dealers terminating and estimated loss exposure for ultimate disposition of vehicles, was recorded as a reduction of revenue.

Balance Sheet

The following table summarizes the balance sheet effects of transactions with Ally Financial (dollars in millions):

	Successor	
	December 31, 2011	December 31, 2010
Assets		
Accounts and notes receivable, net (a)	$ 243	$ 290
Other assets (b)		$ 26
Liabilities		
Accounts payable (c)	$ 59	$ 168
Short-term debt and current portion of long-term debt (d)	$1,068	$1,043
Accrued liabilities and other liabilities (e)	$ 650	$1,167
Long-term debt (f)	$ 8	$ 43
Other non-current liabilities (g)	$ 35	$ 84

(a) Represents wholesale settlements due from Ally Financial and receivables for exclusivity fees and royalties.

(b) Represents distributions due from Ally Financial on our investments in Ally Financial preferred stock.

(c) Represents amounts billed to us and payable related to incentive programs.

(d) Represents wholesale financing, sales of receivable transactions and the short-term portion of term loans provided to certain dealerships which we own or in which we have an equity interest.

(e) Represents accruals for marketing incentives on vehicles which are sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial in North America. This includes the estimated amount of residual and rate support accrued, capitalized cost reduction incentives and amounts owed under lease pull-ahead programs.

(f) Represents the long-term portion of term loans from Ally Financial to certain consolidated dealerships.

(g) Represents long-term portion of liabilities for marketing incentives on vehicles financed by Ally Financial.

Statement of Operations

The following table summarizes the income statement effects of transactions with Ally Financial (dollars in millions):

	Successor			Predecessor
	Year Ended December 31, 2011	Year Ended December 31, 2010	July 10, 2009 Through December 31, 2009	January 1, 2009 Through July 9, 2009
Total net sales and revenue (decrease) (a)	$(1,468)	$(1,383)	$(259)	$207
Automotive cost of sales and other automotive expenses (b)	$ 16	$ 36	$ 113	$180
Interest income and other non-operating income, net (c)	$ 126	$ 228	$ 127	$166
Automotive interest expense (d)	$ 63	$ 243	$ 121	$100

(a) Represents marketing incentives on vehicles which were sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial. This includes the estimated amount of residual and rate support accrued, capitalized cost reduction incentives and costs under lease pull-ahead programs. This amount is offset by net sales for vehicles sold to Ally Financial for employee and governmental lease programs and third party resale purposes.

(b) Represents cost of sales on the sale of vehicles to Ally Financial for employee and governmental lease programs and third party resale purposes.

(c) Represents income on investments in Ally Financial preferred stock (through March 31, 2011), exclusivity and royalty fee income. Included in this amount is rental income related to Ally Financial's primary executive and administrative offices located in the Renaissance Center in Detroit, Michigan. The lease agreement expires in November 2016.

(d) Represents interest incurred on notes payable and wholesale settlements.

Note 29. Supplementary Quarterly Financial Information (Unaudited)

Consolidated

The following tables summarize supplementary quarterly financial information (dollars in millions, except per share amounts):

	Successor			
	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
2011				
Total net sales and revenue	$36,194	$39,373	$36,719	$37,990
Automotive gross margin	$ 4,214	$ 5,250	$ 4,594	$ 4,422
Net income	$ 3,411	$ 3,037	$ 2,092	$ 747
Net income attributable to stockholders	$ 3,366	$ 2,992	$ 2,107	$ 725

GM

In the three months ended June 30, September 30, and December 31, 2011 we used the two-class method for calculating earnings per share because Series B Preferred Stock became a participating security.

Results for the three months ended December 31, 2011 included:

- Goodwill impairment charge of $891 million in GMIO and GME.
- Settlement gain of $749 million related to termination of CAW hourly retiree healthcare benefits.
- Impairment charge of $555 million related to Ally Financial common stock.
- Reversal of deferred income tax valuation allowances of $502 million in Australia.

Results for the three months ended March 31, 2011 included:

- Gain of $1.6 billion related to the sale of our Class A Membership Interests in New Delphi.
- Goodwill impairment charge of $395 million in GME.
- Gain of $339 million related to the sale of 100% of our investment in the Ally Financial preferred stock.

Results for the three months ended December 31, 2010 included:

- A charge of $677 million related to our purchase of 84 million shares of Series A Preferred Stock from the UST.

Note 30. Segment Reporting

Consolidated

We analyze the results of our business through our five segments: GMNA, GME, GMIO, GMSA and GM Financial. Each segment has a manager responsible for executing our strategies. Our automotive manufacturing operations are integrated within the segments, benefit from broad-based trade agreements and are subject to regulatory requirements, such as Corporate Average Fuel Economy regulations. While not all vehicles within a segment are individually profitable on a fully loaded cost basis, those vehicles are needed in our product mix in order to attract customers to dealer showrooms and to maintain sales volumes for other, more profitable vehicles. Because of these factors, we do not manage our business on an individual brand or vehicle basis. The chief operating decision maker evaluates the operating results and performance of our automotive segments through Income (loss) before interest and income taxes, as adjusted for additional amounts, and evaluates GM Financial through Income (loss) before income taxes.

Substantially all of the cars, trucks and parts produced are marketed through retail dealers in North America, and through distributors and dealers outside of North America, the substantial majority of which are independently owned.

In addition to the products sold to dealers for consumer retail sales, cars and trucks are also sold to fleet customers, including daily rental car companies, commercial fleet customers, leasing companies and governments. Sales to fleet customers are completed through the network of dealers and in some cases sold directly to fleet customers. Retail and fleet customers can obtain a wide range of aftersale vehicle services and products through the dealer network, such as maintenance, light repairs, collision repairs, vehicle accessories and extended service warranties.

GMNA primarily meets the demands of customers in North America with vehicles developed, manufactured and/or marketed under the following four brands:

- Buick
- Cadillac
- Chevrolet
- GMC

The demands of customers outside of North America are primarily met with vehicles developed, manufactured and/or marketed under the following brands:

- Buick
- Cadillac
- Chevrolet
- Daewoo
- GMC
- Holden
- Opel
- Vauxhall

At December 31, 2011 we also had equity ownership stakes directly or indirectly in entities through various regional subsidiaries, including GM Korea, SGM, SGMW, FAW-GM and HKJV. These companies design, manufacture and market vehicles under the following brands:

- Alpheon
- Baojun
- Buick
- Cadillac
- Chevrolet
- Daewoo
- Jiefang
- Wuling

Nonsegment operations are classified as Corporate. Corporate includes investments in Ally Financial, certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures and certain nonsegment specific revenues and expenses.

All intersegment balances and transactions have been eliminated in consolidation.

The following tables summarize key financial information by segment (dollars in millions):

Note 32. Chapter 11 Proceedings and the 363 Sale

Background

Over time as Old GM's market share declined in North America, Old GM needed to continually restructure its business operations to reduce cost and excess capacity. Legacy labor costs and obligations and capacity in its dealer network made Old GM less competitive than new entrants into the U.S. market. These factors continued to strain Old GM's liquidity. In 2005 Old GM incurred significant losses from operations and from restructuring activities such as providing support to Delphi and other efforts intended to reduce operating costs. Old GM managed its liquidity during this time through a series of cost reduction initiatives, capital markets transactions and sales of assets. However, the global credit market crisis had a dramatic effect on Old GM and the automotive industry. In the second half of 2008, the increased turmoil in the mortgage and overall credit markets (particularly the lack of financing for buyers or lessees of vehicles), the continued reductions in U.S. housing values, the volatility in the price of oil, recessions in the U.S. and Western Europe and the slowdown of economic growth in the rest of the world created a substantially more difficult business environment. The ability to execute capital markets transactions or sales of assets was extremely limited, vehicle sales in North America and Western Europe contracted severely and the pace of vehicle sales in the rest of the world slowed. Old GM's liquidity position, as well as its operating performance, were negatively affected by these economic and industry conditions and by other financial and business factors, many of which were beyond its control.

As a result of these economic conditions and the rapid decline in sales in the three months ended December 31, 2008 Old GM determined that, despite the actions it had then taken to restructure its U.S. business, it would be unable to pay its obligations in the normal course of business in 2009 or service its debt in a timely fashion, which required the development of a new plan that depended on financial assistance from the U.S. government.

In December 2008 Old GM requested and received financial assistance from the U.S. government and entered into the UST Loan Agreement. In early 2009 Old GM's business results and liquidity continued to deteriorate, and, as a result, Old GM obtained additional funding from the UST under the UST Loan Agreement. Old GM also received funding from EDC under the EDC Loan Facility.

As a condition to obtaining the loans under the UST Loan Agreement, Old GM was required to submit a plan in February 2009 that included specific actions (Viability Plan) intended to result in the following:

- Repayment of all loans, interest and expenses under the UST Loan Agreement, and all other funding provided by the U.S. government;
- Compliance with federal fuel efficiency and emissions requirements and commencement of domestic manufacturing of advanced technology vehicles;
- Achievement of a positive net present value, using reasonable assumptions and taking into account all existing and projected future costs;
- Rationalization of costs, capitalization and capacity with respect to its manufacturing workforce, suppliers and dealerships; and
- A product mix and cost structure that is competitive in the U.S. marketplace.

The UST Loan Agreement also required Old GM to, among other things, use its best efforts to achieve the following restructuring targets: (1) debt reduction of at least two-thirds; (2) labor modifications to achieve an average compensation competitive with that of foreign-owned U.S. domiciled automakers; and, (3) modification of certain retiree healthcare obligations.

The UST Loan Agreement provided that if, by March 31, 2009 or a later date (not to exceed 30 days after March 31, 2009) as determined by the Presidential Task Force on the Auto Industry (Auto Task Force) (Certification Deadline), the Auto Task Force had not certified that Old GM had taken all steps necessary to achieve and sustain its long-term viability, international competitiveness and energy efficiency in accordance with the Viability Plan, then the loans and other obligations under the UST Loan Agreement were to become due and payable on the thirtieth day after the Certification Deadline.

On March 30, 2009 the Auto Task Force determined that the plan was not viable and required substantial revisions. On March 31, 2009 Old GM and the UST agreed to postpone the Certification Deadline to June 1, 2009. Old GM made further modifications to its Viability Plan in an attempt to satisfy the Auto Task Force requirement that it undertake a substantially more accelerated and aggressive restructuring plan (Revised Viability Plan), the most significant of which included reducing Old GM's indebtedness and VEBA obligations.

Chapter 11 Proceedings

Old GM was not able to complete the cost reduction and restructuring actions in its Revised Viability Plan, including the debt reductions and VEBA modifications, which resulted in extreme liquidity constraints. As a result, on June 1, 2009 Old GM and certain of its direct and indirect subsidiaries sought relief through Chapter 11 Proceedings of the Bankruptcy Code in the Bankruptcy Court.

In connection with the Chapter 11 Proceedings, Old GM entered into the DIP Facility and received additional funding commitments from EDC to support Old GM's Canadian operations.

The following table summarizes the total funding and funding commitments Old GM received from the U.S. and Canadian governments and the additional notes Old GM issued related thereto in the period December 31, 2008 through July 9, 2009 (dollars in millions):

	Predecessor		
	Funding and Funding Commitments	Additional Notes Issued (a)	Total Obligation
Description of Funding Commitment			
UST Loan Agreement (b)	$19,761	$1,172	$20,933
EDC funding (c)	6,294	161	6,455
DIP Facility	33,300	2,221	35,521
Total	$59,355	$3,554	$62,909

(a) Old GM did not receive any proceeds from the issuance of these promissory notes, which were issued as additional compensation to the UST and EDC.

(b) Includes debt of $361 million, which the UST loaned to Old GM under the warranty program.

(c) Includes approximately $2.4 billion from the EDC Loan Facility received in the period January 1, 2009 through July 9, 2009 and funding commitments of $3.9 billion that were immediately converted into our equity. This funding was received on July 15, 2009.

363 Sale

On July 10, 2009 we completed the acquisition of substantially all of the assets and assumed certain liabilities of Old GM and certain of its direct and indirect subsidiaries (collectively, the Sellers). The 363 Sale was consummated in accordance with a purchase agreement also referred to as the Amended and Restated Master Sale and Purchase Agreement, dated June 26, 2009, as amended, between us and the Sellers, and pursuant to the Bankruptcy Court's sale order dated July 5, 2009.

In connection with the 363 Sale, the purchase price paid to Old GM was composed of:

- A credit bid in an amount equal to the total of: (1) debt of $19.8 billion under Old GM's UST Loan Agreement, plus notes of $1.2 billion issued as additional compensation for the UST Loan Agreement, plus interest on such debt Old GM owed as of the closing date of the 363 Sale; and (2) debt of $33.3 billion under Old GM's DIP Facility, plus notes of $2.2 billion issued as additional compensation for the DIP Facility, plus interest Old GM owed as of the closing date, less debt of $8.2 billion owed under the DIP Facility;
- The UST's return of the warrants Old GM previously issued to it;
- The issuance to MLC of shares of our common stock and warrants to acquire newly issued shares of our common stock as presented in the table in the following section entitled "Issuance of Common Stock, Preferred Stock and Warrants;" and
- Our assumption of certain specified liabilities of Old GM (including debt of $7.1 billion owed under the DIP Facility).

Under the terms of the 363 Sale agreement, we are obligated to issue Adjustment Shares to the GUC Trust following the dissolution of MLC in the event that allowed general unsecured claims against MLC, as approved by the Bankruptcy Court, exceed $35.0 billion. Refer to Note 20 for a description of the contingently issuable Adjustment Shares.

Agreements with the UST, EDC and New VEBA

On July 10, 2009 we entered into the UST Credit Agreement and assumed debt of $7.1 billion maturing on July 10, 2015 that Old GM incurred under its DIP Facility. Immediately after entering into the UST Credit Agreement, we made a partial prepayment, reducing the UST Credit Agreement principal balance to $6.7 billion. We issued VEBA Notes in the principal amount of $2.5 billion to the New VEBA. Through our wholly-owned subsidiary GMCL we also entered into the Canadian Loan with EDC, as a result of which GMCL had a $1.3 billion term loan.

In December 2009 and March 2010 we made quarterly payments of $1.0 billion and $1.0 billion on the UST Credit Agreement and GMCL made quarterly payments of $192 million and $194 million on the Canadian Loan. In April 2010, we used funds from our escrow account to repay in full the outstanding amount of the UST Credit Agreement of $4.7 billion, and GMCL repaid in full the outstanding amount of the Canadian Loan of $1.1 billion. Both loans were repaid prior to maturity. In October 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Notes of $2.8 billion.

Refer to Note 17 for additional information on the UST Credit Agreement, VEBA Notes and the Canadian Loan.

Issuance of Common Stock, Preferred Stock and Warrants

On July 10, 2009 we issued the following securities to the UST, Canada GEN Investment Corporation, a corporation organized under the laws of Canada (Canada Holdings), the New VEBA and MLC (shares in millions):

	Successor	
	Common Stock	Series A Preferred Stock (b)
UST	912	84
Canada Holdings	175	16
New VEBA (a)	263	260
MLC (a)	150	—
	1,500	360

(a) New VEBA also received a tranche of warrants to acquire 46 million shares of our common stock and MLC received two tranches of warrants, each to acquire 136 million shares of our common stock. Refer to Note 25 for additional description of warrants.

(b) Refer to Note 25 for a description of the Series A Preferred Stock.

Additional Modifications to Pension and Other Postretirement Plans Contingent upon the Completion of the 363 Sale

We modified the U.S. hourly pension plan, the U.S. executive retirement plan, the U.S. salaried life plan, the non-UAW hourly retiree medical plan and the U.S. hourly life plan. These modifications became effective upon the completion of the 363 Sale. Refer to Note 18 for description of the changes to these plans.

Accounting for the Effects of the Chapter 11 Proceedings and the 363 Sale

Chapter 11 Proceedings

ASC 852, "Reorganizations," (ASC 852) is applicable to entities operating under Chapter 11 of the Bankruptcy Code. ASC 852 generally does not affect the application of U.S. GAAP that we and Old GM followed to prepare the consolidated financial statements, but it does require specific disclosures for transactions and events that were directly related to the Chapter 11 Proceedings and transactions and events that resulted from ongoing operations.

Old GM prepared its consolidated financial statements in accordance with the guidance in ASC 852 in the period June 1, 2009 through July 9, 2009. Revenues, expenses, realized gains and losses, and provisions for losses directly related to the Chapter 11 Proceedings were recorded in Reorganization gains, net. Reorganization gains, net do not constitute an element of operating loss due to their nature and due to the requirement of ASC 852 that they be reported separately. Cash amounts provided by or used in the Chapter 11 Proceedings are separately disclosed in the statement of cash flows.

Application of Fresh-Start Reporting

The Bankruptcy Court did not determine a reorganization value in connection with the 363 Sale. Reorganization value is defined as the value of our assets without liabilities. In order to apply fresh-start reporting, ASC 852 requires that total postpetition liabilities and allowed claims be in excess of reorganization value and prepetition stockholders receive less than 50.0% of our common stock. Based on our estimated reorganization value, we determined that on July 10, 2009 both the criteria of ASC 852 were met and, as a result, we applied fresh-start reporting.

363 Sale and Fresh-Start Reporting Adjustments

The following table summarizes Old GM's Reorganization gains, net, arising from the 363 Sale and fresh-start reporting (dollars in millions):

	Predecessor
	January 1, 2009 Through July 9, 2009
Change in net assets resulting from the application of fresh-start reporting	$ 33,829
Fair value of New GM's Series A Preferred Stock, common shares and warrants issued in 363 Sale	20,532
Gain from the conversion of debt owed to UST to equity	31,561
Gain from the conversion of debt owed to EDC to equity	5,964
Gain from the modification and measurement of our VEBA obligation	7,731
Gain from the modification and measurement of other employee benefit plans	4,585
Gain from the settlement of net liabilities retained by MLC via the 363 Sale	25,177
Income tax benefit for release of valuation allowances and other tax adjustments	710
Other 363 Sale adjustments	(21)
Total adjustments from the 363 Sale and fresh-start reporting	130,068
Adjustment recorded to Income tax benefit for release of valuation allowances and other tax adjustments	(710)
Other losses, net (a)	(1,203)
Total Reorganization gains, net	$128,155

(a) Other losses, net primarily relate to costs incurred during Old GM's Chapter 11 proceedings, including: losses of $958 million on extinguishments of debt; losses of $398 million on contract rejections, settlements of claims and other lease terminations; professional fees of $38 million; and a gain of $247 million related to the release of Accumulated other comprehensive income (loss) associated with previously designated derivative financial instruments.

Disclosure Controls and Procedures

We maintain disclosure controls and procedures designed to provide reasonable assurance that information required to be disclosed in reports filed under the Securities Exchange Act of 1934, as amended (Exchange Act) is recorded, processed, summarized and reported within the specified time periods and accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Our management, with the participation of our Chairman and CEO and Senior Vice President and CFO, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) or 15d-15(e) promulgated under the Exchange Act) at December 31, 2011. Based on these evaluations, our CEO and CFO concluded that our disclosure controls and procedures required by paragraph (b) of Rules 13a-15 or 15d-15 were effective as of December 31, 2011.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining effective internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act. This system is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with U.S. GAAP. Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, misstatements due to error or fraud may not be prevented or detected on a timely basis.

Our management performed an assessment of the effectiveness of our internal control over financial reporting at December 31, 2011, utilizing the criteria discussed in the "Internal Control — Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission. The objective of this assessment was to determine whether our internal control over financial reporting was effective at December 31, 2011. Based on management's assessment, we have concluded that our internal control over financial reporting was effective at December 31, 2011.

The effectiveness of our internal control over financial reporting has been audited by Deloitte & Touche LLP, an independent registered public accounting firm, as stated in its report which is included herein.

Changes in Internal Controls

There have not been any changes in our internal control over financial reporting during the three months ended December 31, 2011 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

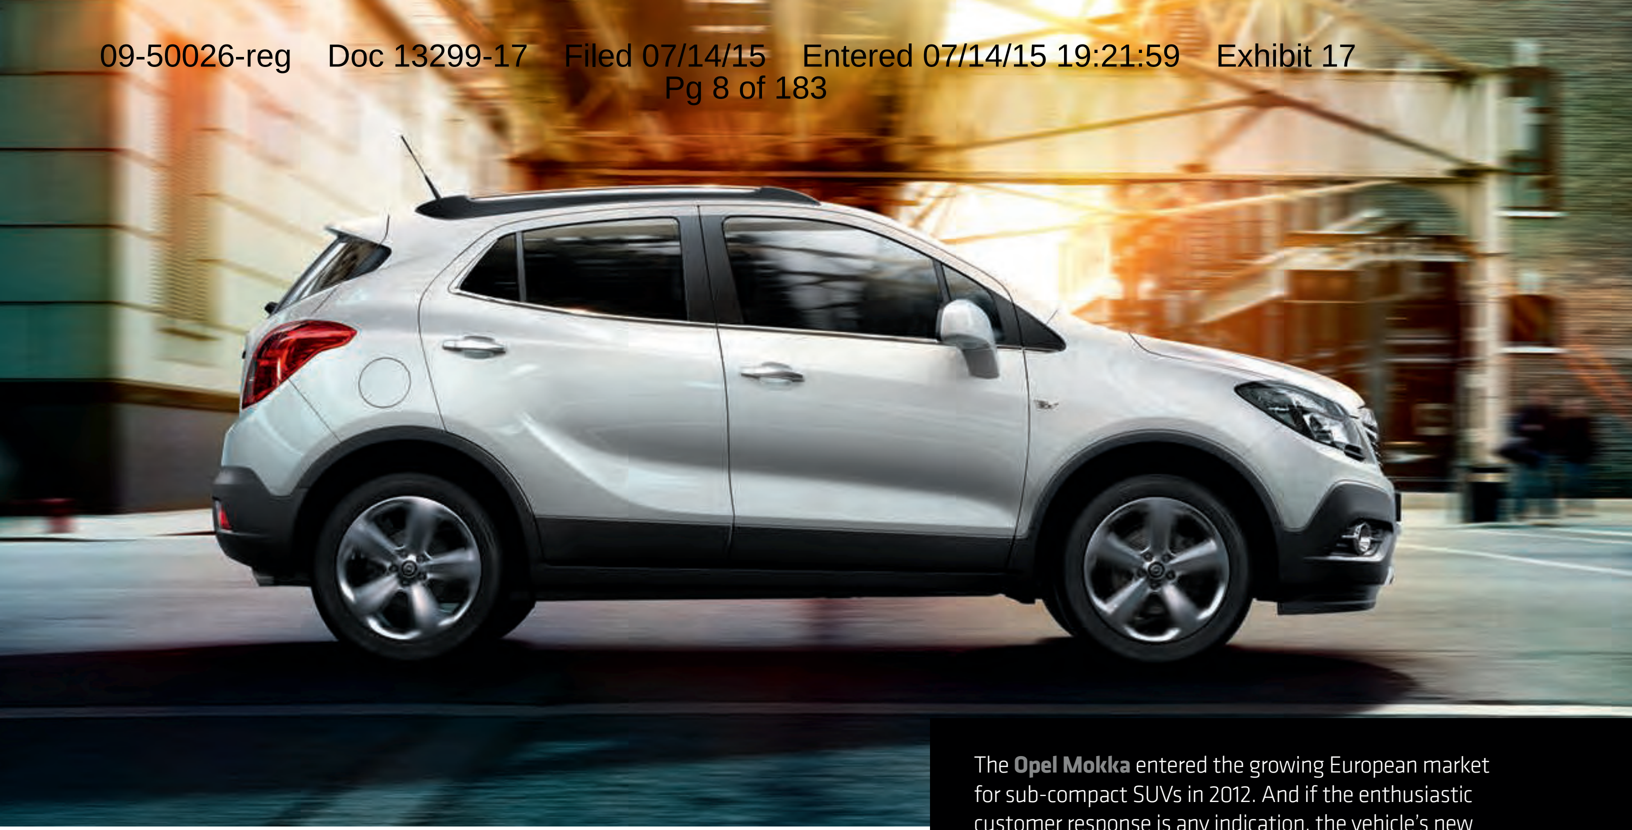
FINANCIAL CONTENTS

DANIEL F. AKERSON
Chairman & Chief Executive Officer
with the 2014 Cadillac CTS

TO OUR STOCKHOLDERS:

Last year, I closed my letter to you by talking about how GM was changing its processes and culture in order to build the best vehicles in the world much more efficiently and profitably. This year, I want to pick up where I left off, and articulate what success looks like for you as stockholders, and for everyone else who depends on us. >>



The **Opel Mokka** entered the growing European market for sub-compact SUVs in 2012. And if the enthusiastic customer response is any indication, the vehicle's new technologies and bold design are already setting a new standard in its segment.

Simply stated, our objective is to make GM the world's most valuable automotive company over time by attracting the industry's most loyal and enthusiastic customers.

The phrase "most valuable" means different things to different groups, which is intentional. To suppliers and our dealers, it means GM will be their preferred business partner. To our team, it means we will be their workplace of choice. And to investors, it means we will become a blue chip holding by virtue of long-term profitable growth, which is the theme of this letter.

What is immutable is our focus on the customer, which requires us to go from "good" today to "great" in everything we do, including product design, initial quality, durability and service after the sale.

As you will read, the foundation for greatness is being built. GM has introduced products that customers around the world love. We are aggressively addressing the issues that hold us back. We have maintained our fortress balance sheet and improved our financial flexibility. And we have planted the seeds of growth in every region of the world.

A YEAR OF SIGNIFICANT PROGRESS

From a financial standpoint, 2012 was another solid year for General Motors. Four of our five business units were profitable and we earned net income attributable to common stockholders of $4.9 billion.

Those of you who have been invested in GM know that we track our operating performance using EBIT-adjusted, which is earnings before interest expense and taxes, adjusted for special items. On this basis, GM earned $7.9 billion.

This is down about $400 million from a year ago, due primarily to a larger loss in Europe. North America's results tracked very close to 2011. Earnings in South America and International Operations were up year over year. GM Financial had record income before tax.

Cash generation was solid. Our automotive revenue in 2012 was $150 billion, our dealers delivered 9.3 million vehicles and we generated $9.6 billion in automotive net cash provided by operating activities. Adjusted automotive free cash flow was up meaningfully from 2011, reaching $4.3 billion.

We ended 2012 with total liquidity of $37.2 billion, including $26.1 billion of cash and marketable securities.

These and other favorable trends prompted Canada's DBRS and Fitch Ratings to upgrade GM's corporate credit rating. DBRS now rates GM as investment grade and all three major U.S. ratings agencies have us rated one notch below investment grade. Our target is to achieve investment grade across-the-board as soon as possible and improve from there.

CREATING A SUSTAINABLE COMPETITIVE ADVANTAGE

GM's much improved financial structure and our $23.2 billion in EBIT-adjusted since the beginning of 2010 are allowing us to reinvest in the business at a consistently high level, despite the fact that most European economies are in distress and U.S. sales remained below pre-recession levels in 2012.

Our capital expenditures increased from $6.2 billion in 2011 to $8.1 billion in 2012, and I expect capital spending will stay at about this level in coming years. We can do this because of our low break-even point in North America, the global geographic diversity of our earnings and our fortress balance sheet.

Our operating results and financial discipline also made it possible to execute a number of transactions that will improve our competitive position and reduce risk going forward.

- Through GM Financial, we are acquiring Ally Financial's International Operations in Europe and Latin America, and Ally's share of its China joint venture. With the Ally acquisitions and GM Financial's other new business initiatives, we will be able to provide financing in markets that represent 80 percent of our sales volume. We will also be able to meet demand in strategic and underserved markets – all with very good risk-adjusted returns and a smaller balance sheet than other captive automotive finance companies.
- To ensure GM has state-of-the-art information technology (IT), we are consolidating 23 mostly leased and shared data centers around the world into two fully redundant, company-owned facilities. The next step is to transform IT into a competitive advantage, so we are creating four innovation centers to develop proprietary business application software. Together, these moves will give us the most robust applications, and the most accurate, timely and secure data.
- In a particularly innovative set of transactions, we reduced our U.S. salaried pension obligations by $28 billion. By offering retirees a lump sum buy-out or an insurance company-backed annuity, we were able to reduce a form of leverage, reduce claims on our future cash flow and actually enhance the income security of our salaried retirees.
- Late in the year, we strengthened our fortress balance sheet by replacing our existing $5 billion revolving line of credit with two new credit facilities totaling $11 billion. This additional liquidity is appropriate for a company of our size. But what made it a landmark deal was the fact that we earned investment-grade pricing and investment-grade terms and conditions – a clear vote of confidence in the financial strength of General Motors.

FIXING GM EUROPE

One of the urgent issues we are addressing is the economic crisis in Europe, which led to increased losses in the region. I'm encouraged that after several years of restructuring, which intensified in 2012, we are now seeing green shoots. Indeed, our objective is to achieve break-even EBIT-adjusted results by mid-decade.

The foundation of our Europe revitalization plan is to grow Chevrolet and underpin Opel/Vauxhall's great new products with a competitive cost structure and the right "go to market" strategy.

Significant progress has been made on all of these fronts:

- We continue to rationalize capacity and pursue productivity gains. We announced the sale of our transmission operations in Strasbourg, France, and confirmed that car production will cease at our plant in Bochum, Germany.
- We significantly strengthened our leadership team in Europe, most notably with the appointment of Dr. Karl-Thomas Neumann, a veteran Volkswagen executive, as chairman of the Opel management board and president of GM Europe. Dr. Neumann started work on March 1, 2013.

Reduced U.S. salaried pension liability

$28B

Capital expenditures

"GM's greatest strengths today are our market-leading positions in the United States and China, the world's two largest markets."

As we reduce our fixed and variable costs in Europe, we'll continue to play offense with no less than 23 new Opel/Vauxhall vehicles and 13 new powertrains coming between 2012 and 2016.

The first two of these products, the Mokka and ADAM, are in segments where we didn't compete before, and they look like hits. By early 2013, we had 90,000 customer and dealer orders for the Mokka and 30,000 for the ADAM.

Sales increase in China 2012 over 2011

11.3%

One of the boldest decisions we made in 2012 was to strike a broad-based alliance with Peugeot S.A. (PSA), Europe's second-largest automaker by volume.

The PSA alliance helps us on both strategic and tactical fronts:

- We expect to see lower material costs through our new purchasing alliance, which covers commodities, components and other goods and services.
- Our logistics costs per vehicle should start to decline now that we are working with Gefco, the leading logistics provider in Europe and a former PSA subsidiary.
- During the medium- to long-term, we expect to accrue even greater synergies by jointly developing several B- and C-segment products from shared architectures.

All of this activity is designed to put Opel/Vauxhall back on a growth trajectory. Although the political, economic and competitive landscape remains volatile, we are making progress on the things we can control. Our drive for results is intense and we will adjust to any reality.

PROFITABLE GROWTH AROUND THE WORLD

GM's greatest strengths today are our market-leading positions in the United States and China, the world's two largest markets.

In China, GM and our joint venture partners sold a record 2.8 million vehicles in 2012. Sales increased 11.3 percent from 2011 and we gained a full point of market share versus 2011.

Our two largest brands, Buick and Wuling, set all-time sales records. Chevrolet also set a record for domestic sales on the strength of products like the Cruze, Sail and new Malibu. Cadillac posted modest growth and our new Baojun brand had sales of more than 84,000 units in its first full year in the marketplace.

By 2020, the market in China could reach 30 million units annually, up from about 19 million in 2011, so we are continuing to invest aggressively in all facets of our business:

- We plan to introduce more than 10 new or upgraded products in China on average each year through 2016.
- Shanghai GM opened a new plant in Yantai, Shandong, and broke ground for its fourth manufacturing base in Wuhan, Hubei.
- SAIC-GM-Wuling opened a new passenger car production facility near its headquarters in Liuzhou, Guangxi, and announced plans to build a third production base in Chongqing Municipality.
- GM's Pan Asia Technical Automotive Center (PATAC) joint venture opened a climatic wind tunnel in Shanghai, and together with PATAC, SAIC and Shanghai GM, we opened the largest automotive proving ground in the country in Guangde, Anhui.

- Export sales from China reached 76,000 units in 2012 and are expected to reach 100,000 units in 2013.
- We now have more than 4,200 dealerships in China and are expanding in the country's growing central and western cities.

Growing Cadillac sales in China is a priority. With a refreshed version of the top-selling Cadillac SRX crossover and local production of the Cadillac XTS sedan, which began in early 2013, along with future products, we will build critical mass. Our goal is to triple sales to 100,000 units within two years.

In the United States, we sold 2.6 million vehicles, up 4 percent compared with 2011, although market share declined 1.6 points to 17.5 percent. The share decline is due in large part to the recovery of the Japanese automakers after the Fukushima earthquake and tsunami, and the relative age of our product portfolio.

Against this backdrop, however, we created significant value for both GM and our customers.

- Thanks to continuous improvement in our product offerings, GM's sales incentives, which used to be the highest in the industry, are now competitive and consistently about the industry average as a percentage of average transaction prices, according to J.D. Power PIN data.
- GM now commands the highest, or among the highest, prices in key segments, including small, mid-size and compact cars, compact and medium crossovers and large SUVs, also according to J.D. Power.
- The combination of more desirable vehicles, disciplined incentives and our balanced approach to fleet sales has helped drive significant increases in the resale value of our U.S. products.

The net result is that our EBIT-adjusted margins in North America have averaged 7.4 percent over the last three calendar years, despite having a relatively older product line-up due to depressed capital spending in 2008 and 2009.

The **Cadillac ELR** marks a pivotal moment in the brand's history – a sleek luxury coupe that features the first application of Extended Range Electric Vehicle technology by a full-line luxury automotive brand.

From hood to hitch, the all-new **Chevrolet Silverado 1500** full-size pickup is engineered to be the strongest, smartest and most capable Silverado ever.

Our market discipline sets us up very well for an aggressive wave of new product launches. During the course of 2012 and 2013, 70 percent of our U.S. nameplates will be redesigned or all new, including:

- A stunning new Chevrolet Corvette Stingray, which was voted "Best in Show" at the 2013 North American International Auto Show in Detroit by the editors of *AutoWeek* magazine.
- The Cadillac ATS luxury sedan, which was named 2013 North American Car of the Year by a distinguished panel of journalists – the first time a Cadillac has won.
- The new Buick Verano and Encore, which are entering new segments for GM, will continue the revitalization of the brand. Buick has now delivered three consecutive years of higher retail sales.

Our most important launch in 2013 will be our completely redesigned Chevrolet Silverado and GMC Sierra full-size pickups, which are cornerstones of our sales, market share and profitability in North America.

Every element of these vehicles has been improved, including durability, capability, fuel economy and refinement. Both competitive-make drivers and our 13-million strong owner base will find our new trucks very appealing.

With so many new products in our portfolio, we expect a modest increase in U.S. market share in 2013, and an even brighter future. By 2014, we expect to have one of the newest showrooms in the industry.

New products and plant investments are also driving our business in South America. In 2012, GM South America earned EBIT-adjusted of $271 million, an almost $400 million improvement over 2011.

The long list of projects we have planned includes a $450 million investment in our Rosario plant in Argentina. In Brazil, they include a new engine plant in Joinville, the expansion of our Gravatai assembly plant, extensive upgrades to our Sao Cetano do Sul plant and much more.

All of this work has been done to prepare for an unprecedented wave of new Chevrolets, including the new Cobalt, Cruze, S10, Sonic, Spin, Trailblazer and the all-new Onix.

The Chevrolet Onix is an exemplar. It was envisioned as a car for the growing middle class in emerging markets, and early feedback from our dealers and media suggests we have struck exactly the right balance of affordability, functionality and design.

The Brazilian Automotive Media Association named the Onix its "Car of the Year," and it could account for as much as 25 percent of Chevrolet sales in Brazil.

Chevrolet's success in growth markets, including Russia, where the brand has been the best-selling non-domestic nameplate for six consecutive years, helped lead to record global sales in 2011 and 2012, and a striking shift in the brand's footprint. Ten years ago, more than 70 percent of Chevrolets were sold INSIDE the United States.

Today, more than 60 percent of Chevrolets are sold OUTSIDE the United States and it now is the world's fastest-growing major automotive brand.

2013 J.D. Power Vehicle Dependability Study

11 GM MODELS

RANKED TOP 3 IN THEIR SEGMENT

BUILDING THE MOST ROBUST BUSINESS MODEL

Today's GM leadership team is attacking issues that once seemed intractable, including our pension obligations and European losses. We have also re-established GM as a leader in automotive design and technology with vehicles such as the Chevrolet Volt, Opel Mokka, Cadillac ATS and ELR, and more. But we have more work to do to further improve our results and build the most robust business model possible.

MORE THAN 60% of Chevrolets are sold outside the United States

In last year's letter, I described how our product development team is working to reduce complexity and better leverage our scale by reducing the number of vehicle and powertrain architectures that underpin our products.

“We are designing products to win in the marketplace, not just compete, and we’re aggressively pursuing growth opportunities around the world.”

That work continues, and it has been complemented by changes to our design and engineering organization that have flattened the structure and created more accountability for product execution, profitability and customer satisfaction.

We’re also providing our product teams with much more detailed and insightful financial analysis. Over time, we will be able to track the profitability of vehicles we build down to the serial number, which will help us prioritize capital allocations and other investment decisions.

Ultimately, these insights will help us become far more strategic about product development, component sourcing and manufacturing decisions, which in turn will help us drive down costs.

Product quality and long-term durability are two other areas that demand our unrelenting attention, even though we are doing well on key measures.

For example, we earned our best-ever results in J.D. Power and Associates’ 2012 Initial Quality Study. In addition, 11 GM models were ranked in the top three of their segments in the 2013 J.D. Power Vehicle Dependability Study, which tracks the performance of three-year-old vehicles. Chevrolet and GMC swept the large pickup segment. This is all good. But it’s not enough.

Internal and external studies prove that long-term durability is hardwired to customer retention rates, and retention drives profitability. For example, we conservatively estimate a one percentage point improvement in GM loyalty rates in the United States would deliver about $700 million in incremental revenue. To capture this revenue, our teams are working hard to further improve customer satisfaction and quality.

Of course, none of the issues I have outlined are new challenges. But they are controllable, and every dollar of incremental revenue or avoided cost brings us closer to our objective of becoming the world’s most valuable automotive company. All of it is achievable.

BECOMING THE WORLD’S MOST VALUABLE AUTOMOTIVE COMPANY

In closing, I want to share my perspective on the U.S. government’s gradual sell-down of its ownership stake in GM, which was announced at the end of 2012. It echoes a message I shared with the GM team on the day we announced our plan to return more than $5 billion in capital to the U.S. Treasury by repurchasing 200 million shares of common stock.

It has never been far from my mind that U.S. and Canadian taxpayers rightfully expected us to change the way we do business in exchange for a second chance. That is exactly what we are doing.

Today’s GM has changed in profound ways:

- We are transforming our financial systems and strengthening our risk management function processes while simultaneously reducing our pension obligations and closing competitive gaps.

- To enhance our competitiveness, we are restoring information technology as a core competency.
- We are designing products to win in the marketplace, not just compete, and we're aggressively pursuing growth opportunities around the world.
- We are building stronger relationships with our suppliers, dealers, employees, unions and the communities where we do business.
- By keeping our debt and break-even point low, we are able to reinvest about $8 billion in capital in the business every year regardless of the economic cycle.

More than anything else, we now put customers at the center of every decision, because we know that the only way to stay in business for generations to come is to earn their loyalty.

All of the traits I described are hallmarks of great companies and prerequisites for GM to achieve our overarching goal: to become the world's most valuable automotive company.

I've challenged the GM team to make this our legacy, which is the best way I can think of to justify the extraordinary assistance taxpayers gave us and thank them for standing by us in what was our darkest hour.

We're well on our way.

Sincerely,

Daniel F. Akerson

Daniel F. Akerson
Chairman & Chief Executive Officer

April 25, 2013

Buick Encore, the brand's stylish, highly fuel-efficient entry into the small crossover segment, entered dealer showrooms in January 2013 – helping to continue the momentum from Buick's most successful retail sales performance in six years.

*Includes GM Financial on an Earnings Before Tax (EBT) basis

GENERAL MOTORS COMPANY AND SUBSIDIARIES
RECONCILIATION OF NON-GAAP MEASURES

The accompanying Letter to Stockholders includes earnings before interest and taxes adjusted for special items (EBIT-adjusted) and Adjusted automotive free cash flow which are not prepared in accordance with Accounting Principles Generally Accepted in the United States of America (U.S. GAAP) and have not been audited or reviewed by GM's independent auditors. EBIT-adjusted and Adjusted automotive free cash flow are considered non-GAAP measures.

Management believes these non-GAAP measures provide meaningful supplemental information regarding GM's operating results and liquidity because they exclude amounts that management does not consider when assessing and measuring operational and financial performance. Management believes these measures allow it to readily view operating trends, perform analytical comparisons and benchmark performance between periods and among geographic regions. GM believes these non-GAAP measures are useful in allowing for greater transparency of GM's core operations and they are therefore used by management in its financial and operational decision-making.

While management believes that these non-GAAP measures provide useful information, they are not operating measures under U.S. GAAP, and there are limitations associated with their use. GM's calculation of these non-GAAP measures may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in their method of calculation. As a result, the use of these non-GAAP measures has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Net income or Net income attributable to common stockholders. Due to these limitations, these non-GAAP measures are used as a supplement to U.S. GAAP measures.

The following table summarizes the reconciliation of EBIT-adjusted to its most comparable U.S. GAAP measure (dollars in millions):

	2011	2012
Operating segments		
GMNA[(a)]	$7,194	$6,953
GME[(a)]	(747)	(1,797)
GMIO[(a)]	1,897	2,191
GMSA[(a)]	(122)	271
GM Financial[(b)]	622	744
Total operating segments[(b)]	8,844	8,362
Corporate and eliminations	(540)	(503)
EBIT-adjusted[(b)]	**8,304**	**7,859**
Special items	861	(36,106)
Interest income	455	343
Automotive interest expense	540	489
Loss on extinguishment of debt	-	250
Income tax benefit	(110)	(34,831)
Net income attributable to stockholders	**$9,190**	**$6,188**

(a)Interest and income taxes are recorded centrally in Corporate and therefore are not reconciling items for GM's automotive operating segments between EBIT-adjusted and Net income (loss) attributable to stockholders.

(b)GM Financial amounts represent income before income taxes.

The following summarizes the adjustments for voluntary management actions for Adjusted automotive free cash flow in the year ended December 31, 2011. Adjustments for voluntary management actions included the following:
- Increase in accounts receivable of $1.1 billion resulting from the termination of an in-transit wholesale advance agreement; and
- Contribution to Canadian Health Care Trust of $0.8 billion.

In the year ended December 31, 2012, adjustments for voluntary management actions for Adjusted automotive free cash flow included the following:
- Voluntary contributions to a pension plan of $2.3 billion; and
- The premium paid to purchase our common stock from the United States Treasury of $0.4 billion.

The following summarizes the special items for EBIT-adjusted in the year ended December 31, 2011. Special items included the following:
- Gain of $1.6 billion in GMNA on the sale of GM's Class A Membership Interests in Delphi Automotive LLP;
- Goodwill impairment charges of $1.0 billion in GME and $258 million in GMIO;
- Gain of $749 million in GMNA related to Canadian Health Care Trust settlement;
- Impairment charges of $555 million in Corporate related to GM's investments in Ally Financial, Inc. common stock;
- Gain of $339 million in Corporate related to the sale of 100% of the Ally Financial, Inc. preferred stock;
- Charge of $106 million in GMIO related to GM's India joint venture; and
- Gain of $63 million in GMSA related to extinguishment of debt.

In the year ended December 31, 2012, special items for EBIT-adjusted included the following:
- Goodwill impairment charges of $26.4 billion in GMNA, $590 million in GME and $132 million in GMIO;
- Pension settlement charges of $2.7 billion in GMNA;
- Income related to various insurance recoveries of $155 million in GMNA, GME, GMIO and GMSA;
- Property impairment charges of $3.7 billion in GME;
- Intangible assets impairment charges of $1.8 billion in GME;
- Impairment charges related to the investment in PSA of $220 million in GME;
- A charge of $119 million in GME to record GM Strasbourg assets and liabilities to estimated fair value;
- GM Korea hourly wage litigation charge of $336 million in GMIO;
- Noncontrolling interests of $68 million in GMIO related to redemption of the GM Korea mandatorily redeemable preferred shares; and
- A charge of $402 million in Corporate which represents the premium paid to purchase our common stock from the UST.

Market Information

Shares of our common stock have been publicly traded since November 18, 2010 when our common stock was listed and began trading on the New York Stock Exchange and the Toronto Stock Exchange.

Quarterly price ranges based on high and low prices from intraday trades of our common stock on the New York Stock Exchange, the principal market in which the stock is traded, are as follows:

	Years Ended December 31,			
	2012		2011	
	High	Low	High	Low
Quarter				
First	$27.68	$20.75	$39.48	$30.20
Second	$27.03	$19.24	$33.47	$28.17
Third	$25.15	$18.72	$32.08	$19.77
Fourth	$28.90	$22.67	$26.55	$19.00

Holders

At February 8, 2013 we had a total of 1.4 billion issued and outstanding shares of common stock held by 319 holders of record.

Dividends

Since our formation, we have not paid any dividends on our common stock. We have no current plans to pay any dividends on our common stock. So long as any share of our Series A or Series B Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on our Series A and Series B Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. Our secured revolving credit facilities contain certain restrictions on our ability to pay dividends on our common stock, subject to exceptions, such as dividends payable solely in shares of our common stock. So long as any share of our Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on our Series A Preferred Stock, subject to exceptions, such as dividends on our Series B Preferred Stock payable solely in shares of our common stock.

Our payment of dividends in the future, if any, will be determined by our Board of Directors and will be paid out of funds legally available for that purpose. Our payment of dividends in the future will depend on business conditions, our financial condition, earnings, liquidity and capital requirements, the covenants in our secured revolving credit facilities and other factors.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Pursuant to the agreement with the Securities and Exchange Commission (SEC), as described in a no-action letter issued to Old GM by the SEC Staff on July 9, 2009 regarding our filing requirements, the selected financial data below includes the selected financial data of Old GM as it is the Predecessor entity solely for accounting and financial reporting purposes. At July 10, 2009 we applied fresh-start reporting following the guidance in Accounting Standards Codification (ASC) 852, "Reorganizations" (ASC 852). The consolidated financial statements for the periods ended on or before July 9, 2009 do not include the effect of any changes in the fair value of assets or liabilities as a result of the application of fresh-start reporting. Our financial information at and for any period after July 10, 2009 is not comparable to Old GM's financial information. Selected financial data is summarized in the following table (dollars in millions except per share amounts):

	Successor				Predecessor	
	Years Ended December 31,			July 10, 2009 Through December 31,	January 1, 2009 Through	Year Ended December 31,
	2012	2011	2010	2009	July 9, 2009	2008
Income Statement Data:						
Total net sales and revenue (a)	$152,256	$150,276	$135,592	$ 57,474	$ 47,115	$148,979
Reorganization gains, net (b)	$ —	$ —	$ —	$ —	$128,155	$ —
Income (loss) from continuing operations	$ 6,136	$ 9,287	$ 6,503	$ (3,786)	$109,003	$ (31,051)
Net (income) loss attributable to noncontrolling interests	52	(97)	(331)	(511)	115	108
Net income (loss) attributable to stockholders (c)	$ 6,188	$ 9,190	$ 6,172	$ (4,297)	$109,118	$ (30,943)
Net income (loss) attributable to common stockholders	$ 4,859	$ 7,585	$ 4,668	$ (4,428)	$109,118	$ (30,943)
GM $0.01 par value common stock and Old GM $1-2/3 par value common stock						
Basic earnings (loss) per share: (d)						
Net income (loss) attributable to common stockholders	$ 3.10	$ 4.94	$ 3.11	$ (3.58)	$ 178.63	$ (53.47)
Diluted earnings (loss) per share: (d)						
Net income (loss) attributable to common stockholders	$ 2.92	$ 4.58	$ 2.89	$ (3.58)	$ 178.55	$ (53.47)
Cash dividends per common share	$ —	$ —	$ —	$ —	$ —	$ 0.50
Balance Sheet Data (as of period end):						
Total assets (a)	$149,422	$144,603	$138,898	$136,295		$ 91,039
Automotive notes and loans payable (e)(f)	$ 5,172	$ 5,295	$ 4,630	$ 15,783		$ 45,938
GM Financial notes and loans payable (a)	$ 10,878	$ 8,538	$ 7,032			
Series A Preferred Stock (g)	$ 5,536	$ 5,536	$ 5,536	$ 6,998		$ —
Series B Preferred Stock (h)	$ 4,855	$ 4,855	$ 4,855	$ —		$ —
Equity (deficit) (i)(j)	$ 37,000	$ 38,991	$ 37,159	$ 21,957		$ (85,076)

(a) General Motors Financial Company, Inc. (GM Financial) was consolidated effective October 1, 2010.

(b) In the period January 1, 2009 through July 9, 2009 Old GM recorded Reorganization gains, net of $128.2 billion directly associated with filing of certain of its direct and indirect subsidiaries voluntary petitions for relief under Chapter 11 of the U.S. Bankruptcy Code in the U.S. Bankruptcy Court for the Southern District of New York, the 363 Sale of Old GM and certain of its direct and indirect subsidiaries and the application of fresh-start reporting.

(c) In the year ended December 31, 2012 we recorded Goodwill impairment charges of $27.1 billion, the reversal of deferred tax valuation allowances of $36.3 billion in the U.S. and Canada, pension settlement charges of $2.7 billion and GM Europe (GME) long-lived asset impairment charges of $5.5 billion.

(d) In the years ended December 31, 2012 and 2011 we used the two-class method for calculating earnings per share as the Series B Preferred Stock is a participating security due to the applicable market value of our common stock being below $33.00 per common share. Refer to Note 25 to our consolidated financial statements for additional detail.

(e) In December 2008 Old GM entered into the United States Treasury (UST) loan agreement, as amended (UST Loan Agreement), pursuant to which the UST agreed to provide a $13.4 billion borrowing facility.

(f) In December 2010 GM Korea Company (GM Korea) terminated its $1.2 billion credit facility following the repayment of the remaining $1.0 billion under the facility.

(g) In December 2010 we purchased 84 million shares of our Series A Preferred Stock from the UST for $2.1 billion.

(h) Series B Preferred Stock was issued in a public offering in November and December 2010.

(i) Series A Preferred Stock was reclassified from temporary equity to permanent equity in the year ended December 31, 2010.

(j) In December 2012 we purchased 200 million shares of our common stock for a total of $5.5 billion, which directly reduced shareholder's equity by $5.1 billion and we recorded a charge to earnings of $0.4 billion.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

General Motors Company was formed in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation through a Section 363 sale under Chapter 11 of the U.S. Bankruptcy Code (363 Sale) and changed its name to General Motors Company, is sometimes referred to in this Annual Report on Form 10-K (2012 Form 10-K) for the periods on or subsequent to July 10, 2009 as “we,” “our,” “us,” “ourselves,” the “Company,” “General Motors,” or “GM.” General Motors Corporation is sometimes referred to in this 2012 Form 10-K, for the periods on or before July 9, 2009, as “Old GM,” as it is the predecessor entity solely for accounting and financial reporting purposes. On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company, which is sometimes referred to in this 2012 Form 10-K for the periods after July 10, 2009 as “MLC.” On December 15, 2011 MLC was dissolved and the Motors Liquidation Company GUC Trust (GUC Trust) assumed responsibility for the affairs of and certain claims against MLC and its debtor subsidiaries that were not concluded prior to MLC’s dissolution. MLC transferred to the GUC Trust all of MLC’s remaining undistributed shares of our common stock and warrants to acquire our common stock.

Presentation and Estimates

Basis of Presentation

This Management’s Discussion and Analysis of Financial Condition and Results of Operations should be read in conjunction with the accompanying consolidated financial statements.

We analyze the results of our business through our five segments, namely GM North America (GMNA), GME, GM International Operations (GMIO), GM South America (GMSA) and GM Financial.

Consistent with industry practice, market share information includes estimates of industry sales in certain countries where public reporting is not legally required or otherwise available on a consistent basis.

Use of Estimates in the Preparation of the Financial Statements

The consolidated financial statements are prepared in conformity with U.S. GAAP, which requires the use of estimates, judgments and assumptions that affect the reported amounts of assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and the resulting balances are reasonable; however, due to the inherent uncertainties in making estimates, actual results could differ from the original estimates, requiring adjustments to these balances in future periods.

Prior Period Financial Statements Conformed to Current Period Presentation

In 2012 we changed the presentation of our consolidated balance sheet, consolidated statements of cash flows and certain notes to the consolidated financial statements to classify the assets and liabilities of GM Financial as current or non-current and to combine line items which were either of a related nature or not individually material. We have made corresponding reclassifications to the comparable information for all periods presented.

Overview

Our Company commenced operations on July 10, 2009 when we completed the acquisition of substantially all of the assets and assumption of certain liabilities of Old GM through a 363 Sale under Chapter 11 of the U.S. Bankruptcy Code. By commencing operations following the 363 Sale, we were able to take advantage of a competitive labor agreement with our unions, a restructured dealer network and a reduced and refocused brand strategy in the U.S. focused on four brands.

In November and December of 2010 we consummated a public offering of 550 million shares of our common stock and 100 million shares of Series B Preferred Stock and listed both of these securities on the New York Stock Exchange and the common stock on the Toronto Stock Exchange. In April 2011 in connection with MLC’s distribution of warrants for our common stock to its unsecured creditors, we listed the warrants expiring July 10, 2016 and the warrants expiring July 10, 2019 on the New York Stock Exchange.

Automotive

We offer a global vehicle portfolio of cars, crossovers and trucks. We are committed to leadership in vehicle design, quality, reliability, telematics and infotainment and safety, as well as to developing key energy efficiency, energy diversity and advanced propulsion technologies, including electric vehicles. Our business is diversified across products and geographic markets. We meet the local sales and service needs of our retail and fleet customers with a global network of independent dealers. Of our total 2012 vehicle sales volume, 72.1% was generated outside the U.S.

Our automotive business is organized into four geographically-based segments:

- GMNA has sales, manufacturing and distribution operations in the U.S., Canada and Mexico and sales and distribution operations in Central America and the Caribbean. GMNA represented 32.5% of our vehicle sales volume in 2012 and we had the largest market share in this market at 16.9%.

- GME has sales, manufacturing and distribution operations across Western and Central Europe. GME's vehicle sales volume, which in addition to Western and Central Europe, includes Eastern Europe (including Russia and the other members of the Commonwealth of Independent States among others) represented 17.3% of our vehicle sales volume in 2012. In 2012 we estimated we had the number four market share in this market at 8.5%. GMIO distributes Chevrolet brand vehicles which, when sold in Europe, are included in GME vehicle sales volume and market share data.

- GMIO has sales, manufacturing and distribution operations in Asia-Pacific, Eastern Europe (including Russia and the other members of the Commonwealth of Independent States among others), Africa and the Middle East. GMIO's vehicle sales volume, which includes Asia-Pacific, Africa and the Middle East is our largest segment by vehicle sales volume. GMIO represented 38.9% of our global vehicle sales volume including sales through our joint ventures in 2012. In 2012 we had approximately 14.6% market share in China as compared to 13.6% in 2011. In 2012 GMIO derived 78.4% of its vehicle sales volume from China. GMIO records the financial results of Chevrolet brand vehicles that it distributes and sells in Europe.

- GMSA has sales, manufacturing, distribution and financing operations in Brazil, Argentina, Colombia, Ecuador and Venezuela as well as sales and distribution operations in Bolivia, Chile, Paraguay, Peru and Uruguay. GMSA represented 11.3% of our vehicle sales volume in 2012. In 2012 we estimated we had the number two market share for this market at 18.0% and the number three market share in Brazil. In 2012 GMSA derived 61.4% of its vehicle sales volume from Brazil.

Automotive Financing — GM Financial

GM Financial specializes in purchasing retail automobile installment sales contracts originated by GM and non-GM franchised and select independent dealers in connection with the sale of used and new automobiles. GM Financial also offers lease products through GM dealerships in connection with the sale of used and new automobiles that target customers with sub-prime and prime credit bureau scores. GM Financial primarily generates revenue and cash flows through the purchase, retention, subsequent securitization and servicing of finance receivables. To fund the acquisition of receivables prior to securitization, GM Financial uses available cash and borrowings under its credit facilities. GM Financial earns finance charge income on finance receivables and pays interest expense on borrowings under its credit facilities. GM Financial periodically transfers receivables to securitization trusts that issue asset-backed securities to investors. The securitization trusts are special purpose entities that are also variable interest entities that meet the requirements to be consolidated in the financial statements.

In April 2012 GM Financial commenced commercial lending activities in the U.S. centered on floor plan financing of dealer vehicle inventory and dealer loans to finance dealer sites, facilities, facility improvements and working capital. These loans are made on a secured basis. We believe the availability of financing for our dealers is important to our business. GM Financial plans to launch similar commercial lending in Canada during the first half of 2013.

Our Strategy

Our vision is to design, build and sell the world's best vehicles. The primary elements of our strategy to achieve this vision are to:

- Deliver a product portfolio of the world's best vehicles, allowing us to maximize sales under any market conditions;
- Sell our vehicles globally by targeting developed markets, which are projected to have increases in vehicle demand as the global economy recovers, and further strengthening our position in high growth emerging markets;
- Improve revenue realization and maintain a competitive cost structure to allow us to remain profitable at lower industry volumes and across the lifecycle of our product portfolio;
- Maintain a strong balance sheet by reducing financial leverage given the high operating leverage of our business model; and
- Ensure that our dealers and customers have consistently available, transparent and competitive financing options through GM Financial and other providers.

Automotive Financing Strategy

Our automotive financing strategy centers around ensuring that our dealers and customers have consistently available, transparent and competitive financing options throughout the business and credit cycles. We achieve this through our captive finance capabilities at GM Financial and through operating relationships with financial institutions, including Ally Financial, Inc. (Ally Financial).

In October 2010 we acquired GM Financial to further bolster our offerings in the leasing and sub-prime financing segments in the U.S. and Canada. We believe that by having our own capabilities in key financing segments of the market we will be able to achieve more competition from other financing market participants, which we believe improves pricing and service to our dealers and retail customers.

In November 2012 GM Financial entered into an agreement with Ally Financial to acquire Ally Financial's automotive finance and financial services operations in Europe and Latin America. Additionally in November 2012 GM Financial entered into a share transfer agreement with Ally Financial to acquire Ally Financial's equity interest in GMAC-SAIC Automotive Finance Company Limited (GMAC-SAIC) that conducts automotive finance and financial services operations in China. The purchases will allow GM Financial to support our dealers in markets comprising 80% of our global sales. The combined consideration will be approximately $4.2 billion, subject to certain possible closing adjustments. Pursuant to the transactions, GM Financial's assets are expected to double to approximately $33.0 billion and its liabilities, including consolidated debt, will increase to approximately $27.0 billion compared with $11.8 billion at December 31, 2012. The closings of the transactions are expected to occur in stages throughout 2013.

In April 2012 GM Financial commenced commercial lending activities in the U.S. centered on floor plan financing of dealer vehicle inventory and dealer loans to finance dealer sites, facilities, facility improvements and working capital. These loans are made on a secured basis. We believe the availability of financing for our dealers is important to our business. GM Financial plans to launch similar commercial lending in Canada during the first half of 2013.

In April 2011 GM Financial began originating leases for our customers in Canada. Given the importance of leasing and the previous lack of availability of third-party leasing offerings to our customers in the Canadian market (due to regulatory restrictions preventing banks and bank holding companies from offering leasing in Canada), we believe having a captive financing offering in Canada is strategically important to our business. In August 2012 GM Financial began offering consumer sub-prime financing in Canada.

In December 2010 GM Financial began offering a lease product in certain geographic areas through our franchised dealerships that targets consumers with prime credit bureau scores leasing new GM vehicles. During 2011 GM Financial completed the nationwide rollout of the lease product in the U.S. including separate product offerings for prime and sub-prime customers. GM Financial continues to expand its business in targeted areas that it views as strategic and to otherwise evaluate opportunities in specific segments of the automotive financing market.

In addition to the financing we provide through GM Financial, we also ensure availability of competitive financing for our customers and dealers through operating relationships with financial institutions. Historically, Ally Financial provided a majority of the financing for our dealers and a significant portion of the financing for our customers in the U.S., Canada and other major international markets where we operate. Ally Financial continues to be the largest third-party provider of the financing for our dealers and customers. We have added relationships with other financial institutions to increase our competitiveness and benefit from additional financing sources, including arrangements to provide incentivized retail financing to our customers in the U.S., Canada, U.K. and Australia.

Focus on Chinese Market

We view the Chinese market, the fastest growing global market by volume of vehicles sold, as important to our global growth strategy and are employing a multi-brand strategy led by our Buick and Chevrolet brands. In the coming years we plan to increasingly leverage our global architectures to increase the number of nameplates under the Buick, Chevrolet and Cadillac brands in China and continue to grow our business under the Baojun, Jiefang and Wuling brands. We operate in Chinese markets through a number of joint ventures and maintaining good relations with our joint ventures partners, which are affiliated with the Chinese government, is an important part of our China growth strategy.

Refer to Note 10 to our consolidated financial statements for our direct ownership interests in our Chinese joint ventures, collectively referred to as China JVs.

The following tables summarize certain key operational and financial data for the China JVs (dollars in millions, vehicles in thousands):

	Years Ended December 31,		
	2012	2011	2010
Total wholesale vehicles (a)	2,909	2,573	2,348
Market share (b)	14.6%	13.6%	12.8%
Total net sales and revenue	$33,364	$30,511	$25,395
Net income	$ 3,198	$ 3,203	$ 2,808

	December 31, 2012	December 31, 2011
Cash and cash equivalents	$ 5,522	$ 4,679
Debt	$ 123	$ 106

(a) Including vehicles exported to markets outside of China.

(b) Market share for China market.

GME

During the second half of 2011 and continuing into 2012, the European automotive industry has been severely affected by the ongoing sovereign debt crisis, high unemployment and a lack of consumer confidence coupled with overcapacity. European automotive industry sales to retail and fleet customers were 19.0 million vehicles in 2012, representing a 5.6% decrease compared to 2011. In 2012 GME's market share declined to 8.5% from 8.7% in 2011 and the region suffered EBIT (loss)-adjusted of $1.8 billion in 2012 compared to EBIT (loss)-adjusted of $0.7 billion in 2011. During this timeframe, we began to experience deterioration in cash flows.

In response, we formulated a plan to implement various actions to strengthen our operations and increase our competitiveness. The key areas of the plan include investments in our product portfolio, a revised brand strategy, significant management changes, reducing material, development and production costs, and further leveraging synergies from the alliance between us and Peugeot S.A. (PSA), as subsequently discussed. The success of our plan will depend on a combination of our ability to execute the actions contemplated, as well as external factors which are outside of our control. We believe it is likely that adverse economic conditions, and their effect on the European automotive industry will not improve significantly in the short-term and we expect to continue to incur losses in the region as a result. During the fourth quarter of 2012, notwithstanding the above described actions, GME performed below expectations relative to the key operating metrics of forecasted revenues, market share, and variable profit established in mid-2012. Further, our industry outlook deteriorated, and our forecast of 2013 cash flows declined. This triggered a long-lived asset impairment analysis.

We performed a recoverability test of the GME asset group by weighting various undiscounted cash flow scenarios. The weighting of the projected cash flows considers the uncertainty in our ability to execute the actions contemplated in our plan, which, in part, are dependent upon actions and factors outside our control. Our test concluded that the GME asset group was not recoverable as the resulting undiscounted cash flows were less than their carrying amount. Accordingly, we estimated the fair value of the GME long-lived assets and adjusted the carrying amounts and recorded impairment charges of $5.5 billion. As we have reduced the carrying amount of these assets by $5.5 billion, depreciation and amortization expense will be reduced in future periods, including approximately $0.6 billion in the year ending December 31, 2013, which may result in an increase in our reported EBIT-adjusted in GME in subsequent periods. Refer to Notes 11 and 13 to our consolidated financial statements for additional information on our real and personal property and intangible asset impairment charges.

Alliance with PSA

In February 2012 we entered into an agreement with PSA to create a long-term and broad-scale global strategic alliance that is expected to leverage the combined strengths and capabilities of the two companies, contribute to our profitability and improve our competitiveness in Europe. In March 2012 we acquired a seven percent equity stake in PSA for $0.4 billion; against which we recorded impairment charges of $0.2 billion in the three months ended December 31, 2012. In June 2012 we entered into a long-term exclusive service agreement with Gefco, a wholly-owned subsidiary of PSA, to provide logistics services in Europe beginning in 2013. In December 2012 PSA sold its controlling interest in Gefco to an unrelated third-party, however the sale has no impact to the long-term exclusive service agreement. In December 2012 we entered into a product development agreement to jointly develop and share certain vehicle platforms, components and modules; and we also signed a definitive agreement to create a joint purchasing organization in Europe supported by a purchasing joint venture for the sourcing of commodities, components and other goods and services based on the combined purchasing reach of both companies to realize purchasing synergies.

Purchase of Common Stock

In December 2012 we purchased 200 million shares of our common stock from the UST for total consideration of $5.5 billion. We recorded a charge of $0.4 billion in Other automotive expenses, net, which represents a premium to the prior day's closing price. The UST agreed to irrevocably waive certain of its rights under the stockholders agreement by and among us and certain other stockholders and covenants under the UST Credit Agreement as part of the transaction to purchase our common stock. These rights and covenants included, among other items, a reduction in certain reporting requirements and a release from the vitality commitment which contained certain manufacturing volume requirements. Additionally, the UST publicly announced its intention to sell the remainder of its holdings of our common stock within 12 to 15 months after the execution of this transaction subject to market conditions.

UST Invested Capital

UST invested capital totaled $49.5 billion, representing the cumulative amount of cash received by Old GM from the UST under the UST Loan Agreement and the debtor-in-possession credit agreement, excluding $0.4 billion which the UST loaned to Old GM under the warranty program and which was repaid on July 10, 2009. This balance also did not include amounts advanced under the UST Ally Financial Loan as the UST exercised its option to convert this loan into Ally Financial preferred membership interests previously held by Old GM in May 2009. At December 31, 2012 the UST had received cumulative proceeds of $28.6 billion from debt repayments, interest payments, Series A Preferred Stock dividends, sales of our common stock and Series A Preferred Stock redemption. The UST's invested capital less proceeds received totals $20.9 billion at December 31, 2012.

Restructuring Activities, Special Attrition Programs, Labor Agreements and Benefit Plan Changes

We have previously executed various restructuring and other initiatives, and we plan to execute additional initiatives in the future, if necessary, in order to align manufacturing capacity and other costs with prevailing global automotive production and to improve the utilization of remaining facilities.

Through December 31, 2012 the active separation programs related to Germany and the United Kingdom had a total cost of \$0.4 billion and had affected a total of 2,550 employees, of which \$0.3 billion related to a program initiated in Germany in 2010. This program was essentially completed in 2012. We expect to complete the active programs in 2013 and incur an additional \$0.2 billion, which will affect an additional 700 employees.

In the year ended December 31, 2012 GMIO and GMSA each recorded charges of \$0.1 billion related to additional separation programs implemented in Korea, Australia and Brazil.

2012 CAW Labor Agreement

In September 2012 we entered into a collective bargaining labor agreement with the Canadian Auto Workers Union (CAW), which was ratified in September 2012. The agreement covers the wages, hours, benefits and other terms and conditions of employment of the CAW represented employees. The key terms and provisions of the agreement are:

- Lump-sum payments of Canadian Dollar (CAD) \$3,000 to certain CAW employees were made in October 2012 and additional lump-sum payments of CAD \$2,000 will be paid annually in December of 2013, 2014, and 2015. The lump-sum payments will be amortized over the four year agreement.
- Hourly employees who retire on or after January 1, 2013 will be offered a new lump-sum distribution option at retirement in the defined benefit pension plan and new hires will be covered by a hybrid defined benefit/defined contribution pension plan. The lump-sum payment option had an insignificant effect on the defined benefit pension plan and has been recognized in the year-end plan remeasurement for 2012.
- Due to the expected closure of the Oshawa Consolidated Plant in June 2014, impacted employees will be eligible for a voluntary restructuring separation incentive program in accordance with the existing collective bargaining agreement that provides cash and a car voucher. This may range up to \$0.1 billion and will be included in our restructuring liability, net of existing liabilities, upon irrevocable acceptance by both parties.
- During the life of the agreement and subject to market conditions and demand, we plan to make total manufacturing program investments of \$0.7 billion.

2011 GM-UAW Labor Agreement

In September 2011 we entered into a collective bargaining labor agreement with the International Union, United Automobile, Aerospace and Agriculture Implement Workers of America (UAW). The agreement covers the wages, hours, benefits and other terms and conditions of employment for our UAW represented employees. The key terms and provisions of the agreement are:

- Lump-sum payments totaling \$0.4 billion to eligible U.S. hourly employees in 2011 through 2014. The lump-sum payments are being amortized over the four year agreement period.
- Termination in 2012 of a cash balance pension plan for entry level employees. Participants in this plan and all employees hired on or after October 1, 2007 participate in a defined contribution plan.
- A plan which provides legal services to U.S. hourly employees and retirees will be terminated on December 31, 2013. In September 2011 we remeasured this plan resulting in a decrease of \$0.3 billion in the other postretirement benefits (OPEB) liability and a corresponding pre-tax increase in the prior service credit component of Accumulated other comprehensive income, which will be amortized through December 31, 2013.

- The profit sharing plan formula is based on GMNA earnings before interest and taxes (EBIT)-adjusted and was effective beginning with the 2011 plan year. The profit sharing payment is capped at $12,000 per employee per year.
- Cash severance incentive programs which were completed in March 2012. A total of 1,400 skilled trades employees participated in the program at a total cost of $0.1 billion. Substantially all of the program cost was recorded in the three months ended March 31, 2012.
- During the four year agreement period we plan to make additional manufacturing investments of more than $2.0 billion to create or retain more than 6,300 UAW jobs.

Canadian Health Care Trust

In October 2011 pursuant to a June 2009 agreement between General Motors of Canada Limited (GMCL) and the CAW an independent Canadian Health Care Trust (HCT) was implemented to provide retiree healthcare benefits to certain active and retired employees. Concurrent with the implementation of the HCT, GMCL was legally released from all obligations associated with the cost of providing retiree healthcare benefits to CAW retirees and surviving spouses by the class action process and to CAW active employees as of June 8, 2009. We accounted for the related termination of CAW hourly retiree healthcare benefits as a settlement, and recorded a gain of $0.7 billion. Refer to Note 18 to our consolidated financial statements for further details regarding the implementation of the HCT.

Benefit Plan Changes

U.S. Salaried Defined Benefit Pension Plan

In January 2012 we amended the salaried pension plan to cease the accrual of additional benefits effective September 30, 2012. This amendment resulted in a curtailment which decreased the pension liability and decreased the net pre-tax actuarial loss component of Accumulated other comprehensive loss by $0.3 billion. Active plan participants receive additional contributions in the defined contribution plan starting in October 2012.

In August 2012 the salaried pension plan was amended to divide the plan to create a new legally separate defined benefit plan primarily for active and terminated vested participants. After the amendment the original salaried pension plan (Retiree Plan) covers the majority of retirees currently receiving payments. As a result of this amendment a remeasurement of the Retiree Plan on August 1, 2012 increased the pension liability and the net pre-tax actuarial loss component of Accumulated other comprehensive loss by $0.7 billion, due primarily to a decrease in the discount rate from 4.21% to 3.37% on a weighted-average basis, partially offset by actual asset returns in excess of expected amounts.

In August 2012 lump-sum distributions of $3.6 billion were made from the Retiree Plan to 12,500 plan participants resulting in a partial plan settlement necessitating a plan remeasurement for the Retiree Plan on August 31, 2012. The settlement resulted in a pre-tax loss of $0.1 billion. The effect on our financial condition was insignificant.

In November and December 2012 the Retiree Plan purchased group annuity contracts from an insurance company and paid a total annuity premium of $25.1 billion and the Retiree Plan settled two other previously guaranteed obligations, with separate insurance companies, totaling $1.9 billion. These agreements unconditionally and irrevocably guarantee the full payment of all annuity payments to the participants in the Retiree Plan and assume all investment risk associated with the assets that were delivered as the annuity contract premiums.

Through these annuity purchase transactions we have settled the remaining obligations of the Retiree Plan in their entirety resulting in a pre-tax settlement loss of $2.5 billion ($2.1 billion after tax) in Automotive cost of sales. The pre-tax loss is composed of existing losses in Accumulated other comprehensive loss of $0.4 billion, and the premium paid to the insurance company of $2.1 billion. The tax benefit of $0.4 billion is composed of the statutory tax benefit of $1.0 billion offset by tax expense of $0.6 billion primarily associated with the removal of prior period income tax allocations between Accumulated other comprehensive loss and Income tax expense (benefit). The ongoing annual impact to earnings will be $0.2 billion unfavorable due to a decrease in pension income.

Canadian Salaried Defined Benefit Plans

In June 2012 we amended the Canadian salaried pension plan to cease the accrual of additional benefits effective December 31, 2012. Active plan participants began receiving additional contributions in the defined contribution plan in January 2013. We also amended the Canadian salaried retiree healthcare plan to eliminate post-65 healthcare benefits for employees retiring on or after July 1, 2014. In conjunction with this change we amended the plan to offer either a monthly monetary payment or an annual lump-sum cash payment to a defined contribution plan for health care in lieu of the benefit coverage provisions formerly provided under the healthcare plan.

Venezuelan Exchange Regulations

Our Venezuelan subsidiaries utilize the U.S. Dollar as their functional currency because of the hyperinflationary status of the Venezuelan economy. The Venezuelan government has introduced foreign exchange control regulations which make it more difficult to convert Bolivar Fuerte (BsF) to U.S. Dollars. These regulations affect our Venezuelan subsidiaries' ability to pay non-BsF denominated obligations that do not qualify to be processed by the Venezuela currency exchange agency at the official exchange rates.

In February 2013 the Venezuelan government announced that the official fixed exchange rate of BsF 4.3 to $1.00 would be changed to BsF 6.3 to $1.00. The devaluation did not have an effect on the 2012 consolidated financial statements; however, the devaluation will require remeasurement of our Venezuelan subsidiaries' non-U.S. dollar denominated monetary assets and liabilities in the three months ending March 31, 2013. The devaluation effective date is February 13, 2013 and is expected to result in a charge in the range of $0.1 billion to $0.2 billion.

Refer to Note 2 to our consolidated financial statements for additional details regarding amounts pending government approval for settlement and the net assets of our Venezuelan subsidiaries.

Sale of Class A Membership in New Delphi

In March 2011 we sold 100% of our Class A Membership Interests in Delphi Automotive LLP (New Delphi) for $3.8 billion. We recorded a gain of $1.6 billion related to the sale. Refer to Note 10 to our consolidated financial statements for further details.

Production and Vehicle Sales Volume

Management believes that production volume and vehicle sales data provide meaningful information regarding our automotive operating results. Production volumes manufactured by our assembly facilities are generally aligned with current period net sales and revenue, as we generally recognize revenue upon the release of the vehicle to the carrier responsible for transporting it to a dealer, which is shortly after the completion of production. Vehicle sales data, which includes retail and fleet sales, does not correlate directly to the revenue we recognize during the period. However, vehicle sales data is indicative of the underlying demand for our vehicles, and is the basis for our market share.

The tables which summarize production volume and sales of new motor vehicles and competitive position are presented in “Item 1. Business.”

Reconciliation of Consolidated, Automotive and GM Financial Segment Results

Management believes EBIT-adjusted provides meaningful supplemental information regarding our automotive segments’ operating results because it excludes interest income, expense and income taxes as well as certain additional amounts. Management does not consider these excluded items when assessing and measuring the operational and financial performance of the organization, its management teams and when making decisions to allocate resources, such as capital investment, among business units and for internal reporting and as part of its forecasting and budgeting processes. Such adjustments include impairment charges related to goodwill and certain investments, gains or losses on the settlement/extinguishment of obligations and gains or losses on the sale of non-core investments. Management believes this measure allows it to readily view operating trends, perform analytical comparisons and benchmark performance between periods and among geographic regions. We believe EBIT-adjusted is useful in allowing for greater transparency of our core operations and is therefore used by management in its financial and operational decision-making.

While management believes that EBIT-adjusted provides useful information, it is not an operating measure under U.S. GAAP and there are limitations associated with its use. Our calculation of EBIT-adjusted may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in the method of calculation. As a result, the use of EBIT-adjusted has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Net income or Net income attributable to stockholders. Due to these limitations, EBIT-adjusted is used as a supplement to U.S. GAAP measures.

Management believes income before income taxes provides meaningful supplemental information regarding GM Financial’s operating results. GM Financial uses a separate measure from our automotive operations because management believes interest income and interest expense are part of operating results when assessing and measuring the operational and financial performance of the segment.

In 2012 we recorded losses on extinguishment of debt within Corporate for segment reporting purposes, and they are excluded from EBIT-adjusted. Previously gains and losses on extinguishment of debt were recorded within the applicable automotive segments. This change is consistent with how management currently views the results of our operations.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

The following tables summarize the reconciliation of our automotive segments EBIT-adjusted and GM Financial's income before income taxes to Net income attributable to stockholders and provides supplemental detail of the adjustments, which are presented net of noncontrolling interests (dollars in millions):

	Years Ended December 31,					
	2012		2011		2010	
Automotive						
EBIT-adjusted						
GMNA (a)	$ 6,953	97.7%	$7,194	93.6%	$ 5,688	82.4%

n.m. = not meaningful

In the year ended December 31, 2012 Total net sales and revenue increased by $2.0 billion (or 1.3%) due primarily to: (1) favorable vehicle mix of $3.7 billion; (2) favorable vehicle pricing effect of $1.6 billion; (3) increased wholesale volumes of $1.5 billion; (4) increased GM Financial finance income of $0.6 billion; partially offset by (5) unfavorable net foreign currency effect of $3.7 billion due to the weakening of certain currencies against the U.S. Dollar; (6) decreased revenues from powertrain and parts sales of $0.7 billion due to decreased volumes; (7) reduction in favorable lease residual adjustments of $0.5 billion; (8) decreased revenues from rental car leases of $0.2 billion; and (9) decreased revenues due to the deconsolidation of VM Motori (VMM) in June 2011 of $0.1 billion.

In the year ended December 31, 2011 Total net sales and revenue increased by $14.7 billion (or 10.8%) due primarily to: (1) increased wholesale volumes of $8.6 billion representing 403,000 vehicles; (2) favorable net foreign currency effect of $2.6 billion due to the strengthening of certain currencies against the U.S. Dollar; (3) favorable vehicle pricing effect of $1.6 billion due to model year price increases and reduced sales allowances; (4) increased finance income of $1.1 billion due to the acquisition of GM

Financial; (5) increased revenues from powertrain and parts sales of $1.1 billion due to increased volumes; (6) favorable vehicle mix of $0.6 billion; and (7) increased revenue of $0.4 billion due to the acquisition of GMS; partially offset by (8) decreased revenue of $1.0 billion due to the sale of Nexteer in November 2010.

Automotive Cost of Sales

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Automotive cost of sales	$140,236	$130,386	$118,768	$ 9,850	7.6%	$11,618	9.8%
Automotive gross margin	$ 10,059	$ 18,480	$ 16,543	$(8,421)	(45.6)%	$ 1,937	11.7%

The most significant element of our Automotive cost of sales is material cost which makes up approximately two-thirds of the total amount excluding adjustments. The remaining portion includes labor costs, depreciation and amortization, engineering, and policy, product warranty and recall campaigns.

In the year ended December 31, 2012 Automotive cost of sales increased by $9.9 billion (or 7.6%) due primarily to: (1) unfavorable vehicle mix of $4.1 billion; (2) increased employee costs of $4.1 billion including increased pension settlement losses and decreased net pension and OPEB income and separation costs; (3) impairment charges of $3.7 billion for long-lived assets and intangible assets; (4) increased manufacturing expense of $1.4 billion due to new launches; (5) increased costs of $0.6 billion related to increased wholesale volumes; (6) increased policy and product warranty expense of $0.2 billion; partially offset by (7) favorable net foreign currency effect of $3.3 billion due to the weakening of certain currencies against the U.S. Dollar; (8) decreased engineering expense of $0.5 billion; (9) decreased costs of $0.3 billion related to powertrain and parts sales; and (10) decreased costs of $0.1 billion due to the deconsolidation of VMM in June 2011.

In the year ended December 31, 2011 Automotive cost of sales increased by $11.6 billion (or 9.8%), in line with Total net sales and revenue, due primarily to: (1) increased costs related to wholesale volume increases of $6.3 billion; (2) unfavorable net foreign currency effect of $2.4 billion due to the strengthening of certain currencies against the U.S. Dollar; (3) unfavorable vehicle mix of $2.3 billion; (4) increased material, freight and manufacturing costs of $1.7 billion due to higher commodity prices and to support new vehicle launches; (5) increased costs of $0.8 billion related to powertrain and parts sales; (6) increased engineering costs of $0.7 billion to support new product development; (7) revisions to restructuring reserves of $0.4 billion related to higher than planned employee utilization in 2010 which did not recur in 2011; and (8) increased costs of $0.3 billion due to the acquisition of GMS; partially offset by (9) decreased costs of $0.9 billion due to the sale of Nexteer in November 2010; (10) decreased depreciation and amortization expense of $0.8 billion related to the amortization of technology intangibles and impairment charges for long-lived assets; (11) a gain of $0.7 billion related to the settlement of the HCT in 2011; (12) decreased restructuring charges of $0.5 billion related to our European operations; and (13) increased net pension and OPEB income of $0.3 billion due to plan remeasurements.

Automotive Selling, General and Administrative Expense

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Automotive selling, general and administrative expense	$13,593	$12,105	$11,446	$1,488	12.3%	$659	5.8%

In the year ended December 31, 2012 Automotive selling, general and administrative expense increased by $1.5 billion (or 12.3%) due primarily to (1) impairment charges for intangibles and long-lived assets of $1.8 billion; partially offset by (2) favorable net foreign currency effect of $0.3 billion due to the weakening of certain currencies against the U.S. Dollar.

In the year ended December 31, 2011 Automotive selling, general and administrative expense increased by $0.7 billion (or 5.8%) due primarily to: (1) increased advertising and sales promotion expenses of $0.5 billion to support media campaigns and new product launches; (2) unfavorable net foreign exchange effect of $0.2 billion due to the strengthening of certain currencies against the U.S. Dollar; and (3) charges of $0.1 billion related to a single customer's default under various commercial supply agreements; partially offset by (4) legal and other expenses of $0.1 billion primarily related to dealer litigation in 2010 which did not recur in 2011.

Other Automotive Expenses, net

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Other automotive expenses, net	$438	$58	$118	$380	n.m.	$(60)	(50.8)%

n.m. = not meaningful

In the year ended December 31, 2012 Other automotive expenses, net increased by $0.4 billion due primarily to the premium paid of $0.4 billion on the common stock purchase from the UST.

In the year ended December 31, 2011 Other automotive expenses, net was insignificant.

Goodwill Impairment Charges

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Goodwill impairment charges	$27,145	$1,286	$—	$25,859	n.m.	$1,286	n.m.

n.m. = not meaningful

In the year ended December 31, 2012 the Goodwill impairment charges increased by $25.9 billion as we recorded charges of $26.4 billion, $0.6 billion and $0.2 billion in GMNA, GME and GMIO in 2012 as compared to $1.0 billion and $0.3 billion in GME and GMIO in 2011. Refer to Note 12 to our consolidated financial statements for additional information related to our Goodwill impairment charges.

Automotive Interest Expense

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Automotive interest expense	$489	$540	$1,098	$(51)	(9.4)%	$(558)	(50.8)%

In the year ended December 31, 2012 the decrease in Automotive interest expense was insignificant, as the composition of our debt and related interest rates did not change significantly.

In the year ended December 31, 2011 Automotive interest expense decreased by $0.6 billion (or 50.8%) due primarily to: (1) decreased interest expense related to the UST Credit Agreement, Canadian Loan Agreement (Canadian Loan) and VEBA Note Agreement (VEBA Notes) of $0.3 billion in 2010 which did not recur in 2011; and (2) decreased interest expense related to obligations with Ally Financial of $0.2 billion in 2010.

Interest Income and Other Non-Operating Income, net

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Interest income and other non-operating income, net	$845	$851	$1,531	$(6)	(0.7)%	$(680)	(44.4)%

In the year ended December 31, 2012 Interest income and other non-operating income, net decreased due primarily to: (1) a gain of $0.3 billion related to the sale of our Ally Financial preferred stock in 2011 which did not recur in 2012; (2) an impairment charge of $0.2 billion related to our investment in PSA; (3) a charge of $0.1 billion to record GMS assets and liabilities to estimated fair value; (4) decreased interest income of $0.1 billion; (5) derivative losses of $0.1 billion related to fair value adjustments; partially offset by (6) an impairment charge of $0.6 billion related to our investment in Ally Financial common stock in 2011 which did not recur in 2012; (7) income related to insurance recoveries of $0.2 billion.

In the year ended December 31, 2011 Interest income and other non-operating income, net decreased by $0.7 billion (or 44.4%) due primarily to: (1) an impairment charge of $0.6 billion related to our investment in Ally Financial common stock; (2) a gain on the reversal of an accrual for contingently issuable shares of our common stock to MLC (Adjustment Shares) of $0.2 billion in 2010 which did not recur in 2011; (3) gains on the sale of Saab Automobile AB and Saab Automobile GB (collectively Saab) and Nexteer of $0.2 billion in 2010 which did not recur in 2011; and (4) a gain on the acquisition of GMS of $0.1 in 2010 which did not recur in 2011; partially offset by (5) a gain of $0.3 billion related to the sale of our Ally Financial preferred stock.

Gains (Losses) on Extinguishment of Debt

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Gains (losses) on extinguishment of debt	$(250)	$18	$196	$(268)	n.m.	$(178)	(90.8)%

n.m. = not meaningful

In the year ended December 31, 2012, we recorded a loss on extinguishment of debt of $0.3 billion which primarily represented the unamortized debt discount on the GM Korea mandatorily redeemable preferred shares.

In the year ended December 31, 2010 Gain on extinguishment of debt included a gain of $0.2 billion resulting from our repayment of the outstanding amount of VEBA Notes of $2.8 billion.

Income Tax Expense (Benefit)

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
Income tax expense (benefit)	$(34,831)	$(110)	$672	$(34,721)	n.m.	$(782)	n.m.

n.m. = not meaningful

In the year ended December 31, 2012 income tax benefit increased by $34.7 billion due primarily to: (1) deferred tax asset valuation allowance reversals of $36.3 billion in the U.S. and Canada in 2012 as compared to $0.5 billion in Australia in 2011; and (2) change in U.S. federal tax elections which permitted us to record a tax benefit of $1.1 billion related to foreign tax credits; partially offset by (3) current year U.S. income tax provision of $1.4 billion; and (4) income tax allocation from Accumulated other comprehensive loss to Income tax expense (benefit) of $0.6 billion related to the U.S. salary pension plan.

In the year ended December 31, 2011 income tax benefit of $0.1 billion decreased by $0.8 billion compared to income tax expense of $0.7 billion in 2010 due primarily to: (1) a $0.5 billion valuation allowance reversal in Australia; and (2) an increase in recognition of previously unrecognized tax benefits of $0.2 billion which included reductions to interest expense and associated valuation allowances.

Refer to Note 21 to our consolidated financial statements for additional information related to our income tax expense (benefit).

Equity Income, Net of Tax and Gain on Investments

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change	
	2012	2011	2010	Amount	%	Amount	%
China JVs	$1,521	$1,511	$1,297	$ 10	0.7%	$ 214	16.5%
New Delphi (including gain on disposition)	—	1,727	117	(1,727)	n.m.	1,610	n.m.
Others	41	(46)	24	87	n.m.	(70)	n.m.
Total equity income, net of tax and gain on investments	$1,562	$3,192	$1,438	$(1,630)	(51.1)%	$1,754	122.0%

n.m. = not meaningful

In the year ended December 31, 2012 Equity income, net of tax and gain on investments decreased by $1.6 billion (or 51.1%) due primarily to: (1) a $1.6 billion gain related to the sale of our New Delphi Class A Membership Interests and related equity income for the year ended December 31, 2011 that did not recur for the year ended December 31, 2012. Income from our China JVs increased slightly.

In the year ended December 31, 2011 Equity income, net of tax and gain on investments increased by $1.8 billion (or 122.0%) due primarily to a gain of $1.6 billion related to the sale of our New Delphi Class A Membership Interests and increased equity income related to our China JVs of $0.2 billion.

Current Assets

Marketable securities decreased by $7.2 billion (or 44.3%) due primarily to our reinvesting in shorter-term cash equivalents as these marketable securities matured to rebalance our securities portfolio in the normal course of business.

GM Financial finance receivables, net increased by $0.8 billion (or 24.4%) due primarily to an increase of new originations and purchases of consumer and commercial finance receivables, partially offset by principal collections.

Equipment on operating lease, net decreased by $0.7 billion (or 27.7%) due primarily to depreciation expense and impairment charges of $0.4 billion in the year ended December 31, 2012 and a net decrease of $0.3 billion in vehicles under lease.

Deferred income taxes increased by $8.9 billion due primarily to the valuation allowance reversals in the U.S. and Canada.

Non-Current Assets

Restricted cash and marketable securities decreased by $0.5 billion (or 44.5%) due primarily to the release of restricted cash and marketable securities that previously served as collateral on various performance guarantees that are no longer required.

GM Financial finance receivables, net increased by $1.0 billion (or 17.6%) due primarily to an increase of new originations and purchases of consumer and commercial finance receivables, partially offset by expected principal payments considered current.

Goodwill decreased by $27.0 billion (or 93.2%) due to the impairment charges in GMNA of $26.4 billion and in GME of $0.6 billion and GMIO of $0.2 billion; partially offset by additions of $0.1 billion related to the acquisition of SAIC GM Investment Limited, the holding company of General Motors India Private Limited and Chevrolet Sales India Private Limited (collectively HKJV).

Intangible assets, net decreased by $3.2 billion (or 32.0%) due primarily to impairment charges in GME of $1.8 billion and amortization of $1.6 billion; partially offset by additions of $0.1 billion related to the acquisition of HKJV.

GM Financial equipment on operating leases, net increased by $0.9 billion (or 110.1%) due primarily to a net increase in leased vehicles purchased in the U.S. and Canada of $1.2 billion; partially offset by depreciation of $0.2 billion.

Deferred income taxes increased by $27.4 billion due primarily to the valuation allowance reversals in the U.S. and Canada.

Non-Current Liabilities

GM Financial long-term debt increased by $2.7 billion (or 60.8%) due primarily to: (1) the issuance of securitization notes payable of $4.1 billion; (2) the issuance of 4.75% senior notes of $1.0 billion; partially offset by (3) long-term debt reclassed to current of $2.5 billion.

GMNA Total Net Sales and Revenue

In the year ended December 31, 2012 Total net sales and revenue increased by $4.4 billion (or 4.8%) due primarily to: (1) increased wholesale volumes of $3.9 billion representing 156,000 vehicles (or 4.9%) due to increased industry demand and successful recent vehicle launches such as the Buick Verano, Cadillac ATS, Cadillac XTS, Chevrolet Sonic and Chevrolet Spark; (2) favorable vehicle mix of $1.1 billion; and (3) favorable vehicle pricing of $0.5 billion; partially offset by (4) reduction in favorable lease residual adjustments of $0.5 billion; and (5) unfavorable net foreign currency effect of $0.2 billion due to the weakening of the CAD and Mexican Peso against the U.S. Dollar.

In the year ended December 31, 2011 Total net sales and revenue increased by $7.2 billion (or 8.7%) due primarily to: (1) increased wholesale volumes of $7.3 billion representing 299,000 vehicles (or 10.3%) due to increased industry demand and successful recent vehicle launches such as the Chevrolet Cruze, Chevrolet Equinox and GMC Terrain; (2) favorable vehicle pricing of $1.1 billion; (3) increased revenues from Customer Care and Aftersales of $0.4 billion due to increased volumes; and (4) favorable net foreign currency effect of $0.3 billion due to the strengthening of the CAD against the U.S. Dollar; partially offset by (5) unfavorable vehicle mix of $1.1 billion; and (6) decreased revenue of $1.0 billion due to the sale of Nexteer in November 2010.

GMNA EBIT -Adjusted

The most significant factors which influence GMNA's profitability are industry volume (primarily U.S. seasonally adjusted annual rate) and market share. While not as significant as industry volume and market share, another factor affecting profitability is the relative mix of vehicles (cars, trucks, crossovers) sold. Variable profit is a key indicator of product profitability. Variable profit is defined as revenue less material cost, freight, the variable component of manufacturing expense, and policy and warranty expense. Vehicles with higher selling prices generally have higher variable profit. Trucks sold in the U.S. currently have a variable profit of approximately 150% of our portfolio on a weighted-average basis. Crossover vehicles' variable profits are in line with the overall portfolio on a weighted-average basis, and cars are approximately 50% of the portfolio on a weighted-average basis.

In the year ended December 31, 2012 EBIT-adjusted decreased by $0.2 billion (or 3.4%) due primarily to: (1) decrease in U.S. pension income of $0.8 billion due to December 31, 2011 plan remeasurements; (2) increase in manufacturing expense, including new launches, of $0.6 billion; (3) reduction in favorable lease residual adjustments of $0.5 billion; (4) unfavorable net vehicle mix of $0.3 billion; and (5) unfavorable policy and warranty adjustments of $0.2 billion; partially offset by (6) increased net wholesale volumes of $1.1 billion due to increased industry demand and successful recent vehicle launches; (7) favorable vehicle pricing effect of $0.5 billion; (8) decreased material prices and freight of $0.4 billion; and (9) decreased engineering expense and other technology fees of $0.3 billion.

In the year ended December 31, 2011 EBIT-adjusted increased by $1.5 billion (or 26.5%) due primarily to: (1) increased net wholesale volumes of $1.9 billion due to increased industry demand and successful recent vehicle launches; (2) favorable vehicle pricing effect of $1.1 billion; (3) decreased amortization expense of $0.7 billion due to the effect of double-declining amortization of technology intangibles which were recorded on July 10, 2009 and impairment charges for long-lived assets in 2010; (4) favorable foreign currency effect of $0.5 billion due to the weakening of the CAD against the U.S. Dollar; and (5) increase in net pension and OPEB income of $0.3 billion due to December 31, 2010 plan remeasurements; partially offset by (6) unfavorable net vehicle mix of $1.8 billion; (7) increased engineering expense and other technology fees of $0.5 billion to support new product development; (8) increased material prices and freight of $0.4 billion; and (9) reduction in favorable adjustments of $0.4 billion to restructuring reserves due to increased production capacity utilization and revisions to productivity initiatives in 2010.

GME Total Net Sales and Revenue

In the year ended December 31, 2012 Total net sales and revenue decreased by $4.7 billion (or 17.6%) due primarily to: (1) decreased wholesale volumes of $2.7 billion representing 182,000 vehicles (or 14.4%) due to the weak European economy; (2) unfavorable foreign currency effect of $1.7 billion, due to the strengthening of the U.S. Dollar against the Euro, Russian Ruble, Hungarian Forint, Turkish Lira, and British Pound; (3) decreased parts, accessories and powertrain engine and transmission sales of $0.4 billion associated with lower demand; (4) a decrease of $0.2 billion due to unfavorable price effects primarily resulting from increased incentive support associated with strong competition; (5) a decrease of $0.1 billion due to the deconsolidation of VMM in June 2011; (6) a decrease of $0.1 billion in components sales; partially offset by (7) favorable vehicle mix of $0.5 billion due to the new generation Astra GTC, Opel Mokka, and Ampera and increased sales of other higher priced vehicles.

In the year ended December 31, 2011 Total net sales and revenue increased by $2.7 billion (or 11.1%) due primarily to: (1) favorable foreign currency effect of $1.1 billion, due to the strengthening of the Euro, British Pound and Swiss Franc against the U.S. Dollar; (2) favorable vehicle mix of $1.1 billion due to the new generation Opel Meriva and Opel Astra and increased sales of other higher priced vehicles; (3) revenue from GMS of $0.4 billion, which we acquired in 2010; (4) increased powertrain engine and transmission sales of $0.3 billion, in support of the Chevrolet Cruze and Chevrolet Volt; (5) increased components sales of $0.2 billion; and (6) increased volumes of $0.1 billion due primarily to a 16,000 vehicles (or 1.3%) increase in wholesales; partially offset by (7) a reduction in Saab brand sales of $0.2 billion related to the sale of Saab in 2010; and (8) a decrease of $0.1 billion due to the deconsolidation of VMM in June 2011.

GME EBIT (Loss)-Adjusted

In the year ended December 31, 2012 EBIT (loss)-adjusted increased by $1.1 billion due primarily to: (1) decreased volumes of $0.5 billion; (2) unfavorable net vehicle mix of $0.4 billion; (3) a decrease of $0.2 billion resulting from the net effect of changes in an embedded foreign currency derivative asset associated with a long-term supply agreement; (4) decreased parts, accessories and powertrain engine and transmission sales of $0.2 billion, associated with lower demand; (5) a decrease of $0.2 billion due to unfavorable price effects; partially offset by (6) lower manufacturing and material costs of $0.4 billion and (7) favorable net foreign currency effect of $0.1 billion, due to the strengthening of the U.S. Dollar against the Euro, Russian Ruble, Hungarian Forint, Turkish Lira, and British Pound.

In the year ended December 31, 2011 EBIT (loss)-adjusted decreased by $1.2 billion (or 61.8%) due primarily to: (1) higher restructuring charges of $0.5 billion recorded in 2010 for separation programs in Belgium, Spain, Germany and the United Kingdom; (2) decreased manufacturing costs of $0.3 billion related to the closing of the Antwerp, Belgium facility and European wide labor savings; (3) favorable net vehicle mix of $0.2 billion; (4) an increase of $0.2 billion in an embedded foreign currency exchange derivative asset associated with a long-term supply agreement entered into in 2010; (5) EBIT-adjusted from GMS of $0.1 billion; offset by (6) unfavorable net foreign currency effect of $0.1 billion; and (7) charges of $0.1 billion related to a single customer's default under various commercial supply agreements.

GM International Operations
(Dollars in Millions)

GMIO Total Net Sales and Revenue

In the year ended December 31, 2012 Total net sales and revenue increased by $2.9 billion (or 11.8%) due primarily to: (1) increased wholesale volumes of $2.4 billion representing 146,000 vehicles due primarily to strong industry growth across the region; (2) favorable vehicle pricing of $0.8 billion due to higher pricing on new models launched and (3) favorable vehicle mix of $0.4 billion due to increased export of new products; partially offset by (4) unfavorable net foreign currency effect of $0.6 billion due to the weakening of the Korean Won and South Africa Rand against the U.S. Dollar; and (5) unfavorable components, parts and accessories sales of $0.1 billion.

In the year ended December 31, 2011 Total net sales and revenue increased by $4.2 billion (or 20.4%) due primarily to: (1) increased wholesale volume of $2.7 billion representing 113,000 vehicles due to strong industry growth across the region; (2) favorable net foreign currency effect of $0.8 billion due to the strengthening of currencies such as the Australian Dollar, the Korean Won and the Euro against the U.S. Dollar; (3) favorable vehicle mix of $0.5 billion due to launches of the Alpheon and Chevrolet Orlando; and (4) favorable vehicle pricing effect of $0.2 billion due to higher pricing on new models launched and lower sales incentives.

The vehicle sales of our China JVs and of HKJV prior to September 1, 2012, the date we consolidated HKJV, are not recorded in Total net sales and revenue. The results of our nonconsolidated joint ventures are recorded in Equity income, net of tax and gain on investments. Refer to Notes 4 and 10 to our consolidated financial statements for further detail on the acquisition of HKJV.

GMIO EBIT-Adjusted

In the year ended December 31, 2012 EBIT-adjusted increased by $0.3 billion (or 15.5%) due primarily to: (1) favorable pricing of $0.8 billion due to higher pricing on new models launched; (2) favorable net wholesale volumes of $0.5 billion and (3) net gain of $0.1 billion measured as the difference between the fair value of our 50% interest in HKJV and the investment's carrying amount at the date of acquisition; partially offset by (4) increased costs of $0.9 billion due primarily to increased material, freight and manufacturing costs; and (5) unfavorable net vehicle mix of $0.3 billion.

In the year ended December 31, 2011 EBIT-adjusted decreased by $0.4 billion (or (16.1)%) due primarily to: (1) increased engineering expenses and other technology fees of $0.5 billion to support new product development; (2) increased material, depreciation and amortization and other manufacturing costs of $0.3 billion; (3) unfavorable net vehicle mix of $0.2 billion; (4) increased advertising and sales promotion expenses of $0.2 billion to support media campaigns for launches of new products and the launch of the Chevrolet brand in Korea; (5) unfavorable net foreign currency effect of $0.1 billion; partially offset by (6) favorable net wholesale volumes of $0.5 billion; (7) favorable pricing effect of $0.2 billion due to higher pricing on new models launched and lower sales incentives; (8) increased equity income, net of tax, $0.2 billion from the operating results of our China JVs; and (9) decreased non-controlling interest of $0.2 billion attributable to minority shareholders.

GMSA Total Net Sales and Revenue

In the year ended December 31, 2012 Total net sales and revenue increased by $0.1 billion (or 0.4%) due primarily to: (1) favorable vehicle mix of $1.6 billion due to increased sales of Chevrolet Cruze and Chevrolet S10; (2) favorable vehicle pricing effect of $0.5 billion, primarily in Argentina due to higher inflation and in Venezuela due to the hyperinflationary economy; and (3) increased revenue from parts and accessories sales of $0.1 billion; partially offset by (4) unfavorable net foreign currency effect of $1.5 billion, due to the strengthening of the U.S. dollar against major currencies such as the Brazilian Real and Argentinian Peso; and (5) decreased wholesale volumes of $0.6 billion representing 44,000 vehicles (or 4.0%) due to deteriorated market share driven by increased competition and aggressive pricing in the market.

In the year ended December 31, 2011 Total net sales and revenue increased by $1.5 billion (or 9.7%) due primarily to: (1) increased wholesale volumes of $0.6 billion representing 59,000 vehicles (or 5.7%) due to improved macroeconomic conditions and industry growth throughout the region; (2) favorable net foreign currency effect of $0.5 billion, due to the strengthening of currencies such as the Brazilian Real and Colombian Peso against the U.S. Dollar; (3) favorable vehicle pricing effect of $0.3 billion, due primarily to the hyperinflationary economy in Venezuela; and (4) favorable vehicle mix of $0.1 billion due primarily to increased sales of the Chevrolet Cruze.

GMSA EBIT (Loss)-Adjusted

In the year ended December 31, 2012 EBIT-adjusted was $0.3 billion compared to EBIT (loss)-adjusted of $0.1 billion in the year ended December 31, 2011 due primarily to: (1) favorable net vehicle mix of $0.5 billion due to increased sales of Chevrolet Cruze and Chevrolet S10; (2) favorable vehicle pricing effect of $0.5 billion, primarily in Argentina due to higher inflation and in Venezuela due to the hyperinflationary economy; (3) decreases in contingency reserves of $0.1 billion due to the resolution of certain items at amounts lower than previously expected; and (4) a bargain purchase gain of $50 million on the purchase of GMAC Venezuela; partially offset by (5) increased material, freight and manufacturing costs of $0.5 billion, (6) unfavorable net wholesale volumes of $0.2 billion; and (7) increased administrative and advertising and sales promotion expenses of $0.1 billion to support launches of new products.

In the year ended December 31, 2011 EBIT-adjusted was a loss of $0.1 billion compared to EBIT-adjusted of $0.8 billion in the year ended December 31, 2010 due primarily to: (1) increased material and freight of $0.7 billion; (2) increased manufacturing costs of $0.3 billion; and (3) foreign currency transaction gains of $0.3 billion recorded in 2010 due to preferential foreign currency exchange rates in Venezuela, which were discontinued in 2011; and (4) unfavorable $0.1 billion related to separation costs; partially offset by (5) favorable vehicle pricing effect of $0.3 billion due primarily to the hyperinflationary economy in Venezuela.

In January 2010 the Venezuelan government announced that the official fixed exchange rate of 2.15 BsF to $1.00 would be changed to a dual rate system that includes a 2.60 BsF to $1.00 essentials rate for food, technology and heavy machine importers and a 4.30 BsF to $1.00 non-essentials rate for all others. This devaluation required remeasurement of our Venezuelan subsidiaries' non-U.S. Dollar denominated monetary assets and liabilities. We used a rate of 4.30 BsF to $1.00 to determine the remeasurement, which resulted in a charge of $25 million recorded in Automotive cost of sales in the year ended December 31, 2010.

GM Financial
(Dollars in Millions)

	Years Ended December 31,		Three Months Ended December 31,	Year Ended 2012 vs. 2011 Change	
	2012	2011	2010	Amount	%
Total revenue	$1,961	$1,410	$281	$551	39.1%
Income before income taxes	$ 744	$ 622	$129	$122	19.6%

GM Financial Revenue

In the year ended December 31, 2012 Total revenue increased by $0.6 billion (or 39.1%) due primarily to: (1) increased finance charge income of $0.3 billion, due to a larger portfolio; and (2) increased leased vehicles income of $0.2 billion due to the increased size of the leased asset portfolio.

In the year ended December 31, 2011 Total revenue included finance charge income of $1.2 billion and other income of $0.2 billion.

In the three months ended December 31, 2010 Total revenue included finance charge income of $0.3 billion. The effective yield on GM Financial's finance receivables was 12.1% for the three months ended December 31, 2010.

GM Financial Income Before Income Taxes

In the year ended December 31, 2012 Income before income taxes increased by $0.1 billion (or 19.6%) due primarily to: (1) increased revenue of $0.6 billion; partially offset by (2) increased leased vehicle expenses of $0.1 billion due to a larger lease portfolio; (3) increased provision for loan losses of $0.1 billion due to a larger loan portfolio; (4) increased interest expenses of $0.1 billion primarily due to new debt; and (5) increased operating expenses of $0.1 billion due to an increase of personnel to support company growth.

Average debt outstanding in the year ended December 31, 2012 was $9.5 billion and the effective rate of interest of debt was 3.0%.

In the year ended December 31, 2011 results included: (1) Total revenue of $1.4 billion; partially offset by (2) operating and leased vehicle expenses of $0.4 billion; (3) interest expense of $0.2 billion; and (4) provision for loan losses of $0.2 billion. GM Financial's operating expenses are primarily related to personnel costs that include base salary and wages, performance incentives and benefits as well as related employment taxes. Provisions for loan losses are charged to income to bring the allowance for loan losses to a level which management considers adequate to absorb probable credit losses inherent in the portfolio of finance receivables originated since October 1, 2010. Interest expense represents interest paid on GM Financial's warehouse credit facilities, securitization notes payable, and other unsecured debt.

Average debt outstanding in the year ended December 31, 2011 was $7.6 billion and the effective rate of interest of debt was 2.7%.

In the three months ended December 31, 2010 results included: (1) Total revenue of $0.3 billion; partially offset by (2) operating and leased vehicle expenses of $0.1 billion; and; (3) other collectively insignificant items.

Average debt outstanding in the three months ended December 31, 2010 was $7.3 billion and the effective rate of interest debt was 2.0%.

Corporate
(Dollars in Millions)

	Years Ended December 31,			Year Ended 2012 vs. 2011 Change		Year Ended 2011 vs. 2010 Change

n.m. = not meaningful

Nonsegment operations are classified as Corporate. Corporate includes an investment in Ally Financial, certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures, and certain nonsegment specific revenues and expenses.

Corporate Total Net Sales and Revenue

Total net sales and revenue includes revenue earned for portfolio management services performed for third-parties and the change in the year ended December 31, 2012 was insignificant.

In the year ended December 31, 2011 Total net sales and revenue decreased by $0.1 billion (or 54.5%) due primarily to decreased revenue earned on portfolio management services performed for third-parties due to the planned reduction of third-party assets managed and decreased lease financing revenues related to the liquidation of the portfolio of automotive retail leases. Average outstanding retail leases on-hand decreased to a de minimus level at December 31, 2011 compared to 7,000 at December 31, 2010.

Corporate Net Income (Loss) Attributable to Stockholders

In the year ended December 31, 2012 Net income attributable to stockholders increased by $34.3 billion due primarily to: (1) deferred tax asset valuation allowance reversals of $36.3 billion in the U.S and Canada in 2012 as compared to $0.5 billion in Australia in 2011, offset by other 2012 tax-related matters of $0.9 billion; and (2) an impairment charge of $0.6 billion in our investment in Ally Financial common stock in 2011; offset by (3) the premium paid to purchase our common stock from the UST of $0.4 billion in December 2012; (4) a gain of $0.3 billion related to the sale of our Ally Financial preferred stock in 2011; and (5) loss on extinguishment of debt in 2012 of $0.3 billion which primarily represented the unamortized debt discount on the GM Korea mandatorily redeemable preferred shares.

In the year ended December 31, 2011 Net loss attributable to stockholders decreased by $0.4 billion (or 48.3%) due primarily to: (1) an income tax benefit of $0.3 billion compared to income tax expense of $0.6 billion in 2010; (2) decreased interest expense of $0.6 billion due to lower debt balances; and (3) a gain of $0.3 billion related to the sale of our Ally Financial preferred stock; offset by (4) an impairment charge of $0.6 billion on our investment in Ally Financial common stock; (5) gains on the extinguishment of debt of $0.2 billion related to the repayment of the VEBA Notes and the elimination of the liability for the Adjustment Shares of $0.2 billion in 2010; and (6) other collectively insignificant items.

Liquidity and Capital Resources

Liquidity Overview

We believe that our current level of cash and cash equivalents, marketable securities and availability under our secured revolving credit facilities will be sufficient to meet our liquidity needs. However, we expect to have substantial cash requirements going forward which we plan to fund through total available liquidity and cash flows generated from operations. Our known material future uses of cash which may vary from time to time based on market conditions and other factors include, among other possible demands in 2013: (1) reinvestment in our business through capital expenditures of approximately $8 billion as well as engineering and product development activities; (2) acquiring certain Ally Financial international operations for approximately $4.2 billion; (3) payments to service debt and other long-term obligations; (4) dividend payments on our Series A and Series B Preferred Shares of $0.9 billion; and (5) certain litigation and income and indirect tax-related administrative proceedings that may require that we make payments or deposit funds in escrow estimated at $0.8 billion.

Our liquidity plans are subject to a number of risks and uncertainties, including those described in the section of this report entitled “Risk Factors,” some of which are outside our control. Macroeconomic conditions could limit our ability to successfully execute our business plans and therefore adversely affect our liquidity plans.

Recent Management Initiatives

Maintaining minimal financial leverage remains a key strategic initiative. We continue to monitor and evaluate opportunities to optimize our liquidity position and capital structure in order to strengthen our balance sheet including options to fund and derisk our pension plans. We continue to evaluate potential repayments of obligations prior to maturity, certain of which may be deeply discounted. Any such repayments may negatively affect our liquidity in the short-term.

In December 2012 we purchased 200 million shares of our common stock from the UST at a price of $27.50 per share for a total of $5.5 billion. The purchase price represented a premium to the prior day’s closing price of $25.49. We allocated the purchase price between a direct reduction to shareholder’s equity of $5.1 billion and a charge to earnings of $0.4 billion, representing the premium and recorded in Other automotive expenses, net.

In the year ended December 31, 2012 we made prepayments of $0.8 billion on debt obligations with a carrying amount of $0.5 billion. We recorded a loss on extinguishment of debt of $0.3 billion which primarily represented the unamortized debt discount on the GM Korea mandatorily redeemable preferred shares.

In November 2012 we entered into two new secured revolving credit facilities with an aggregate borrowing capacity of $11.0 billion. These facilities replaced our five-year, $5.0 billion secured revolving credit facility and provide additional liquidity, improved terms and increased financing flexibility including the ability to borrow in currencies other than U.S. dollars. The facilities are described below in greater detail.

In November and December 2012 the Retiree Plan purchased group annuity contracts from an insurance company to pay and administer future annuity payments to certain of our salaried retirees. We provided the salaried pension plan with funding through contributions and short-term interest free loans of $2.4 billion, of which $2.3 billion was deemed a pension contribution at December 31, 2012. Refer to Note 18 to our consolidated financial statements for additional details on pension activities.

Investment Actions

From time to time we consider the possibility of acquisitions, dispositions and strategic alliances that we believe would generate significant advantages and substantially strengthen our business. These actions may include additional loans, investments with our joint venture partners or the acquisitions of certain operations or ownership stakes in outside businesses. These actions may negatively impact our liquidity in the short-term.

In November 2012 GM Financial entered into agreements with Ally Financial to acquire substantially all of Ally Financial’s automotive finance and financial services business in Europe and Latin America and Ally Financial’s equity interests in GMAC-SAIC that conducts automotive finance services operations in China. The purchase price to acquire this business and equity interests is approximately $4.2 billion, subject to certain possible closing adjustments, and is expected to close in stages during 2013. Refer to Note 4 to our consolidated financial statements for additional information on our agreement to acquire certain Ally Financial international operations.

In September 2012 we acquired security interests in the mandatorily redeemable preferred shares issued by GM Korea for $0.3 billion. The transaction did not meet the criteria for an extinguishment of the liability. Therefore we have classified these interests as an available-for-sale marketable security. GM Korea has since partially redeemed the mandatorily redeemable preferred shares which reduced the fair value of the security interests we hold to $0.2 billion at December 31, 2012.

In February 2012 we entered into an agreement with PSA to create an alliance to leverage the strengths and capabilities of our two companies and acquired a seven percent equity stake in PSA for $0.4 billion; against which we recorded impairment charges of $0.2 billion in the three months ended December 31, 2012. Refer to Note 7 to our consolidated financial statements for additional information on our investment in PSA.

(a) Represents cash on hand at acquisition for GM Financial in the year ended December 31, 2010.

Automotive

Available Liquidity

Total available liquidity includes cash, cash equivalents, marketable securities and funds available under credit facilities. At December 31, 2012 our total available liquidity was $37.2 billion, including funds available under credit facilities of $11.1 billion. The amount of available liquidity is subject to intra-month and seasonal fluctuations and includes balances held by various business units and subsidiaries worldwide that are needed to fund their operations.

We manage our liquidity primarily at our treasury centers as well as at certain of our significant consolidated overseas subsidiaries. Available liquidity held within North America and at our regional treasury centers represented approximately 84% of our available liquidity at December 31, 2012. A portion of our available liquidity includes amounts deemed indefinitely reinvested in our foreign subsidiaries. We have used and will continue to use other methods including intercompany loans to utilize these funds across our global operations as needed.

Our cash equivalents and marketable securities balances include investments in U.S. government and agency obligations, foreign government securities, time deposits and certificates of deposits and corporate debt securities, and are primarily denominated in U.S. Dollars and CAD. We maintained cash investments in CAD denominated securities of $6.6 billion at December 31, 2012. These cash investments will incur foreign exchange gains or losses based on the movement of the CAD in relation to the U.S. Dollar and will therefore reduce our net CAD foreign exchange exposure, which primarily relates to pension and OPEB liabilities. We expect to maintain a sufficient amount of CAD deposits and investments to offset the liabilities denominated in CAD and expect the amount of CAD denominated securities to decrease in 2013. These funds continue to be available to fund our normal ongoing operations and are included in our available liquidity.

Our investment guidelines, which we may change from time to time, prescribe certain minimum credit rating thresholds and limit our exposures to any particular sector, asset class, issuance or security type. Substantially all of our current investments in debt securities are with A/A2 or better rated issuers. We actively monitor and manage our liquidity exposure to Europe which is related primarily to short-term bank deposits and short-term debt securities of high-quality European issuers. The following table summarizes our liquidity (dollars in millions):

	December 31, 2012	December 31, 2011
Cash and cash equivalents	$17,133	$15,499
Marketable securities	8,988	16,148
Available liquidity	26,121	31,647
Available under credit facilities	11,119	5,308
Total available liquidity	$37,240	$36,955

Total available liquidity increased by $0.3 billion in the year ended December 31, 2012 due primarily to: (1) cash provided by operating activities of $9.6 billion; and (2) an increase in amounts available under credit facilities of $5.8 billion related to our new secured revolving credit facilities; partially offset by (3) capital expenditures of $8.1 billion; and (4) cash used in financing activities of $7.1 billion relating to the purchase of our common stock, debt prepayments and dividend payments.

Credit Facilities

We use credit facilities as a mechanism to provide additional flexibility in managing our global liquidity. The following table summarizes our credit facilities (dollars in millions):

	Total Credit Facilities		Amounts Available Under Credit Facilities	
	December 31, 2012 (a)	December 31, 2011	December 31, 2012 (a)	December 31, 2011
Secured revolving credit facilities	$11,000	$5,000	$10,793	$5,000
Other (b)	415	338	326	308
Total	$11,415	$5,338	$11,119	$5,308

(a) GM Financial has not borrowed under the three-year $5.5 billion facility but has the ability to borrow up to $4.0 billion.

(b) Consists of credit facilities available at our foreign subsidiaries that are not individually significant.

Our primary borrowing capacity under credit facilities comes from our secured revolving credit facilities comprising a three-year, $5.5 billion facility and a five-year, $5.5 billion facility. We entered into the secured revolving credit facilities in November 2012 to replace our five-year, $5.0 billion secured revolving credit facility that we entered into in October 2010. Obligations under the new secured revolving credit facilities are secured by the same collateral that had secured our prior facility. Availability under the secured revolving credit facilities is subject to borrowing base restrictions.

The three-year, $5.5 billion facility is available to GM Financial as well as other certain wholly-owned domestic and international subsidiaries. The facility includes various sub-limits including a GM Financial borrowing sub-limit of $4.0 billion, a multi-currency borrowing sub-limit of $3.5 billion, a Brazilian Real borrowing sub-limit of $0.5 billion, and a letter of credit sub-facility limit of $1.5 billion. We had amounts in use under the letter of credit sub-facility of $0.2 billion at December 31, 2012. We may borrow against this facility from time to time for strategic initiatives and for general corporate purposes.

The five-year, $5.5 billion facility is not available to GM Financial and allows for borrowings in U.S. Dollars and other currencies and includes a letter of credit sub-limit of $0.5 billion. While we do not expect to draw on the five-year facility, it provides additional liquidity, financing flexibility and is available for general corporate purposes. Refer to Note 17 to our consolidated financial statements for additional details on our secured revolving credit facilities.

We and our subsidiaries use credit facilities to fund working capital needs and other general corporate purposes.

Cash Flow

Operating Activities

In the year ended December 31, 2012 cash flows from operating activities increased by $2.2 billion due primarily to: (1) increase in accrued and other liabilities of $1.7 billion due primarily to dealer and customer sales allowances and warranty; (2) favorable changes in working capital of $1.6 billion including the termination of advance wholesale agreements in GMNA which adversely impacted working capital in 2011; (3) favorable changes in daily rental fleet activities of $0.9 billion; partially offset by (4) an increase in pension contributions and OPEB payments of $1.5 billion relating to the contributions to the Retiree Plan for the purchase of annuity contracts partially offset by OPEB payments relating to the HCT settlement in 2011; and (5) the premium paid to purchase our common stock from the UST of $0.4 billion in December 2012.

In the year ended December 31, 2011 cash flows from operating activities increased by $0.8 billion due primarily to: (1) increased net income excluding depreciation, impairment charges and amortization of $2.9 billion; (2) decreased pension cash contributions and OPEB payments in excess of expense of $2.3 billion; partially offset by (3) unfavorable changes in working capital of $1.6 billion due to the termination of the advance wholesale agreements and increased production; and (4) other activities of $2.7 billion which include non-cash gains relating to the sale of our investments in New Delphi and Ally Financial preferred stock of $1.9 billion. Significant pension and OPEB related activity included a cash contribution as part of the HCT settlement of $0.8 billion in 2011 and a voluntary contribution made to our U.S. pension plans of $4.0 billion in 2010. Refer to Note 18 to our consolidated financial statements for additional information on the HCT settlement.

Investing Activities

In the year ended December 31, 2012 cash flows from investing activities increased by $9.9 billion due primarily to: (1) an increase in net liquidations of marketable securities of $17.5 billion as we reinvested maturing marketable securities in shorter-term cash equivalents to rebalance our investment portfolio in the normal course of business; partially offset by (2) proceeds from the sale of our investments in New Delphi and preferred stock in Ally Financial of $4.8 billion in 2011; (3) increased capital expenditures of $1.8 billion as we continue to reinvest in our business; (4) a decrease in the release of restricted cash of $0.8 billion related primarily to the release of restricted cash associated with implementation of the HCT in 2011; and (5) an increase in notes receivable of $0.2 billion.

In the year ended December 31, 2011 cash flows from investing activities decreased by $11.3 billion due primarily to: (1) a reduction in restricted cash returned from escrow accounts of $11.6 billion; (2) an increase in net acquisitions of marketable securities with maturities exceeding 90 days of $5.2 billion; and (3) increased capital expenditures of $2.0 billion as we continue to reinvest in our business; partially offset by (4) proceeds from the sale of our investments in New Delphi and preferred stock in Ally Financial of $4.8 billion in 2011; and (5) the acquisition of AmeriCredit Corp. for $3.5 billion in 2010. The decrease in restricted cash was due to the release of $1.0 billion following the implementation of the HCT in 2011 and the release of funds held in an escrow account relating to the UST Credit Agreement of $12.5 billion in 2010.

Financing Activities

In the year ended December 31, 2012 cash flows from financing activities decreased by $5.2 billion due primarily to: (1) the purchase price less the applicable premium to acquire our common stock from the UST of $5.1 billion; and (2) issuance fees paid to enter into our new secured revolving credit facilities of $0.1 billion in 2012.

In the year ended December 31, 2011 cash flows from financing activities increased by $7.4 billion due primarily to: (1) a reduction in payments made in excess of proceeds received from debt obligations of $10.0 billion related to the repayment of our indebtedness under the UST Credit Agreement of $5.7 billion, Canadian Loan of $1.3 billion, principal payments of the VEBA Notes of $2.5 billion and repayment of GM Korea's credit facility of $1.2 billion in 2010; and (2) purchase of the Series A Preferred Stock shares held by the UST of $2.1 billion in 2010; partially offset by (3) proceeds received from the issuance of our Series B Preferred Stock of $4.9 billion in 2010.

Free Cash Flow and Adjusted Free Cash Flow

Management believes free cash flow and adjusted free cash flow provides meaningful supplemental information regarding the liquidity of our automotive operations and its ability to generate sufficient cash flow above those required in our business to sustain our operations. We measure free cash flow as cash flow from operations less capital expenditures. We measure adjusted free cash flow as free cash flow adjusted for certain voluntary management actions, primarily related to strengthening our balance sheet. These voluntary management actions represent items that management does not consider when assessing and managing the operational and financial performance of the organization and its management teams. Management believes that adjusting for these actions allows for greater transparency of operating trends and performance between periods. While management believes that free cash flow and adjusted free cash flow provide useful information, they are not operating measures under U.S. GAAP and there are limitations associated with their use. Our calculation of free cash flow and adjusted free cash flow may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in the method of calculation. As a result the use of free cash flow and adjusted free cash flow has limitations and should not be considered in isolation from, or as a substitute for, other measures such as cash flows from operating activities. Due to these limitations, free cash flow and adjusted free cash flow are used as supplements to U.S. GAAP measures. The following table summarizes free cash flow and adjusted free cash flow (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Operating cash flow	$ 9,631	$ 7,429	$ 6,589
Less: capital expenditures	(8,055)	(6,241)	(4,200)
Free cash flow	1,576	1,188	2,389
Adjustments for voluntary management actions	2,712	1,830	4,000
Adjusted free cash flow	$ 4,288	$ 3,018	$ 6,389

Adjustments for voluntary management actions include the following items: voluntary contributions to the Retiree Plan of $2.3 billion for the purchase of annuity contracts and the premium paid to purchase our common stock from the UST of $0.4 billion in December 2012; termination of in-transit wholesale advance agreement in GMNA resulting in an increase to accounts receivable of $1.1 billion and OPEB payments relating to the HCT settlement of $0.8 billion in 2011; and a voluntary contribution to our U.S. hourly and salaried defined benefit pension plans of $4.0 billion in 2010.

Other Liquidity Issues

Status of Credit Ratings

We receive credit ratings from four independent credit rating agencies: DBRS Limited, Fitch Ratings (Fitch), Moody's Investor Service (Moody's) and Standard & Poor's (S&P).

Moody's, Fitch and S&P currently rate our corporate credit at non-investment grade while DBRS Limited rates our corporate credit as investment grade. The following table summarizes our credit ratings at February 8, 2013:

Rating Agency	Corporate	Secured Revolving Credit Facilities	Outlook
DBRS Limited	BBB (low)	N/A	Stable
Fitch	BB+	BBB-	Stable
Moody's	Ba1	Baa2	Positive
S&P	BB+	BBB	Stable

Rating actions taken by each of the credit rating agencies from January 1, 2012 through February 8, 2013 were as follows:

DBRS Limited: September 2012 — Upgraded corporate rating to BBB (low) from BB (high).

Fitch: November 2012 — Assigned a rating of BBB- to our secured revolving credit facilities.

August 2012 — Upgraded corporate rating to BB+ from BB and changed their outlook to stable from positive.

Moody's: November 2012 — Assigned a rating of Baa2 to our secured revolving credit facilities.

S&P: November 2012 — Assigned a rating of BBB to our secured revolving credit facilities.

We continue to pursue investment grade status by maintaining a balance sheet with minimal financial leverage and demonstrating continued operating performance. Achieving investment grade status will provide us with greater financial flexibility, lower our cost of borrowing and may release collateral from certain agreements including our secured revolving credit facilities.

Series A Preferred Stock

Beginning December 31, 2014 we will be permitted to redeem, in whole or in part, the shares of Series A Preferred Stock outstanding at a redemption price equal to $25.00 per share plus any accrued and unpaid dividends, subject to limited exceptions. Our ability to redeem any portion of this $6.9 billion face amount in Series A Preferred Stock will depend upon our having sufficient liquidity.

Automotive Financing

Liquidity Overview

GM Financial's primary sources of cash are finance charge income, servicing fees, net distributions from securitization trusts, borrowings under credit facilities, transfers of finance receivables to trusts in securitization transactions, collections and recoveries on finance receivables and net proceeds from senior notes transactions. GM Financial's primary uses of cash are purchases and originations of finance receivables and leased assets, repayment of credit facilities, securitization of notes payable and other indebtedness, funding credit enhancement requirements for securitization transactions and credit facilities and operating expenses.

GM Financial used cash of $5.6 billion, $5.0 billion and $0.9 billion for the purchase of consumer finance receivables in the years ended December 31, 2012 and 2011 and the three months ended December 31, 2010. GM Financial used cash of $1.2 billion for the origination of commercial finance receivables in the year ended December 31, 2012. GM Financial used cash of $1.1 billion and $0.8 billion for the purchase of leased vehicles in the years ended December 31, 2012 and 2011. These purchases and originations were funded initially utilizing cash and borrowings under credit facilities and subsequently funded in securitization transactions.

GM Financial received cash of $4.0 billion, $3.7 billion and $0.9 billion from collections and recoveries on consumer finance receivables in the years ended December 31, 2012 and 2011 and the three months ended December 31, 2010 and $0.7 billion from collections on commercial finance receivables in the year ended December 31, 2012.

Available Liquidity

The following table summarizes GM Financial's available liquidity for daily operations (dollars in millions):

	December 31, 2012	December 31, 2011
Cash and cash equivalents	$1,289	$ 572
Borrowing capacity on unpledged eligible receivables	706	387
Borrowing capacity on unpledged eligible leased assets	643	294
Available liquidity	$2,638	$1,253

The increase in liquidity is due primarily to the issuance of senior notes of $1.0 billion, improved credit performance on consumer finance receivables which led to an increase in distributions from trusts and the settlement of several older securitizations with high enhancement levels.

As previously described GM Financial has the ability to borrow up to $4.0 billion against our three-year $5.5 billion secured revolving credit facility. GM Financial's borrowings under the facility are limited by our ability to borrow the entire amount available under the facility. Therefore GM Financial may be able to borrow up to $4.0 billion or may be unable to borrow depending on our borrowing activity. If GM Financial does borrow under the facility it expects such borrowings would be short-term in nature. Neither GM Financial, nor any of its subsidiaries, guarantee any obligations under this facility and none of its subsidiaries' assets secure this facility.

Senior Notes

In August 2012 GM Financial issued 4.75% senior notes of $1.0 billion which are due in August 2017 with interest payable semiannually. GM Financial intends to use the net proceeds from this offering for general corporate purposes including, but not limited to, acquisitions.

In June 2011 GM Financial issued 6.75% senior notes of $0.5 billion which are due in June 2018 with interest payable semiannually. In July 2011 proceeds of $0.1 billion from this offering were used to redeem all of GM Financial's outstanding 8.50% senior notes due in 2015. The remaining proceeds are to be used for general corporate purposes.

Refer to Note 17 to our consolidated financial statements for additional details about these debt issuances.

Credit Facilities

In the normal course of business, in addition to using available cash, GM Financial pledges assets to and borrows under credit facilities to fund operations and repays these borrowings as appropriate under GM Financial's cash management strategy.

The following table summarizes those credit facilities (dollars in millions):

	December 31, 2012		December 31, 2011	
	Facility Amount	Advances Outstanding	Facility Amount	Advances Outstanding
Syndicated warehouse facility (a)	$2,500	$ —	$2,000	$ 621
Canada lease warehouse facility (b)	$ 803	354	$ 589	181
U.S. lease warehouse facility (c)	$ 600	—	$ 600	—
Medium-term note facility (d)		—		294
Bank funding facility		—		3
Total		$354		$1,099

(a) In May 2013 when the revolving period ends, and if the facility is not renewed, the outstanding balance will be repaid over time based on the amortization of the receivables pledged until February 2020 when the remaining balance will be due and payable.

(b) In July 2013 when the revolving period ends, and if the facility is not renewed, the outstanding balance will be repaid over time based on the amortization of the leasing related assets pledged until January 2019 when any remaining balance will be due and payable. The facility amount represents CAD $800 million and CAD $600 million at December 31, 2012 and 2011, and the advances outstanding amount represents CAD $353 million and CAD $185 million at December 31, 2012 and 2011.

(c) In January 2013 GM Financial extended the maturity date of this facility to May 2014. In May 2014 when the revolving period ends, and if the facility is not renewed, the outstanding balance will be repaid over time based on the amortization of the leasing related assets pledged until November 2019 when any remaining amount outstanding will be due and payable.

(d) In October 2012 this facility was paid in full and subsequently terminated.

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under the credit facilities. GM Financial's funding agreements contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios (portfolio net loss and delinquency ratios, and pool level cumulative net loss ratios) as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements, the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements, restrict GM Financial's ability to obtain additional borrowings and/or remove GM Financial as servicer. As of December 31, 2012 GM Financial was in compliance with all covenants in its credit facilities.

Defined Benefit Pension Plan Contributions

Eligible U.S. salaried employees hired prior to January 2001 participated in a defined benefit pension plan which was frozen as of September 30, 2012. All eligible salaried employees now participate in a defined contribution plan. Hourly employees hired prior to October 15, 2007 generally participate in plans which provide benefits of stated amounts for each year of service as well as supplemental benefits for employees who retire with 30 years of service before normal retirement age. Hourly employees hired after October 15, 2007 participate in a defined contribution plan. Our policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulation, or to directly pay benefit payments where appropriate. At December 31, 2012 all legal funding requirements had been met. We expect to contribute $0.1 billion to our U.S. non-qualified plans and $0.8 billion to our non-U.S. pension plans in 2013.

The following table summarizes contributions made to the defined benefit pension plans or direct payments (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
U.S. hourly and salaried	$2,420	$1,962	$4,095
Non-U.S.	855	836	777
Total contributions	$3,275	$2,798	$4,872

In 2012 we provided short-term, interest-free, unsecured loans to the Retiree Plan to provide the plan with incremental liquidity to pay ongoing benefits and administrative costs. In August 2012 we loaned the Retiree Plan $2.0 billion with principal due within 90 days. In the three months ended December 31, 2012 $1.5 billion of the $2.0 billion loan was contributed to the Retiree Plan, $0.3 billion was repaid to us and the remaining $0.3 billion, which had been converted into a new interest-free loan, is due on or before April 15, 2013. In October 2012 we provided a loan of $0.2 billion to the Retiree Plan that was repaid to us in December 2012. At December 31, 2012 $0.2 billion of the remaining $0.3 billion loan was deemed a contribution. Amounts loaned to the Retiree Plan in excess of the ultimate funding requirements will be repaid to us.

We made a voluntary contribution in January 2011 to our U.S. hourly and salaried defined benefit pension plans of 61 million shares of our common stock, valued at $2.2 billion for funding purposes at the time of contribution. The contributed shares qualified as a plan asset for funding purposes at the time of contribution and as a plan asset valued at $1.9 billion for accounting purposes in July 2011. This was a voluntary contribution above our funding requirements for the pension plans.

The following table summarizes the underfunded status of pension plans on a U.S. GAAP basis (dollars in billions):

	December 31, 2012	December 31, 2011
U.S. hourly and salaried	$13.1	$13.3
U.S. nonqualified	0.9	0.9
Total U.S. pension plans	14.0	14.2
Non-U.S.	13.8	11.2
Total underfunded	$27.8	$25.4

The U.S. pension plans were underfunded by $14.0 billion and $14.2 billion at December 31, 2012 and 2011. The change in funded status was due primarily to: (1) actuarial losses due primarily to discount rate decreases of $8.4 billion; and (2) service and interest costs of $4.5 billion; partially offset by (3) actual return on plan assets of $10.3 billion; and (4) contributions of $2.4 billion.

The non-U.S. pension plans were underfunded by $13.8 billion and $11.2 billion at December 31, 2012 and 2011. The change in funded status was due primarily to: (1) actuarial losses of $2.8 billion; (2) service and interest costs of $1.5 billion; (3) net unfavorable foreign currency translation effect of $0.3 billion; and (4) costs primarily related to plan amendments and other of $0.2 billion; partially offset by (5) actual return on plan assets of $1.3 billion; and (6) contributions and benefit payments of $0.9 billion.

Hourly and salaried OPEB plans provide postretirement life insurance to most U.S. retirees and eligible dependents and postretirement health coverage to some U.S. retirees and eligible dependents. Certain of the non-U.S. subsidiaries have postretirement benefit plans, although most participants are covered by government sponsored or administered programs.

The following table summarizes the unfunded status of OPEB plans (dollars in billions):

	December 31, 2012	December 31, 2011
U.S. OPEB plans	$6.3	$5.8
Non-U.S. OPEB plans	1.5	1.5
Total unfunded	$7.8	$7.3

Refer to Note 18 to our consolidated financial statements for the change in benefit obligations and related plan assets.

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service (dollars in millions):

	Pension Benefits (a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
2013	$ 6,052	$1,491	$ 421	$ 63
2014	$ 5,912	$1,507	$ 373	$ 65
2015	$ 5,861	$1,546	$ 366	$ 67
2016	$ 5,674	$1,575	$ 360	$ 70
2017	$ 5,558	$1,588	$ 356	$ 72
2018-2022	$25,259	$8,092	$1,713	$391

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our Cash and cash equivalents.

Off-Balance Sheet Arrangements

We do not currently utilize off-balance sheet securitization arrangements. All trade or financing receivables and related obligations subject to securitization programs are recorded on our consolidated balance sheets at December 31, 2012 and 2011.

Guarantees Provided to Third-Parties

We have provided guarantees related to the residual value of operating leases, certain suppliers' commitments, certain product-related claims and commercial loans made by Ally Financial and outstanding with certain third-parties excluding vehicle repurchase obligations, residual support and risk sharing related to Ally Financial. The maximum potential obligation under these commitments was $1.4 billion and $1.1 billion at December 31, 2012 and 2011.

Our current agreement with Ally Financial requires the repurchase of Ally Financial financed inventory invoiced to dealers with limited exclusions, in the event of a qualifying voluntary or involuntary termination of the dealer's sales and service agreement. The repurchase obligation ended in August 2010 for vehicles invoiced through August 2009, ended in August 2011 for vehicles invoiced through August 2010, ended in August 2012 for vehicles invoiced through August 2011, ends in August 2013 for vehicles invoiced through August 2012 and ends in August 2014 for vehicles invoiced through August 2013.

The maximum potential amount of future payments required to be made to Ally Financial under this guarantee would be based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock and is estimated to be $22.1 billion and $19.0 billion at December 31, 2012 and 2011. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer or at auction. The fair value of the guarantee was $15 million and $17 million at December 31, 2012 and 2011 which considers the likelihood of dealers terminating and estimating the loss exposure for the ultimate disposition of vehicles.

Refer to Notes 20 and 27 to our consolidated financial statements for additional information on guarantees we have provided.

Contractual Obligations and Other Long-Term Liabilities

We have the following minimum commitments under contractual obligations, including purchase obligations. A purchase obligation is defined as an agreement to purchase goods or services that is enforceable and legally binding on us and that specifies all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum, or variable price provisions; and the approximate timing of the transaction. Other long-term liabilities are defined as long-term liabilities that are recorded on our consolidated balance sheet. Based on this definition, the following table includes only those contracts which include fixed or minimum obligations. The majority of our purchases are not included in the table as they are made under purchase orders which are requirements based and accordingly do not specify minimum quantities.

The following table summarizes aggregated information about our outstanding contractual obligations and other long-term liabilities at December 31, 2012 (dollars in millions):

	Payments Due by Period				
	2013	2014-2015	2016-2017	2018 and after	Total
Automotive debt (a)	$ 1,117	$ 559	$1,422	$ 2,064	$ 5,162
Automotive Financing debt (b)	3,760	4,096	2,511	500	10,867
Capital lease obligations	172	229	332	305	1,038
Automotive interest payments (c)	145	620	350	263	1,378
Automotive Financing interest payments (d)	263	346	173	14	796
Postretirement benefits (e)	277	490	26	—	793
Contractual commitments for capital expenditures	530	7	—	—	537
Operating lease obligations (f)	340	457	225	316	1,338
Other contractual commitments:					
Material	613	378	204	80	1,275
Marketing	1,008	808	256	283	2,355
Rental car repurchases	3,293	—	—	—	3,293
Policy, product warranty and recall campaigns liability	3,059	3,202	917	208	7,386
Other	1,380	215	64	513	2,172
Total contractual commitments (g)(h)(i)	$15,957	$11,407	$6,480	$ 4,546	$38,390
Non-contractual postretirement benefits (j)	$ 207	$ 381	$ 831	$13,275	$14,694

(a) Projected future payments on lines of credit were based on amounts drawn at December 31, 2012.

(b) GM Financial credit facilities and securitization notes payable have been classified based on expected payoff date. Senior notes principal amounts have been classified based on maturity date.

(c) Amounts include Automotive interest payments based on contractual terms and current interest rates on our debt and capital lease obligations. Automotive interest payments based on variable interest rates were determined using the interest rate in effect at December 31, 2012.

(d) GM Financial interest payments are calculated based on London Interbank Offered Rate or Canadian Dealer Offered Rate plus the respective credit spreads and specified fees associated with the Canada lease warehouse facility, the coupon rate for the senior notes and a fixed rate of interest for securitization notes payable. GM Financial interest payments on the floating rate tranches of the securitization notes payable were converted to a fixed rate based on the floating rate plus any expected hedge payments.

(e) Amounts include other postretirement benefit payments under the current U.S. contractual labor agreements through 2015 and Canada labor agreements through 2016. Amounts do not include pension funding obligations, which are discussed below under the caption “Pension Funding Requirements.”

(f) Amounts include operating lease obligations for both Automotive and Automotive Financing. Automotive is included net of sublease income.

(g) Future payments in local currency amounts were translated into U.S. Dollars using the balance sheet spot rate at December 31, 2012.

(h) Amounts do not include future cash payments for long-term purchase obligations and other accrued expenditures (unless specifically listed in the table above) which were recorded in Accounts payable or Accrued liabilities at December 31, 2012.

(i) Amounts exclude the future annual contingent obligations of Euro 265 million in the years 2013 to 2014 related to our Opel/Vauxhall restructuring plan. Refer to Note 20 to our consolidated financial statements for further detail.

(j) Amount includes all expected future payments for both current and expected future service at December 31, 2012 for other postretirement benefit obligations for salaried employees and hourly other postretirement benefit obligations extending beyond the current North American union contract agreements. Amounts do not include pension funding obligations, which are discussed below under the caption “Pension Funding Requirements.”

The table above does not reflect unrecognized tax benefits of $2.7 billion due to the high degree of uncertainty regarding the future cash outflows associated with these amounts.

Pension Funding Requirements

In 2012 the U.S. government enacted the Moving Ahead for Progress in the 21st Century Act which allows plan sponsors funding relief for pension plans through the application of higher funding interest rates. As a result, under current economic conditions, we expect no mandatory contributions to our U.S. qualified pension plans for at least five years. The new law does not impact our reported funded status or funding contemplated under our derisking initiatives.

We have implemented and completed a balance sheet derisking strategy, comprising certain actions related to our U.S. salaried pension plan. These actions include payment of lump-sums to retirees, the purchase of group annuity contracts from an insurance company and the settlement of other previously guaranteed obligations. We provided the salaried pension plan with funding through contributions and short-term interest free loans of $2.4 billion, consisting of contributions of $1.5 billion and $0.7 billion, and a loan of $0.3 billion. At December 31, 2012 $0.2 billion of the remaining $0.3 billion loan was deemed a contribution. Amounts loaned to the Retiree Plan in excess of the ultimate funding requirements will be repaid to us. Through these transactions we have settled the remaining obligations of the Retiree Plan in their entirety.

We do not have any required contributions payable to our U.S. qualified plans in 2013. We expect to contribute $0.1 billion to our U.S. non-qualified plans and $0.8 billion to our non-U.S. pension plans in 2013.

Fair Value Measurements

Refer to Note 19 to our consolidated financial statements for additional information regarding Level 3 measurements.

Dividends

The declaration of any dividend on our common stock is a matter to be acted upon by our Board of Directors in its sole discretion. Since our formation we have not paid any dividends on our common stock and have no current plans to pay any dividends on our common stock. Our payment of dividends on our common stock in the future, if any, will be determined by our Board of Directors in its sole discretion out of funds legally available for that purpose and will depend on business conditions, our financial condition, earnings, liquidity and capital requirements, the covenants in our debt instruments and other factors.

So long as any share of our Series A or B Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on our Series A and B Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. Our secured revolving credit facilities contain certain restrictions on our ability to pay dividends, subject to exceptions, such as dividends payable solely in shares of our common stock. So long as any share of our Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our Series B Preferred Stock unless all accrued and unpaid dividends have been paid on our Series A Preferred Stock, subject to exceptions, such as dividends on our Series B Preferred Stock solely in shares of our common stock.

The following table summarizes dividends paid on our Series A and B Preferred Stock (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Series A Preferred Stock (a)	$621	$621	$810
Series B Preferred Stock (b)	238	243	—
Total Preferred Stock dividends paid	$859	$864	$810

(a) Does not include the $677 million charge related to the purchase of 84 million shares of Series A Preferred Stock from the UST in the year ended December 31, 2010.

(b) Cumulative unpaid dividends on our Series B Preferred Stock was $20 million, $20 million and $25 million at December 31, 2012, 2011 and 2010.

Critical Accounting Estimates

The consolidated financial statements are prepared in conformity with U.S. GAAP, which require the use of estimates, judgments and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and resulting balances are reasonable; however, due to inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods. We have discussed the development, selection and disclosures of our critical accounting estimates with the Audit Committee of the Board of Directors, and the Audit Committee has reviewed the disclosures relating to these estimates.

The critical accounting estimates that affect the consolidated financial statements and that use judgments and assumptions are listed below. In addition the likelihood that materially different amounts could be reported under varied conditions and assumptions is discussed.

Pensions

The defined benefit pension plans are accounted for on an actuarial basis, which requires the selection of various assumptions, including an expected long-term rate of return on plan assets and a discount rate. The expected return on U.S. plan assets that is utilized in determining pension expense is derived from periodic studies, which include a review of asset allocation strategies, anticipated future long-term performance of individual asset classes, risks using standard deviations and correlations of returns among the asset classes that comprise the plans' asset mix. While the studies give appropriate consideration to recent plan performance and historical returns, the assumptions are primarily long-term, prospective rates of return.

In January 2013 an investment policy study was completed for the U.S. pension plans taking into account the new plan structures that followed the derisking initiatives and annuity transactions executed during the second half of 2012. The study resulted in new target asset allocations being approved for the U.S. pension plans with resulting changes to the expected long-term return on assets. The weighted-average long-term return on assets decreased from 6.2% at December 31, 2011 to 5.8% due primarily to lower yields on fixed income securities. The U.S. hourly plan assets now represent 91% of the total U.S. pension plan assets compared to 65% at the end of 2011.

Another key assumption in determining net pension expense is the assumed discount rate to be used to discount plan obligations. We estimate this rate for U.S. plans using a cash flow matching approach, which uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate.

Significant differences in actual experience or significant changes in assumptions may materially affect the pension obligations. The effect of actual results differing from assumptions and the changing of assumptions are included in unamortized net actuarial gains and losses that are subject to amortization to expense over future periods.

The following table summarizes the unamortized actuarial loss (before tax) on pension plans (dollars in billions):

	December 31, 2012	December 31, 2011
Unamortized actuarial loss	$6.2	$3.8

The following table illustrates the sensitivity to a change in certain assumptions for the pension plans, holding all other assumptions constant (dollars in millions):

	U.S. Plans		Non-U.S. Plans	
	Effect on 2013 Pension Expense	Effect on December 31, 2012 PBO	Effect on 2013 Pension Expense	Effect on December 31, 2012 PBO
25 basis point decrease in discount rate	−$ 110	+$ 2,250	+$ 65	+$ 943
25 basis point increase in discount rate	+$ 100	−$ 2,190	−$ 56	−$ 892
25 basis point decrease in expected return on assets	+$ 160	N/A	+$ 37	N/A
25 basis point increase in expected return on assets	−$ 150	N/A	−$ 37	N/A

The following data illustrates the sensitivity of changes in pension expense and pension obligation based on the last remeasurement of the U.S. hourly pension plan at December 31, 2012 (dollars in millions):

	Effect on 2013 Pension Expense	Effect on December 31, 2012 PBO
Change in future benefit units		
One percentage point increase in benefit units	+$ 74	+$ 227
One percentage point decrease in benefit units	−$ 72	−$ 220

Refer to Note 18 to our consolidated financial statements for the expected weighted-average long-term rate of return on plan assets, weighted-average discount rate on plan obligations and actual and expected return on plan assets. Refer to Note 3 to our consolidated financial statements for a discussion of the inputs used to determine fair value for each significant asset class or category.

Valuation of Deferred Tax Assets

We evaluate the need for deferred tax asset valuation allowances based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. We consider the following possible sources of taxable income when assessing the realization of deferred tax assets:

- Future reversals of existing taxable temporary differences;
- Future taxable income exclusive of reversing temporary differences and carryforwards;
- Taxable income in prior carryback years; and
- Tax-planning strategies.

The assessment regarding whether a valuation allowance is required or should be adjusted also considers all available positive and negative evidence factors, including but not limited to:

- Nature, frequency, and severity of recent losses;
- Duration of statutory carryforward periods;
- Historical experience with tax attributes expiring unused; and
- Near- and medium-term financial outlook.

It is difficult to conclude a valuation allowance is not required when there is significant objective and verifiable negative evidence, such as cumulative losses in recent years. We utilize a rolling three years of actual and current year anticipated results as the primary measure of cumulative losses in recent years.

The evaluation of deferred tax assets requires judgment in assessing the likely future tax consequences of events that have been recognized in our financial statements or tax returns and future profitability. Our accounting for deferred tax consequences represents our best estimate of those future events. Changes in our current estimates, due to unanticipated events or otherwise, could have a material effect on our financial condition and results of operations.

At December 31, 2012, as a result of sustained profitability in the U.S. and Canada evidenced by three years of earnings and the completion of near- and medium-term business plans in the three months ended December 31, 2012 that forecast continuing profitability, we determined it was more likely than not future earnings will be sufficient to realize deferred tax assets in these two jurisdictions. Accordingly we reversed most of the U.S. and Canadian valuation allowances resulting in non-cash income tax benefits of $33.2 billion and $3.1 billion. We retained valuation allowances of $2.3 billion against deferred tax assets in the U.S. and Canada related primarily to capital loss tax attributes and state operating loss carryforwards which we continue to believe do not meet the more likely than not threshold for releasing the valuation allowance. We retained additional valuation allowances of $8.7 billion against non-U.S. deferred tax assets primarily related to GME and South Korea business units with losses.

At December 31, 2011, as a result of sustained profitability in Australia, we released the valuation allowance against deferred tax assets. The reduction in the valuation allowance resulted in a non-cash income tax benefit of $0.5 billion.

If the remaining valuation allowance jurisdictions experience profitability in the future, utilization of tax attributes to offset taxable income will reduce the overall level of deferred tax assets subject to valuation allowances. In the periods in which the valuation allowances are released, we will record a tax benefit reflecting the release, which will reduce our effective tax rate.

Valuation allowance reversals in the U.S. and Canada contributed to goodwill impairment charges of $26.4 billion in the GMNA reporting unit in the three months ended December 31, 2012. In South Korea future valuation allowance reversals may result in additional goodwill impairment. Refer to Note 12 to our consolidated financial statements for additional information related to goodwill impairment charges.

In future periods, our effective tax rate should approach the U.S. statutory tax rate. If law is enacted that reduces the U.S. statutory rate, we would record a significant reduction to the net deferred tax assets and related increase to income tax expense in the period that includes the enactment date of the tax rate change.

Valuation of Vehicle Operating Leases

In our and GM Financial's accounting for vehicle operating leases, a determination is made at the inception of a lease of the estimated realizable value (i.e., residual value) of the vehicle at the end of the lease. Residual values represent estimates of the market values of the vehicles at the end of the lease term. A retail lease customer is obligated to make payments during the term of a lease, up to five years, to the contract residual. A retail lease customer is not obligated to purchase a vehicle at the end of a lease. Sales to daily rental car companies with guaranteed repurchase obligations are accounted for as operating leases. Generally, the terms under these arrangements are up to 24 months, however, the daily rental car companies can and do return the vehicles earlier, averaging nine months or less. We and GM Financial are exposed to a risk of loss to the extent the value of a vehicle is below the residual value estimated at contract inception.

Realization of residual values is dependent on the future ability to market vehicles under prevailing market conditions. Over the life of a lease, the adequacy of the estimated residual values are evaluated and adjustments are made to the extent the expected values of the vehicles at lease termination declines. Adjustments may be in the form of revisions to depreciation rates or recognition of impairment charges. Impairment is determined to exist if the expected future cash flows, which include estimated residual values, are lower than the corresponding carrying amount.

The critical assumptions underlying the estimated carrying amount of leased vehicles included within Equipment on operating leases, net include: (1) estimated market value information obtained and used in estimating residual values; (2) proper identification and estimation of business conditions; (3) remarketing abilities; and (4) vehicle and marketing programs. Changes in these assumptions could have a significant effect on the estimate of residual values.

We and GM Financial continue to use forecasted auction proceeds to estimate residual values for impairment purposes. Significant differences between the estimate of residual values and actual experience may materially affect impairment charges recorded, if any, and the rate at which vehicles in Equipment on operating leases, net are depreciated.

The following table summarizes recorded impairment charges related to leases to daily rental car companies (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Automotive leases to daily rental car companies	$181	$151	$49

Impairment of Goodwill

In the three months ended December 31, 2012, 2011 and 2010 we performed our annual goodwill impairment testing as of October 1 for all reporting units, which are GMNA, GME, GM Financial and various reporting units within the GMIO and GMSA segments. In the years ended December 31, 2012 and 2011, we performed event-driven goodwill impairment tests at various dates for certain of our reporting units. Based on our testing procedures we recorded Goodwill impairment charges of $27.1 billion and $1.3 billion in the years ended December 31, 2012 and 2011 associated with our GMNA, GME, GM Korea, GM South Africa and GM Holden, Ltd. (Holden) reporting units.

Refer to Note 12 to our consolidated financial statements for additional information on Goodwill impairments, including information pertaining to the determination of the fair values of our reporting units requiring a Step 2 analysis, and the risks of future goodwill impairment charges.

Subsequent to the recording of the Goodwill impairment charges in the year ended December 31, 2012 we had Goodwill of $2.0 billion at December 31, 2012 which predominantly arose upon the acquisition of AmeriCredit Corp. compared to $29.0 billion at December 31, 2011 which predominantly arose upon the application of fresh-start reporting. When applying fresh-start reporting, certain accounts, primarily employee benefit and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than fair value, and the difference between the U.S. GAAP and fair value amounts gave rise to goodwill, which is a residual. Our employee benefit related accounts were recorded in accordance with ASC 712, "Compensation - Nonretirement Postemployment Benefits" (ASC 712) and ASC 715, "Compensation - Retirement Benefits" and deferred income taxes were recorded in accordance with ASC 740, "Income Taxes." The application of ASC 712 and 715 during fresh-start reporting resulted in our recorded liabilities for certain employee benefit obligations being higher than the fair value of these obligations because lower discount rates were utilized in determining the U.S. GAAP values compared to those utilized to determine fair values. The discount rates utilized to determine the fair value of these obligations were based on our incremental borrowing rates, which included our nonperformance risk. Our incremental borrowing rates are also affected by changes in market interest rates. Further, upon the application of fresh-start reporting, the recorded amounts of our assets were lower than their fair values because of the recording of valuation allowances on certain of our deferred tax assets, which under ASC 852 also resulted in goodwill. If all identifiable assets and liabilities had been recorded at fair value upon application of fresh-start reporting, no goodwill would have resulted.

Since fresh-start reporting the differences between these fair value-to-U.S. GAAP amounts; (1) have decreased because of decreases in credit spreads between high quality corporate bond rates and market interest rates for companies with similar nonperformance risk; (2) have decreased due to improvements in our credit rating, thus resulting in a decrease in the spread between our employee benefit related obligations under U.S. GAAP and their fair values; and/or (3) decreased due to a change in the fair values of our estimated employee benefit obligations. Decreases also occurred from reversals of our deferred tax asset valuation allowances. The fair value-to-U.S. GAAP differences decreases for these reasons have resulted in the decline of implied goodwill in each of the years ended December 31, 2012 and 2011. At the next annual or event-driven goodwill impairment test, to the extent the carrying amount of a reporting unit exceeds its fair value or the reporting unit has a negative carrying amount, a goodwill impairment could occur. Future goodwill impairments could also occur should we reorganize our internal reporting structure in a manner that changes the composition of one or more of our reporting units. Upon such an event, goodwill would be reassigned to the affected reporting units using a relative-fair-value allocation approach, unless the entity was never integrated, and not based on the amount of goodwill that was originally attributable to fair value-to-U.S. GAAP differences that gave rise to goodwill upon application of fresh-start reporting.

For purposes of our 2012 annual impairment testing procedures at October 1, 2012, the estimated fair values of our more significant reporting units exceeded their carrying amounts by 111.8% for GMNA, 57.9% for GM Mercosur and 14.7% for GM Financial. In calculating the fair values of our more significant reporting units during our 2012 annual goodwill impairment testing, keeping all other assumptions constant, the estimated fair values of our more significant reporting units would still exceed their carrying amounts had our weighted-average cost of capital (WACC) increased by 1,000 basis points for GMNA and 160 basis points for GM Mercosur. GM Financial's forecasted equity-to-managed asset retention ratio by 2015 was 12.5% and held constant thereafter. GM Korea's fair value continued to be below its carrying amount. GM Financial's fair value would still exceed its carrying amount had equity to managed assets retention ratio increased 160 basis points by 2015. Subsequent to our 2012 annual goodwill impairment testing, we reversed deferred tax asset valuation allowances of $36.2 billion for our GMNA reporting unit causing its carrying amount to exceed its fair value. As a result we performed an event-driven goodwill impairment test in the three months ended December 31, 2012. Based on our testing we determined that the differences between the fair value-to-U.S. GAAP amounts decreased primarily due to the recorded amount of our deferred tax assets exceeding their fair values, which under ASC 805, "Business Combinations" results in less implied goodwill. Based on this event-driven impairment test we recorded a Goodwill impairment charge of $26.4 billion in the year ended December 31, 2012 within our GMNA segment.

For purposes of our 2011 annual impairment testing procedures, the estimated fair values of our more significant reporting units exceeded their carrying amounts by 12.3% for GMNA, 24.7% for Holden, 56.8% for GM Mercosur and 10.3% for GM Financial. In calculating the fair values of our more significant reporting units during our 2011 annual goodwill impairment testing, keeping all other assumptions constant, the estimated fair values of our more significant reporting units would still exceed their carrying amounts had our WACC increased by 150 basis points for GMNA, 410 basis points for Holden and 430 basis points for GM Mercosur. GM Financial's forecasted equity-to-managed asset retention ratio by 2014 was 12.5% and held constant thereafter. GM Financial's fair value would still exceed its carrying amount had equity-to-managed assets retention ratio increased 230 basis points by 2014.

Based on the fair value measures determined during our 2012 and 2011 annual and event-driven impairment tests we determined the fair values of those reporting units requiring a Step 2 analysis (GMNA, GME, GM Korea, GM South Africa and Holden) had not increased sufficiently to give rise to an implied goodwill amount other than the goodwill arising from the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon application of fresh-start reporting.

The key assumptions utilized in determining the fair value-to-U.S. GAAP differences giving rise to the implied goodwill for the reporting units requiring a Step 2 analysis are: (1) the determination of our nonperformance risk; (2) interest rates; (3) estimates of our employee benefit related obligations and; (4) the estimated timing of the utilization of our deferred tax assets, including our determination whether it is more likely than not that the deferred tax assets will be utilized. Of these factors, the amount of implied goodwill within GMNA was most sensitive to our determination whether it is more likely than not that the deferred tax assets will or will not be utilized. Within GME the goodwill assessment was most sensitive to changes in our nonperformance risk, interest rates and estimates of our employee benefit related obligations. The GM Korea goodwill assessment is and the Holden goodwill assessment was most sensitive to our determination of whether it is more likely than not that their deferred tax assets will or will not be utilized. The GM South Africa goodwill assessment was most sensitive to changes in our estimates of our employee benefit related obligations. The $27.1 billion of impairment charges recorded in the year ended December 31, 2012 was primarily driven by the $36.2 billion reversal of our deferred tax asset valuation allowances for our GMNA reporting unit. Refer to Note 21 to our consolidated financial statements for additional information on the reversal of our valuation allowances for our U.S. and Canadian operations.

In the future we have an increased likelihood of measuring goodwill for possible impairment during our annual or event-driven goodwill impairment testing because GM Korea's fair value is less than its carrying amount, which increases the likelihood of measuring goodwill for further impairment in the near-term. At December 31, 2012 GM Korea has $466 million of recorded goodwill.

Impairment of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated for impairment when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds the fair value for the long-lived assets or in certain cases, the asset group to be held and used. Product-specific long-lived asset groups are tested for impairment at the platform or vehicle line level. Non-product specific long-lived assets are tested for impairment on a reporting unit basis in GMNA, GME, and GM Financial and tested at or within our various reporting units within our GMIO and GMSA segments. Assets classified as held for sale are recorded at the lower of carrying amount or fair value less cost to sell. Fair value is determined using either the market or sales comparison approach, cost approach or anticipated cash flows discounted at a rate commensurate with the risk involved. We develop anticipated cash flows from historical experience and internal business plans. A considerable amount of management judgment and assumptions are required in performing the long-lived asset impairment tests, principally in determining the fair value of the asset groups and the assets' average estimated useful life. While we believe our judgments and assumptions are reasonable, a change in assumptions underlying these estimates could result in a material effect to the consolidated financial statements. Long-lived assets could become impaired in the future as a result of declines in profitability due to significant changes in volume, pricing or costs.

The carrying amounts of substantially all of GME's assets were established at fair value during fresh-start reporting. In the determination of fair value, one of our key inputs was a forecasted cash flow projection. During 2010, our actual cash flows approximated our projection. During the second half of 2011 and continuing into 2012, the European automotive industry has been severely affected by the ongoing sovereign debt crisis, high unemployment and a lack of consumer confidence coupled with overcapacity. During this timeframe, we began to experience deterioration in cash flows. In response, we formulated a plan to implement various actions to strengthen our operations and increase our competitiveness. The key areas of the plan include investments in our product portfolio, a revised brand strategy, significant management changes, reducing material, development and production costs, and further leveraging synergies from the alliance between us and PSA.

We believe it is likely that adverse economic conditions, and their effect on the European automotive industry will not improve significantly in the short-term and we expect to continue to incur losses in the region as a result. During the fourth quarter of 2012, notwithstanding the above described actions, GME performed below expectations relative to the key operating metrics of forecasted revenues, market share, and variable profit established in mid-2012. Further, our industry outlook deteriorated, and our forecast of 2013 cash flows declined. This triggered a long-lived asset impairment analysis.

We performed a recoverability test of the GME asset group by weighting various undiscounted cash flow scenarios. The weighting of the projected cash flows considers the uncertainty in our ability to execute the actions contemplated in our plan which, in part, are dependent upon actions and factors outside our control. Our test concluded that the GME asset group was not recoverable as the resulting undiscounted cash flows were less than their carrying amount. Accordingly, we estimated the fair value of the GME long-lived assets to determine the impairment amount. Determining the fair value is judgmental in nature and requires the use of significant estimates and assumptions, considered to be Level 3 inputs. An in-exchange premise was determined to be the highest and best use of the assets which is different than the assets' current use due to the overall European macro-economic environment. Refer to Notes 11 and 13 to our consolidated financial statements for additional information on the impairment charges recorded and related fair value measurements.

Sales Incentives

The estimated effect of sales incentives to dealers and customers is recorded as a reduction of Automotive sales and revenue, and in certain instances, as an increase to Automotive cost of sales, at the later of the time of sale or announcement of an incentive program to dealers. There may be numerous types of incentives available at any particular time, including a choice of incentives for a specific model. Incentive programs are generally brand specific, model specific or region specific, and are for specified time periods, which may be extended. Significant factors used in estimating the cost of incentives include the volume of vehicles that will be affected by the incentive programs offered by product, product mix and the rate of customer acceptance of any incentive program, and the likelihood that an incentive program will be extended, all of which are estimated based on historical experience and assumptions concerning customer behavior and future market conditions. When an incentive program is announced, the number of vehicles in dealer inventory eligible for the incentive program is determined, and a reduction of Automotive sales and revenue or increase to Automotive cost of sales is recorded in the period in which the program is announced. If the actual number of affected vehicles differs from this estimate, or if a different mix of incentives is actually paid, the reduction in Automotive sales and revenue or increase to Automotive cost of sales for sales incentives could be affected. There are a multitude of inputs affecting the calculation of the estimate for sales incentives, and an increase or decrease of any of these variables could have a significant effect on recorded sales incentives.

Policy, Product Warranty and Recall Campaigns

The estimated costs related to policy and product warranties are accrued at the time products are sold. Estimated costs related to product recalls are based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated. These estimates are established using historical information on the nature, frequency, and average cost of claims of each vehicle line or each model year of the vehicle line and assumptions about future activity and events. However where little or no claims experience exists for a model year or a vehicle line, the estimate is based on comparable models. Revisions are made when necessary, based on changes in these factors. These estimates are re-evaluated on an ongoing basis. We actively study trends of claims and take action to improve vehicle quality and minimize claims. Actual experience could differ from the amounts estimated requiring adjustments to these liabilities in future periods. Due to the uncertainty and potential volatility of the factors contributing to developing estimates, changes in our assumptions could materially affect our results of operations.

Forward-Looking Statements

In this report and in reports we subsequently file and have previously filed with the SEC on Forms 10-K and 10-Q and file or furnish on Form 8-K, and in related comments by our management, we use words like “anticipate,” “approximately,” “believe,” “continue,” “could,” “designed,” “effect,” “estimate,” “evaluate,” “expect,” “forecast,” “goal,” “initiative,” “intend,” “may,” “objective,” “outlook,” “plan,” “potential,” “priorities,” “project,” “pursue,” “seek,” “should,” “target,” “when,” “would,” or the negative of any of those words or similar expressions to identify forward-looking statements that represent our current judgment about possible future events. In making these statements we rely on assumptions and analyses based on our experience and perception of historical trends, current conditions and expected future developments as well as other factors we consider appropriate under the circumstances. We believe these judgments are reasonable, but these statements are not guarantees of any events or financial results, and our actual results may differ materially due to a variety of important factors, both positive and negative. These factors, which may be revised or supplemented in subsequent reports on SEC Forms 10-Q and 8-K, include among others the following:

- Our ability to realize production efficiencies and to achieve reductions in costs as a result of our restructuring initiatives and labor modifications;
- Our ability to maintain quality control over our vehicles and avoid material vehicle recalls;
- Our ability to maintain adequate liquidity and financing sources including as required to fund our planned significant investment in new technology;
- Our ability to realize successful vehicle applications of new technology;
- Shortages of and increases or volatility in the price of oil, including as a result of political instability in the Middle East and African nations;
- Our ability to continue to attract customers, particularly for our new products, including cars and crossover vehicles;
- Availability of adequate financing on acceptable terms to our customers, dealers, distributors and suppliers to enable them to continue their business relationships with us;
- The ability of our suppliers to deliver parts, systems and components without disruption and at such times to allow us to meet production schedules;
- Our ability to manage the distribution channels for our products;
- Our ability to successfully restructure our European operations;
- The continued availability of both wholesale and retail financing from Ally Financial and its affiliates and other finance companies in markets in which we operate to support our ability to sell vehicles, which is dependent on those entities’ ability to obtain funding and their continued willingness to provide financing;
- Our continued ability to develop captive financing capability, including GM Financial;
- GM Financial’s ability to successfully integrate certain Ally Financial international operations;
- Overall strength and stability of the automotive industry, both in the U.S. and in global markets, particularly Europe;
- Continued economic instability or poor economic conditions in the U.S., Europe and other global markets, including the credit markets, or changes in economic conditions, commodity prices, housing prices, foreign currency exchange rates or political stability in the markets in which we operate;

- Significant changes in the competitive environment, including the effect of competition and excess manufacturing capacity in our markets, on our pricing policies or use of incentives and the introduction of new and improved vehicle models by our competitors;

- Significant changes in economic, political and market conditions in China, including the effect of competition from new market entrants, on our vehicle sales and market position in China;

- Changes in the existing, or the adoption of new, laws, regulations, policies or other activities of governments, agencies and similar organizations, including where such actions may affect the production, licensing, distribution or sale of our products, the cost thereof or applicable tax rates;

- Costs and risks associated with litigation;

- Significant increases in our pension expense or projected pension contributions resulting from changes in the value of plan assets, the discount rate applied to value the pension liabilities or other assumption changes; and

- Changes in accounting principles, or their application or interpretation, and our ability to make estimates and the assumptions underlying the estimates, which could have an effect on earnings.

We caution readers not to place undue reliance on forward-looking statements. We undertake no obligation to update publicly or otherwise revise any forward-looking statements, whether as a result of new information, future events or other factors that affect the subject of these statements, except where we are expressly required to do so by law.

Quantitative and Qualitative Disclosures About Market Risk

Automotive

We enter into a variety of foreign currency exchange and commodity forward contracts and options to manage exposures arising from market risks resulting from changes in certain foreign currency exchange rates and commodity prices. We do not enter into derivative transactions for speculative purposes.

The overall financial risk management program is under the responsibility of the Risk Management Committee which reviews and, where appropriate, approves strategies to be pursued to mitigate these risks. The Risk Management Committee comprises members of our management and functions under the oversight of the Audit Committee, a committee of the Board of Directors. The Audit Committee assists and guides the Board of Directors in its oversight of our financial and risk management strategies. A risk management control framework is utilized to monitor the strategies, risks and related hedge positions in accordance with the policies and procedures approved by the Risk Management Committee. Our risk management policy intends to protect against risk arising from extreme adverse market movements on our key exposures.

Further information on our exposure to market risk is included in Note 19 to our consolidated financial statements.

The following analyses provide quantitative information regarding exposure to foreign currency exchange rate risk, interest rate risk and equity price risk. Sensitivity analysis is used to measure the potential loss in the fair value of financial instruments with exposure to market risk. The models used assume instantaneous, parallel shifts in exchange rates and interest rate yield curves. For options and other instruments with nonlinear returns, models appropriate to these types of instruments are utilized to determine the effect of market shifts. There are certain shortcomings inherent in the sensitivity analyses presented, due primarily to the assumption that interest rates change in a parallel fashion and that spot exchange rates change instantaneously. In addition the analyses are unable to reflect the complex market reactions that normally would arise from the market shifts modeled and do not contemplate the effects of correlations between foreign currency pairs or offsetting long-short positions in currency pairs which may significantly reduce the potential loss in value.

Foreign Currency Exchange Rate Risk

We have foreign currency exposures related to buying, selling and financing in currencies other than the functional currencies of the operations. At December 31, 2012 our three most significant foreign currency exposures were the Euro/British Pound, U.S. Dollar/Korean Won and Euro/Korean Won. Derivative instruments such as foreign currency forwards, swaps and options are used primarily to hedge exposures with respect to forecasted revenues, costs and commitments denominated in foreign currencies. At December 31, 2012 such contracts had remaining maturities of up to 12 months.

At December 31, 2012 and 2011 the net fair value liability of financial instruments with exposure to foreign currency risk was $4.0 billion and $4.2 billion. This presentation utilizes a population of foreign currency exchange derivatives, embedded derivatives and foreign currency denominated debt and excludes the offsetting effect of foreign currency cash, cash equivalents and other assets. The potential loss in fair value for such financial instruments from a 10% adverse change in all quoted foreign currency exchange rates would be $671 million and $637 million at December 31, 2012 and 2011.

We are exposed to foreign currency risk due to the translation and remeasurement of the results of certain international operations into U.S. Dollars as part of the consolidation process. Fluctuations in foreign currency exchange rates can therefore create volatility in the results of operations and may adversely affect our financial condition.

The following table summarizes the amounts of automotive foreign currency translation and transaction and remeasurement losses (dollars in millions):

	Years Ended December 31,	
	2012	2011
Foreign currency translation losses recorded in Accumulated other comprehensive loss	$118	$167
Losses resulting from foreign currency transactions and remeasurements recorded in earnings	$117	$ 56

Interest Rate Risk

We are subject to market risk from exposure to changes in interest rates related to certain financial instruments, primarily debt, capital lease obligations and certain marketable securities.

At December 31, 2012 we did not have any interest rate swap positions to manage interest rate exposures in our automotive operations.

The following table summarizes our automotive debt by fixed rate and variable rate (dollars in millions):

	December 31, 2012	December 31, 2011
Short-term debt — fixed rate	$ 749	$ 573
Short-term debt — variable rate	999	1,109
Total short-term debt	$1,748	$1,682
Short-term debt — fixed rate denominated in U.S. Dollars	$ 186	$ 135
Short-term debt — fixed rate denominated in foreign currency	563	438
Total short-term debt — fixed rate	$ 749	$ 573
Short-term debt — variable rate denominated in U.S. Dollars	$ 140	$ 192
Short-term debt — variable rate denominated in foreign currency	859	917
Total short-term debt — variable rate	$ 999	$1,109
Long-term debt — fixed rate	$3,254	$3,536
Long-term debt — variable rate	170	77
Total long-term debt	$3,424	$3,613
Long-term debt — fixed rate denominated in U.S. Dollars	$ 663	$ 525
Long-term debt — fixed rate denominated in foreign currency	2,591	3,011
Total long-term debt — fixed rate	$3,254	$3,536
Long-term debt — variable rate denominated in U.S. Dollars	$ 28	$ 32
Long-term debt — variable rate denominated in foreign currency	142	45
Total long-term debt — variable rate	$ 170	$ 77

At December 31, 2012 and 2011 the fair value liability of debt and capital leases was $5.3 billion and $5.5 billion. The potential increase in fair value resulting from a 10% decrease in quoted interest rates would be $112 million and $152 million at December 31, 2012 and 2011.

We invest in marketable securities of various types and maturities, the value of which are subject to fluctuations in interest rates. Our marketable securities portfolio includes marketable securities classified as available-for-sale and trading.

At December 31, 2012 and 2011 we had marketable securities of $3.8 billion and $10.1 billion classified as available-for sale with exposure to interest rate risk. The potential decrease in fair value from a 50 basis point increase in interest rates would be $28 million and $28 million at December 31, 2012 and 2011.

At December 31, 2012 and 2011 we had marketable securities of $5.2 billion and $6.0 billion classified as trading with exposure to interest rate risk. The potential decrease in fair value from a 50 basis point increase in interest rates would be $8 million and $20 million at December 31, 2012 and 2011.

Equity Price Risk

At December 31, 2012 the carrying amount of our investment in Ally Financial common stock was $399 million, the carrying amount of our investment in PSA was $179 million and the carrying amount of other investments was $21 million. At December 31, 2011 the carrying amount of our investment in Ally Financial common stock was $403 million and the carrying amount of other investments was $36 million. These amounts represent the maximum exposure to loss from these investments.

Automotive Financing — GM Financial

Fluctuations in market interest rates affect GM Financial's credit facilities and securitization transactions. GM Financial's gross interest rate spread, which is the difference between interest earned on finance receivables and interest paid, is affected by changes in interest rates as a result of GM Financial's dependence upon the issuance of variable rate securities and the incurrence of variable rate debt to fund purchases of finance receivables.

Credit Facilities

Fixed interest rate receivables purchased by GM Financial are pledged to secure borrowings under its credit facilities. Amounts borrowed under these credit facilities bear interest at variable rates that are subject to frequent adjustments to reflect prevailing market interest rates. To protect the interest rate spread within each credit facility, GM Financial is contractually required to enter into interest rate cap agreements in connection with borrowings under its credit facilities.

Securitizations

In GM Financial's securitization transactions, it can transfer fixed rate finance receivables to securitization trusts that, in turn, sell either fixed rate or floating rate securities to investors. Derivative financial instruments, such as interest rate swaps and caps, are used to manage the gross interest rate spread on the floating rate transactions.

Derivatives

GM Financial had interest rate swaps and caps in asset positions with notional amounts of $775 million and $2.0 billion at December 31, 2012 and 2011. GM Financial had interest rate swaps and caps in liability positions with notional amounts of $775 million and $2.0 billion at December 31, 2012 and 2011. The fair value of these derivative financial instruments was insignificant.

The following table summarizes GM Financial's interest rate sensitive assets and liabilities, excluding derivatives, by year of expected maturity and the fair value of those assets and liabilities at December 31, 2012 (dollars in millions):

	Years Ending December 31,						December 31, 2012
	2013	2014	2015	2016	2017	Thereafter	Fair Value

Convertible senior notes							
Principal amounts	$ —	$ 1	$ —	$ —	$ —	$ —	$ 1
Weighted-average coupon interest rate	—%	2.13%	—%	—%	—%	—%	

GM Financial estimates the realization of finance receivables in future periods using discount rate, prepayment and credit loss assumptions similar to its historical experience. Credit facilities and securitization notes payable amounts have been classified based on expected payoff. Senior notes and convertible senior notes principal amounts have been classified based on maturity.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the internal control over financial reporting of General Motors Company and subsidiaries (the Company) as of December 31, 2012, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2012, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements of General Motors Company and subsidiaries as of and for the year ended December 31, 2012. Our report dated February 15, 2013 expressed an unqualified opinion on those financial statements and included an explanatory paragraph related to the Company's adoption of revised accounting standards related to comprehensive income.

Deloitte & Touche LLP

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the accompanying Consolidated Balance Sheets of General Motors Company and subsidiaries (the Company) as of December 31, 2012 and 2011, and the related Consolidated Statements of Income, Comprehensive Income, Cash Flows and Equity for each of the three years in the period ended December 31, 2012. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of General Motors Company and subsidiaries at December 31, 2012 and 2011, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2012, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 3 to the consolidated financial statements, the Company adopted amendments in Accounting Standards Update (ASU) 2011-05 and 2011-12 to Accounting Standards Codification (ASC) Topic 220, *Comprehensive Income*, effective January 1, 2012.

As discussed in Note 12 to the consolidated financial statements, the Company adopted amendments in ASU 2010-28 to ASC Topic 350, *Intangibles-Goodwill and Other*, effective January 1, 2011.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2012, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 15, 2013 expressed an unqualified opinion on the Company's internal control over financial reporting.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Nature of Operations

General Motors Company was formed in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation through a Section 363 sale under Chapter 11 of the U.S. Bankruptcy Code (363 Sale) and changed its name to General Motors Company, is sometimes referred to in these consolidated financial statements for the periods on or subsequent to July 10, 2009 as "we," "our," "us," "ourselves," the "Company," "General Motors," or "GM." General Motors Corporation is sometimes referred to in these consolidated financial statements, for the periods on or before July 9, 2009, as "Old GM" as it is the predecessor entity solely for accounting and financial reporting purposes. Old GM was renamed Motors Liquidation Company (MLC), which was dissolved on December 15, 2011 and transferred its remaining assets and liabilities to the Motors Liquidation Company GUC Trust (GUC Trust).

We design, build and sell cars, trucks and automobile parts worldwide. We also provide automotive financing services through General Motors Financial Company, Inc. (GM Financial).

We analyze the results of our business through our five segments: GM North America (GMNA), GM Europe (GME), GM International Operations (GMIO), GM South America (GMSA) and GM Financial. Nonsegment operations are classified as Corporate. Corporate includes investments in Ally Financial, Inc. (Ally Financial), certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures and certain nonsegment specific revenues and expenses.

Note 2. Basis of Presentation

Principles of Consolidation

The consolidated financial statements include our accounts and those of our subsidiaries that we control due to ownership of a majority voting interest and our consolidated variable interest entities (VIEs) of which we are the primary beneficiary. We continually evaluate our involvement with VIEs to determine whether we have variable interests and are the primary beneficiary of the VIE. When these criteria are met, we are required to consolidate the VIE. Our share of earnings or losses of nonconsolidated affiliates is included in our consolidated operating results using the equity method of accounting when we are able to exercise significant influence over the operating and financial decisions of the affiliate. We use the cost method of accounting if we are not able to exercise significant influence over the operating and financial decisions of the affiliate. All intercompany balances and transactions have been eliminated in consolidation.

Use of Estimates in the Preparation of the Financial Statements

The consolidated financial statements are prepared in conformity with U.S. GAAP, which requires the use of estimates, judgments, and assumptions that affect the amounts of assets and liabilities at the reporting date and the amounts of revenue and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and the resulting balances are reasonable; however, due to the inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods.

GM Financial

The amounts presented for GM Financial have been adjusted to include the effect of our tax attributes on GM Financial's deferred tax positions and provision for income taxes since the date of acquisition, which are not applicable to GM Financial on a stand-alone basis, and to eliminate the effect of transactions between GM Financial and the other members of the consolidated group. Accordingly, the amounts presented will differ from those presented by GM Financial on a stand-alone basis.

Change in Presentation of Financial Statements

In 2012 we changed the presentation of our consolidated balance sheet, consolidated statements of cash flows and certain notes to the consolidated financial statements to classify the assets and liabilities of GM Financial as current or non-current and to combine line items which were either of a related nature or not individually material. We have made corresponding reclassifications to the comparable information for all periods presented.

Venezuelan Exchange Regulations

Our Venezuelan subsidiaries changed their functional currency from Bolivar Fuerte (BsF), the local currency, to the U.S. Dollar, our reporting currency, on January 1, 2010 because of the hyperinflationary status of the Venezuelan economy. In January 2010 there was a devaluation of the Venezuelan currency and establishment of dual fixed exchange rates, an essential rate and a nonessential rate.

In June 2010 the Venezuelan government introduced additional foreign currency exchange control regulations, which imposed restrictions on the use of the parallel foreign currency exchange market, thereby making it more difficult to convert BsF to U.S. Dollars. The restrictions on the foreign currency exchange market affect our Venezuelan subsidiaries' ability to pay non-BsF denominated obligations that do not qualify to be processed by the Venezuela currency exchange agency at the official exchange rates as well as our ability to fully benefit from these operations.

Effective January 1, 2011 the BsF was further devalued and the essential rate was eliminated. The devaluation has affected results of operations from that date forward because our Venezuelan subsidiaries no longer realize gains that result from favorable foreign currency exchanges processed by the Venezuela currency exchange agency at the essential rate.

The aggregate net assets of our Venezuelan subsidiaries at December 31, 2012 and 2011 were $786 million and $438 million. At December 31, 2012 and 2011 other consolidated entities have receivables from our Venezuelan subsidiaries of $379 million and $380 million. The total amounts pending government approval for settlement at December 31, 2012 and 2011 were BsF 2.2 billion (equivalent to $523 million) and BsF 2.3 billion (equivalent to $535 million), for which some requests have been pending from 2007.

In February 2013 the Venezuelan government announced that the official fixed exchange rate of BsF 4.3 to $1.00 would be changed to BsF 6.3 to $1.00. The devaluation did not have an effect on the 2012 consolidated financial statements; however, the devaluation will require remeasurement of our Venezuelan subsidiaries' non-U.S. dollar denominated monetary assets and liabilities in the three months ending March 31, 2013. The devaluation effective date is February 13, 2013 and is expected to result in a charge in the range of $150 million to $200 million.

Note 3. Significant Accounting Policies

The accounting policies which follow are utilized by our automotive and automotive financing operations, unless otherwise indicated.

Revenue Recognition

Automotive

Automotive sales and revenue are primarily composed of revenue generated from the sale of vehicles. Vehicle sales are recorded when title and all risks and rewards of ownership have passed to our customers. For the majority of our automotive sales, this occurs when a vehicle is released to the carrier responsible for transporting to a dealer and when collectability is reasonably assured. Vehicle sales are recorded when the vehicle is delivered to the dealer in most remaining cases. Provisions for recurring dealer and customer sales and leasing incentives, consisting of allowances and rebates, are recorded as reductions to Automotive sales and revenue at the time of vehicle sales. All other incentives, allowances, and rebates related to vehicles previously sold are recorded as reductions to Automotive sales and revenue when announced.

Vehicle sales to daily rental car companies with guaranteed repurchase obligations are accounted for as operating leases. Estimated lease revenue is recorded ratably over the estimated term of the lease based on the difference between net sales proceeds and the guaranteed repurchase amount. The difference between the cost of the vehicle and estimated residual value is depreciated on a straight-line basis over the estimated term of the lease.

Automotive Financing — GM Financial

Finance income earned on receivables is recognized using the effective interest method. Fees and commissions (including incentive payments) received and direct costs of originating loans are deferred and amortized over the term of the related finance receivables using the effective interest method and are removed from the consolidated balance sheets when the related finance receivables are sold, charged off or paid in full. Accrual of finance charge income is suspended on accounts that are more than 60 days delinquent, accounts in bankruptcy, and accounts in repossession. Payments received on nonaccrual loans are first applied to any fees due, then to any interest due and then any remaining amounts are recorded to principal. Interest accrual resumes once an account has received payments bringing the delinquency to less than 60 days past due.

Income from operating lease assets, which includes lease origination fees, net of lease origination costs and incentives, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement.

Advertising and Promotion Expense

The following table summarizes advertising and promotion expenditures, which are expensed as incurred (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Advertising and promotion expense	$5,372	$5,209	$4,742

Research and Development Expenditures

The following table summarizes research and development expenditures, which are expensed as incurred (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Research and development expense	$7,368	$8,124	$6,962

Cash Equivalents

Cash equivalents are defined as short-term, highly-liquid investments with original maturities of 90 days or less.

Allowance for Doubtful Accounts

Automotive

The following table summarizes activity in our allowance for doubtful accounts (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Balance at beginning of period	$331	$252	$250
Amounts charged (credited) to costs and expenses	(10)	159	93
Other	36	3	—
Deductions	(46)	(83)	(91)
Balance at end of period	$311	$331	$252

Fair Value Measurements

A three-level valuation hierarchy, based upon observable and unobservable inputs, is used for fair value measurements. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect market assumptions based on the best evidence available. These two types of inputs create the following fair value hierarchy:

- Level 1 — Quoted prices for *identical* instruments in active markets;
- Level 2 —Quoted prices for *similar* instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose significant inputs are observable; and
- Level 3 — Instruments whose significant inputs are *unobservable*.

Financial instruments are transferred in and/or out of Level 1, 2 or 3 at the beginning of the accounting period in which there is a change in the valuation inputs.

Marketable Securities

We classify marketable securities as available-for-sale or trading. Various factors, including turnover of holdings and investment guidelines, are considered in determining the classification of securities. Available-for-sale securities are recorded at fair value with unrealized gains and losses recorded, net of related income taxes, in Accumulated other comprehensive income until realized. Trading securities are recorded at fair value with changes in fair value recorded in Interest income and other non-operating income, net. We determine realized gains and losses for all securities using the specific identification method.

We measure the fair value of our marketable securities using a market approach where identical or comparable prices are available, and an income approach in other cases. Securities are classified in Level 1 when quoted prices in an active market for identical securities are available. If quoted market prices are not available, fair values of securities are determined using prices from a pricing service, pricing models, quoted prices of securities with similar characteristics or discounted cash flow models and are generally classified in Level 2. These prices represent non-binding quotes. U.S. government and agency securities, sovereign debt, certificates of deposit, and corporate debt securities are classified as Level 2. Our pricing vendor utilizes industry-standard pricing models that consider various inputs, including benchmark yields, reported trades, broker/dealer quotes, issuer spreads and benchmark securities as well as other relevant economic measures. We conduct an annual review of our pricing service. This review includes discussion and analysis of the inputs used by the pricing service to provide prices for the types of securities we hold. These inputs include prices for comparable securities, bid/ask quotes, interest rate yields, and prepayment speeds. Based on our review we believe the prices received from our pricing service are a reliable representation of exit prices. Securities are classified in Level 3 in certain cases where there are unobservable inputs to the valuation in the marketplace. Level 3 financial instruments typically include, in addition to the unobservable inputs, observable components that are validated to external sources.

An evaluation is made quarterly to determine if unrealized losses related to non-trading investments in securities are other-than-temporary. Factors considered in determining whether a loss on a marketable security is other-than-temporary include: (1) the length of time and extent to which the fair value has been below cost; (2) the financial condition and near-term prospects of the issuer; and (3) the intent to sell or likelihood to be forced to sell the security before any anticipated recovery.

Finance Receivables

Pre-Acquisition Consumer Finance Receivables

Finance receivables originated prior to the acquisition of AmeriCredit Corp. (AmeriCredit) were adjusted to fair value at October 1, 2010. As a result of the acquisition the allowance for loan losses at October 1, 2010 was eliminated and a net discount was recorded on the receivables. The fair value of the receivables was less than the principal amount of those receivables, thus resulting in a discount to par. This discount was attributable, in part, to future credit losses that did not exist at the origination of the receivables.

A non-accretable difference is the excess between a loan's contractually required payments (undiscounted amount of all uncollected principal and contractual interest payments, both past due and scheduled for the future) and the amount of the loan's cash flows expected to be collected. An accretable yield is the excess in the loan's cash flows expected to be collected over the initial investment in the loan, which at October 1, 2010 was fair value.

As a result of acquisition accounting GM Financial evaluated the common risk characteristics of the loan portfolio and split it into several pools. GM Financial's policy is to remove a charged off loan individually from a pool based on comparing any amount received with its contractual amount. Any difference between these amounts is absorbed by the non-accretable difference. This removal method assumes that the amount received approximates pool performance expectations. The remaining accretable yield balance is unaffected and any material change in remaining effective yield caused by this removal method is addressed by GM Financial's quarterly cash flow evaluation process for each pool. For loans that are resolved by payment in full there is no release of the non-accretable difference for the pool because there is no difference between the amount received and the contractual amount of the loan.

Any deterioration in the performance of the pre-acquisition receivables will result in recording an incremental provision for loan losses. Improvements in the performance of the pre-acquisition receivables which results in a significant increase in actual or expected cash flows will result first in the reversal of any incremental related allowance for loan losses and then in a transfer of the excess from the non-accretable difference to accretable yield, which will be recorded as finance charge income over the remaining life of the receivables.

Post-Acquisition Consumer Finance Receivables and Allowance for Loan Losses

Finance receivables originated after the acquisition of AmeriCredit are carried at amortized cost, net of allowance for loan losses. Provisions for loan losses are charged to operations in amounts sufficient to maintain an allowance for loan losses at a level considered adequate to cover probable credit losses inherent in GM Financial's post-acquisition finance receivables.

The allowance for loan losses is established systematically based on the determination of the amount of probable credit losses inherent in the post-acquisition finance receivables as of the balance sheet date. GM Financial reviews charge-off experience factors, delinquency reports, historical collection rates, estimates of the value of the underlying collateral, economic trends, such as unemployment rates, and other information in order to make the necessary judgments as to probable credit losses. GM Financial also uses historical charge-off experience to determine a loss confirmation period, which is defined as the time between when an event, such as delinquency status, giving rise to a probable credit loss occurs with respect to a specific account and when such account is charged off. This loss confirmation period is applied to the forecasted probable credit losses to determine the amount of losses inherent in finance receivables at the balance sheet date. Assumptions regarding credit losses and loss confirmation periods are reviewed periodically and may be impacted by actual performance of finance receivables and changes in any of the factors discussed above. Should the credit loss assumption or loss confirmation period increase, there would be an increase in the amount of allowance for loan losses required, which would decrease the net carrying value of finance receivables and increase the amount of provision for loan losses recorded on the consolidated statements of operations.

Inventory

Inventories are stated at the lower of cost or market.

Market, which represents selling price less cost to sell, considers general market and economic conditions, periodic reviews of current profitability of vehicles, product warranty costs and the effect of current incentive offers at the balance sheet date. Market for off-lease and other vehicles is current auction sales proceeds less disposal and warranty costs. Productive material, work in process, supplies and service parts are reviewed to determine if inventory quantities are in excess of forecasted usage, or if they have become obsolete.

Equipment on Operating Leases, net

Equipment on operating leases, net is reported at cost, less accumulated depreciation, net of origination fees or costs, and lease incentives. Estimated income from operating lease assets, which includes lease origination fees, net of lease origination costs, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement. Depreciation of vehicles is provided on a straight-line basis to an estimated residual value over the term of the lease agreement.

We have significant investments in vehicles in operating lease portfolios, which are composed of vehicle leases to retail customers with lease terms of up to 60 months and vehicles leased to rental car companies with lease terms that average nine months or less. We are exposed to changes in the residual values of those assets. For impairment purposes, the residual values represent estimates of the values of the vehicles leased at the end of the lease contracts and are determined based on forecasted auction proceeds when there is a reliable basis to make such a determination. Realization of the residual values is dependent on the future ability to market the vehicles under the prevailing market conditions. The adequacy of the estimate of the residual value is evaluated over the life of the lease and adjustments may be made to the extent the expected value of the vehicle at lease termination changes. Adjustments may be in the form of revisions to the depreciation rate or recognition of an impairment charge. Impairment is determined to exist if the expected future cash flows, which include estimated residual values, are lower than the carrying amount of the vehicles leased. If the carrying amount is considered impaired, an impairment charge is recorded for the amount by which the carrying amount exceeds the fair value. Fair value is determined primarily using the anticipated cash flows, including estimated residual values.

In our Automotive operations when a leased vehicle is returned the asset is reclassified from Equipment on operating leases, net to Inventories at the lower of cost or estimated selling price, less cost to sell. In our Automotive Finance operations when a leased vehicle is returned or repossessed the asset is recorded in Other assets at the lower of cost or estimated selling price, less costs to sell. Upon disposition a gain or loss is recorded for any difference between the net book value of the lease asset and the proceeds from the disposition of the asset.

Impairment charges related to Equipment on operating leases, net are recorded in Automotive cost of sales or GM Financial operating and other expenses.

Valuation of Cost and Equity Method Investments

When events and circumstances warrant, investments accounted for under the cost or equity method of accounting are evaluated for impairment. An impairment charge is recorded whenever a decline in value of an investment below its carrying amount is determined to be other-than-temporary. In determining if a decline is other-than-temporary, factors such as the length of time and extent to which the fair value of the investment has been less than the carrying amount of the investment, the near-term and longer-term operating and financial prospects of the affiliate and the intent and ability to hold the investment for a period of time sufficient to allow for any anticipated recovery are considered. Impairment charges related to equity method investments are recorded in Equity income, net of tax and gain on investments. Impairment charges related to cost method investments are recorded in Interest income and other non-operating income, net.

Property, net

Property, plant and equipment, including internal use software, is recorded at cost. Major improvements that extend the useful life or add functionality of property are capitalized. The gross amount of assets under capital leases is included in property, plant and equipment. Expenditures for repairs and maintenance are charged to expense as incurred. We depreciate all depreciable property using the straight-line method. Leasehold improvements are amortized over the period of lease or the life of the asset, whichever is shorter. The amortization of the assets under capital leases is included in depreciation expense. Upon retirement or disposition of property, plant and equipment, the cost and related accumulated depreciation are removed from the accounts and any resulting gain or loss is recorded in earnings. Impairment charges related to property are recorded in Automotive cost of sales, Automotive selling, general and administrative expense or GM Financial operating and other expenses.

Special Tools

Special tools represent product-specific powertrain and non-powertrain related tools, dies, molds and other items used in the vehicle manufacturing process. Expenditures for special tools are recorded at cost and are capitalized. We amortize all non-powertrain special tools over their estimated useful lives using an accelerated amortization method. We amortize powertrain special tools over their estimated useful lives using the straight-line method. Impairment charges related to special tools are recorded in Automotive cost of sales.

Goodwill

Goodwill arises from the application of fresh-start reporting and acquisitions accounted for as business combinations. Goodwill is tested for impairment for all reporting units on an annual basis during the fourth quarter, or more frequently, if events occur or circumstances change that would warrant such a review. When the fair value of a reporting unit falls below its carrying amount an impairment charge is recorded for the amount, if any, by which the carrying amount of goodwill exceeds its implied fair value. Fair values of reporting units are established using a discounted cash flow method. Where available and as appropriate, comparative market multiples and the quoted market price for our common stock are used to corroborate the results of the discounted cash flow method. Our reporting units are GMNA, GME, GM Financial and various reporting units within the GMIO and GMSA segments. Due to the integrated nature of our manufacturing operations and the sharing of assets, other resources and vehicle platforms among brands within GMNA and GME and because financial information by brand or country is not discrete below the operating segment level, GMNA and GME do not contain reporting units below the operating segment level. GM Financial also does not contain reporting units below the operating segment level. GMIO and GMSA are less integrated given the lack of regional trade pacts and other unique geographical differences and thus contain separate reporting units below the operating segment level. Goodwill would be reassigned on a relative-fair-value basis to a portion of a reporting unit to be disposed of or upon the reorganization of the composition of one or more of our reporting units, unless the reporting unit was never integrated.

Intangible Assets, net

Intangible assets, excluding Goodwill, primarily include brand names (including defensive intangibles associated with discontinued brands), technology and intellectual property, customer relationships and dealer networks.

Intangible assets are amortized on a straight-line or an accelerated method of amortization over their estimated useful lives. An accelerated amortization method reflecting the pattern in which the asset will be consumed is utilized if that pattern can be reliably determined. If that pattern cannot be reliably determined, a straight-line amortization method is used. We consider the period of expected cash flows and underlying data used to measure the fair value of the intangible assets when selecting a useful life. Impairment charges related to intangible assets are recorded in Automotive selling, general and administrative expense or Automotive cost of sales.

Amortization of developed technology and intellectual property is recorded in Automotive cost of sales. Amortization of brand names, customer relationships and our dealer networks is recorded in Automotive selling, general and administrative expense or GM Financial operating and other expenses.

Valuation of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated for impairment when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds fair value. Product-specific long-lived asset groups are tested for impairment at the platform or vehicle line level. Non-product specific long-lived assets are tested for impairment on a reporting unit basis in GMNA, GME, and GM Financial and tested at or within our various reporting units within our GMIO and GMSA segments. Fair value is determined using either the market or sales comparison approach, cost approach or anticipated cash flows discounted at a rate commensurate with the risk involved. Long-lived assets to be disposed of other than by sale are considered held for use until disposition. Product-specific assets may become impaired as a result of declines in profitability due to changes in volume, pricing or costs.

Pension and Other Postretirement Plans

Attribution, Methods and Assumptions

The cost of benefits provided by defined benefit pension plans is recorded in the period employees provide service. The cost of pension plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be: (1) the duration of the applicable collective bargaining agreement specific to the plan; (2) expected future working lifetime; or (3) the life expectancy of the plan participants.

The cost of medical, dental, legal service and life insurance benefits provided through postretirement benefit plans is recorded in the period employees provide service. The cost of postretirement plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be the average period to full eligibility or the average life expectancy of the plan participants, or the period to the plan's termination date for the plan which provides legal services.

An expected return on plan asset methodology is utilized to calculate future pension expense for certain significant funded benefit plans. A market-related value of plan assets methodology is also utilized that averages gains and losses on the plan assets over a period of years to determine future pension expense. The methodology recognizes 60% of the difference between the fair value of assets and the expected calculated value in the first year and 10% of that difference over each of the next four years.

The discount rate assumption is established for each of the retirement-related benefit plans at their respective measurement dates. In the U.S. we use a cash flow matching approach that uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate.

The benefit obligation for pension plans in Canada, the United Kingdom and Germany represents 92% of the non-U.S. pension benefit obligation at December 31, 2012. The discount rates for plans in Canada, the United Kingdom and Germany are determined using a cash flow matching approach, similar to the U.S. approach.

In countries other than the U.S., Canada, United Kingdom and those located in the Eurozone discount rates are established depending on the local financial markets, using a high quality yield curve based on local bonds, a yield curve adjusted to reflect local conditions using foreign currency swaps or local actuarial standards.

Plan Asset Valuation

Cash Equivalents and Other Short-Term Investments

Money market funds and other similar short-term investment funds are valued using the net asset value per share (NAV) as provided by the investment sponsor or third-party administrator. Prices for short-term debt securities are received from independent pricing services or from dealers who make markets in such securities. Independent pricing services utilize matrix pricing which considers readily available inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices. Money market mutual funds which provide investors with the ability to redeem their interests on a daily basis and for which NAVs are publicly available are classified in Level 1. Other cash equivalents and short-term investments are classified in Level 2.

Common and Preferred Stock

Common and preferred stock for which market prices are readily available at the measurement date, are valued at the last reported sale price or official closing price on the primary market or exchange on which they are actively traded and are classified in Level 1. Such equity securities for which the market is not considered to be active are valued via the use of observable inputs, which may include, among others, the use of adjusted market prices last available, bids or last available sales prices and/or other observable inputs and are classified in Level 2. Common and preferred stock classified in Level 3 are those privately issued securities or other issues that are valued via the use of valuation models using significant unobservable inputs that generally consider among others, aged (stale) pricing, earnings multiples, discounted cash flows and/or other qualitative and quantitative factors. We may consider other security attributes such as liquidity and market activity in assessing the observability of inputs used by pricing services or dealers, which may affect classification in the fair value hierarchy.

Government, Agency and Corporate Debt Securities

U.S. government and government agency obligations, foreign government and government agency obligations, municipal securities, supranational obligations, corporate bonds, bank notes, and preferred securities are valued based on quotations received from independent pricing services or from dealers who make markets in such securities. Debt securities which are priced via the use of pricing services that utilize matrix pricing which considers readily observable inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices, are classified in Level 2. Securities within this category that are typically priced by dealers and pricing services via the use of proprietary pricing models which incorporate significant unobservable inputs are classified in Level 3. These inputs primarily consist of yield and credit spread assumptions. We may consider other security attributes such as liquidity, market activity, price level, credit ratings and geo-political risk in assessing the observability of inputs used by pricing services or dealers, which may affect classification.

Agency and Non-Agency Mortgage and Other Asset-Backed Securities

U.S. and foreign government agency mortgage and asset-backed securities, non-agency collateralized mortgage obligations, commercial mortgage securities, residential mortgage securities and other asset-backed securities are valued based on quotations received from independent pricing services or from dealers who make markets in such securities. Securities which are priced via the use of pricing services that utilize matrix pricing which considers readily observable inputs such as prepayment speed assumptions, attributes of the collateral, yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices are classified in Level 2. Securities within this category that are typically priced by dealers and pricing services via the use of proprietary pricing models which incorporate significant unobservable inputs are classified in Level 3. These inputs primarily consist of prepayment curves, discount rates, default assumptions and recovery rates. We may consider other security attributes such as liquidity, market activity, price level and other factors in assessing the observability of inputs used by pricing services or dealers, which may affect classification.

Investment Funds, Private Equity and Debt Investments and Real Estate Investments

Investments in exchange traded funds, real estate investment trusts and mutual funds, for which market quotations are generally readily available, are valued at the last reported sale price, official closing price or publicly available NAV (or its equivalent) on the primary market or exchange on which they are traded, and are classified in Level 1. Investments in private investment funds (including hedge funds, private equity funds and real estate funds) are generally valued based on their respective NAV (or its equivalent), as a practical expedient to estimate fair value due to the absence of readily available market prices. Investments in private investment funds, which may be fully redeemed at NAV in the near-term are generally classified in Level 2. Investments in funds, which may not be fully redeemed at NAV in the near-term, are generally classified in Level 3.

Direct investments in private equity, private debt and real estate securities, are generally valued in good faith via the use of the market approach (earnings multiples from comparable companies) or the income approach (discounted cash flow techniques), and consider inputs such as revenue growth and gross margin assumptions, discount rates, discounts for lack of liquidity, market capitalization rates, and the selection of comparable companies. As these valuations incorporate significant unobservable inputs they are classified as Level 3.

Fair value estimates for private investment funds, private equity, private debt, and real estate investments are provided by the respective investment sponsors or investment advisers and are subsequently reviewed and approved by management. In the event management concludes a reported NAV or fair value estimate (collectively, external valuation) does not reflect fair value or is not determined as of the financial reporting measurement date, we will consider whether an adjustment is necessary. In determining whether an adjustment to the external valuation is required, we will review material factors that could affect the valuation, such as changes to the composition or performance of the underlying investment(s) or comparable investments, overall market conditions, expected sale prices for private investments which are probable of being sold in the short term, and other economic factors that may possibly have a favorable or unfavorable effect on the reported external valuation. We may adjust the external valuation to ensure fair value as of the balance sheet date.

Derivatives

Exchange traded derivatives, such as options and futures, for which market quotations are readily available, are valued at the last reported sale price or official closing price on the primary market or exchange on which they are traded and are classified in Level 1. Over-the-counter derivatives, including but not limited to swaps, swaptions and forwards, which are typically valued through independent pricing services with observable inputs are generally classified in Level 2. Derivatives classified in Level 3 are typically valued via the use of pricing models which incorporate significant unobservable inputs, but may also include derivatives which are valued with the use of significant observable inputs which are not subject to corroboration. The inputs part of the model based valuations may include extrapolated or model-derived assumptions such as volatilities and yield and credit spread assumptions.

Due to the lack of timely available market information for certain investments in the asset classes described above as well as the inherent uncertainty of valuation, reported fair values may differ from fair values that would have been used had timely available market information been available.

Extended Disability Benefits

Estimated extended disability benefits are accrued ratably over the employee's active service period using measurement provisions similar to those used to measure our other postretirement benefits (OPEB) obligations. The liability is composed of the future obligations for income replacement, healthcare costs and life insurance premiums for employees currently disabled and those in the active workforce who may become disabled. Future disabilities are estimated in the current workforce using actuarial methods based on historical experience. We record actuarial gains and losses immediately in earnings.

Labor Force

On a worldwide basis, we have a concentration of the workforce working under the guidelines of unionized collective bargaining agreements. At December 31, 2012 50,000 of our U.S. employees (or 62%) were represented by unions, the majority of which were represented by the International Union, United Automobile, Aerospace and Agriculture Implement Workers of America (UAW). The current labor contract with the UAW is effective for a four-year term that began in October 2011 and expires in September 2015. The contract included a $5,000 lump sum payment to each eligible UAW employee in the year ended December 31, 2011 and three additional lump-sum payments of $1,000 to be paid annually in the years ending December 31, 2012, 2013 and 2014. These lump-sum payments expected to total $381 million are being amortized over the four-year contract period.

Job Security Programs

Effective with our current labor agreement with the UAW the Job Opportunity Bank Program was eliminated and the Supplemental Unemployment Benefit (SUB) program and the Transitional Support Program (TSP) were retained. These modified job security programs provide employees reduced wages and continued coverage under certain employee benefit programs depending on the employee's classification as well as the number of years of service that the employee has accrued. A similar tiered benefit is provided to Canadian Auto Workers Union (CAW) employees. We recognize a liability for these SUB/TSP benefits over the expected service period of employees, based on our best estimate of the probable liability at the measurement date.

Stock Incentive Plans

We measure and record compensation expense for all share-based payment awards based on the award's estimated fair value which is the fair value of our common stock on the date of grant, or for restricted stock units (RSUs) granted prior to our public offering, the fair value of our common stock as of the date of the public offering. We record compensation cost for the awards on a straight-line basis over the entire vesting period, or for retirement eligible employees over the requisite service period.

Salary stock awards granted are fully vested and nonforfeitable upon grant; therefore, compensation cost is recorded on the date of grant.

The liability for stock incentive plan awards settled in cash is remeasured to fair value at the end of each reporting period.

Policy, Product Warranty and Recall Campaigns

The estimated costs related to policy and product warranties are accrued at the time products are sold and are charged to Automotive cost of sales. These estimates are established using historical information on the nature, frequency and average cost of claims of each vehicle line or each model year of the vehicle line and assumptions about future activity and events. Revisions are made when necessary, based on changes in these factors. Trends of claims are actively studied and actions are taken to improve vehicle quality and minimize claims.

The estimated costs related to product recalls are based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated.

Income Taxes

The liability method is used in accounting for income taxes. Deferred tax assets and liabilities are recorded for temporary differences between the tax basis of assets and liabilities and their reported amounts in the consolidated financial statements, using the statutory tax rates in effect for the year in which the differences are expected to reverse. The effect on deferred tax assets and liabilities of a change in tax rates is recorded in the results of operations in the period that includes the enactment date under the law.

Deferred income tax assets are evaluated quarterly to determine if valuation allowances are required or should be adjusted. We establish valuation allowances for deferred tax assets based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. We consider the following possible sources of taxable income when assessing the realization of deferred tax assets:

- Future reversals of existing taxable temporary differences;
- Future taxable income exclusive of reversing temporary differences and carryforwards;
- Taxable income in prior carryback years; and
- Tax-planning strategies.

The assessment regarding whether a valuation allowance is required or should be adjusted also considers all available positive and negative evidence factors, including but not limited to:

- Nature, frequency, and severity of recent losses;
- Duration of statutory carryforward periods;

- Historical experience with tax attributes expiring unused; and
- Near- and medium-term financial outlook.

It is difficult to conclude a valuation allowance is not required when there is significant objective and verifiable negative evidence, such as cumulative losses in recent years. We utilize a rolling three years of actual and current year anticipated results as the primary measure of cumulative losses in recent years.

Income tax expense (benefit) for the year is allocated between continuing operations and other categories of income such as Discontinued operations or Other comprehensive income (loss). In periods in which there is a pre-tax loss from continuing operations and pre-tax income in another income category, the tax benefit allocated to continuing operations is determined by taking into account the pre-tax income of other categories.

We record uncertain tax positions on the basis of a two-step process whereby: (1) we determine whether it is more likely than not that the tax positions will be sustained based on the technical merits of the position; and (2) for those tax positions that meet the more likely than not recognition, we recognize the largest amount of tax benefit that is greater than 50% likely to be realized upon ultimate settlement with the related tax authority.

We record interest and penalties on uncertain tax positions in Income tax expense (benefit).

Derivative Instruments

We are party to a variety of foreign currency exchange rate, commodity, interest rate swap and interest rate cap derivative contracts entered into in connection with the management of exposure to fluctuations in certain foreign currency exchange rates, commodity prices and interest rates.

In connection with certain long-term supply contracts that we have entered into, we have identified embedded derivatives which we have bifurcated for valuation and accounting purposes.

GM Financial is exposed to market risks arising from adverse changes in interest rates due to floating interest rate exposure on its credit facilities and on certain securitization notes payable. GM Financial's special purpose entities (SPEs) are contractually required to purchase derivative instruments as credit enhancements in connection with securitization transactions and credit facilities. These financial exposures and contractual requirements are managed in accordance with corporate policies and procedures and a risk management control system is used to assist in monitoring hedging programs, derivative positions and hedging strategies. Hedging documentation includes hedging objectives, practices and procedures and the related accounting treatment.

The accounting for changes in the fair value of each derivative financial instrument depends on whether it has been designated and qualifies as an accounting hedge, as well as the type of hedging relationship identified. Derivative financial instruments entered into by our automotive operations are not designated in hedging relationships. Certain of the derivatives entered into by GM Financial have been designated in cash flow hedging relationships. Derivatives that receive hedge accounting treatment are evaluated for effectiveness at the time they are designated as well as throughout the hedging period. We do not hold derivative financial instruments for speculative purposes.

All derivatives are recorded at fair value and presented gross in the consolidated balance sheets. Internal models are used to value a majority of derivatives. The models use, as their basis, readily observable market inputs, such as time value, forward interest rates, volatility factors and current and forward market prices for foreign currency exchange rates and commodities. We estimate our nonperformance risk using our corporate credit rating, the rating on our secured revolver, and yields on traded bonds of companies with comparable credit ratings and risk profiles. Derivative contracts that are valued based upon models with significant unobservable market inputs, primarily price, are classified in Level 3.

We record the earnings effect resulting from the change in fair value of automotive operations derivative instruments in Interest income and other non-operating income, net. We record the earnings effect resulting from the change in fair value of derivative instruments entered into by GM Financial in GM Financial operating and other expenses.

Effective changes in fair value of derivatives designated as cash flow hedges are recorded in Cash flow hedging gains (losses), net within a separate component of Other comprehensive income (OCI). Amounts are reclassified from Accumulated other comprehensive income when the underlying hedged item affects earnings. All ineffective changes in fair value are recorded in earnings. We also discontinue hedge accounting prospectively when it is determined that a derivative instrument has ceased to be effective as an accounting hedge or if the underlying hedged cash flow is no longer probable of occurring.

We enter into contracts with counterparties that we believe are creditworthy and generally settle on a net basis. We perform a quarterly assessment of our counterparty credit risk, including a review of credit ratings, credit default swap rates and potential nonperformance of the counterparty. Based on our most recent quarterly assessment of our counterparty credit risk, we consider this risk to be low.

The cash flows from derivative instruments are classified in the same categories as the hedged items in the consolidated statement of cash flows.

Foreign Currency Transactions and Translation

The assets and liabilities of foreign subsidiaries, that use the local currency as their functional currency, are translated to U.S. Dollars based on the current exchange rate prevailing at each balance sheet date and any resulting translation adjustments are included in Accumulated other comprehensive income. The assets and liabilities of foreign subsidiaries whose local currency is not their functional currency are remeasured from their local currency to their functional currency, and then translated to U.S. Dollars. Revenues and expenses are translated into U.S. Dollars using the average exchange rates prevailing for each period presented.

Gains and losses arising from foreign currency transactions and the effects of remeasurements discussed in the preceding paragraph are recorded in Automotive cost of sales and GM Financial operating and other expenses unless related to Automotive debt, which are recorded in Interest income and other non-operating income, net.

The following table summarizes the effects of foreign currency transactions and remeasurement (dollars in millions):

	Years Ended December 31,		
	2012	**2011**	**2010**
Foreign currency transaction and remeasurement losses	$117	$55	$210

Recently Adopted Accounting Principles

In 2012 we adopted the provisions of Accounting Standards Update (ASU) 2011-05, “Presentation of Comprehensive Income” (ASU 2011-05) that requires presentation of all non-owner changes in equity in one continuous statement of comprehensive income or in two separate but consecutive statements. We elected to provide a separate statement of comprehensive income for all periods presented. The amendments in this update do not change the items that must be reported in OCI or when an OCI item must be reclassified to net income. The adoption of ASU 2011-05 did not affect our consolidated statements of financial position, results of operations and cash flows.

ASU 2011-05 was modified in December 2011 by the issuance of ASU 2011-12, “Deferral of the Effective Date for Amendments to the Presentation of Reclassifications of Items out of Accumulated Other Comprehensive Income in Accounting Standards Update No. 2011-05.” This update indefinitely defers certain provisions of ASU 2011-05 that require the disclosure of the amount of reclassifications of items from OCI to net income by component of net income and by component of OCI.

Note 4. Acquisition and Disposal of Businesses

Sale of General Motors Strasbourg S.A.S.

In December 2012 we entered into a definitive agreement to sell 100% of our equity interest of General Motors Strasbourg S.A.S. (GMS), which was included in our GME segment, for cash of one Euro to an external third-party. GMS is engaged in the business of developing and manufacturing automatic transmissions for luxury and performance light automotive vehicles. We acquired GMS in October 2010 as subsequently discussed. GMS's assets and liabilities were adjusted to their estimated fair value of one Euro upon entering into the definitive agreement. The resulting charge of $119 million was recorded in Interest income and other non-operating income, net. In January 2013 we completed the sale of GMS. GMS's assets, composed primarily of accounts receivable and inventories, and its liabilities composed primarily of accounts payable and accrued liabilities were classified as held for sale and were included in Current Assets and Current Liabilities.

Definitive Agreement to Acquire Certain Ally Financial International Operations

In November 2012 GM Financial entered into an agreement with Ally Financial to acquire 100% of the outstanding equity interests of its automotive finance and financial services operations in Europe and Latin America and a separate agreement to acquire Ally Financial's non-controlling equity interests in GMAC-SAIC Automotive Finance Company Limited (GMAC-SAIC), which conducts automotive finance and other financial services in China. The combined consideration will be approximately $4.2 billion in cash, subject to certain closing adjustments. These transactions will enable GM Financial to provide automotive finance and other financial services to customers in European, Latin American and Chinese markets. The closings of the transactions contemplated by the agreements are subject to satisfaction of certain closing conditions, including obtaining applicable regulatory approvals and third-party consents and other customary closing conditions, and are expected to close in stages throughout 2013.

Acquisition of SAIC GM Investment Limited

In September 2012 SAIC Motor Hong Kong Investment Limited (SAIC-HK) exercised its option to not participate in future capital injections to SAIC GM Investment Limited, the holding company of General Motors India Private Limited and Chevrolet Sales India Private Limited (collectively HKJV). We agreed with SAIC-HK to settle a promissory note due from HKJV to us in exchange for HKJV's issuance of 257 million Class B shares at face value of $1.17 per share. SAIC-HK's equity interest in HKJV was diluted from 50% to 14% and we obtained control of HKJV with an 86% interest and consolidated HKJV effective September 1, 2012. We recognized a gain of $51 million measured as the difference between the fair value of our 50% interest in HKJV and the investment carrying amount at the date of acquisition of which $50 million was recorded in Equity income, net of tax and gain on investments. In addition we invested $125 million in HKJV and acquired 186 million Class A shares at face value of $0.6708 per share, which increased our interest in HKJV from 86% to 90.8%. Refer to Note 10 for additional details on our investment in HKJV prior to acquisition.

The following table summarizes the consideration paid and the HKJV assets acquired and liabilities assumed, which are included in our GMIO segment (dollars in millions):

	September 1, 2012
Consideration	
Fair value of our previously held investment	$ 74
Consideration paid for Shanghai Automotive Industry Corporation's (SAIC) portion of the promissory note	150
Settlement of written put option	(94)
Total consideration	$ 130
Fair value of the noncontrolling interest	$ 21
Assets acquired and liabilities assumed	
Cash	$ 17
Accounts receivable	124
Inventory	132
Other current assets	13
Property	385
Goodwill	61
Other non-current assets	59
Current liabilities	(483)
Non-current liabilities	(157)
	$ 151

When applying the acquisition method of accounting deferred tax assets and related valuation allowances give rise to goodwill, which is a residual. None of the goodwill from this transaction is deductible for tax purposes. We did not provide pro forma financial information because we do not believe the information is material.

Acquisition of GMAC South America LLC

In March 2012 we acquired from Ally Financial for cash of $29 million 100% of the outstanding equity interests of GMAC South America LLC whose only asset is GMAC de Venezuela CA (GMAC Venezuela) comprising the business and operations of Ally Financial in Venezuela. This acquisition provides us with a captive finance offering in Venezuela which we believe is important in maintaining market position and will provide continued sources of financing for our Venezuela dealers and customers.

We recorded the fair value of the assets acquired and liabilities assumed as of March 1, 2012, the date we obtained control, and have included GMAC Venezuela's results of operations and cash flows from that date forward. The following table summarizes the amounts recorded in connection with the acquisition of GMAC Venezuela, which are included in our GMSA segment (dollars in millions):

	March 1, 2012
Cash	$ 79
Other assets	11
Liabilities	(11)
Bargain purchase gain	(50)
Consideration paid	$ 29

We determined the excess of net assets acquired over consideration paid was attributable to the measurement differences between the BsF denominated assets and liabilities valued using the official foreign exchange rate, as required by U.S. GAAP, and the enterprise value which has been discounted to reflect the uncertainty surrounding our ability to convert the BsF to U.S. Dollars and the risks of operating in a politically unstable country. The measurement differences do not qualify to be recorded in the application of the acquisition method of accounting, and we recorded the excess of net assets acquired over the consideration paid as a bargain purchase gain. The bargain purchase gain was recorded in Interest income and other non-operating income, net. We did not provide pro forma financial information because we do not believe the information is material.

Acquisition of Additional GM Korea Interests

In March 2011 we completed the acquisition of an additional 6.9% interest in GM Korea Company (GM Korea) for cash of $100 million. The transaction was accounted for as an equity transaction as we retain the controlling financial interest in GM Korea. This transaction reduced our equity attributable to Noncontrolling interests by $134 million and our Accumulated other comprehensive income by $7 million and increased our Capital surplus by $41 million. We now own 77.0% of the outstanding shares of GM Korea.

Acquisition of AmeriCredit

In October 2010 we acquired 100% of the outstanding equity interests of AmeriCredit, an automotive finance company, renamed General Motors Financial Company, Inc., for cash of $3.5 billion. This acquisition allows us to provide a more complete range of financing options to our customers across the U.S. and Canada, specifically focusing on providing additional capabilities in leasing and sub-prime vehicle financing options.

The following table summarizes the consideration paid, acquisition-related costs, and the assets acquired and liabilities assumed recognized at the acquisition date in connection with the acquisition of AmeriCredit (dollars in millions, except per share amounts):

	October 1, 2010
Consideration	
Cash paid to AmeriCredit common shareholders of $24.50 per share	$ 3,327
Cash paid to cancel outstanding stock warrants	94
Cash paid to settle equity-based compensation awards	33
Total consideration	$ 3,454
Acquisition-related costs (a)	$ 43
Assets acquired and liabilities assumed	
Cash	$ 538
Restricted cash	1,136
Finance receivables (b)	8,231
Other assets, including identifiable intangible assets	200
Securitization notes payable and other borrowings (c)	(7,564)
Other liabilities	(352)
Identifiable net assets acquired	2,189
Goodwill resulting from the acquisition of AmeriCredit	1,265
	$ 3,454

(a) Acquisition-related costs of $43 million were expensed as incurred. The acquisition related costs include $27 million recorded in Automotive selling, general and administrative expense and $16 million recorded in GM Financial operating and other expenses.

(b) The fair value of Finance receivables was determined using a discounted cash flow approach. The contractual cash flows were adjusted for estimated prepayments, defaults, recoveries, finance charge income and servicing costs and discounted using a discount rate commensurate with risks and maturity inherent in the finance contracts. As of the acquisition date, the contractually required payments receivable was $10.7 billion of which $9.7 billion was expected to be collected.

(c) The fair value of Securitization notes payable and other borrowings was principally determined using quoted market rates.

We recorded goodwill in the amount of $1.3 billion for the excess of consideration paid over the fair value of the individual assets acquired and liabilities assumed. Goodwill includes $153 million recorded to establish a valuation allowance for deferred tax assets that was not applicable to GM Financial on a stand-alone basis. All of the goodwill was assigned to the GM Financial reporting unit. The goodwill expected to be tax deductible is $159 million and was generated from previous acquisitions by GM Financial.

The results of operations of GM Financial are included in our results beginning October 1, 2010. The following table summarizes the actual amounts of revenue and earnings of GM Financial included in our consolidated financial statements for the years ended December 31, 2012, 2011 and 2010, as well as the supplemental pro forma revenue and earnings of the combined entity for the year ended December 31, 2010 as if the acquisition had occurred on January 1, 2010 (dollars in millions):

	GM Financial Amounts For Year Ended December 31,			Pro Forma-Combined (Unaudited)
	2012	2011	2010	Year Ended December 31, 2010
Total net sales and revenue	$1,961	$1,410	$281	$136,645
Net income attributable to stockholders	$ 567	$ 440	$ 90	$ 6,651

The supplemental pro forma information was adjusted to give effect to the tax effected amortization of a premium on finance receivables and a premium on securitization notes payable and other borrowings, depreciation and amortization related to other assets and acquisition related costs. The pro forma information should not be considered indicative of the results had the acquisition been consummated on January 1, 2010, nor are they indicative of future results.

Sale of Nexteer

In November 2010 we completed the sale of Nexteer Automotive Corporation (Nexteer), a manufacturer of steering components and half-shafts, which was included in our GMNA segment, to Pacific Century Motors. The sale of the Nexteer business included the global steering business which was acquired in October 2009.

We received consideration of $426 million in cash and a $39 million promissory note in exchange for 100% of our ownership interest in Nexteer and recorded a gain of $60 million on the sale which is recorded in Interest income and other non-operating income, net. Subsequent to the sale, Nexteer became one of our third-party suppliers. During the year ended December 31, 2010 Nexteer recorded revenue of $1.8 billion, of which $939 million were sales to us.

Acquisition of GMS

In October 2010 we acquired 100% of the outstanding equity interest of GMS for cash of one Euro from MLC. We recorded the fair value of the assets acquired and liabilities assumed as of October 1, 2010 and have included GMS's results of operations and cash flows from that date forward. GMS was sold in January 2013 as previously discussed. The following table summarizes the amounts recorded in connection with the acquisition of GMS, which are included in our GME segment (dollars in millions):

	October 1, 2010
Assets acquired and liabilities assumed	
Cash	$ 49
Accounts receivable (a)	60
Inventory	56
Property, net	25
Other non-current assets	3
Current liabilities	(116)
Non-current liabilities	(11)
Bargain purchase gain	$ 66

(a) Accounts receivable includes $32 million that is due from us.

We determined that the excess of fair value over consideration paid was attributable to potential future restructuring scenarios made necessary due to the uncertainty in sales demand beyond in-place supply agreements. Restructuring costs, if incurred, would be expensed in future periods. As potential future restructuring activities do not qualify to be recorded as a liability in the application of the acquisition method of accounting, none was recorded, and we recorded the excess as a bargain purchase gain, recorded in Interest income and other non-operating income, net. We did not provide the pro forma financial information because we do not believe the information was material.

Saab Sale

In February 2010 we completed the sale of Saab Automobile AB and in May 2010 we completed the sale of Saab Automobile GB (collectively Saab) to Spyker Cars NV. Of the negotiated cash purchase price of $74 million, we received $50 million at closing and received the remainder in July 2010. We also received preference shares in Saab with a face value of $326 million and an estimated fair value that is insignificant and received $114 million as repayment of the debtor-in-possession financing that we provided to Saab during 2009. In the year ended December 31, 2010 we recorded a gain of $123 million in Interest income and other non-operating income, net reflecting cash received of $166 million less net assets with a book value of $43 million.

Note 5. GM Financial Finance Receivables, net

In April 2012 GM Financial commenced commercial lending activities in the U.S. centered on floorplan financing of dealer vehicle inventory and dealer loans to finance dealer sites, facilities, facility improvements and working capital. These loans are made on a secured basis.

The following table summarizes GM Financial finance receivables, net relating to consumer and commercial activities (dollars in millions):

	December 31, 2012	December 31, 2011
Current	$ 4,044	$3,251
Non-current	6,954	5,911
Total GM Financial finance receivables, net	$10,998	$9,162

The following table summarizes the components of GM Financial finance receivables, net relating to consumer and commercial activities (dollars in millions):

	December 31, 2012	December 31, 2011
Pre-acquisition finance receivables, outstanding balance	$ 2,162	$4,366
Pre-acquisition finance receivables, carrying amount	$ 1,958	$4,027
Post-acquisition finance receivables, net of fees (a)	9,391	5,314
Total finance receivables	11,349	9,341
Less: allowance for loan losses on post-acquisition finance receivables (a)	(351)	(179)
Total GM Financial finance receivables, net	$10,998	$9,162

(a) At December 31, 2012 the balance includes finance receivables and loans of $560 million and allowance for loan losses of $6 million in connection with the commercial lending program.

The following table summarizes activity for finance receivables relating to consumer and commercial activities (dollars in millions):

	Years Ended December 31,	
	2012	2011
Pre-acquisition finance receivables, carrying amount, beginning of period	$ 4,027	$ 7,299
Post-acquisition finance receivables, beginning of period	5,314	924
Loans originated or purchased (a)	6,806	5,085
Charge-offs	(304)	(66)
Principal collections and other (a)	(4,324)	(3,418)
Change in carrying amount adjustment on the pre-acquisition finance receivables	(170)	(483)
Balance at end of period	$11,349	$ 9,341

(a) Includes finance receivables and loans originated of $1.2 billion and principal collections of $667 million in connection with the commercial lending program for the year ended December 31, 2012.

The following table summarizes carrying amount and estimated fair value of GM Financial finance receivables, net (dollars in millions):

	December 31, 2012		December 31, 2011	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
GM Financial finance receivables, net	$10,998	$11,313	$9,162	$9,386

GM Financial determined the fair value of consumer finance receivables using Level 3 inputs within a cash flow model. The Level 3 inputs reflect assumptions regarding expected prepayments, deferrals, delinquencies, recoveries and charge-offs of the loans within the finance receivable portfolio. The cash flow model produces an estimated amortization schedule of the finance receivables which is the basis for the calculation of the series of cash flows that derive the fair value of the portfolio. The series of cash flows are calculated and discounted using a weighted-average cost of capital (WACC) using unobservable debt and equity percentages, an unobservable cost of equity and an observable cost of debt based on companies with a similar credit rating and maturity and maturity profile as the portfolio. Macroeconomic factors could negatively affect the credit performance of the portfolio and therefore could potentially affect the assumptions used in GM Financial's cash flow model.

Substantially all commercial finance receivables have variable interest rates and maturities of one year. Therefore, the carrying amount is considered to be a reasonable estimate of fair value.

GM Financial purchases consumer finance contracts from automobile dealers without recourse, and accordingly, the dealer has no liability to GM Financial if the consumer defaults on the contract. Finance receivables are collateralized by vehicle titles and GM Financial has the right to repossess the vehicle in the event the consumer defaults on the payment terms of the contract.

At December 31, 2012 and 2011 the accrual of finance charge income has been suspended on delinquent consumer finance receivables based on contractual amounts due of $503 million and $439 million. At December 31, 2012 there were no commercial finance receivables or loans on non-accrual status.

GM Financial reviews its pre-acquisition portfolio for differences between contractual cash flows and the cash flows expected to be collected from its initial investment in the pre-acquisition portfolio to determine if the difference is attributable, at least, in part to credit quality. For the period ended December 31, 2012 as a result of improvements in the credit performance of the pre-acquisition portfolio, which resulted in an increase of expected cash flows of $170 million, GM Financial transferred the excess non-accretable difference to accretable yield. GM Financial will recognize this excess as finance charge income over the remaining life of the portfolio.

The following table summarizes accretable yield (dollars in millions):

	Years Ended December 31,	
	2012	2011
Balance at beginning of period	$ 737	$1,201
Accretion of accretable yield	(503)	(725)
Transfer from non-accretable difference	170	261
Balance at end of period	$ 404	$ 737

The following table summarizes the allowance for post-acquisition loan losses on consumer and commercial finance receivables (dollars in millions):

	December 31, 2012	December 31, 2011
Current	$266	$136
Non-current	85	43
Total allowance for post-acquisition loan losses	$351	$179

The following table summarizes activity for the allowance for post-acquisition loan losses on consumer and commercial finance receivables (dollars in millions):

	Years Ended December 31,		October 1, 2010 Through December 31, 2010
	2012	2011	
Balance at beginning of period	$ 179	$ 26	$—
Provision for loan losses	304	178	26
Charge-offs	(304)	(66)	—
Recoveries	172	41	—
Balance at end of period	$ 351	$179	$26

Credit Quality

Consumer Finance Receivables

Credit bureau scores, generally referred to as FICO scores, are determined during GM Financial's automotive loan origination process. The following table summarizes the credit risk profile of finance receivables by FICO score band, determined at origination (dollars in millions):

	December 31, 2012	December 31, 2011
FICO score less than 540	$ 3,011	$2,133
FICO score 540 to 599	5,014	4,167
FICO score 600 to 659	2,513	2,624
FICO score 660 and greater	455	756
Balance at end of period (a)	$10,993	$9,680

(a) Composed of the sum of pre-acquisition consumer finance receivables - outstanding balance and post-acquisition consumer finance receivables, net of fees.

Commercial Finance Receivables

GM Financial's commercial finance receivables consist of dealer financings. A proprietary model is used to assign a risk rating to each dealer. A credit review of each dealer is performed at least annually and, if necessary, the dealer's risk rating is adjusted on the basis of the review.

Delinquency

Consumer Finance Receivables

The following summarizes the contractual amount of consumer finance receivables, which is not materially different than the recorded investment, more than 30 days delinquent, but not yet in repossession, and in repossession, but not yet charged off (dollars in millions):

	December 31, 2012		December 31, 2011	
	Amount	Percent of Contractual Amount Due	Amount	Percent of Contractual Amount Due
Delinquent contracts				
31-to-60 days	$672	6.1%	$517	5.3%
Greater-than-60 days	230	2.1%	182	1.9%
Total consumer finance receivables more than 30 days delinquent	902	8.2%	699	7.2%
In repossession	31	0.3%	27	0.3%
Total consumer finance receivables more than 30 days delinquent and in repossession	$933	8.5%	$726	7.5%

An account is considered delinquent if a substantial portion of a scheduled payment has not been received by the date such payment was contractually due. Delinquencies may vary from period to period based upon the average age of the portfolio, seasonality within the calendar year and economic factors.

Commercial Finance Receivables

At December 31, 2012 all commercial finance receivables were current with respect to payment status.

Note 6. Securitizations

Automotive Financing — GM Financial

The following table summarizes securitization activity and cash flows from consolidated SPEs used for securitizations (dollars in millions):

	Years Ended December 31,		October 1, 2010 Through December 31, 2010
	2012	2011	
Receivables securitized	$6,777	$4,828	$743
Net proceeds from securitization	$6,400	$4,550	$700
Servicing fees			
Variable interest entities	$ 242	$ 201	$ 46
Net distributions from trusts			
Variable interest entities	$1,487	$ 852	$216

GM Financial retains servicing responsibilities for receivables transferred to securitization SPEs. At December 31, 2012 and 2011 GM Financial serviced finance receivables that have been transferred to certain SPEs of $9.9 billion and $7.9 billion. At December 31, 2012 and 2011 a Canadian subsidiary of GM Financial serviced leased assets of $625 million and $1.0 billion for a third-party.

Note 7. Marketable Securities

We measure the fair value of our marketable securities using a market approach where identical or comparable prices are available and an income approach in other cases. We obtain the majority of the prices used in this valuation from a pricing service. Our pricing service utilizes industry standard pricing models that consider various inputs, including benchmark yields, reported trades, broker/dealer quotes, issuer spreads and benchmark securities as well as other relevant economic measures. We conduct an annual review of valuations provided by our pricing service, which includes discussion and analysis of the inputs used by the pricing service to provide prices for the types of securities we hold. These inputs include prices for comparable securities, bid/ask quotes, interest rate yields and prepayment spreads. Based on our review we believe the prices received from our pricing service are a reliable representation of exit prices.

Peugeot S.A.

At December 31, 2012, we measured the fair value of our investment in Peugeot S.A. (PSA) common stock using the published stock price and determined the carrying amount of our investment in PSA common stock exceeded its fair value. PSA's stock price has shown no sustained signs of recovery towards the price at which we acquired our seven percent interest in March 2012.

Based upon the 55% decline in PSA common stock price since our acquisition in March 2012 and the nine month duration of the impairment, combined with our fourth quarter reassessment of our European automotive operations, we have concluded that the impairment of our investment in PSA common stock is other-than-temporary. As a result we have transferred the total unrealized losses from Accumulated other comprehensive loss to Interest income and other non-operating income, net resulting in recognition of an impairment charge of $220 million.

GM Korea Preferred Shares

In September 2012 we entered into a transaction to acquire security interests in certain mandatorily redeemable preferred shares issued by GM Korea for $293 million. The transaction did not meet the criteria for an extinguishment of the liability. Subsequently, GM Korea partially redeemed the mandatorily redeemable preferred shares resulting in an extinguishment of the liability and redemption of a portion of the security interests, which is described in more detail in Note 17. The remaining unredeemed interests are classified as available-for-sale corporate debt securities and had a fair value of $177 million at December 31, 2012.

The following tables summarize information regarding marketable securities (dollars in millions):

	December 31, 2012						
		Unrealized			Fair Value Measurements on a Recurring Basis		
	Cost	Gains	Losses	Fair Value	Level 1	Level 2	Level 3

We maintained securities of $84 million as compensating balances to support letters of credit of $70 million at December 31, 2011. At December 31, 2012 these compensating balances were not required.

Sales proceeds from investments in marketable securities classified as available-for-sale and sold prior to maturity were $4.7 billion, $1.6 billion and $11 million in the years ended December 31, 2012, 2011 and 2010.

The following table summarizes the amortized cost and the fair value of investments classified as available-for-sale within cash equivalents, marketable securities and restricted cash by contractual maturity at December 31, 2012 (dollars in millions):

	Amortized Cost	Fair Value
Due in one year or less	$ 9,281	$ 9,318
Due after one year through five years	1,892	1,896
Total contractual maturities of available-for-sale securities	$11,173	$11,214

Note 8. Inventories

The following table summarizes the components of Inventories (dollars in millions):

	December 31, 2012	December 31, 2011
Productive material, supplies and work in process	$ 6,560	$ 6,486
Finished product, including service parts	8,154	7,838
Total inventories	$14,714	$14,324

Note 9. Equipment on Operating Leases, net

Automotive

Equipment on operating leases, net is composed of vehicle sales to daily rental car companies.

The following table summarizes information related to Equipment on operating leases, net (dollars in millions):

	December 31, 2012	December 31, 2011
Equipment on operating leases	$1,946	$2,691
Less: accumulated depreciation	(164)	(227)
Equipment on operating leases, net	$1,782	$2,464

The following table summarizes depreciation expense and impairment charges related to Equipment on operating leases, net (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Depreciation expense	$227	$431	$500
Impairment charges	$181	$151	$ 49

The following table summarizes equipment on operating leases to daily rental car companies measured at fair value utilizing Level 3 inputs on a nonrecurring basis (dollars in millions):

		Fair Value Measurements on a Nonrecurring Basis (a)		
	Fair Value Measures	Level 1	Level 2	Level 3
Year ended December 31, 2012	$2,469	$—	$—	$2,469
Year ended December 31, 2011	$2,571	$—	$—	$2,571
Year ended December 31, 2010	$2,310	$—	$—	$2,310

(a) The carrying amount of the related assets at December 31, 2012, 2011 and 2010 may no longer equal the fair value as the fair value presented is as of the date the impairment was recorded during the year presented.

Impairment of vehicles leased to daily rental car companies with guaranteed repurchase obligations is determined to exist if the expected future cash flows are lower than the carrying amount of the vehicle. We have multiple, distinct portfolios of vehicles leased to rental car companies and may have multiple impairments within a period. Expected cash flows include all estimated net revenue and costs associated with the sale to daily rental car companies through disposal at auction. The fair value measurements are determined, reviewed and approved on a monthly basis by personnel with appropriate knowledge of transactions with daily rental car companies and auction transactions.

The following table summarizes the significant quantitative unobservable inputs and assumptions used in the fair value measurement of Equipment on operating leases, net (dollars in millions):

	Valuation Technique	Significant Unobservable Input	Year Ended December 31, 2012
Impaired equipment on operating leases	Cash flow	Estimated net revenue	$2,530
		Estimated costs	$2,711

Automotive Financing — GM Financial

GM Financial originates leases in the U.S. and Canada that are recorded as operating leases. A Canadian subsidiary of GM Financial originates and sells leases to a third-party with servicing retained.

The following table summarizes GM Financial equipment on operating leases, net (dollars in millions):

	December 31, 2012	December 31, 2011
GM Financial equipment on operating leases	$1,910	$860
Less: accumulated depreciation	(261)	(75)
GM Financial equipment on operating leases, net	$1,649	$785

The following table summarizes depreciation expense related to GM Financial equipment on operating leases, net (dollars in millions):

	Year Ended December 31,	
	2012	2011
Depreciation expense	$205	$70

The following table summarizes minimum rental payments due to GM Financial as lessor under operating leases (dollars in millions):

	2013	2014	2015	2016	2017
Minimum rental receipts under operating leases	$331	$274	$160	$33	$2

Note 10. Equity in Net Assets of Nonconsolidated Affiliates

Nonconsolidated affiliates are entities in which an equity ownership interest is maintained and for which the equity method of accounting is used, due to the ability to exert significant influence over decisions relating to their operating and financial affairs.

The following table summarizes information regarding Equity income, net of tax and gain on investments (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
China joint ventures (China JVs)	$1,521	$1,511	$1,297
New Delphi (including gain on disposition)	—	1,727	117
Others (including gain on acquisition of HKJV)	41	(46)	24
Total equity income, net of tax and gain on investments	$1,562	$3,192	$1,438

Sales and income of our joint ventures are not consolidated into our financial statements; rather, our proportionate share of the earnings of each joint venture is reflected as Equity income, net of tax and gain on investments.

We received dividends from nonconsolidated affiliates of $1.4 billion, $1.2 billion and $685 million in the years ended December 31, 2012, 2011 and 2010. At December 31, 2012 and 2011 we had undistributed earnings including dividends declared but not received, of $1.7 billion and $1.6 billion related to our nonconsolidated affiliates.

Investment in China JVs

The following table summarizes our direct ownership interests in China JVs:

	December 31, 2012	December 31, 2011
Shanghai General Motors Co., Ltd. (SGM)	50%	49%
Shanghai GM Norsom Motor Co., Ltd. (SGM Norsom)	25%	25%
Shanghai GM Dong Yue Motors Co., Ltd. (SGM DY)	25%	25%
Shanghai GM Dong Yue Powertrain (SGM DYPT)	25%	25%
SAIC-GM-Wuling Automobile Co., Ltd. (SGMW)	44%	44%
FAW-GM Light Duty Commercial Vehicle Co., Ltd. (FAW-GM)	50%	50%
Pan Asia Technical Automotive Center Co., Ltd.	50%	50%
Shanghai OnStar Telematics Co., Ltd. (Shanghai OnStar)	40%	40%
Shanghai Chengxin Used Car Operation and Management Co., Ltd. (Shanghai Chengxin Used Car)	33%	33%
SAIC General Motors Sales Co., Ltd. (SGMS)	49%	49%

SGM is a joint venture established in 1997 by SAIC (50%) and us (50%). SGM has interests in three other joint ventures in China: SGM Norsom, SGM DY and SGM DYPT. These three joint ventures are jointly held by SGM (50%), SAIC (25%) and us (25%). These four joint ventures are engaged in the production, import, and sale of a comprehensive range of products under the Buick, Chevrolet and Cadillac brands. SGM also has interests in Shanghai OnStar (20%) and Shanghai Chengxin Used Car (33%). SGM also has a 20% equity interest in GMAC-SAIC, a joint venture established by General Motors Acceptance Corporation (now Ally Financial) (40%) and SAIC Finance Co., Ltd. (40%) in 2007.

SGMS is a joint venture established in November 2011 by SAIC (51%) and us (49%) to engage in the sales of the imported Buick, Chevrolet and Cadillac brands and the sales of automobiles manufactured by SGM.

In February 2010 we sold a 1% ownership interest in SGM to SAIC-HK, reducing our ownership interest to 49%. The sale of the 1% ownership interest to SAIC was predicated on our ability to work with SAIC to obtain a $400 million line of credit from a commercial bank to us. We also received a call option to repurchase the 1% which was contingently exercisable based on events which we did not unilaterally control. As part of the loan arrangement SAIC provided a commitment whereby, in the event of default, SAIC would purchase the ownership interest in SGM that we pledged as collateral for the loan. We recorded an insignificant gain on the transaction.

In September 2012 we repurchased the 1% interest in SGM for a total consideration of $119 million, increasing our ownership interest in SGM to 50%. The transaction was accounted for by applying the equity method of accounting. The consideration exceeded our proportionate share of the 1% interest in SGM net assets by $82 million, which consists of plant, property and equipment, intangible assets and goodwill of $8 million, $36 million and $38 million.

In November 2010 we purchased an additional 10% interest in SGMW from the Liuzhou Wuling Motors Co., Ltd. and Liuzhou Mini Vehicles Factory, collectively the Wuling Group, for cash of $52 million plus an agreement to provide technical services to the Wuling Group for a period of three years. As a result of this transaction we own 44%, SAIC owns 50.1% and certain Liuzhou investors own 5.9% of the outstanding stock of SGMW.

Sale of New Delphi

In March 2011 we sold our Class A Membership Interests in Delphi Automotive LLP (New Delphi) to New Delphi for $3.8 billion. The Class A Membership Interests sold represented 100% of our direct and indirect interests in New Delphi and 100% of New Delphi's Class A Membership Interests issued and outstanding. The sale terminated any direct and indirect obligation to loan New Delphi up to $500 million under a term loan facility established in October 2009 when New Delphi was created and the Class A Membership Interests were issued. New Delphi had not borrowed under this loan facility. In March 2011 we recorded a gain of $1.6 billion related to the sale in Equity income, net of tax and gain on investments. Our existing supply contracts with New Delphi were not affected by this transaction.

Investment in HKJV

In March 2011 the fair value of our investment in HKJV was determined to be less than its carrying amount. The loss in value was determined to be other-than-temporary; therefore, we recorded an impairment charge of $39 million in the three months ended March 31, 2011. In addition we recorded other charges totaling $67 million related to our investment in the HKJV.

We provided SAIC-HK, a 50% equity holder in HKJV through September 1, 2012, an option to not participate in future capital injections, which would otherwise be required under certain circumstances. The related option liability was $88 million and total unrealized losses were $64 million at December 31, 2011. A Monte Carlo option-pricing model was used to estimate the fair value of the option liability which is a Level 3 measure. The key inputs into the option pricing model were the expected volatility, risk-free rate, expected term, fair value of HKJV and expected amounts of the future funding requirement. The fair value estimate of the option was most sensitive to the fair value of HKJV, which was unobservable. A discounted cash flow methodology was utilized to estimate the fair value of HKJV.

In September 2012 SAIC-HK exercised its option to not participate in future capital injections to HKJV. As a consequence of the decision to not participate in the capital injections and our settlement of a promissory note, SAIC-HK's interest in HKJV was diluted from 50% to 14% and we obtained control of HKJV with an 86% interest. We consolidated the assets and liabilities and the results of operations of HKJV beginning on September 1, 2012. Refer to Note 4 for further detail regarding the acquisition.

VMM Deconsolidation

In June 2011 we entered into a new shareholder agreement with Fiat Powertrain Technologies SPA related to VM Motori (VMM) in Italy. Under the new shareholder agreement, we retain 50% ownership but no longer have control. Accordingly, we removed the assets and liabilities of VMM, which included allocated goodwill of $36 million from our GME reporting unit, from our consolidated balance sheets and recorded an equity interest in the amount of $46 million.

Investment in and Summarized Financial Data of Nonconsolidated Affiliates

The following table summarizes the carrying amount of investments in nonconsolidated affiliates (dollars in millions):

	December 31, 2012	December 31, 2011
China JVs	$6,579	$6,452
Other investments	304	338
Total equity in net assets of nonconsolidated affiliates	$6,883	$6,790

At December 31, 2012 and 2011 the carrying amount of our investments in certain joint ventures exceeded our share of the underlying net assets by $3.8 billion. These differences are primarily related to the application of fresh-start reporting and purchase of additional interests in nonconsolidated affiliates, of which $3.4 billion and $3.3 billion at December 31, 2012 and 2011 were allocated to goodwill and the remainder was allocated to the underlying assets and liabilities, primarily intangibles, and are being amortized over their useful lives.

The following tables present summarized financial data for all of our nonconsolidated affiliates (dollars in millions):

	December 31, 2012			December 31, 2011		
	China JVs	Others	Total	China JVs	Others	Total
Summarized Balance Sheet Data						
Current assets	$11,759	$2,642	$14,401	$10,882	$2,274	$13,156
Non-current assets	6,766	1,507	8,273	5,293	1,863	7,156
Total assets	$18,525	$4,149	$22,674	$16,175	$4,137	$20,312
Current liabilities	$12,612	$1,893	$14,505	$10,526	$1,492	$12,018
Non-current liabilities	756	758	1,514	651	934	1,585
Total liabilities	$13,368	$2,651	$16,019	$11,177	$2,426	$13,603
Non-controlling interests	$ 1,055	$ 1	$ 1,056	$ 948	$ —	$ 948

	Years Ended December 31,		
	2012	2011	2010
Summarized Operating Data			
China JV's net sales	$33,364	$30,511	$25,395
Others' net sales	3,963	4,242	17,500
Total net sales	$37,327	$34,753	$42,895
China JV's net income	$ 3,198	$ 3,203	$ 2,808
Others' net income (loss)	(23)	(13)	656
Total net income	$ 3,175	$ 3,190	$ 3,464

Transactions with Nonconsolidated Affiliates

Nonconsolidated affiliates are involved in various aspects of the development, production and marketing of cars, trucks and automobile parts. We purchase component parts and vehicles from certain nonconsolidated affiliates for resale to dealers. The following tables summarize the effects of transactions with nonconsolidated affiliates (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Results of Operations			
Automotive sales and revenue	$2,572	$3,266	$2,910
Automotive purchases, net	$ 497	$1,044	$2,881
Interest income and other non-operating income, net	$ 184	$ 34	$ 43

	December 31, 2012	December 31, 2011
Financial Position		
Accounts and notes receivable, net	$1,668	$1,785
Accounts and notes payable	$ 167	$ 342
Deferred revenue and customer deposits	$ 46	$ 150

	Years Ended December 31,		
	2012	2011	2010
Cash Flows			
Operating	$3,385	$3,624	$719
Investing	$ (41)	$ (27)	$(74)

Note 11. Property, net

The following table summarizes the components of Property, net (dollars in millions):

	Estimated Useful Lives in Years	December 31, 2012	December 31, 2011
Land		$ 2,107	$ 2,502
Buildings and improvements	5-40	4,601	4,701
Machinery and equipment	3-27	12,720	10,670
Construction in progress		3,018	3,070
Real estate, plants, and equipment		22,446	20,943
Less: accumulated depreciation		(5,556)	(4,611)
Real estate, plants, and equipment, net		16,890	16,332
Special tools, net	1-15	7,306	6,673
Total property, net		$24,196	$23,005

The following table summarizes the amount of interest capitalized and excluded from Automotive interest expense related to Property, net (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Capitalized interest	$117	$91	$62

The following table summarizes the amount of capitalized software included in Property, net (dollars in millions):

	December 31, 2012	December 31, 2011
Capitalized software in use, net	$465	$280
Capitalized software in the process of being developed	$108	$113

The following table summarizes depreciation, impairment charges and amortization expense related to Property, net, recorded in Automotive cost of sales, GM Financial operating and other expenses, Automotive selling, general and administrative expense and Other automotive expenses, net (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Depreciation and amortization expense	$3,888	$3,604	$3,576
Impairment charges (a)	3,793	81	240
Depreciation, impairment charges and amortization expense	$7,681	$3,685	$3,816
Capitalized software amortization expense (b)	$ 209	$ 203	$ 195

(a) Includes GME assets whose fair value was $408 million at December 31, 2012. Also includes other assets whose fair value was determined to be $0 in the years ended December 31, 2012, 2011 and 2010 measured utilizing Level 3 inputs. Fair value measurements of the non-GME asset group long-lived assets utilized projected cash flows discounted at a rate commensurate with the perceived business risks related to the assets involved.

(b) Included in total depreciation, impairment charges and amortization expense.

GME Impairment Charges

The carrying amounts of substantially all of GME's assets were established at fair value during fresh-start reporting. In the determination of fair value, one of our key inputs was a forecasted cash flow projection. During 2010, our actual cash flows approximated our projection. During the second half of 2011 and continuing into 2012, the European automotive industry has been severely affected by the ongoing sovereign debt crisis, high unemployment and a lack of consumer confidence coupled with overcapacity. During this timeframe, we began to experience deterioration in cash flows. In response, we formulated a plan to implement various actions to strengthen our operations and increase our competitiveness. The key areas of the plan include investments in our product portfolio, a revised brand strategy, significant management changes, reducing material, development and production costs, and further leveraging synergies from the alliance between us and PSA.

We believe it is likely that adverse economic conditions, and their effect on the European automotive industry will not improve significantly in the short-term and we expect to continue to incur losses in the region as a result. During the fourth quarter of 2012, notwithstanding the above described actions, GME performed below expectations relative to the key operating metrics of forecasted revenues, market share, and variable profit established in mid-2012. Further, our industry outlook deteriorated, and our forecast of 2013 cash flows declined. This triggered a long-lived asset impairment analysis.

We performed a recoverability test of the GME asset group by weighting various undiscounted cash flow scenarios. The weighting of the projected cash flows considers the uncertainty in our ability to execute the actions contemplated in our plan which, in part, are dependent upon actions and factors outside our control. Our test concluded that the GME asset group was not recoverable as the resulting undiscounted cash flows were less than their carrying amount. Accordingly, we estimated the fair value of the GME long-lived assets to determine the impairment amount. Determining the fair value is judgmental in nature and requires the use of significant estimates and assumptions, considered to be Level 3 inputs.

To determine the estimated fair value of real and personal property, the cost approach, market approach and income approach were considered. Under the cost approach, the determination of fair value considered the estimates of the cost to construct or purchase a new asset of equal utility at current prices with adjustments in value for physical deterioration, functional obsolescence, and economic obsolescence. Under the market approach, the determination of fair value considered the market prices in transactions for similar assets and certain direct market values based on quoted prices from brokers and secondary market participants for similar assets. Under the income approach, the determination of fair value considered the estimate of the present worth of future benefits derived from ownership, usually measured through the capitalization of a specific level of income which can be derived from the subject asset with adjustments in value for demolition costs and for the effect of an estimated holding period. Under the income approach, it was assumed fair value could not exceed the present value of the net cash flows discounted at a rate commensurate with the level of risk inherent in the subject asset. An in-exchange premise was determined to be the highest and best use.

The following table summarizes the significant Level 3 inputs for real and personal property measurements:

	Valuation Technique(s)	Unobservable Input(s)	Range
Real Property	Market approach	Demolition costs (a)	6% - 23%
	Cost approach	Holding period (b)	0 - 4 years
	Income approach	Discount rate (c)	11.2% - 14.5%
Personal Property	Market approach	Physical deterioration (d)	52% - 69%
	Cost approach	Functional obsolescence (e)	8% - 28%
		Economic obsolescence (f)	17% - 23%

(a) Represents estimated gross cost to demolish and clear the structures on the property as a percentage of replacement cost new.

(b) Represents estimated marketing period for each property; which dictates the amount of property specific holding costs to be incurred such as real estate taxes.

(c) Represents the discount rate for the specific property based on local market sources and available benchmarking data.

(d) Represents estimates of loss in asset value due to wear and tear, action of the elements, and other physical factors that reduce the life and serviceability of the asset.

(e) Represents estimated loss in asset value caused by inefficiencies and inadequacies of the asset itself.

(f) Represents estimated loss in asset value caused by factors external to the asset such as legislative enactments, changes in use, social change, and change in supply and demand.

As a result of our fair value estimates, we adjusted the carrying amount of the GME real and personal property to fair value and recorded asset impairment charges of $3.7 billion at December 31, 2012. These charges were recorded in our GME segment with $3.5 billion recorded in Automotive cost of sales and $0.2 billion recorded in Automotive selling, general and administrative expense. The fair value estimates for GME real and personal property are based on a valuation premise that assumes the assets' highest and best use are different than their current use due to the overall European macro-economic environment.

The following table summarizes GME real and personal property measured at fair value utilizing Level 3 inputs on a nonrecurring basis (dollars in millions):

	Fair Value Measure	Level 1	Level 2	Level 3	Total Impairment
Year ended December 31, 2012	$408	$—	$—	$408	$3,714

Our recoverability test of the GME asset group also included intangible assets and other long-lived assets resulting in additional impairment charges of $1.8 billion at December 31, 2012, for a total of $5.5 billion. Refer to Note 13 for additional information regarding the impairment of intangible assets.

Note 12. Goodwill

The following table summarizes the changes in the carrying amounts of Goodwill (dollars in millions):

	GMNA	GME	GMIO	GMSA	Total Automotive	GM Financial	Total
Balance at January 1, 2011	$ 26,394	$ 3,053	$ 901	$165	$ 30,513	$1,265	$ 31,778
Effect of adoption of ASU 2010-28	—	(1,466)	—	—	(1,466)	—	(1,466)

Accumulated impairment charges at December 31, 2012	$(26,399)	$(3,072)	$(426)	$ —	$(29,897)	$ —	$(29,897)

(a) Refer to Note 10 for additional information concerning the deconsolidation of VMM.

(b) Refer to Note 4 for additional information concerning the acquisition of HKJV.

In the three months ended December 31, 2012, 2011 and 2010 we performed our annual goodwill impairment testing as of October 1 for all reporting units. In addition, in the years ended December 31, 2012 and 2011, we performed event-driven goodwill impairment tests at various dates for certain of our reporting units.

GMNA

Subsequent to our 2012 annual goodwill impairment testing, we reversed $36.2 billion of our deferred tax asset valuation allowances for our GMNA reporting unit. The reversal of the deferred tax asset valuation allowances resulted in the carrying amount of our GMNA reporting unit exceeding its fair value. As a result we performed an event-driven goodwill impairment test in the three months ended December 31, 2012. Based on the results of this event-driven impairment test we recorded a Goodwill impairment charge of $26.4 billion in the three months ended December 31, 2012. At December 31, 2012, GMNA's Goodwill balance was $0. Refer to Note 21 for additional information on the reversal of our deferred tax asset valuation allowances for our U.S. and Canadian operations.

GME

We adopted the provisions of ASU 2010-28, "When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts" (ASU 2010-28) on January 1, 2011 and performed Step 2 of the goodwill impairment testing analysis for our GME reporting unit which had a negative carrying amount resulting in the recognition of a cumulative-effect adjustment to beginning Retained earnings. GME continued to have a negative carrying amount and because it was more likely than not further goodwill impairment existed at March 31, 2012 and at December 31, and March 31, 2011, we recorded aggregate Goodwill impairment charges of $590 million and $1.0 billion in the years ended December 31, 2012 and 2011. At March 31, 2012, GME's Goodwill balance was $0.

GMIO

Based on our annual goodwill impairment testing we determined that goodwill was impaired for our GM Korea reporting unit at October 1, 2011, as the fair value of GM Korea decreased below its carrying amount. We performed event-driven goodwill impairment tests for GM Korea for each three month period ended subsequent to October 1, 2011. The decrease in 2011 of GM Korea's fair value was driven by a higher level of anticipated economic weakness in certain markets to which GM Korea exports coupled with lower forecasted margins resulting from higher raw material costs and unfavorable foreign exchange rates. Subsequent to our 2011 annual impairment testing we reversed a deferred tax asset valuation allowance for our GM Holden, Ltd. (Holden) reporting unit that resulted in the carrying amount of this reporting unit exceeding its fair value. At December 31, 2011 Holden's goodwill balance was $0. At October 1, 2012 based on our annual goodwill impairment testing we determined that the fair value of GM South Africa decreased below its carrying amount. Based on the results of our annual and event-driven goodwill impairment tests, we recorded total Goodwill impairment charges of $156 million and $270 million in the years ended December 31, 2012 and 2011 within our GMIO segment. At December 31, 2012 GM South Africa's goodwill balance was $0.

Impairment Charges

The impairment charges recorded as a result of the initial adoption of ASU 2010-28 and the annual and event-driven goodwill impairment tests in the years ended December 31, 2012 and 2011 represent the net decreases in implied goodwill resulting primarily from decreases in the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon our application of fresh-start reporting. The net decreases resulted primarily from the reversal of our deferred tax asset valuation allowances for certain reporting units thus resulting in the recorded amount for deferred taxes exceeding their fair values. The net decreases also resulted from improvements in our nonperformance risk and in our incremental borrowing rates since July 10, 2009. At certain of the testing dates the net decrease was also due to an increase in the high quality corporate bond rates utilized to measure our employee benefit obligations and a decrease in credit spreads between high quality corporate bond rates and market interest rates for companies with similar nonperformance risk. For the purpose of deriving an implied goodwill balance, deterioration in the business outlook for GME resulted in a reduction in the fair value of certain tax attributes and an increase in estimated employee benefit obligations. The amount of implied goodwill derived from GM Korea decreased primarily from a reduction in the fair value of certain tax attributes. The amount of implied goodwill derived from GMNA and Holden decreased primarily due to the recorded amount of deferred taxes exceeding the fair values of the tax attributes.

Fair Value Measurements

When performing our goodwill impairment testing, the fair values of our reporting units were determined based on valuation techniques using the best available information, primarily discounted cash flow projections. We make significant assumptions and estimates about the extent and timing of future cash flows, growth rates, market share and discount rates that represent unobservable inputs into our valuation methodologies. The cash flows are estimated over a significant future period of time, which makes those estimates and assumptions subject to a high degree of uncertainty. Where available and as appropriate, comparative market multiples and the quoted market price of our common stock are used to corroborate the results of the discounted cash flow method. Assumptions used in our discounted cash flow analysis that have the most significant effect on the estimated fair value of our reporting units (excluding GM Financial) include:

- Our estimated WACC;
- Our estimated long-term growth rates; and
- Our estimate of industry volumes and our market share.

The valuation methodologies utilized to perform our goodwill impairment testing were consistent with those used in our application of fresh-start reporting on July 10, 2009 and in any subsequent annual or event-driven goodwill impairment tests and utilized Level 3 measures. Because the fair value of goodwill can be measured only as a residual amount and cannot be determined directly we calculated the implied goodwill for those reporting units failing Step 1 in the same manner that goodwill is recognized in a business combination pursuant to Accounting Standards Codification (ASC) 805, "Business Combinations."

The following table summarizes the goodwill balances and key assumptions utilized for each of our reporting units that required a Step 2 analysis (dollars and vehicles in millions):

				Industry Volumes (a)		Market Share (a)	
	Goodwill(b)	WACC	Long-Term Growth Rates	2011/2012/2013	2015/2016	2011/2012/2013	2015/2016
GMNA — At December 31, 2012	$26,399	17.5%	1.5%	18.7	20.5	17.8%	18.9%
GME — At January 1, 2011	$ 3,053	17.0%	0.5%	18.4	22.0	6.6%	7.4%
GME — At March 31, 2011	$ 1,661	16.5%	0.5%	18.4	22.0	6.6%	7.4%
GME — At October 1, 2011	$ 1,246	17.5%	0.5%	19.4	21.7	6.7%	7.0%
GME — At December 31, 2011	$ 1,193	18.5%	0.5%	19.4	22.3	6.3%	6.9%
GME — At March 31, 2012	$ 594	17.5%	0.5%	19.1	21.9	6.2%	6.3%
GM Korea — At October 1, 2011 (c)	$ 615	15.5%	3.0%	81.0	97.1	1.4%	1.1%
GM Korea — At December 31, 2011 (c)	$ 596	15.5%	3.0%	81.0	97.1	1.4%	1.1%
GM Korea — At March 31, 2012 (c)	$ 564	14.8%	3.0%	81.0	97.1	1.4%	1.1%
GM Korea — At June 30, 2012 (c)	$ 523	14.8%	3.0%	81.0	97.1	1.4%	1.1%
GM Korea — At September 30, 2012 (c)	$ 540	14.5%	3.0%	82.1	99.8	1.2%	1.2%
GM Korea — At December 31, 2012 (c)	$ 481	14.0%	3.0%	85.0	99.7	1.2%	1.2%
Holden — At December 31, 2011	$ 197	14.0%	2.0%	1.2	1.3	12.5%	12.6%
GM South Africa — At October 1, 2012	$ 38	13.3%	3.5%	0.7	0.9	10.4%	10.0%

(a) GMNA forecast volumes at December 31, 2012 are 2013 through 2016. GME forecast volumes at January 1, 2011 and March 31, 2011 are 2011 through 2015 and are 2012 through 2016 thereafter. GM Korea forecast volumes are 2012 through 2015, except for at September 30, 2012 which are 2012 through 2016 and December 31, 2012 which are 2013 through 2016. Holden forecast volumes at December 31, 2011 are 2012 through 2015. GM South Africa forecast volumes at October 1, 2012 are 2012 through 2016.

(b) Represents the balance of Goodwill evaluated for impairment under the Step 2 analysis.

(c) Industry forecast volumes and market share for GM Korea are based on global industry volumes because GM Korea exports vehicles globally.

The WACCs considered various factors including bond yields, risk premiums and tax rates; the terminal values were determined using a growth model that applied a reporting unit's long-term growth rate to its projected cash flows beyond the forecast period; and industry volumes and a market share for each reporting unit included annual estimates through the forecast period. In addition minimum operating cash needs that incorporate specific business, economic and regulatory factors giving rise to varying cash needs were estimated.

During our Step 2 analyses we determined the fair values of these reporting units had not increased sufficiently to give rise to implied goodwill other than the goodwill arising from the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon application of fresh-start reporting. On the various testing dates noted in the table above, our Step 2 analyses indicated GMNA's, GME's, GM Korea's, GM South Africa's and Holden's implied goodwill was less than their recorded goodwill; therefore, goodwill was adjusted at the various dates indicated in the table above, except for at June 30, 2012 GM Korea's implied goodwill exceeded its recorded goodwill. As such GM Korea's goodwill was not adjusted at June 30, 2012.

Future goodwill impairments that may be material could be recognized should economic uncertainty continue, our equity price decline on a sustained basis, global economies enter into another recession and industry growth stagnates, or should we release deferred tax asset valuation allowances in certain tax jurisdictions. In these circumstances future goodwill impairments would largely be affected by decreases in the fair value-to-U.S.-GAAP differences that have occurred subsequent to our application of fresh-start reporting, which in the future would primarily occur upon reversal of our remaining deferred tax asset valuation allowances or a decline in the fair value of GM Financial. Any declines would have a negative effect on our earnings that could be material.

Our fair value estimates for annual and event-driven impairment tests assume the achievement of the future financial results contemplated in our forecasted cash flows and there can be no assurance that we will realize that value. The estimates and assumptions used are subject to significant uncertainties, many of which are beyond our control, and there is no assurance that anticipated financial results will be achieved.

Note 13. Intangible Assets, net

The following table summarizes the components of Intangible assets, net (dollars in millions):

	December 31, 2012				December 31, 2011			
	Weighted-Average Remaining Amortization Period in Years	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Weighted-Average Remaining Amortization Period in Years	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Technology and intellectual property	2	$ 7,775	$6,320	$1,455	3	$ 7,751	$5,081	$ 2,670
Brands	34	4,464	431	4,033	36	5,410	374	5,036
Dealer network and customer relationships	17	1,375	327	1,048	20	2,138	322	1,816
Favorable contracts	37	367	269	98	30	514	200	314
Other	0	17	17	—	1	17	14	3
Total amortizing intangible assets	25	13,998	7,364	6,634	24	15,830	5,991	9,839
Nonamortizing in process research and development		175		175		175		175
Total intangible assets		$14,173	$7,364	$6,809		$16,005	$5,991	$10,014

The following table summarizes the amortization expense and impairment charges related to Intangible assets, net (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Amortization expense	$1,568	$1,804	$2,561
Impairment charges	$1,755	$ —	$ —

The following table summarizes estimated amortization expense related to Intangible assets, net in each of the next five years (dollars in millions):

	2013	2014	2015	2016	2017
Estimated amortization expense	$1,165	$549	$251	$251	$249

GME Impairment Charges

The carrying amounts of substantially all of GME's assets were established at fair value during fresh-start reporting. In the determination of fair value, one of our key inputs was a forecasted cash flow projection. During 2010, our actual cash flows approximated our projection. During the second half of 2011 and continuing into 2012, the European automotive industry has been severely affected by the ongoing sovereign debt crisis, high unemployment and a lack of consumer confidence coupled with overcapacity. During this timeframe, we began to experience deterioration in cash flows. In response, we formulated a plan to implement various actions to strengthen our operations and increase our competitiveness. The key areas of the plan include investments in our product portfolio, a revised brand strategy, significant management changes, reducing material, development and production costs, and further leveraging synergies from the alliance between us and PSA.

We believe it is likely that adverse economic conditions, and their effect on the European automotive industry will not improve significantly in the short-term and we expect to continue to incur losses in the region as a result. During the fourth quarter of 2012, notwithstanding the above described actions, GME performed below expectations relative to the key operating metrics of forecasted revenues, market share, and variable profit established in mid-2012. Further, our industry outlook deteriorated, and our forecast of 2013 cash flows declined. This triggered a long-lived asset impairment analysis.

We performed a recoverability test of the GME asset group by weighting various undiscounted cash flow scenarios. The weighting of the projected cash flows considers the uncertainty in our ability to execute the actions contemplated in our plan which, in part, are dependent upon actions and factors outside our control. Our test concluded that the GME asset group was not recoverable as the resulting undiscounted cash flows were less than their carrying amount. Accordingly, we estimated the fair value of the GME long-lived assets to determine the impairment amount. Determining the fair value is judgmental in nature and requires the use of significant estimates and assumptions, considered to be Level 3 inputs.

To determine the estimated fair value of the brand intangible assets, we used the relief from royalty method, which is a form of the income approach. Under this approach, revenue associated with the brand is projected over the expected remaining useful life of the asset. A royalty rate is then applied to estimate the royalty savings. The royalty rate used was based on an analysis of empirical, market-derived royalty rates for guideline intangible assets and a profit split analysis to determine a rate that is economically supported by GME's forecasted profitability. The net after-tax royalty savings are calculated for each year during the remaining economic life of the asset and discounted to present value.

To determine the estimated fair value of the dealer network, we used the cost approach with adjustments in value for the overcapacity of dealers and the sales environment in the region. We determined the fair value to be $0.

The following table summarizes the significant Level 3 inputs for brand intangible assets measurements:

	Valuation Technique	Unobservable Input(s)	Percentage
Brand intangible assets	Income approach	Long-term growth rate	0.50%
		Pre-tax royalty rate (a)	0.14%
		Discount rate (b)	21.25%

(a) Represents estimated savings realized from owning the asset or having the royalty-free right to use the asset.

(b) Represents WACC adjusted for perceived business risks related to these intangible assets.

As a result of our fair value estimates, we adjusted the carrying amount of the GME intangible assets to fair value and recorded asset impairment charges of $1.8 billion at December 31, 2012. These charges were recorded in our GME segment with $1.6 billion recorded in Automotive selling, general and administrative expense and $0.2 billion recorded in Automotive cost of sales. The fair value estimates for GME's intangible assets are based on a valuation premise that assumes the assets' highest and best use are different than their current use due to the overall European macro-economic environment.

The following table summarizes brand intangible assets in GME measured at fair value utilizing Level 3 inputs on a nonrecurring basis (dollars in millions):

	Fair Value Measure	Level 1	Level 2	Level 3	Total Impairment
Year ended December 31, 2012	$139	$ —	$ —	$139	$1,755

Our recoverability test of the GME asset group includes real and personal property, resulting in additional impairment charges of $3.7 billion at December 31, 2012, for a total of $5.5 billion. Refer to Note 11 for additional information regarding the impairment of real and personal property.

Note 14. Restricted Cash and Marketable Securities

We are required to post cash and marketable securities as collateral as part of certain agreements that we enter into as part of our operations. Cash and marketable securities subject to contractual restrictions and not readily available are classified as Restricted cash and marketable securities. Restricted cash and marketable securities are invested in accordance with the terms of the underlying agreements. Refer to Note 7 for additional information on securities classified as Restricted cash and marketable securities.

Automotive

At December 31, 2012 and 2011 we held securities of $403 million and $562 million that were classified as Restricted cash and marketable securities.

The following table summarizes the components of Restricted cash and marketable securities (dollars in millions):

	December 31, 2012	December 31, 2011
Current		
Total current restricted cash and marketable securities (a)	$220	$ 206
Non-current		
Collateral for insurance related activities	74	407
Other restricted cash and marketable securities (a)	306	505
Total non-current restricted cash and marketable securities	380	912
Total restricted cash and marketable securities	$600	$1,118

(a) Includes amounts related to various deposits, escrows and other cash collateral.

Automotive Financing — GM Financial

The following table summarizes the components of Restricted cash (dollars in millions):

	December 31, 2012	December 31, 2011
Current		
Securitization notes and credit facilities	$442	$ 758
Other (a)	24	41
Total current restricted cash	466	799
Non-current		
Securitization notes and credit facilities	302	298
Other (a)	—	18
Total non-current restricted cash	302	316
Total restricted cash	$768	$1,115

(a) Pledged in association with derivative transactions and cash collections related to leases serviced for a third-party.

Note 15. Variable Interest Entities

Consolidated VIEs

Automotive

VIEs that we do not control through a majority voting interest that are consolidated because we are the primary beneficiary include certain vehicle assembling, manufacturing and selling venture arrangements, the most significant of which is GM Egypt. We consolidated GM Egypt in January 2010 in connection with our adoption of amendments to ASC 810, "Consolidation." GM Egypt, a 31% owned operating entity, assembles and manufactures vehicles. Certain voting and other rights permit us to direct those activities of GM Egypt that most significantly affect its economic performance. At December 31, 2012 and 2011; (1) Total assets of these VIEs were $436 million and $463 million, which were composed of Cash and cash equivalents, Accounts and notes receivables, net, Inventories, and Property, net; and (2) Total liabilities were $254 million and $298 million, which were composed of Accounts payable (principally trade), and Accrued and other liabilities. In the years ended December 31, 2012 and 2011 Total net sales and revenue recorded for these consolidated VIEs were $1.0 billion and $748 million and Net income was $56 million and $61 million. These amounts are stated prior to intercompany eliminations. Liabilities recognized as a result of consolidating VIEs generally do not represent claims against us or our other subsidiaries and assets recognized generally are for the benefit of the VIEs' operations and cannot be used to satisfy our obligations.

HKJV and GM Korea are non-wholly owned consolidated subsidiaries that we control through a majority voting interest. They are also VIEs because in the future they may require additional subordinated financial support.

The following table summarizes the liabilities of HKJV and GM Korea for which their creditors do not have recourse to our general credit (dollars in millions):

	December 31, 2012			December 31, 2011
	GM Korea	HKJV (a)	Total	GM Korea
Short-term debt	$124	$104	$228	$171
Current derivative	$ 18	$ —	$ 18	$ 44
Long-term debt	$ 2	$120	$122	$ 7

(a) Consolidated effective September 1, 2012. Refer to Notes 4 and 10 for additional information on the acquisition of HKJV.

In February 2011 we provided a guarantee to a minority shareholder in GM Korea to repurchase the GM Korea mandatorily redeemable preferred shares according to the redemption schedule should GM Korea not repurchase the shares. This guarantee decreased the amount of long-term debt which did not have recourse to our general credit in the years ended December 31, 2012 and 2011.

Automotive Financing — GM Financial

GM Financial finances its loan and lease origination volume through the use of credit facilities and securitization trusts that issue asset-backed securities to investors. GM Financial retains a residual interest in these entities and is not required to provide any additional financial support to its sponsored credit facilities and securitization SPEs. The SPEs are considered VIEs because they do not have sufficient equity at risk and are consolidated because GM Financial has the power over those activities that most significantly affect the economic performance of the SPEs. The finance receivables, leased assets and other assets held by these subsidiaries are not available to our creditors or creditors of our other subsidiaries. Refer to Notes 5, 6 and 17 for additional information on GM Financial's involvement with the SPEs.

Nonconsolidated VIEs

Automotive

VIEs that are not consolidated include certain vehicle assembling, manufacturing and selling venture arrangements and other automotive related entities to which we provided financial support, including HKJV prior to September 2012 and Ally Financial. We concluded these entities are VIEs because they do not have sufficient equity at risk or may require additional subordinated financial support. We currently lack the power through voting or similar rights to direct those activities of these entities that most significantly affect their economic performance. Our variable interests in these nonconsolidated VIEs include accounts and notes receivable, equity in net assets, guarantees and financial support, some of which were provided to certain current or previously divested suppliers in order to ensure that supply needs for production were not disrupted due to a supplier's liquidity concerns or possible shutdowns.

The following table summarizes the amounts recorded for nonconsolidated VIEs and the related off-balance sheet guarantees and maximum exposure to loss, excluding Ally Financial that is disclosed in Note 27 (dollars in millions):

	December 31, 2012		December 31, 2011	
	Carrying Amount	Maximum Exposure to Loss	Carrying Amount	Maximum Exposure to Loss
Assets				
Equity in net assets of nonconsolidated affiliates	$117	$113	$190	$186
Other assets	12	12	2	2
Total assets	$129	$125	$192	$188
Liabilities				
Other liabilities	$ 45		$198	
Off-Balance Sheet				
Loan commitments		$ 15		$ 15
Other liquidity arrangements (a)		17		220
Total guarantees and liquidity arrangements		$ 32		$235

(a) Amounts at December 31, 2011 represented additional contingent future capital funding requirements related primarily to HKJV.

Refer to Note 27 for additional information on Ally Financial, including our maximum exposure to loss under agreements with Ally Financial and our recorded investment in Ally Financial. Refer to Notes 4 and 10 for additional information on our investment in HKJV.

Note 16. Accrued Liabilities, Other Liabilities and Deferred Income Taxes

The following table summarizes the components of Accrued liabilities and Other liabilities and deferred income taxes (dollars in millions):

	December 31, 2012	December 31, 2011
Current		
Dealer and customer allowances, claims and discounts	$ 7,722	$ 6,820
Deposits primarily from rental car companies	4,250	4,883
Deferred revenue	1,326	1,137
Policy, product warranty and recall campaigns	2,919	3,061
Payrolls and employee benefits excluding postemployment benefits	2,144	1,993
Other	4,947	4,981
Total accrued liabilities	$23,308	$22,875
Non-current		
Deferred revenue	$ 1,169	$ 1,300
Policy, product warranty and recall campaigns	4,285	3,539
Employee benefits excluding postemployment benefits	1,359	1,380
Postemployment benefits including facility idling reserves	1,518	1,674
Other	4,838	4,549
Total other liabilities and deferred income taxes	$13,169	$12,442

The following table summarizes activity for policy, product warranty, recall campaigns and certified used vehicle warranty liabilities (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Beginning balance	$ 6,600	$ 6,789	$ 7,030
Warranties issued and assumed in period	3,394	3,062	3,204
Payments	(3,393)	(3,740)	(3,662)
Adjustments to pre-existing warranties	539	565	210
Effect of foreign currency translation	64	(76)	7
Ending balance	$ 7,204	$ 6,600	$ 6,789

Note 17. Short-Term and Long-Term Debt

Automotive

Short-Term Debt and Long-Term Debt

The following table summarizes the components of our short-term debt and long-term debt (dollars in millions):

	December 31, 2012	December 31, 2011
Short-term debt		
Wholesale financing (a)	$ 889	$ 1,081
GM Korea mandatorily redeemable preferred shares	467	312
Capital leases	183	139
Other short-term debt and current portion of long-term debt	209	150
Total automotive short-term debt and current portion of long-term debt	1,748	1,682
Long-term debt		
Canadian Health Care Trust (HCT) notes	1,239	1,141
GM Korea mandatorily redeemable preferred shares	—	666
Capital leases	855	853
Other long-term debt (a)	1,330	953
Total automotive long-term debt	3,424	3,613
Total automotive debt (b)	$ 5,172	$ 5,295
Fair value of automotive debt (c)	$ 5,298	$ 5,467
Available under credit facility agreements	$ 11,119	$ 5,308
Interest rate range on outstanding debt (d)	0.0-19.0%	0.0-19.0%
Weighted-average interest rate on outstanding short-term debt (d)	3.7%	5.0%
Weighted-average interest rate on outstanding long-term debt (d)	4.0%	3.6%

(a) Includes debt obligations to Ally Financial of $869 million and $1.1 billion at December 31, 2012 and 2011.

(b) Net of a $1.1 billion and $1.6 billion discount at December 31, 2012 and 2011.

(c) The fair value of debt included $4.1 billion and $4.4 billion measured utilizing Level 2 inputs at December 31, 2012 and 2011. The fair value of debt included $1.2 billion and $1.1 billion measured utilizing Level 3 inputs at December 31, 2012 and 2011.

(d) Includes coupon rates on debt denominated in various foreign currencies and interest free loans.

The Level 2 fair value measurements utilize a discounted cash flow model. The valuation is reviewed internally by personnel with appropriate expertise in valuation methodologies. This model utilizes observable inputs such as contractual repayment terms and benchmark forward yield curves, plus a spread that is intended to represent our nonperformance risk for secured or unsecured obligations. We estimate our nonperformance risk using our corporate credit rating, the rating on our secured revolving credit facilities, yields on traded bonds of companies with comparable credit ratings and risk profiles. We acquire the benchmark yield curves and nonperformance risk spread from independent sources that are widely used in the financial industry. In certain circumstances we adjust the valuation of debt for additional nonperformance risk or potential prepayment probability scenarios. We may use a probability weighting of prepayment scenarios when the stated rate exceeds market rates and the instrument contains prepayment features. The prepayment scenarios are adjusted to reflect the views of market participants. The fair value measurements subject to additional adjustments for nonperformance risk or prepayment have been categorized within Level 3.

The following table summarizes our short-term and long-term debt by collateral type (dollars in millions):

	December 31, 2012	December 31, 2011
Unsecured debt	$2,952	$3,065
Secured debt (a)	1,182	1,238
Capital leases	1,038	992
Total automotive debt	$5,172	$5,295

(a) Includes wholesale financing of dealer inventory.

Wholesale Financing

Wholesale financing represents arrangements, primarily with Ally Financial, where cash is received in advance of the final sale of vehicles, parts and accessories to our dealers or ultimate consumer. These obligations typically settle through the sale and delivery of our product and generally do not require cash outflows to settle. Balances under these facilities fluctuate period to period based on the volume of vehicles financed.

HCT Notes

As part of the establishment of the HCT to provide retiree healthcare benefits to certain active and retired employees in Canada, we issued notes to the HCT with a fair value of $1.1 billion in October 2011. We recorded a premium of $42 million at issuance. The notes accrue interest at an annual rate of 7.0%. The notes are due in periodic installments through 2018. We may prepay these notes at any time. Refer to Note 18 for additional information on the HCT settlement.

GM Korea Preferred Shares

GM Korea has outstanding non-convertible mandatorily redeemable preferred shares. Dividends accrued at a rate of 2.5% through October 2012 at which time the rate increased to 7.0% and remains in effect through 2017. The mandatorily redeemable preferred shares are redeemable in periodic installments through 2017. In February 2011 we provided a guarantee to repurchase the mandatorily redeemable preferred shares according to the redemption schedule if GM Korea does not have sufficient legally distributable earnings. In December 2012 GM Korea made a payment of $671 million to redeem early a portion of shares that had a carrying amount of $429 million and the difference was recorded as a loss on extinguishment of debt. GM Korea has the option to redeem the remainder of the shares early provided sufficient legally distributable earnings exist.

Secured Revolving Credit Facilities

In November 2012 we entered into two new secured revolving credit facilities with an aggregate borrowing capacity of $11.0 billion. These facilities consist of a three-year, $5.5 billion facility and a five-year, $5.5 billion facility and replaced our previous five-year, $5.0 billion secured revolving credit facility that we entered into in October 2010. Availability under the secured revolving credit facilities is subject to borrowing base restrictions.

The three-year, $5.5 billion facility is available to GM Financial as well as certain wholly-owned domestic and international subsidiaries. The facility includes various sub-limits including a GM Financial borrowing sub-limit of $4.0 billion, a multi-currency borrowing sub-limit of $3.5 billion, a Brazilian Real borrowing sub-limit of approximately $485 million and a letter of credit sub-facility limit of $1.5 billion. We had amounts in use under the letter of credit sub-facility of $207 million at December 31, 2012.

The five-year, $5.5 billion facility allows for borrowings in U.S. Dollars and other currencies and includes a letter of credit sub-limit of $500 million. This facility is not available to GM Financial.

Our obligations under the secured revolving credit facilities are guaranteed by certain of our domestic subsidiaries and by a substantial portion of our domestic assets including accounts receivable, inventory, property, plant and equipment, intellectual property and trademarks, equity interests in certain of our direct domestic subsidiaries as well as up to 65% of the voting equity interests in certain of our direct foreign subsidiaries, in each case, subject to certain exceptions. The collateral securing the secured revolving credit facilities does not include, among other assets, cash, cash equivalents and marketable securities as well as our investments in GM Financial, GM Korea and in our China JVs. If we receive an investment grade corporate rating from two or more of the following credit rating agencies: Fitch Ratings, Moody's Investor Service and Standard & Poor's, we will no longer have to post collateral or provide guarantees from certain domestic subsidiaries under the terms of the facilities. If we fail to maintain an investment grade corporate rating from at least two of the above listed rating agencies, these guarantees will be reinstated.

The secured revolving credit facilities contain representations, warranties and covenants customary for facilities of this nature, including negative covenants restricting incurring liens, consummating mergers or sales of assets and incurring secured indebtedness, and restricting us from making restricted payments, in each case, subject to exceptions and limitations. These restricted payments include, among others, limitations on our ability to pay dividends and purchase our common stock in certain circumstances. The facilities contain minimum liquidity covenants, which require us to maintain at least $4.0 billion in consolidated global liquidity and at least $2.0 billion in consolidated U.S. liquidity.

Interest rates on obligations under the secured revolving credit facilities are based on prevailing per annum interest rates for Eurodollar loans or an alternative base rate plus an applicable margin, in each case, based upon the credit rating assigned to the secured revolving credit facilities or our corporate rating depending on certain criteria.

UST Credit Agreement

In April 2010 we repaid the full outstanding amount under the loan agreement with the United States Department of the Treasury (UST). Amounts repaid under the agreement may not be reborrowed. While we have repaid the loans from the UST in full, certain of the covenants in the UST credit agreement remain, including covenants regarding executive compensation and expense policies. These covenants remain effective until it is determined that we are not a recipient of exceptional financial assistance or their earlier termination.

Gains (Losses) on Extinguishment of Debt

In the year ended December 31, 2012 we prepaid and retired debt obligations with a total carrying amount of $514 million and recorded a loss on extinguishment of debt of $250 million which primarily represented the unamortized debt discount on the GM Korea mandatorily redeemable preferred shares of $242 million. In the year ended December 31, 2011 we prepaid and retired in full debt facilities of $1.0 billion held by certain of our subsidiaries, primarily in GMNA and GMSA, and recorded a gain on these debt facilities of $18 million. In the year ended December 31, 2010 we repaid in full the outstanding amount (together with accreted interest thereon) of the VEBA Note Agreement (VEBA Notes) of $2.8 billion, which resulted in a gain on extinguishment debt of $198 million.

Technical Defaults and Covenant Violations

Several of our loan facilities, including our secured revolving credit facilities require compliance with certain financial and operational covenants as well as regular reporting to lenders, including providing certain subsidiary financial statements. Failure to meet certain of these requirements may result in a covenant violation or an event of default depending on the terms of the agreement. An event of default may allow lenders to declare amounts outstanding under these agreements immediately due and payable, to enforce their interests against collateral pledged under these agreements or restrict our ability to obtain additional borrowings. No technical defaults or covenant violations existed at December 31, 2012.

Automotive Financing — GM Financial

The following table summarizes the current and non-current portion of debt (dollars in millions):

	December 31, 2012	December 31, 2011
Short-term debt and current portion of long-term debt	$ 3,770	$4,118
Long-term debt	7,108	4,420
Total GM Financial debt	$10,878	$8,538

The following table summarizes the carrying amount and fair value of debt (dollars in millions):

		December 31, 2012		December 31, 2011	
	Level	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Credit facilities					
Medium-term note facility	3	$ —	$ —	$ 294	$ 294
Syndicated warehouse facility	2	—	—	621	621
Lease warehouse facilities	2	354	354	181	181
Bank funding facility	3	—	—	3	3
Total credit facilities		354	354	1,099	1,099
Securitization notes payable					
Securitization notes payable	1	8,534	8,669	6,938	6,946
Private securitization 2012-PP1	3	490	502		
Total securitization notes payable		9,024	9,171	6,938	6,946
Senior notes	2	1,500	1,620	501	511
Total GM Financial debt		$10,878	$11,145	$8,538	$8,556

The carrying amounts of the syndicated warehouse facility and lease warehouse facilities are considered to be a reasonable estimate of their fair values because these facilities have variable rates of interest and maturities of approximately one year. The fair values of the bank funding facility, securitization notes payable and senior notes are based on quoted market prices, when available. If quoted prices are not available the market value is estimated by discounting future net cash flows expected to be settled using a current risk-adjusted rate.

The estimated fair value of the medium-term note facility is based on observable and unobservable inputs. Observable inputs are used regarding an advance rate on the receivables to generate an estimated debt amount as well as the interest rate used to calculate the series of estimated principal payments. Those series of principal and interest payments are discounted using an unobservable interest rate based on the most recent securitization in order to estimate fair value which would approximate the market value.

GM Financial uses observable and unobservable inputs to estimate the fair value for the private securitization 2012-PP1. Unobservable inputs are related to the structuring of the debt into various classes, which is based on public securitizations issued during the same time frame. Observable inputs are used by obtaining active prices based on the securitization debt issued during the same time frame. These observable inputs are then used to create expected market prices (unobservable inputs), which are then applied to the debt classes in order to estimate fair value which would approximate market value.

Credit Facilities

The following table summarizes further details regarding terms and availability of GM Financial's credit facilities at December 31, 2012 (dollars in millions):

	Facility Amount	Advances Outstanding	Assets Pledged	Restricted Cash Pledged (a)
Syndicated warehouse facility (b)	$2,500	$ —	$ —	$—
Canada lease warehouse facility (c)	$ 803	354	540	3
U.S. lease warehouse facility (d)	$ 600	—	—	—
		$354	$540	$ 3

(a) These amounts do not include cash collected on finance receivables and leasing related assets pledged of $12 million which is included in Restricted cash and marketable securities.

(b) In May 2013 when the revolving period ends, and if the facility is not renewed, the outstanding balance will be repaid over time based on the amortization of the receivables pledged until February 2020 when the remaining balance will be due and payable.

(c) In July 2013 when the revolving period ends, and if the facility is not renewed, the outstanding balance will be repaid over time based on the amortization of the leasing related assets pledged until January 2019 when any remaining balance will be due and payable. Borrowings in the facility are collateralized by leased assets. At December 31, 2012 the facility amount represents Canadian Dollar (CAD) $800 million and the advances outstanding amount represents CAD $353 million.

(d) In January 2013 GM Financial extended the maturity date of this facility to May 2014. In May 2014 when the revolving period ends, and if the facility is not renewed, the outstanding balance will be repaid over time based on the amortization of the related leased assets pledged until November 2019 when any remaining amount outstanding will be due and payable.

As previously described GM Financial has the ability to borrow against our three-year $5.5 billion secured revolving credit facility.

Credit Facility Covenants

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under the credit facilities. GM Financial's funding agreements contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios (portfolio net loss and delinquency ratios, and pool level cumulative net loss ratios) as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements, the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements, restrict GM Financial's ability to obtain additional borrowings and/or remove GM Financial as servicer. As of December 31, 2012 GM Financial was in compliance with all covenants in its credit facilities.

Securitization Notes Payable

Securitization notes payable represents debt issued by GM Financial in securitization transactions. Debt issuance costs are amortized over the expected term of the securitizations on an effective yield basis. As a result of the acquisition, GM Financial recorded a purchase accounting premium of $133 million that is being amortized over the expected term of the notes. At December 31, 2012 and 2011 unamortized purchase accounting premium of $11 million and $43 million is included in Securitization notes payable.

The following table summarizes securitization notes payable (dollars in millions):

	December 31, 2012					December 31, 2011
Year of Transactions	Maturity Dates (a)	Original Note Amounts	Original Weighted-Average Interest Rates	Total Receivables Pledged	Note Balance	Note Balance
2006	January 2014	$ 1,200	5.4%	$ —	$ —	$ 63
2007	October 2013 – March 2016	$1,000 - 1,500	5.2% - 5.5%	—	—	794
2008	January 2015 – April 2015	$ 500	8.7% - 10.5%	147	24	171
2009	January 2016 – July 2017	$ 227 - 725	2.7% - 7.5%	207	160	298
2010	July 2017 – April 2018	$ 200 - 850	2.2% - 3.8%	1,230	1,095	1,756
2011	July 2018 – March 2019	$ 800 - 1,000	2.4% - 2.9%	2,728	2,519	3,813
2012	June 2019 – May 2020	$ 800 - 1,300	1.4% - 2.9%	5,590	5,215	
				$9,902	9,013	6,895
Purchase accounting premium					11	43
Total securitization notes payable					$9,024	$6,938

(a) Maturity dates represent final legal maturity of securitization notes payable. Securitization notes payable are expected to be paid based on amortization of the finance receivables pledged to the trusts.

At the time of securitization of finance receivables, GM Financial is required to pledge assets equal to a specified percentage of the securitization pool to support the securitization transaction. The assets pledged consist of cash deposited to a restricted account and additional receivables delivered to the trust, which create overcollateralization. The securitization transactions require the percentage of assets pledged to support the transaction to increase until a specified level is attained. Excess cash flows generated by the trusts are added to the restricted cash account or used to pay down outstanding debt in the trusts, creating overcollateralization until the targeted percentage level of assets has been reached. Once the targeted percentage level of assets is reached and maintained, excess cash flows generated by the trusts are released to GM Financial as distributions from trusts. As the balance of the securitization pool declines, the amount of pledged assets needed to maintain the required percentage level is reduced. Assets in excess of the required percentage are also released to GM Financial as distributions from trusts.

Senior Notes

In August 2012 GM Financial issued 4.75% senior notes of $1.0 billion which are due in August 2017 with interest payable semiannually. GM Financial intends to use the net proceeds from this offering for general corporate purposes including, but not limited to, acquisitions. The notes are guaranteed by GM Financial's principal operating subsidiary.

In connection with the issuance of these senior notes, GM Financial entered into a registration rights agreement that requires GM Financial to file a registration statement with the Securities and Exchange Commission (SEC) for an exchange offer with respect to the 4.75% senior notes and the subsidiary guaranty. If the registration statement has not been declared effective by the SEC within 365 days from the original issuance of the senior notes or ceases to remain effective, GM Financial will be required to pay the 4.75% senior note holders a maximum amount of $0.50 per week of additional interest per $1,000 of principal during the time the registration statement is not effective, for a period of up to one year.

In June 2011 GM Financial issued 6.75% senior notes of $500 million which are due in June 2018 with interest payable semiannually. In July 2011 proceeds of $71 million from this offering were used to redeem all of GM Financial's outstanding 8.50% senior notes due in 2015. The remaining proceeds are to be used for general corporate purposes.

Interest Expense

Consolidated

The following table summarizes interest expense (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Loans from UST	$ —	$ —	$ 117
Canadian Loan	—	—	26
VEBA Notes	—	—	166
Capital leases	98	101	72
Amortization of debt discounts and issuance fees	189	200	163
Ally Financial, primarily wholesale financing	41	63	243
Other	161	176	311
Total Automotive interest expense	489	540	1,098
GM Financial interest expense	283	204	37
Total interest expense	$772	$744	$1,135

Debt Maturities

Consolidated

The following table summarizes contractual maturities including capital leases at December 31, 2012 (dollars in millions):

	Automotive	Automotive Financing (a)	Total
2013	$1,289	$ 3,760	$ 5,049
2014	315	2,324	2,639
2015	473	1,772	2,245
2016	363	1,073	1,436
2017	1,391	1,438	2,829
Thereafter	2,369	500	2,869
	$6,200	$10,867	$17,067

(a) GM Financial credit facilities and securitization notes payable are based on expected payoff date. Senior notes principal amounts are based on maturity.

At December 31, 2012 future interest payments on automotive capital lease obligations were $644 million. GM Financial does not have capital lease obligations at December 31, 2012.

Note 18. Pensions and Other Postretirement Benefits

Employee Pension and Other Postretirement Benefit Plans

Defined Benefit Pension Plans

Defined benefit pension plans covering eligible U.S. hourly employees (hired prior to October 15, 2007) and Canadian hourly employees generally provide benefits of negotiated, stated amounts for each year of service and supplemental benefits for employees who retire with 30 years of service before normal retirement age. The benefits provided by the defined benefit pension plans covering eligible U.S. (hired prior to January 1, 2001) and Canadian salaried employees and employees in certain other non-U.S. locations are generally based on years of service and compensation history. Accrual of defined pension benefits ceased on September 30, 2012 for U.S. salaried employees and on December 31, 2012 for Canadian salaried employees. There is also an unfunded nonqualified pension plan covering primarily U.S. executives for service prior to January 1, 2007 and it is based on an "excess plan" for service after that date.

Pension Contributions

The funding policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulations or to directly pay benefit payments where appropriate. At December 31, 2012 all legal funding requirements had been met. We expect to contribute $97 million to our U.S. non-qualified plans and $823 million to our non-U.S. pension plans in 2013.

The following table summarizes contributions made to the defined benefit pension plans or direct payments to plan beneficiaries (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
U.S. hourly and salaried	$2,420	$1,962	$4,095
Non-U.S.	855	836	777
Total	$3,275	$2,798	$4,872

We made a voluntary contribution in January 2011 to our U.S. hourly and salaried defined benefit pension plans of 61 million shares of our common stock valued at $2.2 billion for funding purposes at the time of contribution. The contributed shares qualified as a plan asset for funding purposes at the time of contribution and as a plan asset valued at $1.9 billion for accounting purposes in July 2011. This was a voluntary contribution above our funding requirements for the pension plans.

We continue to pursue various options to fund and derisk our pension plans, including continued changes to the pension asset portfolio mix to reduce funded status volatility.

Other Postretirement Benefit Plans

Certain hourly and salaried defined benefit plans provide postretirement medical, dental, legal service and life insurance to eligible U.S. and Canadian retirees and their eligible dependents. Certain other non-U.S. subsidiaries have postretirement benefit plans, although most non-U.S. employees are covered by government sponsored or administered programs.

OPEB Contributions

The following table summarizes contributions to the U.S. OPEB plans (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Employer contributions	$432	$426	$651
Plan participants' contributions	4	13	53
Total contributions	$436	$439	$704

For the year ended December 31, 2011 we also contributed $1.9 billion to the independent HCT consisting of restricted cash of $0.8 billion and notes payable of $1.1 billion.

Defined Contribution Plans

We have a defined contribution plan for eligible U.S. salaried employees. This plan provides discretionary matching contributions which we instituted in October 2009. U.S. hourly employees hired after October 1, 2007 also participate in a defined contribution plan. Contributions are also made to certain non-U.S. defined contribution plans.

The following table summarizes our contributions to defined contribution plans (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Total contributions	$352	$297	$241

Significant Plan Amendments, Benefit Modifications and Related Events

U.S. Salaried Defined Benefit Pension Plan

In January 2012 we amended the salaried pension plan to cease the accrual of additional benefits effective September 30, 2012. This amendment resulted in a curtailment which decreased the pension liability and decreased the net pre-tax actuarial loss component of Accumulated other comprehensive loss by $309 million. Active plan participants receive additional contributions in the defined contribution plan starting in October 2012.

In August 2012 the salaried pension plan was amended to divide the plan to create a new legally separate defined benefit plan primarily for active and terminated vested participants. After the amendment the original salaried pension plan (Retiree Plan) covers the majority of retirees currently receiving payments. As a result of this amendment a remeasurement of the Retiree Plan on August 1, 2012 increased the pension liability and the net pre-tax actuarial loss component of Accumulated other comprehensive loss by $654 million, due primarily to a decrease in the discount rate from 4.21% to 3.37% on a weighted-average basis, partially offset by actual asset returns in excess of expected amounts.

In August 2012 lump-sum distributions of $3.6 billion were made from the Retiree Plan to 12,500 plan participants resulting in a partial plan settlement necessitating a plan remeasurement for the Retiree Plan on August 31, 2012. The settlement resulted in a pre-tax loss of $54 million. The effect on our financial condition was insignificant.

In November and December 2012 the Retiree Plan purchased group annuity contracts from an insurance company and paid a total annuity premium of $25.1 billion and the Retiree Plan settled two other previously guaranteed obligations, with separate insurance companies, totaling $1.9 billion. These agreements unconditionally and irrevocably guarantee the full payment of all annuity payments to the participants in the Retiree Plan and assume all investment risk associated with the assets that were delivered as the annuity contract premiums.

Through these annuity purchase transactions we have settled the remaining obligations of the Retiree Plan in their entirety resulting in a pre-tax settlement loss of $2.5 billion ($2.1 billion after tax) in Automotive cost of sales. The pre-tax loss is composed of existing losses in Accumulated other comprehensive loss of $377 million, and the premium paid to the insurance company of $2.1 billion. The tax benefit of $413 million is composed of the statutory tax benefit of $1.0 billion offset by tax expense of $596 million associated with the removal of prior period income tax allocations between Accumulated other comprehensive loss and Income tax expense (benefit).

In 2012 we provided short-term, interest-free, unsecured loans to the Retiree Plan to provide the plan with incremental liquidity to pay ongoing benefits and administrative costs. In August 2012 we loaned the Retiree Plan $2.0 billion with principal due within 90 days. In the three months ended December 31, 2012 $1.5 billion of the $2.0 billion loan was contributed to the Retiree Plan, $250 million was repaid to us and the remaining $250 million, which had been converted into a new interest-free loan, is due on or before April 15, 2013. In October 2012 we provided a loan of $180 million to the Retiree Plan that was repaid to us in December 2012. At December 31, 2012 $160 million of the remaining $250 million loan was deemed a contribution. Amounts loaned to the Retiree Plan in excess of the ultimate funding requirements will be repaid to us.

Canadian Salaried Defined Benefit Plans

In June 2012 we amended the Canadian salaried pension plan to cease the accrual of additional benefits effective December 31, 2012 and provide active employees a lump-sum distribution option at retirement. The remeasurement, amendments and offsetting curtailment increased the pension liability by $84 million, and resulted in a net decrease in the pre-tax components of Accumulated other comprehensive loss comprising net actuarial loss of $58 million, net actuarial curtailment gain of $20 million and prior service cost of $46 million. Active plan participants will receive additional contributions in the defined contribution plan starting in January 2013.

We also amended the Canadian salaried retiree healthcare plan to eliminate post-65 healthcare benefits for employees retiring on or after July 1, 2014. In conjunction with this change we amended the plan to offer either a monthly monetary payment or an annual lump-sum cash payment to a defined contribution plan for health care in lieu of the benefit coverage provisions formerly provided under the healthcare plan. These amendments decreased the OPEB liability by $28 million and resulted in a net increase in the pre-tax components of Accumulated other comprehensive loss comprising prior service credit of $51 million and net actuarial loss of $23 million.

Canadian HCT

In October 2011 pursuant to a June 2009 agreement between General Motors of Canada Limited (GMCL) and the CAW an independent HCT was implemented to provide retiree healthcare benefits to certain active and retired employees. Concurrent with the implementation of the HCT, GMCL was legally released from all obligations associated with the cost of providing retiree healthcare benefits to CAW retirees and surviving spouses by the class action process and to CAW active employees as of June 8, 2009. We accounted for the related termination of CAW hourly retiree healthcare benefits as a settlement and recorded a gain of $749 million in Automotive cost of sales. The settlement gain represents the difference between the healthcare plan obligation of $3.1 billion (as of the implementation date) and the fair value of the notes and restricted cash contributed totaling $1.9 billion, and recognition of Accumulated other comprehensive loss of $414 million.

Other Remeasurements

In March 2012 certain pension plans in GME were remeasured as part of our Goodwill impairment testing, resulting in an increase of $150 million in the pension liability and a pre-tax increase in the net actuarial loss component of Accumulated other comprehensive loss.

In September 2011 a plan which provides legal services to U.S. hourly employees and retirees was remeasured as a result of our labor agreement provisions which terminate the plan effective December 31, 2013. The negotiated termination has been accounted for as a negative plan amendment resulting in a decrease in the OPEB liability and a pre-tax increase of $266 million in the prior service credit component of Accumulated other comprehensive loss, which is being amortized through December 31, 2013.

In March 2011 certain pension plans in GME were remeasured as part of our Goodwill impairment testing, resulting in a decrease of $272 million in the pension liability and a pre-tax increase in the net actuarial gain component of Accumulated other comprehensive loss.

Refer to Note 12 for additional information on our Goodwill impairment.

Pension and OPEB Obligations and Plan Assets

The following tables summarize the change in benefit obligations and related plan assets (dollars in millions):

	Year Ended December 31, 2012			
	Pension Benefits		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
Change in benefit obligations

The following table summarizes the total accumulated benefit obligations (ABO), the fair value of plan assets for defined benefit pension plans with ABO in excess of plan assets, and the projected benefit obligation (PBO) and fair value of plan assets for defined benefit pension plans with PBO in excess of plan assets (dollars in millions):

	December 31, 2012		December 31, 2011	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
ABO	$82,103	$28,880	$108,195	$25,404
Plans with ABO in excess of plan assets				
ABO	$82,103	$28,156	$108,195	$24,687
Fair value of plan assets	$68,085	$14,702	$ 94,349	$13,738
Plans with PBO in excess of plan assets				
PBO	$82,110	$28,537	$108,562	$25,024
Fair value of plan assets	$68,085	$14,704	$ 94,349	$13,739

The following tables summarize the components of net periodic pension and OPEB expense along with the assumptions used to determine benefit obligations (dollars in millions):

	Year Ended December 31, 2012			
	Pension Benefits		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
Components of expense				
Service cost	$ 590	$ 411	$ 23	$ 16
Interest cost	4,055	1,110	234	63
Expected return on plan assets	(5,029)	(870)	—	—
Amortization of prior service cost (credit)	(1)	1	(116)	(12)
Recognized net actuarial loss	2	35	52	6
Curtailments, settlements and other losses	2,580	71	—	11
Net periodic pension and OPEB expense	$ 2,197	$ 758	$ 193	$ 84
Weighted-average assumptions used to determine benefit obligations				
Discount rate	3.59%	3.70%	3.68%	3.97%
Rate of compensation increase (a)	N/A	2.77%	4.50%	4.21%
Weighted-average assumptions used to determine net expense				
Discount rate	4.06%	4.45%	4.24%	4.31%
Expected return on plan assets	6.18%	6.20%	N/A	N/A
Rate of compensation increase	4.50%	3.15%	4.50%	4.21%

(a) As a result of ceasing the accrual of additional benefits for participants in the Retiree Plan in 2012, the rate of compensation increase does not have a significant effect on our U.S. pension plans.

	Year Ended December 31, 2011			
	Pension Benefits		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
Components of expense				
Service cost	$ 632	$ 399	$ 23	$ 30

Rate of compensation increase	3.94%	3.25%	1.48%	4.45%

U.S. pension plan service cost includes administrative expenses of $138 million, $138 million and $97 million for the years ended December 31, 2012, 2011 and 2010. Weighted-average assumptions used to determine net expense are determined at the beginning of the period and updated for remeasurements.

Non-U.S. pension plan service cost includes administrative expenses of $28 million for the year ended December 31, 2012.

The following table summarizes estimated amounts to be amortized from Accumulated other comprehensive loss into net periodic benefit cost in the year ended 2013 based on December 31, 2012 plan measurements (dollars in millions):

	U.S. Pension Plans	Non-U.S. Pension Plans	U.S. Other Benefit Plans	Non-U.S. Other Benefit Plans
Amortization of prior service (credit) cost	$(4)	$ 20	$(116)	$(15)
Amortization of net actuarial loss (gain)	6	206	91	7
	$ 2	$226	$ (25)	$ (8)

Assumptions

Healthcare Trend Rate

As a result of previous modifications made to healthcare plans, there are no significant uncapped U.S. healthcare plans remaining, therefore, the healthcare cost trend rate does not have a significant effect on our U.S. plans. The implementation of the HCT at October 31, 2011 eliminated significant exposure to changes in the healthcare cost trend rate for non-U.S. plans.

Assumed Healthcare Trend Rates	December 31, 2010
Initial healthcare cost trend rate	5.6%
Ultimate healthcare cost trend rate	3.4%
Number of years to ultimate trend rate	8

Healthcare trend rate assumptions are determined for inclusion in healthcare OPEB valuation at each remeasurement. The healthcare trend rates are developed using historical cash expenditures and near-term outlook for retiree healthcare. This information is supplemented with information gathered from actuarial based models, information obtained from healthcare providers and known significant events.

The following table summarizes the effect of a one-percentage point change in the assumed healthcare trend rates for non-U.S. plans (dollars in millions):

Change in Assumption	Effect on 2011 Aggregate Service and Interest Cost	Effect on December 31, 2010 APBO
One percentage point increase	$ 31	$ 491
One percentage point decrease	$(25)	$(392)

Investment Strategies and Long-Term Rate of Return

Detailed periodic studies conducted by outside actuaries and an internal asset management group, consisting of an analysis of capital market assumptions and employing Monte-Carlo simulations, are used to determine the long-term strategic mix among asset classes, risk mitigation strategies, and the expected long-term return on asset assumptions for the U.S. pension plans. The U.S. study includes a review of alternative asset allocation and risk mitigation strategies, anticipated future long-term performance of individual asset classes, risks evaluated using standard deviation techniques and correlations among the asset classes that comprise the plans' asset mix. Similar studies are performed for the significant non-U.S. pension plans with the assistance of outside actuaries and asset managers. While the studies incorporate data from recent plan performance and historical returns, the expected long-term return on plan asset assumptions are determined based on long-term, prospective rates of return.

The strategic asset mix and risk mitigation strategies for the plans are tailored specifically for each plan. Individual plans have distinct liabilities, liquidity needs, and regulatory requirements. Consequently, there are different investment policies set by individual plan fiduciaries. Although investment policies and risk mitigation strategies may differ among plans, each investment strategy is considered to be appropriate in the context of the specific factors affecting each plan.

In setting new strategic asset mixes, consideration is given to the likelihood that the selected mixes will effectively fund the projected pension plan liabilities, while aligning with the risk tolerance of the plans' fiduciaries. The strategic asset mixes for U.S. defined benefit pension plans are increasingly designed to satisfy the complementary objectives of reaching fully funded positions (market value of assets equal to or greater than the present value of the liabilities) and mitigating the possibility of a deterioration in funded status.

Derivatives may be used to provide cost effective solutions for rebalancing investment portfolios, increasing or decreasing exposure to various asset classes and for mitigating risks, primarily interest rate and currency risks. Equity and fixed income managers are permitted to utilize derivatives as efficient substitutes for traditional physical securities. Interest rate derivatives may be used to adjust portfolio duration to align with a plan's targeted investment policy. Alternative investment managers are permitted to employ leverage, including through the use of derivatives, which may alter economic exposure.

In January 2013 an investment policy study was completed for the U.S. pension plans taking into account the new plan structures that followed the derisking initiatives and annuity transactions executed during the second half of 2012. The study resulted in new target asset allocations being approved for the U.S. pension plans with resulting changes to the expected long-term return on assets. The weighted-average long-term return on assets decreased from 6.2% at December 31, 2011 to 5.8% due primarily to lower yields on fixed income securities. The U.S. hourly plan assets now represent 91% of the total U.S. pension plan assets compared to 65% at the end of 2011.

The expected long-term return on plan assets used in determining pension expense for non-U.S. plans is determined in a similar manner to the U.S. plans. The rates of 6.2% and 6.5% for the years ended December 31, 2012 and 2011 represent weighted-average rates of all of the funded non-U.S. plans.

Target Allocation Percentages

The following table summarizes the target allocations by asset category for U.S. and non-U.S. defined benefit pension plans:

	December 31, 2012		December 31, 2011	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
Asset Categories				
Equity	19%	30%	14%	34%
Debt	60%	53%	66%	45%
Alternatives (a)	21%	17%	20%	21%
Total	100%	100%	100%	100%

(a) Includes private equity, real estate and absolute return strategies which primarily consist of hedge funds.

Assets and Fair Value Measurements

The following tables summarize the fair value of defined benefit pension plan assets by asset class (dollars in millions):

	Fair Value Measurements of U.S. Plan Assets at December 31, 2012				Fair Value Measurements of Non-U.S. Plan Assets at December 31, 2012				Total U.S. and Non-U.S. Plan Assets

Transfers In and/or Out of Level 3

There were no significant transfers into and/or out of Level 3 within U.S. or non-U.S. plan assets during the years ended December 31, 2012 and 2011.

Investment Fund Strategies

Equity funds include funds that invest in U.S. common and preferred stocks as well as similar equity securities issued by companies incorporated, listed or domiciled in developed and/or emerging markets countries. Certain fund managers may attempt to profit from security mispricing in equity markets. Equity long/short managers typically construct portfolios consisting of long and short positions, which may be determined by a variety of techniques including fundamental, quantitative and technical analysis. Index funds, exchange traded funds and derivatives may be used for hedging purposes to limit exposure to various risk factors.

Fixed income funds include investments in high quality and high yield funds as well as in credit arbitrage funds. High quality fixed income funds invest in U.S. government securities, investment-grade corporate bonds, mortgages and asset-backed securities. High yield fixed income funds invest in U.S. high yield fixed income securities issued by corporations which are rated below investment grade, are unrated but are believed by the investment manager to have similar risk characteristics or are rated investment grade or higher but are priced at yields comparable to securities rated below investment grade and believed to have similar risk characteristics. Credit arbitrage funds invest in a variety of credit and credit-related instruments that allow fund managers to profit from mispricing of these credit instruments. Certain derivatives may be used for hedging purposes by some fixed income fund managers to limit exposure to various risk factors.

Funds of hedge funds include funds that invest in a portfolio of hedge funds. Funds of hedge fund managers typically seek to achieve their objectives by allocating capital across a broad array of funds and/or investment managers.

Global macro funds include funds that enter into leveraged transactions utilizing a variety of equity, fixed income and derivative instruments to benefit from anticipated price movements of stock, interest rates, foreign exchange currencies and physical commodities markets while minimizing downside risk. Global macro managers may invest in a variety of markets to participate in expected market movements.

Multi-strategy funds include funds that invest in broadly diversified portfolios of equity, fixed income and derivative instruments. Certain funds may also employ multiple alternative investment strategies, in combination, such as global macro, event-driven (which seeks to profit from opportunities created by significant transactional events such as spin-offs, mergers and acquisitions, bankruptcy reorganizations, recapitalizations and share buybacks) and relative value (which seeks to take advantage of pricing discrepancies between instruments including equities, debt, options and futures).

Other investment funds generally consist of funds that employ broad-ranging strategies and styles. The objective of such funds is to deliver returns having relatively low volatility and correlation to movements in major equity and bond markets. Funds in this category employ single strategies such as event-driven or relative value.

Private equity and debt investments principally consists of investments in private equity and debt funds. These investments are made to gain exposure to and benefit from long-term equity investments in private companies, including leveraged buy-outs, venture capital and distressed debt strategies.

Real estate investments include funds that invest in entities which are principally engaged in the ownership, acquisition, development, financing, sale and/or management of income-producing real estate properties, both commercial and residential. These funds typically seek long-term growth of capital and current income that is above average relative to public equity funds.

Significant Concentrations of Risk

The pension plans' assets include certain private investment funds, private equity and debt securities, real estate investments and derivative instruments. Investment managers may be unable to quickly sell or redeem some or all of these investments at an amount close or equal to fair value in order to meet a plan's liquidity requirements or to respond to specific events such as deterioration in the creditworthiness of any particular issuer or counterparty.

Illiquid investments held by the plans are generally long-term investments that complement the long-term nature of pension obligations and are not used to fund benefit payments when currently due. Plan management monitors liquidity risk on an ongoing basis and has procedures in place that are designed to maintain flexibility in addressing plan-specific, broader industry and market liquidity events.

The pension plans may invest in financial instruments denominated in foreign currencies and may be exposed to risks that the foreign currency exchange rates might change in a manner that has an adverse effect on the value of the foreign currency denominated assets or liabilities. Forward currency contracts may be used to manage and mitigate foreign currency risk.

The pension plans may invest in fixed income securities for which any change in the relevant interest rates for particular securities might result in an investment manager being unable to secure similar returns upon the maturity or the sale of securities. In addition, changes to prevailing interest rates or changes in expectations of future interest rates might result in an increase or decrease in the fair value of the securities held. Interest rate swaps and other financial derivative instruments may be used to manage interest rate risk.

Counterparty credit risk is the risk that a counterparty to a financial instrument will default on its commitment. Counterparty risk is primarily related to over-the-counter derivative instruments used to manage risk exposures related to interest rates on long-term debt securities and foreign currency exchange rate fluctuations. The risk of default can be influenced by various factors including macro-economic conditions, market liquidity, fiscal and monetary policies and counterparty-specific characteristics and activities. Certain agreements with counterparties employ set-off, collateral support arrangements and other risk mitigating procedures designed to reduce the net exposure to credit risk in the event of counterparty default. Credit policies and processes are in place to manage concentrations of counterparty risk by seeking to undertake transactions with large well-capitalized counterparties and by monitoring the creditworthiness of these counterparties. The majority of derivatives held by the plans at December 31, 2012 were fully collateralized and therefore, the related counterparty credit risk was significantly reduced.

Pension Funding Requirements

We are subject to a variety of U.S. federal rules and regulations, including the Employee Retirement Income Security Act of 1974, as amended and the Pension Protection Act of 2006, which govern the manner in which we fund and administer our pensions for our retired employees and their spouses. In 2012 the U.S. government enacted the Moving Ahead for Progress in the 21st Century Act which allows plan sponsors funding relief for pension plans through the application of higher funding interest rates. As a result, under current economic conditions, we expect no mandatory contributions to our U.S. qualified pension plans for at least five years. The new law does not impact our reported funded status. We have no funding requirements for our U.S. qualified plans in 2013.

We also maintain pension plans for employees in a number of countries outside the U.S. which are subject to local laws and regulations.

Benefit Payments

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service (dollars in millions):

	Pension Benefits (a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
2013	$ 6,052	$1,491	$ 421	$ 63
2014	$ 5,912	$1,507	$ 373	$ 65
2015	$ 5,861	$1,546	$ 366	$ 67
2016	$ 5,674	$1,575	$ 360	$ 70
2017	$ 5,558	$1,588	$ 356	$ 72
2018-2022	$25,259	$8,092	$1,713	$391

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our Cash and cash equivalents.

Note 19. Derivative Financial Instruments and Risk Management

Automotive

Derivatives and Hedge Accounting

In accordance with our risk management policy, we enter into a variety of foreign currency exchange rate and commodity derivative contracts to manage our exposure to fluctuations in certain foreign currency exchange rates and commodity prices. At December 31, 2012 and 2011 our derivative instruments consisted primarily of forward contracts and options, none of which were designated in hedging relationships. We manage our counterparty credit risk by monitoring the credit ratings of our counterparties and by requiring them to post collateral in certain circumstances. Agreements are entered into with counterparties that allow the set-off of certain exposures in order to manage the risk. Certain of our agreements with counterparties require that we provide cash collateral. At December 31, 2012 and 2011 no collateral was posted related to derivative instruments and we did not have any agreements with counterparties to derivative instruments containing covenants requiring the maintenance of certain credit rating levels or credit risk ratios that would require the posting of collateral in the event that such covenants are violated.

Fair Value of Derivatives

The following tables summarize fair value measurements of our derivative instruments measured on a recurring basis (dollars in millions):

	December 31, 2012				
		Derivative Assets		Derivative Liabilities	
	Notional	Current (a)	Non-Current (b)	Current (c)	Non-Current (d)
Foreign currency	$ 7,652	$118	$—	$19	$—
Commodity	1,851	17	3	7	—
Embedded	1,248	9	19	—	1
Total	$10,751	$144	$22	$26	$ 1

	December 31, 2011				
		Derivative Assets		Derivative Liabilities	
	Notional	Current (a)	Non-Current (b)	Current (c)	Non-Current (d)
Foreign currency	$ 6,507	$ 64	$ —	$46	$—
Commodity	2,566	9	—	10	5
Embedded	1,461	28	124	1	5
Total	$10,534	$101	$124	$57	$10

(a) Recorded in Other current assets.

(b) Recorded in Other assets.

(c) Recorded in Accrued liabilities.

(d) Recorded in Other liabilities and deferred income taxes.

	December 31, 2012				December 31, 2011			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total
Assets								
Foreign currency	$—	$118	$—	$118	$—	$64	$ —	$ 64
Commodity	—	9	11	20	—	9	—	9
Embedded	—	2	26	28	—	4	148	152
Total	$—	$129	$37	$166	$—	$77	$148	$225
Liabilities								
Foreign currency	$—	$ 19	$—	$ 19	$—	$46	$ —	$ 46
Commodity	—	7	—	7	—	5	10	15
Embedded	—	1	—	1	—	6	—	6
Total	$—	$ 27	$—	$ 27	$—	$57	$ 10	$ 67

We measure the fair value of our portfolio of foreign currency, commodity and embedded derivatives using industry accepted models. The significant Level 2 inputs used in the valuation of our derivatives include spot rates, forward rates, volatility and interest rates. These inputs are obtained from pricing services, broker quotes and other sources.

We entered into a power plant lease agreement which included the purchase of natural gas at a fixed price adjusted for movements in heavy fuel oil and coal indices as published by a German governmental agency. The natural gas agreement was determined to be a derivative for accounting purposes and is valued as a forward contract utilizing Level 3 inputs. The significant unobservable inputs used in the fair value measurement of our commodity derivative are coal and heavy fuel oil forward rates and supplier credit spreads. Significant increases (decreases) in the coal and heavy fuel oil index and supplier credit spread would result in significant decreases (increases) to the fair value measurement.

We are party to a long-term supply agreement which provides for pricing to be partially denominated in a currency other than the functional currency of the parties to the contract. This pricing feature was determined to be an embedded derivative which we have bifurcated for valuation and accounting purposes. This embedded derivative is valued using an industry accepted model which contains Level 3 inputs.

The significant unobservable inputs used in the fair value measurement of our embedded foreign currency derivative is the estimate of the Turkish central bank's Euro/Turkish Lira (TRY) forward exchange rate and monthly volume commitment and vehicle mix. Significant decreases (increases) to the Euro/TRY forward exchange rate and monthly volume commitment and vehicle mix would result in significant decreases (increases) to the fair value measurement.

The valuations are performed, reviewed and approved by personnel with appropriate expertise in valuation methodologies. For certain derivatives we compare our own valuations to valuations prepared by independent outside parties.

The following table summarizes the significant quantitative unobservable inputs and assumptions used in the fair value measurement of the derivatives at December 31, 2012:

	Valuation Technique	Significant Unobservable Input	Metric
Commodity	Discounted cash flow	Coal forward price per ton in Euro (a)	€ 93.09
		Heavy fuel oil forward price per ton in Euro (a)	€ 562.51
		Supplier nonperformance risk (average)	2.44%
Embedded	Discounted cash flow	Average Euro/TRY forward exchange rate (b)	€ 2.72
		Volume commitment and vehicle mix in Euro (c)	€909 million

(a) Forward prices are estimated to be equivalents of the spot price as published by a governmental agency.

(b) Calculated by adjusting market forward rates for the spread between current market and Turkish central bank spot prices.

(c) Volume commitment is spread evenly on a monthly basis and vehicle mix is pursuant to management forecasts.

Fair Value Measurements on a Recurring Basis Using Level 3 Inputs

The following table summarizes the activity for our derivative investments measured using Level 3 inputs (dollars in millions):

	Level 3 Net Assets and (Liabilities)					
	Year Ended December 31, 2012			Year Ended December 31, 2011		
	Embedded	Commodity	Total	Embedded	Commodity	Total
Balance at beginning of period	$ 148	$(10)	$ 138	$ —	$ —	$ —
Total realized/unrealized gains (losses) (a)						
Included in earnings	(104)	4	(100)	160	(10)	150
Included in OCI	(2)	(1)	(3)	(10)	—	(10)
Settlements	(16)	(6)	(22)	(2)	—	(2)
Issuances	—	24	24	—	—	—
Balance at end of period	$ 26	$ 11	$ 37	$148	$(10)	$138
Amount of total gains (losses) in the period included in earnings attributable to the change in unrealized gains (losses) relating to assets still held at the reporting date	$ (95)	$ 3	$ (92)	$157	$(10)	$147

(a) Realized and unrealized gains (losses) are recorded in Interest income and other non-operating income, net and foreign currency translation gains (losses) are recorded in Accumulated other comprehensive income.

Gains and (Losses) on Derivatives

The following table summarizes derivative gains (losses) recorded in Interest income and other non-operating income, net (dollars in millions):

	Years Ended December 31,		
	2012	**2011**	**2010**
Foreign Currency	$ 70	$ (30)	$ 82
Commodity	(31)	(98)	(25)
Embedded	(102)	165	(8)
Warrants	—	4	19
Total gains (losses) recorded in earnings	$ (63)	$ 41	$ 68

Other Derivatives

In February 2011 we exercised warrants to purchase 4 million shares of a supplier's common stock at $2.76 per share and sold the shares and received proceeds of $48 million.

In connection with our investment in New Delphi, which we accounted for using the equity method, we recorded our share of New Delphi's other comprehensive income (loss) in Accumulated other comprehensive income. In the three months ended March 31, 2011 we recorded cash flow hedging gains of $13 million and in the year ended December 31, 2010 we recorded cash flow hedging losses of $22 million related to our share of New Delphi's hedging gains and losses. In March 2011 we sold our interests in New Delphi. As a result previously recorded cash flow hedging losses of $10 million in Accumulated other comprehensive loss were reclassified to earnings and recorded in the gain on sale of New Delphi. Refer to Note 10 for additional information on the sale of New Delphi.

Automotive Financing — GM Financial

GM Financial is exposed to market risks arising from adverse changes in interest rates due to floating interest rate exposure on its credit facilities and on certain securitization notes payable and manages this exposure with interest rate swaps and caps. GM Financial had interest rate swaps and caps in asset positions with notional amounts of $775 million and $2.0 billion at December 31, 2012 and 2011. GM Financial had interest rate swaps and caps in liability positions with notional amounts of $775 million and $2.0 billion at December 31, 2012 and 2011. The fair value of these derivative financial instruments was insignificant.

Credit Risk Related Contingent Features

Under the terms of the derivative financial instruments, GM Financial is required to pledge certain funds to be held in restricted cash accounts as collateral for the outstanding derivative transactions. At December 31, 2012 and 2011 these restricted cash accounts totaled $4 million and $36 million and were recorded in Restricted cash and marketable securities.

Note 20. Commitments and Contingencies

The following tables summarize information related to commitments and contingencies (dollars in millions):

	December 31, 2012		December 31, 2011	
	Liability Recorded	Maximum Liability (a)	Liability Recorded	Maximum Liability (a)
Guarantees (b)				
Operating leases	$—	$ 9	$—	$ 26
Ally Financial commercial loans	$ 4	$ 6	$—	$ 24
Third-party commercial loans and other obligations	$70	$ 296	$ 7	$210
Other product-related claims	$51	$1,040	$53	$838

(a) Calculated as future undiscounted payments.

(b) Excludes residual support and risk sharing programs and vehicle repurchase obligations related to Ally Financial.

	December 31, 2012	December 31, 2011
	Liability Recorded	Liability Recorded
Credit card programs (a)		
Redemption liability (b)	$ 209	$ 123
Deferred revenue (c)	$ 355	$ 345
Environmental liability (d)	$ 166	$ 169
Product liability	$ 601	$ 514
Other litigation-related liability and tax administrative matters (e)	$1,728	$1,196

(a) At December 31, 2012 and 2011 qualified cardholders had rebates available, net of deferred program revenue, of $1.8 billion and $2.3 billion.

(b) Recorded in Accrued liabilities.

(c) Recorded in Other liabilities and deferred income taxes.

(d) Includes $33 million and $34 million recorded in Accrued liabilities at December 31, 2012 and 2011, and the remainder was recorded in Other liabilities and deferred income taxes.

(e) Primarily indirect tax-related litigation as well as various non-U.S. labor related matters.

Guarantees

We have provided guarantees related to the residual value of certain operating leases. These guarantees terminate in years ranging from 2016 to 2035. Certain leases contain renewal options.

We provide payment guarantees on commercial loans made by Ally Financial and outstanding with certain third-parties, such as dealers or rental car companies. These guarantees either expire in 2018 or are ongoing. We determined the fair value ascribed to the guarantees at inception and subsequent to inception to be insignificant based on the credit worthiness of the third-parties. Refer to Note 27 for additional information on guarantees that we provide to Ally Financial.

We have agreements with third-parties that guarantee the fulfillment of certain suppliers' commitments and other obligations. These guarantees expire in 2013 through 2017 or are ongoing, or upon the occurrence of specific events.

In some instances certain assets of the party whose debt or performance we have guaranteed may offset, to some degree, the cost of the guarantee. The offset of certain of our payables to guaranteed parties may also offset certain guarantees, if triggered. At December 31, 2012 any proceeds we would receive from collateral would be approximately $60 million.

In connection with certain divestitures of assets or operating businesses, we have entered into agreements indemnifying certain buyers and other parties with respect to environmental conditions and other closure costs pertaining to real property we owned. We periodically enter into agreements that incorporate indemnification provisions in the normal course of business. It is not possible to estimate our maximum exposure under these indemnifications or guarantees due to the conditional nature of these obligations. Immaterial amounts have been recorded for such obligations as the majority of them are not probable or estimable at this time and the fair value of the guarantees at issuance was insignificant.

In addition to the guarantees and indemnifying agreements previously discussed, we indemnify dealers for certain product liability related claims as subsequently discussed.

With respect to other product-related claims involving products manufactured by certain joint ventures, we believe that costs incurred are adequately covered by recorded accruals. These guarantees terminate in years ranging from 2020 to 2026.

Credit Card Programs

Credit card programs offer rebates that can be applied primarily against the purchase or lease of our vehicles.

Environmental Liability

Automotive operations, like operations of other companies engaged in similar businesses, are subject to a wide range of environmental protection laws, including laws regulating air emissions, water discharges, waste management and environmental remediation. We are in various stages of investigation or remediation for sites where contamination has been alleged. We are involved in a number of actions to remediate hazardous wastes as required by federal and state laws. Such statutes require that responsible parties fund remediation actions regardless of fault, legality of original disposal or ownership of a disposal site.

The future effect of environmental matters, including potential liabilities, is often difficult to estimate. An environmental reserve is recorded when it is probable that a liability has been incurred and the amount of the liability can be reasonably estimated. This practice is followed whether the claims are asserted or unasserted. Recorded liabilities are not reduced for possible recoveries from insurance carriers or other parties. Liabilities have been recorded for the expected costs to be paid over the periods of remediation for the applicable sites, which typically range from five to 30 years.

For many sites, the remediation costs and other damages for which we ultimately may be responsible may vary because of uncertainties with respect to factors such as the connection to the site or to materials there, the involvement of other potentially responsible parties, the application of laws and other standards or regulations, site conditions and the nature and scope of investigations, studies and remediation to be undertaken (including the technologies to be required and the extent, duration and success of remediation).

The final outcome of environmental matters cannot be predicted with certainty at this time. Subsequent adjustments to initial estimates are recorded as necessary based upon additional information obtained. In future periods, new laws or regulations, advances in remediation technologies and additional information about the ultimate remediation methodology to be used could significantly change our estimates. It is possible that the resolution of one or more environmental matters could exceed the amounts accrued in an amount that could be material to our financial condition, results of operations and cash flows. At December 31, 2012 we estimate the remediation losses could range from $130 million to $250 million.

Product Liability

With respect to product liability claims involving our and Old GM's products, we believe that any judgment against us for actual damages will be adequately covered by our recorded accruals and, where applicable, excess liability insurance coverage. Although punitive damages are claimed in some of these lawsuits and such claims are inherently unpredictable, accruals incorporate historic experience with these types of claims. Liabilities have been recorded for the expected cost of all known product liability claims plus an estimate of the expected cost for product liability claims that have already been incurred and are expected to be filed in the future for which we are self-insured. These amounts were recorded in Accrued liabilities and Other liabilities and deferred income taxes.

We indemnify dealers for certain product liability related claims including products sold by Old GM. We monitor actual claims experience and make periodic adjustments to our estimates. Based on both management's judgment concerning the projected number and value of both dealer indemnification obligations and product liability claims, we have applied actuarial methodologies and estimated the liability. We expect our product liability reserve to rise in future periods as new claims arise from incidents subsequent to July 9, 2009.

Other Litigation-Related Liability and Tax Administrative Matters

Various legal actions, governmental investigations, claims and proceedings are pending against us including matters arising out of alleged product defects; employment-related matters; governmental regulations relating to safety, emissions and fuel economy; product warranties; financial services; dealer, supplier and other contractual relationships; tax-related matters not recorded pursuant to ASC 740, "Income Taxes" (indirect tax-related matters) and environmental matters.

With regard to the litigation matters discussed in the previous paragraph, reserves have been established for matters in which we believe that losses are probable and can be reasonably estimated, the majority of which are associated with indirect tax-related matters as well as various non-U.S. labor-related matters. Indirect tax-related matters are being litigated globally pertaining to value added taxes, customs, duties, sales, property taxes and other non-income tax related tax exposures. The various non-U.S. labor-related matters include claims from current and former employees related to alleged unpaid wage, benefit, severance and other compensation matters. Certain South American administrative proceedings are indirect tax-related and may require that we deposit funds in escrow. Escrow deposits may range from $400 million to $600 million. Some of the matters may involve compensatory, punitive or other treble damage claims, environmental remediation programs or sanctions that, if granted, could require us to pay damages or make other expenditures in amounts that could not be reasonably estimated at December 31, 2012. We believe that appropriate accruals have been established for such matters based on information currently available. Reserves for litigation losses are recorded in Accrued liabilities and Other liabilities and deferred income taxes. Litigation is inherently unpredictable, however, and unfavorable resolutions could occur. Accordingly it is possible that an adverse outcome from such proceedings could exceed the amounts accrued in an amount that could be material to our financial condition, results of operations and cash flows in any particular reporting period.

GM Korea Wage Litigation

Commencing on or about September 29, 2010 current and former hourly employees of GM Korea filed seven separate group actions in the Incheon District Court in Incheon, Korea. The cases, which in the aggregate involve more than 10,000 employees, allege that GM Korea failed to include certain allowances in its calculation of Ordinary Wages due under the Presidential Decree of the Korean Labor Standards Act. On November 23, 2012 the Seoul High Court (an intermediate level appellate court) issued a decision affirming a decision of the Incheon District Court in a case involving five GM Korea employees which was contrary to GM Korea's position in all of these cases. Although GM Korea believes the decision of the Seoul High Court is incorrect and intends to appeal to the Supreme Court of the Republic of Korea we have increased our accrual in the three months ended December 31, 2012 by 564 billion Korean Won (equivalent to $525 million) to 746 billion Korean Won (equivalent to $697 million) in connection with these cases. In the year ended December 31, 2012 we recorded 616 billion Korean Won (equivalent to $573 million) in Automotive cost of sales (77% of which is reflected in our Net income attributable to stockholders based on our ownership interest in GM Korea). We do not believe we have any reasonably possible exposure in excess of the amount of the accrual. Both the scope of claims asserted and GM Korea's assessment of any or all of individual claim elements may change if new information becomes available.

GMCL Dealers' Claim

On February 12, 2010 a claim was filed in the Ontario Superior Court of Justice against GMCL on behalf of a purported class of over 200 former GMCL dealers (the Plaintiff Dealers) which had entered into wind-down agreements with GMCL. In May 2009 in the context of the global restructuring of the business and the possibility that GMCL might be required to initiate insolvency proceedings, GMCL offered the Plaintiff Dealers the wind-down agreements to assist with their exit from the GMCL dealer network and to facilitate winding down their operations in an orderly fashion by December 31, 2009 or such other date as GMCL approved but no later than on October 31, 2010. The Plaintiff Dealers allege that the Dealer Sales and Service Agreements were wrongly terminated by GMCL and that GMCL failed to comply with certain disclosure obligations, breached its statutory duty of fair dealing and unlawfully interfered with the Plaintiff Dealers' statutory right to associate in an attempt to coerce the Plaintiff Dealers into accepting the wind-down agreements. The Plaintiff Dealers seek damages and assert that the wind-down agreements are rescindable. The Plaintiff Dealers' initial pleading makes reference to a claim "not exceeding" CAD $750 million without explanation of any specific measure of damages. On March 1, 2011 the court approved certification of a class for the purpose of deciding a number of specifically defined issues including: (1) whether GMCL breached its obligation of "good faith" in offering the wind-down agreements; (2) whether GMCL interfered with the Plaintiff Dealers' rights of free association; (3) whether GMCL was obligated to provide a disclosure statement and/or disclose more specific information regarding its restructuring plans in connection with proffering the wind-down agreements; and (4) assuming liability, whether the Plaintiff Dealers can recover damages in the aggregate (as opposed to proving individual damages). On June 22, 2011 the court granted GMCL permission to appeal the class certification decision. On March 26, 2012 the Ontario Superior Court dismissed GMCL's appeal of the class certification order. Accordingly the case will proceed as a class action. Twenty-six dealers within the certified class definition have indicated that they will not participate. The current prospects for liability are uncertain, but because liability is not deemed probable we have no accrual relating to this litigation. We cannot estimate the range of reasonably possible loss in the event of liability as the case presents a variety of different legal theories, none of which GMCL believes are valid.

UAW Claim

On April 6, 2010 the UAW filed suit against us in the U.S. District Court for the Eastern District of Michigan claiming that we breached an obligation to contribute $450 million to the UAW Retiree Medical Benefits Trust (New VEBA). The UAW alleges that we were contractually required to make this contribution. The reasonably possible loss as defined by ASC 450, "Contingencies" is $450 million, which is the amount claimed. We believe that the claim is without merit and we have no accrual relating to this litigation. We believe the UAW's claim is barred by the 2009 UAW Retiree Settlement Agreement approved by the U.S. Bankruptcy Court for the Southern District of New York (Bankruptcy Court). We also maintain that Delphi Corporation's bankruptcy plan of reorganization did not fulfill the applicable conditions of the relevant agreement and therefore payment would not be due even in the absence of the 2009 UAW Retiree Settlement Agreement.

Nova Scotia Claims Litigation

We are a participating party-in-interest in proceedings pending in the Bankruptcy Court to adjudicate claims in the Old GM bankruptcy arising from certain securities issued by General Motors Nova Scotia Finance Company (Nova Scotia Finance), an Old GM subsidiary which we did not acquire in 2009 (Nova Scotia Claims Litigation). Although the current proceedings involve no claims against us, they present issues which, depending upon their resolution, could result in future claims against GMCL.

In 2003 Nova Scotia Finance, a Nova Scotia unlimited liability company, issued notes of 600 million British Pounds which were guaranteed by Old GM (Guaranty) (collectively, the Nova Scotia Notes). The proceeds from the Nova Scotia Notes were converted to CAD and loaned by Nova Scotia Finance to GMCL by means of two intercompany loans totaling CAD $1.3 billion. As part of the bankruptcy proceeding these intercompany loans were compromised for CAD $399 million pursuant to a transaction defined by a Lock-Up Agreement between GMCL, Nova Scotia Finance, Old GM and certain holders of the Nova Scotia Notes (Noteholders). The Lock-Up Agreement defined a transaction by which the Noteholders consented to, among other things, the compromise of the intercompany loans in exchange for payment of CAD $399 million as a Consent Fee. The Consent Fee was originally financed by a loan from Old GM to GMCL immediately prior to the Old GM bankruptcy filing. That loan was subsequently repaid. Pursuant to the terms of the Lock-Up Agreement, the Consent Fee did not reduce the principal amount outstanding under the Nova Scotia Notes or the Guaranty. We acquired Old GM's interest in the Lock-Up Agreement in 2009.

In the Nova Scotia Claims Litigation the Noteholders seek an allowed claim in the Old GM bankruptcy based on the Guaranty. The trustee of Nova Scotia Finance seeks an allowed claim in the amount of the deficiency between Nova Scotia Finance's assets and liabilities by reason of the fact that it is an unlimited liability company and Old GM was its sole shareholder. The claim asserted by the trustee includes sums allegedly owed by Nova Scotia Finance to us by reason of currency swaps entered into between Old GM and Nova Scotia Finance which we contend we acquired from Old GM in 2009. Allowance of the claims is opposed by the GUC Trust which asserts that the claims of the trustee and Noteholders are duplicative, that they should be reduced by the amount of the Consent Fee and/or that they should be equitably subordinated or equitably disallowed by reason of alleged inequitable conduct by the Noteholders. In support of this position the GUC Trust has asserted that the Lock-Up Agreement is void because it was not approved by the Bankruptcy Court and was funded by Old GM, that we did not acquire MLC's interest in the Lock-Up Agreements and currency swaps and that other aspects of the sale of assets to us on July 10, 2009 may be adjusted to permit disallowance or reduction of the claims of the Noteholders and the trustee. The trial has commenced but the timing of any decision is uncertain.

Although we believe the positions taken by the GUC Trust are without merit, it is reasonably possible that the Bankruptcy Court will issue rulings adverse to our interest in the Nova Scotia Claims Litigation. Such rulings could lead to subsequent claims which, although we believe would be without merit, could adversely impact GMCL's compromise of the intercompany loans. It is impossible to estimate the reasonably possible loss which would depend upon a variety of factors including the outcome of additional litigation. However the compromise of the intercompany loans for CAD $399 million resulted in a savings to GMCL of CAD $935 million (equivalent to $940 million) which we believe represents a reasonable estimate of the approximate amount of the maximum reasonably possible loss.

GME Planned Spending Guarantee

As part of our Opel/Vauxhall restructuring plan agreed to with European labor representatives we have committed to achieving specified milestones associated with planned spending from 2011 to 2014 on certain product programs. If we fail to accomplish the requirements set out under the agreement we will be required to pay certain amounts up to Euro 265 million for each of those years, and/or interest on those amounts, to our employees. Certain inventory with a carrying amount of $186 million and $209 million at December 31, 2012 and 2011 was pledged as collateral under the agreement. Through December 31, 2012 spending was sufficient to meet the current requirements under the agreement and the specified milestones have been accomplished. Management has the intent and believes it has the ability to meet the future requirements under the agreement.

Asset Retirement Obligations

Asset retirement obligations relate to legal obligations associated with retirement of tangible long-lived assets that result from acquisition, construction, development or normal operation of a long-lived asset. An analysis is performed of such obligations associated with all real property owned or leased, including facilities, warehouses and offices. Estimates of conditional asset retirement obligations relate, in the case of owned properties, to costs estimated to be necessary for the legally required removal or remediation of various regulated materials, primarily asbestos. Asbestos abatement was estimated using site-specific surveys where available and a per square foot estimate where surveys were unavailable. For leased properties such obligations relate to the estimated cost of contractually required property restoration. At December 31, 2012 and 2011 accruals for asset retirement obligations were $116 million and $99 million.

Contract Cancellations

The following table summarizes contract cancellation charges primarily related to the cancellation of product programs (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
GMNA (a)	$ 64	$38	$30
GME	38	8	3
GMIO	5	43	—
GMSA	30	4	—
Total contract cancellations	$137	$93	$33

(a) The year ended December 31, 2010 includes favorable changes in estimate on contract cancellations of $30 million.

Noncancelable Operating Leases

The following table summarizes our minimum commitments under noncancelable operating leases having initial terms in excess of one year, primarily for property (dollars in millions):

	2013	2014	2015	2016	2017	Thereafter
Minimum commitments (a)	$394	$312	$246	$192	$125	$ 595
Sublease income	(54)	(53)	(48)	(47)	(45)	(279)
Net minimum commitments	$340	$259	$198	$145	$ 80	$ 316

(a) Certain of the leases contain escalation clauses and renewal or purchase options.

The following table summarizes our rental expense under operating leases (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Rental expense under operating leases	$474	$556	$604

Note 21. Income Taxes

The following table summarizes Income (loss) before income taxes and equity income (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
U.S. income (loss)	$(19,063)	$2,883	$2,648
Non-U.S. income (loss)	(11,194)	3,102	3,089
Income (loss) before income taxes and equity income	$(30,257)	$5,985	$5,737

Income Tax Expense (Benefit)

The following table summarizes Income tax expense (benefit) (dollars in millions):

	Years Ended December 31, 2012	2011	2010
Current income tax expense (benefit)			
U.S. federal	$ 6	$(134)	$ (10)
U.S. state and local	78	58	(1)
Non-U.S.	646	275	441
Total current income tax expense	730	199	430
Deferred income tax expense (benefit)			
U.S. federal	(28,965)	8	(25)
U.S. state and local	(3,415)	(28)	8
Non-U.S.	(3,181)	(289)	259
Total deferred income tax expense (benefit)	(35,561)	(309)	242
Total income tax expense (benefit)	$(34,831)	$(110)	$672

Provisions are made for estimated U.S. and non-U.S. income taxes, less available tax credits and deductions, which may be incurred on the remittance of our basis differences in investments in foreign subsidiaries and corporate joint ventures not deemed to be indefinitely reinvested. Taxes have not been provided on basis differences in investments in foreign subsidiaries and corporate joint ventures which are deemed indefinitely reinvested of $5.5 billion and $6.2 billion at December 31, 2012 and 2011. Quantification of the deferred tax liability, if any, associated with indefinitely reinvested basis differences is not practicable.

The following table summarizes a reconciliation of Income tax expense (benefit) compared with the amounts at the U.S. federal statutory rate (dollars in millions):

	Years Ended December 31, 2012	2011	2010
Income tax expense (benefit) at U.S. federal statutory income tax rate	$(10,590)	$ 2,094	$ 2,008
State and local tax expense	254	215	334
Foreign income taxed at other than 35%	908	243	1,579
Foreign tax credit election change	(1,075)	—	—
Taxes on unremitted earnings of subsidiaries	100	(537)	(10)
Change in valuation allowance	(33,917)	(2,386)	(2,903)
Change in tax laws	67	(33)	—
Research incentives	(68)	(45)	(235)
Gain on sale of New Delphi equity interests	—	599	—
Goodwill impairment	8,705	377	—
Settlements of prior year tax matters	—	(56)	(170)
VEBA contribution	—	(476)	—
Foreign currency remeasurement	(36)	59	143
Pension contribution	—	(127)	—
U.S. salaried pension plan settlement	541	—	—
Other adjustments	280	(37)	(74)
Total income tax expense (benefit)	$(34,831)	$ (110)	$ 672

Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities at December 31, 2012 and 2011 reflect the effect of temporary differences between amounts of assets, liabilities and equity for financial reporting purposes and the bases of such assets, liabilities and equity as measured by tax laws, as well as tax loss and tax credit carryforwards.

The following table summarizes the components of temporary differences and carryforwards that give rise to deferred tax assets and liabilities (dollars in millions):

	December 31, 2012	December 31, 2011
Deferred tax assets		
Postretirement benefits other than pensions	$ 3,494	$ 3,672
Pension and other employee benefit plans	8,536	8,357
Warranties, dealer and customer allowances, claims and discounts	4,277	4,015
Property, plants and equipment	2,225	1,547
Capitalized research expenditures	6,106	5,152
Operating loss and tax credit carryforwards	20,220	21,199
Miscellaneous U.S.	2,865	3,017
Miscellaneous non-U.S.	578	243
Total deferred tax assets before valuation allowances	48,301	47,202
Less: valuation allowances	(10,991)	(45,191)
Total deferred tax assets	37,310	2,011
Deferred tax liabilities		
Intangible assets	724	1,933
Total deferred tax liabilities	724	1,933
Net deferred tax assets	$ 36,586	$ 78

The following table summarizes the classification of deferred tax assets and liabilities (dollars in millions):

	December 31, 2012	December 31, 2011
Current deferred tax assets	$ 9,429	$ 527
Current deferred tax liabilities	(162)	(48)
Non-current deferred tax assets	27,922	512
Non-current deferred tax liabilities	(603)	(913)
Net deferred tax assets	$36,586	$ 78

The following table summarizes the amount and expiration dates of our operating loss and tax credit carryforwards at December 31, 2012 (dollars in millions):

	Expiration Dates	Amounts
U.S. federal and state loss carryforwards	2013-2030	$ 6,642
Non-U.S. loss and tax credit carryforwards	Indefinite	1,472
Non-U.S. loss and tax credit carryforwards	2013-2031	4,961
U.S. alternative minimum tax credit	Indefinite	669
U.S. general business credits (a)	2017-2031	1,914
U.S. foreign tax credits	2013-2022	4,562
Total operating loss and tax credit carryforwards		$20,220

(a) The general business credits are principally composed of research credits.

Valuation Allowances

The following table summarizes the change in valuation allowances related to net deferred tax assets (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Beginning balance	$ 45,191	$42,979	$45,281
Additions (Reversals)			
U.S.(a)	(34,263)	2,411	(2,196)
Canada	(3,049)	(158)	63
Germany	1,649	1	(139)
Spain	886	463	378
South Korea	138	27	(121)
Australia	—	(498)	(39)
U.K.	177	141	(121)
India	137	—	(123)
Other	125	(175)	(4)
Ending balance	$ 10,991	$45,191	$42,979

(a) In the year ended December 31, 2012 the difference between the change in the valuation allowance and the income tax benefit associated with the valuation allowance release is due primarily to the establishment of deferred tax liabilities related to state deferred tax assets. In the year ended December 31, 2011 we recorded an adjustment to the debt cancellation income that resulted from the 363 Sale. The adjustment resulted in a $2.1 billion increase in valuation allowances related to U.S. federal and state tax attributes.

At December 31, 2012, as a result of sustained profitability in the U.S. and Canada evidenced by three years of earnings and the completion of our near- and medium-term business plans in the three months ended December 31, 2012 that forecast continuing profitability, we determined it was more likely than not future earnings will be sufficient to realize deferred tax assets in these two jurisdictions. Accordingly we reversed most of the U.S. and Canadian valuation allowances resulting in non-cash income tax benefits of $33.2 billion and $3.1 billion. We retained valuation allowances of $2.3 billion against deferred tax assets in the U.S. and Canada related primarily to capital loss tax attributes and state operating loss carryforwards which we continue to believe do not meet the more likely than not threshold for releasing the valuation allowance. We retained additional valuation allowances of $8.7 billion against non-U.S. deferred tax assets, primarily related to GME and South Korea business units with losses.

At December 31, 2011, as a result of sustained profitability in Australia, we released the valuation allowance against deferred tax assets. The reduction in the valuation allowance resulted in a non-cash income tax benefit of $502 million.

Uncertain Tax Positions

The following table summarizes gross unrecognized tax benefits before valuation allowances and the amount that would favorably affect the effective tax rate in future periods after valuation allowances (dollars in millions):

	December 31, 2012	December 31, 2011
Gross unrecognized tax benefits before valuation allowances	$2,745	$2,370
Unrecognized tax benefit that would favorably affect effective tax rate in future	$1,210	$ 326
Liability for uncertain tax positions netted against deferred tax assets in the same jurisdiction (a)	$1,550	$1,285

(a) The remaining uncertain tax positions are classified as current and non-current liabilities.

The following table summarizes activity of the total amounts of unrecognized tax benefits (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Beginning balance	$2,370	$ 5,169	$5,410
Additions to current year tax positions	112	129	195
Additions to prior years' tax positions	512	562	803
Reductions to prior years' tax positions	(141)	(1,002)	(475)
Reductions in tax positions due to lapse of statutory limitations	(34)	(64)	(18)
Settlements	(112)	(2,399)	(761)
Other	38	(25)	15
Ending balance	$2,745	$ 2,370	$5,169

The following tables summarize information regarding income tax related interest and penalties (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Interest income	$12	$ 7	$13
Interest expense (benefit) (a)	$52	$(113)	$20
Penalties (a)	$ 4	$ (25)	$ 1

(a) The interest and penalty benefit in the year ended December 31, 2011 is due primarily to remeasurements, settlements and statute expirations.

	December 31, 2012	December 31, 2011
Accrued interest payable	$117	$103
Accrued penalties	$105	$ 89

Other Matters

The ability to utilize certain of the U.S. tax attributes in future tax periods could be limited by Section 382 of the Internal Revenue Code. On November 1, 2010 we amended our certificate of incorporation to minimize the likelihood of an ownership change occurring for Section 382 purposes. We have net operating loss carryforwards in Germany through November 30, 2009 that, as a result of reorganizations that took place in 2008 and 2009, were not recorded as deferred tax assets. Depending on the outcome of European court decisions these loss carryforwards may be available to reduce future taxable income in Germany. In Australia we have net operating loss carryforwards which are subject to meeting a "Same Business Test" requirement that we assess on a quarterly basis.

Income tax returns are filed in multiple jurisdictions and are subject to examination by taxing authorities throughout the world. We have open tax years from 2002 to 2012 with various significant tax jurisdictions. These open years contain matters that could be subject to differing interpretations of applicable tax laws and regulations as they relate to the amount, character, timing or inclusion of revenue and expenses or the sustainability of income tax credits for a given audit cycle. Given the global nature of our operations there is a risk that transfer pricing disputes may arise.

In the U.S. we have continuing responsibility for Old GM's open tax years. Old GM's federal income tax returns through the date of the 363 Sale have been audited by the Internal Revenue Service. Audit closure in January 2013 of Old GM's 2007, 2008 and 2009 federal income tax returns will result in no change to the amount of unrecognized tax benefits. The audit of our 2009 federal income tax return was concluded in January 2013 and will result in no change to the amount of unrecognized tax benefits. In January 2013 the U.S. Congress enacted federal income tax legislation including an extension of the research credit for tax years 2012 and 2013. As a result, in the three months ending March 31, 2013, we will record an income tax benefit related to the 2012 research credit of approximately $160 million.

In May 2012 a Brazilian income tax assessment was issued related to the 2007 tax year totaling $181 million including tax, interest and penalties. We believe we have adequate reserves established. Proceedings may require that we deposit escrow funds in the future.

In March 2012 a Mexican income tax audit covering the 2004 tax year was concluded and an assessment, adjusted for inflation, of $136 million including tax, interest and penalties was issued. The total 2002, 2003 and 2004 assessments, adjusted for inflation, at December 31, 2012 including tax, interest and penalties is $309 million. We believe we have adequate reserves established. Payment of any assessment is suspended during the proceedings through U.S. and Mexican competent authorities.

In the year ended December 31, 2011 certain issues were resolved relating to uncertain tax positions in jurisdictions which had full valuation allowances. The resolution of these matters resulted in a $2.7 billion reduction to gross uncertain positions. No tax benefit was recognized with respect to these reductions because the entities were in full valuation allowance jurisdictions or the amounts were reserved in a prior period.

In June 2011 we settled a Brazilian income tax matter for $241 million that was reserved and disclosed in a prior period.

In November 2010 an agreement was reached with the Canadian government to resolve various income tax matters in the years 2003 through 2009. In the three months ended December 31, 2010 this resolution resulted in a tax benefit of $140 million including interest.

At December 31, 2012 it is not possible to reasonably estimate the expected change to the total amount of unrecognized tax benefits in the next twelve months.

Note 22. Restructuring and Other Initiatives

We have previously executed various restructuring and other initiatives, and we plan to execute additional initiatives in the future, if necessary, in order to align manufacturing capacity and other costs with prevailing global automotive production and to improve the utilization of remaining facilities. To the extent these programs involve voluntary separations, no liabilities are generally recorded until offers to employees are accepted. If employees are involuntarily terminated, a liability is generally recorded at the communication date. Related charges are recorded in Automotive cost of sales and Automotive selling, general and administrative expense.

The following table summarizes the reserves related to restructuring and other initiatives (excluding restructuring reserves related to dealer wind-down agreements) and charges by segment, including postemployment benefit reserves and charges (dollars in millions):

	GMNA	GME	GMIO	GMSA	Total
Balance at January 1, 2010	$2,088	$ 451	$ 3	$ 4	$ 2,546
Additions	50	734	1	2	787
Interest accretion and other	36	114	—	—	150
Payments	(712)	(589)	(1)	(7)	(1,309)
Revisions to estimates	(361)	(8)	—	1	(368)
Effect of foreign currency	34	(38)	—	—	(4)
Balance at December 31, 2010 (a)	1,135	664	3	—	1,802
Additions	82	344	—	80	506
Interest accretion and other	22	105	—	1	128
Payments	(366)	(395)	(2)	(68)	(831)
Revisions to estimates	19	(9)	—	—	10
Effect of foreign currency	(8)	(22)	—	(1)	(31)
Balance at December 31, 2011 (a)	884	687	1	12	1,584
Additions	129	188	84	92	493
Interest accretion and other	11	66	—	—	77
Payments	(304)	(344)	(46)	(55)	(749)
Revisions to estimates	(78)	(17)	(1)	(11)	(107)
Effect of foreign currency	11	10	1	—	22
Balance at December 31, 2012 (a)	$ 653	$ 590	$ 39	$ 38	$ 1,320

(a) The remaining cash payments related to these reserves for restructuring and other initiatives, including temporary layoff benefits of $356 million, $376 million and $363 million at December 31, 2012, 2011 and 2010 for GMNA, primarily relate to postemployment benefits to be paid.

Year Ended December 31, 2012

GMNA recorded charges, interest accretion and other and revisions to estimates that increased the reserves by $62 million. The $62 million includes charges for cash severance incentive programs for skilled trade U.S. hourly employees, partially offset by increased production capacity utilization in Canada.

GMNA recorded charges of $90 million in connection with our 2011 UAW labor agreement that included cash severance incentive programs which were completed at March 31, 2012 for skilled trade U.S. hourly employees. A total of 1,400 skilled trade U.S. hourly employees participated in these programs at a total cost of $99 million and was recorded upon irrevocable acceptances by both parties.

Due to the expected closure of the Oshawa Consolidated Plant in June 2014, impacted employees will be eligible for a voluntary restructuring separation incentive program in accordance with the existing collective bargaining agreement that provides cash and a car voucher. This may range up to $70 million and will be included in our restructuring liability, net of existing liabilities, upon irrevocable acceptance by both parties.

GME recorded charges, interest accretion and other of $254 million for previously announced separation and early retirement programs. Through December 31, 2012 the active separation programs related to Germany and the United Kingdom had a total cost of $400 million and had affected a total of 2,550 employees, of which $310 million related to a program initiated in Germany in 2010. This program was essentially completed in 2012. We expect to complete the active programs in 2013 and incur an additional $200 million, which will affect an additional 700 employees.

GMIO recorded charges, interest accretion and other related to voluntary separation programs primarily in Korea and Australia. Through December 31, 2012 these programs had a total cost of $69 million which affected 650 employees. We expect to complete the programs in GMIO in 2013 and incur up to an additional $40 million, which will affect up to an additional 200 employees.

GMSA recorded charges of $87 million for employee separation costs related to a separation program in Brazil.

Year Ended December 31, 2011

GMNA recorded charges, interest accretion and other and revisions to estimates primarily related to special attrition programs for skilled trade U.S. hourly employees, service cost for hourly layoff benefits and Canadian restructuring activities.

GME recorded charges, interest accretion and other for separation programs primarily related to previously announced programs in Germany. Restructuring and early retirement programs in Spain, the U.K. and Belgium were essentially completed in 2010 and we also initiated a program in Germany in 2010. Through December 31, 2011 these programs had a total cost of $1.1 billion and affected a total of 6,700 employees and included the December 2010 closure of the Antwerp, Belgium facility.

GMSA recorded charges, interest accretion and other for separation programs primarily related to the voluntary separation program in Brazil implemented in the three months ended December 31, 2011. A total of 900 employees in Brazil participated in the separation program at a total cost of $74 million.

Year Ended December 31, 2010

GMNA recorded charges, interest accretion and other, and revisions to estimates primarily related to increased production capacity utilization, which resulted in the recall of idled employees to fill added shifts at multiple U.S. production sites and revisions to productivity initiatives, partially offset by Canadian restructuring activities.

GME recorded charges, interest accretion and other, and revisions to estimates for separation programs primarily related to the following initiatives:

- Separation charges of $527 million related to the closure of the Antwerp, Belgium facility which affected 2,600 employees.
- Separation charges of $63 million related to separation/layoff plans and an early retirement plan in Spain which ultimately affected 1,200 employees.
- Separation charges of $31 million related to a voluntary separation program in the United Kingdom.
- Separation charges of $95 million and interest accretion and other of $104 million related to a voluntary separation program in Germany.

Dealer Wind-downs

We market vehicles worldwide through a network of independent retail dealers and distributors. We determined that a reduction in the number of GMNA dealerships was necessary.

The following table summarizes GMNA's restructuring reserves related to dealer wind-down agreements (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Balance at beginning of period	$25	$ 144	$ 501
Additions and revisions to estimates	(5)	(8)	7
Payments	(7)	(111)	(366)
Effect of foreign currency	—	—	2
Balance at end of period	$13	$ 25	$ 144

Note 23. Interest Income and Other Non-Operating Income, net

The following table summarizes the components of Interest income and other non-operating income, net (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Interest income	$343	$455	$ 465
Net gains (losses) on derivatives	(63)	41	68
Rental income	158	149	164
Dividends and royalties	98	153	213
Other (a)	309	53	621
Total interest income and other non-operating income, net	$845	$851	$1,531

(a) Amounts in the year ended December 31, 2012 include impairment charges related to the investment in PSA of $220 million, income related to various insurance recoveries of $168 million, a charge of $119 million in connection with the entry into an agreement to sell the GMS business, resulting in a reduction in the carrying value to estimated fair value, and recognition of deferred income from technology agreements with SGMW of $114 million. Amounts in the year ended December 31, 2011 include impairment charges related to the investment in Ally Financial of $555 million, a gain on the sale of Ally Financial preferred shares of $339 million, and recognition of deferred income from technology agreements with SGMW of $113 million. Amounts in the year ended December 31, 2010 include a gain on the reversal of an accrual for contingently issuable shares of our common stock to MLC (Adjustment Shares) of $162 million, a gain on the sale of Saab of $123 million, a gain on the acquisition of GMS of $66 million and a gain on the sale of Nexteer of $60 million.

Note 24. Stockholders' Equity and Noncontrolling Interests

Preferred Stock

The following table summarizes significant features relating to our preferred stock (dollars in millions, except for per share amounts):

	Liquidation Preference Per Share	Dividend Rate Per Annum	Dividends Paid Years Ended December 31,		
			2012	2011	2010
Series A Preferred Stock	$25.00	9.00%	$621	$621	$810
Series B Preferred Stock	$50.00	4.75%	$238	$243	$ —

Series A Preferred Stock

The Series A Preferred Stock ranks senior with respect to liquidation preference and dividend rights to our common stock and Series B Preferred Stock and any other class or series of stock that we may issue. In the event of any voluntary or involuntary liquidation, dissolution or winding-up of our affairs, a holder of Series A Preferred Stock will be entitled to be paid, before any distribution or payment may be made to any holders of common stock or Series B Preferred Stock, the liquidation amount and the amount of any accrued and unpaid dividends, if any, whether or not declared, prior to such distribution or payment date. On or after December 31, 2014, the Series A Preferred Stock may be redeemed, in whole or in part, for cash at a price per share equal to the $25.00 per share liquidation amount, plus any accrued and unpaid dividends. Upon a redemption or purchase of any or all Series A Preferred Stock, the difference, if any, between the recorded amount of the Series A Preferred Stock being redeemed or purchased and the consideration paid would be recorded as a charge to Net income attributable to common stockholders. If all of the Series A Preferred Stock were to be redeemed or purchased at its par value, the amount of the charge would be $1.4 billion.

In December 2010 we purchased 84 million shares of Series A Preferred Stock, held by the UST, at a price equal to 102% of the aggregate liquidation amount, for $2.1 billion. The purchase of the UST's Series A Preferred Stock resulted in a charge of $677 million recorded in Cash dividends paid on Series A Preferred Stock and cumulative dividends on Series B Preferred Stock and charge related to purchase of Series A Preferred Stock.

Series B Preferred Stock

The Series B Preferred Stock, with respect to dividend rights and rights upon our liquidation, winding-up or dissolution, ranks: (1) senior to our common stock and to each other class of capital stock or series of preferred stock the terms of which do not expressly provide that such class or series ranks senior to, or on a parity with, the Series B Preferred Stock; (2) on a parity with any class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank on a parity with the Series B Preferred Stock; and (3) junior to our Series A Preferred Stock and to each class of capital stock or series of preferred stock the terms of which expressly provide that such class or series will rank senior to the Series B Preferred Stock.

Each share of the Series B Preferred Stock, unless previously converted, will automatically convert on December 1, 2013 into shares of our common stock. The number of shares of our common stock issuable upon mandatory conversion of each share of Series B Preferred Stock is determined based on the applicable market value of our common stock subject to anti-dilution adjustments and accumulated and unpaid dividends. The applicable market value of our common stock is the average of the closing prices of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the mandatory conversion date. Holders of the Series B Preferred Stock have the right to convert their shares at any time prior to the mandatory conversion date at a conversion ratio of 1.2626 shares of our common stock for each share of the Series B Preferred Stock that is optionally converted, subject to anti-dilution, make-whole and other adjustments.

If the applicable market value of our common stock upon mandatory conversion falls within a range of $33.00-$39.60 per common share, the holder receives a variable number of shares of our common stock with a value equal to the liquidation preference plus accumulated dividends. If the applicable market value is not within this range, there is a fixed conversion ratio equaling 1.2626 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is greater than $39.60, and 1.5152 shares of common stock for each share of Series B Preferred Stock when the applicable market value of our common stock is less than $33.00. The fixed conversion ratios will be adjusted for events that would otherwise dilute a Series B Preferred Stockholder's interest.

In the three months ended December 31, 2012, holders of our Series B Preferred Stock converted 11,204 shares into 14,145 shares of common stock.

Common Stock

Holders of our common stock are entitled to dividends at the sole discretion of our Board of Directors. However, the terms of the Series A Preferred Stock and Series B Preferred Stock prohibit, subject to exceptions, the payment of dividends on our common stock unless all accrued and unpaid dividends on the Series A Preferred Stock and Series B Preferred Stock are paid in full. Holders of common stock are entitled to one vote per share on all matters submitted to our stockholders for a vote. The liquidation rights of holders of our common stock are secondary to the payment or provision for payment of all our debts and liabilities and to holders of our Series A Preferred Stock and Series B Preferred Stock, if any such shares are then outstanding.

In the year ended December 31, 2011 we issued 61 million shares of common stock to the U.S. hourly and salaried pension plans, 3,500,000 shares for exercised warrants and 500,000 shares for the settlement of salary and other restricted stock awards.

In December 2012 we purchased 200 million shares of our common stock from the UST at a price of $27.50 per share for a total of $5.5 billion. The purchase price represented a premium to the prior day's closing price of $25.49. We allocated the purchase price between a direct reduction to shareholder's equity of $5.1 billion and a charge to earnings of $402 million representing the premium. This premium was recorded in Other automotive expenses, net. These shares were retired by the Board and returned to authorized but unissued status. In the year ended December 31, 2012 we issued 1,300,000 shares of common stock for the settlement of restricted stock and salary stock awards and 400,000 shares for exercised warrants.

The UST agreed to irrevocably waive certain of its rights under the stockholders agreement by and among us and certain other stockholders and covenants under the UST Credit Agreement as part of this agreement. These rights and covenants included, among other items, a reduction in certain reporting requirements and a release from the vitality commitment, which contained certain manufacturing volume requirements.

Warrants

In connection with the 363 Sale we issued two tranches of warrants, each to acquire 136 million shares of common stock, to MLC which have all been distributed to creditors of Old GM and to the GUC Trust by MLC and one tranche of warrants to acquire 46 million shares of common stock to the New VEBA. The first tranche of MLC warrants is exercisable at any time prior to July 10, 2016 at an exercise price of $10.00 per share and the second tranche of MLC warrants is exercisable at any time prior to July 10, 2019 at an exercise price of $18.33 per share. The New VEBA warrants are exercisable at any time prior to December 31, 2015 at an exercise price of $42.31 per share. Upon exercise of the warrants, the shares issued will be included in the number of basic shares outstanding used in the computation of earnings per share. The number of shares of common stock underlying each of the warrants and the per share exercise price are subject to adjustment as a result of certain events, including stock splits, reverse stock splits and stock dividends. The outstanding balance of warrants at December 31, 2012 and 2011 was 313 million.

Accumulated Other Comprehensive Income (Loss)

The following table summarizes the components of Accumulated other comprehensive income (loss), net of taxes (dollars in millions):

	Foreign Currency Translation Adjustments	Cash Flow Hedging Gains (Losses), Net	Unrealized Gains (Losses) on Securities, Net	Defined Benefit Plans, Net	Accumulated Other Comprehensive Income (Loss)
Balance December 31, 2009	$ 157	$ (1)	$ 2	$ 1,430	$ 1,588

(a) Includes the HCT settlement. Refer to Note 18.

Note 25. Earnings Per Share

In the years ended December 31, 2012 and 2011 we were required to use the two-class method for calculating earnings per share, as further discussed below, as the applicable market value of our common stock was below $33.00 per common share in the periods ended December 31, 2012 and 2011.

Basic and diluted earnings per share are computed by dividing Net income attributable to common stockholders by the weighted-average common shares outstanding in the period. Diluted earnings per share is computed by giving effect to all potentially dilutive securities that were outstanding.

The following table summarizes basic and diluted earnings per share (in millions, except for per share amounts):

	Years Ended December 31, 2012	2011	2010
Basic earnings per share			
Net income attributable to stockholders	$6,188	$9,190	$6,172
Less: cumulative dividends on and charge related to purchase of preferred stock and undistributed earnings allocated to Series B Preferred Stock participating security (a) (b)	1,329	1,605	1,504
Net income attributable to common stockholders	$4,859	$7,585	$4,668
Weighted-average common shares outstanding — basic	1,566	1,536	1,500
Basic earnings per share	$ 3.10	$ 4.94	$ 3.11
Diluted earnings per share			
Net income attributable to stockholders	$6,188	$9,190	$6,172
Add: preferred dividends to holders of Series B Preferred Stock	—	—	25
Less: cumulative dividends on and charge related to purchase of preferred stock and undistributed earnings allocated to Series B Preferred Stock participating security (a) (c)	1,301	1,552	1,504
Net income attributable to common stockholders	$4,887	$7,638	$4,693
Weighted-average common shares outstanding — diluted			
Weighted-average common shares outstanding — basic	1,566	1,536	1,500
Dilutive effect of warrants	104	130	106
Dilutive effect of conversion of Series B Preferred Stock	—	—	17
Dilutive effect of RSUs	5	2	1
Weighted-average common shares outstanding — diluted	1,675	1,668	1,624
Diluted earnings per share	$ 2.92	$ 4.58	$ 2.89

(a) Includes earned but undeclared dividends of $26 million, $26 million and $26 million on our Series A Preferred Stock and $20 million, $20 million and $25 million on our Series B Preferred Stock in the years ended December 31, 2012, 2011 and 2010.

(b) Includes cumulative dividends on preferred stock of $859 million and earnings of $470 million that have been allocated to the Series B Preferred Stock holders in the year ended December 31, 2012; includes cumulative dividends on preferred stock of $859 million and earnings of $746 million that have been allocated to the Series B Preferred Stock holders in the year ended December 31, 2011; and cumulative dividends on preferred stock of $827 million and a charge related to the purchase of Series A Preferred Stock of $677 million in the year ended December 31, 2010.

(c) Includes cumulative dividends on preferred stock of $859 million and earnings of $442 million that have been allocated to the Series B Preferred Stock holders in the year ended December 31, 2012; includes cumulative dividends on preferred stock of $859 million and earnings of $693 million that have been allocated to the Series B Preferred Stock holders in the year ended December 31, 2011; and cumulative dividends on preferred stock of $827 million and a charge related to the purchase of Series A Preferred Stock of $677 million in the year ended December 31, 2010.

Years Ended December 31, 2012 and 2011

Holders of the Series B Preferred Stock have a right to participate in our undistributed earnings because a dividend, if declared, would result in a transfer of value to the holder through an adjustment to the fixed conversion ratios through various anti-dilution provisions. Based on the nature of the Series B Preferred Stock and the nature of these anti-dilution provisions, we have concluded that the Series B Preferred Stock is a participating security and, as such, the application of the two-class method for computing earnings per share is required when the applicable market value of our common stock is below $33.00 or above $39.60 per share. For purposes of calculating earnings per share, the applicable market value is calculated as the average of the closing prices of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the date of our financial statements. The calculation of the applicable market value at the date of our financial statements will apply to the full year, irrespective of the applicable market value computed during the prior quarters of the current year.

We applied the two-class method to calculate basic earnings per share and the more dilutive of the two-class or the if-converted method to calculate diluted earnings per share in the years ended December 31, 2012 and 2011. Under the two-class method for computing earnings per share, undistributed earnings are allocated to common stock and the Series B Preferred Stock according to their respective participation rights in undistributed earnings, as if all the earnings for the period had been distributed. This allocation to the Series B Preferred Stock holders reduced Net income attributable to common stockholders, resulting in a lower basic and dilutive earnings per share amount. Variability may result in our calculation of earnings per share from period to period depending on whether the application of the two-class method is required.

The application of the two-class method resulted in an allocation of undistributed earnings to our Series B Preferred Stock holders and, accordingly, 152 million common stock equivalents from the assumed conversion of the Series B Preferred Stock are not considered outstanding for purposes of determining the weighted-average common shares outstanding in the computation of diluted earnings per share in the years December 31, 2012 and 2011.

MLC distributed all of its 272 million warrants for our common stock to its unsecured creditors and the GUC Trust. The warrant holders may exercise the warrants at any time prior to their respective expiration dates. Upon exercise of the warrants the shares issued will be included in the number of basic shares outstanding used in the computation of earnings per share.

Warrants to purchase 313 million shares of our common stock were outstanding at December 31, 2012 and 2011, of which 46 million shares were not included in each year's computation of diluted earnings per share because the warrants' exercise price was greater than the average market price of the common shares. Under the treasury stock method, the assumed exercise of the remaining warrants resulted in 104 million and 130 million dilutive shares in the years ended December 31, 2012 and 2011.

Diluted earnings per share included the effect of 15 million and 13 million unvested RSUs granted to certain global executives in the years ended December 31, 2012 and 2011.

In July 2011 the 61 million shares of common stock contributed to our pension plans in January 2011 met the criteria to qualify as plan assets for accounting purposes. These shares were considered outstanding for earnings per share purposes beginning in July 2011.

Year Ended December 31, 2010

Warrants to purchase 318 million shares of our common stock were outstanding, of which 46 million shares were not included in the computation of diluted earnings per share because the warrants' exercise price was greater than the average market price of our common stock. Under the treasury stock method, the assumed exercise of warrants to purchase the remaining warrants resulted in 106 million dilutive shares.

Diluted earnings per share included the effect of 11 million unvested RSUs granted to certain global executives. The dilutive effect of the RSUs was included only for the period subsequent to our public offering as the RSUs prior were accounted for as liability awards prior to that date.

Note 26. Stock Incentive Plans

Our stock incentive plans consist of the 2009 Long-Term Incentive Plan and the Salary Stock Plan. Both plans are administered by the Executive Compensation Committee of our Board of Directors. The aggregate number of shares with respect to which awards may be granted under these amended plans shall not exceed 75 million.

Long-Term Incentive Plan

We granted 7 million, 5 million and 15 million RSUs in the years ended December 31, 2012, 2011 and 2010. These awards granted either cliff vest or ratably vest generally over a three-year service period, as defined in the terms of each award. Our policy is to issue new shares upon settlement of RSUs.

The 2012 awards granted to the Top 25 highest compensated employees will settle on the second and third anniversary dates of grant in 25% increments consistent with the terms of the 2009 Long-Term Incentive Plan. The awards for the non-Top 25 highest compensated employees will vest and settle on the second and third anniversary dates of grant. Vesting and subsequent settlement will generally occur based upon employment at the end of each specified service period.

The 2011 awards granted to the Top 25 highest compensated employees will settle three years from the grant date in 25% increments consistent with the terms of the 2009 Long-Term Incentive Plan. The awards for the Next 75 highest compensated employees will settle either: (1) three years from the date of grant; or (2) on the first and third anniversary dates of grant. The awards to the non-Top 100 highest compensated employees will settle on the first, second and third anniversary dates of grant. Vesting and subsequent settlement will generally occur based upon employment at the end of each specified service period.

The 2010 awards granted to the Top 25 highest compensated employees will settle three years from the grant date in 25% increments consistent with the terms of the 2009 Long-Term Incentive Plan. The awards for the non-top 25 highest compensated employees will settle after three years.

Retirement eligible participants that are non-Top 25 highest compensated employees who retire during the service period will retain and vest in a pro-rata portion of RSUs earned. The vested award will be payable on the settlement date.

Salary Stock Plan

In the years ended December 31, 2012, 2011 and 2010 a portion of each participant's salary was accrued on each salary payment date and converted to RSUs on a quarterly basis. In March 2012 we amended the plan to provide for cash settlement of awards instead of issuing new shares. As a result we will now settle these awards in cash and we reclassified $97 million from Capital surplus to Accrued liabilities and Other liabilities and deferred income taxes.

RSUs

The following table summarizes information about the RSUs under our stock incentive plans (RSUs in millions):

	Shares	Weighted-Average Grant Date Fair Value	Weighted-Average Remaining Contractual Term
RSUs outstanding at December 31, 2011	22.5	$23.01	1.1
Granted	9.1	$25.10	
Settled	(3.2)	$27.71	
Forfeited or expired	(1.5)	$24.42	
RSUs outstanding at December 31, 2012	26.9	$23.06	0.7
RSUs unvested and expected to vest at December 31, 2012	16.2	$23.49	1.0
RSUs vested and payable at December 31, 2012	10.3	$22.27	—
RSUs granted in the year ended December 31, 2011		$31.18	
RSUs granted in the year ended December 31, 2010		$19.17	

The following table summarizes compensation expense recorded for our stock incentive plans (dollars in millions):

	Years Ended December 31, 2012	2011	2010
Compensation expense	$302	$233	$235
Income tax benefit	$100	$ —	$ —

At December 31, 2012 the total unrecognized compensation expense for nonvested equity awards granted was $185 million. This expense is expected to be recorded over a weighted-average period of one year.

The total fair value of RSUs vested in the years ended December 31, 2012, 2011 and 2010 was $141 million, $105 million and $78 million.

In the years ended December 31, 2012, 2011 and 2010 total payments for 1.6 million, 456,000 and 292,000 RSUs settled under stock incentive plans were $36 million, $14 million and $5 million.

Note 27. Ally Financial

Automotive

The following tables summarize the financial statement effects of and maximum obligations under agreements with Ally Financial (dollars in millions):

	December 31, 2012	December 31, 2011
Vehicle repurchase obligations		
Maximum obligations (a)	$22,112	$18,972
Fair value of guarantee	$ 15	$ 17

(a) We corrected the amount originally reported as $19.8 billion in our Annual Report on Form 10-K as of December 31, 2011.

	Years Ended December 31, 2012	2011	2010
U.S. marketing incentives and operating lease residual payments	$1,732	$1,428	$1,111
Exclusivity fee income	$ 63	$ 76	$ 99

Marketing Incentives and Operating Lease Residuals

Under an interest rate support program, we pay an amount at the time of lease or retail contract origination to adjust the interest rate in the retail contract or implicit in the lease below Ally Financial's standard interest rate. The amount paid at contract origination represents the present value of the difference between the customer's contractual rate and Ally Financial's standard rate for a given program.

Under a residual support program, a customer's contract residual value is adjusted above Ally Financial's standard residual value. We reimburse Ally Financial to the extent sales proceeds are less than the customer's contract residual value, limited to Ally Financial's standard residual value. The residual support amount owed is calculated at contract termination and, in cases where the amount differs from the expected amount paid at contract origination, the difference is paid to or paid by Ally Financial.

Under a risk-sharing arrangement, residual losses are shared equally with Ally Financial to the extent remarketing proceeds are below Ally Financial's standard residual value (limited to a floor).

Under a capitalized cost reduction program, we pay an amount at the time of lease or retail contract origination to reduce the principal amount implicit in the lease or retail contract below the standard manufacturers' suggested retail price.

Under a lease pull-ahead program, a customer is encouraged to terminate their lease early and buy or lease a new GM vehicle. Ally Financial waives the customer's remaining payment obligation under their current lease and Ally Financial is compensated for any foregone revenue from the waived payments. Since these programs generally accelerate the resale of the vehicle, the proceeds are typically higher than if the vehicle had been sold at contract maturity. The reimbursement to Ally Financial for the foregone payments is reduced by the amount of this benefit.

Exclusivity Arrangements

We have entered into exclusivity agreements with Ally Financial whereby: (1) for a two-year period, retail financing incentive programs can be offered through a third-party financing source under certain specified circumstances, and after such two-year period beginning in January 2011 through December 2013 any such incentive programs can be offered on a graduated basis through third-parties on a non-exclusive basis, or if Ally Financial matches the rates offered by such third-party on a side-by-side basis with Ally Financial; (2) Ally Financial has no obligation to provide financing; and (3) Ally Financial has no targets against which it could be assessed penalties. After December 31, 2013 we will no longer have any restrictions or limitations on our ability to offer retail financing incentive programs through any third-party financing source as a result of agreements with Ally Financial.

Contractual Exposure Limit

We have an agreement with Ally Financial that limits certain unsecured obligations arising from service agreements to Ally Financial to $1.5 billion and limits the sum of maximum unsecured exposure and maximum secured exposure to the greater of $3.0 billion or 15% of Ally Financial's capital from and after December 30, 2010.

Vehicle Repurchase Obligations

Our agreement with Ally Financial requires the repurchase of Ally Financial financed inventory invoiced to dealers with limited exclusions, in the event of a qualifying voluntary or involuntary termination of the dealer's sales and service agreement. The repurchase obligation ended in August 2010 for vehicles invoiced through August 2009, ended in August 2011 for vehicles invoiced through August 2010, ended in August 2012 for vehicles invoiced through August 2011, ends in August 2013 for vehicles invoiced through August 2012 and ends in August 2014 for vehicles invoiced through August 2013.

The maximum potential amount of future payments required to be made to Ally Financial under this guarantee is based on the repurchase value of total eligible vehicles financed by Ally Financial in dealer stock. If vehicles are required to be repurchased under this arrangement, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer. The fair value of the guarantee, which considers the likelihood of dealers terminating and estimated loss exposure for ultimate disposition of vehicles, was recorded as a reduction of revenue.

Balance Sheet

The following table summarizes the balance sheet effects of transactions with Ally Financial (dollars in millions):

	December 31, 2012	December 31, 2011
Assets		
Accounts and notes receivable, net (a)	$222	$ 243
Liabilities		
Accounts payable (b)	$ 47	$ 59
Short-term debt and current portion of long-term debt (c)	$863	$1,068
Accrued liabilities and other liabilities (d)	$878	$ 650
Long-term debt (e)	$ 6	$ 8
Other non-current liabilities (f)	$ 19	$ 35

(a) Represents wholesale settlements due from Ally Financial and receivables for exclusivity fees and royalties.

(b) Represents amounts billed to us and payable related to incentive programs.

(c) Represents wholesale financing, sales of receivable transactions and the short-term portion of term loans provided to certain dealerships which we own or in which we have an equity interest.

(d) Includes accruals for marketing incentives on vehicles which are sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial. This includes the estimated amount of residual and rate support accrued, capitalized cost reduction incentives and amounts owed under lease pull-ahead programs.

(e) Represents the long-term portion of term loans from Ally Financial to certain consolidated dealerships.

(f) Represents long-term portion of liabilities for marketing incentives on vehicles financed by Ally Financial.

Statement of Operations

The following table summarizes the income statement effects of transactions with Ally Financial (dollars in millions):

	Years Ended December 31,		
	2012	2011	2010
Total net sales and revenue (decrease) (a)	$(2,368)	$(1,468)	$(1,383)
Interest income and other non-operating income, net (b)	$ 87	$ 126	$ 228
Automotive interest expense (c)	$ 38	$ 63	$ 243

(a) Represents marketing incentives on vehicles which were sold, or anticipated to be sold, to customers or dealers and financed by Ally Financial. This includes the estimated amount of residual and rate support accrued, capitalized cost reduction incentives and costs under risk sharing and lease pull-ahead programs. This amount is offset by net sales for vehicles sold to Ally Financial for employee and governmental lease programs and third-party resale purposes.

(b) Represents income on investments in Ally Financial preferred stock (through March 31, 2011), exclusivity and royalty fee income. Included in this amount is rental income related to Ally Financial's primary executive and administrative offices located in the Renaissance Center in Detroit, Michigan. The lease agreement expires in November 2016.

(c) Represents interest incurred on notes payable and wholesale settlements.

Ally Financial Common and Preferred Stock

In December 2010 the UST agreed to convert 110 million shares of preferred securities into 532,000 shares of common stock. This resulted in the dilution of our investment in Ally Financial common stock from 16.6% to 9.9%, of which 4.0% was held directly and 5.9% was held indirectly through an independent trust. In May 2011 we transferred the 4.0% of shares we owned directly to the independent trust. In December 2011 in response to a letter from the trustee requesting that the life of the trust be extended, the Federal Reserve agreed to extend the trust from December 2011 to December 2013. Pursuant to previous commitments to reduce influence over and ownership in Ally Financial, the trustee, who is independent of us, has the sole authority to vote and is required to dispose of all Ally Financial common stock held in the trust by December 24, 2013. We can cause the trustee to return any Ally Financial common stock to us to hold directly, so long as our directly held voting and total common equity interests remain below 10.0%. At December 31, 2012 and 2011 our equity ownership in Ally Financial was 9.9%.

Fair Value of Ally Financial Common Stock

We estimated the fair value of Ally Financial common stock using a market approach that applies the average price to tangible book value multiples of comparable companies to the consolidated Ally Financial tangible book value. The significant inputs used in our fair value analyses included Ally Financial's December 31, 2012 and 2011 financial statements, financial statements and price to tangible book value multiples of comparable companies in the banking and finance industry, and the effects of certain Ally Financial shareholder rights. The measurement of Ally Financial common stock is a Level 3 fair value measurement.

At December 31, 2011 we determined the carrying amount of our investment in Ally Financial common stock exceeded our estimate of its fair value. Our estimate of fair value resulted from broader macroeconomic uncertainties and volatility in the financial markets including the Eurozone debt crisis, continued heightened risk of recession and concerns about Ally Financial's mortgage related operations. Our estimate considered the potential effect of contractual provisions held by the UST who may receive incremental ownership interest in Ally Financial depending upon Ally Financial's equity value at the time of a successful public offering or private sale. These contractual provisions could result in significant dilution of our ownership interest. Based on an evaluation of the duration and severity of this decline in fair value, we concluded the impairment was other-than-temporary. As a result we recorded an impairment charge of $555 million in Interest income and other non-operating income, net to reduce our investment to its estimated fair value of $403 million.

The following table summarizes the carrying amount and estimated fair value of Ally Financial common stock (dollars in millions):

	December 31, 2012	December 31, 2011
Common stock		
Carrying amount	$ 399	$403
Fair value	$1,268	$403

Ally Financial Preferred Stock

In March 2011 our investment in Ally Financial preferred stock was sold through a public offering for net proceeds of $1.0 billion. The gain of $339 million related to the sale was recorded in Interest income and other non-operating income, net.

Note 28. Supplementary Quarterly Financial Information (Unaudited)

The following tables summarize supplementary quarterly financial information (dollars in millions, except per share amounts):

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
2012				
Total net sales and revenue	$37,759	$37,614	$37,576	$39,307
Automotive gross margin	$ 4,418	$ 4,449	$ 4,327	$ (3,135)
Net income	$ 1,350	$ 1,901	$ 1,854	$ 1,031
Net income attributable to stockholders	$ 1,315	$ 1,846	$ 1,833	$ 1,194
Earnings per share, basic	$ 0.64	$ 0.95	$ 0.94	$ 0.58
Earnings per share, diluted	$ 0.60	$ 0.90	$ 0.89	$ 0.54

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
2011				
Total net sales and revenue	$36,194	$39,373	$36,719	$37,990
Automotive gross margin	$ 4,214	$ 5,250	$ 4,594	$ 4,422
Net income	$ 3,411	$ 3,037	$ 2,092	$ 747
Net income attributable to stockholders	$ 3,366	$ 2,992	$ 2,107	$ 725
Earnings per share, basic	$ 2.09	$ 1.68	$ 1.10	$ 0.30
Earnings per share, diluted	$ 1.77	$ 1.54	$ 1.03	$ 0.28

Starting in the three months ended June 30, 2011 we used the two-class method for calculating earnings per share because Series B Preferred Stock was a participating security.

Net income for the three months ended December 31, 2012 included:

- Deferred tax asset valuation allowance release of $36.3 billion in the U.S. and Canada.
- Goodwill impairment charges of $26.5 billion in GMNA and GMIO.
- Property, plant and equipment impairment charges of $3.7 billion in GME.
- Pension settlement charge of $2.6 billion in GMNA.
- Intangible asset impairment charges of $1.8 billion in GME.
- Charge of $525 million for GM Korea hourly wage litigation.
- Charge of $402 million which represents the premium paid to purchase our common stock from the UST in Corporate.

Net income for the three months ended September 30, 2012 included:

- Goodwill impairment charges of $78 million in GMIO.

Net income for the three months ended March 31, 2012 included:

- Goodwill impairment charges of $617 million in GMIO and GME.

Net income the three months ended December 31, 2011 included:

- Goodwill impairment charge of $891 million in GMIO and GME.

- Settlement gain of $749 million related to termination of CAW hourly retiree healthcare benefits in GMNA.
- Impairment charge of $555 million related to Ally Financial common stock in Corporate.
- Reversal of deferred income tax valuation allowances of $502 million in Australia.

Net income for the three months ended March 31, 2011 included:

- Gain of $1.6 billion related to the sale of our Class A membership Interests in New Delphi in GMNA.
- Goodwill impairment charge of $395 million in GME.
- Gain of $339 million related to the sale of 100% of our investment in the Ally Financial preferred stock in Corporate.

Note 29. Segment Reporting

We analyze the results of our business through our five segments: GMNA, GME, GMIO, GMSA and GM Financial. Each segment has a manager responsible for executing our strategies. Our automotive manufacturing operations are integrated within the segments, benefit from broad-based trade agreements and are subject to regulatory requirements, such as Corporate Average Fuel Economy regulations. While not all vehicles within a segment are individually profitable on a fully loaded cost basis, those vehicles are needed in our product mix in order to attract customers to dealer showrooms and to maintain sales volumes for other, more profitable vehicles. Because of these factors, we do not manage our business on an individual brand or vehicle basis. The chief operating decision maker evaluates the operating results and performance of our automotive segments through Income (loss) before interest and income taxes, as adjusted for additional amounts, which are presented net of noncontrolling interests, and evaluates GM Financial through income before income taxes.

Substantially all of the cars, trucks and parts produced are marketed through retail dealers in North America, and through distributors and dealers outside of North America, the substantial majority of which are independently owned.

In addition to the products sold to dealers for consumer retail sales, cars and trucks are also sold to fleet customers, including daily rental car companies, commercial fleet customers, leasing companies and governments. Sales to fleet customers are completed through the network of dealers and in some cases sold directly to fleet customers. Retail and fleet customers can obtain a wide range of aftersale vehicle services and products through the dealer network, such as maintenance, light repairs, collision repairs, vehicle accessories and extended service warranties.

GMNA primarily meets the demands of customers in North America with vehicles developed, manufactured and/or marketed under the following four brands:

- Buick
- Cadillac
- Chevrolet
- GMC

The demands of customers outside of North America are primarily met with vehicles developed, manufactured and/or marketed under the following brands:

- Buick
- Cadillac
- Chevrolet
- GMC
- Holden
- Opel
- Vauxhall

At December 31, 2012 we also had equity ownership stakes directly or indirectly in entities through various regional subsidiaries, including GM Korea, SGM, SGMS, SGMW, FAW-GM and HKJV. These companies design, manufacture and market vehicles under the following brands:

- Alpheon
- Baojun
- Buick
- Cadillac
- Chevrolet
- Jiefang
- Wuling

Nonsegment operations are classified as Corporate. Corporate includes an investment in Ally Financial, certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures and certain nonsegment specific revenues and expenses.

In 2012 we recorded losses on extinguishment of debt within Corporate for segment reporting purposes. Previously gains and losses on extinguishment of debt were recorded within the applicable automotive segments. This change is consistent with how management currently views the results of our operations.

All intersegment balances and transactions have been eliminated in consolidation.

The following tables summarize key financial information by segment (dollars in millions):

	At and For the Year Ended December 31, 2012									
	GMNA	GME	GMIO	GMSA	Corporate	Eliminations	Total Automotive	GM Financial	Eliminations	Total

(a) Consists of a gain on the sale of Nexteer of $60 million in GMNA, a gain on the sale of Saab of $123 million, a gain on acquisition of GMS of $66 million in GME and a gain on the extinguishment of the VEBA Notes of $198 million in Corporate.

(b) Gain on the reversal of an accrual for Adjustment Shares due to the conclusion that it was no longer probable that unsecured claims of MLC would reach the levels as defined by the Amended and Restated Master Sale and Purchase Agreement.

(c) Amounts exclude changes related to income tax expense (benefits) in jurisdictions with a full valuation allowance throughout the period.

Automotive revenue is attributed to geographic areas based on the country in which the product is sold, except for revenue from certain joint ventures and non-wholly owned consolidated subsidiaries. In such case, the revenue is attributed based on the geographic location of the joint venture or non-wholly owned consolidated subsidiary. Automotive Financing revenue is attributed to the geographic area where the financing is originated. The following table summarizes information concerning principal geographic areas (dollars in millions):

	At and For the Years Ended December 31,

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Disclosure Controls and Procedures

We maintain disclosure controls and procedures designed to provide reasonable assurance that information required to be disclosed in reports filed under the Securities Exchange Act of 1934, as amended (Exchange Act) is recorded, processed, summarized and reported within the specified time periods and accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Our management, with the participation of our Chairman and CEO and Senior Vice President and CFO, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) or 15d-15(e) promulgated under the Exchange Act) at December 31, 2012. Based on these evaluations, our CEO and CFO concluded that our disclosure controls and procedures required by paragraph (b) of Rules 13a-15 or 15d-15 were effective as of December 31, 2012.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining effective internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act. This system is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with U.S. GAAP. Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, misstatements due to error or fraud may not be prevented or detected on a timely basis.

Our management performed an assessment of the effectiveness of our internal control over financial reporting at December 31, 2012, utilizing the criteria discussed in the "Internal Control - Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission. The objective of this assessment was to determine whether our internal control over financial reporting was effective at December 31, 2012. Based on management's assessment, we have concluded that our internal control over financial reporting was effective at December 31, 2012.

The effectiveness of our internal control over financial reporting has been audited by Deloitte & Touche LLP, an independent registered public accounting firm, as stated in its report which is included herein.

Changes in Internal Controls

There have not been any changes in our internal control over financial reporting during the three months ended December 31, 2012 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

GENERAL MOTORS COMPANY

2013 ANNUAL REPORT

2014 CADILLAC CTS Motor Trend Car of the Year

Relentless forward motion.

Today's GM is born of the passion of our people to bring our customers the finest cars and trucks we've ever built … and to reward our stockholders for their confidence in us.

We're doing all that and more. GM is moving forward. And the very best is yet to come.

FINANCIAL CONTENTS

To Our Stockholders:

2013 was an historic year for General Motors – a year in which we advanced every part of our long-term strategy for profitable growth.

We strengthened GM's fortress balance sheet. We delivered solid earnings and made a number of strategic investments around the world. We also built on our reputation for product excellence and world-class quality, thanks to our revitalized portfolio of highly regarded new and refreshed vehicles.

In June, Standard & Poor's restored GM to the S&P 500, which opened the door to new investors, including index mutual fund holders and other investment institutions. Then in September, Moody's Investors Service responded to our progress by elevating GM to investment grade. Finally, the U.S. Treasury sold its remaining stake in the company toward the end of the year, and we will be forever grateful for the extraordinary assistance we received.

These were all important milestones. But just as important, our culture is changing and the entire company is now squarely focused on the customer: what they want, what they need and what they deserve when they buy a new GM car, truck or crossover.

This discipline is transforming our product design, quality and customer care at a remarkable pace. It is also guiding our response to the large safety recalls announced in early 2014 that involve the ignition switches in certain GM vehicles no longer in production.

Rest assured that we are completely focused on this issue at the highest levels of the company and we are working to exceed everyone's expectations for customer care, responsiveness and transparency.

MARY T. BARRA

Chief Executive Officer

Our culture is changing and the entire company is now squarely focused on the customer: what they want, what they need and what they deserve when they buy a new GM car, truck or crossover.

RECORD SALES

9,700,000
VEHICLES

delivered around the world

Nothing is more important than the safety of our customers, so we are also making changes to ensure that something like this does not happen again. One of our first actions was to name a vice president of Global Vehicle Safety to oversee the safety development of GM vehicle systems on a global basis, the confirmation and validation of safety performance, and post-sale safety activities such as recalls. There will be more changes because we are determined to emerge from this crisis stronger and wiser so we can accelerate the momentum we generated throughout 2013.

During the year, we delivered a record 9.7 million vehicles around the world and more than $155 billion in revenue. We saw record sales in China, the world's largest market; higher retail share in the United States; and Opel/Vauxhall's first market share increase in Europe in 14 years.

Net income to common stockholders was $3.8 billion, which is down from 2012 largely because of incremental tax expense and the actions we took to make the business stronger for the long term.

By contrast, our EBIT-adjusted – a figure that tracks how the underlying business is performing before interest, taxes and special items – was a robust $8.6 billion. That is up $700 million from 2012.

The largest contributors were our operations in North America, where we had record earnings, our China joint ventures and GM Financial, which also posted record results. South America was profitable and Europe, which significantly reduced its losses, remains on track to achieve its mid-decade break-even target.

All of this translates into 16 consecutive profitable quarters and almost $32 billion of cumulative EBIT-adjusted since the beginning of 2010. These results also paved the way, in early 2014, for our Board of Directors to declare a 30-cent per share quarterly dividend on our common stock – a first for today's GM.

2015 CADILLAC
ATS COUPE

GM's IPO: An Expression of What Could Be

Returning capital to common stockholders through a dividend was meaningful because it helps deliver on the promise of GM's historic 2010 initial public offering.

We went public as a smaller company with far less debt and some very good vehicles. However, a wide range of issues had to be addressed so that the company could better adapt to aggressive global competition, rapid-fire advances in technology and increasingly stringent government regulations.

Working together, our team set out to rebuild the company's organizational capability in corporate and consumer finance, accounting, information technology, risk management, research and development, and more.

Every year since the IPO, we have made significant progress, and 2013 was no exception. For example, we acquired Ally Financial's International Operations in Europe and Latin America, and we expect to acquire Ally Financial's China joint venture in 2014.

The year also saw the opening of a new state-of-the-art information technology data center and the start of construction on a second mirrored and fully redundant facility, as well as the retirement of several billion dollars of high-cost preferred stock. However, no amount of restructuring, reorganization and investment would matter much if we had not made the customer our compass.

Our products best tell this story. Today, GM products are taking on the best vehicles in the world and winning – with customers and critics alike. For example, the new Cadillac ATS sedan, which was named the 2013 North American Car of the Year by a panel of distinguished journalists, helped Cadillac become the fastest-growing full-line luxury brand in 2013. Just 12 months later, Chevrolet

2014 SILVERADO: North American Truck of the Year; **2014 CORVETTE STINGRAY:** North American Car of the Year

QUALITY

8

J.D. Power
Initial Quality Awards
in 2013

swept the group's 2014 car and truck awards with the Corvette Stingray and the Silverado. About the same time, the new Cadillac CTS was named the *Motor Trend* Car of the Year.

The same story is playing out all over the world. The revitalization of Opel/Vauxhall is just one example. Opel won more than three dozen awards for design, performance, innovation and value in 2013, thanks in large measure to the new ADAM and Mokka.

Compelling design played a part in these success stories. So did value, and advanced technology in areas like safety, connectivity and fuel economy. However, there is one attribute that can make or break a brand, and that is quality.

Quality: Good Enough Just Isn't

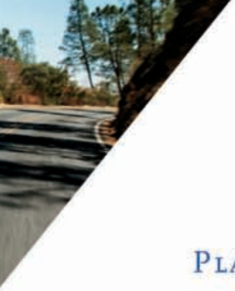
For years, GM's quality was competitive. Today "good enough" just isn't, and we have made major strides because the entire organization is now on the same page. For example, back in 2011 we aligned the compensation of salaried and hourly employees in the United States around profits and quality.

This provides a greater opportunity for employees to share in the success of the business. And getting our workforce fully engaged was instrumental in helping us earn eight Initial Quality Awards in the J.D. Power 2013 Initial Quality Study*, which was more than any other automaker.

We are proud of our progress, but it is critical that we improve on these results and then replicate them all over the world. That is why we created the Global Quality & Customer Experience team in 2013.

This group is helping us develop even more robust product quality and durability testing standards, and revamp how we handle customer concerns to move faster and get our designers and engineers fully engaged.

* The GM vehicles ranked highest in their segments in the J.D. Power 2013 Initial Quality Study were: Chevrolet Camaro (Midsize Sporty Car); Chevrolet Impala (Large Car); Chevrolet Tahoe (Large CUV); Chevrolet Silverado HD (Large Heavy-Duty Pickup); Chevrolet Avalanche and GMC Sierra (Tie – Large Light-Duty Pickup); Cadillac Escalade (Large Premium CUV); Buick Encore (Tie – Sub-Compact CUV).



Playing Offense

Everyone at GM knows that to get ahead and stay ahead, we have to do more than just get the fundamentals like quality right. We have to play offense with great products and exceptional value.

For example, in 2013 and early 2014, we announced that GMC and Chevrolet will reenter the mid-size pickup segment in the United States by leveraging one of our global truck architectures. This is a segment that our domestic competitors abandoned. But we think there are plenty of customers ready for great-looking, very capable and fuel-efficient designs. The vehicles – the Chevrolet Colorado and GMC Canyon – launch this fall.

Transforming Cadillac into a global luxury brand is another priority. That's why we are simultaneously expanding our product portfolio and building a dedicated plant in Shanghai to serve the Chinese market, which we believe will be the largest luxury market in the world by the end of the decade. We broke ground on this facility in 2013, and it is one of several investments that we expect will increase our capacity in China to about 5 million units within a few years.

Driving Innovation

Another thing all great companies do is innovate, and GM is now doing a much better job of stretching for breakthroughs and creating significant positive change for customers.

Our global connected car strategy is a case in point. Our OnStar business was a pioneer of the connected car, and it turned three simple buttons – one for calls, one for directions and one for emergencies – into a very successful business with close to 7 million subscribers in the United States, Canada, China and Mexico.

BUICK ENCORE

62,000
UNITS

global sales of 100,000 units – including 62,000 in China

2014 BUICK ENCORE

2015 GMC CANYON

2015 CHEVROLET COLORADO

Now Opel is planning to introduce OnStar across its passenger car range in selected European markets beginning in 2015. In addition, we are preparing to take OnStar beyond safety and security to an entirely new level of performance and redefine what it means to be connected.

In early 2013, we announced the automotive industry's largest global deployment of 4G LTE high-speed mobile broadband. Our strategy will give consumers around the world superior smartphone integration, a built-in Wi-Fi hotspot and a growing portfolio of apps that can handle everything from scheduling vehicle service appointments to booking a hotel room.

The plan is for the OnStar 4G LTE rollout to start this summer in the United States and Canada on most 2015 models, and we plan to expand availability to more brands, vehicles and markets in coming years.

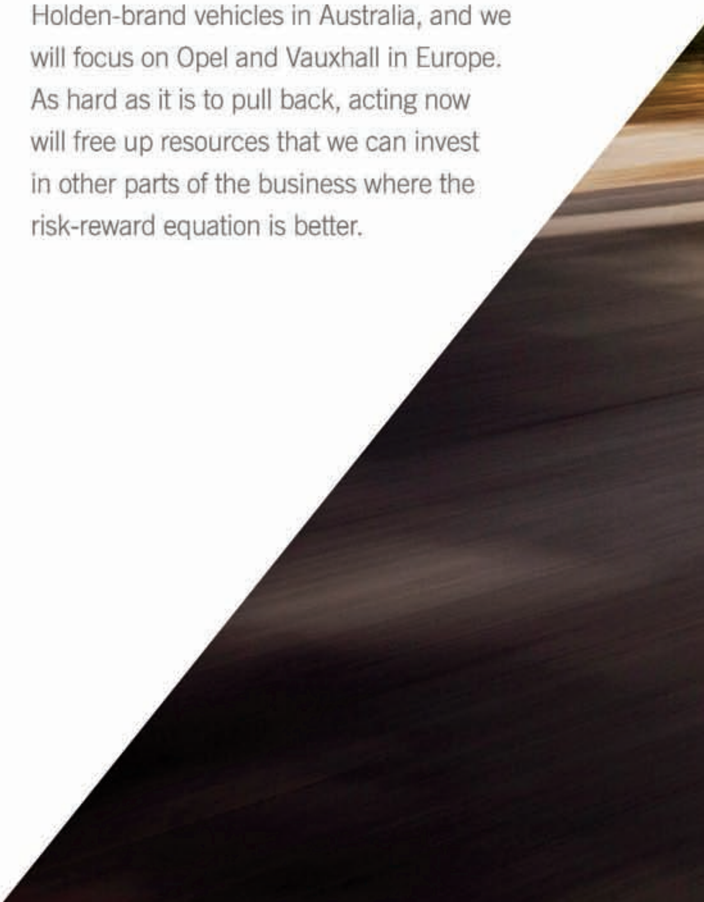
Every initiative I have shared so far has one goal: to help GM grow profitably around the world. The same holds true for the difficult decisions we made in 2013, which include actions that will end the sale of mainstream Chevrolet products in Europe after 2015, and stop the production of vehicles at our Australian operations by the end of 2017. These business units have been generating losses for years because of issues that include high production costs, lack of scale and adverse currency shifts.

Going forward, we will continue to market Holden-brand vehicles in Australia, and we will focus on Opel and Vauxhall in Europe. As hard as it is to pull back, acting now will free up resources that we can invest in other parts of the business where the risk-reward equation is better.

BROADBAND

4G LTE

rolls out this year in U.S. and Canada



2014 OPEL ADAM

Opel won more than three dozen awards for design, performance, innovation and value in 2013.

Our ultimate goal is to see GM ranked among the very best companies in the world.

2014
CHEVROLET
MALIBU

Leading GM into the Future

One of the principal architects of GM's success is Dan Akerson, who stepped down as chairman and CEO in January 2014 due to family reasons. Dan's GM career began on the eve of our historic IPO, and it spanned some of the most critical – and successful – years in the company's history.

I remember the day early in his tenure when Dan said emphatically, "I am not a car guy." Many people didn't know what to make of his remark because they were used to auto executives with gasoline in their veins and nicknames like "Engine Charlie."

However, history will show that Dan was the quintessential car guy because he drove us to refocus our entire organization around the customer, saying that is what the world's most successful companies do. At the same time, he changed how we operate by challenging the status quo in every area and promoting or recruiting change agents who helped us learn that past practice isn't always best practice.

Under Dan's leadership, the GM Board of Directors has become one of the strongest boards in corporate America. We've added a number of respected directors, including Tim Solso, the retired chairman and CEO of Cummins Inc., who is now GM's non-executive chairman. Tim is widely considered to be one of the world's best corporate leaders.

At Cummins, he preached profitable growth, he championed innovation and the company delivered exceptional returns to stockholders in the process. His counsel is going to be invaluable.

To be sure, we still have our share of internal and external challenges. But we know what they are and we are facing them down one after another. That's why there will be no right or left turns by today's leadership team.

In the years ahead, you can expect continued investment by GM in compelling design, innovation and an exceptional ownership experience. Simultaneously, we will continue our work to reduce internal complexity, especially in product development, drive down material and logistics costs, and fix or exit businesses that are not profitable.

We know that winning in each of these areas – not just making progress – is the best path to leadership and reaching our ultimate goal, which is to see GM ranked among the very best companies in the world.

Respectfully,

Mary T Barra

GENERAL MOTORS COMPANY AND SUBSIDIARIES RECONCILIATION OF NON-GAAP MEASURES

The accompanying Letter to Stockholders includes earnings before interest and taxes adjusted for special items (EBIT-adjusted) and Adjusted automotive free cash flow which are not prepared in accordance with Accounting Principles Generally Accepted in the United States of America (U.S. GAAP) and have not been audited or reviewed by GM's independent auditors. EBIT-adjusted and Adjusted automotive free cash flow are considered non-GAAP measures.

Management believes these non-GAAP measures provide meaningful supplemental information regarding GM's operating results and liquidity because they exclude amounts that management does not consider when assessing and measuring operational and financial performance. Management believes these measures allow it to readily view operating trends, perform analytical comparisons and benchmark performance between periods and among geographic regions. GM believes these non-GAAP measures are useful in allowing for greater transparency of GM's core operations and they are therefore used by management in its financial and operational decision-making.

While management believes that these non-GAAP measures provide useful information, they are not operating measures under U.S. GAAP, and there are limitations associated with their use. GM's calculation of these non-GAAP measures may not be completely comparable to similarly titled measures of other companies due to potential differences between companies in their method of calculation. As a result, the use of these non-GAAP measures has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Net income or Net income attributable to common stockholders. Due to these limitations, these non-GAAP measures are used as a supplement to U.S. GAAP measures.

The following table summarizes the reconciliation of EBIT-adjusted to its most comparable U.S. GAAP measure (dollars in millions):

	2012	2013
OPERATING SEGMENTS		
GMNA[(a)]	$6,470	$7,461
GME[(a)]	(1,939)	(844)
GMIO[(a)]	2,528	1,230
GMSA[(a)]	457	327
GM Financial[(b)]	744	898
Total operating segments[(b)]	8,260	9,072
Corporate and eliminations	(401)	(494)
EBIT-ADJUSTED[(b)]	**7,859**	**8,578**
Special items	(36,106)	(805)
Corporate interest income	343	246
Automotive interest expense	489	334
Loss on extiguishment of debt	250	212
Income tax expense (benefit)	(34,831)	2,127
NET INCOME ATTRIBUTABLE TO STOCKHOLDERS	**$6,188**	**$5,346**

(a)Interest and income taxes are recorded centrally in Corporate and therefore are not reconciling items for GM's automotive operating segments between EBIT-adjusted and Net income attributable to stockholders.
(b)GM Financial amounts represent income before income taxes.

In the year ended December 31, 2012, adjustments to automotive free cash flow included the following:
- Voluntary contributions to a pension plan of $2.3 billion; and
- The premium paid to purchase our common stock from the United States Treasury of $0.4 billion.

In the year ended December 31, 2013, adjustments to automotive free cash flow included the following:
- Accrued interest on the prepayment of the HCT notes of $0.2 billion
- Pension contributions of $0.1 billion related to the previously announced annuitization of the U.S. salaried pension plan

In the year ended December 31, 2012, special items for EBIT-adjusted included the following:
- Goodwill impairment charges of $26.4 billion in GMNA, $590 million in GME and $132 million in GMIO;
- Pension settlement charges of $2.7 billion in GMNA;
- Income related to various insurance recoveries of $155 million in GMNA, GME, GMIO and GMSA;
- Property impairment charges of $3.7 billion in GME;
- Intangible assets impairment charges of $1.8 billion in GME;
- Impairment charges related to the investment in PSA of $220 million in GME;
- A charge of $119 million in GME to record GM Strasbourg assets and liabilities to estimated fair value;
- GM Korea hourly wage litigation charge of $336 million in GMIO;
- Noncontrolling interests of $68 million in GMIO related to redemption of the GM Korea mandatorily redeemable preferred shares; and
- A charge of $402 million in Corporate which represents the premium paid to purchase our common stock from the UST.

In the year ended December 31, 2013, special items for EBIT-adjusted included the following:
- Impairment charges of property and intangible assets of $774 million in GMIO;
- Costs related to our plans to cease mainstream distribution of Chevrolet brand in Europe of $621 million in GMIO;
- Gain related to reversal of GM Korea wage litigation accrual of $577 million in GMIO;
- Gain on sale of equity investment in Ally Financial of $483 million in Corporate;
- Goodwill impairment charges of $442 million in GMIO;
- Venezuela currency devaluation loss of $162 million in GMSA;
- Gain on sale of equity investment in PSA of $152 million in GME;
- Noncontrolling interests related to redemption of the GM Korea mandatorily redeemable preferred shares of $67 million in GMIO;
- Pension settlement charges of $56 million in GMNA;
- Charges related to PSA product development agreement of $49 million in GMNA; and
- Income related to various insurance recoveries of $35 million.

BOARD OF DIRECTORS (AS OF APRIL 1, 2014)

BEGINNING ON LEFT:

STEPHEN J. GIRSKY
Senior Advisor, General Motors Company, *Joined Board 07/10/09*

PATRICIA F. RUSSO
Retired Chief Executive Officer, Alcatel-Lucent, *Joined Board 07/24/09*

ROBERT D. KREBS
Retired Chairman and Chief Executive Officer, Burlington Northern Santa Fe Corporation, *Joined Board 07/24/09*

DAVID BONDERMAN
Co-Founding Partner and Managing General Partner, TPG, *Joined Board 07/24/09*

E. NEVILLE ISDELL
Retired Chairman and Chief Executive Officer, The Coca-Cola Company, *Joined Board 07/10/09*

MARY T. BARRA
Chief Executive Officer, General Motors Company, *Joined Board 01/15/14*

THEODORE M. SOLSO
Retired Chairman and Chief Executive Officer, Cummins Inc., and Chairman of the Board, General Motors Company, *Joined Board 06/12/12*

CAROL M. STEPHENSON
Retired Dean, Ivey Business School, The University of Western Ontario, *Joined Board 07/24/09*

JAMES J. MULVA
Retired Chairman and Chief Executive Officer, ConocoPhillips, *Joined Board 06/12/12*

DR. CYNTHIA A. TELLES
Director, UCLA Neuropsychiatric Institute Spanish-Speaking Psychosocial Clinic, *Joined Board 04/13/10*

THOMAS M. SCHOEWE
Retired Executive Vice President and Chief Financial Officer, Wal-Mart Stores, Inc., *Joined Board 11/14/11*

KATHRYN V. MARINELLO
Senior Advisor, Ares Management LLC, *Joined Board 07/10/09*

NOT PICTURED:

ERROLL B. DAVIS, JR.
Superintendent, Atlanta Public Schools, *Joined Board 07/10/09*

ADMIRAL MICHAEL G. MULLEN, USN (RET.)
Retired Chairman, Joint Chiefs of Staff, *Joined Board 02/01/13*

MANAGEMENT TEAM (AS OF APRIL 1, 2014)

MARY T. BARRA
Chief Executive Officer

DANIEL AMMANN
President

JAIME ARDILA
Executive Vice President & President, South America

ALAN S. BATEY
Executive Vice President & President, North America

SELIM BINGOL
Senior Vice President, Global Communications & Public Policy

ALICIA BOLER-DAVIS
Senior Vice President, Global Quality & Customer Experience

General Auditor

THOMAS S. TIMKO
Vice President, Controller & Chief Accounting Officer

MATTHEW TSIEN
Executive Vice President & President, GM China

EDWARD T. WELBURN, JR.
Vice President, Global Design

Market Information

Shares of our common stock have been publicly traded since November 18, 2010 when our common stock was listed and began trading on the New York Stock Exchange and the Toronto Stock Exchange. The following table summarizes the quarterly price ranges of our common stock based on high and low prices from intraday trades on the New York Stock Exchange, the principal market in which the stock is traded:

	Years Ended December 31,			
	2013		2012	
	High	Low	High	Low
Quarter				
First	$ 30.68	$ 26.19	$ 27.68	$ 20.75
Second	$ 35.49	$ 27.11	$ 27.03	$ 19.24
Third	$ 37.97	$ 33.41	$ 25.15	$ 18.72
Fourth	$ 41.85	$ 33.92	$ 28.90	$ 22.67

Holders

At January 30, 2014 we had a total of 1.6 billion issued and outstanding shares of common stock held by 403 holders of record.

Dividends

So long as any share of our Series A Preferred Stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on our Series A Preferred Stock, subject to exceptions, such as dividends on our common stock payable solely in shares of our common stock. Our secured revolving credit facilities contain certain restrictions on our ability to pay dividends on our common stock, subject to exceptions, such as dividends payable solely in shares of our common stock. At December 31, 2013 there were no dividends in arrears on our Series A Preferred Stock.

Since our formation, we had not paid any dividends on our common stock through the year ended December 31, 2013. In January 2014 our Board of Directors declared a dividend on common stock in the amount of $0.30 per share payable in March 2014. It is anticipated that dividends on our common stock will be declared and paid quarterly subsequent to the initial dividend declaration. However our payment of dividends in the future, if any, will be determined by our Board of Directors and will be paid out of funds legally available for that purpose. Our payment of dividends in the future will depend on business conditions, our financial condition, earnings, liquidity and capital requirements, the covenants in our secured revolving credit facilities and other factors.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Selected Financial Data

Pursuant to the agreement with the Securities and Exchange Commission (SEC), as described in a no-action letter issued to Old GM by the SEC Staff on July 9, 2009 regarding our filing requirements, the selected financial data below includes the selected financial data of Old GM as it is the Predecessor entity solely for accounting and financial reporting purposes. At July 10, 2009 we applied fresh-start reporting following the guidance in Accounting Standards Codification (ASC) 852, "Reorganizations". The consolidated financial statements for the periods ended on or before July 9, 2009 do not include the effect of any changes in the fair value of assets or liabilities as a result of the application of fresh-start reporting. Our financial information at and for any period after July 10, 2009 is not comparable to Old GM's financial information. Selected financial data is summarized in the following table (dollars in millions except per share amounts):

	Successor					Predecessor
	Years Ended December 31,				July 10, 2009 Through December 31,	January 1, 2009 Through
	2013	2012	2011	2010	2009	July 9, 2009
Income Statement Data:						
Total net sales and revenue (a)	$ 155,427	$ 152,256	$ 150,276	$ 135,592	$ 57,474	$ 47,115
Reorganization gains, net (b)	$ —	$ —	$ —	$ —	$ —	$ 128,155
Income (loss) from continuing operations	$ 5,331	$ 6,136	$ 9,287	$ 6,503	$ (3,786)	$ 109,003
Net (income) loss attributable to noncontrolling interests	15	52	(97)	(331)	(511)	115
Net income (loss) attributable to stockholders (c)	$ 5,346	$ 6,188	$ 9,190	$ 6,172	$ (4,297)	$ 109,118
Net income (loss) attributable to common stockholders	$ 3,770	$ 4,859	$ 7,585	$ 4,668	$ (4,428)	$ 109,118
Basic earnings (loss) per common share (d)	$ 2.71	$ 3.10	$ 4.94	$ 3.11	$ (3.58)	$ 178.63
Diluted earnings (loss) per common share (d)	$ 2.38	$ 2.92	$ 4.58	$ 2.89	$ (3.58)	$ 178.55
Balance Sheet Data (as of period end):						
Total assets (a)	$ 166,344	$ 149,422	$ 144,603	$ 138,898	$ 136,295	
Automotive notes and loans payable (e)	$ 7,137	$ 5,172	$ 5,295	$ 4,630	$ 15,783	
GM Financial notes and loans payable (a)	$ 29,046	$ 10,878	$ 8,538	$ 7,032		
Series A Preferred Stock (f)	$ 3,109	$ 5,536	$ 5,536	$ 5,536	$ 6,998	
Series B Preferred Stock (g)	$ —	$ 4,855	$ 4,855	$ 4,855		
Equity (h)	$ 43,174	$ 37,000	$ 38,991	$ 37,159	$ 21,957	

(a) General Motors Financial Company, Inc (GM Financial) was consolidated effective October 1, 2010. GM Financial acquired Ally Financial, Inc's (Ally Financial) international operations in Europe and Latin America in the year ended December 31, 2013.

(b) In the period January 1, 2009 through July 9, 2009 Old GM recorded Reorganization gains, net of $128.2 billion directly associated with filing of certain of its direct and indirect subsidiaries voluntary petitions for relief under Chapter 11 of the U.S. Bankruptcy Code in the U.S. Bankruptcy Court for the Southern District of New York, a Section 363 sale under Chapter 11 of the U.S. Bankruptcy Code (363 Sale) of Old GM and certain of its direct and indirect subsidiaries and the application of fresh-start reporting.

(c) In the year ended December 31, 2012 we recorded Goodwill impairment charges of $27.1 billion, the reversal of deferred tax valuation allowances of $36.3 billion in the U.S. and Canada, pension settlement charges of $2.7 billion and GM Europe (GME) long-lived asset impairment charges of $5.5 billion.

(d) In the years ended December 31, 2012 and 2011 we used the two-class method for calculating earnings per share as the Series B Preferred Stock was a participating security due to the applicable market value of our common stock being below $33.00 per common share. Refer to Note 22 to our consolidated financial statements for additional detail.

(e) In December 2010 GM Korea Company (GM Korea) terminated its $1.2 billion credit facility following the repayment of the remaining $1.0 billion under the facility.

(f) In September 2013 we purchased 120 million shares of our Series A Preferred Stock held by the UAW Retiree Medical Benefits Trust (New VEBA) for $3.2 billion. In December 2010 we purchased 84 million shares from the UST for $2.1 billion.

(g) In December 2013 all of our Series B Preferred Stock automatically converted into 137 million shares of our common stock. Our Series B Preferred Stock was issued in a public offering in November and December 2010.

(h) In December 2012 we purchased 200 million shares of our common stock for a total of $5.5 billion, which directly reduced shareholder's equity by $5.1 billion and we recorded a charge to earnings of $0.4 billion. Our Series A Preferred Stock was reclassified from temporary equity to permanent equity in the year ended December 31, 2010.

Management's Discussion and Analysis of Financial Condition and Results of Operations

General Motors Company (sometimes referred to as "we," "our," "us," "ourselves," the "Company," "General Motors," or "GM") was incorporated as a Delaware corporation in 2009 and on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation through the 363 Sale. General Motors Corporation is sometimes referred to in this Annual Report on Form 10-K (2013 Form 10-K), for the periods on or before July 9, 2009, as "Old GM," as it is the predecessor entity solely for accounting and financial reporting purposes. On July 10, 2009 in connection with the 363 Sale, General Motors Corporation changed its name to Motors Liquidation Company, which is sometimes referred to in this 2013 Form 10-K for the periods after July 10, 2009 as "MLC." On December 15, 2011 MLC was dissolved and the Motors Liquidation Company GUC Trust (GUC Trust) assumed responsibility for the affairs of and certain claims against MLC and its debtor subsidiaries that were not concluded prior to MLC's dissolution. MLC transferred to the GUC Trust all of MLC's remaining undistributed shares of our common stock and warrants to acquire our common stock.

Basis of Presentation

This Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) should be read in conjunction with the accompanying consolidated financial statements. We analyze the results of our business through our five segments: GM North America (GMNA), GME, GM International Operations (GMIO), GM South America (GMSA) and GM Financial. Consistent with industry practice, market share information includes estimates of industry sales in certain countries where public reporting is not legally required or otherwise available on a consistent basis.

In the three months ended March 31, 2013 we changed our managerial and financial reporting structure to measure our reportable segments revenue and profitability based on the geographic area in which we sell vehicles to third party customers. We have retrospectively revised the segment presentation for all periods presented. Refer to Note 25 to our consolidated financial statements for additional information on this change.

Overview

Automotive

Our vision is to design, build and sell the world's best vehicles. The primary elements of our strategy to achieve this vision are to:

- Deliver a product portfolio of the world's best vehicles that includes cars, crossovers and trucks, allowing us to maximize sales under any market condition;
- Sell our vehicles globally by targeting developed markets, which are projected to have increases in vehicle demand as the global economy recovers, and further strengthening our position in high growth emerging markets;
- Improve revenue realization and maintain a competitive cost structure to allow us to remain profitable at lower industry volumes and across the lifecycle of our product portfolio;
- Maintain a strong balance sheet by reducing financial leverage given the high operating leverage of our business model; and
- Ensure that our dealers and customers have consistently available, transparent and competitive financing options through GM Financial and other providers.

We are committed to leadership in vehicle design, quality, reliability, telematics and infotainment and safety, as well as to developing key energy efficiency, energy diversity and advanced propulsion technologies, including electric vehicles. Our business is diversified across products and geographic markets. We meet the local sales and service needs of our retail and fleet customers with a global network of independent dealers.

GMNA

GMNA has sales, manufacturing and distribution operations in the U.S., Canada and Mexico and sales and distribution operations in Central America and the Caribbean. GMNA represented 51.1% of our wholesale vehicle sales volume in 2013 and we had the largest market share, based upon retail vehicle sales, in North America at 16.9%. We grew our retail market share in all four brands as compared to 2012. Our market share growth was driven in part by the success of several product launches during the year, most notably the Corvette Stingray, Chevrolet Impala, Cadillac CTS and the all-new Chevrolet Silverado and GMC Sierra full-size trucks. Our products in the region continued to receive recognitions of excellence including the most initial quality awards as determined by JD Power and Associates as compared to any other automotive manufacturer in 2013.

GME

GME has sales, manufacturing and distribution operations across Western and Central Europe. GME's wholesale vehicle sales volume, which in addition to Western and Central Europe, includes Eastern Europe (including Russia and the other members of the Commonwealth of Independent States among others) represented 16.3% of our wholesale vehicle sales volume in 2013. In 2013 we estimate we had the number four market share, based upon retail vehicle sales, in Europe at 8.3%. GMIO distributed Chevrolet brand vehicles in Europe. These vehicles are reported within market share for Europe, but wholesale vehicle sales volume is recorded by GMIO. Our European operations continue to show signs of improvement underscored by our first Opel and Vauxhall market share increase in 14 years. This market share increase was partially driven by the successful launches of the Opel Mokka, ADAM and Cascada during 2013. Our focus on successfully executing product launches and containing costs has in part contributed to significant year-over-year reduction in EBIT (loss)-adjusted.

In an effort to rationalize our manufacturing footprint in GME, we reached agreement with the labor union in Germany to terminate all vehicle and transmission production at our Bochum, Germany facility by the end of 2014. Affected employees will be eligible for a voluntary restructuring separation program. Restructuring charges will be recorded primarily through 2014. Refer to Note 19 to our consolidated financial statements for additional information.

GMIO

GMIO has sales, manufacturing and distribution operations in Asia/Pacific, the Middle East, Africa and Eastern Europe (including Russia and the other members of the Commonwealth of Independent States among others). GMIO represented 16.2% of our wholesale vehicle sales volume in 2013. The Asia/Pacific, Middle East and Africa region is our largest region by retail vehicle sales volume and represented 40.0% of our global retail vehicle sales volume in 2013. In 2013 we estimate we had the number two market share, based upon retail vehicle sales, in Asia/Pacific, Middle East and Africa at 9.5%. In 2013 we had market share of 14.3% in China. GMIO records the wholesale unit volume and financial results of Chevrolet brand vehicles that it distributes and sells in Europe. Our international operations' results were highlighted by our continued strength in China where we sold over 3 million vehicles. Our strength in the market was in part driven by the successful launches of the new Cadillac XTS, the refreshed Buick LaCrosse and Regal and certain Wuling branded vehicles, as well as continued strong sales of the Buick Encore and Buick Excelle. Our Buick brand continues to be our strongest brand in China with 810,000 vehicles sold in 2013 an increase of 16% from the prior year. In addition we have been making investments in our Cadillac brand in China which included a new assembly plant in Shanghai.

We are addressing many of the challenges in our GMIO operations and have performed strategic assessments on the performance and the manner in which we operate in certain countries. While we are continuing our strategic assessments we announced plans to discontinue offering mainstream Chevrolet vehicles in Europe in 2015 and recorded asset impairment and restructuring charges; announced plans to cease manufacturing at GM Holden Ltd., our subsidiary in Australia (Holden), and recorded asset impairment and restructuring charges; recorded asset impairment charges at General Motors India Private Limited and Chevrolet Sales India Private Limited (collectively GM India) and impaired our remaining goodwill in GMIO. Refer to the "GM International Operations" section of MD&A and Notes 9, 10 and 19 to our consolidated financial statements for additional information.

Our GM Korea subsidiary has continuing litigation with more than 10,000 current and former employees over the definition of ordinary wages. As a result of the recent Supreme Court of the Republic of Korea's favorable decision on a very similar wage litigation case involving another company we now believe an unfavorable outcome on our case given the new precedent is no longer probable and we reversed certain accruals for our cases. Refer to Note 17 to our consolidated financial statements for additional information.

GMSA

GMSA has sales, manufacturing, distribution and/or financing operations in Brazil, Argentina, Colombia, Ecuador and Venezuela as well as sales and distribution operations in Bolivia, Chile, Paraguay, Peru and Uruguay. GMSA represented 16.4% of our wholesale vehicle sales volume in 2013. In 2013 GMSA derived 63.5% of its wholesale vehicle sales volume from Brazil. In 2013 we estimate we had the number one market share, based upon retail vehicle sales, in South America at 17.5% and the number three market share, based upon retail vehicle sales, in Brazil at 17.3%. Despite foreign currency pressures and challenging political environments across the region, our South American operations experienced continued profitability in 2013 that was driven in part by successful product launches including the Chevrolet Onix, Prisma and Tracker. We have further addressed our cost structure through restructuring efforts and multi-year labor agreements in Brazil.

Our Venezuelan operations highlight some of the foreign currency and political pressures. In 2013 the Venezuelan government announced a change in the official fixed exchange rate which resulted in devaluation charges during the year. In addition to currency controls already in place, the Venezuelan government announced pricing controls that, taken with other initiatives, require us to closely monitor and consider our ability to manage and control our Venezuelan subsidiaries. Refer to the "GM South America" section of MD&A for additional information.

Corporate

We continue to focus on strengthening our balance sheet. Initiatives during 2013 included lowering our cost of capital and increased financial flexibility by issuing $4.5 billion in aggregate principal amount of senior unsecured notes. We used proceeds from the issuance to prepay notes issued to the Canadian Health Care Trust (HCT) and to purchase 120 million shares of our Series A Preferred Stock from the New VEBA. Refer to Notes 14 and 21 to our consolidated financial statements for additional information.

As part of an effort to release capital from non-core assets and further enhance our financial flexibility we sold our common equity ownership in Ally Financial and our seven percent equity interest in Peugeot S.A. (PSA) held by GME. Refer to Notes 5 and 12 to our consolidated financial statements for additional information.

The United States Treasury divested its remaining ownership stake in our common stock. Also, all of our shares of Series B Preferred Stock mandatorily converted into 137 million shares of our common stock and will result in future annual cash preferred stock dividend savings. Refer to Note 21 to our consolidated financial statements for additional information.

Through ongoing discussions with taxing authorities we remeasured an uncertain tax position resulting in a tax benefit that will reduce future cash taxes.

Our collective actions during 2013 have helped us achieve investment grade status with a rating agency and we were added to the Standard & Poor's (S&P) 500.

Automotive Outlook

We anticipate the 2014 global automotive industry to be up approximately 2% over 2013 or about 85 million vehicles. For 2014 we expect our biggest challenges will be associated with unfavorable foreign currency pressures and planned global restructuring charges of up to $1.1 billion. However we expect to substantially offset these challenges with favorable pricing and by leveraging our continued strength in North America and China. We continue to progress toward our target of mid- to high-single digit margins for mid-decade and expect our 2014 EBIT-adjusted margins to be comparable to 2013. We are also committed to returning capital to our common stockholders and in January 2014 our Board of Directors declared a dividend on common stock in the amount of $0.30 per share payable in March 2014.

Automotive Financing — GM Financial

GM Financial purchases automobile finance contracts originated by GM and non-GM franchised and select independent dealers in connection with the sale of used and new automobiles. GM Financial also offers a lease financing product for new GM vehicles and a commercial lending program for GM-franchised dealerships. GM Financial's lending products in North America are primarily offered to consumers who typically are unable to obtain financing from traditional sources such as banks and credit unions. GM Financial utilizes a proprietary credit scoring system to differentiate credit applications and to statistically rank-order credit risk in terms of expected default rates, which enables it to evaluate credit applications for approval and tailor loan and lease pricing and structure. GM Financial services its loan and lease portfolios at regional centers using automated servicing and collection systems. Funding for our auto finance activities is primarily obtained through the utilization of our credit facilities and through securitization transactions.

In November 2012 GM Financial entered into agreements with Ally Financial to acquire Ally Financial's automotive finance and financial services businesses in Europe and Latin America and Ally Financial's equity interest in GMAC-SAIC Automotive Finance Company Limited (GMAC-SAIC) that conducts automotive finance and financial services operations in China. The acquisitions will allow GM Financial to support our dealers in markets comprising approximately 80% of our global sales. In the year ended December 31, 2013 GM Financial completed the acquisitions of the operations in Europe and Latin America for $3.3 billion. GM Financial's acquisition of Ally Financial's equity interest in GMAC-SAIC is subject to certain regulatory and other approvals and is expected to close in 2014 for approximately $0.9 billion. Refer to Note 3 to our consolidated financial statements for additional information on these acquisitions.

Consolidated Results

Total Net Sales and Revenue
(Dollars in Millions)

	Years Ended December 31,		Year Ended 2013 vs. 2012 Change		Variance Due To				
	2013	2012	Favorable/ (Unfavorable)	%	Volume	Mix	Price	Other	Total
	(Dollars in millions)				(Dollars in billions)				
Automotive	$ 152,092	$ 150,295	$ 1,797	1.2%	$ (0.2)	$ 1.7	$ 2.2	$ (1.9)	$ 1.8
GM Financial	3,335	1,961	1,374	70.1%	—	—	—	1.4	1.4
Total net sales and revenue	$ 155,427	$ 152,256	$ 3,171	2.1%	$ (0.2)	$ 1.7	$ 2.2	$ (0.5)	$ 3.2

	Years Ended December 31,		Year Ended 2012 vs. 2011 Change		Variance Due To				
	2012	2011	Favorable/ (Unfavorable)	%	Volume	Mix	Price	Other	Total
	(Dollars in millions)				(Dollars in billions)				
Automotive	$ 150,295	$ 148,866	$ 1,429	1.0%	$ 2.1	$ 3.0	$ 1.6	$ (5.3)	$ 1.4
GM Financial	1,961	1,410	551	39.1%	—	—	—	0.6	0.6
Total net sales and revenue	$ 152,256	$ 150,276	$ 1,980	1.3%	$ 2.1	$ 3.0	$ 1.6	$ (4.7)	$ 2.0

In the year ended December 31, 2013 Automotive Total net sales and revenue increased due primarily to: (1) favorable vehicle pricing effect due primarily to GMNA of $1.9 billion; (2) favorable vehicle mix due primarily to GMNA of $1.3 billion and GMSA of $0.6 billion; partially offset by (3) Other of $1.9 billion due primarily to unfavorable net foreign currency effect of $2.3 billion due from the weakening of the Brazilian Real, Argentinian Peso and Venezuela Bolivar Fuerte against the U.S. Dollar; partially offset by increased other revenue of $0.4 billion due primarily to increases in OnStar, LLC and parts and accessories revenue; and (4) decreased wholesale volumes.

In the year ended December 31, 2013 GM Financial Total sales and revenue increased due primarily to: (1) increased finance charge income of $1.0 billion due to growth in the portfolio resulting from the acquisition of Ally Financial's international operations and increased originations; and (2) increased leased vehicle income of $0.3 billion due to the increased size of the leased asset portfolio.

In the year ended December 31, 2012 Automotive Total net sales and revenue increased due primarily to: (1) favorable vehicle mix due primarily to GMSA of $1.6 billion, GMNA of $0.7 billion and GME of $0.4 billion; (2) increased wholesale volumes due primarily to GMNA of $3.8 billion and GMIO of $1.4 billion; partially offset by decreases in GME of $2.4 billion and GMSA of $0.6 billion; (3) favorable vehicle pricing effect due primarily to GMIO of $0.8 billion, GMNA of $0.5 billion and GMSA of $0.5 billion; partially offset by (4) Other of $5.3 billion due primarily to unfavorable net foreign currency effect of $3.7 billion due primarily to the weakening of the Brazilian Real, Euro, Korean Won, Argentinian Peso and South African Zar against the U.S. Dollar; decreased revenues from powertrain and parts sales of $0.7 billion due to decreased volumes; reduction in favorable lease residual adjustments of $0.5 billion; decreased revenues from rental car leases of $0.2 billion; and decreased revenues due to the deconsolidation of VM Motori (VMM) in June 2011 of $0.1 billion.

In the year ended December 31, 2012 GM Financial Total sales and revenue increased due primarily to: (1) increased finance charge income of $0.3 billion, due to a larger portfolio; and (2) increased leased vehicles income of $0.2 billion due to the increased size of the leased asset portfolio.

Automotive Cost of Sales

	Years Ended December 31,		Year Ended 2013 vs. 2012 Change		Variance Due To			
	2013	2012	Favorable/ (Unfavorable)	%	Volume	Mix	Other	Total
	(Dollars in millions)				(Dollars in billions)			
Automotive cost of sales	$ 134,925	$ 140,236	$ 5,311	3.8%	$ 0.3	$ (2.3)	$ 7.3	$ 5.3
Automotive gross margin	$ 17,167	$ 10,059	$ 7,108	70.7%				

	Years Ended December 31,		Year Ended 2012 vs. 2011 Change		Variance Due To			
	2012	2011	Favorable/ (Unfavorable)	%	Volume	Mix	Other	Total
	(Dollars in millions)				(Dollars in billions)			
Automotive cost of sales	$ 140,236	$ 130,386	$ (9,850)	(7.6)%	$ (0.9)	$ (3.8)	$ (5.2)	$ (9.9)
Automotive gross margin	$ 10,059	$ 18,480	$ (8,421)	(45.6)%				

The most significant element of our Automotive cost of sales is material cost which makes up approximately two-thirds of the total amount excluding adjustments. The remaining portion includes labor costs, depreciation and amortization, engineering, and policy, product warranty and recall campaigns.

In the year ended December 31, 2013 Automotive cost of sales decreased due primarily to: (1) Other of $7.3 billion due to decreased impairment charges of $2.8 billion for long-lived assets and intangible assets; decreased pension settlement losses of $2.5 billion; the favorable effect of $1.3 billion resulting from the reversal of the Korea wage litigation accrual in 2013 compared to accruals related to the litigation in 2012; favorable net foreign currency effect of $0.9 billion due primarily to the weakening of the Brazilian Real against the U.S. Dollar; and reduction in unfavorable warranty and policy adjustments of $0.7 billion; partially offset by increased material and freight costs of $0.4 billion; increased costs of $0.2 billion related to parts and accessories sales; and net increased manufacturing expenses of $0.1 billion due primarily to new launch costs offset by reduced depreciation and amortization; (2) decreased costs related to decreased wholesale volumes; partially offset by (3) unfavorable vehicle mix due primarily to GMNA of $1.3 billion, GMSA of $0.4 billion and GMIO of $0.4 billion.

In the year ended December 31, 2012 Automotive cost of sales increased due primarily to: (1) Other of $5.2 billion due primarily to increased employee costs of $4.1 billion including increased pension settlement losses and decreased net pension and other postretirement benefits (OPEB) income and separation costs; impairment charges of $3.7 billion for long-lived assets and intangible assets; increased manufacturing expense of $1.4 billion due to new launches; increased policy and product warranty expense of $0.2 billion; partially offset by favorable net foreign currency effect of $3.3 billion due primarily to the weakening of the Brazilian Real, Euro, Korean Won, Argentinian Peso and South African Zar against the U.S. Dollar; decreased engineering expense of $0.5 billion; decreased costs of $0.3 billion related to powertrain and parts sales; and decreased costs of $0.1 billion due to the deconsolidation of VMM in June 2011; (2) unfavorable vehicle mix due primarily to GMNA of $1.3 billion, GMSA of $1.2 billion and GME of $0.8 billion; and (3) increased costs related to increased wholesale volumes due primarily to GMNA of $2.7 billion; partially offset by a decrease in GME of $1.9 billion.

GM Financial Operating and Other Expenses

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
GM Financial operating and other expenses	$ 2,448	$ 1,207	$ 785	$ 1,241	102.8%	$ 422	53.8%

In the year ended December 31, 2013 GM Financial operating and other expenses increased primarily due to: (1) an increase in interest expense of $0.4 billion due to higher average debt outstanding in 2013 compared to 2012, primarily resulting from the acquisition of Ally Financial's international operations; (2) an increase in employee and other operating costs of $0.4 billion due primarily to the acquisition of Ally Financial's international operations and an increase in headcount; (3) an increase in the provision for loan losses of $0.2 billion due primarily to growth of the consumer loan portfolio; and (4) an increase in depreciation expense of $0.2 billion due primarily to the increased size of the leased asset portfolio.

In the year ended December 31, 2012 GM Financial operating and other expenses increased primarily due to: (1) an increase in depreciation expense of $0.1 billion due to the increased size of the leased asset portfolio; (2) an increase in the provision for loan losses of $0.1 billion due primarily to growth of the consumer loan portfolio; (3) an increase in interest expense of $0.1 billion due to higher average debt outstanding in 2012 compared to 2011; and (4) an increase in employee costs of $0.1 billion due primarily to a 9% increase in employee headcount to support growth in GM Financial's business.

Automotive Selling, General and Administrative Expense

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
Automotive selling, general and administrative expense	$ 12,382	$ 14,031	$ 12,163	$ (1,649)	(11.8)%	$ 1,868	15.4%

In the year ended December 31, 2013 Automotive selling, general and administrative expense decreased due primarily to: (1) impairment charges in GME for intangibles and long-lived assets of $1.8 billion that occurred in 2012 but not in 2013; and (2) a premium paid of $0.4 billion on the common stock purchase from the UST that occurred in 2012 but not in 2013; partially offset by (3) costs related to our plans to cease mainstream distribution of Chevrolet brand in Europe of $0.5 billion.

In the year ended December 31, 2012 Automotive selling, general and administrative expense increased due primarily to: (1) impairment charges in GME for intangibles and long-lived assets of $1.8 billion; and (2) a premium paid of $0.4 billion on the common stock purchase from the UST; partially offset by (3) favorable net foreign currency effect of $0.3 billion due to the weakening of certain currencies against the U.S. Dollar.

Goodwill Impairment Charges

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
Goodwill impairment charges	$ 541	$ 27,145	$ 1,286	$ (26,604)	(98.0)%	$ 25,859	n.m.

n.m. = not meaningful

In the year ended December 31, 2013 Goodwill impairment charges decreased as we recorded charges of $0.5 billion in GMIO in 2013 as compared to charges of $26.4 billion, $0.6 billion and $0.2 billion in GMNA, GME and GMIO in 2012. Refer to Note 10 to our consolidated financial statements for additional information related to our Goodwill impairment charges.

In the year ended December 31, 2012 the Goodwill impairment charges increased as we recorded charges of $26.4 billion, $0.6 billion and $0.2 billion in GMNA, GME and GMIO in 2012 as compared to charges of $1.0 billion and $0.3 billion in GME and GMIO in 2011. Refer to Note 10 to our consolidated financial statements for additional information related to our Goodwill impairment charges.

Automotive Interest Expense

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
Automotive interest expense	$ 334	$ 489	$ 540	$ (155)	(31.7)%	$ (51)	(9.4)%

In the year ended December 31, 2013 Automotive interest expense decreased due primarily to the redemption of GM Korea's preferred shares in December 2012 and April 2013.

In the year ended December 31, 2012 the decrease in Automotive interest expense was insignificant, as the composition of our debt and related interest rates did not change significantly compared to 2011.

Interest Income and Other Non-Operating Income, net

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
Interest income and other non-operating income, net	$ 1,063	$ 845	$ 851	$ 218	25.8%	$ (6)	(0.7)%

In the year ended December 31, 2013 Interest income and other non-operating income, net increased due primarily to: (1) a gain of $0.5 billion related to the sale of our Ally Financial investment in 2013; and (2) favorable effect of $0.4 billion due to a $0.2 billion gain on the sale of the PSA stock in 2013 compared to a $0.2 billion impairment charge in 2012; partially offset by (3) unfavorable $0.2 billion foreign currency effect related to intercompany foreign currency denominated loans; (4) decreased insurance recoveries of $0.1 billion; (5) decreased interest income of $0.1 billion; (6) decreased gain on the sale of machinery and equipment of $0.1 billion; and (7) unfavorable effect of $0.1 billion gain on the purchase of GMAC de Venezuela in 2012 that did not occur in 2013.

In the year ended December 31, 2012 Interest income and other non-operating income, net remained flat due primarily to: (1) a gain of $0.3 billion related to the sale of our Ally Financial preferred stock in 2011 which did not recur in 2012; (2) an impairment charge of $0.2 billion related to our investment in PSA; (3) a charge of $0.1 billion to record General Motors Strasbourg S.A.S. (GMS) assets and liabilities to estimated fair value; (4) decreased interest income of $0.1 billion; and (5) derivative losses of $0.1 billion related to fair value adjustments; offset by (6) an impairment charge of $0.6 billion related to our investment in Ally Financial common stock in 2011 which did not recur in 2012; and (7) income related to insurance recoveries of $0.2 billion.

Gain (Loss) on Extinguishment of Debt

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
Gain (loss) on extinguishment of debt	$ (212)	$ (250)	$ 18	$ 38	15.2%	$ (268)	n.m.

n.m. = not meaningful

In the years ended December 31, 2013 and December 31, 2012 we recorded losses on extinguishment of debt primarily related to the early redemption of the GM Korea redeemable preferred shares.

Equity Income and Gain on Investments

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
China joint ventures (China JVs)	$ 1,763	$ 1,521	$ 1,511	$ 242	15.9%	$ 10	0.7%
New Delphi (including gain on disposition)	—	—	1,727	—	n.m.	(1,727)	n.m.
Others	47	41	(46)	6	14.6%	87	n.m.
Total equity income and gain on investments	$ 1,810	$ 1,562	$ 3,192	$ 248	15.9%	$ (1,630)	(51.1)%

n.m. = not meaningful

In the year ended December 31, 2013 Equity income and gain on investments increased due primarily to a $0.2 billion increase in earnings of our China JVs.

In the year ended December 31, 2012 Equity income and gain on investments decreased due primarily to a $1.6 billion gain related to the sale of our Delphi Automotive LLP (New Delphi) Class A Membership Interests and related equity income for the year ended December 31, 2011 that did not recur for the year ended December 31, 2012.

Income Tax Expense (Benefit)

	Years Ended December 31,			Year Ended 2013 vs. 2012 Change		Year Ended 2012 vs. 2011 Change	
	2013	2012	2011	Amount	%	Amount	%
Income tax expense (benefit)	$ 2,127	$ (34,831)	$ (110)	$ 36,958	n.m.	$ (34,721)	n.m.

n.m. = not meaningful

In the year ended December 31, 2013 our effective tax rate was 28.5%. Income tax expense increased due primarily to the deferred tax asset valuation allowance reversal of $36.3 billion in the U.S. and Canada that occurred in 2012.

In the year ended December 31, 2012 income tax benefit increased due primarily to: (1) deferred tax asset valuation allowance reversals of $36.3 billion in the U.S. and Canada in 2012 as compared to $0.5 billion in Australia in 2011; and (2) change in U.S. federal tax elections which permitted us to record a tax benefit of $1.1 billion related to foreign tax credits; partially offset by (3) current year U.S. income tax provision of $1.4 billion; and (4) income tax allocation from Accumulated other comprehensive loss to Income tax expense (benefit) of $0.6 billion related to the U.S. salary pension plan.

Refer to Note 18 to our consolidated financial statements for additional information related to our income tax expense (benefit).

Reconciliation of Consolidated, Automotive and GM Financial Segment Results

Non-GAAP Measures

Management believes earnings before interest and tax (EBIT)-adjusted provides meaningful supplemental information regarding our automotive segments' operating results because it excludes interest income, interest expense and income taxes as well as certain additional adjustments. Such adjustments include impairment charges related to goodwill, other long-lived assets under certain circumstances and certain investments, gains or losses on the settlement/extinguishment of obligations and gains or losses on the sale of non-core investments.

Management believes free cash flow and adjusted free cash flow provide meaningful supplemental information regarding the liquidity of our automotive operations and our ability to generate sufficient cash flow above those required in our business to sustain our operations. We measure free cash flow as cash flow from operations less capital expenditures. We measure adjusted free cash flow as free cash flow adjusted for management actions, primarily related to strengthening our balance sheet, such as accrued interest on prepayments of debt and voluntary contributions to employee benefit plans.

Management believes these measures allow it to readily view operating trends, perform analytical comparisons and benchmark performance between periods and among geographic regions. We believe these non-GAAP measures are useful in allowing for greater transparency of our core operations and are therefore used by management in its financial and operational decision-making. Management does not consider the excluded items when assessing and measuring the operational and financial performance of the organization, its management teams and when making decisions to allocate resources, such as capital investment, among business units and for internal reporting and as part of its forecasting and budgeting processes.

While management believes that these non-GAAP measures provide useful information, they are not operating measures under U.S. GAAP and there are limitations associated with their use. Our calculation of these non-GAAP measures may not be comparable to similarly titled measures of other companies due to potential differences between companies in the method of calculation. As a result the use of these non-GAAP measures has limitations and should not be considered in isolation from, or as a substitute for, other measures such as Net income, Net income attributable to stockholders or operating cash flow. Due to these limitations, these non-GAAP measures are used as supplements to U.S. GAAP measures.

Management believes income before income taxes provides meaningful supplemental information regarding GM Financial's operating results. GM Financial uses a separate measure from our automotive operations because management believes interest income and interest expense are part of operating results when assessing and measuring the operational and financial performance of the segment.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

The following tables summarize the reconciliation of our automotive segments EBIT-adjusted and GM Financial's income before income taxes to Net income attributable to stockholders and provides supplemental detail of the adjustments, which are presented net of noncontrolling interests (dollars in millions):

	Years Ended December 31,					
	2013		2012		2011	
Automotive						
EBIT-adjusted						
GMNA	$ 7,461	97.1%	$ 6,470	90.9%	$ 6,779	88.2%
GME	(844)	(11.0)%	(1,939)	(27.2)%	(1,041)	(13.6)%
GMIO	1,230	16.0%	2,528	35.5%	2,232	29.1%
GMSA	327	4.3%	457	6.4%	158	2.1%
Corporate and eliminations	(494)	(6.4)%	(400)	(5.6)%	(446)	(5.8)%
Total automotive EBIT-adjusted	7,680	100.0%	7,116	100.0%	7,682	100.0%
Adjustments	(790)		(36,106)		861	
Corporate interest income	249		343		455	
Automotive interest expense	338		489		540	
Loss on extinguishment of debt	212		250		—	
Automotive Financing						
GM Financial income before income taxes	898		744		622	
Adjustments	(15)		—		—	
Consolidated						
Eliminations	1		(1)		—	
Income tax expense (benefit)	2,127		(34,831)		(110)	
Net income attributable to stockholders	$ 5,346		$ 6,188		$ 9,190	

Our automotive operations interest and income taxes are recorded centrally in Corporate; therefore, there are no reconciling items for our automotive operating segments between EBIT-adjusted and Net income attributable to stockholders.

GMNA Total Net Sales and Revenue

In the year ended December 31, 2013 Total net sales and revenue increased due primarily to: (1) favorable vehicle pricing related to recent vehicle launches such as Chevrolet Silverado and GMC Sierra; (2) increased wholesale volumes due to increased industry demand and successful recent vehicle launches such as the Buick Encore, Cadillac ATS, Chevrolet Silverado, Chevrolet Spark, and GMC Sierra; and (3) favorable vehicle mix related to improving market segments containing higher revenue vehicles including crossovers and trucks.

In the year ended December 31, 2012 Total net sales and revenue increased due primarily to: (1) increased wholesale volumes due to increased industry demand and successful recent vehicle launches such as the Buick Verano, Cadillac ATS, Cadillac XTS, Chevrolet Sonic and Chevrolet Spark; (2) favorable vehicle mix due to increases in Cadillac ATS, Cadillac XTS, Chevrolet Silverado and GMC Sierra; and (3) favorable vehicle pricing related to recent vehicle launches such as Chevrolet Malibu, Chevrolet Traverse, GMC Acadia and Buick Enclave; partially offset by (4) Other of $1.1 billion due primarily to reduction in favorable lease residual adjustments of $0.5 billion; and unfavorable net foreign currency effect of $0.2 billion due to the weakening of the Canadian Dollar (CAD) and Mexican Peso against the U.S. Dollar.

GMNA EBIT-Adjusted

The most significant factors which influence GMNA's profitability are industry volume (primarily U.S. seasonally adjusted annual rate) and market share. While not as significant as industry volume and market share, another factor affecting profitability is the relative mix of vehicles (cars, trucks, crossovers) sold. Variable profit is a key indicator of product profitability. Variable profit is defined as revenue less material cost, freight, the variable component of manufacturing expense, and policy and warranty expense. Vehicles with higher selling prices generally have higher variable profit. Trucks sold in the U.S. currently have a variable profit of approximately 160% of our portfolio on a weighted-average basis. Crossover vehicles' variable profits are in line with the overall portfolio on a weighted-average basis, and cars are approximately 50% of the portfolio on a weighted-average basis.

In the year ended December 31, 2013 EBIT-adjusted increased due primarily to: (1) favorable vehicle pricing; and (2) increased wholesale volumes; partially offset by (3) unfavorable Other of $1.4 billion primarily due to increased material and freight costs including new launches of $1.1 billion; increased manufacturing expense, including new launches, of $0.3 billion; increased engineering expense of $0.3 billion; and increased depreciation and amortization expense of $0.2 billion, partially offset by a reduction in unfavorable warranty and policy adjustments of $0.6 billion.

In the year ended December 31, 2012 EBIT-adjusted decreased due primarily to: (1) unfavorable vehicle mix due to increase in lower margin vehicles; and (2) Other of $1.3 billion due primarily to decreased U.S. pension income of $0.8 billion due to December 31, 2011 plan remeasurements; increased manufacturing expense, including new launches, of $0.6 billion; reduction in favorable lease residual adjustments of $0.5 billion; and unfavorable policy and warranty adjustments of $0.2 billion; partially offset by decreased engineering expense and other technology fees of $0.5 billion; and decreased material and freight costs of $0.4 billion. These were partially offset by: (3) increased net wholesale volumes; and (4) favorable vehicle pricing effect.

GM Europe

During the second half of 2011 and continuing into 2013, the European automotive industry has been severely affected by high unemployment and a lack of consumer confidence coupled with manufacturing overcapacity. European automotive industry sales to retail and fleet customers were 19 million vehicles in the year ended December 31, 2013, representing a 1.1% decrease compared to the corresponding period in 2012.

Outlook

We have formulated a plan and are implementing various actions to strengthen our operations and increase our competitiveness. The key areas include investments in our product portfolio, a revised brand strategy, significant management changes, reducing material, development and production costs, including restructuring activities. The success of our plan will depend on a combination of our ability to execute the actions contemplated, as well as external factors which are outside of our control. We believe it is likely that adverse economic conditions and their effect on the European automotive industry will not improve significantly in the near-term; however, we expect to break even in GME by mid-decade.

GME Total Net Sales and Revenue and EBIT (Loss)-Adjusted

GME Total Net Sales and Revenue

In the year ended December 31, 2013 Total net sales and revenue decreased due primarily to: (1) decreased wholesale volumes due to the weak European economy; and (2) unfavorable vehicle pricing primarily resulting from increased incentive support associated with difficult market conditions; partially offset by (3) Other of $0.2 billion due primarily to favorable net foreign currency effect.

In the year ended December 31, 2012 Total net sales and revenue decreased due primarily to: (1) decreased wholesale volumes due to the weak European economy; (2) unfavorable price effects primarily resulting from increased incentive support associated with strong competition; and (3) Other of $2.3 billion due primarily to unfavorable net foreign currency effect of $1.7 billion resulting from the strengthening of the U.S. Dollar against the Euro, Russian Ruble, Hungarian Forint, Turkish Lira and British Pound; decreased parts, accessories and powertrain engine and transmission sales of $0.5 billion associated with lower demand; and a decrease of $0.1 billion due to the deconsolidation of VMM in June 2011; partially offset by (4) favorable vehicle mix due to the new generation Astra GTC, Opel Mokka and Ampera and increased sales of other higher priced vehicles.

GME EBIT (Loss)-Adjusted

In the year ended December 31, 2013 EBIT (loss)-adjusted decreased due primarily to: (1) Other of $1.6 billion due primarily to decreased manufacturing costs of $0.7 billion mainly resulting from decreased depreciation expense because of asset impairments in December 2012, which decreased the depreciable base; decreased engineering expenses of $0.3 billion; favorable material and freight costs of $0.3 billion; and a favorable net effect of changes in the fair value of an embedded foreign currency derivative asset of $0.2 billion associated with a long-term supply agreement; partially offset by (2) unfavorable net vehicle mix due to lower proportion of higher priced vehicles; (3) unfavorable vehicle pricing; and (4) decreased wholesale volumes.

In the year ended December 31, 2012 EBIT (loss)-adjusted increased due primarily to: (1) decreased wholesale volumes; (2) unfavorable net vehicle mix; and (3) unfavorable price effects; partially offset by (4) Other of $0.2 billion due primarily to lower manufacturing and material costs of $0.4 billion; and favorable net foreign currency effect of $0.1 billion resulting from the strengthening of the U.S. Dollar against the Euro, Russian Ruble, Hungarian Forint, Turkish Lira, and British Pound; partially offset by a decrease of $0.2 billion resulting from the net effect of changes in an embedded foreign currency derivative asset associated with a long-term supply agreement; and decreased parts, accessories and powertrain engine and transmission sales of $0.2 billion, associated with lower demand.

GM International Operations

We have strategically assessed the manner in which we operate in certain countries within GMIO, including our cost structure, the level of local sourcing, the level of investment in the product portfolio, the allocation of production activity to the existing manufacturing base and our brand strategy. These strategic reviews considered the effects that recent and forecasted deterioration in local market conditions would have on our operations. While we are continuing our strategic assessments, we have taken certain actions and incurred impairment and other charges as detailed below.

Withdrawal of the Chevrolet Brand from Europe

In December 2013 we announced our plans to cease mainstream distribution of Chevrolet brand in Western and Central Europe in 2015 due to the challenging business model and difficult economic situation in Europe. The results of our Chevrolet operations in Western and Central Europe, which are subsidiaries of our GM Korea operations, are reflected in the financial results of our GMIO region. This action is expected to improve our European operations through a further strengthening of our Opel and Vauxhall brands and reduce the market complexity associated with both Opel and Chevrolet products in Western and Central Europe. In the three months ended December 31, 2013 we recorded pre-tax charges of $0.6 billion, net of noncontrolling interests of 23.0%, consisting of intangible asset impairment charges, dealer restructuring costs, sales incentive and inventory related costs and employee severance and other costs. We may incur additional charges of up to $0.3 billion through the first half of 2014 primarily for dealer restructuring costs and sales incentives. Refer to Note 19 of our consolidated financial statements for additional information.

Holden

In December 2013 we announced plans to cease vehicle and engine manufacturing and significantly reduce engineering operations at Holden by the end of 2017. Holden will continue to sell imported vehicles through its Holden dealer network and maintain its global design studio. Our Australian operations have been subject to unfavorable market conditions including the sustained strength of the Australian dollar, high cost of production and a small but highly competitive and fragmented domestic automotive market. In the three months ended December 31, 2013 we recorded pre-tax charges of $0.5 billion consisting of asset impairment charges including property, plant and equipment and exit-related costs including certain employee severance related costs. We expect to incur additional charges through 2017 for incremental future cash payments of employee severance once negotiations of the amount are completed. Refer to Note 19 of our consolidated financial statements for additional information.

GM India

In the three months ended December 31, 2013 we performed a strategic assessment of GM India in response to lower than expected sales performance of our current product offerings in India, higher raw material costs, unfavorable foreign exchange rates and recent deterioration in local market conditions. As a result we recorded pre-tax asset impairment charges of $0.3 billion, net of noncontrolling interests of 9.2%, to adjust the carrying amount of GM India's real and personal property, Intangible assets, net and Goodwill. Our strategic assessment also outlines planned actions requiring additional future investments and modifications to our existing GM India business model that are needed to reach profitability in the medium to long-term. There are no assurances that the forecasted financial results outlined in the strategic assessment will be achieved. Refer to Note 9 of our consolidated financial statements for additional information.

Goodwill Impairment Charges

We recorded Goodwill impairment charges of $0.5 billion in the year ended December 31, 2013 primarily related to our GM Korea and GM India reporting units.

Focus on Chinese Market

We view the Chinese market as important to our global growth strategy and are employing a multi-brand strategy, led by our Buick and Chevrolet brands. In the coming years, we plan to increasingly leverage our global architectures to increase the number of nameplates under the Buick, Chevrolet and Cadillac brands in China and continue to grow our business under the Baojun, Jiefang and Wuling brands. We operate in the Chinese market through a number of joint ventures and maintaining good relations with our joint venture partners, which are affiliated with the Chinese government, is an important part of our China growth strategy.

The following tables summarize certain key operational and financial data for the China JVs (dollars in millions, vehicles in thousands):

	Years Ended December 31,		
	2013	2012	2011
Total wholesale vehicles (a)	3,239	2,909	2,573
Market share	14.3%	14.6%	13.6%
Total net sales and revenue	$ 38,767	$ 33,364	$ 30,511
Net income	$ 3,685	$ 3,198	$ 3,203

(a) Including vehicles exported to markets outside of China.

	December 31, 2013	December 31, 2012
Cash and cash equivalents	$ 6,606	$ 5,522
Debt	$ 151	$ 123

GMIO Total Net Sales and Revenue

The vehicle sales of our China JVs and of GM India prior to September 1, 2012, the date we consolidated GM India, are not recorded in Total net sales and revenue. The results of our nonconsolidated joint ventures are recorded in Equity income and gain on investments. Refer to Notes 3 and 8 to our consolidated financial statements for further detail on the acquisition of GM India.

In the year ended December 31, 2013 Total net sales and revenue decreased due primarily to: (1) decreased wholesale volume of 129,000 vehicles (or 11.6%) primarily in Middle East and Chevrolet brand vehicles in Europe partially offset by an increase from the consolidation of GM India effective September 2012 resulting in an additional 57,000 wholesale vehicle sales (or 5.0%) in 2013; (2) unfavorable pricing due to increased incentive support associated with strong competition; (3) unfavorable vehicle mix; and (4) Other of $0.8 billion due primarily to unfavorable net foreign currency effect due to the weakening of the Australian Dollar, the South Africa Rand and the Egyptian Pound against the U.S. Dollar of $0.5 billion and decreased sales of components, parts and accessories of $0.3 billion.

In the year ended December 31, 2012 Total net sales and revenue increased due primarily to: (1) increased wholesale volume of 41,000 vehicles (of 4.0%) due primarily to strong industry growth across the region; coupled with an increase from the consolidation of GM India effective September 2012 resulting in an inclusion of 29,000 wholesale vehicle sales (or 2.8%); (2) favorable pricing due to higher pricing on new models launched; and (3) favorable vehicle mix due to increased export of new product; partially offset by (4) Other of $0.6 billion due primarily to unfavorable net foreign currency effect due to the weakening of the Korean Won and South Africa Rand against the U.S. Dollar of $0.5 billion; and decrease in components, parts and accessories revenue of $0.1 billion.

GMIO EBIT-Adjusted

In the year ended December 31, 2013 EBIT-adjusted decreased due primarily to: (1) unfavorable net vehicle mix primarily in Middle East and Australian markets; (2) unfavorable pricing excluding $0.2 billion sales incentive related to withdrawal of the Chevrolet brand from Europe; (3) unfavorable net wholesale volumes; and (4) Other of $0.2 billion due primarily to unfavorable manufacturing costs of $0.3 billion; unfavorable net foreign currency effect of $0.2 billion; and a decrease in sales of components, parts and accessories of $0.2 billion; partially offset by favorable material and freight cost of $0.3 billion; and increased equity income, net of tax of $0.2 billion, from our interest in the increased net income of our China JVs.

In the year ended December 31, 2012 EBIT-adjusted increased due primarily to: (1) favorable pricing due to higher pricing on new models launched; and (2) favorable net wholesale volumes; partially offset by (3) unfavorable net vehicle mix; and (4) Other of $0.9 billion due primarily to increased costs of $1.0 billion due primarily to increased material, freight and manufacturing costs; partially offset by net gain of $0.1 billion measured as the difference between the fair value of our 50% interest in GM India and the investment carrying amount at the date of acquisition.

GM South America

Venezuelan Operations

Our Venezuelan subsidiaries functional currency is the U.S. Dollar because of the hyperinflationary status of the Venezuelan economy.

Effective February 13, 2013 the Venezuelan government set the official fixed exchange rate of the Bolivar Fuerte (BsF) at BsF 6.3 to $1.00 from BsF 4.3 to $1.00. The devaluation resulted in a charge of $0.2 billion in the three months ended March 31, 2013 from the remeasurement of our Venezuelan subsidiaries' non-U.S. Dollar denominated monetary assets and liabilities. We believe it is possible that the Venezuelan government may further devalue the BsF against the U.S. Dollar in the future. If the BsF were devalued further, it would result in a charge to our income statement in the period of devaluation. Based on our December 31, 2013 net monetary assets, a charge of approximately $0.1 billion would result for every 10% devaluation of the BsF.

In December 2013 a new decree became effective requiring the government of Venezuela to set prices for all vehicles, parts and accessories sold in the country. In addition the Venezuelan government has foreign exchange control regulations that make it difficult to convert BsF to U.S. Dollars which affect our Venezuelan subsidiaries' ability to pay non-BsF denominated obligations and to pay dividends. In January 2014 the Venezuelan government announced changes to the foreign exchange process which could affect the rate at which our Venezuelan subsidiaries buy dollars. These regulations, when considered with other governmental policies impacting labor force reductions and other circumstances in Venezuela, may limit our ability to fully benefit from and maintain our controlling financial interest in our Venezuelan subsidiaries. The financial impact on our operations in Venezuela of these events and associated ongoing restrictions are uncertain.

The total amounts pending government approval for settlement in U.S. Dollar at December 31, 2013 and 2012 were BsF 3.7 billion (equivalent to $0.6 billion) and BsF 2.2 billion (equivalent to $0.5 billion). These amounts include requests in the amount of BsF 0.6 billion (equivalent to $0.1 billion) that have been pending from 2007. Our Venezuelan subsidiaries net assets were $0.9 billion at December 31, 2013, including net monetary assets of $1.0 billion. At December 31, 2013 other consolidated entities had receivables from our Venezuelan subsidiaries denominated in other currencies of $0.5 billion.

GMSA Total Net Sales and Revenue

In the year ended December 31, 2013 Total net sales and revenue decreased due primarily to: (1) Other of $1.7 billion due primarily to unfavorable net foreign currency effect due to the strengthening of the U.S. Dollar against the Brazilian Real and Argentinian Peso and the devaluation of the Venezuelan Bolivar of $1.9 billion; partially offset by increased revenue from parts and accessories sales of $0.1 billion; partially offset by (2) favorable vehicle pricing primarily due to high inflation in Venezuela and Argentina; and (3) favorable vehicle mix due to increased sales of the Chevrolet Trailblazer, Chevrolet Captiva, Chevrolet Orlando, Chevrolet Tahoe and Chevrolet S10.

In the year ended December 31, 2012 Total net sales and revenue increased due primarily to: (1) favorable vehicle mix due to increased sales of Chevrolet Cruze and Chevrolet S10; and (2) favorable vehicle pricing primarily due to high inflation in Venezuela and Argentina; partially offset by (3) decreased wholesale volumes due to deteriorated market share driven by increased competition and aggressive pricing in the market; and (4) Other of $1.4 billion due primarily to unfavorable net foreign currency effect due to the strengthening of the U.S. Dollar against the Brazilian Real and Argentinian Peso and the devaluation of the BsF of $1.5 billion; partially offset by increased revenue from parts and accessories sales of $0.1 billion.

GMSA EBIT-Adjusted

In the year ended December 31, 2013 EBIT-adjusted decreased due primarily to: (1) Other of $1.3 billion due primarily to unfavorable net foreign currency effect as a result of the strengthening of the U.S. Dollar against the Brazilian Real and Argentinian Peso and the devaluation of the Venezuelan Bolivar of $1.1 billion; increased selling, general and administrative expense mainly due to a decrease in contingency reserves of $0.1 billion in the corresponding period of 2012 due to the resolution of certain items at amounts lower than previously expected; and a gain of $50 million on the purchase of GMAC de Venezuela CA in the corresponding period of 2012; partially offset by (2) favorable vehicle pricing effect primarily driven by high inflation in Venezuela and Argentina; and (3) favorable net vehicle mix.

In the year ended December 31, 2012 EBIT-adjusted increased due primarily to: (1) favorable vehicle pricing; and (2) favorable net vehicle mix; partially offset by (3) unfavorable net wholesale volumes; and (4) Other of $0.4 billion due primarily to increased material, freight and manufacturing costs of $0.5 billion; and increased administrative and advertising and sales promotion expenses of $0.1 billion to support launches of new products; partially offset by decreases in contingency reserves of $0.1 billion due to the resolution of certain items at amounts lower than previously expected; and a bargain purchase gain of $50 million on the purchase of GMAC de Venezuela CA.

GM Financial

GM Financial Revenue

In the year ended December 31, 2013 Total revenue increased due primarily to: (1) increased finance charge income of $1.0 billion due to the acquisition of Ally Financial international operations and increased loan originations; and (2) increased leased vehicle income of $0.3 billion due to a larger lease portfolio.

In the year ended December 31, 2012 Total revenue increased due primarily to: (1) increased finance charge income of $0.3 billion, due to a larger portfolio; and (2) increased leased vehicles income of $0.2 billion due to the increased size of the leased asset portfolio.

GM Financial Income Before Income Taxes

In the year ended December 31, 2013 Income before income taxes increased due primarily to: (1) increased revenue of $1.0 billion; partially offset by (2) increased provision for loan losses; (3) increased interest expenses of $0.4 billion; and (4) increased operating expenses of $0.4 billion. These changes are due primarily to the acquisition of the Ally Financial international operations.

In the year ended December 31, 2012 Income before income taxes increased due primarily to: (1) increased revenue of $0.6 billion; partially offset by (2) increased leased vehicle expenses of $0.1 billion due to a larger lease portfolio; (3) increased provision for loan losses due to a larger loan portfolio; (4) increased interest expenses of $0.1 billion due primarily to new debt; and (5) increased operating expenses of $0.1 billion due to an increase of personnel to support company growth.

Liquidity and Capital Resources

Liquidity Overview

We believe that our current level of cash and cash equivalents, marketable securities and availability under our secured revolving credit facilities will be sufficient to meet our liquidity needs. However we expect to have substantial cash requirements going forward which we plan to fund through total available liquidity and cash flows generated from operations. Our future uses of cash, which may vary from time to time based on market conditions and other factors, are centered around three objectives: (1) reinvest in our business; (2) continue to strengthen our balance sheet and competitive position; and (3) return cash to shareholders. Our known future material uses of cash include, among other possible demands: (1) capital expenditures of approximately $7.5 billion annually as well as engineering and product development activities; (2) acquiring Ally Financial's equity interests in GMAC-SAIC, as subsequently discussed, for approximately $0.9 billion; (3) payments for previously announced restructuring activities of up to $1.1 billion; (4) payments to service debt and other long-term obligations; (5) payments to purchase the remaining outstanding shares of our Series A Preferred Stock with a liquidation amount of $3.9 billion once the shares become redeemable on or after December 31, 2014; and (6) dividend payments on our common stock that are declared by our Board of Directors.

Our liquidity plans are subject to a number of risks and uncertainties, including those described in the "Risk Factors" section of this 2013 Form 10-K, some of which are outside our control. Macroeconomic conditions could limit our ability to successfully execute our business plans and therefore adversely affect our liquidity plans.

Recent Management Initiatives

We continue to monitor and evaluate opportunities to strengthen our balance sheet and competitive position over the long-term. These actions may include opportunistic payments to reduce our long-term obligations while maintaining minimal financial leverage as well as the possibility of acquisitions, dispositions and strategic alliances that we believe would generate significant advantages and substantially strengthen our business. These actions may include additional loans, investments with our joint venture partners or the acquisitions of certain operations or ownership stakes in outside businesses. These actions may negatively impact our liquidity in the short-term.

In November 2012 GM Financial entered into agreements with Ally Financial to acquire Ally Financial's automotive finance and financial services businesses in Europe and Latin America and Ally Financial's equity interests in GMAC-SAIC for approximately $4.2 billion. GM Financial has completed the acquisitions of Ally Financial's European and Latin American automotive finance operations for $3.3 billion in 2013. Increases in GM Financial receivables and GM Financial Short-term and Long-term debt in 2013 compared to 2012 were due primarily to the acquisition. Refer to Note 3 to our consolidated financial statements for additional information on these acquisitions.

In April 2013 GM Korea made a payment of $0.7 billion to acquire, prior to the mandatory redemption date, the remaining balance of GM Korea's seven percent mandatorily redeemable preferred shares that had a carrying amount of $0.5 billion. We recorded the difference of $0.2 billion as a loss on extinguishment of debt.

In September 2013 we issued $4.5 billion in aggregate principal amount of senior unsecured notes comprising $1.5 billion of 3.5% notes due in 2018, $1.5 billion of 4.875% notes due in 2023 and $1.5 billion of 6.25% notes due in 2043. We used proceeds from the issuance of these notes to purchase 120 million shares of our Series A Preferred Stock from the New VEBA for a total price of $3.2 billion, which was equal to 108.1% of their aggregate liquidation amount. The Series A Preferred Stock accrues cumulative dividends at a 9% annual rate. We recorded a loss for the difference between the carrying amount of the Series A Preferred Stock purchased of $2.4 billion and the consideration paid of $3.2 billion, which reduced Net income attributable to common stockholders by $0.8 billion.

In October 2013 we used proceeds from the issuance of the senior unsecured notes to make a payment of $1.2 billion to prepay notes issued to the HCT. The HCT notes accrued interest at a 7% annual rate. This transaction and the purchase of the Series A Preferred Stock from the New VEBA lowered our overall cost of funding as the senior unsecured notes carry a lower interest rate than the dividends on the Series A Preferred Stock and the interest rate on the HCT notes.

In December 2013 we sold our investment in Ally Financial's common stock for $0.9 billion. Also in December 2013 we sold our seven percent equity stake in PSA for $0.3 billion. These transactions released capital from non-core investment assets and allow the funds to be used for other corporate purposes.

Automotive

Available Liquidity

Total available liquidity includes cash, cash equivalents, marketable securities and funds available under credit facilities. At December 31, 2013 our total available liquidity was $38.3 billion, including funds available under credit facilities of $10.4 billion. The amount of available liquidity is subject to intra-month and seasonal fluctuations and includes balances held by various business units and subsidiaries worldwide that are needed to fund their operations.

We manage our liquidity primarily at our treasury centers as well as at certain of our significant consolidated overseas subsidiaries. Available liquidity held within North America and at our regional treasury centers represented approximately 84% of our available liquidity at December 31, 2013. A portion of our available liquidity includes amounts deemed indefinitely reinvested in our foreign subsidiaries. We have used and will continue to use other methods including intercompany loans to utilize these funds across our global operations as needed.

Our cash equivalents and marketable securities balances include investments in U.S. government and agency obligations, foreign government securities, time deposits and corporate debt securities, and are primarily denominated in U.S. Dollars. We expect to maintain a sufficient amount of CAD denominated cash investments to offset certain CAD denominated liabilities, which primarily relate to pension and OPEB liabilities. These cash investments will incur foreign currency exchange gains or losses based on the movement of the CAD in relation to the U.S. Dollar and will therefore reduce our net CAD foreign currency exchange exposure. We held cash investments in CAD denominated securities of $1.7 billion at December 31, 2013. These funds continue to be available to fund our normal ongoing operations and are included in our available liquidity.

Our investment guidelines, which we may change from time to time, prescribe certain minimum credit worthiness thresholds and limit our exposures to any particular sector, asset class, issuance or security type. Substantially all of our current investments in debt securities are with A/A2 or better rated issuers.

We use credit facilities as a mechanism to provide additional flexibility in managing our global liquidity and to fund working capital needs at certain of our subsidiaries. The total size of our credit facilities was $11.2 billion and $11.4 billion at December 31, 2013 and 2012. Our primary borrowing capacity under credit facilities comes from our secured revolving credit facilities comprising a three-year, $5.5 billion facility maturing in 2015 and a five-year, $5.5 billion facility maturing in 2017. We have not borrowed against these facilities, but have amounts in use under the letter of credit sub-facility of $0.6 billion at December 31, 2013. GM Financial has not borrowed against the three-year facility. Refer to Note 14 to our consolidated financial statements for additional details on our secured revolving credit facilities.

The following table summarizes our automotive available liquidity (dollars in millions):

	December 31, 2013	December 31, 2012
Cash and cash equivalents	$ 18,947	$ 17,133
Marketable securities	8,972	8,988

Other	—	3.0	(3.6)
Cash flows from operating activities	$ 11.0	$ 9.6	$ 7.4

Depreciation, amortization and impairments included goodwill impairments of $0.5 billion, $27.1 billion and $1.3 billion and impairment charges of property and intangible assets of $1.4 billion, $5.5 billion and $0.1 billion in the year ended December 31, 2013, 2012 and 2011. In the year ended December 31, 2012 significant Pension and OPEB activities included contributions to the U.S. salaried pension plan of $2.3 billion for the purchase of annuity contracts and associated pension settlement charges of $2.7 billion. In the year ended December 31, 2011 significant Pension and OPEB activities included a cash contribution as part of the HCT settlement of $0.8 billion and a gain associated with the HCT settlement of $0.7 billion. In the year ended December 31, 2012 Other was due primarily to favorable movements in dealer and customer allowances of $0.9 billion, other deferred tax provisions of $0.9 billion and policy and warranty of $0.6 billion. In the year ended December 31, 2011 Other was due primarily to gains on the sale of our investments in New Delphi Class A Membership Interests and Ally Financial preferred stock of $2.0 billion, unfavorable movements in accrued and other liabilities of $0.7 billion and equipment on operating leases of $0.5 billion.

	Years Ended December 31,		
	2013	2012	2011
Investing Activities			
Capital expenditures	$ (7.5)	$ (8.1)	$ (6.2)
Liquidations (acquisitions) of marketable securities, net	0.1	6.9	(10.6)
Sale of our investment in Ally Financial	0.9	—	1.0
Sale of our investment in Delphi	—	—	3.8
Other	0.4	0.5	1.4
Cash flows from investing activities	$ (6.1)	$ (0.7)	$ (10.6)

Changes in the (Acquisitions) liquidations of marketable securities, net were due to varying maturities of investments as we rebalanced our investment portfolio in the normal course of business. Other was due primarily to the release of restricted cash, including the release of $1.0 billion associated with the implementation of the HCT in the year ended December 31, 2011.

	Years Ended December 31,		
	2013	2012	2011
Financing Activities			
Issuance of senior unsecured notes	$ 4.5	$ —	$ —
Prepayment of HCT notes	(1.1)	—	—
Early redemption of GM Korea preferred stock	(0.7)	(0.7)	—
Purchase of Series A Preferred Stock	(3.2)	—	—
Purchase of Common Stock (excluding charge related to purchase premium)	—	(5.1)	—
Dividends paid (excluding charge related to purchase of series A Preferred Stock)	(0.9)	(0.9)	(0.9)
Other	—	(0.4)	(1.0)
Cash flows from financing activities	$ (1.4)	$ (7.1)	$ (1.9)

Other was due primarily to prepayments on debt facilities held by certain of our foreign subsidiaries, primarily in GMNA and GMSA, of $1.0 billion in the year ended December 31, 2011.

Free Cash Flow and Adjusted Free Cash Flow

The following table summarizes free cash flow and adjusted free cash flow (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Operating cash flow	$ 11,021	$ 9,631	$ 7,429
Less: capital expenditures	(7,549)	(8,055)	(6,241)
Free cash flow	3,472	1,576	1,188
Adjustments	225	2,712	1,830
Adjusted free cash flow	$ 3,697	$ 4,288	$ 3,018

Adjustments to free cash flow included the following items: accrued interest on the prepayment of the HCT notes of $0.2 billion in October 2013 and pension contributions of $0.1 billion related to the previously announced annuitization of the U.S. salaried pension plan in March 2013; voluntary contributions to the U.S. salaried pension plan of $2.3 billion for the purchase of annuity contracts and the premium paid to purchase our common stock from the UST of $0.4 billion in December 2012; termination of in-transit wholesale advance agreement in GMNA resulting in an increase to accounts receivable of $1.1 billion and OPEB payments relating to the HCT settlement of $0.8 billion in 2011.

Status of Credit Ratings

We receive ratings from four independent credit rating agencies: DBRS Limited, Fitch Ratings (Fitch), Moody's Investor Service (Moody's) and S&P. DBRS Limited and Moody's currently rate our corporate credit at investment grade while Fitch and S&P currently rate our corporate credit at non-investment grade. The following table summarizes our credit ratings at January 30, 2014:

	Corporate	Secured Revolving Credit Facilities	Senior Unsecured	Outlook
DBRS Limited	BBB (low)	N/A	N/A	Stable
Fitch	BB+	BBB-	BB+	Positive
Moody's	Investment Grade	Baa2	Ba1	Stable
S&P	BB+	BBB	BB+	Positive

Rating actions taken by each of the credit rating agencies from January 1, 2013 through January 30, 2014 were as follows:

Fitch: September — Assigned a senior unsecured rating of BB+. August — Upgraded their outlook to positive from stable.

Moody's: September — Upgraded corporate rating to an investment grade rating of Baa3 from Ba1, assigned a senior unsecured rating of Ba1 and changed their outlook to stable from positive.

S&P: September — Assigned a senior unsecured rating of BB+ and upgraded their outlook to positive from stable.

We continue to pursue investment grade status from all of the credit rating agencies by maintaining a balance sheet with minimal financial leverage and demonstrating continued operating performance. Achieving investment grade status will provide us with greater financial flexibility, lower our cost of borrowing and may release collateral from certain agreements including our secured revolving credit facility.

Automotive Financing — GM Financial

Liquidity Overview

GM Financial's primary sources of cash are finance charge income, leasing income, servicing fees, net distributions from secured debt, borrowings under secured and unsecured debt, net proceeds from senior notes transactions and collections and recoveries on finance receivables. GM Financial's primary uses of cash are purchases of finance receivables and leased vehicles, funding of commercial finance receivables, business acquisitions, repayment of secured and unsecured debt, funding credit enhancement requirements for secured debt, operating expenses and interest costs. GM Financial continues to monitor and evaluate opportunities to optimize its liquidity position and the mix of its debt.

Available Liquidity

The following table summarizes GM Financial's available liquidity for daily operations (dollars in millions):

	December 31, 2013	December 31, 2012
Cash and cash equivalents	$ 1,074	$ 1,289
Borrowing capacity on unpledged eligible assets	1,650	1,349
Borrowing capacity on committed unsecured lines of credit	615	—
Available liquidity	$ 3,339	$ 2,638

The increase in liquidity is due primarily to the net increase of $0.8 billion resulting from the Ally Financial international operations acquisition.

GM Financial has the ability to borrow up to $4.0 billion against our three-year $5.5 billion secured revolving credit facility subject to available capacity and borrowing base restrictions. In the event GM Financial borrows against the facility, it is expected such borrowings would be short-term in nature. The facility is not guaranteed or secured by any GM Financial assets or subsidiaries.

Credit Facilities

In the normal course of business, in addition to using its available cash, GM Financial utilizes borrowings under its credit facilities, which may be secured and structured as securitizations, or may be unsecured, and GM Financial repays these borrowings as appropriate under its cash management strategy. At December 31, 2013 secured and unsecured credit facilities totaled $15.6 billion and $4.0 billion, with advances outstanding of $9.0 billion and $3.0 billion.

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under certain secured credit facilities. GM Financial's secured credit facilities contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios (portfolio net loss and delinquency ratios, and pool level cumulative net loss ratios) as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements, the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements, restrict GM Financial's ability to obtain additional borrowings under these agreements and/or remove GM Financial as servicer. At December 31, 2013 GM Financial was in compliance with all covenants related to its credit facilities.

Cash Flow

The following table summarizes GM Financial cash flows from operating, investing and financing activities (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Net cash provided by operating activities	$ 1,609	$ 974	$ 737
Net cash used in investing activities	$ (8,215)	$ (2,776)	$ (2,112)
Net cash provided by financing activities	$ 5,143	$ 2,318	$ 1,520

Operating Activities

In the year ended December 31, 2013 net cash provided by operating activities increased by $0.6 billion due primarily to the acquisitions of Ally Financial international operations.

In the year ended December 31, 2012 net cash provided by operating activities increased by $0.2 billion due primarily to higher revenues resulting from a $2.4 billion increase in average earning assets.

Investing Activities

In the year ended December 31, 2013 net cash used in investing activities increased by $5.4 billion due primarily to: (1) increased funding of commercial finance receivables of $19.9 billion and purchase of consumer finance receivables of $4.0 billion; (2) net cash payment of $2.6 billion made in the current year on the acquisitions of Ally Financial international operations; (3) increased purchase of leased vehicles of $1.2 billion; and (4) increase in restricted cash of $0.6 billion; partially offset by (5) increased collections and recoveries on finance receivables of $22.8 billion.

In the year ended December 31, 2012 net cash used in investing activities increased by $0.7 billion due primarily to: (1) increased funding of commercial finance receivables of $1.2 billion and purchase of consumer finance receivables of $0.6 billion; and (2) increased purchase of leased vehicles of $0.2 billion; partially offset by (3) increased collections and recoveries on finance receivables of $1.0 billion.

Financing Activities

In the year ended December 31, 2013 net cash provided by financing activities increased by $2.8 billion due primarily to the increased borrowings under secured and unsecured debt and issuance of senior notes of $14.0 billion, partially offset by the increased debt repayment of $9.7 billion and the repayment of $1.4 billion in certain debt assumed as part of the Ally Financial international operations acquisitions.

In the year ended December 31, 2012 net cash provided by financing activities increased by $0.8 billion due primarily to a decrease in repayment of debt.

Defined Benefit Pension Plan Contributions

Eligible U.S. salaried employees hired prior to January 2001 participated in a defined benefit pension plan which was frozen as of September 30, 2012. All eligible salaried employees now participate in a defined contribution plan. Hourly employees hired prior to October 2007 generally participate in plans which provide benefits of stated amounts for each year of service as well as supplemental benefits for employees who retire with 30 years of service before normal retirement age. Hourly employees hired after September 2007 participate in a defined contribution plan. Our policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulation, or to directly pay benefit payments where appropriate. At December 31, 2013 all legal funding requirements had been met. We expect to contribute $0.1 billion to our U.S. non-qualified plans and $0.7 billion to our non-U.S. pension plans in 2014.

The following table summarizes contributions made to the defined benefit pension plans or direct payments (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
U.S. hourly and salaried	$ 128	$ 2,420	$ 1,962
Non-U.S.	886	855	836
Total contributions	$ 1,014	$ 3,275	$ 2,798

We provided short-term, interest-free, unsecured loans of $2.2 billion to provide the U.S. salaried defined benefit pension plan with incremental liquidity to pay ongoing benefits and administrative costs. Through December 31, 2013 contributions of $1.7 billion were made from the $2.2 billion loans and the remaining amounts were repaid.

We made a voluntary contribution in January 2011 to our U.S. hourly and salaried defined benefit pension plans of 61 million shares of our common stock valued at $2.2 billion for funding purposes at the time of contribution. The contributed shares qualified as a plan asset for funding purposes at the time of contribution and as a plan asset valued at $1.9 billion for accounting purposes in July 2011. This was a voluntary contribution above our funding requirements for the pension plans.

The following table summarizes the underfunded status of pension plans on a U.S. GAAP basis (dollars in millions):

	December 31, 2013	December 31, 2012
U.S. hourly and salaried	$ 6,552	$ 13,148
U.S. nonqualified	762	877
Total U.S. pension plans	7,314	14,025
Non-U.S.	12,542	13,760
Total underfunded	$ 19,856	$ 27,785

The decrease in underfunded status of the U.S. pension plans was due primarily to: (1) actuarial gains due primarily to discount rate increases of $7.7 billion; (2) actual return on plan assets of $2.1 billion; and (3) contributions of $0.1 billion; partially offset by (4) service and interest costs of $3.1 billion.

The decrease in underfunded status of the non-U.S. pension plans primarily in Canada, the United Kingdom and Germany was due primarily to: (1) actuarial gains due primarily to discount rate increases of $1.0 billion; (2) actual return on plan assets of $1.0 billion; and (3) contributions and benefit payments of $0.9 billion; partially offset by (4) service and interest costs of $1.4 billion; (5) net unfavorable foreign currency effect of $0.2 billion; and (6) business combinations of $0.1 billion.

Hourly and salaried OPEB plans provide postretirement life insurance to certain U.S. retirees and eligible dependents and postretirement health coverage to some U.S. retirees and eligible dependents. Certain of the non-U.S. subsidiaries have postretirement benefit plans, although most participants are covered by government sponsored or administered programs.

The following table summarizes the unfunded status of OPEB plans (dollars in millions):

	December 31, 2013	December 31, 2012
U.S. OPEB plans	$ 5,110	$ 6,271
Non-U.S. OPEB plans	1,238	1,528
Total unfunded	$ 6,348	$ 7,799

Refer to Note 15 to our consolidated financial statements for the change in benefit obligations and related plan assets.

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service (dollars in millions):

	Pension Benefits (a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
2014	$ 5,780	$ 1,609	$ 376	$ 77
2015	$ 5,687	$ 1,597	$ 364	$ 65
2016	$ 5,475	$ 1,688	$ 352	$ 65
2017	$ 5,368	$ 1,711	$ 341	$ 65
2018	$ 5,210	$ 1,581	$ 332	$ 66
2019 - 2023	$ 24,019	$ 7,858	$ 1,576	$ 357

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our Cash and cash equivalents.

Off-Balance Sheet Arrangements

We do not currently utilize off-balance sheet securitization arrangements. All trade or financing receivables and related obligations subject to securitization programs are recorded on our consolidated balance sheets at December 31, 2013 and 2012.

Guarantees Provided to Third Parties

We have provided guarantees related to the residual value of operating leases, certain suppliers' commitments, certain product-related claims and third party commercial loans and other obligations. The maximum potential obligation under these commitments was $16.9 billion and $23.5 billion at December 31, 2013 and 2012.

Refer to Note 17 to our consolidated financial statements for additional information on guarantees we have provided.

Contractual Obligations and Other Long-Term Liabilities

We have the following minimum commitments under contractual obligations, including purchase obligations. A purchase obligation is defined as an agreement to purchase goods or services that is enforceable and legally binding on us and that specifies all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum, or variable price provisions; and the approximate timing of the transaction. Other long-term liabilities are defined as long-term liabilities that are recorded on our consolidated balance sheet. Based on this definition, the following table includes only those contracts which include fixed or minimum obligations. The majority of our purchases are not included in the table as they are made under purchase orders which are requirements based and accordingly do not specify minimum quantities.

The following table summarizes aggregated information about our outstanding contractual obligations and other long-term liabilities at December 31, 2013 (dollars in millions):

	Payments Due by Period				
	2014	2015-2016	2017-2018	2019 and after	Total
Automotive debt	$ 389	$ 26	$ 1,781	$ 4,741	$ 6,937
Automotive Financing debt	13,594	10,672	4,030	750	29,046
Capital lease obligations	154	230	297	284	965
Automotive interest payments (a)	362	635	552	2,944	4,493
Automotive Financing interest payments (b)	766	833	232	141	1,972
Postretirement benefits (c)	259	279	3	—	541
Contractual commitments for capital expenditures	224	—	—	—	224
Operating lease obligations	311	397	173	206	1,087
Other contractual commitments:					
Material	947	991	117	30	2,085
Marketing	1,089	780	267	181	2,317
Rental car repurchases	3,761	—	—	—	3,761
Policy, product warranty and recall campaigns liability	2,628	3,266	1,153	246	7,293
Other	980	522	462	670	2,634
Total contractual commitments (d)(e)	$ 25,464	$ 18,631	$ 9,067	$ 10,193	$ 63,355
Non-contractual postretirement benefits (f)	$ 194	$ 567	$ 801	$ 11,136	$ 12,698

(a) Amounts include Automotive interest payments based on contractual terms and current interest rates on our debt and capital lease obligations. Automotive interest payments based on variable interest rates were determined using the interest rate in effect at December 31, 2013.

(b) GM Financial interest payments were determined using the interest rate in effect at December 31, 2013 for floating rate debt and the contractual rates for fixed rate debt. GM Financial interest payments on floating rate tranches of the securitization notes payable were converted to a fixed rate based on the floating rate plus any expected hedge payments.

(c) Amounts include OPEB payments under the current U.S. contractual labor agreements through 2015 and Canada labor agreements through 2016. Amounts do not include pension funding obligations, which are discussed below under the caption "Pension Funding Requirements."

(d) Amounts do not include future cash payments for long-term purchase obligations and other accrued expenditures (unless specifically listed in the table above) which were recorded in Accounts payable or Accrued liabilities at December 31, 2013.

(e) Amounts exclude the future annual contingent obligations of Euro 265 million in the years 2013 to 2014 related to our Opel/Vauxhall restructuring plan. Refer to Note 17 to our consolidated financial statements for further detail.

(f) Amounts include all expected future payments for both current and expected future service at December 31, 2013 for OPEB obligations for salaried employees and hourly OPEB obligations extending beyond the current North American union contract agreements. Amounts do not include pension funding obligations, which are discussed below under the caption "Pension Funding Requirements."

The table above does not reflect unrecognized tax benefits of $2.5 billion due to the high degree of uncertainty regarding the future cash outflows associated with these amounts.

Pension Funding Requirements

We have implemented and completed a balance sheet derisking strategy, comprising certain actions related to our U.S. salaried pension plan. These actions included payment of lump-sums to retirees, the purchase of group annuity contracts from an insurance company and the settlement of other previously guaranteed obligations.

We do not have any required contributions payable to our U.S. qualified plans in 2014. We expect to contribute $0.1 billion to our U.S. non-qualified plans and $0.7 billion to our non-U.S. pension plans in 2014.

Critical Accounting Estimates

The consolidated financial statements are prepared in conformity with U.S. GAAP, which require the use of estimates, judgments and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and resulting balances are reasonable; however, due to inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods. We have discussed the development, selection and disclosures of our critical accounting estimates with the Audit Committee of the Board of Directors and the Audit Committee has reviewed the disclosures relating to these estimates.

Pensions

The defined benefit pension plans are accounted for on an actuarial basis, which requires the selection of various assumptions, including an expected long-term rate of return on plan assets and a discount rate. The expected long-term rate of return on U.S. plan assets that is utilized in determining pension expense is derived from periodic studies, which include a review of asset allocation strategies, anticipated future long-term performance of individual asset classes, risks using standard deviations and correlations of returns among the asset classes that comprise the plans' asset mix. While the studies give appropriate consideration to recent plan performance and historical returns, the assumptions are primarily long-term, prospective rates of return.

In December 2013 an investment policy study was completed for the U.S. pension plans. The study resulted in new target asset allocations being approved for the U.S. pension plans with resulting changes to the expected long-term rate of return on assets. The weighted-average long-term rate of return on assets increased from 5.8% at December 31, 2012 to 6.5% at December 31, 2013 due primarily to higher yields on fixed income securities.

Another key assumption in determining net pension expense is the assumed discount rate to be used to discount plan obligations. We estimate this rate for U.S. plans using a cash flow matching approach, which uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate.

Significant differences in actual experience or significant changes in assumptions may materially affect the pension obligations. The effects of actual results differing from assumptions and the changing of assumptions are included in unamortized net actuarial gains and losses that are subject to amortization to expense over future periods. The unamortized pre-tax actuarial gain (loss) on our pension plans was $1.4 billion and $(6.2) billion at December 31, 2013 and 2012. The change is due primarily to the increase in discount rates.

The following table illustrates the sensitivity to a change in certain assumptions for the pension plans, holding all other assumptions constant (dollars in millions):

	U.S. Plans		Non-U.S. Plans	
	Effect on 2014 Pension Expense	Effect on December 31, 2013 PBO	Effect on 2014 Pension Expense	Effect on December 31, 2013 PBO
25 basis point decrease in discount rate	−$ 50	+$ 1,890	+$ 22	+$ 866
25 basis point increase in discount rate	+$ 50	−$ 1,830	−$ 21	−$ 821
25 basis point decrease in expected rate of return on assets	+$ 150	N/A	+$ 36	N/A
25 basis point increase in expected rate of return on assets	−$ 150	N/A	−$ 36	N/A

The following data illustrates the sensitivity of changes in pension expense and pension obligation based on the last remeasurement of the U.S. hourly pension plan at December 31, 2013 (dollars in millions):

	Effect on 2014 Pension Expense	Effect on December 31, 2013 PBO
Change in future benefit units		
One percentage point increase in benefit units	+$ 69	+$ 206
One percentage point decrease in benefit units	−$ 66	−$ 200

Refer to Note 15 to our consolidated financial statements for the expected weighted-average long-term rate of return on plan assets, weighted-average discount rate on plan obligations and actual and expected return on plan assets. Refer to Note 2 to our consolidated financial statements for a discussion of the inputs used to determine fair value for each significant asset class or category.

Valuation of Deferred Tax Assets

We evaluate the need for deferred tax asset valuation allowances based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. It is difficult to conclude a valuation allowance is not required when there is significant objective and verifiable negative evidence, such as cumulative losses in recent years. We utilize a rolling three years of actual and current year anticipated results as the primary measure of cumulative losses in recent years. Our accounting for deferred tax consequences represents our best estimate of future events. Changes in our current estimates, due to unanticipated events or otherwise, could have a material effect on our financial condition and results of operations. At December 31, 2013 we retained valuation allowances of $10.8 billion against deferred tax assets primarily in GME and South Korea business units with losses and in the U.S. and Canada related primarily to capital loss tax attributes and state operating loss carryforwards.

If law is enacted that reduces the U.S. statutory rate, we would record a significant reduction to the net deferred tax assets and a related increase to income tax expense in the period that includes the enactment date of the tax rate change.

Impairment of Goodwill

When applying fresh-start reporting, certain accounts, primarily employee benefit and income tax related, were recorded at amounts determined under specific U.S. GAAP rather than fair value and the difference between the U.S. GAAP and fair value amounts gave rise to goodwill, which is a residual. If all identifiable assets and liabilities had been recorded at fair value upon application of fresh-start reporting, no goodwill would have resulted. Goodwill established at fresh-start was $30.5 billion of which $30.4 billion has been impaired through December 31, 2013.

In the three months ended December 31, 2013 we performed our annual goodwill impairment testing as of October 1 for all reporting units with Goodwill. Our reporting units are GMNA, GME and various reporting units within the GMIO, GMSA and GM Financial segments. In the year ended December 31, 2013 we also performed event-driven goodwill impairment tests at various dates for certain of our reporting units. Based on our testing procedures we recorded Goodwill impairment charges of $0.5 billion in the year ended December 31, 2013 primarily associated with our GM Korea and GM India reporting units. Subsequent to the recording of the Goodwill impairment charges in the year ended December 31, 2013 we had Goodwill of $1.6 billion at December 31, 2013 which resulted primarily from the acquisition of AmeriCredit Corp in 2011.

Refer to Note 10 to our consolidated financial statements for additional information on goodwill impairments.

For purposes of our 2013 annual impairment testing procedures at October 1, 2013 the estimated fair value of GM Financial's North American reporting unit exceeded its carrying amount by 29%. Due to anticipated changes in GM Financial's business model to continue to introduce higher credit quality products into its lending portfolio, the initial equity retention ratio assumption of 12.5% was forecasted to decrease to 7.5% by 2018 in the discounted cash flow analysis utilized for goodwill impairment testing purposes. Having higher credit quality products comprising a larger percentage of GM Financial's lending portfolio will require less equity. GM Korea's fair value continued to be below its carrying amount and GM India's carrying amount became negative.

The key assumptions utilized in determining the fair value-to-U.S. GAAP differences giving rise to the implied goodwill for the reporting units requiring a Step 2 analysis are: (1) the determination of our nonperformance risk; (2) interest rates; (3) estimates of our employee benefit related obligations; and (4) the estimated timing of the utilization of our deferred tax assets, including our determination whether it is more likely than not that the deferred tax assets will be utilized. For the year ended December 31, 2013 GM Korea's goodwill assessment was most sensitive to our determination of estimates of our employee benefit related obligations and GM India's was most sensitive to the estimated timing of the utilization of our deferred tax assets.

Impairment of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated for impairment when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds the fair value for the long-lived assets or in certain cases, the asset group to be held and used. Product-specific long-lived asset groups are tested for impairment at the platform or vehicle line level. Non-product-specific long-lived assets are tested for impairment on a reporting unit basis in GMNA and GME and tested at or within our various reporting units within our GMIO, GMSA and GM Financial segments.

In December 2013 we: (1) announced our plans to cease mainstream distribution of Chevrolet brand in Western and Central Europe in 2015 due to the challenging business model and difficult economic situation in Europe; (2) announced plans to cease manufacturing at Holden by the end of 2017; and (3) performed a strategic assessment of GM India in response to lower than expected sales performance of our current product offerings in India, higher raw material costs, unfavorable foreign exchange rates and recent deterioration in local market conditions. These triggered long-lived asset impairment analyses so we performed recoverability tests on the long-lived assets associated with these asset groups. Our tests concluded that the associated long-lived assets were not recoverable as the resulting undiscounted cash flows were less than their carrying amounts. We develop anticipated cash flows from historical experience and internal business plans.

We estimated the fair values of the associated long-lived assets to determine the impairment amount. Fair value is determined using either the market or sales comparison approach, cost approach or anticipated cash flows discounted at a rate commensurate with the risk involved. A considerable amount of management judgment was required in determining the fair value of the asset groups which requires the use of significant estimates and assumptions, considered to be Level 3 inputs. An in-exchange premise was determined to be the highest and best use of the assets which is different than the assets' current use due to: (1) expected losses to be incurred associated with the exit of Chevrolet from a mainstream presence in Western and Central Europe and the wind down of manufacturing activities at Holden; and (2) the lack of economic support due to declining operations for the existing long-lived assets at GM India. As a result in the three months ended December 31, 2013 we recorded total asset impairment charges of $1.1 billion in GMIO. Refer to Notes 9 and 11 to our consolidated financial statements for additional information on the impairment charges recorded and related fair value measurements.

While we believe our judgments and assumptions are reasonable, a change in assumptions underlying these estimates could result in a material effect to the consolidated financial statements. Long-lived assets could become impaired in the future as a result of declines in profitability due to significant changes in volume, pricing or costs.

Sales Incentives

The estimated effect of sales incentives to dealers and customers is recorded as a reduction of Automotive net sales and revenue, and in certain instances, as an increase to Automotive cost of sales, at the later of the time of sale or announcement of an incentive program to dealers. There may be numerous types of incentives available at any particular time, including a choice of incentives for a specific model. Incentive programs are generally brand specific, model specific or region specific and are for specified time periods, which may be extended. Significant factors used in estimating the cost of incentives include the volume of vehicles that will be affected by the incentive programs offered by product, product mix, the rate of customer acceptance of any incentive program and the likelihood that an incentive program will be extended, all of which are estimated based on historical experience and assumptions concerning customer behavior and future market conditions. When an incentive program is announced, the number of vehicles in dealer inventory eligible for the incentive program is determined and a reduction of Automotive net sales and revenue or increase to Automotive cost of sales is recorded in the period in which the program is announced. If the actual number of affected vehicles differs from this estimate, or if a different mix of incentives is actually paid, the reduction in Automotive net sales and revenue or increase to Automotive cost of sales for sales incentives could be affected. There are a multitude of inputs affecting the calculation of the estimate for sales incentives, and an increase or decrease of any of these variables could have a significant effect on recorded sales incentives.

Policy, Product Warranty and Recall Campaigns

The estimated costs related to policy and product warranties are accrued at the time products are sold. Estimated costs related to product recalls based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated. These estimates are established using historical information on the nature, frequency and average cost of claims of each vehicle line or each model year of the vehicle line and assumptions about future activity and events. However where little or no claims experience exists for a model year or a vehicle line, the estimate is based on comparable models. Revisions are made when necessary based on changes in these factors. These estimates are re-evaluated on an ongoing basis. We actively study trends of claims and take action to improve vehicle quality and minimize claims. Actual experience could differ from the amounts estimated requiring adjustments to these liabilities in future periods. Due to the uncertainty and potential volatility of the factors contributing to developing estimates, changes in our assumptions could materially affect our results of operations.

Accounting Standards Not Yet Adopted

Accounting standards not yet adopted are discussed in Note 2 to our consolidated financial statements.

Forward-Looking Statements

In this report and in reports we subsequently file and have previously filed with the SEC on Forms 10-K and 10-Q and file or furnish on Form 8-K, and in related comments by our management, we use words like “anticipate,” “approximately,” “believe,” “continue,” “could,” “designed,” “effect,” “estimate,” “evaluate,” “expect,” “forecast,” “goal,” “initiative,” “intend,” “may,” “objective,” “outlook,” “plan,” “potential,” “priorities,” “project,” “pursue,” “seek,” “should,” “target,” “when,” “would,” or the negative of any of those words or similar expressions to identify forward-looking statements that represent our current judgment about possible future events. In making these statements we rely on assumptions and analyses based on our experience and perception of historical trends, current conditions and expected future developments as well as other factors we consider appropriate under the circumstances. We believe these judgments are reasonable, but these statements are not guarantees of any events or financial results, and our actual results may differ materially due to a variety of important factors, both positive and negative. These factors, which may be revised or supplemented in subsequent reports on SEC Forms 10-Q and 8-K, include among others the following:

- Our ability to realize production efficiencies and to achieve reductions in costs as a result of our restructuring initiatives and labor modifications;
- Our ability to maintain quality control over our vehicles and avoid material vehicle recalls;
- Our ability to maintain adequate liquidity and financing sources including as required to fund our planned significant investment in new technology;
- Our ability to realize successful vehicle applications of new technology;
- Shortages of and increases or volatility in the price of oil, including as a result of political instability in the Middle East and African nations;
- Our ability to continue to attract customers, particularly for our new products, including cars and crossover vehicles;
- Availability of adequate financing on acceptable terms to our customers, dealers, distributors and suppliers to enable them to continue their business relationships with us;

- The ability of our suppliers to deliver parts, systems and components without disruption and at such times to allow us to meet production schedules;
- Our ability to manage the distribution channels for our products;
- Our ability to successfully restructure our European and consolidated international operations;
- The continued availability of both wholesale and retail financing from Ally Financial and its affiliates and other finance companies in markets in which we operate to support our ability to sell vehicles, which is dependent on those entities' ability to obtain funding and their continued willingness to provide financing;
- Our continued ability to develop captive financing capability, including GM Financial;
- GM Financial's ability to successfully integrate certain Ally Financial international operations;
- Overall strength and stability of the automotive industry, both in the U.S. and in global markets, particularly Europe;
- Continued economic instability or poor economic conditions in the U.S., Europe and other global markets, including the credit markets, or changes in economic conditions, commodity prices, housing prices, foreign currency exchange rates or political stability in the markets in which we operate;
- Significant changes in the competitive environment, including the effect of competition and excess manufacturing capacity in our markets, on our pricing policies or use of incentives and the introduction of new and improved vehicle models by our competitors;
- Significant changes in economic, political and market conditions in China, including the effect of competition from new market entrants, on our vehicle sales and market position in China;
- Changes in the existing, or the adoption of new, laws, regulations, policies or other activities of governments, agencies and similar organizations, including where such actions may affect the production, licensing, distribution or sale of our products, the cost thereof or applicable tax rates;
- Costs and risks associated with litigation;
- Significant increases in our pension expense or projected pension contributions resulting from changes in the value of plan assets, the discount rate applied to value the pension liabilities or other assumption changes; and
- Changes in accounting principles, or their application or interpretation, and our ability to make estimates and the assumptions underlying the estimates, which could have an effect on earnings.

We caution readers not to place undue reliance on forward-looking statements. We undertake no obligation to update publicly or otherwise revise any forward-looking statements, whether as a result of new information, future events or other factors that affect the subject of these statements, except where we are expressly required to do so by law.

Quantitative and Qualitative Disclosures About Market Risk

Automotive

We enter into a variety of foreign currency exchange and commodity forward contracts and options to manage exposures arising from market risks resulting from changes in certain foreign currency exchange rates and commodity prices. We do not enter into derivative transactions for speculative purposes.

The overall financial risk management program is under the responsibility of the Risk Management Committee which reviews and, where appropriate, approves strategies to be pursued to mitigate these risks. The Risk Management Committee comprises members of our management and functions under the oversight of the Audit Committee, a committee of the Board of Directors. The Audit Committee assists and guides the Board of Directors in its oversight of our financial and risk management strategies. A risk management control framework is utilized to monitor the strategies, risks and related hedge positions in accordance with the policies and procedures approved by the Risk Management Committee. Our risk management policy intends to protect against risk arising from extreme adverse market movements on our key exposures.

The following analyses provide quantitative information regarding exposure to foreign currency exchange rate risk and interest rate risk. Sensitivity analysis is used to measure the potential loss in the fair value of financial instruments with exposure to market risk. The models used assume instantaneous, parallel shifts in exchange rates and interest rate yield curves. For options and other instruments with nonlinear returns, models appropriate to these types of instruments are utilized to determine the effect of market shifts. There are certain shortcomings inherent in the sensitivity analyses presented, due primarily to the assumption that interest rates change in a parallel fashion and that spot exchange rates change instantaneously. In addition the analyses are unable to reflect the complex market reactions that normally would arise from the market shifts modeled and do not contemplate the effects of correlations between foreign currency pairs or offsetting long-short positions in currency pairs which may significantly reduce the potential loss in value.

Foreign Currency Exchange Rate Risk

We have foreign currency exposures related to buying, selling and financing in currencies other than the functional currencies of the operations. At December 31, 2013 our most significant foreign currency exposures were the Euro/British Pound, U.S. Dollar/Korean Won, Euro/Korean Won and Euro/U.S. Dollar. Derivative instruments such as foreign currency forwards, swaps and options are used primarily to hedge exposures with respect to forecasted revenues, costs and commitments denominated in foreign currencies. At December 31, 2013 such contracts had remaining maturities of up to 23 months.

At December 31, 2013 and 2012 the net fair value liability of financial instruments with exposure to foreign currency risk was $1.0 billion and $4.0 billion. This presentation utilizes a population of foreign currency exchange derivatives, embedded derivatives and foreign currency denominated debt and excludes the offsetting effect of foreign currency cash, cash equivalents and other assets. The potential loss in fair value for such financial instruments from a 10% adverse change in all quoted foreign currency exchange rates would be $195 million and $671 million at December 31, 2013 and 2012.

We are exposed to foreign currency risk due to the translation and remeasurement of the results of certain international operations into U.S. Dollars as part of the consolidation process. Fluctuations in foreign currency exchange rates can therefore create volatility in the results of operations and may adversely affect our financial condition.

The following table summarizes the amounts of automotive foreign currency translation and transaction and remeasurement losses (dollars in millions):

	Years Ended December 31,	
	2013	2012
Foreign currency translation losses recorded in Accumulated other comprehensive loss	$ 729	$ 118
Losses resulting from foreign currency transactions and remeasurements recorded in earnings	$ 352	$ 117

Interest Rate Risk

We are subject to market risk from exposure to changes in interest rates related to certain financial instruments, primarily debt, capital lease obligations and certain marketable securities. At December 31, 2013 we did not have any interest rate swap positions to manage interest rate exposures in our automotive operations. At December 31, 2013 and 2012 the fair value liability of debt and capital leases was $6.8 billion and $5.3 billion. The potential increase in fair value resulting from a 10% decrease in quoted interest rates would be $251 million and $112 million at December 31, 2013 and 2012.

At December 31, 2013 and 2012 we had marketable securities of $7.2 billion and $3.8 billion classified as available-for sale and $1.7 billion and $5.2 billion classified as trading. The potential decrease in fair value from a 50 basis point increase in interest rates would be insignificant at December 31, 2013 and 2012.

Automotive Financing — GM Financial

Fluctuations in market interest rates can affect GM Financial's secured and unsecured debt. GM Financial's gross interest rate spread, which is the difference between: (1) interest earned on finance receivables, other income and lease contracts; and (2) interest paid, is affected by changes in interest rates as a result of GM Financial's dependence upon the issuance of variable rate securities and the incurrence of variable rate debt to fund purchases of finance receivables and leased vehicles.

Credit Facilities

Fixed interest rate receivables purchased by GM Financial are pledged to secure borrowings under its credit facilities. Amounts borrowed under these credit facilities bear interest at variable rates that are subject to frequent adjustments to reflect prevailing market interest rates. To protect the interest rate spread within each credit facility, GM Financial is contractually required to enter into interest rate cap agreements in connection with borrowings under its credit facilities.

Securitizations

In GM Financial's securitization transactions it can transfer fixed rate finance receivables to securitization trusts that, in turn, sell either fixed rate or floating rate securities to investors. Derivative financial instruments, such as interest rate swaps and caps, are used to manage the gross interest rate spread on the floating rate transactions.

GM Financial had interest rate swaps and caps in asset positions with notional amounts of $3.8 billion and $0.8 billion at December 31, 2013 and 2012. GM Financial had interest rate swaps and caps in liability positions with notional amounts of $5.5 billion and $0.8 billion at December 31, 2013 and 2012. The fair value of these derivative financial instruments was insignificant.

Foreign Currency Exchange Rate Risk

GM Financial is exposed to foreign currency risk due to the translation and remeasurement of the results of certain international operations, primarily those acquired from Ally Financial at various dates in 2013, into U.S. Dollars as part of the consolidation process. Fluctuations in foreign currency exchange rates can therefore create volatility in the results of operations and may adversely affect GM Financial's financial condition.

In connection with the closing of certain acquisitions of Ally Financial's international operations, GM Financial provided loans denominated in foreign currencies (Euro, British Pound and Swedish Krona) to acquired entities that had an equivalent balance of $1.7 billion at December 31, 2013. GM Financial purchased foreign exchange swaps to offset any valuation change in the loans due to changes in foreign exchange rates. The fair value of these foreign exchange swaps was insignificant.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

The following table summarizes GM Financial's interest rate sensitive assets and liabilities, excluding derivatives, by year of expected maturity and the fair value of those assets and liabilities at December 31, 2013 (dollars in millions):

	Years Ending December 31,						December 31, 2013
	2014	2015	2016	2017	2018	Thereafter	Fair Value

Weighted-average interest rate	—%	—%	—%	—%	4.75%	6.75%	

GM Financial estimates the realization of finance receivables in future periods using discount rate, prepayment and credit loss assumptions similar to its historical experience. Credit facilities and securitization notes payable amounts have been classified based on expected payoff. Senior notes and convertible senior notes principal amounts have been classified based on maturity.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the internal control over financial reporting of General Motors Company and subsidiaries (the Company) as of December 31, 2013, based on the criteria established in *Internal Control — Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control — Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements as of and for the year ended December 31, 2013 of the Company and our report dated February 6, 2014 expressed an unqualified opinion on those financial statements and included an explanatory paragraph related to the Company's adoption of a revised accounting standard related to comprehensive income.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

General Motors Company, its Directors, and Stockholders:

We have audited the accompanying Consolidated Balance Sheets of General Motors Company and subsidiaries (the Company) as of December 31, 2013 and 2012, and the related Consolidated Statements of Income, Comprehensive Income, Cash Flows and Equity for each of the three years in the period ended December 31, 2013. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of General Motors Company and subsidiaries at December 31, 2013 and 2012, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2013, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 2 to the consolidated financial statements, the Company adopted amendments in Accounting Standards Update (ASU) 2013-02 to Accounting Standards Codification (ASC) Topic 220, *Comprehensive Income*, effective January 1, 2013.

As discussed in Note 10 to the consolidated financial statements, the Company adopted amendments in ASU 2010-28 to ASC Topic 350, *Intangibles — Goodwill and Other*, effective January 1, 2011.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control — Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 6, 2014 expressed an unqualified opinion on the Company's internal control over financial reporting.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Nature of Operations and Basis of Presentation

General Motors Company was formed in 2009 originally as a Delaware limited liability company, Vehicle Acquisition Holdings LLC, and subsequently converted to a Delaware corporation, NGMCO, Inc. This company, which on July 10, 2009 acquired substantially all of the assets and assumed certain liabilities of General Motors Corporation through a Section 363 sale under Chapter 11 of the U.S. Bankruptcy Code (363 Sale) and changed its name to General Motors Company, is sometimes referred to in these consolidated financial statements for the periods on or subsequent to July 10, 2009 as "we," "our," "us," "ourselves," the "Company," "General Motors," or "GM." General Motors Corporation is sometimes referred to in these consolidated financial statements, for the periods on or before July 9, 2009, as "Old GM" as it is the predecessor entity solely for accounting and financial reporting purposes. Old GM was renamed Motors Liquidation Company (MLC), which was dissolved on December 15, 2011 and transferred its remaining assets and liabilities to the Motors Liquidation Company GUC Trust (GUC Trust).

We design, build and sell cars, trucks and automobile parts worldwide. We also provide automotive financing services through General Motors Financial Company, Inc. (GM Financial). We analyze the results of our business through our five segments: GM North America (GMNA), GM Europe (GME), GM International Operations (GMIO), GM South America (GMSA) and GM Financial. Nonsegment operations are classified as Corporate. Corporate includes certain centrally recorded income and costs, such as interest, income taxes and corporate expenditures and certain nonsegment specific revenues and expenses.

Principles of Consolidation

The consolidated financial statements include our accounts and those of our subsidiaries that we control due to ownership of a majority voting interest and our consolidated variable interest entities (VIEs) of which we are the primary beneficiary. We continually evaluate our involvement with VIEs to determine whether we have variable interests and are the primary beneficiary of the VIE. When these criteria are met, we are required to consolidate the VIE. Our share of earnings or losses of nonconsolidated affiliates is included in our consolidated operating results using the equity method of accounting when we are able to exercise significant influence over the operating and financial decisions of the affiliate. We use the cost method of accounting if we are not able to exercise significant influence over the operating and financial decisions of the affiliate. All intercompany balances and transactions have been eliminated in consolidation.

Certain prior year amounts were reclassified to conform to our current year presentation.

Use of Estimates in the Preparation of the Financial Statements

The consolidated financial statements are prepared in conformity with U.S. GAAP, which requires the use of estimates, judgments and assumptions that affect the amounts of assets and liabilities at the reporting date and the amounts of revenue and expenses in the periods presented. We believe that the accounting estimates employed are appropriate and the resulting balances are reasonable; however, due to the inherent uncertainties in making estimates actual results could differ from the original estimates, requiring adjustments to these balances in future periods.

GM Financial

The amounts presented for GM Financial have been adjusted to include the effect of our tax attributes on GM Financial's deferred tax positions and provision for income taxes since the date of acquisition, which are not applicable to GM Financial on a stand-alone basis, and to eliminate the effect of transactions between GM Financial and the other members of the consolidated group. Accordingly, the amounts presented will differ from those presented by GM Financial on a stand-alone basis.

Note 2. Significant Accounting Policies

The accounting policies which follow are utilized by our automotive and automotive financing operations, unless otherwise indicated.

Revenue Recognition

Automotive

Automotive net sales and revenue are primarily composed of revenue generated from the sale of vehicles. Vehicle sales are recorded when title and all risks and rewards of ownership have passed to our customers. For the majority of our automotive sales this occurs when a vehicle is released to the carrier responsible for transporting to a dealer and when collectability is reasonably assured. Vehicle sales are recorded when the vehicle is delivered to the dealer in most remaining cases. Provisions for recurring dealer and customer sales and leasing incentives, consisting of allowances and rebates, are recorded as reductions to Automotive net sales and revenue at the time of vehicle sales. All other incentives, allowances and rebates related to vehicles previously sold are recorded as reductions to Automotive net sales and revenue when announced.

Vehicle sales to daily rental car companies with guaranteed repurchase obligations are accounted for as operating leases. Estimated lease revenue is recorded ratably over the estimated term of the lease based on the difference between net sales proceeds and the guaranteed repurchase amount. The difference between the cost of the vehicle and estimated residual value is depreciated on a straight-line basis over the estimated term of the lease.

Automotive Financing — GM Financial

Finance income earned on receivables is recognized using the effective interest method for consumer financing receivables and accrual method for commercial financing receivables. Fees and commissions (including incentive payments) received and direct costs of originating loans are deferred and amortized over the term of the related finance receivables using the effective interest method and are removed from the consolidated balance sheets when the related finance receivables are sold, charged off or paid in full. Accrual of finance charge income is generally suspended on accounts that are more than 60 days delinquent, accounts in bankruptcy and accounts in repossession. Payments received on nonaccrual loans are first applied to any fees due, then to any interest due and then any remaining amounts are recorded to principal. Interest accrual generally resumes once an account has received payments bringing the delinquency to less than 60 days past due.

Income from operating lease assets, which includes lease origination fees, net of lease origination costs and incentives, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement.

Advertising and Promotion Expenditures

Advertising and promotion expenditures, which are expensed as incurred, were $5.5 billion, $5.4 billion and $5.2 billion in the years ended December 31, 2013, 2012 and 2011.

Research and Development Expenditures

Research and development expenditures, which are expensed as incurred, were $7.2 billion, $7.4 billion and $8.1 billion in the years ended December, 31 2013, 2012 and 2011.

Cash Equivalents

Cash equivalents are defined as short-term, highly-liquid investments with original maturities of 90 days or less.

Allowance for Doubtful Accounts

The following table summarizes activity in our allowance for doubtful accounts and notes receivable (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Balance at beginning of period	$ 311	$ 331	$ 252
Amounts charged (credited) to costs and expenses	61	(10)	159
Deductions	(24)	(46)	(83)
Other	(4)	36	3
Balance at end of period	$ 344	$ 311	$ 331

Fair Value Measurements

A three-level valuation hierarchy, based upon observable and unobservable inputs, is used for fair value measurements. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect market assumptions based on the best evidence available. These two types of inputs create the following fair value hierarchy:

- Level 1 — Quoted prices for *identical* instruments in active markets;
- Level 2 — Quoted prices for *similar* instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose significant inputs are observable; and
- Level 3 — Instruments whose significant inputs are *unobservable*.

Financial instruments are transferred in and/or out of Level 1, 2 or 3 at the beginning of the accounting period in which there is a change in the valuation inputs.

Marketable Securities

We classify marketable securities as available-for-sale or trading. Various factors, including turnover of holdings and investment guidelines, are considered in determining the classification of securities. Available-for-sale securities are recorded at fair value with unrealized gains and losses recorded net of related income taxes in Accumulated other comprehensive loss until realized. Trading securities are recorded at fair value with changes in fair value recorded in Interest income and other non-operating income, net. We determine realized gains and losses for all securities using the specific identification method.

We measure the fair value of our marketable securities using a market approach where identical or comparable prices are available and an income approach in other cases. Securities are classified in Level 1 when quoted prices in an active market for identical securities are available. If quoted market prices are not available, fair values of securities are determined using prices from a pricing service, pricing models, quoted prices of securities with similar characteristics or discounted cash flow models and are generally classified in Level 2. These prices represent non-binding quotes. U.S. government and agency securities, sovereign debt and corporate debt securities are classified in Level 2. Our pricing service utilizes industry-standard pricing models that consider various inputs, including benchmark yields, reported trades, broker/dealer quotes, issuer spreads and benchmark securities as well as other relevant economic measures. We conduct an annual review of our pricing service. This review includes discussion and analysis of the inputs used by the pricing service to provide prices for the types of securities we hold. These inputs include prices for comparable securities, bid/ask quotes, interest rate yields and prepayment speeds. Based on our review we believe the prices received from our pricing service are a reliable representation of exit prices. Securities are classified in Level 3 in certain cases where there are unobservable inputs to the valuation in the marketplace. Level 3 financial instruments typically include, in addition to the unobservable inputs, observable components that are validated to external sources.

An evaluation is made quarterly to determine if unrealized losses related to non-trading investments in securities are other-than-temporary. Factors considered in determining whether a loss on a marketable security is other-than-temporary include: (1) the length of time and extent to which the fair value has been below cost; (2) the financial condition and near-term prospects of the issuer; and (3) the intent to sell or likelihood to be forced to sell the security before any anticipated recovery.

Finance Receivables

As the result of our October 2010 acquisition of GM Financial and GM Financial's acquisition of the Ally Financial, Inc. (Ally Financial) international operations, finance receivables are reported in two portfolios: pre-acquisition and post-acquisition portfolios. The pre-acquisition finance receivables portfolio consists of finance receivables that were considered to have had deterioration in credit quality at the time they were acquired with the acquisition of GM Financial or the acquisition of the Ally Financial international operations. The pre-acquisition portfolio will decrease over time with the amortization of the acquired receivables. The post-acquisition finance receivables portfolio consists of finance receivables that were considered to have had no deterioration in credit quality at the time they were acquired with the acquisition of the Ally Financial international operations and finance receivables originated since the acquisitions of GM Financial and the Ally Financial international operations. The post-acquisition portfolio is expected to grow over time as GM Financial originates new receivables.

Pre-Acquisition Consumer Finance Receivables

At the time of acquisitions the receivables were recorded at fair value. The pre-acquisition finance receivables were acquired at a discount, which contains two components: a non-accretable difference and an accretable yield. The accretable yield is recorded as finance charge income over the life of the acquired receivables.

Any deterioration in the performance of the pre-acquisition finance receivables from their expected performance will result in an incremental provision for loan losses. Improvements in the performance of the pre-acquisition finance receivables will result first in the reversal of any incremental related allowance for loan losses and then in a transfer of the excess from the non-accretable difference to accretable yield, which will be recorded as finance charge income over the remaining life of the receivables.

Post-Acquisition Consumer Finance Receivables and Allowance for Loan Losses

Post-acquisition finance receivables originated since the acquisitions of GM Financial and the Ally Financial international operations are carried at amortized cost, net of allowance for loan losses.

The component of the allowance for consumer finance receivables that are collectively evaluated for impairment is based on a statistical calculation supplemented by management judgment. GM Financial uses a combination of forecasting models to determine the allowance for loan losses. Factors that are considered when estimating the allowance include loss confirmation period, historical delinquency migration to loss, probability of default and loss given default. The loss confirmation period is a key assumption within the models, which represents the average amount of time between when a loss event first occurs to when the receivable is charged-off.

Consumer finance receivables that become classified as troubled debt restructurings (TDRs) are separately assessed for impairment. A specific allowance is estimated based on the present value of the expected future cash flows of the receivable discounted at the loan's original effective interest rate.

The finance receivables acquired with Ally Financial international operations that were considered to have no deterioration in credit quality at the time of acquisition were recorded at fair value. The purchase discount will accrete to income over the life of the receivables, based on contractual cash flows, using the effective interest method. Provisions for loan losses are charged to operations in amounts equal to net credit losses for the period. Any subsequent deterioration in the performance of the acquired receivables will result in an incremental provision for loan losses.

Inventory

Inventories are stated at the lower of cost or market. Market, which represents selling price less cost to sell, considers general market and economic conditions, periodic reviews of current profitability of vehicles, product warranty costs and the effect of current and expected incentive offers at the balance sheet date. Market for off-lease and other vehicles is current auction sales proceeds less disposal and warranty costs. Productive material, work in process, supplies and service parts are reviewed to determine if inventory quantities are in excess of forecasted usage or if they have become obsolete.

Equipment on Operating Leases, net

Equipment on operating leases, net is reported at cost, less accumulated depreciation, net of origination fees or costs, and lease incentives. Estimated income from operating lease assets, which includes lease origination fees, net of lease origination costs, is recorded as operating lease revenue on a straight-line basis over the term of the lease agreement. Leased vehicles are depreciated on a straight-line basis to an estimated residual value over the term of the lease agreements.

We have significant investments in vehicles in operating lease portfolios, which are composed of vehicle leases to retail customers with lease terms of up to 60 months and vehicles leased to rental car companies with lease terms that average eight months or less. We are exposed to changes in the residual values of those assets. For impairment purposes the residual values represent estimates of the values of the vehicles leased at the end of the lease contracts and are determined based on forecasted auction proceeds when there is a reliable basis to make such a determination. Realization of the residual values is dependent on the future ability to market the vehicles under the prevailing market conditions. The adequacy of the estimate of the residual value is evaluated over the life of the lease and adjustments may be made to the extent the expected value of the vehicle at lease termination changes. Adjustments may be in the form of revisions to the depreciation rate or recognition of an impairment charge. Impairment is determined to exist if the expected future cash flows, which include estimated residual values, are lower than the carrying amount of the vehicles leased. If the carrying amount is considered impaired, an impairment charge is recorded for the amount by which the carrying amount exceeds the fair value. Fair value is determined primarily using the anticipated cash flows, including estimated residual values.

In our Automotive operations when a leased vehicle is returned the asset is reclassified from Equipment on operating leases, net to Inventories at the lower of cost or estimated selling price, less cost to sell. In our Automotive Finance operations when a leased vehicle is returned or repossessed the asset is recorded in Other assets at the lower of cost or estimated selling price, less costs to sell. Upon disposition a gain or loss is recorded for any difference between the net book value of the leased asset and the proceeds from the disposition of the asset.

Impairment charges related to Equipment on operating leases, net are recorded in Automotive cost of sales or GM Financial operating and other expenses.

Valuation of Cost and Equity Method Investments

When events and circumstances warrant, investments accounted for under the cost or equity method of accounting are evaluated for impairment. An impairment charge is recorded whenever a decline in value of an investment below its carrying amount is determined to be other-than-temporary. In determining if a decline is other-than-temporary, factors such as the length of time and extent to which the fair value of the investment has been less than the carrying amount of the investment, the near-term and longer-term operating and financial prospects of the affiliate and the intent and ability to hold the investment for a period of time sufficient to allow for any anticipated recovery are considered. Impairment charges related to equity method investments are recorded in Equity income and gain on investments. Impairment charges related to cost method investments are recorded in Interest income and other non-operating income, net.

Property, net

Property, plant and equipment, including internal use software, is recorded at cost. Major improvements that extend the useful life or add functionality of property are capitalized. The gross amount of assets under capital leases is included in property, plant and equipment. Expenditures for repairs and maintenance are charged to expense as incurred. We depreciate all depreciable property using the straight-line method. Leasehold improvements are amortized over the period of lease or the life of the asset, whichever is shorter. The amortization of the assets under capital leases is included in depreciation expense. Upon retirement or disposition of property, plant and equipment, the cost and related accumulated depreciation are removed from the accounts and any resulting gain or loss is recorded in earnings. Impairment charges related to property are recorded in Automotive cost of sales, Automotive selling, general and administrative expense or GM Financial operating and other expenses.

Special Tools

Special tools represent product-specific powertrain and non-powertrain related tools, dies, molds and other items used in the vehicle manufacturing process. Expenditures for special tools are recorded at cost and are capitalized. We amortize all non-powertrain special tools over their estimated useful lives using an accelerated amortization method. We amortize powertrain special tools over their estimated useful lives using the straight-line method. Impairment charges related to special tools are recorded in Automotive cost of sales.

Goodwill

Goodwill arises from the application of fresh-start reporting and acquisitions accounted for as business combinations. Goodwill is tested for impairment for all reporting units on an annual basis during the fourth quarter, or more frequently if events occur or circumstances change that would warrant such a review. When the fair value of a reporting unit falls below its carrying amount an impairment charge is recorded for the amount, if any, by which the carrying amount of goodwill exceeds its implied fair value. Fair values of reporting units are established using a discounted cash flow method. Where available and as appropriate, comparative market multiples and the quoted market price for our common stock are used to corroborate the results of the discounted cash flow method. Our reporting units are GMNA and GME and various reporting units within the GMIO, GMSA and GM Financial segments. Due to the integrated nature of our manufacturing operations and the sharing of assets, other resources and vehicle platforms among brands within GMNA and GME and because financial information by brand or country is not discrete below the operating segment level, GMNA and GME do not contain reporting units below the operating segment level. GMIO, GMSA and GM Financial are less integrated given the lack of regional trade pacts and other unique geographical differences and thus contain separate reporting units below the operating segment level. Goodwill would be reassigned on a relative-fair-value basis to a portion of a reporting unit to be disposed of or upon the reorganization of the composition of one or more of our reporting units, unless the reporting unit was never integrated.

Intangible Assets, net

Intangible assets, excluding Goodwill, primarily include brand names (including defensive intangibles associated with discontinued brands), technology and intellectual property, customer relationships and dealer networks.

Intangible assets are amortized on a straight-line or an accelerated method of amortization over their estimated useful lives. An accelerated amortization method reflecting the pattern in which the asset will be consumed is utilized if that pattern can be reliably determined. We consider the period of expected cash flows and underlying data used to measure the fair value of the intangible assets when selecting a useful life. Impairment charges related to intangible assets are recorded in Automotive selling, general and administrative expense or Automotive cost of sales.

Amortization of developed technology and intellectual property is recorded in Automotive cost of sales. Amortization of brand names, customer relationships and our dealer networks is recorded in Automotive selling, general and administrative expense or GM Financial operating and other expenses.

Valuation of Long-Lived Assets

The carrying amount of long-lived assets and finite-lived intangible assets to be held and used in the business are evaluated for impairment when events and circumstances warrant. If the carrying amount of a long-lived asset group is considered impaired, a loss is recorded based on the amount by which the carrying amount exceeds fair value. Product-specific long-lived asset groups are tested for impairment at the platform or vehicle line level and consider their geographical location. Non-product specific long-lived assets are tested for impairment on a reporting unit basis in GMNA and GME and tested at or within our various reporting units within our GMIO, GMSA and GM Financial segments. Fair value is determined using either the market or sales comparison approach, cost approach or anticipated cash flows discounted at a rate commensurate with the risk involved. Long-lived assets to be disposed of other than by sale are considered held for use until disposition. Product-specific assets may become impaired as a result of declines in profitability due to changes in volume, pricing or costs.

Pension and Other Postretirement Plans

Attribution, Methods and Assumptions

The cost of benefits provided by defined benefit pension plans is recorded in the period employees provide service. The cost of pension plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be: (1) the duration of the applicable collective bargaining agreement specific to the plan; (2) expected future working lifetime; or (3) the life expectancy of the plan participants.

The cost of medical, dental, legal service and life insurance benefits provided through postretirement benefit plans is recorded in the period employees provide service. The cost of postretirement plan amendments that provide for benefits already earned by plan participants is amortized over the expected period of benefit which may be the average period to full eligibility or the average life expectancy of the plan participants, or the period to the plan’s termination date for a plan which provides legal services.

An expected return on plan asset methodology is utilized to calculate future pension expense for certain significant funded benefit plans. A market-related value of plan assets methodology is also utilized that averages gains and losses on the plan assets over a period of years to determine future pension expense. The methodology recognizes 60% of the difference between the fair value of assets and the expected calculated value in the first year and 10% of that difference over each of the next four years.

The discount rate assumption is established for each of the retirement-related benefit plans at their respective measurement dates. In the U.S. we use a cash flow matching approach that uses projected cash flows matched to spot rates along a high quality corporate yield curve to determine the present value of cash flows to calculate a single equivalent discount rate.

The benefit obligation for pension plans in Canada, the United Kingdom and Germany represents 92% of the non-U.S. pension benefit obligation at December 31, 2013. The discount rates for plans in Canada, the United Kingdom and Germany are determined using a cash flow matching approach, similar to the U.S. approach.

In countries other than the U.S., Canada, the United Kingdom and those located in the Eurozone discount rates are established depending on the local financial markets, using a high quality yield curve based on local bonds, a yield curve adjusted to reflect local conditions or local actuarial standards.

Plan Asset Valuation

Cash Equivalents and Other Short-Term Investments

Money market funds and other similar short-term investment funds are valued using the net asset value per share (NAV). Prices for short-term debt securities are received from independent pricing services or from dealers who make markets in such securities. Independent pricing services utilize matrix pricing which considers readily available inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices. Money market mutual funds which provide investors with the ability to redeem their interests on a daily basis and for which NAVs are publicly available are classified in Level 1. Other cash equivalents and short-term investments are classified in Level 2.

Common and Preferred Stock

Common and preferred stock for which market prices are readily available at the measurement date are valued at the last reported sale price or official closing price on the primary market or exchange on which they are actively traded and are classified in Level 1. Such equity securities for which the market is not considered to be active are valued via the use of observable inputs, which may include, among others, the use of adjusted market prices last available, bids or last available sales prices and/or other observable inputs and are classified in Level 2. Common and preferred stock classified in Level 3 are those privately issued securities or other issues that are valued via the use of valuation models using significant unobservable inputs that generally consider among others, aged (stale) pricing, earnings multiples, discounted cash flows and/or other qualitative and quantitative factors.

Fixed Income Securities

Fixed income securities are valued based on quotations received from independent pricing services or from dealers who make markets in such securities. Debt securities which are priced via the use of pricing services that utilize matrix pricing which considers readily observable inputs such as the yield or price of bonds of comparable quality, coupon, maturity and type as well as dealer supplied prices, are classified in Level 2. Fixed income securities within this category that are typically priced by dealers and pricing services via the use of proprietary pricing models which incorporate significant unobservable inputs are classified in Level 3. These inputs primarily consist of yield and credit spread assumptions, discount rates, prepayment curves, default assumptions and recovery rates.

Investment Funds, Private Equity and Debt Investments and Real Estate Investments

Investments in exchange traded funds, real estate investment trusts and mutual funds, for which market quotations are generally readily available, are valued at the last reported sale price, official closing price or publicly available NAV (or its equivalent) on the primary market or exchange on which they are traded and are classified in Level 1. Investments in private investment funds (including hedge funds, private equity funds and real estate funds) are generally valued based on their respective NAV (or its equivalent), as a practical expedient to estimate fair value due to the absence of readily available market prices. Investments in private investment funds, which may be fully redeemed at NAV in the near-term are generally classified in Level 2. Investments in funds, which may not be fully redeemed at NAV in the near-term, are generally classified in Level 3.

Direct investments in private equity, private debt and real estate securities, are generally valued in good faith via the use of the market approach (earnings multiples from comparable companies) or the income approach (discounted cash flow techniques), and consider inputs such as revenue growth and gross margin assumptions, discount rates, discounts for lack of liquidity, market capitalization rates, and the selection of comparable companies. As these valuations incorporate significant unobservable inputs they are classified in Level 3.

Fair value estimates for private investment funds, private equity, private debt and real estate investments are provided by the respective investment sponsors or investment advisers and are subsequently reviewed and approved by management. In the event management concludes a reported NAV or fair value estimate (collectively, external valuation) does not reflect fair value or is not determined as of the financial reporting measurement date, we will consider whether and when deemed necessary to make an adjustment at the balance sheet date. In determining whether an adjustment to the external valuation is required, we will review material factors that could affect the valuation, such as changes to the composition or performance of the underlying investments or comparable investments, overall market conditions, expected sale prices for private investments which are probable of being sold in the short term and other economic factors that may possibly have a favorable or unfavorable effect on the reported external valuation.

Derivatives

Exchange traded derivatives, such as options and futures, for which market quotations are readily available, are valued at the last reported sale price or official closing price on the primary market or exchange on which they are traded and are classified in Level 1. Over-the-counter derivatives, including but not limited to swaps, swaptions and forwards, which are typically valued through independent pricing services with observable inputs are generally classified in Level 2. Swaps that are cleared by clearinghouses or exchanges are valued with the prices provided by those venues and are generally classified in Level 2. Derivatives classified in Level 3 are typically valued via the use of pricing models which incorporate significant unobservable inputs, but may also include derivatives which are valued with the use of significant observable inputs which are not subject to corroboration. The inputs part of the model based valuations may include extrapolated or model-derived assumptions such as volatilities, yield and credit spread assumptions.

Due to the lack of timely available market information for certain investments in the asset classes described above as well as the inherent uncertainty of valuation, reported fair values may differ from fair values that would have been used had timely available market information been available.

Job Security Programs and Extended Disability Benefits

We have job security programs to provide International Union, United Automobile, Aerospace and Agriculture Implement Workers of America (UAW) and Canadian Auto Workers Union (CAW) employees reduced wages and continued coverage under certain employee benefit programs depending on the employee's classification as well as the number of years of service that the employee has accrued. We also provide extended disability benefits for employees currently disabled and those in the active workforce who may become disabled in the form of income replacement, healthcare costs and life insurance premiums.

We recognize a liability for job security programs and extended disability benefits over the expected service period using measurement provisions similar to those used to measure our other postretirement benefits (OPEB) obligations based on our best estimate of the probable liability at the measurement date. We record actuarial gains and losses immediately in earnings.

Stock Incentive Plans

We measure and record compensation expense for all share-based payment awards based on the award's estimated fair value which is the fair value of our common stock on the date of grant, or for restricted stock units (RSUs) granted prior to our public offering, the fair value of our common stock as of the date of the public offering. We record compensation cost for the awards on a straight-line basis over the entire vesting period, or for retirement eligible employees over the requisite service period. Salary stock awards granted are fully vested and nonforfeitable upon grant; therefore, compensation cost is recorded on the date of grant. The liability for stock incentive plan awards settled in cash is remeasured to fair value at the end of each reporting period.

Policy, Product Warranty and Recall Campaigns

The estimated costs related to policy and product warranties are accrued at the time products are sold and are charged to Automotive cost of sales. These estimates are established using historical information on the nature, frequency and average cost of claims of each vehicle line or each model year of the vehicle line and assumptions about future activity and events. Revisions are made when necessary based on changes in these factors. Trends of claims are actively studied and actions are taken to improve vehicle quality and minimize claims. The estimated costs related to product recalls based on a formal campaign soliciting return of that product are accrued when they are deemed to be probable and can be reasonably estimated.

Income Taxes

The liability method is used in accounting for income taxes. Deferred tax assets and liabilities are recorded for temporary differences between the tax basis of assets and liabilities and their reported amounts in the consolidated financial statements using the statutory tax rates in effect for the year in which the differences are expected to reverse. The effect on deferred tax assets and liabilities of a change in tax rates is recorded in the results of operations in the period that includes the enactment date under the law.

Deferred income tax assets are evaluated quarterly to determine if valuation allowances are required or should be adjusted. We establish valuation allowances for deferred tax assets based on a more likely than not standard. The ability to realize deferred tax assets depends on the ability to generate sufficient taxable income within the carryback or carryforward periods provided for in the tax law for each applicable tax jurisdiction. The assessment regarding whether a valuation allowance is required or should be adjusted also considers all available positive and negative evidence factors.

It is difficult to conclude a valuation allowance is not required when there is significant objective and verifiable negative evidence, such as cumulative losses in recent years. We utilize a rolling three years of actual and current year results as the primary measure of cumulative losses in recent years.

Income tax expense (benefit) for the year is allocated between continuing operations and other categories of income such as Other comprehensive income (loss). In periods in which there is a pre-tax loss from continuing operations and pre-tax income in another income category, the tax benefit allocated to continuing operations is determined by taking into account the pre-tax income of other categories.

We record uncertain tax positions on the basis of a two-step process whereby: (1) we determine whether it is more likely than not that the tax positions will be sustained based on the technical merits of the position; and (2) for those tax positions that meet the more likely than not recognition, we recognize the largest amount of tax benefit that is greater than 50% likely to be realized upon ultimate settlement with the related tax authority. We record interest and penalties on uncertain tax positions in Income tax expense (benefit).

Foreign Currency Transactions and Translation

The assets and liabilities of foreign subsidiaries that use the local currency as their functional currency are translated to U.S. Dollars based on the current exchange rate prevailing at each balance sheet date and any resulting translation adjustments are included in Accumulated other comprehensive loss. The assets and liabilities of foreign subsidiaries whose local currency is not their functional currency are remeasured from their local currency to their functional currency and then translated to U.S. Dollars. Revenues and expenses are translated into U.S. Dollars using the average exchange rates prevailing for each period presented.

Gains and losses arising from foreign currency transactions and the effects of remeasurements discussed in the preceding paragraph are recorded in Automotive cost of sales and GM Financial operating and other expenses unless related to Automotive debt, which are recorded in Interest income and other non-operating income, net. Foreign currency transaction and remeasurement losses were $350 million, $117 million and $55 million in the years ended December 31, 2013, 2012 and 2011.

Recently Adopted Accounting Principles

On January 1, 2013 we adopted Accounting Standards Update (ASU) 2013-02, “Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income.” This ASU does not change current requirements for reporting net income or other comprehensive income (OCI) in financial statements; rather, it requires certain disclosures of the amount of reclassifications of items from OCI to net income by component. The related disclosures are presented in Note 21.

Accounting Standards Not Yet Adopted

In July 2013 the FASB issued ASU 2013-11, “Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists” to eliminate diversity in practice. This ASU requires that companies net their unrecognized tax benefits against all same-jurisdiction net operating losses or tax credit carryforwards that would be used to settle the position with a tax authority. This new guidance is effective prospectively for annual reporting periods beginning on or after December 15, 2013 and interim periods therein. The adoption of this ASU will not have a material effect on our consolidated financial statements because it aligns with our current presentation.

Note 3. Acquisition of Businesses

Acquisition of Certain Ally Financial International Operations

In November 2012 GM Financial entered into a definitive agreement with Ally Financial to acquire 100% of the outstanding equity interests in the top level holding companies of its automotive finance and financial services operations in Europe and Latin America and a separate agreement to acquire Ally Financial's non-controlling equity interest in GMAC-SAIC Automotive Finance Company Limited (GMAC-SAIC), which conducts automotive finance and other financial services in China.

On April 1, 2013 GM Financial completed the acquisition of Ally Financial's European and Latin American automotive finance operations except for France, Portugal and Brazil; on June 1, 2013 it completed the acquisition of Ally Financial's automotive finance operations in France and Portugal; and on October 1, 2013 it completed the acquisition of Ally Financial's automotive finance operations in Brazil. The aggregate consideration for these acquisitions was $3.3 billion, subject to certain closing adjustments. Acquisition-related costs were insignificant. In addition GM Financial repaid loans of $1.4 billion that were assumed as part of the acquisitions. GM Financial recorded the fair value of the assets acquired and liabilities assumed on the acquisition dates. Certain amounts previously presented related to the acquisitions have been, and will continue to be, updated as a result of closing adjustments.

GM Financial's acquisition of Ally Financial's equity interest in GMAC-SAIC is subject to certain regulatory and other approvals and is expected to close in 2014. GM Financial expects to pay approximately $900 million to close this acquisition subject to certain closing adjustments.

The following table summarizes the aggregate consideration and the assets acquired and liabilities assumed at the acquisition dates before eliminations for net intercompany receivables of approximately $300 million (dollars in millions):

Cash	$ 607
Restricted cash	906
Finance receivables	15,144
Other assets, including identifiable intangible assets	769
Secured and unsecured debt	(12,833)
Other liabilities	(1,483)
Identifiable net assets acquired	3,110
Goodwill resulting from the acquisitions	144
Aggregate consideration	$ 3,254

The fair value of finance receivables was determined using a discounted cash flow approach. The contractual cash flows were adjusted for estimated prepayments, defaults, recoveries and servicing costs and discounted using a discount rate commensurate with risks and maturity inherent in the finance contracts. The contractually required payments receivable, cash flows expected to be collected and fair value for finance receivables acquired with deteriorated credit quality at the acquisition date were $799 million, $728 million and $601 million. The contractually required payments receivable, cash flows not expected to be collected and fair value for other acquired finance receivables were $15.6 billion, $303 million and $14.5 billion. The fair value of secured and unsecured debt was determined using quoted market prices when available and a discounted cash flow approach when not available.

We recorded goodwill in the amount of $144 million for the excess of the aggregate consideration over the fair value of the individual assets acquired and liabilities assumed and such amount is primarily attributed to the value of the incremental GM Financial business expected. The recorded goodwill is subject to further adjustment resulting from the finalization of closing balance sheet audits. Valuations and assumptions pertaining to income taxes are subject to change as additional information is obtained during the measurement period. All of the goodwill was assigned to the GM Financial segment and will be assigned to reporting units, which will be determined pending completion of the remaining acquisitions. The goodwill is not tax deductible.

The results of the acquired European and Latin American automotive finance operations are included in GM Financial's results beginning on the dates GM Financial completed each acquisition. The following table summarizes the actual amounts of revenue and earnings included in our consolidated financial statements as well as certain pro forma revenue and earnings of the combined entity had these acquisitions occurred as of January 1, 2012, without consideration of historical transactions between the acquired operations and us, as it is impracticable to obtain such information (dollars in millions):

	Acquired Operations' Amounts Included in Results For Year Ended December 31, 2013	Pro Forma-Combined for Years Ended	
		December 31, 2013	December 31, 2012
Total net sales and revenue	$ 968	$ 156,284	$ 154,161
Net income attributable to stockholders	$ 109	$ 5,492	$ 6,412

Acquisition of SAIC GM Investment Limited

In September 2012 we obtained control of SAIC GM Investment Limited, the holding company of General Motors India Private Limited and Chevrolet Sales India Private Limited (collectively GM India) with an 86% interest and consolidated GM India and recorded goodwill of $61 million. We also recognized a gain of $51 million which was recorded in Equity income and gain on investments. In addition we invested $125 million in GM India, which increased our interest in GM India to 90.8%. Refer to Note 8 for additional details on our investment in GM India prior to acquisition.

Note 4. GM Financial Receivables, net

In the year ended December 31, 2013 GM Financial acquired certain international operations in Europe and Latin America from Ally Financial that conduct consumer and commercial lending activities. All of the loans acquired were made on a secured basis.

The following table summarizes the components of consumer and commercial finance receivables, net (dollars in millions):

	December 31, 2013			December 31, 2012		
	Consumer	Commercial	Total	Consumer	Commercial	Total
Pre-acquisition finance receivables, outstanding amount	$ 1,294	$ —	$ 1,294	$ 2,162	$ —	$ 2,162
Pre-acquisition finance receivables, carrying amount	$ 1,174	$ —	$ 1,174	$ 1,958	$ —	$ 1,958
Post-acquisition finance receivables, net of fees	21,956	6,050	28,006	8,831	560	9,391
Finance receivables	23,130	6,050	29,180	10,789	560	11,349
Less: allowance for loan losses	(497)	(51)	(548)	(345)	(6)	(351)
GM Financial receivables, net	$ 22,633	$ 5,999	$ 28,632	$ 10,444	$ 554	$ 10,998
Fair value of GM Financial receivables, net			$ 28,668			$ 11,313

Of the total allowance for loan losses in the above table, $427 million and $266 million were current at December 31, 2013 and 2012.

GM Financial determined the fair value of consumer finance receivables using observable and unobservable inputs within a cash flow model. The inputs reflect assumptions regarding expected prepayments, deferrals, delinquencies, recoveries and charge-offs of the loans within the portfolio. The cash flow model produces an estimated amortization schedule of the finance receivables which is the basis for the calculation of the series of cash flows that derive the fair value of the portfolio. The series of cash flows is calculated and discounted using a weighted-average cost of capital (WACC) using unobservable debt and equity percentages, an unobservable cost of equity and an observable cost of debt based on companies with a similar credit rating and maturity profile as the portfolio. Macroeconomic factors could negatively affect the credit performance of the portfolio and therefore could potentially affect the assumptions used in GM Financial's cash flow model. Substantially all commercial finance receivables either have variable interest rates and maturities of one year or less, or were acquired or originated within the past year. Therefore, the carrying amount is considered to be a reasonable estimate of fair value.

GM Financial reviews its pre-acquisition finance receivables portfolios for differences between contractual cash flows and the cash flows expected to be collected to determine if the difference is attributable, at least in part, to credit quality. In the years ended December 31, 2013 and 2012 as a result of improvements in credit performance of the pre-acquisition finance receivables, GM Financial transferred the amount of excess cash flows from the non-accretable difference to accretable yield. GM Financial will recognize this excess as finance charge income over the remaining life of the portfolio.

The following table summarizes the activity for accretable yield (dollars in millions):

	Years Ended December 31,	
	2013	2012
Balance at beginning of period	$ 404	$ 737
Ally Financial international operations acquisition	127	
Accretion of accretable yield	(342)	(503)
Transfer from non-accretable difference	74	170
Effect of foreign currency	(8)	—
Balance at end of period	$ 255	$ 404

The following table summarizes activity for the allowance for loan losses on consumer and commercial finance receivables (dollars in millions):

	Years Ended December 31, (a)		
	2013	2012	2011
Balance at beginning of period	$ 351	$ 179	$ 26
Provision for loan losses	475	304	178
Charge-offs	(643)	(304)	(66)
Recoveries	362	172	41
Effect of foreign currency	3	—	—
Balance at end of period	$ 548	$ 351	$ 179

(a) The balances and activity of the allowance for commercial loan losses included in the amounts at and for the years ended December 31, 2013 and 2012 were insignificant.

Credit Quality

Consumer Finance Receivables

GM Financial uses proprietary scoring systems that measure the credit quality of the receivables using several factors, such as credit bureau information, consumer credit risk scores (e.g. FICO score) and contract characteristics. In addition to GM Financial's proprietary scoring systems GM Financial considers other individual consumer factors such as employment history, financial stability and capacity to pay. Subsequent to origination GM Financial reviews the credit quality of retail receivables based on customer payment activity. At the time of loan origination substantially all of GM Financial's international consumers have prime credit scores. In North America sub-prime is typically defined as a loan with a borrower that has a FICO score of less than 620. At December 31, 2013 and 2012 88% and 84% of the consumer finance receivables in North America were consumers with FICO scores less than 620.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

An account is considered delinquent if a substantial portion of a scheduled payment has not been received by the date such payment was contractually due. At December 31, 2013 and 2012 the accrual of finance charge income has been suspended on delinquent consumer finance receivables based on contractual amounts due of $642 million and $503 million.

GM Financial purchases consumer finance contracts from automobile dealers without recourse and, accordingly, the dealer has no liability to GM Financial if the consumer defaults on the contract. Finance receivables are collateralized by vehicle titles and GM Financial has the right to repossess the vehicle in the event the consumer defaults on the payment terms of the contract.

The following table summarizes the contractual amount of delinquent contracts, which is not materially different from the recorded investment of the consumer finance receivables (dollars in millions):

	December 31, 2013		December 31, 2012	
	Amount	Percent of Contractual Amount Due	Amount	Percent of Contractual Amount Due
Delinquent contracts				
31-to-60 days	$ 952	4.1%	$ 672	6.1%
Greater-than-60 days	408	1.7%	230	2.1%
Total finance receivables more than 30 days delinquent	1,360	5.8%	902	8.2%
In repossession	41	0.2%	31	0.3%
Total finance receivables more than 30 days delinquent or in repossession	$ 1,401	6.0%	$ 933	8.5%

Impaired Finance Receivables — Troubled Debt Restructurings

The following table summarizes the outstanding recorded investment for consumer finance receivables that are considered to be TDRs and the related allowance (dollars in millions):

	December 31, 2013	December 31, 2012
Outstanding recorded investment	$ 767	$ 228
Less: allowance for loan losses	(103)	(32)
Outstanding recorded investment, net of allowance	$ 664	$ 196
Unpaid principal balance	$ 779	$ 232

Commercial Finance Receivables

GM Financial's commercial finance receivables consist of dealer financings. A proprietary model is used to assign a risk rating to each dealer. A credit review of each dealer is performed at least annually and, if necessary, the dealer's risk rating is adjusted on the basis of the review. At December 31, 2013 and 2012 the commercial finance receivables or loans on non-accrual status were insignificant.

The following table summarizes the credit risk profile by dealer grouping of the commercial finance receivables (dollars in millions):

	December 31, 2013	December 31, 2012
Group I — Dealers with strong to superior financial metrics	$ 549	$ 99
Group II — Dealers with fair to favorable financial metrics	1,460	278
Group III — Dealers with marginal to weak financial metrics	1,982	171
Group IV — Dealers with poor financial metrics	1,462	12
Group V — Dealers warranting special mention due to potential weaknesses	385	
Group VI — Dealers with loans classified as substandard, doubtful or impaired	212	
	$ 6,050	$ 560

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The credit lines for Group VI dealers are suspended and no further funding is extended to these dealers.

Note 5. Marketable Securities

The following table summarizes information regarding marketable securities (dollars in millions):

	Fair Value Level	December 31, 2013		December 31, 2012	
		Cost	Fair Value	Cost	Fair Value
Cash and cash equivalents					
Available-for-sale securities					
U.S. government and agencies	2	$ 1,437	$ 1,437	$ 4,190	$ 4,190
Sovereign debt	2	515	515	—	—
Money market funds	1	1,262	1,262	1,799	1,799
Corporate debt	2	7,598	7,598	3,222	3,222
Total available-for-sale securities		$ 10,812	10,812	$ 9,211	9,211
Trading securities					
Sovereign debt	2		—		1,408
Corporate debt	2		25		—
Total trading securities			25		1,408
Total marketable securities classified as cash equivalents			10,837		10,619
Cash, cash equivalents and time deposits			9,184		7,803
Total cash and cash equivalents			$ 20,021		$ 18,422
Marketable securities — current					
Available-for-sale securities					
U.S. government and agencies	2	$ 5,343	$ 5,344	$ 1,231	$ 1,231
Corporate debt	2	1,867	1,869	2,465	2,505
Equity and sovereign debt	1 & 2	22	22	30	51
Total available-for-sale securities		$ 7,232	7,235	$ 3,726	3,787
Trading securities — Sovereign debt	2		1,737		5,201
Total marketable securities — current			8,972		8,988
Marketable securities — non-current					
Available-for-sale securities — Investment in Peugeot S.A.	1	$ —	—	$ 179	179
Total marketable securities			$ 8,972		$ 9,167
Restricted cash and marketable securities					
Available-for-sale securities					
Money market funds	1	$ 897	$ 897	$ 933	$ 933
Other	2	34	35	198	199
Total marketable securities classified as restricted cash and marketable securities		$ 931	932	$ 1,131	1,132
Restricted cash and cash equivalents and time deposits			1,144		236
Total restricted cash and marketable securities			$ 2,076		$ 1,368

We are required to post cash and marketable securities as collateral as part of certain agreements that we enter into as part of our operations. Cash and marketable securities subject to contractual restrictions and not readily available are classified as Restricted cash and marketable securities. Restricted cash and marketable securities are invested in accordance with the terms of the underlying agreements and include amounts related to various deposits, escrows and other cash collateral.

Sales proceeds from investments classified as available-for-sale and sold prior to maturity were $4.7 billion, $4.7 billion and $1.6 billion in the years ended December 31, 2013, 2012 and 2011.

The following table summarizes the amortized cost and the fair value of investments classified as available-for-sale by contractual maturity at December 31, 2013 (dollars in millions):

	Amortized Cost	Fair Value
Due in one year or less	$ 14,879	$ 14,881
Due after one year through five years	1,937	1,939
Total contractual maturities of available-for-sale securities	$ 16,816	$ 16,820

Cumulative unrealized gains and losses on available-for-sale securities and net unrealized gains (losses) on trading securities were insignificant at and in the years ended December 31, 2013, 2012 and 2011.

Peugeot S.A.

In December 2013 we sold our seven percent investment in Peugeot S. A. (PSA) common stock for $339 million, net of disposal costs and we recorded a net gain of $152 million in Interest income and other non-operating income, net.

At December 31, 2012 we measured the fair value of our investment in PSA common stock using the published stock price and determined the carrying amount of our investment in PSA common stock exceeded its fair value. PSA's stock price had shown no sustained signs of recovery towards the price at which we acquired it in March 2012. Based upon the 55% decline in PSA common stock price since our acquisition and the nine month duration of the impairment, combined with our fourth quarter reassessment of our European automotive operations, we concluded that the impairment of our investment in PSA common stock was other-than-temporary. As a result we transferred the total unrealized losses from Accumulated other comprehensive loss to Interest income and other non-operating income, net resulting in an impairment charge of $220 million.

Note 6. Inventories

The following table summarizes the components of Inventories (dollars in millions):

	December 31, 2013	December 31, 2012
Productive material, supplies and work in process	$ 5,872	$ 6,560
Finished product, including service parts	8,167	8,154
Total inventories	$ 14,039	$ 14,714

Note 7. Equipment on Operating Leases, net

Automotive

Equipment on operating leases, net is composed of vehicle sales to daily rental car companies. The following table summarizes information related to Equipment on operating leases, net (dollars in millions):

	December 31, 2013	December 31, 2012
Equipment on operating leases	$ 2,605	$ 1,946
Less: accumulated depreciation	(207)	(164)
Equipment on operating leases, net	$ 2,398	$ 1,782

The following table summarizes depreciation expense and impairment charges related to Equipment on operating leases, net (dollars in millions):

	Years Ended December 31, 2013	2012	2011
Depreciation expense	$ 218	$ 227	$ 431
Impairment charges	$ 168	$ 181	$ 151

Automotive Financing — GM Financial

GM Financial originates leases in the U.S. and Canada that are recorded as operating leases. A Canadian subsidiary of GM Financial originates and sells leases to a third-party with servicing retained. The following table summarizes GM Financial equipment on operating leases, net (dollars in millions):

	December 31, 2013	December 31, 2012
GM Financial equipment on operating leases	$ 4,025	$ 1,910
Less: accumulated depreciation	(642)	(261)
GM Financial equipment on operating leases, net	$ 3,383	$ 1,649

Depreciation expense related to GM Financial equipment on operating leases, net was $450 million, $205 million and $70 million in the years ended December 31, 2013, 2012 and 2011.

The following table summarizes minimum rental payments due to GM Financial as lessor under operating leases (dollars in millions):

	2014	2015	2016	2017	2018
Minimum rental receipts under operating leases	$ 628	$ 512	$ 266	$ 43	$ 4

Note 8. Equity in Net Assets of Nonconsolidated Affiliates

Nonconsolidated affiliates are entities in which an equity ownership interest is maintained and for which the equity method of accounting is used, due to the ability to exert significant influence over decisions relating to their operating and financial affairs.

The following table summarizes information regarding Equity income and gain on investments (dollars in millions):

	Years Ended December 31, 2013	2012	2011
China joint ventures (China JVs)	$ 1,763	$ 1,521	$ 1,511
New Delphi (including gain on disposition)	—	—	1,727
Others (including gain on acquisition of GM India)	47	41	(46)
Total equity income and gain on investments	$ 1,810	$ 1,562	$ 3,192

Sales and income of our joint ventures are not consolidated into our financial statements; rather, our proportionate share of the earnings of each joint venture is reflected as Equity income and gain on investments.

We received dividends from nonconsolidated affiliates of $1.7 billion, $1.4 billion and $1.2 billion in the years ended December 31, 2013, 2012 and 2011. At December 31, 2013 and 2012 we had undistributed earnings including dividends declared but not received, of $1.8 billion and $1.7 billion related to our nonconsolidated affiliates.

Investment in China JVs

The following table summarizes our direct ownership interests in China JVs:

	December 31, 2013	December 31, 2012
Shanghai General Motors Co., Ltd. (SGM)	50%	50%
Shanghai GM Norsom Motor Co., Ltd. (SGM Norsom)	25%	25%
Shanghai GM Dong Yue Motors Co., Ltd. (SGM DY)	25%	25%
Shanghai GM Dong Yue Powertrain (SGM DYPT)	25%	25%
SAIC-GM-Wuling Automobile Co., Ltd.	44%	44%
FAW-GM Light Duty Commercial Vehicle Co., Ltd.	50%	50%
Pan Asia Technical Automotive Center Co., Ltd.	50%	50%
Shanghai OnStar Telematics Co., Ltd. (Shanghai OnStar)	40%	40%
Shanghai Chengxin Used Car Operation and Management Co., Ltd. (Shanghai Chengxin Used Car)	33%	33%
SAIC General Motors Sales Co., Ltd. (SGMS)	49%	49%

SGM is a joint venture established by Shanghai Automotive Industry Corporation (SAIC) (50%) and us (50%). SGM has interests in three other joint ventures in China: SGM Norsom, SGM DY and SGM DYPT. These three joint ventures are jointly held by SGM (50%), SAIC (25%) and us (25%). These four joint ventures are engaged in the production, import, and sale of a comprehensive range of products under the Buick, Chevrolet and Cadillac brands. SGM also has interests in Shanghai OnStar (20%) and Shanghai Chengxin Used Car (33%). SGM also has a 20% equity interest in GMAC-SAIC, a joint venture established by General Motors Acceptance Corporation (now Ally Financial) (40%) and SAIC Finance Co., Ltd. (40%).

SGMS is a joint venture established in November 2011 by SAIC (51%) and us (49%) to engage in the sales of the imported Buick, Chevrolet and Cadillac brands and the sales of automobiles manufactured by SGM.

In September 2012 we repurchased a 1% interest in SGM for a total consideration of $119 million, increasing our ownership interest in SGM to 50%. The transaction was accounted for by applying the equity method of accounting. The consideration exceeded our proportionate share of the 1% interest in SGM net assets by $82 million, which consists of plant, property and equipment, intangible assets and goodwill of $8 million, $36 million and $38 million.

Sale of New Delphi

In March 2011 we sold our Class A Membership Interests in Delphi Automotive LLP (New Delphi) to New Delphi for $3.8 billion. The Class A Membership Interests sold represented 100% of our direct and indirect interests in New Delphi and 100% of New Delphi's Class A Membership Interests issued and outstanding. The sale terminated any direct and indirect obligation to loan New Delphi up to $500 million under a term loan facility established in October 2009 when New Delphi was created and the Class A Membership Interests were issued. New Delphi had not borrowed under this loan facility. In March 2011 we recorded a gain of $1.6 billion related to the sale in Equity income and gain on investments. Our existing supply contracts with New Delphi were not affected by this transaction.

Investment in GM India

In March 2011 the fair value of our investment in GM India was determined to be less than its carrying amount. The loss in value was determined to be other-than-temporary; therefore, we recorded an impairment charge of $39 million in the three months ended March 31, 2011. In addition we recorded other charges totaling $67 million related to our investment in GM India. Refer to Note 3 for detail regarding the acquisition of GM India.

Investment in and Summarized Financial Data of Nonconsolidated Affiliates

The following table summarizes the carrying amount of investments in nonconsolidated affiliates (dollars in millions):

	December 31, 2013	December 31, 2012
China JVs	$ 7,851	$ 6,579
Other investments	243	304
Total equity in net assets of nonconsolidated affiliates	$ 8,094	$ 6,883

At December 31, 2013 and 2012 the carrying amount of our investments in certain joint ventures exceeded our share of the underlying net assets by $3.8 billion. These differences are primarily related to the application of fresh-start reporting and purchase of additional interests in nonconsolidated affiliates, of which $3.4 billion at December 31, 2013 and 2012 were allocated to goodwill and the remainder was allocated to the underlying assets and liabilities, primarily intangibles, and are being amortized over their useful lives.

The following tables present summarized financial data for all of our nonconsolidated affiliates (dollars in millions):

	December 31, 2013			December 31, 2012		
	China JVs	Others	Total	China JVs	Others	Total
Summarized Balance Sheet Data						
Current assets	$ 14,666	$ 2,234	$ 16,900	$ 11,759	$ 2,642	$ 14,401
Non-current assets	8,187	1,458	9,645	6,766	1,507	8,273
Total assets	$ 22,853	$ 3,692	$ 26,545	$ 18,525	$ 4,149	$ 22,674
Current liabilities	$ 14,019	$ 1,859	$ 15,878	$ 12,612	$ 1,893	$ 14,505
Non-current liabilities	1,065	511	1,576	756	758	1,514

	Years Ended December 31,		
	2013	2012	2011
Summarized Operating Data			
China JV's net sales	$ 38,767	$ 33,364	$ 30,511
Others' net sales	1,830	3,963	4,242
Total net sales	$ 40,597	$ 37,327	$ 34,753
China JV's net income	$ 3,685	$ 3,198	$ 3,203
Others' net income (loss)	50	(23)	(13)
Total net income	$ 3,735	$ 3,175	$ 3,190

Transactions with Nonconsolidated Affiliates

Nonconsolidated affiliates are involved in various aspects of the development, production and marketing of cars, trucks and automobile parts. We purchase component parts and vehicles from certain nonconsolidated affiliates for resale to dealers. We also sell component parts and vehicles to certain nonconsolidated affiliates. The following tables summarize the effects of transactions with nonconsolidated affiliates (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Results of Operations			
Automotive sales and revenue	$ 2,724	$ 2,572	$ 3,266
Automotive purchases, net	$ 724	$ 497	$ 1,044
Interest income and other non-operating income, net	$ 19	$ 184	$ 34

	December 31, 2013	December 31, 2012
Financial Position

Investing	$ (13)	$ (41)	$ (27)

Note 9. Property, net

The following table summarizes the components of Property, net (dollars in millions):

	Estimated Useful Lives in Years	December 31, 2013	December 31, 2012
Land		$ 1,868	$ 2,107
Buildings and improvements	5-40	4,971	4,601
Machinery and equipment	3-27	15,222	12,720
Construction in progress		2,644	3,018
Real estate, plants and equipment		24,705	22,446
Less: accumulated depreciation		(6,787)	(5,556)
Real estate, plants and equipment, net		17,918	16,890
Special tools, net	1-15	7,949	7,306
Total property, net		$ 25,867	$ 24,196

The amount of interest capitalized and excluded from Automotive interest expense related to Property, net was $81 million, $117 million and $91 million in the years ended December 31, 2013, 2012 and 2011.

The following table summarizes the amount of capitalized software included in Property, net (dollars in millions):

	December 31, 2013	December 31, 2012
Capitalized software in use, net	$ 580	$ 465
Capitalized software in the process of being developed	$ 50	$ 108

The following table summarizes depreciation, impairment charges and amortization expense related to Property, net, recorded in Automotive cost of sales, GM Financial operating and other expenses, and Automotive selling, general and administrative expense (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Depreciation and amortization expense	$ 3,959	$ 3,888	$ 3,604
Impairment charges (a)	901	3,793	81
Depreciation, impairment charges and amortization expense	$ 4,860	$ 7,681	$ 3,685
Capitalized software amortization expense (b)	$ 244	$ 209	$ 203

(a) Includes GMIO assets whose fair value was $131 million at December 31, 2013. Includes GME assets whose fair value was $408 million at December 31, 2012. Also includes other assets whose fair value was determined to be $0 in the years ended December 31, 2013, 2012 and 2011 measured utilizing Level 3 inputs. Fair value measurements of the non-GMIO and non-GME asset group long-lived assets utilized projected cash flows discounted at a rate commensurate with the perceived business risks related to the assets involved.

(b) Included in total depreciation, impairment charges and amortization expense.

Impairment Charges

Year Ended December 31, 2013

GM India

In the three months ended December 31, 2013 we performed a strategic assessment of GM India in response to lower than expected sales performance of our current product offerings in India, higher raw material costs, unfavorable foreign exchange rates and recent deterioration in local market conditions. Our strategic review indicated that the existing long-lived assets of the GM India asset group were not recoverable. In the three months ended December 31, 2013 we recorded asset impairment charges of $280 million to adjust the carrying amount of GM India's real and personal property to fair value of $45 million. These charges were recorded in our GMIO segment in Automotive cost of sales. Our recoverability test of the GM India asset group also included Intangible assets, net and Goodwill resulting in additional impairment charges of $103 million, for total impairment charges of $383 million. The noncontrolling interest portion of these charges was $35 million based on our 90.8% ownership of GM India. Refer to Note 11 for additional information regarding the impairment of Intangible assets, net and Note 10 for additional information regarding the impairment of Goodwill.

GM Holden Ltd. (Holden)

In December 2013 we announced plans to cease manufacturing and reduce engineering at our Holden subsidiary in Australia by the end of 2017. As a result we recorded asset impairment charges of $477 million to adjust the carrying amounts of certain long-lived assets of our Holden asset group to fair value of $71 million. These charges were recorded in our GMIO segment in Automotive cost of sales. Refer to Note 19 for additional information on the actions taken at Holden.

Year Ended December 31, 2012

During the second half of 2011 and continuing into 2012 the European automotive industry was severely affected by the ongoing sovereign debt crisis, high unemployment and a lack of consumer confidence coupled with overcapacity and we began to experience deterioration in cash flows. In response we formulated a plan to implement various actions to strengthen our operations and increase our competitiveness. During the fourth quarter of 2012 our industry outlook deteriorated further and our forecast of 2013 cash flows declined notwithstanding our actions. As a result we performed a recoverability test of the GME asset group by weighting various undiscounted cash flow scenarios and concluded the GME asset group was not recoverable. Accordingly we recorded asset impairment charges of $3.7 billion at December 31, 2012 to adjust the carrying amount of the GME real and personal property to fair value of $0.4 billion. These charges were recorded in our GME segment with $3.5 billion recorded in Automotive cost of sales and $0.2 billion recorded in Automotive selling, general and administrative expense. Our recoverability test of the GME asset group also included Intangible assets, net and other long-lived assets resulting in additional impairment charges of $1.8 billion, for total impairment charges of $5.5 billion. Refer to Note 11 for additional information regarding the impairment of Intangible assets, net.

Fair Value Measurements

To determine the estimated fair value of real and personal property, the cost approach, market approach and income approach were considered. Under the cost approach, the determination of fair value considered the estimates of the cost to construct or purchase a new asset of equal utility at current prices with adjustments in value for physical deterioration, functional obsolescence, and economic obsolescence. Under the market approach, the determination of fair value considered the market prices in transactions for similar assets and certain direct market values based on quoted prices from brokers and secondary market participants for similar assets. Under the income approach, the determination of fair value considered the estimate of the present worth of future benefits derived from ownership, usually measured through the capitalization of a specific level of income which can be derived from the subject asset with adjustments in value for demolition costs and for the effect of an estimated holding period. Under the income approach, it was assumed fair value could not exceed the present value of the net cash flows discounted at a rate commensurate with the level of risk inherent in the subject asset. An in-exchange premise was determined to be the highest and best use.

The following table summarizes the significant Level 3 inputs for real and personal property measurements:

	Valuation Technique(s)	Unobservable Input(s)	Range
GM India personal property	Market approach	Economic obsolescence (a)	72% - 100%
Holden real property	Income approach	Holding period (b)	0 - 3 years
		Discount rate (c)	11% - 12%
GME real property	Market approach	Demolition costs (d)	6% - 23%
	Cost approach	Holding period (b)	0 - 4 years
	Income approach	Discount rate (c)	11.2% - 14.5%
GME personal property	Market approach	Physical deterioration (e)	52% - 69%
	Cost approach	Functional obsolescence (f)	8% - 28%
		Economic obsolescence (a)	17% - 23%

(a) Represents estimated loss in asset value caused by factors external to the asset such as legislative enactments, changes in use, social change and change in supply and demand.
(b) Represents estimated marketing period for each property which dictates the amount of property specific holding costs to be incurred such as real estate taxes.
(c) Represents the discount rate for the specific property based on local market sources and available benchmarking data.
(d) Represents estimated gross cost to demolish and clear the structures on the property as a percentage of replacement cost new.
(e) Represents estimated loss in asset value due to wear and tear, action of the elements and other physical factors that reduce the life and serviceability of the asset.
(f) Represents estimated loss in asset value caused by inefficiencies and inadequacies of the asset itself.

The personal property in our Holden asset group was determined to have a nominal fair value because of anticipated losses during the wind-down period and limited to no salvage value given the decline in the automotive manufacturing base in Australia.

The fair value estimates for GM India, Holden and GME real and personal property are based on a valuation premise that assumes the assets' highest and best use are different than their current use based on the forecasted financial results of the asset groups.

Note 10. Goodwill

The following table summarizes the changes in the carrying amounts of Goodwill (dollars in millions):

	GMNA	GME	GMIO	GMSA	Total Automotive	GM Financial	Total
Balance at January 1, 2012	$ 26,399	$ 581	$ 610	$ 151	$ 27,741	$ 1,278	$ 29,019

Effect of foreign currency and other	—	—	(8)	(18)	(26)	—	(26)
Balance at December 31, 2013	$ —	$ —	$ —	$ 138	$ 138	$ 1,422	$ 1,560
Accumulated impairment charges at January 1, 2012	$ —	$ (2,482)	$ (270)	$ —	$ (2,752)	$ —	$ (2,752)
Accumulated impairment charges at December 31, 2012	$ (26,399)	$ (3,072)	$ (426)	$ —	$ (29,897)	$ —	$ (29,897)
Accumulated impairment charges at December 31, 2013	$ (26,399)	$ (3,072)	$ (967)	$ —	$ (30,438)	$ —	$ (30,438)

(a) Refer to Note 3 for additional information concerning the acquisitions.

In the three months ended December 31, 2013, 2012, and 2011 we performed our annual goodwill impairment testing as of October 1 for all reporting units. In addition, in the years ended December 31, 2013, 2012 and 2011, we performed event-driven goodwill impairment tests at various dates for certain of our reporting units.

GMNA

Subsequent to our 2012 annual goodwill impairment testing, we reversed $36.2 billion of our deferred tax asset valuation allowances for our GMNA reporting unit. The reversal of the deferred tax asset valuation allowances resulted in the carrying amount of our GMNA reporting unit exceeding its fair value. As a result we performed an event-driven goodwill impairment test in the three months ended December 31, 2012 and recorded a Goodwill impairment charge of $26.4 billion. At December 31, 2012 GMNA's Goodwill balance was $0. Refer to Note 18 for additional information on the reversal of our deferred tax asset valuation allowances for our U.S. and Canadian operations.

GME

We adopted the provisions of ASU 2010-28, "When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts" (ASU 2010-28) on January 1, 2011 and performed Step 2 of the goodwill impairment testing analysis for our GME reporting unit which had a negative carrying amount resulting in the recognition of a cumulative-effect adjustment to beginning Retained earnings. GME continued to have a negative carrying amount and because it was more likely than not further goodwill impairment existed due to further deterioration in the business outlook for GME and increases in the fair value of estimated employee benefit obligations, we recorded Goodwill impairment charges of $590 million and $1.0 billion in the years ended December 31, 2012 and 2011. At December 31, 2012 GME's Goodwill balance was $0.

GMIO

Based on the results of our annual and event-driven goodwill impairment tests, we recorded total Goodwill impairment charges of $541 million, $156 million and $270 million in the years ended December 31, 2013, 2012 and 2011 within our GMIO segment. The impairment charges primarily related to our GM Korea Company (GM Korea) and Holden reporting units. We performed event-driven goodwill impairment tests for GM Korea in 2013, 2012 and 2011 as the fair value of GM Korea continued to be below its carrying amount due to ongoing economic weakness in certain markets to which GM Korea exports coupled with lower forecasted margins resulting from higher raw material costs and unfavorable foreign exchange rates. Furthermore, in the three months ended December 31, 2013 we announced our plans to cease mainstream distribution of Chevrolet brand in Western and Central Europe that resulted in the impairment of the remaining goodwill. Chevrolet sales in Europe are included in our GM Korea operations. We also recorded a Goodwill impairment charge in the three months ended December 31, 2013 associated with our GM India reporting unit resulting from lower forecasted profitability in India due to lower than expected sales performance of our current product offerings in India, higher raw material costs, unfavorable foreign exchange rates and recent deterioration in local market conditions. Refer to Note 9 for additional information on our operations in India. In the three months ended December 31, 2011 we reversed a deferred tax asset valuation allowance for our Holden reporting unit that resulted in the carrying amount of this reporting unit exceeding its fair value. At December 31, 2013 the goodwill balance was $0 for all of the reporting units in GMIO.

Impairment Charges

The impairment charges recorded as a result of the initial adoption of ASU 2010-28 and the annual and event-driven goodwill impairment tests in the years ended December 31, 2013, 2012 and 2011 represent the net decreases in implied goodwill resulting primarily from decreases in the fair value-to-U.S. GAAP differences attributable to those assets and liabilities that gave rise to goodwill upon our application of fresh-start reporting. The net decreases resulted primarily from the reversal of our deferred tax asset valuation allowances for certain reporting units thus resulting in the recorded amount for deferred taxes exceeding their fair values which under Accounting Standards Codification (ASC) 805, “Business Combinations” (ASC 805) results in less implied goodwill. The net decreases also resulted from improvements in our nonperformance risk and in our incremental borrowing rates since July 10, 2009. At certain of the testing dates the net decrease was also due to an increase in the high quality corporate bond rates utilized to measure our employee benefit obligations and a decrease in credit spreads between high quality corporate bond rates and market interest rates for companies with similar nonperformance risk. For the purpose of deriving an implied goodwill balance, deterioration in the business outlook and anticipated restructuring activities for GME and GM Korea resulted in a reduction in the fair value of certain tax attributes and an increase in estimated employee benefit obligations. The amount of implied goodwill derived from GM India decreased primarily from a reduction in the fair value of certain tax attributes.

Fair Value Measurements

When performing our goodwill impairment testing, the fair values of our reporting units were determined based on valuation techniques using the best available information, primarily discounted cash flow projections. We make significant assumptions and estimates, which utilized Level 3 measures, about the extent and timing of future cash flows, growth rates, market share and discount rates that represent unobservable inputs into our valuation methodologies. Our fair value estimates for annual and event-driven impairment tests assume the achievement of the future financial results contemplated in our forecasted cash flows and there can be no assurance that we will realize that value.

The valuation methodologies utilized to perform our goodwill impairment testing were consistent with those used in our application of fresh-start reporting on July 10, 2009 and in any subsequent annual or event-driven goodwill impairment tests and utilized Level 3 measures. Because the fair value of goodwill can be measured only as a residual amount and cannot be determined directly we calculated the implied goodwill for those reporting units failing Step 1 in the same manner that goodwill is recognized in a business combination pursuant to ASC 805.

Note 11. Intangible Assets, net

The following table summarizes the components of Intangible assets, net (dollars in millions):

	December 31, 2013			December 31, 2012		
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Technology and intellectual property	$ 8,210	$ 7,308	$ 902	$ 7,775	$ 6,320	$ 1,455
Brands	4,466	559	3,907	4,464	431	4,033
Dealer network and customer relationships	1,108	364	744	1,375	327	1,048

Nonamortizing in process research and development	96		96	175		175
Total intangible assets	$ 14,225	$ 8,557	$ 5,668	$ 14,173	$ 7,364	$ 6,809

In December 2012 we entered into a product development agreement with PSA to collaborate on the development of certain vehicle platforms, components and modules. As a result of this agreement, in the three months ended March 31, 2013 we acquired the rights to certain technology and intellectual property for total consideration of $642 million. Consideration of $201 million was paid in cash in May 2013 with the remaining consideration to be paid by May 2018. The acquired rights were recorded at the present value of the total payments to be made as technology and intellectual property of $594 million.

In December 2013 we agreed with PSA to mutually cancel development of one of the vehicle programs and reduce the amount of remaining consideration to be paid, resulting in a net charge of $49 million recorded in Automotive cost of sales in GMNA. The net charge consisted of an impairment of the associated intellectual property of $211 million and a reduction of total consideration from $642 million to $480 million.

The following table summarizes the amortization expense and impairment charges related to Intangible assets, net (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Amortization expense	$ 1,281	$ 1,568	$ 1,804
Impairment charges	$ 523	$ 1,755	$ —

The following table summarizes estimated amortization expense related to Intangible assets, net in each of the next five years (dollars in millions):

	2014	2015	2016	2017	2018
Estimated amortization expense	$ 672	$ 330	$ 310	$ 305	$ 300

Impairment Charges

Year Ended December 31, 2013

GM India

In the three months ended December 31, 2013 we recorded impairment charges of $48 million to adjust the carrying amounts of Intangible assets, net, primarily favorable contract intangibles, to fair value of $0, because of a lack of economic support associated with GM India's declining operations. These charges were recorded in our GMIO segment primarily in Automotive cost of sales. Refer to Note 9 for additional information regarding the triggering events of the impairment charge in India and information on the impairment of Property, net.

Withdrawal of the Chevrolet Brand from Europe

In the three months ended December 31, 2013 we recorded impairment charges of $264 million to adjust the carrying amounts of Intangible assets, net, primarily dealer network intangibles, to fair value because we are winding down the dealer network in 2014 and we expect to incur losses during the wind-down period. These charges were recorded in our GMIO segment in Automotive cost of sales. Refer to Note 19 for additional information on the withdrawal of the Chevrolet brand from Europe.

Year Ended December 31, 2012

We adjusted the carrying amount of the GME intangible assets to their fair value of $139 million and recorded asset impairment charges of $1.8 billion at December 31, 2012. These charges were recorded in our GME segment with $1.6 billion recorded in Automotive selling, general and administrative expense and $0.2 billion recorded in Automotive cost of sales. The fair value estimates for GME's intangible assets are based on a valuation premise that assumes the assets' highest and best use are different than their current use due to the overall European macro-economic environment.

Our recoverability test of the GME asset group includes real and personal property, resulting in additional impairment charges of $3.7 billion, for total impairment charges of $5.5 billion. Refer to Note 9 for additional information regarding the impairment of real and personal property.

To determine the estimated fair value of the brand intangible assets we used the relief from royalty method which is a form of the income approach. Under this approach revenue associated with the brand is projected over the expected remaining useful life of the asset. A royalty rate is then applied to estimate the royalty savings. The royalty rate used was based on an analysis of empirical, market-derived royalty rates for guideline intangible assets and a profit split analysis to determine a rate that is economically supported by GME's forecasted profitability. The net after-tax royalty savings are calculated for each year during the remaining economic life of the asset and discounted to present value.

To determine the estimated fair value of the dealer network we used the cost approach with adjustments in value for the overcapacity of dealers and the sales environment in the region. We determined the fair value to be $0.

The following table summarizes the significant Level 3 inputs for brand intangible assets measurements:

	Valuation Technique	Unobservable Input(s)	Percentage
Brand intangible assets	Income approach	Long-term growth rate	0.50%
		Pre-tax royalty rate (a)	0.14%
		Discount rate (b)	21.25%

(a) Represents estimated savings realized from owning the asset or having the royalty-free right to use the asset.
(b) Represents WACC adjusted for perceived business risks related to these intangible assets.

Note 12. Variable Interest Entities

Consolidated VIEs

Automotive

VIEs that we do not control through a majority voting interest that are consolidated because we are the primary beneficiary include certain vehicle assembling, manufacturing and selling venture arrangements, the most significant of which is GM Egypt. At December 31, 2013 and 2012: (1) Total assets of these VIEs were $564 million and $436 million, which were composed of Cash and cash equivalents, Accounts and notes receivables, net, Inventories, and Property, net; and (2) Total liabilities were $395 million and $254 million, which were composed of Accounts payable (principally trade) and Accrued liabilities. In the years ended December 31, 2013 and 2012 Total net sales and revenue recorded for these consolidated VIEs were $1.1 billion and $1.0 billion and Net income was $55 million and $56 million. These amounts are stated prior to intercompany eliminations. Liabilities recognized as a result of consolidating VIEs generally do not represent claims against us or our other subsidiaries and assets recognized generally are for the benefit of the VIEs' operations and cannot be used to satisfy our obligations.

GM Korea and GM India are non-wholly owned consolidated subsidiaries that we control through a majority voting interest. They are also VIEs because in the future they may require additional subordinated financial support. At December 31, 2013 and 2012 the combined creditors of GM Korea's and GM India's liabilities of $242 million and $368 million, which were composed of short-term debt, current derivative liabilities and long-term debt, do not have recourse to our general credit.

Automotive Financing — GM Financial

GM Financial uses special purpose entities (SPEs) that are considered VIEs to issue variable funding notes to third party bank-sponsored warehouse facilities or asset-backed securities to investors in securitization transactions. The debt issued by these VIEs is backed by the cash flows related to finance receivables and leasing related assets transferred by GM Financial to the VIEs (Securitized Assets). GM Financial holds variable interests in the VIEs that could potentially be significant to the VIEs. GM Financial determined that it is the primary beneficiary of the SPEs because (1) the servicing responsibilities for the Securitized Assets give it the power to direct the activities that most significantly impact the performance of the VIEs and (2) the variable interests in the VIEs give it the obligation to absorb losses and the right to receive residual returns that could potentially be significant. The assets and liabilities of the VIEs are included in GM Financial's consolidated balance sheets. The amounts are stated prior to intercompany eliminations.

The following table summarizes the assets and liabilities related to GM Financial's consolidated VIEs (dollars in millions):

	December 31, 2013	December 31, 2012
Restricted cash	$ 1,523	$ 744
Securitized Assets	$ 23,584	$ 10,442
Securitization notes payable and other credit facilities	$ 19,448	$ 9,378

Restricted cash represents collections from the underlying Securitized Assets and certain reserve accounts held as credit enhancement for securitizations held by GM Financial for the benefit of the noteholders. Except for the acquisition accounting adjustments, which are not recorded in SPE trusts, GM Financial recognizes finance charge income, leased vehicle income and other income on the Securitized Assets and interest expense on the secured debt issued by the SPEs. GM Financial also maintains an allowance for credit losses on the Securitized Assets. Cash pledged to support the secured borrowings is deposited to a restricted cash account which is invested in highly liquid securities with original maturities of 90 days or less.

The assets of the VIEs and the restricted cash held by GM Financial serve as the sole source of repayment for the debt issued by these entities. Investors in the notes issued by the VIEs do not have recourse to GM Financial or its other assets, with the exception of customary representation and warranty repurchase provisions and indemnities that GM Financial provides as the servicer. GM Financial is not required and does not currently intend to provide additional financial support to these SPEs. While these subsidiaries are included in our consolidated financial statements, these subsidiaries are separate legal entities and their assets are legally owned by them and are not available to GM Financial's creditors.

Nonconsolidated VIEs

Automotive

VIEs that are not consolidated include certain vehicle assembling, manufacturing and selling venture arrangements and other automotive related entities to which we provided financial support, including GM India prior to September 2012 and Ally Financial. We concluded these entities are VIEs because they do not have sufficient equity at risk or may require additional subordinated financial support. We currently lack the power through voting or similar rights to direct those activities of these entities that most significantly affect their economic performance. Our variable interests in these nonconsolidated VIEs include accounts and notes receivable, equity in net assets, guarantees and financial support, some of which were provided to certain current or previously divested suppliers in order to ensure that supply needs for production were not disrupted due to a supplier's liquidity concerns or possible shutdowns.

At December 31, 2013 and 2012 our variable interests in these VIEs included: (1) Total assets of $169 million and $351 million, which were composed of Accounts and notes receivable, net and Equity in net assets of nonconsolidated affiliates; (2) Total liabilities of $838 million and $1.9 billion, which were composed of Accounts payable (principally trade), Short-term debt and current portion of long-term debt, Accrued liabilities and Other liabilities and deferred income taxes; and (3) Total off-balance sheet arrangements of $115 million and $32 million, which were composed of loan commitments and other liquidity arrangements. The amount of total off-balance sheet arrangements at December 31, 2013 includes contractual commitments under an agreement with a supplier that became a VIE in January 2013. The maximum exposure to loss for total assets approximated the carrying amount at December 31, 2013 and 2012. Refer to Note 17 for additional information on our maximum exposure to loss under agreements with Ally Financial.

Ally Financial Common Stock

At December 31, 2012 we held a 9.9% common equity ownership in Ally Financial with carrying amount and fair value of $399 million and $1.3 billion. We estimated the fair value of Ally Financial common stock using a market approach that applied the average price to tangible book value multiples of comparable companies to the consolidated Ally Financial tangible book value. The significant inputs used in our fair value analyses included Ally Financial's financial statements, financial statements and price to tangible book value multiples of comparable companies in the banking and finance industry and the effects of certain Ally Financial shareholder rights. The inputs used in the measurement of the fair value are Level 3 inputs. In December 2013 we sold our investment through a private offering for net proceeds of $880 million and recorded a gain of $483 million in Interest income and other non-operating income, net.

Ally Financial Preferred Stock

In March 2011 our investment in Ally Financial preferred stock was sold through a public offering for net proceeds of $1.0 billion. The gain of $339 million related to the sale was recorded in Interest income and other non-operating income, net.

Note 13. Accrued Liabilities, Other Liabilities and Deferred Income Taxes

The following table summarizes the components of Accrued liabilities and Other liabilities and deferred income taxes (dollars in millions):

	December 31, 2013	December 31, 2012
Current		
Dealer and customer allowances, claims and discounts	$ 7,919	$ 7,722
Deposits primarily from rental car companies	4,713	4,250
Deferred revenue	1,276	1,326
Policy, product warranty and recall campaigns	2,559	2,919
Payrolls and employee benefits excluding postemployment benefits	2,285	2,144
Other	5,881	4,947
Total accrued liabilities	$ 24,633	$ 23,308
Non-current		
Deferred revenue	$ 1,249	$ 1,169
Policy, product warranty and recall campaigns	4,655	4,285
Employee benefits excluding postemployment benefits	1,192	1,359
Postemployment benefits including facility idling reserves	1,216	1,518
Other	5,041	4,838
Total other liabilities and deferred income taxes	$ 13,353	$ 13,169

The following table summarizes activity for policy, product warranty and recall campaigns (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Beginning balance	$ 7,204	$ 6,600	$ 6,789
Warranties issued and assumed in period	3,181	3,394	3,062
Payments	(3,063)	(3,393)	(3,740)
Adjustments to pre-existing warranties	123	539	565
Effect of foreign currency and other	(231)	64	(76)
Ending balance	$ 7,214	$ 7,204	$ 6,600

Note 14. Short-Term and Long-Term Debt

Automotive

The following table summarizes the components of our short-term debt and long-term debt (dollars in millions):

	December 31, 2013	December 31, 2012
Secured debt	$ 320	$ 1,182
Unsecured debt		
Senior unsecured notes	4,500	—
Canadian Health Care Trust (HCT) notes	—	1,239
Other unsecured debt	1,352	1,713
Total unsecured debt	5,852	2,952
Capital leases	965	1,038
Total automotive debt (a)	7,137	5,172
Less: short-term debt and current portion of long-term debt	564	1,748
Total long-term debt	$ 6,573	$ 3,424
Fair value of automotive debt (b)	$ 6,837	$ 5,298
Available under credit facility agreements	$ 10,404	$ 11,119
Interest rate range on outstanding debt (c)	0.0-19.0%	0.0-19.0%
Weighted-average interest rate on outstanding short-term debt (c)	9.0%	3.7%
Weighted-average interest rate on outstanding long-term debt (c)	3.8%	4.0%

(a) Net of a $765 million and $1.1 billion net discount at December 31, 2013 and 2012.
(b) The fair value of debt includes $6.8 billion and $4.1 billion measured utilizing Level 2 inputs at December 31, 2013 and 2012 and $1.2 billion measured utilizing Level 3 inputs at December 31, 2012.
(c) Includes coupon rates on debt denominated in various foreign currencies and interest free loans.

The Level 2 fair value measurements utilize quoted market prices and if unavailable, a discounted cash flow model. The valuation is reviewed internally by personnel with appropriate expertise in valuation methodologies. This model utilizes observable inputs such as contractual repayment terms and benchmark yield curves, plus a spread that is intended to represent our nonperformance risk for secured or unsecured obligations. We estimate our nonperformance risk using our corporate credit rating, the ratings on our senior unsecured notes and on our secured revolver, yields on traded bonds of companies with comparable credit ratings and risk profiles. We acquire the benchmark yield curves and nonperformance risk spread from independent sources that are widely used in the financial industry. In certain circumstances we adjust the valuation of debt for additional nonperformance risk or potential prepayment probability scenarios. We may use a probability weighting of prepayment scenarios when the stated rate exceeds market rates and the instrument contains prepayment features. The prepayment scenarios are adjusted to reflect the views of market participants. The fair value measurements subject to additional adjustments for nonperformance risk or prepayment have been categorized in Level 3.

Secured Debt

Wholesale financing represents arrangements, primarily with Ally Financial, where cash is received in advance of the final sale of vehicles, parts and accessories to our dealers or ultimate consumer. These obligations typically settle through the sale and delivery of our products and generally do not require cash outflows to settle. Following GM Financial's acquisition of the Ally Financial international operations in April 2013, most of the wholesale financing balance classified as debt became intercompany debt and was eliminated in consolidation, resulting in a decrease to our automotive debt balance of $682 million.

Secured Revolving Credit Facilities

In November 2012 we entered into two new secured revolving credit facilities with an aggregate borrowing capacity of $11.0 billion. These facilities consist of a three-year, $5.5 billion facility and a five-year, $5.5 billion facility and replaced our previous five-year, $5.0 billion secured revolving credit facility. Availability under the secured revolving credit facilities is subject to borrowing base restrictions.

The three-year, $5.5 billion facility is available to GM Financial as well as certain wholly-owned domestic and international subsidiaries. The facility includes various sub-limits including a GM Financial borrowing sub-limit of $4.0 billion, a multi-currency borrowing sub-limit of $3.5 billion, a Brazilian Real borrowing sub-limit of approximately $485 million and a letter of credit sub-facility limit of $1.5 billion. We had amounts in use under the letter of credit sub-facility of $625 million at December 31, 2013.

The five-year, $5.5 billion facility allows for borrowings in U.S. Dollars and other currencies and includes a letter of credit sub-limit of $500 million. This facility is not available to GM Financial.

Our obligations under the secured revolving credit facilities are guaranteed by certain of our domestic subsidiaries and by a substantial portion of our domestic assets including accounts receivable, inventory, property, plant and equipment, intellectual property and trademarks, equity interests in certain of our direct domestic subsidiaries as well as up to 65% of the voting equity interests in certain of our direct foreign subsidiaries, in each case, subject to certain exceptions. The collateral securing the secured revolving credit facilities does not include, among other assets, cash, cash equivalents and marketable securities as well as our investments in GM Financial, GM Korea and in our China JVs. If we receive and maintain an investment grade corporate rating from two or more of the following credit rating agencies: Fitch Ratings, Moody's Investor Service and Standard & Poor's, we will no longer have to post collateral or provide guarantees from certain domestic subsidiaries under the terms of the facilities.

The secured revolving credit facilities contain representations, warranties and covenants customary of these types of facilities, including negative covenants restricting incurring liens, consummating mergers or sales of assets and incurring secured indebtedness, and restricting us from making restricted payments, in each case, subject to exceptions and limitations. These restricted payments include limitations on the amount of dividend payments and repurchases of our common stock. These restrictions can be mitigated based on various factors including but not limited to cash flows generated from operating and investing activities, prior restricted payments, our borrowing base coverage ratio, consolidated global liquidity and other provisions. The facilities also require us to maintain at least $4.0 billion in consolidated global liquidity and at least $2.0 billion in consolidated U.S. liquidity.

Interest rates on obligations under the secured revolving credit facilities are based on prevailing per annum interest rates for Eurodollar loans or an alternative base rate plus an applicable margin, in each case, based upon the credit rating assigned to the secured revolving credit facilities or our corporate rating depending on certain criteria.

Unsecured Debt

Senior Unsecured Notes

In September 2013 we issued $4.5 billion in aggregate principal amount of senior unsecured notes comprising $1.5 billion of 3.5% notes due in 2018, $1.5 billion of 4.875% notes due in 2023 and $1.5 billion of 6.25% notes due in 2043. These notes contain terms and covenants customary of these types of securities including limitations on the amount of the secured debt we may issue.

In connection with the issuance of these notes we entered into a registration rights agreement that requires us to file a registration statement with the Securities and Exchange Commission (SEC) for an exchange offer with respect to the senior notes. If the registration statement has not been declared effective by the SEC within 365 days after the closing date of the debt issuance, if we fail to consummate the exchange offer within 30 business days after such target effective date or if the registration statement ceases to remain effective, we will be required to pay additional interest of 0.25% per annum for the first 90 day period following such event and an additional 0.25% per annum for each subsequent 90 day period prior to the consummation of the exchange offer up to a maximum additional interest rate of 0.5% per annum.

HCT Notes

As part of the establishment of the HCT to provide retiree healthcare benefits to certain active and retired employees in Canada, we issued notes to the HCT with a fair value of $1.1 billion in October 2011. We recorded a premium of $42 million at issuance. The notes accrued interest at an annual rate of 7.0%. The notes were due in periodic installments through 2018. In October 2013 we prepaid the HCT notes in full for $1.2 billion. Refer to Note 15 for additional information on the HCT settlement.

GM Korea Preferred Shares

Prior to April 2013 GM Korea had outstanding non-convertible mandatorily redeemable preferred shares. Dividends accrued at a rate of 2.5% through October 2012 and increased to 7.0% through 2017. In December 2012 GM Korea made a payment of $671 million to redeem early a portion of shares that had a carrying amount of $429 million and the difference was recorded as a loss on extinguishment of debt. In April 2013 GM Korea made a payment of $708 million to redeem early the remaining balance of the shares that had a carrying amount of $468 million and the difference was recorded as a loss on extinguishment of debt.

Gains (Losses) on Extinguishment of Debt

In the year ended December 31, 2013 we prepaid and retired debt obligations with a total carrying amount of $1.8 billion and recorded a net loss on extinguishment of debt of $212 million which primarily represented the unamortized debt discount on the GM Korea mandatorily redeemable preferred shares. In the year ended December 31, 2012 we prepaid and retired debt obligations with a total carrying amount of $514 million and recorded a net loss on extinguishment of debt of $250 million which primarily represented the unamortized debt discount on the GM Korea mandatorily redeemable preferred shares. In the year ended December 31, 2011 we prepaid and retired in full debt facilities of $1.0 billion held by certain of our subsidiaries, primarily in GMNA and GMSA, and recorded a gain on these debt facilities of $18 million.

Technical Defaults and Covenant Violations

Several of our loan facilities, including our secured revolving credit facilities, require compliance with certain financial and operational covenants as well as regular reporting to lenders, including providing certain subsidiary financial statements. Failure to meet certain of these requirements may result in a covenant violation or an event of default depending on the terms of the agreement. An event of default may allow lenders to declare amounts outstanding under these agreements immediately due and payable, to enforce their interests against collateral pledged under these agreements or restrict our ability to obtain additional borrowings. A foreign subsidiary was not in compliance with certain financial covenants under its $77 million term loan facility. We are evaluating alternatives to cure this financial covenant issue and included this liability in Short-term debt and current portion of long-term debt.

Automotive Financing — GM Financial

The following table summarizes the carrying amount and fair value of debt (dollars in millions):

	December 31, 2013		December 31, 2012	
	Carrying Amount	Fair Value (a)	Carrying Amount	Fair Value (a)
Secured				
Revolving credit facilities	$ 9,000	$ 8,995	$ 354	$ 354
Securitization notes payable (b)	13,073	13,175	9,024	9,171
Total secured	22,073	22,170	9,378	9,525
Unsecured				
Senior notes	4,000	4,106	1,500	1,620
Bank lines and other unsecured debt	2,973	2,972	—	—
Total unsecured	6,973	7,078	1,500	1,620
Total GM Financial debt	$ 29,046	$ 29,248	$ 10,878	$ 11,145

(a) The fair value of debt includes $23.0 billion and $11.1 billion measured utilizing Level 2 inputs at December 31, 2013 and 2012 and $6.2 billion measured utilizing Level 3 inputs at December 31, 2013. For revolving credit facilities with variable interest rates and maturities of one year or less, the carrying amount is considered to be a reasonable estimate of fair value. The fair value of other secured debt and the unsecured debt is based on quoted market prices, when available. If quoted market prices are not available, the market value is estimated by discounting future net cash flows expected to be paid using current risk-adjusted rates.

(b) Includes a private securitization that GM Financial used observable and unobservable inputs to estimate fair value. Unobservable inputs are related to the structuring of the debt into various classes, which is based on public securitizations issued during the same time frame. Observable inputs are used by obtaining active prices based on the securitization debt issued during the same time frame. These observable inputs are then used to create expected market prices (unobservable inputs), which are then applied to the debt classes in order to estimate fair value which would approximate market value.

Secured

Revolving Credit Facilities

The revolving credit facilities have revolving periods ranging from one to three years. At the end of the revolving period, if the facilities are not renewed, the debt will amortize over periods ranging up to six years. Most of the secured debt was issued by VIEs and it is repayable only from proceeds related to the underlying pledged finance receivables and leases. Refer to Note 12 for additional information relating to GM Financial's involvement with VIEs. Weighted-average interest rates are both fixed and variable, ranging from 0.9% to 15.9% at December 31, 2013.

GM Financial is required to hold certain funds in restricted cash accounts to provide additional collateral for borrowings under certain secured credit facilities. Additionally, some of GM Financial's secured credit facilities contain various covenants requiring minimum financial ratios, asset quality and portfolio performance ratios (portfolio net loss and delinquency ratios and pool level cumulative net loss ratios) as well as limits on deferment levels. Failure to meet any of these covenants could result in an event of default under these agreements. If an event of default occurs under these agreements the lenders could elect to declare all amounts outstanding under these agreements to be immediately due and payable, enforce their interests against collateral pledged under these agreements, restrict GM Financial's ability to obtain additional borrowings under these agreements and/or remove GM Financial as servicer. At December 31, 2013 GM Financial was in compliance with all covenants related to its credit facilities.

In the year ended December 31, 2013 GM Financial entered into two new credit facilities with a total borrowing capacity of $1.3 billion. At December 31, 2013 revolving credit facilities of $7.3 billion resulted from the acquisition of the Ally Financial international operations.

Securitization Notes Payable

Securitization notes payable represents debt issued by GM Financial through securitization transactions. Debt issuance costs are amortized over the expected term of the securitizations on an effective yield basis. As a result of GM Financial's acquisition of the Ally Financial international operations, GM Financial recorded a purchase accounting discount of $69 million that will amortize to interest expense over the expected term of the notes. At December 31, 2013 the remaining purchase accounting discount of $47 million is included in Total secured debt.

At the time of securitization of finance receivables, GM Financial is required to pledge assets equal to a specified percentage of the securitization pool to support the securitization transaction. The assets pledged consist of cash deposited to a restricted account and additional receivables delivered to the trust, which create overcollateralization. The securitization transactions require the percentage of assets pledged to support the transaction to increase until a specified level is attained. Excess cash flows generated by the trusts are added to the restricted cash account or used to pay down outstanding debt in the trusts, creating overcollateralization until the targeted percentage level of assets is reached. Once the targeted percentage level of assets is reached and maintained, excess cash flows generated by the trusts are released to GM Financial as distributions from trusts. As the balance of the securitization pool declines, the amount of pledged assets needed to maintain the required percentage level is reduced. Assets in excess of the required percentage are also released to GM Financial as distributions from trusts.

In the year ended December 31, 2013 GM Financial issued securitization notes payable of $6.8 billion with a weighted-average interest rate of 1.7% maturing on various dates through 2021. At December 31, 2013 securitization notes payable of $2.3 billion resulted from the acquisition of the Ally Financial international operations.

Unsecured

Senior Notes

In May 2013 GM Financial issued $2.5 billion in aggregate principal amount of senior notes due in 2016 through 2023 with interest rates that range from 2.75% to 4.25%. In August 2012 GM Financial issued 4.75% senior notes of $1.0 billion which are due in August 2017 with interest payable semiannually. Senior notes outstanding at December 31, 2013 are due beginning in 2016 through 2023 and have interest rates that range from 2.75% to 6.75%. The notes are guaranteed by GM Financial's principal operating subsidiary.

Bank Lines and Other Unsecured Debt

The maturity dates of bank lines and other unsecured debt, which was assumed in the acquisition of the Ally Financial international operations, range up to five years. If not renewed, any balance outstanding under these bank lines is either immediately due in full or will amortize over a defined period. Interest rates on bank lines and other unsecured debt ranged from 1.1% to 12.9% at December 31, 2013.

Consolidated

Interest Expense

The following table summarizes interest expense (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Automotive	$ 334	$ 489	$ 540
Automotive Financing — GM Financial	715	283	204
Total interest expense	$ 1,049	$ 772	$ 744

Debt Maturities

The following table summarizes contractual maturities including capital leases at December 31, 2013 (dollars in millions):

	Automotive	Automotive Financing (a)	Total
2014	$ 543	$ 13,594	$ 14,137
2015	147	6,473	6,620
2016	109	4,199	4,308
2017	496	2,337	2,833
2018	1,582	1,693	3,275
Thereafter	5,025	750	5,775
	$ 7,902	$ 29,046	$ 36,948

(a) Secured debt, bank lines and other unsecured debt are based on expected payoff date. Senior notes principal amounts are based on maturity.

At December 31, 2013 future interest payments on automotive capital lease obligations were $578 million. GM Financial had no capital lease obligations at December 31, 2013.

Note 15. Pensions and Other Postretirement Benefits

Employee Pension and Other Postretirement Benefit Plans

Defined Benefit Pension Plans

Defined benefit pension plans covering eligible U.S. hourly employees (hired prior to October 2007) and Canadian hourly employees generally provide benefits of negotiated, stated amounts for each year of service and supplemental benefits for employees who retire with 30 years of service before normal retirement age. The benefits provided by the defined benefit pension plans covering eligible U.S. (hired prior to January 1, 2001) and Canadian salaried employees and employees in certain other non-U.S. locations are generally based on years of service and compensation history. Accrual of defined pension benefits ceased on September 30, 2012 for U.S. salaried employees and on December 31, 2012 for Canadian salaried employees. There is also an unfunded nonqualified pension plan covering primarily U.S. executives for service prior to January 1, 2007 and it is based on an “excess plan” for service after that date.

Pension Contributions

The funding policy for qualified defined benefit pension plans is to contribute annually not less than the minimum required by applicable law and regulations or to directly pay benefit payments where appropriate. At December 31, 2013 all legal funding requirements had been met. We expect to contribute $100 million to our U.S. non-qualified plans and $749 million to our non-U.S. pension plans in 2014. The following table summarizes contributions made to the defined benefit pension plans (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
U.S. hourly and salaried	$ 128	$ 2,420	$ 1,962
Non-U.S.	886	855	836
Total	$ 1,014	$ 3,275	$ 2,798

We made a voluntary contribution in January 2011 to our U.S. hourly and salaried defined benefit pension plans of 61 million shares of our common stock valued at $2.2 billion for funding purposes at the time of contribution. The contributed shares qualified as a plan asset for funding purposes at the time of contribution and as a plan asset valued at $1.9 billion for accounting purposes in July 2011. This was a voluntary contribution above our funding requirements for the pension plans.

We continue to pursue various options to fund and derisk our pension plans, including continued changes to the pension asset portfolio mix to reduce funded status volatility.

Other Postretirement Benefit Plans

Certain hourly and salaried defined benefit plans provide postretirement medical, dental, legal service and life insurance to eligible U.S. and Canadian retirees and their eligible dependents. Certain other non-U.S. subsidiaries have postretirement benefit plans, although most non-U.S. employees are covered by government sponsored or administered programs.

OPEB Contributions

The following table summarizes contributions to the U.S. OPEB plans (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Employer contributions	$ 393	$ 432	$ 426
Plan participants' contributions	29	4	13
Total contributions	$ 422	$ 436	$ 439

For the year ended December 31, 2011 we also contributed $1.9 billion to the independent HCT consisting of restricted cash of $782 million and notes payable of $1.1 billion.

Defined Contribution Plans

We have a defined contribution plan for eligible U.S. salaried employees. This plan provides discretionary matching contributions which we instituted in October 2009. U.S. hourly employees hired after September 2007 also participate in a defined contribution plan. Contributions are also made to certain non-U.S. defined contribution plans. We made contributions to our defined contribution plans of $502 million, $352 million and $297 million in the years ended December 31, 2013, 2012 and 2011.

Significant Plan Amendments, Benefit Modifications and Related Events

U.S. Salaried Defined Benefit Life Insurance Plan

In September 2013 we amended the U.S. salaried life insurance plan effective January 1, 2014 to eliminate benefits for retirees and eligible employees retiring on or after August 1, 2009. The remeasurement, settlement and curtailment resulted in a decrease in the OPEB liability of $319 million, a decrease in the net pre-tax actuarial loss component of Accumulated other comprehensive loss of $236 million and a pre-tax gain of $83 million.

U.S. Salaried Defined Benefit Pension Plan

In 2012 we amended the salaried pension plan to cease the accrual of additional benefits effective September 30, 2012 resulting in a curtailment of $309 million which decreased the pension liability. We divided the plan to create a new legally separate defined benefit plan primarily for active and terminated vested participants. Settlement payments of $30.6 billion were made consisting of lump-sum pension distributions of $3.6 billion to retired salaried plan participants, group annuity contracts purchased for a total annuity premium of $25.1 billion and two separate previously guaranteed obligations of $1.9 billion were settled. These agreements unconditionally and irrevocably guarantee the full payment of all annuity payments to the participants that were receiving payments from the plan and the insurance companies assumed all investment risk associated with the assets that were delivered as the annuity contract premiums.

Through these transactions we have settled certain pension obligations in their entirety resulting in a pre-tax settlement loss of $2.6 billion ($2.2 billion after tax) in Automotive cost of sales. The pre-tax loss is composed of existing losses in Accumulated other comprehensive loss of $377 million, and the premium paid to the insurance company of $2.1 billion. The tax benefit of $413 million is composed of the statutory tax benefit of $1.0 billion offset by tax expense of $596 million primarily associated with the removal of prior period income tax allocations between Accumulated other comprehensive loss and Income tax expense (benefit).

In 2012 we provided short-term, interest-free, unsecured loans of $2.2 billion to provide the plan with incremental liquidity to pay ongoing benefits and administrative costs. Contributions of $1.7 billion were made from the $2.2 billion loans. Through December 31, 2012 $430 million was repaid and $90 million of the loan was still outstanding. In the year ended December 31, 2013 $60 million was repaid and the remaining $30 million was deemed a plan contribution.

Active salaried plan participants began receiving additional contributions in the defined contribution plan in October 2012. Lump-sum pension distributions in 2013 of $430 million resulted in a pre-tax settlement gain of $128 million.

Canadian Salaried Defined Benefit Plans

In June 2012 we amended the Canadian salaried pension plan to cease the accrual of additional benefits effective December 31, 2012 and provide active employees a lump-sum distribution option at retirement. The remeasurement, amendments and offsetting curtailment increased the pension liability by $84 million. Active plan participants started receiving additional contributions in the defined contribution plan starting in January 2013.

We also amended the Canadian salaried retiree healthcare plan to eliminate post-65 healthcare benefits for employees retiring on or after July 1, 2014. In conjunction with this change we amended the plan to offer either a monthly monetary payment or an annual lump-sum cash payment to a defined contribution plan for health care in lieu of the benefit coverage provisions formerly provided under the healthcare plan. These amendments decreased the OPEB liability by $28 million.

Canadian HCT

In October 2011 pursuant to a June 2009 agreement between General Motors of Canada Limited (GMCL) and the CAW an independent HCT was implemented to provide retiree healthcare benefits to certain active and retired employees. Concurrent with the implementation of the HCT, GMCL was legally released from all obligations associated with the cost of providing retiree healthcare benefits to CAW retirees and surviving spouses by the class action process and to CAW active employees as of June 8, 2009. We accounted for the related termination of CAW hourly retiree healthcare benefits as a settlement and recorded a gain of $749 million in Automotive cost of sales. The settlement gain represents the difference between the healthcare plan obligation of $3.1 billion (as of the implementation date) and the fair value of the notes and restricted cash contributed totaling $1.9 billion, and recognition of Accumulated other comprehensive loss of $414 million.

Other Remeasurements

In March 2012 certain pension plans in GME were remeasured as part of our goodwill impairment testing, resulting in an increase of $150 million in the pension liability and a pre-tax increase in the net actuarial loss component of Accumulated other comprehensive loss.

In September 2011 a plan which provided legal services to U.S. hourly employees and retirees was remeasured as a result of our labor agreement provisions which terminated the plan effective December 31, 2013. The negotiated termination has been accounted for as a negative plan amendment resulting in a decrease in the OPEB liability and a pre-tax increase of $266 million in the prior service credit component of Accumulated other comprehensive loss was amortized through December 31, 2013.

In March 2011 certain pension plans in GME were remeasured as part of our goodwill impairment testing, resulting in a decrease of $272 million in the pension liability and a pre-tax increase in the net actuarial gain component of Accumulated other comprehensive loss.

Curtailments, settlements and other (gains) losses	(77)	(6)	(62)	—	2,580	71	—	11	(23)	(7)	—	(749)
Net periodic pension and OPEB expense (income)	$ (405)	$ 833	$ 148	$ 62	$ 2,197	$ 758	$ 193	$ 84	$ (1,170)	$ 680	$ 255	$ (542)
Weighted-average assumptions used to determine benefit obligations												
Discount rate	4.46%	4.10%	4.52%	4.71%	3.59%	3.70%	3.68%	3.97%	4.15%	4.50%	4.24%	4.37%
Rate of compensation increase (a)	N/A	2.90%	N/A	4.21%	N/A	2.77%	4.50%	4.21%	4.50%	3.11%	4.50%	4.20%
Weighted-average assumptions used to determine net expense												
Discount rate	3.59%	3.69%	3.69%	3.97%	4.06%	4.45%	4.24%	4.31%	4.96%	5.16%	5.05%	5.01%
Expected rate of return on plan assets	5.77%	5.70%	N/A	N/A	6.18%	6.20%	N/A	N/A	8.00%	6.50%	N/A	N/A
Rate of compensation increase (a)	N/A	2.77%	4.50%	4.21%	4.50%	3.15%	4.50%	4.21%	3.96%	3.25%	4.50%	4.42%

(a) As a result of ceasing the accrual of additional benefits for salaried plan participants, the rate of compensation increase does not have a significant effect on our U.S. pension and OPEB plans.

U.S. pension plan service cost includes administrative expenses of $97 million, $138 million and $138 million in the years ended December 31, 2013, 2012 and 2011. Weighted-average assumptions used to determine net expense are determined at the beginning of the period and updated for remeasurements. Non-U.S. pension plan service cost includes administrative expenses of $31 million and $28 million in the years ended December 31, 2013 and 2012.

The following table summarizes estimated amounts to be amortized from Accumulated other comprehensive loss into net periodic benefit cost in the year ending December 31, 2014 based on December 31, 2013 plan measurements (dollars in millions):

	U.S. Pension Plans	Non-U.S. Pension Plans	U.S. Other Benefit Plans	Non-U.S. Other Benefit Plans
Amortization of prior service cost (credit)	$ (4)	$ 19	$ (2)	$ (14)
Amortization of net actuarial (gain) loss	(91)	159	14	(6)
	$ (95)	$ 178	$ 12	$ (20)

Assumptions

Investment Strategies and Long-Term Rate of Return

Detailed periodic studies conducted by outside actuaries and an internal asset management group are used to determine the long-term strategic mix among asset classes, risk mitigation strategies, and the expected long-term return on asset assumptions for the U.S. pension plans. The U.S. study includes a review of alternative asset allocation and risk mitigation strategies, anticipated future long-term performance and risk of the individual asset classes that comprise the plans' asset mix. Similar studies are performed for the significant non-U.S. pension plans with the assistance of outside actuaries and asset managers. While the studies incorporate data from recent plan performance and historical returns, the expected long-term return on plan asset assumptions are determined based on long-term, prospective rates of return.

The strategic asset mix and risk mitigation strategies for the plans are tailored specifically for each plan. Individual plans have distinct liabilities, liquidity needs, and regulatory requirements. Consequently, there are different investment policies set by individual plan fiduciaries. Although investment policies and risk mitigation strategies may differ among plans, each investment strategy is considered to be appropriate in the context of the specific factors affecting each plan.

In setting new strategic asset mixes, consideration is given to the likelihood that the selected mixes will effectively fund the projected pension plan liabilities, while aligning with the risk tolerance of the plans' fiduciaries. The strategic asset mixes for U.S. defined benefit pension plans are increasingly designed to satisfy the competing objectives of improving funded positions (market value of assets equal to or greater than the present value of the liabilities) and mitigating the possibility of a deterioration in funded status.

Derivatives may be used to provide cost effective solutions for rebalancing investment portfolios, increasing or decreasing exposure to various asset classes and for mitigating risks, primarily interest rate and currency risks. Equity and fixed income managers are permitted to utilize derivatives as efficient substitutes for traditional physical securities. Interest rate derivatives may be used to adjust portfolio duration to align with a plan's targeted investment policy. Alternative investment managers are permitted to employ leverage, including through the use of derivatives, which may alter economic exposure.

In December 2013 an investment policy study was completed for the U.S. pension plans. The study resulted in new target asset allocations being approved for the U.S. pension plans with resulting changes to the expected long-term rate of return on assets. The weighted-average long-term rate of return on assets increased from 5.8% at December 31, 2012 to 6.5% at December 31, 2013 due primarily to higher yields on fixed income securities. The expected long-term rate of return on plan assets used in determining pension expense for non-U.S. plans is determined in a similar manner to the U.S. plans.

(e) Includes investment funds and public real estate investment trusts.
(f) Primarily investments sold short.
(g) Cash held by the plans, net of amounts receivable/payable for unsettled security transactions and payables for investment manager fees, custody fees and other expenses.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

Investment Fund Strategies

Equity funds include funds that invest in U.S. common and preferred stocks as well as similar equity securities issued by companies incorporated, listed or domiciled in developed and/or emerging markets countries.

Fixed income funds include investments in high quality and high yield funds as well as in credit arbitrage funds. High quality fixed income funds invest in government securities, investment-grade corporate bonds, mortgages and asset-backed securities. High yield fixed income funds invest in high yield fixed income securities issued by corporations which are rated below investment grade, are unrated but are believed by the investment manager to have similar risk characteristics or are rated investment grade or higher but are priced at yields comparable to securities rated below investment grade and believed to have similar risk characteristics. Credit arbitrage funds invest in a variety of credit and credit-related instruments that allow fund managers to profit from mispricing of these credit instruments. Certain derivatives may be used for hedging purposes by some fixed income fund managers to limit exposure to various risk factors.

Funds of hedge funds represent funds that invest in a portfolio of hedge funds. Fund managers typically seek to achieve their objectives by allocating capital across a broad array of funds and/or investment managers.

Other investment funds primarily represent multi-strategy funds. These funds invest in broadly diversified portfolios of equity, fixed income and derivative instruments. Certain funds may also employ multiple alternative investment strategies, in combination, such as global macro, event-driven (which seeks to profit from opportunities created by significant transactional events such as spin-offs, mergers and acquisitions, bankruptcy reorganizations, recapitalizations and share buybacks) and relative value (which seeks to take advantage of pricing discrepancies between instruments including equities, debt, options and futures).

Private equity and debt investments principally consists of investments in private equity and debt funds. These investments provide exposure to and benefit from long-term equity investments in private companies, including leveraged buy-outs, venture capital and distressed debt strategies.

Real estate investments include funds that invest in entities which are principally engaged in the ownership, acquisition, development, financing, sale and/or management of income-producing real estate properties, both commercial and residential. These funds typically seek long-term growth of capital and current income that is above average relative to public equity funds.

Significant Concentrations of Risk

The assets of the pension plans include certain private investment funds, private equity and debt securities, real estate investments and derivative instruments. Investment managers may be unable to quickly sell or redeem some or all of these investments at an amount close or equal to fair value in order to meet a plan's liquidity requirements or to respond to specific events such as deterioration in the creditworthiness of any particular issuer or counterparty.

Illiquid investments held by the plans are generally long-term investments that complement the long-term nature of pension obligations and are not used to fund benefit payments when currently due. Plan management monitors liquidity risk on an ongoing basis and has procedures in place that are designed to maintain flexibility in addressing plan-specific, broader industry and market liquidity events.

The pension plans may invest in financial instruments denominated in foreign currencies and may be exposed to risks that the foreign currency exchange rates might change in a manner that has an adverse effect on the value of the foreign currency denominated assets or liabilities. Forward currency contracts may be used to manage and mitigate foreign currency risk.

The pension plans may invest in fixed income securities for which any change in the relevant interest rates for particular securities might result in an investment manager being unable to secure similar returns upon the maturity or the sale of securities. In addition, changes to prevailing interest rates or changes in expectations of future interest rates might result in an increase or decrease in the fair value of the securities held. Interest rate swaps and other financial derivative instruments may be used to manage interest rate risk.

Counterparty credit risk is the risk that a counterparty to a financial instrument will default on its commitment. Counterparty risk is primarily related to over-the-counter derivative instruments used to manage risk exposures related to interest rates on long-term debt securities and foreign currency exchange rate fluctuations. The risk of default can be influenced by various factors including macro-economic conditions, market liquidity, fiscal and monetary policies and counterparty-specific characteristics and activities. Certain agreements with counterparties employ set-off, collateral support arrangements and other risk mitigating procedures designed to reduce the net exposure to credit risk in the event of counterparty default. Credit policies and processes are in place to manage concentrations of counterparty risk by seeking to undertake transactions with large well-capitalized counterparties and by monitoring the creditworthiness of these counterparties. The majority of derivatives held by the plans at December 31, 2013 were fully collateralized and therefore, the related counterparty credit risk was significantly reduced.

Pension Funding Requirements

We are subject to a variety of U.S. federal rules and regulations, including the Employee Retirement Income Security Act of 1974, as amended and the Pension Protection Act of 2006, which govern the manner in which we fund and administer our pensions for our retired employees and their spouses. In 2012 the U.S. government enacted the Moving Ahead for Progress in the 21st Century Act which allows plan sponsors funding relief for pension plans through the application of higher funding interest rates. As a result, under current economic conditions, we expect no mandatory contributions to our U.S. qualified pension plans for at least five years. The new law does not impact our reported funded status. We have no funding requirements for our U.S. qualified plans in 2014.

We also maintain pension plans for employees in a number of countries outside the U.S. which are subject to local laws and regulations.

Benefit Payments

The following table summarizes net benefit payments expected to be paid in the future, which include assumptions related to estimated future employee service (dollars in millions):

	Pension Benefits (a)		Other Benefits	
	U.S. Plans	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans
2014	$ 5,780	$ 1,609	$ 376	$ 77
2015	$ 5,687	$ 1,597	$ 364	$ 65
2016	$ 5,475	$ 1,688	$ 352	$ 65
2017	$ 5,368	$ 1,711	$ 341	$ 65
2018	$ 5,210	$ 1,581	$ 332	$ 66
2019 - 2023	$ 24,019	$ 7,858	$ 1,576	$ 357

(a) Benefits for most U.S. pension plans and certain non-U.S. pension plans are paid out of plan assets rather than our Cash and cash equivalents.

Note 16. Derivative Financial Instruments

Automotive

At December 31, 2013 and 2012 our derivative instruments consisted primarily of options and forward contracts, none of which were designated as hedging relationships. We had derivative instruments in asset positions with notional amounts of $9.3 billion and $9.1 billion and liability positions with notional amounts of $427 million and $1.6 billion at December 31, 2013 and 2012. The fair value of these derivative instruments was insignificant.

Automotive Financing — GM Financial

GM Financial had interest rate swaps and caps in asset positions with notional amounts of $3.8 billion and $775 million and liability positions with notional amounts of $5.5 billion and $775 million at December 31, 2013 and 2012. As a result of the acquisition of certain Ally Financial international operations, GM Financial had foreign currency swaps with notional amounts of $1.7 billion and $2.1 billion in asset and liability positions at December 31, 2013. The fair value of these derivative financial instruments was insignificant.

Note 17. Commitments and Contingencies

The following tables summarize information related to commitments and contingencies (dollars in millions):

	December 31, 2013		December 31, 2012	
	Liability Recorded	Maximum Liability (a)	Liability Recorded	Maximum Liability (a)
Guarantees				
Third-party commercial loans and other obligations (b)	$ 51	$ 15,616	$ 168	$ 22,496
Other product-related claims	$ 54	$ 1,317	$ 51	$ 1,040

(a) Calculated as future undiscounted payments.

(b) Includes liabilities recorded of $10 million and $15 million and maximum liabilities of $15.3 billion and $22.1 billion related to Ally Financial repurchase obligations at December 31, 2013 and 2012.

	Liability Recorded	
	December 31, 2013	December 31, 2012
Other litigation-related liability and tax administrative matters (a)	$ 1,227	$ 1,728
Product liability	$ 690	$ 601
Credit card programs (b)		
Redemption liability (c)	$ 183	$ 209
Deferred revenue (d)	$ 295	$ 355
Environmental liability	$ 154	$ 166

(a) Primarily indirect tax-related litigation as well as various non-U.S. labor related matters.

(b) At December 31, 2013 and 2012 qualified cardholders had rebates available, net of deferred program revenue, of approximately $2.6 billion and $2.9 billion.

(c) Recorded in Accrued liabilities.

(d) Recorded in Other liabilities and deferred income taxes.

Guarantees

We provide payment guarantees on commercial loans outstanding with third parties, such as dealers or rental car companies. These guarantees either expire in 2018 or are ongoing. We determined the fair value ascribed to the guarantees at inception and subsequent to inception to be insignificant based on the credit worthiness of the third parties.

We have agreements with third parties that guarantee the fulfillment of certain suppliers' commitments and other obligations. These guarantees expire in 2014 through 2016 or are ongoing, or upon the occurrence of specific events.

In some instances certain assets of the party whose debt or performance we have guaranteed may offset, to some degree, the cost of the guarantee. The offset of certain of our payables to guaranteed parties may also offset certain guarantees, if triggered. If vehicles are required to be repurchased under vehicle repurchase obligations, the total exposure would be reduced to the extent vehicles are able to be resold to another dealer.

In connection with certain divestitures of assets or operating businesses, we have entered into agreements indemnifying certain buyers and other parties with respect to environmental conditions and other closure costs pertaining to real property we owned. We periodically enter into agreements that incorporate indemnification provisions in the normal course of business. It is not possible to estimate our maximum exposure under these indemnifications or guarantees due to the conditional nature of these obligations. Immaterial amounts have been recorded for such obligations as the majority of them are not probable or estimable at this time and the fair value of the guarantees at issuance was insignificant.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

In addition to the guarantees and indemnifying agreements previously discussed, we indemnify dealers for certain product liability related claims as subsequently discussed.

With respect to other product-related claims involving products manufactured by certain joint ventures, we believe that costs incurred are adequately covered by recorded accruals. These guarantees terminate in years ranging from 2020 to 2027.

Other Litigation-Related Liability and Tax Administrative Matters

Various legal actions, governmental investigations, claims and proceedings are pending against us including matters arising out of alleged product defects; employment-related matters; governmental regulations relating to safety, emissions and fuel economy; product warranties; financial services; dealer, supplier and other contractual relationships; tax-related matters not recorded pursuant to ASC 740, "Income Taxes" (indirect tax-related matters) and environmental matters.

With regard to the litigation matters discussed in the previous paragraph, reserves have been established for matters in which we believe that losses are probable and can be reasonably estimated, the majority of which are associated with indirect tax-related matters as well as non-U.S. labor-related matters. Indirect tax-related matters are being litigated globally pertaining to value added taxes, customs, duties, sales, property taxes and other non-income tax related tax exposures. The various non-U.S. labor-related matters include claims from current and former employees related to alleged unpaid wage, benefit, severance and other compensation matters. Certain South American administrative proceedings are indirect tax-related and may require that we deposit funds in escrow. Escrow deposits may range from $500 million to $800 million. Some of the matters may involve compensatory, punitive or other treble damage claims, environmental remediation programs or sanctions that, if granted, could require us to pay damages or make other expenditures in amounts that could not be reasonably estimated at December 31, 2013. We believe that appropriate accruals have been established for such matters based on information currently available. Reserves for litigation losses are recorded in Accrued liabilities and Other liabilities and deferred income taxes. Litigation is inherently unpredictable however; and unfavorable resolutions could occur. Accordingly it is possible that an adverse outcome from such proceedings could exceed the amounts accrued in an amount that could be material to our financial condition, results of operations and cash flows in any particular reporting period.

GM Korea Wage Litigation

Commencing on or about September 29, 2010 current and former hourly employees of GM Korea filed eight separate group actions in the Incheon District Court in Incheon, Korea. The cases, which in aggregate involve more than 10,000 employees, allege that GM Korea failed to include bonuses and certain allowances in its calculation of Ordinary Wages due under the Presidential Decree of the Korean Labor Standards Act. In November 2012 the Seoul High Court (an intermediate level appellate court) issued a decision affirming a decision of the Incheon District Court in a case involving five GM Korea employees which was contrary to GM Korea's position in all of these cases. GM Korea appealed to the Supreme Court of the Republic of Korea (Supreme Court) and initiated a constitutional challenge to the adverse interpretation of the relevant statute. At September 30, 2013 we had an accrual of 843 billion South Korean Won (equivalent to $784 million) in connection with these cases. In December 2013, the Supreme Court rendered a decision in a case involving another company not affiliated with us which addressed many of the issues presented in the cases pending against GM Korea and resolved many of them in a manner which we believe is favorable to GM Korea. In particular, while the Supreme Court held that fixed bonuses should be included in the calculation of Ordinary Wages, it also held that claims for retroactive application of this rule would be barred under certain circumstances. We believe the Supreme Court's reasoning is applicable to GM Korea, even though GM Korea's case remains pending before the Supreme Court. Accordingly, we have eliminated the accrual associated with these cases. In the year ended December 31, 2013 we recorded a net reduction of our accrual of 746 billion South Korean Won (equivalent to $711 million) to Automotive cost of sales (77% of which is reflected in our Net income attributable to stockholders based on our ownership interest in GM Korea). We estimate our reasonably possible loss, as defined by ASC 450, "Contingencies," to be 632 billion South Korean Won (equivalent to $599 million) at December 31, 2013. We are also party to litigation with current and former salaried employees over allegations relating to Ordinary Wages regulation. Although the issues differ due to differences between hourly and salaried benefit design, we believe the latest decision of the Supreme Court also impacts this litigation. At December 31, 2013 we have identified a reasonably possible loss in excess of the amount of our accrual of 165 billion South Korean Won (equivalent to $156 million). Both the scope of claims asserted and GM Korea's assessment of any or all of the individual claim elements may change if new information becomes available.

GMCL Dealers' Claim

On February 12, 2010 a claim was filed in the Ontario Superior Court of Justice against GMCL on behalf of a purported class of over 200 former GMCL dealers (the Plaintiff Dealers) which had entered into wind-down agreements with GMCL. In May 2009 in the context of the global restructuring of the business and the possibility that GMCL might be required to initiate insolvency proceedings, GMCL offered the Plaintiff Dealers the wind-down agreements to assist with their exit from the GMCL dealer network and to facilitate winding down their operations in an orderly fashion by December 31, 2009 or such other date as GMCL approved but no later than on October 31, 2010. The Plaintiff Dealers allege that the Dealer Sales and Service Agreements were wrongly terminated by GMCL and that GMCL failed to comply with certain disclosure obligations, breached its statutory duty of fair dealing and unlawfully interfered with the Plaintiff Dealers' statutory right to associate in an attempt to coerce the Plaintiff Dealers into accepting the wind-down agreements. The Plaintiff Dealers seek damages and assert that the wind-down agreements are rescindable. The Plaintiff Dealers' initial pleading makes reference to a claim "not exceeding" Canadian Dollar $750 million, without explanation of any specific measure of damages. On March 1, 2011 the court approved certification of a class for the purpose of deciding a number of specifically defined issues including: (1) whether GMCL breached its obligation of "good faith" in offering the wind-down agreements; (2) whether GMCL interfered with the Plaintiff Dealers' rights of free association; (3) whether GMCL was obligated to provide a disclosure statement and/or disclose more specific information regarding its restructuring plans in connection with proffering the wind-down agreements; and (4) assuming liability, whether the Plaintiff Dealers can recover damages in the aggregate (as opposed to proving individual damages). A number of former dealers have opted out of participation in the litigation, leaving 181 dealers in the certified class. Trial of the class issues is scheduled to occur in the third quarter of 2014. The current prospects for liability are uncertain, but because liability is not deemed probable we have no accrual relating to this litigation. We cannot estimate the range of reasonably possible loss in the event of liability as the case presents a variety of different legal theories, none of which GMCL believes are valid.

UAW Claim

On April 6, 2010 the UAW filed suit against us in the U.S. District Court for the Eastern District of Michigan claiming that we breached an obligation to contribute $450 million to the UAW Retiree Medical Benefits Trust (New VEBA). The UAW alleges that we were contractually required to make this contribution. On December 10, 2013 the court granted our motion for summary judgment and dismissed the claims asserted by the UAW, holding that the relevant agreement is unambiguous and does not require the payment sought. The UAW has appealed. At this juncture, we believe the prospects for liability on the claims asserted in this matter are remote.

Nova Scotia Claims Litigation

We were a participating party-in-interest in proceedings pending in the U.S. Bankruptcy Court for the Southern District of New York to adjudicate claims in the Old GM bankruptcy arising from certain securities issued by General Motors Nova Scotia Finance Company (Nova Scotia Finance), an Old GM subsidiary which we did not acquire in 2009 (Nova Scotia Claims Litigation). Although the proceedings involved no claims against us, they presented issues which, depending upon their resolution, could have resulted in future claims against GMCL. In December 2013, pursuant to the agreement, GMCL paid $50 million to, or as directed by, the Trustee of Nova Scotia Finance and we (including our subsidiaries and affiliates) were released from all claims relating to Nova Scotia Finance, the Nova Scotia Claims Litigation and the transactions at issue in the litigation.

Product Liability

With respect to product liability claims involving our and Old GM's products, we believe that any judgment against us for actual damages will be adequately covered by our recorded accruals and, where applicable, excess liability insurance coverage. Although punitive damages are claimed in some of these lawsuits and such claims are inherently unpredictable, accruals incorporate historic experience with these types of claims. Liabilities have been recorded in Accrued liabilities and Other liabilities and deferred income taxes for the expected cost of all known product liability claims plus an estimate of the expected cost for product liability claims that have already been incurred and are expected to be filed in the future for which we are self-insured.

We indemnify dealers for certain product liability related claims including products sold by Old GM. We monitor actual claims experience and make periodic adjustments to our estimates. Based on both management's judgment concerning the projected number and value of both dealer indemnification obligations and product liability claims, we have applied actuarial methodologies and estimated the liability. We expect our product liability reserve to rise in future periods as new claims arise from incidents subsequent to July 9, 2009.

Credit Card Programs

Credit card programs offer rebates that can be applied primarily against the purchase or lease of our vehicles.

Environmental Liability

Automotive operations, like operations of other companies engaged in similar businesses, are subject to a wide range of environmental protection laws, including laws regulating air emissions, water discharges, waste management and environmental remediation. Liabilities have been recorded primarily in Other liabilities and deferred income taxes for the expected costs to be paid over the periods of remediation for the applicable sites, which typically range from five to 30 years.

The final outcome of environmental matters cannot be predicted with certainty at this time. Subsequent adjustments to initial estimates are recorded as necessary based upon additional information obtained. In future periods new laws or regulations, advances in remediation technologies and additional information about the ultimate remediation methodology to be used could significantly change our estimates. It is possible that the resolution of one or more environmental matters could exceed the amounts accrued in an amount that could be material to our financial condition, results of operations and cash flows. At December 31, 2013 we estimate the remediation losses could range from $120 million to $230 million.

Other Matters

Brazil Excise Tax Incentive

In October 2012 the Brazilian government issued a decree which increased an excise tax rate by 30 percentage points, but also provided an offsetting tax incentive that requires participating companies to meet certain criteria, such as local investment and fuel efficiency standards. Participating companies that fail to meet the required criteria are subject to clawback provisions and fines. At December 31, 2013 we believe it is reasonably assured that the program requirements will be met based on the current business model and available technologies.

GME Planned Spending Guarantee

As part of our Opel/Vauxhall restructuring plan agreed to with European labor representatives we have committed to achieving specified milestones associated with planned spending from 2011 to 2014 on certain product programs. If we fail to accomplish the requirements set out under the agreement we will be required to pay certain amounts up to Euro 265 million for each of those years, and/or interest on those amounts, to our employees. Certain inventory with a carrying amount of $200 million and $186 million at December 31, 2013 and 2012 was pledged as collateral under the agreement. Through December 31, 2013 spending was sufficient to meet the current requirements under the agreement and the specified milestones have been accomplished. Management has the intent and believes it has the ability to meet the future requirements under the agreement.

India Tavera Emissions Compliance

We have identified an emissions compliance issue with the Tavera produced in India. We have self-reported this issue to local government authorities and will cooperate with any review they may conduct. It is too early to determine the impact this issue will have on us or our Indian operations.

Asset Retirement Obligations

Asset retirement obligations relate to legal obligations associated with retirement of tangible long-lived assets that result from acquisition, construction, development or normal operation of a long-lived asset. An analysis is performed of such obligations associated with all real property owned or leased, including facilities, warehouses and offices. Estimates of conditional asset retirement obligations relate, in the case of owned properties, to costs estimated to be necessary for the legally required removal or remediation of various regulated materials, primarily asbestos. Asbestos abatement was estimated using site-specific surveys where available and a per square foot estimate where surveys were unavailable. For leased properties such obligations relate to the estimated cost of contractually required property restoration. At December 31, 2013 and 2012 accruals for asset retirement obligations were $159 million and $116 million.

Noncancelable Operating Leases

The following table summarizes our minimum commitments under noncancelable operating leases having initial terms in excess of one year, primarily for property (dollars in millions):

	2014	2015	2016	2017	2018	Thereafter
Minimum commitments (a)	$ 363	$ 290	$ 225	$ 156	$ 132	$ 499
Sublease income	(52)	(58)	(60)	(59)	(56)	(293)
Net minimum commitments	$ 311	$ 232	$ 165	$ 97	$ 76	$ 206

(a) Certain of the leases contain escalation clauses and renewal or purchase options.

Rental expense under operating leases was $477 million, $474 million and $556 million in the years ended December 31, 2013, 2012 and 2011.

Note 18. Income Taxes

The following table summarizes income (loss) before income taxes and equity income and gain on investments (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
U.S. income (loss)	$ 4,880	$(19,063)	$ 2,883
Non-U.S. income (loss)	768	(11,194)	3,102
Income (loss) before income taxes and equity income and gain on investments	$ 5,648	$(30,257)	$ 5,985

Income Tax Expense (Benefit)

The following table summarizes Income tax expense (benefit) (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Current income tax expense (benefit)			
U.S. federal	$ (34)	$ 6	$(134)
U.S. state and local	88	78	58
Non-U.S.	512	646	275
Total current income tax expense	566	730	199
Deferred income tax expense (benefit)			
U.S. federal	1,049	(28,965)	8
U.S. state and local	137	(3,415)	(28)
Non-U.S.	375	(3,181)	(289)
Total deferred income tax expense (benefit)	1,561	(35,561)	(309)
Total income tax expense (benefit)	$ 2,127	$(34,831)	$(110)

Provisions are made for estimated U.S. and non-U.S. income taxes, less available tax credits and deductions, which may be incurred on the remittance of our basis differences in investments in foreign subsidiaries and corporate joint ventures not deemed to be indefinitely reinvested. Taxes have not been provided on basis differences in investments primarily as a result of earnings in foreign subsidiaries and corporate joint ventures which are deemed indefinitely reinvested of $2.6 billion and $1.4 billion at December 31, 2013 and 2012. Additional basis differences in investments in nonconsolidated China JVs exist of $4.1 billion at December 31, 2013 and 2012 primarily related to fresh-start reporting. Quantification of the deferred tax liability, if any, associated with indefinitely reinvested basis differences is not practicable.

The following table summarizes a reconciliation of Income tax expense (benefit) compared with the amounts at the U.S. federal statutory rate (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Income tax expense (benefit) at U.S. federal statutory income tax rate	$ 1,977	$(10,590)	$ 2,094
State and local tax expense	145	254	215
Non-U.S. income taxed at other than 35%	(168)	908	(172)
Foreign tax credit election change	—	(1,075)	—
U.S. tax on Non-U.S. income	543	713	(122)
Change in valuation allowance	182	(33,917)	(2,386)
Change in tax laws	146	67	(33)
Research incentives	(490)	(68)	(45)
Gain on sale of New Delphi equity interests	—	—	599
Goodwill impairment	124	8,705	377
Settlements of prior year tax matters	(473)	—	(56)
VEBA contribution	—	—	(476)
Foreign currency remeasurement	(21)	(36)	59
Pension contribution	—	—	(127)
U.S. salaried pension plan settlement	—	541	—
Other adjustments	162	(333)	(37)
Total income tax expense (benefit)	$ 2,127	$(34,831)	$ (110)

Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities at December 31, 2013 and 2012 reflect the effect of temporary differences between amounts of assets, liabilities and equity for financial reporting purposes and the bases of such assets, liabilities and equity as measured by tax laws, as well as tax loss and tax credit carryforwards. The following table summarizes the components of temporary differences and carryforwards that give rise to deferred tax assets and liabilities (dollars in millions):

	December 31, 2013	December 31, 2012
Deferred tax assets		
Postretirement benefits other than pensions	$ 2,902	$ 3,494
Pension and other employee benefit plans	5,469	8,536
Warranties, dealer and customer allowances, claims and discounts	4,282	4,277
Property, plants and equipment	2,464	2,225
Capitalized research expenditures	7,179	6,106
Operating loss and tax credit carryforwards (a)	19,342	20,220
Miscellaneous	1,663	3,443
Total deferred tax assets before valuation allowances	43,301	48,301
Less: valuation allowances	(10,823)	(10,991)
Total deferred tax assets	32,478	37,310
Deferred tax liabilities		
Intangible assets	397	724
Net deferred tax assets	$ 32,081	$ 36,586

(a) Includes operating loss and tax credit carryforwards of $16.3 billion expiring through 2033 and $3.0 billion that may be carried forward indefinitely at December 31, 2013.

At December 31, 2013 we retained valuation allowances of $10.8 billion against deferred tax assets primarily in GME and South Korea business units with losses and in the U.S. and Canada related primarily to capital loss tax attributes and state operating loss carryforwards.

At December 31, 2012 as a result of sustained profitability in the U.S. and Canada evidenced by three years of earnings and the completion of our near- and medium-term business plans in the three months ended December 31, 2012 that forecast continuing profitability, we determined it was more likely than not future earnings will be sufficient to realize deferred tax assets in these two jurisdictions. Accordingly we reversed most of the U.S. and Canadian valuation allowances resulting in non-cash income tax benefits of $33.2 billion and $3.1 billion.

At December 31, 2011 as a result of sustained profitability in Australia, we released the valuation allowance against deferred tax assets. The reduction in the valuation allowance resulted in a non-cash income tax benefit of $502 million. In Australia we have net operating loss carryforwards which are subject to meeting a "Same Business Test" requirement that we assess on a quarterly basis. At December 31, 2013 as a result of our plans to cease vehicle and engine manufacturing at Holden, we determined that it was more likely than not Holden would not realize a portion of the deferred tax assets and recorded a valuation allowance in the amount of $133 million.

Uncertain Tax Positions

The following table summarizes activity of the total amounts of unrecognized tax benefits (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Beginning balance	$ 2,745	$ 2,370	$ 5,169
Additions to current year tax positions	251	112	129
Additions to prior years' tax positions	276	512	562
Reductions to prior years' tax positions	(535)	(141)	(1,002)
Reductions in tax positions due to lapse of statutory limitations	(73)	(34)	(64)
Settlements	(132)	(112)	(2,399)
Other	(2)	38	(25)
Ending balance	$ 2,530	$ 2,745	$ 2,370

At December 31, 2013 and 2012 there are $1.5 billion and $1.2 billion of unrecognized tax benefits that if recognized would favorably affect our effective tax rate in the future. In the years ended December 31, 2013, 2012 and 2011 we recorded income tax related interest expense (benefit) and penalties of $(25) million, $44 million and $(145) million. The interest and penalty benefit in the year ended December 31, 2011 was due primarily to remeasurements, settlements and statute expirations. At December 31, 2013 and 2012 we had liabilities of $286 million and $222 million for income tax related interest and penalties.

In November 2013 we remeasured a previously disclosed uncertain tax position and recorded a $473 million tax benefit that increased net operating loss carryforwards, reducing future taxable income.

In the year ended December 31, 2011 certain issues were resolved relating to uncertain tax positions in jurisdictions which had full valuation allowances. The resolution of these matters resulted in a $2.7 billion reduction to gross uncertain positions. No tax benefit was recognized with respect to these reductions because the entities were in full valuation allowance jurisdictions or the amounts were reserved in a prior period.

At December 31, 2013 it is not possible to reasonably estimate the expected change to the total amount of unrecognized tax benefits in the next twelve months.

Other Matters

Income tax returns are filed in multiple jurisdictions and are subject to examination by taxing authorities throughout the world. We have open tax years from 2005 to 2013 with various significant tax jurisdictions. These open years contain matters that could be subject to differing interpretations of applicable tax laws and regulations as they relate to the amount, character, timing or inclusion of revenue and expenses or the sustainability of income tax credits for a given audit cycle. Given the global nature of our operations there is a risk that transfer pricing disputes may arise.

We have net operating loss carryforwards in Germany through November 30, 2009 that, as a result of reorganizations that took place in 2008 and 2009, were not recorded as deferred tax assets. Depending on the outcome of European court decisions these loss carryforwards may be available to reduce future taxable income in Germany.

In June 2011 we settled a Brazilian income tax matter for $241 million that was reserved and disclosed in a prior period.

In the U.S. we have continuing responsibility for Old GM's open tax years. Old GM was liquidated on December 15, 2011. The Internal Revenue Service has audited the returns through the liquidation date and, in January 2014, the audit of these returns was closed. The reduction to the amount of unrecognized tax benefits is not expected to be significant. In January 2013 the U.S. Congress enacted federal income tax legislation including an extension of the research credit for tax years 2012 and 2013. As a result, in the year ended December 31, 2013 we recorded an income tax benefit related to the 2012 research credit of approximately $200 million.

Note 19. Restructuring and Other Initiatives

We have previously executed various restructuring and other initiatives and we plan to execute additional initiatives in the future, if necessary, in order to align manufacturing capacity and other costs with prevailing global automotive production and to improve the utilization of remaining facilities. To the extent these programs involve voluntary separations, no liabilities are generally recorded until offers to employees are accepted. If employees are involuntarily terminated, a liability is generally recorded at the communication date. Related charges are recorded in Automotive cost of sales and Automotive selling, general and administrative expense.

The following table summarizes the reserves related to restructuring and other initiatives and charges by segment, including postemployment benefit reserves and charges (dollars in millions):

	GMNA	GME	GMIO	GMSA	Total
Balance at January 1, 2011 (a)	$ 1,135	$ 664	$ 3	$ —	$ 1,802
Additions, interest accretion and other	104	449	—	81	634
Payments	(366)	(395)	(2)	(68)	(831)
Revisions to estimates	19	(9)	—	—	10
Effect of foreign currency	(8)	(22)	—	(1)	(31)
Balance at December 31, 2011 (a)	884	687	1	12	1,584
Additions, interest accretion and other	140	254	84	92	570
Payments	(304)	(344)	(46)	(55)	(749)
Revisions to estimates	(78)	(17)	(1)	(11)	(107)
Effect of foreign currency	11	10	1	—	22
Balance at December 31, 2012 (a)	653	590	39	38	1,320
Additions, interest accretion and other	58	202	404	50	714
Payments	(182)	(299)	(111)	(68)	(660)
Revisions to estimates	(16)	(9)	(3)	(1)	(29)
Effect of foreign currency	(16)	19	4	(3)	4
Balance at December 31, 2013 (a)	$ 497	$ 503	$ 333	$ 16	$ 1,349

(a) The remaining cash payments related to these reserves for restructuring and other initiatives, including temporary layoff benefits of $353 million, $356 million and $376 million at December 31, 2013, 2012 and 2011 for GMNA, primarily relate to postemployment benefits to be paid.

Year Ended December 31, 2013

GMNA recorded charges, interest accretion and other and revisions to estimates primarily related to cash severance incentive programs for skilled trade U.S. hourly employees and service cost for hourly layoff benefits. Due to the expected closure of the Oshawa Consolidated Plant in December 2016, affected employees will be eligible for a voluntary restructuring separation incentive program in accordance with the existing collective bargaining agreement that provides cash and a car voucher. During 2013 some of the affected employees separated and the related costs were recorded.

GME recorded charges, interest accretion and other and revisions to estimates primarily related to our plan to terminate all vehicle and transmission production at our Bochum, Germany facility by the end of 2014. Through December 31, 2013 the active separation programs related to Germany had a total cost of $194 million and had affected a total of 450 employees. We expect to complete these programs in 2014 and incur additional charges of $650 million, which will affect an additional 3,300 employees.

GMIO recorded charges, interest accretion and other and revisions to estimates for separation programs in Australia and Korea and programs related to the withdrawal of the Chevrolet brand from Europe described below. Through December 31, 2013 the active separation programs in GMIO had a total cost of $420 million and had affected a total of 4,100 employees. We expect to complete these programs in 2017 and incur additional restructuring and other charges of $640 million.

GMSA recorded charges for active separation programs in Brazil. Through December 31, 2013 the active separation programs related to Brazil had a total cost of $103 million.

Year Ended December 31, 2012

GMNA recorded charges, interest accretion and other and revisions to estimates related to our 2011 UAW labor agreement and increased production capacity utilization in Canada. Our 2011 UAW labor agreement included cash severance incentive programs which were completed at March 31, 2012 for skilled trade U.S. hourly employees. A total of 1,400 skilled trade U.S. hourly employees participated in these programs at a total cost of $99 million which was recorded upon irrevocable acceptances by both parties. Substantially all of the program cost was recorded in the three months ended March 31, 2012.

GME recorded charges, interest accretion and other and revisions to estimates for previously announced separation and early retirement programs. Through December 31, 2012 the active separation programs related to Germany and the United Kingdom had a total cost of $400 million and had affected a total of 2,550 employees, of which $310 million related to a program initiated in Germany in 2010.

GMIO recorded charges, interest accretion and other related to voluntary separation programs primarily in Korea and Australia. Through December 31, 2012 these programs had a total cost of $69 million which affected 650 employees.

GMSA recorded charges of $87 million for employee separation costs related to a separation program in Brazil.

Year Ended December 31, 2011

GMNA recorded charges, interest accretion and other primarily related to special attrition programs for skilled trade U.S. hourly employees, service cost for hourly layoff benefits and Canadian restructuring activities.

GME recorded charges, interest accretion and other for separation programs primarily related to previously announced programs in Germany. Through December 31, 2011 these programs had a total cost of $1.1 billion and affected a total of 6,700 employees and included the December 2010 closure of the Antwerp, Belgium facility.

GMSA recorded charges, interest accretion and other for separation programs primarily related to the voluntary separation program in Brazil implemented in the three months ended December 31, 2011. A total of 900 employees in Brazil participated in the separation program at a total cost of $74 million.

Withdrawal of the Chevrolet Brand from Europe

In December 2013 we announced our plans to focus our marketing and product portfolio on our Opel and Vauxhall brands in Western and Central Europe and cease mainstream distribution of Chevrolet brand in those markets in 2015. This decision impacts 1,200 Chevrolet dealers and distributors in the affected countries and 480 Chevrolet Europe employees. In the three months ended December 31, 2013 we recorded pre-tax charges of $636 million, net of noncontrolling interests of $124 million. These charges included dealer restructuring costs of $233 million and employee severance costs of $30 million which are reflected in the table above. The remaining charges for intangible asset impairments of $264 million and sales incentive, inventory related and other costs of $233 million are not included in the table above. We may incur additional charges for exit costs of up to $300 million primarily through the first half of 2014. Refer to Note 11 for additional information on the intangible asset impairment charges.

Manufacturing Operations at Holden

In December 2013 we announced plans to cease vehicle and engine manufacturing and significantly reduce engineering operations at Holden by the end of 2017. Holden will continue to sell imported vehicles through its Holden dealer network and maintain its global design studio. This decision affects 2,900 employees from the Elizabeth vehicle manufacturing plant and Holden's Victorian workforce. In the three months ended December 31, 2013 we recorded pre-tax charges of $536 million in Automotive cost of sales consisting primarily of asset impairment charges of $477 million, including property, plant and equipment, which are not included in the table above. The remaining charges relate to exit-related costs, including certain employee severance related costs, of $59 million which are included in the table above. We expect to incur additional charges through 2017 for incremental future cash payments of employee severance once negotiations of the amount are completed. Refer to Note 9 for additional information on the property, plant and equipment impairment charges.

Note 20. Interest Income and Other Non-Operating Income, net

The following table summarizes the components of Interest income and other non-operating income, net (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Interest income	$ 246	$ 343	$ 455
Net gains (losses) on derivatives	(13)	(63)	41
Dividends and royalties	97	98	153
Foreign currency transaction and translation gains (losses)	(154)	16	(48)
Gains (losses) on securities and other investments — realized and unrealized	691	(193)	(9)
Deferred income from technology agreements	100	114	113
Other	96	530	146
Total interest income and other non-operating income, net	$ 1,063	$ 845	$ 851

Note 21. Stockholders' Equity and Noncontrolling Interests

Preferred and Common Stock

We have 2.0 billion shares of preferred stock and 5.0 billion shares of common stock authorized for issuance. We had 156 million and 276 million shares of Series A Preferred Stock issued and outstanding at December 31, 2013 and 2012. There were no shares of Series B Preferred Stock issued and outstanding at December 31, 2013 and 100 million shares issued and outstanding at December 31, 2012. We had 1.5 billion and 1.4 billion shares of common stock issued and outstanding at December 31, 2013 and 2012.

Preferred Stock

The following table summarizes significant features relating to our preferred stock (dollars in millions, except for per share amounts):

	Liquidation Preference Per Share	Dividend Rate Per Annum	Dividends Paid Years Ended December 31,		
			2013	2012	2011
Series A Preferred Stock	$ 25.00	9.00%	$ 1,370	$ 621	$ 621
Series B Preferred Stock	$ 50.00	4.75%	$ 237	$ 238	$ 243

Series A Preferred Stock

The Series A Preferred Stock ranks senior with respect to liquidation preference and dividend rights to our common stock and Series B Preferred Stock and any other class or series of stock that we may issue. In the event of any voluntary or involuntary liquidation, dissolution or winding-up of our affairs, a holder of Series A Preferred Stock will be entitled to be paid, before any distribution or payment may be made to any holders of common stock or other series of stock, the liquidation amount and the amount of any accrued and unpaid dividends, if any, whether or not declared, prior to such distribution or payment date. On or after December 31, 2014, the Series A Preferred Stock may be redeemed, in whole or in part, for cash at a price per share equal to the $25.00 per share liquidation amount, plus any accrued and unpaid dividends. Upon a redemption or purchase of any or all Series A Preferred Stock, the difference, if any, between the recorded amount of the Series A Preferred Stock being redeemed or purchased and the consideration paid would be recorded as a charge to Net income attributable to common stockholders.

In September 2013 we purchased 120 million shares (or 43.5% of the total shares outstanding) of our Series A Preferred Stock held by the New VEBA at a price equal to 108.1% of the aggregate liquidation amount for $3.2 billion. We recorded a loss for the difference between the carrying amount of the Series A Preferred Stock purchased and the consideration paid, which reduced Net income attributable to common stockholders by $816 million. If all of the remaining Series A Preferred Stock were redeemed or purchased at its par value, Net income available to common stockholders would be reduced by a charge of $800 million.

Series B Preferred Stock

On December 1, 2013 each of the 100 million shares of our Series B Preferred Stock outstanding automatically converted into 1.3736 shares of our common stock for a total of 137 million common shares. The number of shares of our common stock issued upon mandatory conversion of each share of Series B Preferred Stock was determined based on the average of the closing prices of our common stock over the 40 consecutive trading day period ended November 26, 2013.

Common Stock

Holders of our common stock are entitled to dividends at the sole discretion of our Board of Directors. However, the terms of the Series A Preferred Stock prohibit, subject to exceptions, the payment of dividends on our common stock unless all accrued and unpaid dividends on the Series A Preferred Stock are paid in full. Holders of common stock are entitled to one vote per share on all matters submitted to our stockholders for a vote. The liquidation rights of holders of our common stock are secondary to the payment or provision for payment of all our debts and liabilities and to holders of our Series A Preferred Stock, if any such shares are then outstanding.

In December 2012 we purchased 200 million shares of our common stock from the UST at a price of $27.50 per share for a total of $5.5 billion. The purchase price represented a premium to the prior day's closing price of $25.49. We allocated the purchase price between a direct reduction to shareholder's equity of $5.1 billion and a charge to Automotive selling, general and administrative expense of $402 million representing the premium. These shares were retired and returned to authorized but unissued status. In the year ended December 31, 2012 we issued 1.3 million shares of common stock for the settlement of restricted stock and salary stock awards and 400,000 shares for exercised warrants. Refer to Note 23 for additional information on our stock incentive plans.

Warrants

In connection with the 363 Sale we issued two tranches of warrants, each to acquire 136 million shares of common stock, to MLC which have all been distributed to creditors of Old GM and to the GUC Trust by MLC and one tranche of warrants to acquire 46 million shares of common stock to the New VEBA. The first tranche of MLC warrants is exercisable at any time prior to July 10, 2016 at an exercise price of $10.00 per share and the second tranche of MLC warrants is exercisable at any time prior to July 10, 2019 at an exercise price of $18.33 per share. The New VEBA warrants, which were subsequently sold by the New VEBA, are exercisable at any time prior to December 31, 2015 at an exercise price of $42.31 per share. Upon exercise of the warrants, the shares issued will be included in the number of basic shares outstanding used in the computation of earnings per share. The number of shares of common stock underlying each of the warrants and the per share exercise price are subject to adjustment as a result of certain events, including stock splits, reverse stock splits and stock dividends. The outstanding balance of warrants was 293 million and 313 million at December 31, 2013 and 2012.

Accumulated Other Comprehensive Loss

The following table summarizes the components of Accumulated other comprehensive loss (dollars in millions):

	Years Ended December 31,								
	2013			2012			2011

Balance at end of period	$ 354	$ 3,467	$ (3,113)	$ (7,619)	$ 433	$ (8,052)	$ (4,436)	$ 1,425	$ (5,861)

(a) Included in the computation of net periodic pension and OPEB (income) expense. Refer to Note 15 for additional information.

Note 22. Earnings Per Share

Basic and diluted earnings per share are computed by dividing Net income attributable to common stockholders by the weighted-average common shares outstanding in the period. Diluted earnings per share is computed by giving effect to all potentially dilutive securities that are outstanding.

The following table summarizes basic and diluted earnings per share (in millions, except for per share amounts):

	Years Ended December 31,		
	2013	2012	2011
Basic earnings per share			
Net income attributable to stockholders	$ 5,346	$ 6,188	$ 9,190
Less: cumulative dividends on preferred stock and charge related to purchase of preferred stock (a)	(1,576)	(859)	(859)
Less: undistributed earnings allocated to Series B Preferred Stock participating security	—	(470)	(746)
Net income attributable to common stockholders	$ 3,770	$ 4,859	$ 7,585
Weighted-average common shares outstanding — basic	1,393	1,566	1,536
Basic earnings per common share	$ 2.71	$ 3.10	$ 4.94
Diluted earnings per share			
Net income attributable to stockholders	$ 5,346	$ 6,188	$ 9,190
Add: preferred dividends to holders of Series B Preferred Stock	218	—	—
Less: cumulative dividends on preferred stock and charge related to purchase of preferred stock (a)	(1,576)	(859)	(859)
Less: undistributed earnings allocated to Series B Preferred Stock participating security	—	(442)	(693)
Net income attributable to common stockholders	$ 3,988	$ 4,887	$ 7,638
Weighted-average common shares outstanding — diluted			
Weighted-average common shares outstanding — basic	1,393	1,566	1,536
Dilutive effect of warrants	146	104	130
Dilutive effect of conversion of Series B Preferred Stock	134	—	—
Dilutive effect of RSUs	3	5	2
Weighted-average common shares outstanding — diluted	1,676	1,675	1,668
Diluted earnings per common share	$ 2.38	$ 2.92	$ 4.58

(a) Includes earned but undeclared dividends of $15 million, $26 million and $26 million on our Series A Preferred Stock in the years ended December 31, 2013, 2012 and 2011 and $20 million on our Series B Preferred Stock in the years ended December 31, 2012 and 2011.

Holders of the Series B Preferred Stock had a right to participate in our undistributed earnings because a dividend, if declared, would result in a transfer of value to the holder through an adjustment to the fixed conversion ratios through various anti-dilution provisions. Based on the nature of the Series B Preferred Stock and the nature of these anti-dilution provisions, we concluded that the Series B Preferred Stock was a participating security and, as such, requires the application of the more dilutive of the two-class or if-converted method to calculate earnings per share when the applicable market value of our common stock is below or above the range of $33.00 to $39.60 per common share. For purposes of calculating earnings per share, the applicable market value is calculated as the average of the closing prices of our common stock over the 40 consecutive trading day period ending on the third trading day immediately preceding the date of our mandatory conversion in 2013 or the date of our financial statements for 2012 and 2011. The calculation of the applicable market value is applied to the full year, irrespective of the applicable market value computed during the prior quarters of the current year.

On the mandatory conversion date of our Series B Preferred Stock, December 1, 2013, the applicable market value of our common stock was within the range of $33.00 to $39.60 per common share and, as such, we applied the if-converted method for purposes of calculating diluted earnings per share in the year ended December 31, 2013. In the years ended December 31, 2012 and 2011, we were required to use the two-class method for calculating earnings per share as the applicable market value of our common stock was below $33.00 per common share. Under the two-class method for computing earnings per share, undistributed earnings are allocated to common stock and the Series B Preferred Stock according to their respective participation rights in undistributed earnings, as if all the earnings for the period had been distributed. This allocation to the Series B Preferred Stock holders reduced Net income attributable to common stockholders, resulting in a lower basic and dilutive earnings per share amount. The impact on diluted earnings per share was an increase of $0.13 in the year ended December 31, 2013 using the if-converted as compared to the two-class method. Our calculation of earnings per share varied from period to period depending on whether the two-class or if-converted method was required.

The application of the two-class method resulted in an allocation of undistributed earnings to our Series B Preferred Stock holders and, accordingly, 152 million common stock equivalents from the assumed conversion of the Series B Preferred Stock are not considered outstanding for purposes of determining the weighted-average common shares outstanding in the computation of diluted earnings per share for December 31, 2012 and 2011.

In the years ended December 31, 2013, 2012 and 2011 warrants to purchase 46 million shares were not included in the computation of diluted earnings per share because the warrants' exercise price was greater than the average market price of the common shares.

Note 23. Stock Incentive Plans

Our stock incentive plans consist of the 2009 Long-Term Incentive Plan and the Salary Stock Plan. Both plans are administered by the Executive Compensation Committee of our Board of Directors. The aggregate number of shares with respect to which awards may be granted under these amended plans shall not exceed 75 million.

Long-Term Incentive Plan

We granted 7 million, 7 million and 5 million RSUs in the years ended December 31, 2013, 2012 and 2011. These awards granted either cliff vest or ratably vest generally over a three-year service period, as defined in the terms of each award. Our policy is to issue new shares upon settlement of RSUs.

The 2013 awards granted to the Top 25 highest compensated employees will settle on the second and third anniversary dates of grant in 25% increments consistent with the terms of the 2009 Long-Term Incentive Plan. The awards for the Next 75 highest compensated employees will settle on the second and third anniversary dates of grant. The awards for the non-Top 100 highest compensated employees will settle on the first, second and third anniversary dates of grant. Vesting and subsequent settlement will generally occur based upon employment at the end of each specified service period.

The 2012 awards granted to the Top 25 highest compensated employees will settle on the second and third anniversary dates of grant in 25% increments consistent with the terms of the 2009 Long-Term Incentive Plan. The awards for the non-Top 25 highest compensated employees will vest and settle on the second and third anniversary dates of grant. Vesting and subsequent settlement will generally occur based upon employment at the end of each specified service period.

The 2011 awards granted to the Top 25 highest compensated employees will settle three years from the grant date in 25% increments consistent with the terms of the 2009 Long-Term Incentive Plan. The awards for the Next 75 highest compensated employees will settle either: (1) three years from the date of grant; or (2) on the first and third anniversary dates of grant. The awards to the non-Top 100 highest compensated employees will settle on the first, second and third anniversary dates of grant. Vesting and subsequent settlement will generally occur based upon employment at the end of each specified service period.

Retirement eligible participants that are non-Top 100 highest compensated employees who retire in the first twelve months following the grant will retain and vest a pro-rata portion of RSUs earned and those who retire after the first anniversary of the grant will retain and vest the full RSU grant. The vested award will be payable on the settlement date.

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The plan was amended in January 2014 to provide cash payment, on a going forward basis, of dividend equivalents upon settlement to active employees and certain former employees with outstanding awards as of the amendment date.

Salary Stock Plan

In the years ended December 31, 2013, 2012 and 2011 a portion of each participant's salary was accrued on each salary payment date and converted to RSUs on a quarterly basis. In March 2012 we amended the plan to provide for cash settlement of awards and reclassified $97 million from Additional paid-in capital to Accrued liabilities and Other liabilities and deferred income taxes. Prior to this amendment it was our policy to issue new shares upon settlement of these awards. In June 2013 we amended the plan to provide for cash or share settlement of awards based on election by the participant. The plan was amended in January 2014 to provide cash payment, on a going forward basis, of dividend equivalents upon settlement to active employees with outstanding awards as of the amendment date. The liability for these awards continues to be remeasured to fair value at the end of each reporting period.

RSUs

The following table summarizes information about the RSUs under our stock incentive plans (RSUs in millions):

	Shares	Weighted-Average Grant Date Fair Value	Weighted-Average Remaining Contractual Term in Years
RSUs outstanding at January 1, 2013	26.9	$ 23.06	0.7
Granted	8.9	$ 29.05	
Settled	(16.0)	$ 20.60	
Forfeited or expired	(1.2)	$ 27.20	
RSUs outstanding at December 31, 2013	18.6	$ 27.76	1.2
RSUs unvested and expected to vest at December 31, 2013	9.2	$ 27.94	1.6
RSUs vested and payable at December 31, 2013	8.8	$ 27.61	—
RSUs granted in the year ended December 31, 2012		$ 25.10	
RSUs granted in the year ended December 31, 2011		$ 31.18	

The following table summarizes compensation expense recorded for our stock incentive plans (dollars in millions):

	Years Ended December 31,		
	2013	2012	2011
Compensation expense	$ 311	$ 302	$ 233
Income tax benefit	$ 100	$ 100	$ —

At December 31, 2013 the total unrecognized compensation expense for nonvested equity awards granted was $149 million. This expense is expected to be recorded over a weighted-average period of 1.6 years. The total fair value of RSUs vested in the years ended December 31, 2013, 2012 and 2011 was $342 million, $141 million and $105 million. In the years ended December 31, 2013, 2012 and 2011 total payments for 3.1 million, 1.6 million and 456,000 RSUs settled under stock incentive plans were $94 million, $36 million and $14 million.

Note 24. Supplementary Quarterly Financial Information (Unaudited)

The following tables summarize supplementary quarterly financial information (dollars in millions, except per share amounts):

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
2013				
Total net sales and revenue	$ 36,884	$ 39,075	$ 38,983	$ 40,485
Automotive gross margin	$ 3,727	$ 4,416	$ 4,954	$ 4,070
Net income	$ 1,185	$ 1,388	$ 1,705	$ 1,053
Net income attributable to stockholders	$ 1,175	$ 1,414	$ 1,717	$ 1,040
Earnings per share, basic	$ 0.63	$ 0.87	$ 0.50	$ 0.64
Earnings per share, diluted	$ 0.58	$ 0.75	$ 0.45	$ 0.57

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
2012				
Total net sales and revenue	$ 37,759	$ 37,614	$ 37,576	$ 39,307
Automotive gross margin	$ 4,418	$ 4,449	$ 4,327	$ (3,135)
Net income	$ 1,350	$ 1,901	$ 1,854	$ 1,031
Net income attributable to stockholders	$ 1,315	$ 1,846	$ 1,833	$ 1,194
Earnings per share, basic	$ 0.64	$ 0.95	$ 0.94	$ 0.58
Earnings per share, diluted	$ 0.60	$ 0.90	$ 0.89	$ 0.54

Prior to the three months ended June 30, 2013 we used the two-class method for calculating earnings per share because Series B Preferred Stock was a participating security.

The three months ended December 31, 2013 included the following on a pre-tax (except tax matters) and pre-noncontrolling interests basis:

- Benefit from the release of GM Korea wage litigation accruals of $846 million in GMIO.
- Property and intangible asset impairment charges of $805 million at Holden and GM India in GMIO.
- Charges of $745 million related to our plans to cease mainstream distribution of Chevrolet brand in Europe in GMIO.
- Gain on sale of equity investment in Ally Financial of $483 million in Corporate.
- Goodwill impairment charges of $481 million in GMIO.
- Tax benefit of $473 million from remeasurement of uncertain tax position in Corporate.
- Gain on sale of equity investment in PSA of $152 million in GME.

The three months ended March 31, 2013 included the following on a pre-tax and pre-noncontrolling interests basis:

- Charge of $162 million in GMSA for the Venezuela currency devaluation.

The three months ended December 31, 2012 included the following on a pre-tax and pre-noncontrolling interests basis:

- Deferred tax asset valuation allowance release of $36.3 billion in the U.S. and Canada.
- Goodwill impairment charges of $26.5 billion in GMNA and GMIO.
- Property, plant and equipment impairment charges of $3.7 billion in GME.
- Pension settlement charge of $2.6 billion in GMNA.

- Intangible asset impairment charges of $1.8 billion in GME.

- Charge of $525 million for GM Korea hourly wage litigation.

- Charge of $402 million which represents the premium paid to purchase our common stock from the UST in Corporate.

The three months ended March 31, 2012 included the following on a pre-tax and pre-noncontrolling interests basis:

- Goodwill impairment charges of $617 million in GMIO and GME.

Note 25. Segment Reporting

We analyze the results of our business through our five segments: GMNA, GME, GMIO, GMSA and GM Financial. The chief operating decision maker evaluates the operating results and performance of our automotive segments through Income (loss) before interest and income taxes, as adjusted for additional amounts, which are presented net of noncontrolling interests, and evaluates GM Financial through income before income taxes. Each segment has a manager responsible for executing our strategies. Our automotive manufacturing operations are integrated within the segments, benefit from broad-based trade agreements and are subject to regulatory requirements, such as Corporate Average Fuel Economy regulations. While not all vehicles within a segment are individually profitable on a fully allocated cost basis, those vehicles are needed in our product mix in order to attract customers to dealer showrooms and to maintain sales volumes for other, more profitable vehicles. Because of these and other factors, we do not manage our business on an individual brand or vehicle basis.

In the three months ended March 31, 2013 we changed our managerial and financial reporting structure to measure our reportable segments revenue and profitability based on the geographic area in which we sell vehicles to third party customers. We record certain transactions between our automotive and finance segments as intersegment activity and eliminate them in consolidation. The new reporting structure provides clearer profit and revenue visibility across geographic areas and identifies our profitability at the point of sale. Previously, it was based on the geographic area in which the vehicles originated and our managerial and financial reporting structure included intercompany sales and cost of sales in our segment results. Certain expenses such as engineering, warranty, recall campaigns and selling, general and administrative are allocated to the geographic area in which the vehicle is sold to third party customers. We have retrospectively revised the segment presentation for all periods presented.

Substantially all of the cars, trucks and parts produced are marketed through retail dealers in North America, and through distributors and dealers outside of North America, the substantial majority of which are independently owned.

In addition to the products sold to dealers for consumer retail sales, cars and trucks are also sold to fleet customers, including daily rental car companies, commercial fleet customers, leasing companies and governments. Sales to fleet customers are completed through the network of dealers and in some cases sold directly to fleet customers. Retail and fleet customers can obtain a wide range of aftersale vehicle services and products through the dealer network, such as maintenance, light repairs, collision repairs, vehicle accessories and extended service warranties.

GMNA primarily meets the demands of customers in North America with vehicles developed, manufactured and/or marketed under the following four brands:

- Buick
- Cadillac
- Chevrolet
- GMC

The demands of customers outside of North America are primarily met with vehicles developed, manufactured and/or marketed under the following brands:

- Buick
- Cadillac
- Chevrolet
- GMC
- Holden
- Opel
- Vauxhall

GENERAL MOTORS COMPANY AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

At December 31, 2013 we also had equity ownership stakes directly or indirectly in entities through various regional subsidiaries, primarily in Asia that design, manufacture and market vehicles under the following brands:

- Alpheon
- Baojun
- Buick
- Cadillac
- Chevrolet
- Jiefang
- Wuling

All intersegment balances and transactions have been eliminated in consolidation.

The following tables summarize key financial information by segment (dollars in millions):

	At and For the Year Ended December 31, 2013									
	GMNA	GME	GMIO	GMSA	Corporate	Eliminations	Total Automotive	GM Financial	Eliminations	Total
Sales

Disclosure Controls and Procedures

We maintain disclosure controls and procedures designed to provide reasonable assurance that information required to be disclosed in reports filed under the Securities Exchange Act of 1934, as amended (Exchange Act) is recorded, processed, summarized and reported within the specified time periods and accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Our management, with the participation of our CEO and Executive Vice President and CFO, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) or 15d-15(e) promulgated under the Exchange Act) at December 31, 2013. Based on these evaluations, our CEO and CFO concluded that our disclosure controls and procedures required by paragraph (b) of Rules 13a-15 or 15d-15 were effective as of December 31, 2013.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining effective internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act. This system is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with U.S. GAAP. Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, misstatements due to error or fraud may not be prevented or detected on a timely basis.

Our management performed an assessment of the effectiveness of our internal control over financial reporting at December 31, 2013, utilizing the criteria discussed in the "Internal Control—Integrated Framework (1992)" issued by the Committee of Sponsoring Organizations of the Treadway Commission. The objective of this assessment was to determine whether our internal control over financial reporting was effective at December 31, 2013. Based on management's assessment, we have concluded that our internal control over financial reporting was effective at December 31, 2013.

The effectiveness of our internal control over financial reporting has been audited by Deloitte & Touche LLP, an independent registered public accounting firm, as stated in its report which is included herein.

Changes in Internal Controls

There have not been any changes in our internal control over financial reporting during the three months ended December 31, 2013 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

☐ Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Item 8.01 Other Events.

On April 21, 2011, the Motors Liquidation Company GUC Trust (the "GUC Trust") announced that, pursuant to the Plan (as defined below) and the GUC Trust Agreement (as defined below), it had directed Motors Liquidation Company, f/k/a General Motors Corporation ("MLC") to make an initial distribution (the "Initial Distribution") of more than 75 percent of the New GM Securities (as defined below) to holders of Allowed General Unsecured Claims (as defined below).

Background

As previously discussed in MLC's Current Report on Form 8-K filed on April 4, 2011, MLC, Chevrolet-Saturn of Harlem, Inc., n/k/a MLC of Harlem, Inc., Saturn, LLC, n/k/a MLCS, LLC, and Saturn Distribution Corporation, n/k/a MLCS Distribution Corporation (collectively, the "Initial Debtors") filed voluntary petitions for relief under chapter 11 of title 11 of the U.S. Code (the "Bankruptcy Code"), with the bankruptcy court for the Southern District of New York (the "Bankruptcy Court") on June 1, 2009. On October 9, 2009, Remediation and Liability Management Company, Inc. and Environmental Corporate Remediation Company, Inc. (collectively with the Initial Debtors, the "Debtors") filed voluntary petitions for relief under chapter 11 of the Bankruptcy Code with the Bankruptcy Court.

On July 5, 2009, the Bankruptcy Court authorized the sale (the "Sale") of substantially all of the assets of the Initial Debtors to a U.S. Treasury sponsored purchaser, NGMCO, Inc. n/k/a General Motors Company ("New GM").[1] In addition to the assumption of certain liabilities by New GM, a credit bid of outstanding obligations under certain prepetition debt held by the U.S. Treasury and a debtor-in-possession credit agreement (the "DIP Credit Agreement") held by the U.S. Treasury and the Governments of Canada and Ontario (through Export Development Canada) ("EDC"), and the cancellation of certain warrants issued to the U.S. Treasury, the primary consideration provided by New GM to the Initial Debtors was 150 million shares of common stock issued by New GM ("New GM Stock"), warrants to acquire 136,363,635 newly issued shares of New GM Stock with an exercise price set at $10.00 per share ("New GM $10.00 Warrants"), and warrants to acquire 136,363,635 newly issued shares of New GM Stock with an exercise price set at $18.33 per share ("New GM $18.33 Warrants," and together with the New GM $10.00 Warrants, the "New GM Warrants").[2] In addition, the agreement governing the Sale provides that in the event that the aggregate total allowed general unsecured claims against the Initial Debtors exceed $35 billion, New GM will issue additional New GM Stock in an amount up to 2% of the total New GM Stock outstanding as of the closing of the Sale (the "Additional Shares," and together with the New GM Stock and the New GM Warrants, the "New GM Securities").

[1] Formerly known as General Motors Holding Company, General Motors Company is a Delaware corporation formed as part of that certain holding company reorganization that occurred on October 19, 2009, pursuant to which all of the outstanding shares of common stock and preferred stock of the prior General Motors Company (now known as "General Motors LLC") were exchanged on a one-for-one basis for shares of common stock and preferred stock of the newly organized holding company that now bears the name General Motors Company. General Motors Company has a 100% ownership interest in General Motors Holdings LLC, a Delaware limited liability company, and General Motors LLC is a direct wholly-owned subsidiary of General Motors Holdings LLC.

[2] The number of shares of New GM Common Stock, the number of shares issuable upon exercise of the New GM Warrants to acquire New GM Common Stock, and the exercise price of the New GM Warrants were adjusted to account for a three-for-one stock split of the New GM Common Stock effected in connection with the initial public offering of the New GM Common Stock in November 2010.

On August 31, 2010, the Debtors filed a Joint Chapter 11 Plan and related Disclosure Statement with the Bankruptcy Court. On December 8, 2010, the Debtors filed an Amended Joint Chapter 11 Plan and related Disclosure Statement (as amended, the "Disclosure Statement"). On December 8, 2010, the Bankruptcy Court approved the Disclosure Statement and approved the procedures for solicitation of votes on the Debtors' Amended Joint Chapter 11 Plan. On March 18, 2011, the Debtors filed the Second Amended Joint Chapter 11 Plan (the "Plan") with the Bankruptcy Court. As previously disclosed, on March 29, 2011, the Bankruptcy Court entered an order confirming the Plan (the "Confirmation Date") and on March 31, 2011, the Plan became effective in accordance with its terms (the "Effective Date"). Among other things, the Plan generally provides for the distribution of the New GM Securities to holders of allowed general unsecured claims against the Debtors ("Allowed General Unsecured Claims") pro rata by allowed claim amount.

The GUC Trust

The GUC Trust was formed on March 30, 2011, as a statutory trust under the Delaware Statutory Trust Act, upon the execution of the Motors Liquidation Company GUC Trust Agreement (the "GUC Trust Agreement") by all parties thereto and upon the filing of the Certificate of Trust of Motors Liquidation Company GUC Trust with the Office of the Secretary of State of the State of Delaware. The GUC Trust is administered by Wilmington Trust Company, solely in its capacity as trust administrator and trustee of the GUC Trust (the "GUC Trust Administrator"). Among other rights and duties, the GUC Trust Administrator has the power and authority to hold, manage, sell, invest and distribute the assets comprising the corpus of the GUC Trust, prosecute and resolve objections to disputed general unsecured claims, take all necessary actions to administer the wind-down of the affairs of the Debtors upon their dissolution, and upon such dissolution resolve and satisfy (to the extent allowed) the Residual Wind-Down Claims (as defined below). The activities of the GUC Trust Administrator are overseen by FTI Consulting, Inc., solely in its capacity as monitor of the GUC Trust (the "GUC Trust Monitor"). The GUC Trust Monitor is responsible for reviewing and approving material matters and decisions brought to its attention by the GUC Trust Administrator.

Administration of the Plan

On the Effective Date, there were approximately $29,776 million in Allowed General Unsecured Claims (the "Initial Allowed General Unsecured Claims"). In addition, there were approximately $8,150 million in general unsecured claims asserted against the Debtors that were disputed by the Debtors ("Disputed General Unsecured Claims"), which amount reflects liquidated disputed claims and a Bankruptcy Court ordered reserve for unliquidated disputed claims, but does not reflect potential Avoidance Action General Unsecured Claims (as defined below). Accordingly, the total aggregate amount of general unsecured claims asserted against the Debtors, inclusive of the potential Avoidance Action General Unsecured Claims (as defined below) is approximately $39,426 million. While none of the holders of the Disputed General Unsecured Claims are entitled to receive a distribution of New GM Securities from the GUC Trust currently, such holders will be entitled to receive a distribution if, and to the extent that, such Disputed General Unsecured Claims become Allowed General Unsecured Claims.

Prior to the Effective Date, the Debtors had outstanding objections to approximately $444 million of the aggregate Disputed General Unsecured Claims. In addition, certain claimants are currently participating in alternative dispute resolution proceedings, including mediation and arbitration ("ADR Proceedings"). For claimants that are not subject to ADR Proceedings, such claimants shall be entitled to a hearing before the Bankruptcy Court with respect to the validity of their Disputed General Unsecured Claims. For claimants that are subject to ADR Proceedings, such claimants may be entitled to a hearing before the Bankruptcy Court, or other court of competent jurisdiction, if their Disputed General Unsecured Claims cannot be resolved through the ADR Proceedings.

In addition to the Disputed General Unsecured Claims for which objections are currently pending, there are approximately $7,706 million of Disputed General Unsecured Claims which are not yet subject to objections, including potential contract rejection damages claims. The GUC Trust Agreement provides the GUC Trust Administrator with the authority to file objections to such Disputed General Unsecured Claims within 180 days of the Effective Date (which date may be extended by application to the Bankruptcy Court). Such claims may be prosecuted through ADR Proceedings if appropriate.

To the extent that all or a portion of a Disputed General Unsecured Claim is deemed invalid – or "disallowed" – by order of the Bankruptcy Court, by order of the tribunal presiding over the ADR Proceeding (if applicable), or by settlement with the GUC Trust, such portion of the Disputed General Unsecured Claim that is disallowed shall not be entitled to a distribution from the GUC Trust (subject to any appeal rights of the claimant). However, to the extent that a Disputed General Unsecured Claim is fully resolved, and such resolution results in all or a portion of the original Disputed General Unsecured Claim being deemed valid – or "allowed" – by order of the Bankruptcy Court, by order of the tribunal presiding over the ADR Proceeding (if applicable), or by settlement with the GUC Trust, such portion of the Disputed General Unsecured Claim that is allowed shall be considered an Allowed General Unsecured Claim and shall be entitled to a distribution from the GUC Trust as if it were an Allowed General Unsecured Claim on the Effective Date (such claimants, holders of "Resolved Disputed Claims").

In addition to the Initial Allowed General Unsecured Claims and the Disputed General Unsecured Claims, there may be additional general unsecured claims, in a currently unknown amount, which may potentially arise in the event that the Debtors (or an alternative designated plaintiff) commence and are successful in prosecuting legal actions arising under chapter 5 of the Bankruptcy Code (such actions, "Avoidance Actions"), and recover the proceeds of such legal actions.

As of the Effective Date, only one Avoidance Action, styled as *Official Committee of Unsecured Creditors of Motors Liquidation Co. v. JPMorgan Chase Bank, N.A. et al.*, Adv. Pro. No. 09-00504 (Bankr. S.D.N.Y. July 31, 2009) (the "Term Loan Avoidance Action"), had been commenced. The Term Loan Avoidance Action was commenced by the Official Committee of Unsecured Creditors of Motors Liquidation Company, and seeks the return of approximately $1.5 billion that had been transferred to a consortium of prepetition lenders pursuant to the terms of the order approving the DIP Credit Agreement. To the extent that the plaintiff in the Term Loan Avoidance Action is successful in obtaining and collecting a judgment against the defendant(s) therein, general unsecured claims will arise in the amount actually collected from the defendant(s), and in the name of such defendant(s) (such general unsecured claims "Avoidance Action General Unsecured Claims," and together with Resolved Disputed Claims, the "Resolved Allowed Claims").

While the Term Loan Avoidance Action was the only Avoidance Action pending on the Effective Date, the Debtors (or an alternative designated plaintiff) could commence additional Avoidance Actions after the Effective Date (the "Other Avoidance Actions"). To the extent that Other Avoidance Actions are commenced and proceeds are recovered from the defendant(s) with respect thereto, Avoidance Action General Unsecured Claims will arise in the amount actually collected from the defendant(s), and in the name of such defendant(s).

Unless and until Avoidance Action General Unsecured Claims arise, the potential holders of such claims shall not be entitled to receive a distribution from the GUC Trust. However, once such Avoidance Action General Unsecured Claims arise, the holders of such claims shall be entitled to receive a distribution of New GM Securities from the GUC Trust.

Reserve for Resolved Allowed Claims

In an attempt to ensure that there are sufficient New GM Securities available to provide distributions to all holders of Resolved Allowed Claims as if such holders were holders of Initial Allowed General Unsecured Claims, the GUC Trust Agreement provides that additional distributions of New GM Securities to holders of Initial Allowed General Unsecured Claims will be made only if and to the extent that the GUC Trust holds New GM Securities in excess of the amount of New GM Securities (i) that are reserved for purposes of funding administrative costs that overrun the Budget (as defined below) and (ii) that would be attributable to holders of Disputed General Unsecured Claims and Avoidance Action General Unsecured Claims, in the aggregate, assuming all such claims became Resolved Allowed Claims at each of such claims' "maximum amount." The "maximum amount" of each Disputed General Unsecured Claim and Avoidance Action General Unsecured Claim is determined in accordance with the following procedures:

- With respect to any Disputed General Unsecured Claim that has been capped at an amount agreed to by the Debtors and/or the GUC Trust Administrator, on the one hand, and the holder of such claim, on the other hand (which may include any agreed capped amount imposed pursuant to the procedures governing any ADR Proceeding), such Disputed General Unsecured Claim's "maximum amount" is the capped amount;

- With respect to any Disputed General Unsecured Claim that has been estimated or determined by the Bankruptcy Court in accordance with Bankruptcy Code Section 502(c), such Disputed General Unsecured Claim's "maximum amount" is the estimated amount;
- With respect to any fully liquidated or partially liquidated Disputed General Unsecured Claim that is not subject to a cap and has not been estimated by the Bankruptcy Court, such Disputed General Unsecured Claim's "maximum amount" is the amount set forth in the proof of claim associated with such claim;
- With respect to fully unliquidated Disputed General Unsecured Claims that are not subject to a cap and were not otherwise estimated by the Bankruptcy Court, such claims were estimated in the aggregate pursuant to a Bankruptcy Court order dated March 4, 2011;
- With respect to the potential Avoidance Action General Unsecured Claims associated with the Term Loan Avoidance Action, the "maximum amount" is an amount equal to the amount that the plaintiff is seeking to recover in the Term Loan Avoidance Action (which amount shall initially be equal to $1.5 billion); and
- With respect to the potential Avoidance Action General Unsecured Claims associated with the Other Avoidance Actions, the "maximum amount" is an amount equal to the amount that the plaintiff(s) are seeking to recover in the Other Avoidance Actions.

As of the Effective Date, the "maximum amount" of the Disputed General Unsecured Claims and Avoidance Action General Unsecured Claims, in the aggregate, was approximately $9,650 million, which amount has been designated as a reserve for future Resolved Allowed Claims (the "Claims Reserve"). Accordingly, on the Effective Date, the Claims Reserve consisted of approximately 36.7 million New GM Common Stock, 33.4 million New GM $10.00 Warrants and 33.4 million New GM $18.33 Warrants. Pursuant to the GUC Trust Agreement, the GUC Trust will make distributions to holders of Resolved Allowed Claims (if any) on a quarterly basis from the Claims Reserve.

While the Plan provides that units of the GUC Trust, representing the contingent right to receive subsequent distributions of New GM Securities could have been issued by the GUC Trust in transferable form, the conditions required for the issuance of such transferable units were not met. Therefore, the GUC Trust will not issue any transferrable GUC Trust units. Any subsequent distributions of New GM Securities will be made, with respect to holders of claims based in debt issued by the Debtors (such holders, "Bondholders"), through escrow positions established by the Depository Trust Company to those Bondholders who received the Initial Distribution, and, with respect to non-Bondholder claimants, to those persons who were holders of Allowed General Unsecured Claims (including Resolved Allowed Claims) as of the Confirmation Date (the distribution record date under the Plan).

GUC Trust Assets

The New GM Securities are currently held by MLC. The GUC Trust has the authority to request, and MLC is required to provide, an amount of New GM Securities necessary to make distributions pursuant to the Plan and the GUC Trust Agreement. However, because the GUC Trust is obligated to distribute all New GM Securities received from MLC within thirty (30) days of receipt thereof (until the dissolution of MLC), the GUC Trust Administrator intends to only request the amount of New GM Securities necessary to make immediately forthcoming distributions pursuant to the Plan and the GUC Trust Agreement. On or after December 15, 2011, but by no later than December 29, 2011, all remaining undistributed New GM Securities shall be transferred from MLC to the GUC Trust (the "GUC Trust Transfer Date"). To the extent that any of such New GM Securities transferred to the GUC Trust on the GUC Trust Transfer Date would otherwise be distributable on the next upcoming distribution date, such New GM Securities must be distributed by the GUC Trust within thirty (30) days of receipt thereof. The remaining New GM Securities transferred to the GUC Trust on the GUC Trust Transfer Date shall not be required to be distributed by the GUC Trust within thirty (30) days of receipt thereof.

As of the Effective Date, the corpus of the GUC Trust consisted solely of approximately $52.7 million in cash contributed by MLC solely to fund the fees and expenses incurred by the GUC Trust in administering its duties pursuant to the Plan and the GUC Trust Agreement (the "GUC Trust Administrative Fund"). The GUC Trust Administrative Fund is subject to a lien held by the U.S. Treasury and EDC which was obtained pursuant to the DIP Credit Agreement. As such, the cash comprising the GUC Trust Administrative Fund cannot be utilized for distributions to holders of Allowed General Unsecured Claims. Moreover, the usage of the GUC Trust Administrative Fund for the payment of fees and expenses of the GUC Trust is subject to a budget (the "Budget") which must be approved on an annual basis by the U.S. Treasury and EDC. Any fees and expenses incurred by the GUC Trust that exceed the Budget will not be paid from the GUC Trust Administrative Fund. Rather, the GUC Trust Administrator is authorized, with the approval of the GUC Trust Monitor and the Bankruptcy Court to sell New GM Securities to cover any shortfall.

Residual Wind-Down Claims

Upon the dissolution of the Debtors, which will occur no later than December 15, 2011, the GUC Trust shall be responsible for resolving and satisfying (to the extent allowed) all remaining disputed administrative expenses, priority tax claims, priority non-tax claims and secured claims (the "Residual Wind-Down Claims"). On the date of dissolution of the Debtors, the Debtors shall transfer to the GUC Trust cash in an amount necessary to satisfy the ultimate allowed amount of such Residual Wind-Down Claims, as estimated by the Debtors (the "Residual Wind-Down Cash"). However, to the extent that such Residual Wind-Down Cash is insufficient to satisfy in full the allowed Residual Wind-Down Claims, the GUC Trust Administrator is authorized, with the approval of the GUC Trust Monitor and the Bankruptcy Court, to sell New GM Securities to cover any shortfall.

☐ Written communications pursuant to Rule 425 under the Securities Act (17 CFR 230.425)

☐ Soliciting material pursuant to Rule 14a-12 under the Exchange Act (17 CFR 240.14a-12)

☐ Pre-commencement communications pursuant to Rule 14d-2(b) under the Exchange Act (17 CFR 240.14d-2(b))

☐ Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Item 8.01 Other Events.

On May 16, 2014, the Bankruptcy Court for the Southern District of New York (the "Court") issued a scheduling order (the "Scheduling Order") with respect to a number of issues relating to a motion filed by General Motors Company (together with its consolidated subsidiaries, "New GM") in which the GUC Trust has appeared as a party in interest, as summarized below.

In its quarterly report on Form 10-Q filed April 24, 2014 (the "New GM Form 10-Q"), New GM disclosed that since the beginning of 2014, New GM had recalled approximately 2.6 million vehicles to repair ignition switches or to fix ignition lock cylinders and an additional 4.4 million vehicles to address certain electrical and other safety concerns. In addition, as disclosed in its current report on Form 8-K filed May 15, 2014, New GM subsequently announced five new safety recalls relating to additional defects, affecting approximately 2.7 million vehicles. Many of the vehicles affected by the foregoing recalls were manufactured or sold prior to July 10, 2009, the date that Motors Liquidation Company (formerly General Motors Corporation) sold substantially all of its assets to New GM pursuant to the provisions of Section 363(b) of Chapter 11 of the United States Bankruptcy Code (the "Closing Date").

In the New GM Form 10-Q, New GM also disclosed that 55 putative class actions had been filed by various plaintiffs (the "Plaintiffs") against New GM seeking compensatory damages for economic losses allegedly resulting from the ignition-switch-related recalls or the underlying condition of the vehicles covered by those recalls (the "Ignition Switch Issue"). Since the date of that quarterly report, additional putative class actions have been filed against New GM relating to the Ignition Switch Issue (together, with the above-described lawsuits, the "Class Actions"). The claims of many of the putative Class Actions may be overlapping, and to date, such actions have not been consolidated. The Judicial Panel on Multidistrict Litigation has scheduled a May 29, 2014 hearing to determine whether to consolidate and transfer the Class Actions filed in federal courts for coordinated and consolidated pretrial proceedings.

On April 21, 2014, New GM filed a motion with the Court seeking to enforce the Sale Order and Injunction, entered on July 5, 2009 (the "Sale Order"), approving the sale of substantially all of the assets of General Motors Corporation ("Old GM," and subsequently known as Motors Liquidation Company) to New GM pursuant to Section 363(b) of Chapter 11 of the United States Bankruptcy Code, which incorporates the terms of the Master Sale and Purchase Agreement, dated July 10, 2009 (the "MSPA"), by and among Old GM, certain of its debtor subsidiaries, and New GM. Under the terms of the Sale Order and the MSPA, all product liability and property damage claims arising from accidents or incidents prior to the Closing Date are to remain with Old GM as general unsecured claims. The GUC Trust has appeared in the proceedings in the Bankruptcy Court as an interested party.

On May 16, 2014, the Court entered the Scheduling Order identifying a number of "threshold issues" for its resolution, including whether a fraud on the Court was committed in connection with the Sale Order in respect of the Ignition Switch Issue and whether any or all of the claims asserted in the Class Actions are claims against Old GM and/or the GUC Trust. The GUC Trust intends to vigorously defend its position that none of the claims of the Plaintiffs may be properly asserted against Old GM or the GUC Trust.

As previously disclosed, on September 16, 2009, the Court entered the bar order (the "Bar Order"), setting November 30, 2009, as the bar date for filing proofs of claims related to all general unsecured claims against Old GM and, following the passage of the effective date of Old GM's *Second Amended Joint Chapter 11 Plan* dated March 18, 2011 (the "Plan"), the GUC Trust. To date, no Plaintiff has asserted a claim against the GUC Trust in connection with the Class Actions. In any event, however, the Scheduling Order provides that the threshold issues do not include whether any claims in the Class Actions are timely or meritorious as against the bankruptcy estate of Old GM or the GUC Trust (notwithstanding the Bar Order).

Nonetheless, no assurance may be given that personal injury, property damage and other claims relating to New GM's recalls involving GM vehicles manufactured or sold prior to the Closing Date and/or settlements previously reached with certain plaintiffs who asserted personal injury, property damage or other claims due to incidents or accidents that occurred prior to the Closing Date, will not adversely affect the GUC Trust, its assets or the Plan.

SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

MOTORS LIQUIDATION COMPANY GUC TRUST
FORM 10-K TABLE OF CONTENTS

FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K (the "Form 10-K") contains forward-looking statements about the assets, financial condition and prospects of the Motors Liquidation Company GUC Trust, or the GUC Trust. Actual results could differ materially from those indicated by the forward-looking statements because of various risks and uncertainties, including, without limitation, the resolution of the Disputed General Unsecured Claims (as defined below), the outcome of and the ultimate recovery on the Term Loan Avoidance Action (as defined below), any related incurrence of Allowed General Unsecured Claims (as defined below), the GUC Trust's incurrence of professional fees, tax liabilities and other expenses in connection with administration of the GUC Trust, economic conditions, changes in tax and other governmental rules and regulations applicable to the GUC Trust, fluctuations in the market price of the New GM Securities (as defined below) and other risks, as well as various risks and uncertainties associated with New GM (as defined below), as described in New GM's periodic and current reports filed under the Securities Exchange Act of 1934, as amended. Some of these risks and uncertainties are beyond the ability of the GUC Trust to control, and in many cases, risks and uncertainties that could cause actual results to differ materially from those indicated by the forward-looking statements cannot be predicted. When used in this Form 10-K, the words "believes," "estimates," "plans," "expects," "intends," and "anticipates" and similar expressions are intended to identify forward-looking statements.

GLOSSARY

A glossary of defined terms used in this Form 10-K is provided beginning on page 14.

PART I

Item 1. Business.

The GUC Trust was formed on March 30, 2011 as a statutory trust under the Delaware Statutory Trust Act, as amended, or the Delaware Act, upon the execution of the Motors Liquidation Company GUC Trust Agreement, or the GUC Trust Agreement (a copy of which, as amended, is filed as Exhibit 3.1 hereto), by Motors Liquidation Company, or MLC, MLC of Harlem, Inc., MLCS, LLC, MLCS Distribution Corporation, Remediation and Liability Management Company, Inc. and Environmental Corporate Remediation Company, Inc., Wilmington Trust Company, not in its individual capacity but solely in its capacity as trust administrator and trustee of the GUC Trust, or the GUC Trust Administrator, and FTI Consulting, Inc., solely in its capacity as trust monitor of the GUC Trust, or the GUC Trust Monitor, and upon the filing of the Certificate of Trust of Motors Liquidation Company GUC Trust with the Office of the Secretary of State of the State of Delaware.

The GUC Trust has no officers, directors or employees. The GUC Trust is administered by the GUC Trust Administrator, which is authorized by the GUC Trust Agreement to engage professionals, or GUC Trust professionals, to assist the GUC Trust Administrator in the administration of the GUC Trust. Accordingly, the GUC Trust and GUC Trust Administrator rely on receiving accurate information, reports and other representations from (i) the GUC Trust professionals, (ii) the GUC Trust Monitor, and (iii) other service providers to the GUC Trust. Notwithstanding such reliance, the GUC Trust Administrator is ultimately responsible for the disclosure provided in this Form 10-K. Among other rights and duties, pursuant and subject to the GUC Trust Agreement, the GUC Trust Administrator has the powers and authority as set forth in the GUC Trust Agreement, including, without limitation, the power and authority to hold, manage, sell, invest and distribute the assets comprising the corpus of the GUC Trust, prosecute and resolve objections to Disputed General Unsecured Claims (as defined below), take all necessary actions to administer the wind-down of the affairs of the Debtors (as defined below), and resolve and satisfy (to the extent allowed) any administrative expenses, priority tax claims, priority non-tax claims and secured claims, or collectively the Residual Wind-Down Claims. The activities of the GUC Trust Administrator are overseen by the GUC Trust Monitor. As further described below, the GUC Trust was formed for the purposes of implementing the Plan (as defined below) as a post-confirmation successor to MLC and resolving Disputed General Unsecured Claims against MLC and its affiliated debtors and debtors-in-possession, or the Debtors, and winding-down the Debtors' affairs, with no objective to engage in the conduct of a trade or business. The GUC Trust is a post-confirmation successor to MLC within the meaning of Section 1145 of title 11 of the United States Code, or the Bankruptcy Code.

Background: The General Motors Corporation Bankruptcy

General Motors Corporation, or Old GM, which is also known as MLC, and certain of its direct and indirect subsidiaries Chevrolet-Saturn of Harlem, Inc., n/k/a MLC of Harlem, Inc., Saturn, LLC, n/k/a MLCS, LLC and Saturn Distribution Corporation, n/k/a MLCS Distribution Corporation filed voluntary petitions for relief under chapter 11 of the Bankruptcy Code, in the United States Bankruptcy Court for the Southern District of New York, or the Bankruptcy Court, on June 1, 2009. On October 9, 2009, Remediation and Liability Management Company, Inc. and Environmental Corporate Remediation Company, Inc. filed voluntary petitions for relief under chapter 11 of the Bankruptcy Code with the Bankruptcy Court.

On July 5, 2009, the Bankruptcy Court authorized the sale of substantially all of the assets of the Debtors to an acquisition vehicle principally formed by the United States Department of the Treasury, or the U.S. Treasury. On July 10, 2009, the acquisition vehicle, NGMCO, Inc., acquired substantially all of the assets and assumed certain liabilities of the Debtors pursuant to a Master Sale and Purchase Agreement, or, as amended, the MSPA, among Old GM and certain of its debtor subsidiaries and NGMCO, Inc., in a transaction under Section 363 of the Bankruptcy Code, or the 363 Transaction. In connection with the 363 Transaction, Old GM changed its name to Motors Liquidation Company and the acquisition vehicle pursuant to a holding company reorganization became General Motors Company, or (together with its consolidated subsidiaries) New GM.

The primary consideration provided by New GM to the Debtors under the MSPA was 150 million shares of common stock of New GM, or the New GM Common Stock, issued by New GM, amounting to approximately 10% of the outstanding New GM Common Stock at the time of the closing of the 363 Transaction, a series of warrants to acquire 136,363,635 newly issued shares of New GM Common Stock with an exercise price set at $10.00 per share, expiring July 10, 2016, or the New GM Series A Warrants, and another series of warrants to acquire 136,363,635 newly issued shares of New GM Common Stock with an exercise price set at $18.33 per share, expiring July 10, 2019, or the New GM Series B Warrants, and, collectively, the New GM Warrants. Together, the New GM Warrants constituted approximately 15% of the New GM Common Stock on a fully-diluted basis at the time of their issuance. Both the New GM Series A Warrants and the New GM Series B Warrants are subject to customary anti-dilution adjustments. The New GM Common Stock and both series of New GM Warrants are currently listed on the New York Stock Exchange, or the NYSE.

Additional consideration was also provided in the form of (i) the assumption of certain liabilities by New GM, (ii) a credit bid of certain outstanding obligations under (a) certain prepetition debt held by the U.S. Treasury and (b) a debtor-in-possession credit agreement, or the DIP Credit Agreement, held by, as lenders thereunder, the U.S. Treasury and the Governments of Canada and Ontario (through Export Development Canada), and together with the U.S. Treasury, the DIP Lenders, and (iii) the cancellation of certain warrant notes issued to the U.S. Treasury.

On March 18, 2011, the Debtors filed the Debtors' Second Amended Joint Chapter 11 Plan, or the Plan, with the Bankruptcy Court, and on March 29, 2011, or the Confirmation Date, the Bankruptcy Court entered an order confirming the Plan, or the Confirmation Order. The Plan became effective on March 31, 2011, or the Effective Date. On December 15, 2011, or the Dissolution Date, as required by the Plan, MLC filed a Certificate of Dissolution with the Secretary of State of the State of Delaware and MLC was dissolved as of such date. On April 18, 2013, the Bankruptcy Court entered an order granting the GUC Trust's request for entry of a final decree administratively closing each of the Debtors' chapter 11 cases other than that of MLC.

The Plan and the Formation of the GUC Trust

The Plan treats all creditors and equity interest holders in accordance with their relative priorities under the Bankruptcy Code, and designates 6 distinct classes of claims or equity interests: secured claims, priority non-tax claims, general unsecured claims, property environmental claims, asbestos personal injury claims and equity interests in MLC. The GUC Trust is primarily tasked with the resolution and satisfaction of general unsecured claims. Under the terms of the Plan and following the Special Excess Distribution (as defined below), for each $1,000 in amount of allowed general unsecured claims against the Debtors, or the Allowed General Unsecured Claims, the holders of such claims are entitled to receive (upon delivery of any information required by the GUC Trust) approximately 4.19 shares of New GM Common Stock and approximately 3.81 warrants of each series of New GM Warrants, as well as one unit of beneficial interest in the GUC Trust, or a GUC Trust Unit, subject in each case to rounding under the Plan, the GUC Trust Agreement and/or the rules of any applicable clearing system, and exclusive of any securities received, or to be received, in respect of GUC Trust Units. Holders of disputed general unsecured claims against the Debtors, or the Disputed General Unsecured Claims, will receive subsequent distributions of New GM Common Stock and New GM Warrants (which are collectively called the New GM Securities) and GUC Trust Units, in respect of such claims, only if and to the extent that their Disputed General Unsecured Claims are subsequently allowed, or Resolved Disputed Claims.

The Plan provides for the formation of the GUC Trust to, among other duties, administer the prosecution, resolution and satisfaction of general unsecured claims and Residual Wind-Down Claims against the Debtors. As further described below, the GUC Trust is responsible for implementing the Plan, including distributing the New GM Securities and GUC Trust Units to holders of Allowed General Unsecured Claims in satisfaction of their claims, resolving (that is, seeking allowance or disallowance of all or part of such claims) Disputed General Unsecured Claims that were outstanding as of the Effective Date and distributing New GM Securities and GUC Trust Units in satisfaction of the Resolved Allowed Claims (as defined below).

Under the Plan, the Debtors were required to be dissolved no later than the Dissolution Date. Upon the dissolution of MLC, the GUC Trust assumed responsibility for the winding down of the affairs of the Debtors and resolving and satisfying the Residual Wind-Down Claims.

The GUC Trust had an initial stated term of three years from the Effective Date. On February 6, 2014, the Bankruptcy Court entered an order extending the duration of the GUC Trust to March 31, 2015. The duration of the GUC Trust may in the future be shortened or further extended upon application to and approval by the Bankruptcy Court as necessary to complete the claims resolution process and the wind-down of the Debtors' affairs. The GUC Trust will remain under the jurisdiction of the Bankruptcy Court throughout the term of its existence.

The GUC Trust Assets

As of the Effective Date, the corpus of the GUC Trust consisted solely of approximately $52.7 million in cash contributed by the Debtors to fund the administrative fees and expenses (including certain tax obligations), or the Wind-Down Costs, incurred by the GUC Trust in administering its duties pursuant to the Plan and the GUC Trust Agreement, or the Administrative Fund. The cash comprising the Administrative Fund was obtained by MLC from the DIP Lenders and is subject to a lien held by the DIP Lenders pursuant to the DIP Credit Agreement, with any excess funds remaining in the Administrative Fund required to be returned to the DIP Lenders after (i) the satisfaction in full of all Wind-Down Costs and other liabilities of the GUC Trust (subject to the terms of the GUC Trust Agreement) and (ii) the winding up of the GUC Trust's affairs. As such, the Administrative Fund cannot be utilized for distributions to holders of Allowed General Unsecured Claims.

Moreover, the usage of the Administrative Fund for the payment of fees and expenses of the GUC Trust is subject to a budget, (the "Budget"), which must be submitted on an annual basis to the GUC Trust Monitor and the DIP Lenders for their approval and is updated quarterly as needed. The GUC Trust Agreement provides that any Wind-Down Costs incurred by the GUC Trust that exceed or are not covered by the Budget cannot be paid from the Administrative Fund, except with written consent of the DIP Lenders or Bankruptcy Court approval, in limited circumstances.

The GUC Trust Agreement provides that the Administrative Fund may not be utilized to fund certain specified costs, fees and expenses, which are referred to as Reporting Costs, including those directly or indirectly relating to (i) reports to be prepared and filed by the GUC Trust pursuant to applicable rules, regulations and interpretations of the Securities and Exchange Commission (the "SEC"), (ii) the transfer, registration for transfer and certification of GUC Trust Units, (iii) the application by the Committee (as defined below) to the Internal Revenue Service for a private letter ruling regarding the tax treatment of the GUC Trust and the holders of Allowed General Unsecured Claims in respect to the distribution of New GM Securities, which is discussed in more detail below under the heading "Income Tax Liabilities for Certain Capital Gains and Dividends on New GM Common Stock," and (iv) certain legal proceedings relating to the Term Loan Avoidance Action. In addition, the Administrative Fund cannot be used to fund any current or projected tax liabilities of the GUC Trust, other than those included in the Budget. However, the GUC Trust Agreement provides the GUC Trust Administrator with the authority to set aside from distribution and sell New GM Securities to fund such Reporting Costs (the proceeds of such sales, the "Reporting and Transfer Cash") and projected tax liabilities (other than those included in the Budget), with the approval of the Bankruptcy Court and/or the GUC Trust Monitor, in each case as described below.

The GUC Trust Agreement affords the GUC Trust Administrator, with the approval of the GUC Trust Monitor, the authority to set aside from distribution New GM Securities in numbers sufficient to satisfy (i) any current or projected Wind-Down Costs of the GUC Trust that exceed the amounts budgeted or were not budgeted in the Administrative Fund, including federal income taxes incurred in respect of dividends received by the GUC Trust on New GM Common Stock held by the GUC Trust ("Dividend Taxes"), (ii) any current or projected Reporting Costs that exceed the then current Reporting and Transfer Cash, or (iii) any current or projected Taxes on Distribution (as defined below). This process is not related to, and is separate from, the process of recording current and deferred income tax liabilities, as well as reserves for expected costs of liquidation in the Statement of Net Assets in Liquidation as a matter of financial reporting, which is only required for expected costs of liquidation for which there is a reasonable basis for estimation under applicable accounting standards. See "Critical Accounting Policies and Estimates—Reserves for Expected Costs of Liquidation" and "—Income Taxes" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below. The GUC Trust Administrator reevaluates, on a quarterly basis, the amount of New GM Securities needed to be set aside from distribution for purposes of funding projected liquidation and administrative costs (including projected Dividend Taxes) and potential Taxes on Distribution. The calculation converts estimates of projected liquidation and administrative costs and potential Taxes on Distributions into the number of New GM Securities to be set aside from distribution, using the trailing twelve month average closing prices for the New GM Securities since the Dissolution Date (the date record ownership of the New GM Securities was transferred to the GUC Trust from MLC). For additional information, see "Net Assets in Liquidation—New GM Securities Set Aside from Distribution" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below.

The GUC Trust Administrator may liquidate New GM Securities that have been set aside from distribution to fund (with the required approval of the Bankruptcy Court) the current or projected Wind-Down Costs (including Dividend Taxes) or Reporting Costs of the GUC Trust and (with the required approval of only the GUC Trust Monitor) current and projected Taxes on Distribution of the GUC Trust. The cash proceeds of such sales, and the marketable securities in which such cash proceeds are invested, are referred to as Other Administrative Cash. Pursuant to the GUC Trust Agreement, any cash or marketable securities constituting Other Administrative Cash which remain at the winding up and conclusion of the GUC Trust will be distributed to the holders of GUC Trust Units. The Bankruptcy Court has previously, in March 2012, and again in December 2012, approved the sale of New GM Securities to fund certain accrued and projected Wind-Down Costs which were in excess of the amounts budgeted in the Administrative Fund for such costs, and certain projected Reporting Costs which were in excess of the Reporting and Transfer Cash. Through March 31, 2014, sales of New GM Securities to fund projected Reporting Costs and Wind-Down Costs aggregated approximately $50.2 million. As of March 31, 2014, approximately $13.2 million remained in Other Administrative Cash and was recorded in cash and cash equivalents and marketable securities in the Statement of Net Assets in Liquidation as of March 31, 2014.

Prior to the dissolution of MLC, certain designated assets and the New GM Securities were maintained at MLC (the latter was retained by MLC to avoid federal income taxes that might have been payable by the GUC Trust upon distribution of the New GM Securities with respect to any appreciation of the securities while in possession of the GUC Trust, or Taxes on Distribution; see discussion below). As required by the Plan, MLC transferred to the GUC Trust on the Dissolution Date (i) record ownership of all remaining undistributed New GM Securities, which consisted of 30,967,561 shares of New GM Common Stock, 28,152,186 New GM Series A Warrants and 28,152,186 New GM Series B Warrants, (ii) approximately $2.0 million designated for Reporting Costs, (iii) approximately $1.4 million designated for reimbursing the indenture trustees and the fiscal and paying agents under the Debtors' prepetition debt issuances for costs associated with, among other things, administering distributions to registered holders of the Debtors' prepetition debt issuances, and (iv) certain rights and obligations. Separately, on the Dissolution Date, MLC transferred $500,000 to the Avoidance Action Trust (as defined below) for the purposes of funding any potential public reporting requirements of the Avoidance Action Trust, in which funds the GUC Trust holds a residual interest to the extent unused by the Avoidance Action Trust.

Further, upon the dissolution of MLC, the GUC Trust assumed responsibility for the winding down of the affairs of the Debtors and resolving and satisfying the Residual Wind-Down Claims. Under the Plan, upon the dissolution of MLC, the Debtors were directed to transfer to the GUC Trust, Residual Wind-Down Assets (as defined below) in an amount sufficient, based upon the Debtors' reasonable estimate, to satisfy the Residual Wind-Down Claims and the Residual Wind-Down Costs (as defined below). On the Dissolution Date, MLC transferred approximately $42.8 million in Residual Wind-Down Assets to the GUC Trust (which amount consisted of approximately $40.0 million in cash, including approximately $1.4 million for payment of certain defense costs related to the Term Loan Avoidance Action, or the Avoidance Action Defense Costs, and the transferred benefit of approximately $2.8 million in prepaid expenses).

Pursuant to the GUC Trust Agreement and the Plan, the Residual Wind-Down Assets are to be administered in accordance with the GUC Trust Agreement and Plan and are to be used to satisfy and resolve the Residual Wind-Down Claims and to fund the Residual Wind-Down Costs and certain Avoidance Action Defense Costs. Any unused portions of the Residual Wind-Down Assets must be returned to the DIP Lenders and will not be available for distribution to the holders of GUC Trust Units at the winding up and conclusion of the GUC Trust. If, collectively, the actual amounts of Residual Wind-Down Claims allowed, the Residual Wind-Down Costs and the Avoidance Action Defense Costs exceed the Residual Wind-Down Assets, the GUC Trust Administrator may be required to set aside from distribution and sell additional New GM Securities to fund the shortfall. Any such sale of securities would reduce the numbers of New GM Securities available for distribution to holders of GUC Trust Units.

In March 2014, the GUC Trust received dividends on the New GM Common Stock it held as of the record date of $0.30 per share aggregating approximately $4.6 million. New GM has also declared a dividend of $0.30 per share to holders of New GM Common Stock of record as of June 10, 2014. Such dividends and any future declared dividends on New GM Common Stock are required to be applied to the same purpose as the New GM Common Stock to which such dividends relate. If shares of New GM Common Stock are distributed to holders of subsequently Resolved Allowed Claims and GUC Trust Units, then the dividends relating to those shares will also be distributed to such holders. If, however, shares of New GM Common Stock are sold by the GUC Trust in accordance with the GUC Trust Agreement to fund the costs and liabilities of the GUC Trust, then, in that case, the dividends relating to those shares will be applied to such costs and liabilities of the GUC Trust and (just like the cash proceeds from the sale of the shares of New GM Common Stock) will be maintained in Other Administrative Cash. Because such dividends are applied to the same purpose as the New GM Common Stock, references in this Form 10-K to New GM Common Stock and New GM Securities that have been set aside from distribution, reserved or sold should be understood to include the dividends (if any) relating to such New GM Common Stock, unless expressly indicated otherwise. The amount of cash and cash equivalents held by the GUC Trust that relates to dividends received by the GUC Trust on New GM Common Stock held by the GUC Trust is referred to as Dividend Cash.

The GUC Trust does not and will not engage in any trade or business. As a result, the only income earned by the GUC Trust is interest income and dividends from permitted investments of cash as prescribed by the GUC Trust Agreement. The GUC Trust has no other sources of income. As of March 31, 2014, the GUC Trust had an aggregate of approximately $14.9 million in cash and cash equivalents and $44.4 million in marketable securities consisting of corporate commercial paper and municipal government commercial paper and variable rate notes.

Functions and Responsibilities of the GUC Trust

The functions and responsibilities of the GUC Trust are governed by the Plan and the GUC Trust Agreement, as amended, with the oversight of the GUC Trust Monitor. The GUC Trust has no officers, directors or employees. The GUC Trust is administered by the GUC Trust Administrator, which is authorized by the GUC Trust Agreement to engage Trust Professionals to assist the GUC Trust Administrator in the administration of the GUC Trust. Accordingly, the GUC Trust and GUC Trust Administrator rely on receiving accurate information, reports and other representations from (i) the Trust Professionals, (ii) the GUC Trust Monitor, and (iii) other service providers to the GUC Trust. Notwithstanding such reliance, the GUC Trust Administrator is ultimately responsible for the disclosure provided in this Form 10-K. Under the GUC Trust Agreement, among other duties and obligations, the GUC Trust is obligated to distribute the assets comprising the corpus of the GUC Trust to satisfy Allowed General Unsecured Claims, prosecute and resolve objections to Disputed General Unsecured Claims, take all necessary actions to administer the wind-down of the affairs of the Debtors and resolve and satisfy (to the extent allowed) the Residual Wind-Down Claims assumed by the GUC Trust.

- Satisfaction of Allowed General Unsecured Claims

Pursuant to the GUC Trust Agreement, the GUC Trust is required to make quarterly distributions, provided that either (i) the Minimum Threshold (as defined below) with respect to the Excess GUC Trust Distributable Assets (as defined below) is reached or (ii) Resolved Allowed Claims have arisen during the GUC Trust's preceding fiscal quarter. If a distribution of Excess GUC Trust Distributable Assets is required to be made, then the GUC Trust Administrator must select the record date for such distribution. Each quarterly distribution is made as promptly as practicable following the close of the immediately preceding fiscal quarter.

In addition to New GM Securities and Dividend Cash, the GUC Trust Agreement provides for the distribution of GUC Trust Units to holders of Allowed General Unsecured Claims equal to one GUC Trust Unit per $1,000 in Allowed General Unsecured Claims, subject to rounding under the GUC Trust Agreement. Each GUC Trust Unit represents the contingent right to receive, on a pro rata basis, the excess assets of the GUC Trust, including additional New GM Securities (if and to the extent such New GM Securities are not required for the satisfaction of the Resolved Allowed Claims), Dividend Cash associated with such additional New GM Securities and

Other Administrative Cash, if any, available for distribution in respect of the GUC Trust Units, either through a periodic distribution as provided for under the GUC Trust Agreement, or upon the dissolution of the GUC Trust, in each case subject to the terms and conditions of the GUC Trust Agreement and the Plan, or the Excess GUC Trust Distributable Assets.

Pursuant to the GUC Trust Agreement, quarterly distributions are required to be made to (i) holders of Resolved Allowed Claims, and (ii) beneficiaries of GUC Trust Units (including persons listed in (i)), subject to the following limitation. The GUC Trust will make quarterly distributions in respect of the GUC Trust Units only if and to the extent that certain previously Disputed General Unsecured Claims asserted against the Debtors are either disallowed or are otherwise resolved favorably to the Debtors' estates (thereby reducing the amount of GUC Trust distributable assets which would be required to satisfy in full all the then-remaining Disputed General Unsecured Claims) and the resulting amount of Excess GUC Trust Distributable Assets as of the end of the relevant quarter exceeds thresholds set forth in the GUC Trust Agreement, or the Minimum Threshold. The Minimum Threshold is equal to: (i) with respect to New GM Common Stock, 1,000,000 shares of New GM Common Stock, (ii) with respect to the New GM Series A Warrants, warrants to acquire 909,091 shares of New GM Common Stock (subject to customary adjustment), (iii) with respect to the New GM Series B Warrants, warrants to acquire 909,091 shares of New GM Common Stock (subject to customary adjustment), and (iv) with respect to cash, $5 million. Notwithstanding the foregoing, holders of Resolved Allowed Claims receiving quarterly distributions will additionally receive distributions in respect of their GUC Trust Units that such recipients would have previously received had they been holders of Initial Allowed General Unsecured Claims (as defined below).

Holders of Allowed General Unsecured Claims who do not satisfy certain informational requirements by a date, or dates, established by the GUC Trust Administrator in connection with a quarterly distribution may not receive New GM Securities or cash pursuant to such distribution; provided, however, that each such holder will be entitled to participate in the first quarterly distribution following its satisfaction of such informational requirements. In addition, if a holder of an Allowed General Unsecured Claim fails to satisfy such informational requirements prior to dissolution of the GUC Trust, such holder may risk forfeiting the distribution to which it would otherwise be entitled, and any such assets would be distributed to the beneficiaries of GUC Trust Units.

On or about the Effective Date, there were approximately $29,771 million in Allowed General Unsecured Claims, or the Initial Allowed General Unsecured Claims. As of March 31, 2014, there were approximately $31,854 million in Allowed General Unsecured Claims. See the table on page 31 for a summary of the Allowed General Unsecured Claims, Disputed General Unsecured Claims and Term Loan Avoidance Action Claims (as defined below).

On April 21, 2011, as supplemented by a secondary distribution on May 26, 2011, the GUC Trust made its initial distribution of New GM Securities to holders of Initial Allowed General Unsecured Claims, or the Initial Distribution. The GUC Trust has made nine subsequent quarterly distributions, on July 28, 2011, October 28, 2011, April 27, 2012, August 3, 2012, November 5, 2012, February 8, 2013, May 10, 2013, August 9, 2013, and October 31, 2013, each in respect of the Disputed General Unsecured Claims that were resolved in the immediately preceding fiscal quarter.

The quarterly distributions in respect of the fiscal quarters ended June 30, 2011 and September 30, 2011 reflected distributions to both holders of Resolved Allowed Claims, as well as holders of GUC Trust Units. Because the amount of Excess GUC Trust Distributable Assets has not exceeded the Minimum Threshold for any quarter following the quarter ended September 30, 2011, due in principal part to the reserving, or setting-aside, of New GM Securities for the purposes of funding potential Taxes on Distribution as described below, no distributions have been made in respect of the GUC Trust Units since the quarterly distribution on October 28, 2011, other than the Special Excess Distribution (as defined below). Rather, other than the Special Excess Distribution, all such subsequent distributions have consisted solely of distributions to holders of newly Allowed General Unsecured Claims and holders of previously Allowed General Unsecured Claims who initially failed to fulfill the informational requirements set forth in the GUC Trust Agreement, but subsequently successfully fulfilled such requirements.

In respect of Allowed General Unsecured Claims aggregating $31,854 million at March 31, 2014, the GUC Trust has distributed, or was obligated to distribute, in the aggregate, 134,106,321 shares of New GM Common Stock, 121,914,975 of each series of New GM Warrants and 31,853,702 GUC Trust Units. See the table on page 32 for a summary of the activity in the New GM Securities and related Dividend Cash, that comprise the GUC Trust's distributable assets, including the numbers of New GM Securities distributed through or distributable as of March 31, 2014, as well as the numbers of New GM Securities and the amount of related Dividend Cash available for distribution to holders of GUC Trust Units as of March 31, 2014.

As discussed above, in addition to New GM Securities and Dividend Cash, the GUC Trust Agreement also provides for the distribution of beneficial interests in units, or GUC Trust Units, to holders of Allowed General Unsecured Claims in an amount equal to one GUC Trust Unit per $1,000 in Allowed General Unsecured Claims, subject to rounding under the GUC Trust Agreement. Each GUC Trust Unit represents the contingent right to receive, on a pro rata basis, a share of the Excess GUC Trust Distributable Assets. Pursuant to a No Action Letter received from the SEC on May 23, 2012 (the "No Action Letter"), the GUC Trust Units are currently issued in book-entry form only, represented by one or more global certificates registered in the name of the Depository Trust Company (which is referred to in this Form 10-K as DTC), as depositary, or Cede & Co., its nominee. See "Description of the GUC Trust Units" below for a more detailed discussion of the GUC Trust Units. As such, the GUC Trust Units are transferable in accordance with the procedures of DTC and its direct and indirect participants. The GUC Trust has issued additional GUC Trust Units, in transferable form, in connection with each of the quarterly distributions that occurred in respect of the fiscal quarter ended June 30, 2012 and thereafter. As of March 31, 2014, the total number of GUC Trust Units outstanding or issuable was 31,853,702.

The Plan prohibits the distribution of fractional New GM Securities in respect of Allowed General Unsecured Claims and GUC Trust Units. Cash distributions are made in lieu of fractional New GM Securities to beneficiaries of GUC Trust Units, subject to certain minimum cash distribution thresholds. In addition, the GUC Trust may distribute cash in lieu of New GM Securities to any governmental entity to the extent such governmental entity has requested a sale of such New GM Securities and demonstrated to the satisfaction of the GUC Trust Administrator that such governmental entity is precluded by applicable law from receiving distributions of New GM Securities. As a result, since the Effective Date, the GUC Trust has sold, exclusive of sales of New GM Securities to fund Wind-Down Costs and Reporting Costs as described above, an aggregate of 24,259 shares of New GM Common Stock and 22,174 of each series of New GM Warrants, realizing net proceeds of approximately $1.4 million. These sales occurred in the years ended March 31, 2014 and 2013 and proceeds from these sales were distributed to qualifying governmental entities or beneficiaries of GUC Trust Units, as applicable.

- Resolution of Disputed General Unsecured Claims

There were approximately $8,154 million in Disputed General Unsecured Claims as of the Effective Date. This amount reflects liquidated disputed claims and a Bankruptcy Court ordered reserve for unliquidated disputed claims, but does not include potential Term Loan Avoidance Action Claims. As of March 31, 2014, there were approximately $79.5 million in Disputed General Unsecured Claims, which reflects a decrease of approximately $8,074 million as compared to the amount of Disputed General Unsecured Claims existing on or around the Effective Date. See the table on page 31 for a summary of the status of the claims resolution process as of March 31, 2014.

The process of resolving Disputed General Unsecured Claims is generally administered by the GUC Trust through Trust Professionals it retains specifically for this purpose. If the GUC Trust Administrator files an objection to a Disputed General Unsecured Claim, certain claimants participate in alternative dispute resolution proceedings, including mediation and arbitration, or ADR Proceedings, to determine the validity of their claims. Such claimants may be entitled to a hearing before the Bankruptcy Court if their claims cannot be resolved through ADR Proceedings. Claimants that are not subject to ADR Proceedings are entitled to a hearing before the Bankruptcy Court to determine the validity of their claims. The GUC Trust Administrator also has the authority to settle Disputed General Unsecured Claims, in accordance with the terms and procedures set forth in the GUC Trust Agreement.

In an attempt to ensure that there are sufficient New GM Securities available to provide distributions to all holders of Resolved Allowed Claims as if such holders were holders of Initial Allowed General Unsecured Claims, the GUC Trust Agreement authorizes and directs the GUC Trust Administrator to withhold from distributions the number of New GM Securities that would be sufficient to satisfy all Disputed General Unsecured Claims and Term Loan Avoidance Action Claims in the event that such claims were allowed in full. To the extent that all or a portion of a Disputed General Unsecured Claim is disallowed by order of the Bankruptcy Court, by order of the tribunal presiding over the ADR Proceeding, if applicable, or by settlement with the GUC Trust, such portion of the Disputed General Unsecured Claim that is disallowed will not be entitled to a distribution of such New GM Securities or beneficial interests in GUC Trust Units from the GUC Trust (subject to any appeal rights of the claimant). The portion of such New GM Securities reserved for the satisfaction of the disallowed claim will instead become Excess GUC Trust Distributable Assets available for distribution to beneficiaries of GUC Trust Units. To the extent that a Disputed General Unsecured Claim is fully resolved, and such resolution results in all or a portion of the original Disputed General Unsecured Claim being allowed by the Bankruptcy Court, by order of the tribunal presiding over the ADR Proceeding, if applicable, or by settlement with the GUC Trust, such allowed portion of the Disputed General Unsecured Claim will be considered an Allowed General Unsecured Claim and the holder will be entitled to the distribution of New GM Securities and beneficial interests in GUC Trust Units from the GUC Trust corresponding to what the holder would have received had the claim been allowed as of the Effective Date.

In certain circumstances, holders of Resolved Allowed Claims and GUC Trust Units will receive from the GUC Trust cash in lieu of or in addition to New GM Securities. This will occur when New GM declares cash dividends on the New GM Common Stock held by the GUC Trust, in which case the holders of subsequently Resolved Allowed Claims and GUC Trust Units will receive the cash dividends that had been paid in respect of the shares of New GM Common Stock they receive. During March 2014, the GUC Trust received approximately $4.6 million in dividends on its holdings of New GM Common Stock. See "Statement of Changes in Net Assets in Liquidation" and "Net Assets in Liquidation" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below. Also, if the GUC Trust sells New GM Warrants that are about to expire, the holders of subsequent Resolved Allowed Claims and GUC Trust Units would receive the cash realized by the GUC Trust on the sale of the New GM Warrants that otherwise would have been distributed to them. Also, the GUC Trust may distribute cash in lieu of New GM Securities to any governmental entity to the extent such governmental entity has requested a sale of such New GM Securities and demonstrated to the satisfaction of the GUC Trust Administrator that such governmental entity is precluded by applicable law from receiving distributions of New GM Securities. Finally the GUC Trust may distribute cash in lieu of fractional New GM Securities in any distribution of Excess GUC Trust Distributable Assets, subject to any distribution rules or rounding under the Plan, the GUC Trust Agreement and/or the rules of any applicable clearing system. For each $1,000 in amount of Allowed General Unsecured

Claims (including Resolved Allowed Claims), each holder of such claim is currently (following the Special Excess Distribution) entitled to receive (upon delivery of any information required by the GUC Trust) approximately 4.19 shares of New GM Common Stock (and related Dividend Cash) and approximately 3.81 warrants of each series of New GM Warrants, as well as one GUC Trust Unit, subject in each case to rounding under the Plan, the GUC Trust Agreement and/or the rules of any applicable clearing system and exclusive of any securities received, or to be received, in respect of GUC Trust Units.

- Resolution and Satisfaction of Residual Wind-Down Claims

In accordance with the Plan, each of the Debtors was dissolved on or prior to the Dissolution Date. Upon the dissolution of MLC, the New GM Securities and certain remaining cash assets of MLC were transferred to the GUC Trust and the GUC Trust assumed responsibility for the wind-down of the Debtors. This includes monitoring and enforcing the implementation of the Plan as it relates to the wind-down, paying taxes and filing tax returns, making any other necessary filings related to the wind-down and taking any other actions necessary or appropriate to wind-down the Debtors and obtain an order, or orders, closing the chapter 11 cases of the Debtors. The GUC Trust is also responsible for resolving and satisfying (to the extent allowed) all remaining disputed Residual Wind-Down Claims.

Under the Plan, the Debtors were directed to transfer to the GUC Trust assets in an amount sufficient, based upon the Debtors' reasonable estimate, to satisfy the ultimate allowed amount of the Residual Wind-Down Claims, or the Residual Wind-Down Assets, including the costs, fees and expenses related to satisfying and resolving the Residual Wind-Down Claims, or the Residual Wind-Down Costs. On the Dissolution Date, MLC transferred approximately $42.8 million in Residual Wind-Down Assets to the GUC Trust (which amount consisted of approximately $40.0 million in cash (including approximately $1.4 million for the payment of Avoidance Action Defense Costs) and the transferred benefit of approximately $2.8 million in prepaid expenses. Based on the Debtors' estimate of the amount necessary to satisfy the ultimate allowed amount of the Residual Wind-Down Claims, the GUC Trust Administrator established a reserve for Residual Wind-Down Claims of approximately $33.8 million relating to approximately $246.2 million in Residual Wind-Down Claims (which amount was increased to $248.9 million by additional Residual Wind-Down Claims arising subsequent thereto). In addition, the GUC Trust increased its reserve for liquidation costs by approximately $9.0 million for Residual Wind-Down Costs associated with these obligations and Avoidance Action Defense Costs. Since the Dissolution Date, the GUC Trust has resolved approximately $235.8 million in disputed Residual Wind-Down Claims, allowing $7.3 million, while disallowing $228.5 million.

As of March 31, 2014, the remaining Residual Wind-Down Claims totaled approximately $13.1 million, subject to increase for new Residual Wind-Down Claims that are expected to arise with respect to Avoidance Action Defense Costs, as described below. In comparison, the reserve for Residual Wind-Down Claims and the remaining Residual Wind-Down Assets totaled $28.7 million and $30.5 million, respectively. The GUC Trust Administrator has objected to, or intends to object to, substantially all of the remaining Residual Wind-Down Claims that are not consensually resolved. The Residual Wind-Down Assets aggregating $30.5 million as of March 31, 2014 are recorded in cash and cash equivalents, marketable securities, and other assets and deposits in the accompanying Statement of Net Assets in Liquidation at March 31, 2014. A corresponding amount, in the aggregate, is recorded in the reserve for Residual Wind-Down Claims, reserves for expected costs of liquidation and accounts payable and accrued liabilities in the Statement of Net Assets in Liquidation at March 31, 2014.

The amount of Avoidance Action Defense Costs incurred to date exceeds the corresponding cash of $1.4 million received by the GUC Trust from MLC on the Dissolution Date by approximately $0.7 million. As a result, new Residual Wind-Down Claims have arisen in the amount of such excess. The Term Loan Avoidance Action is currently pending before the U.S. Court of Appeals for the Second Circuit, and it is expected that additional Avoidance Action Defense Costs will be incurred for which additional Residual Wind-Down Claims will arise, to be paid from the remaining Residual Wind-Down Assets and, following the depletion of such assets, Other Administrative Cash or the sale of New GM Securities.

Should the ultimate allowed amount of Residual Wind-Down Claims and the Residual Wind-Down Costs be less than the Residual Wind-Down Assets, any excess funds will be returned to the DIP Lenders. If the Residual Wind-Down Assets are not adequate to satisfy the Residual Wind-Down Claims and/or the Residual Wind-Down Costs, such deficiency will be satisfied by any remaining Other Administrative Cash designated by the GUC Trust Administrator for such purposes. If there is no remaining Other Administrative Cash designated for such purposes, the GUC Trust Administrator is authorized, with GUC Trust Monitor approval, to reserve and, with Bankruptcy Court approval, sell New GM Securities to cover the shortfall. To the extent that New GM Securities are reserved and sold to obtain funding to complete the wind-down of the Debtors or satisfy Residual Wind-Down Claims, such securities will not be available for distribution to the beneficiaries of the GUC Trust. Therefore, the amount of Residual Wind-Down Claims and Residual Wind-Down Costs could reduce the assets of the GUC Trust available for distribution. After the GUC Trust has concluded its affairs, any funds remaining that were obtained from New GM Securities sold to fund the resolution of Residual Wind-Down Claims or the distribution of Residual Wind-Down Assets (including any related Dividend Cash) will be distributed to the beneficiaries of the GUC Trust Units.

- Administrative Structure and Responsibilities of the GUC Trust

The GUC Trust has no officers, directors or employees. The GUC Trust is administered by the GUC Trust Administrator, which is authorized by the GUC Trust Agreement to engage Trust Professionals to assist the GUC Trust Administrator in the administration of the GUC Trust. The GUC Trust Administrator is authorized by the GUC Trust Agreement to retain, pay, oversee, direct the services of, and (subject to GUC Trust Monitor approval) terminate Trust Professionals, to assist in the administration of the GUC Trust, particularly in connection with the claims resolution process, the preparation of financial statements, and the GUC Trust's record keeping and reporting functions. The GUC Trust and GUC Trust Administrator rely solely on receiving accurate information, reports and other representations from (i) the Trust Professionals, (ii) the GUC Trust Monitor, and (iii) other service providers to the GUC Trust. In filing this Form 10-K and executing any related documentation on behalf of the GUC Trust, the GUC Trust Administrator has relied upon the accuracy of such reports, information and representations. Notwithstanding such reliance, the GUC Trust Administrator is ultimately responsible for the disclosure provided in this Form 10-K. In addition to issuing GUC Trust Units and making distributions of New GM Securities to holders of Allowed General Unsecured Claims, the GUC Trust is also responsible for the administrative tasks that are incidental to the resolution and, to the extent they are allowed, satisfaction of Disputed General Unsecured Claims remaining against the Debtors as of the Effective Date.

The GUC Trust Monitor was appointed for the purpose of overseeing the activities of the GUC Trust Administrator. Pursuant to the GUC Trust Agreement, the GUC Trust Administrator is required to obtain the approval of the GUC Trust Monitor for a variety of actions, including but not limited to: preparation of budgets; reserving New GM Securities for the purposes of satisfying fees, costs and expenses of the GUC Trust (including Taxes on Distribution and Dividend Taxes (as defined below)); the sale of New GM Securities to satisfy Taxes on Distribution; the incurrence of any cost or expense in excess of 10% of any line item in the Budget measured on a yearly basis (except to the extent such cost or expense is approved by the Bankruptcy Court); settling Disputed General Unsecured Claims in excess of $10.0 million; the retention or termination of Trust Professionals; and amendments to the GUC Trust Agreement.

As discussed above, the GUC Trust was initially provided with the Administrative Fund by MLC for the purposes of paying Wind-Down Costs. The Administrative Fund was created with cash provided to MLC by the DIP Lenders. It is fixed in amount and payments from the Administrative Fund are made in accordance with the Budget. The principal expenses of the GUC Trust in connection with the Administrative Fund are professional, advisory and administrative fees of the legal and financial advisors of the GUC Trust and the GUC Trust Administrator and the GUC Trust Monitor. The GUC Trust has no income other than income on permitted investments of cash prescribed by the GUC Trust Agreement.

As of March 31, 2014, approximately $11.6 million remained in the Administrative Fund and is recorded in cash and cash equivalents and marketable securities (aggregating $10.6 million) and prepaid and other assets (approximating $1.0 million) in the Statement of Net Assets in Liquidation. Of that amount of $11.6 million, approximately $8.0 million has been separately designated for the satisfaction of certain costs and liabilities of the GUC Trust (other than Reporting Costs) and $3.6 million is available for other Wind-Down Costs, which funds must be exhausted prior to the use of any Other Administrative Cash for such purposes. If there is cash remaining in the Administrative Fund after the GUC Trust has concluded its affairs, the remaining cash will be returned to the DIP Lenders. If the GUC Trust Administrator determines that (i) the Administrative Fund is not sufficient to satisfy the current or projected Wind-Down Costs (including Dividend Taxes), (ii) the Reporting and Transfer Cash is not sufficient to satisfy the current or projected Reporting Costs, or (iii) the GUC Trust is required to fund Taxes on Distribution, the GUC Trust Administrator, with the approval of the GUC Trust Monitor, is authorized to reserve New GM Securities for these purposes. The GUC Trust Administrator may then liquidate such reserved New GM Securities to fund these costs and expenses, with the required approval of the Bankruptcy Court (other than with respect to sales of New GM Securities for the purposes of funding Taxes on Distribution, pursuant to which only GUC Trust Monitor approval is required), and the proceeds from such liquidations of New GM Securities constitute part of the Other Administrative Cash.

New GM Securities that are reserved or sold in the manner described above will not be available for distribution to the beneficiaries of GUC Trust Units. As such, increased Wind-Down Costs (including Dividend Taxes), Reporting Costs and/or Taxes on Distribution could reduce the GUC Trust's otherwise distributable assets. To the extent that any reserved New GM Securities, or funds remaining from the sale of reserved New GM Securities, are not ultimately required and are held by the GUC Trust at the time of its dissolution, such remaining New GM Securities and funds, including the Other Administrative Cash, will be distributed by the GUC Trust to the holders of the GUC Trust Units.

Other than for the matters described above and in "—Resolution and Satisfaction of Residual Wind-Down Claims," and matters that are incidental to them, the GUC Trust does not and will not engage in any business activities. In particular, the GUC Trust does not and will not engage in any trade or business.

Income Tax Liabilities for Certain Capital Gains and Dividends on New GM Common Stock

The GUC Trust incurs income tax liabilities on any net capital gains realized upon the distribution of New GM Securities to holders of Allowed General Unsecured Claims or GUC Trust Units or by sale of New GM Securities (unless such net capital gains are offset by deductible expenses and accumulated net operating losses), which are referred to as Taxes on Distribution. The GUC Trust also incurs income tax liabilities on interest income and dividends received on New GM Common Stock held by the GUC Trust (such income tax liabilities on dividends received on New GM Common Stock are referred to as Dividend Taxes). The GUC Trust records any current taxes payable from such realized net gains and interest and dividends (net of deductible operating losses) and a deferred tax liability at the end of each quarter for all of the New GM Securities that it then holds, where the market prices of such New GM Securities exceed their tax basis. For the years ended March 31, 2014 and 2013, the amount of such deferred tax liability recorded is equal to the GUC Trust's statutory rate of 39.6% applied to the excess of the market value of the New GM Securities over their tax basis. Where the market prices of the New GM Securities held at quarter end are less than their tax basis, a deferred tax asset with a corresponding valuation allowance is recorded, resulting in no net deferred tax asset at such quarter end. A full valuation allowance is recorded under such circumstances, because realization of the deferred tax asset is uncertain (in that it is dependent upon the generation of taxable gains upon the sale or distribution of New GM Securities in the future, which is not determinable prior to occurrence, or upon the receipt of future dividends on the GUC Trust holdings of New GM Common Stock, for which a reasonable basis for estimation does not exist at this time). Because the amount of any deferred tax liability recorded at any quarter end is largely dependent upon the market prices of the New GM Securities held at such quarter end, fluctuations in such market prices will result in fluctuations in the deferred tax liability recorded in the Statement of Net Assets in Liquidation and in the income tax provision or benefit recorded in the Statement of Changes in Net Assets in Liquidation for such quarter. See "Critical Accounting Policies and Estimates—Income Taxes" and "Statement of Changes in Net Assets in Liquidation" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below.

Upon the dissolution and winding up of MLC on the Dissolution Date, record ownership of all undistributed New GM Securities was transferred to the GUC Trust. Using the value of the New GM Securities as of that date, the tax basis per share or warrant of the New GM Securities on the Dissolution Date was $19.87 for the New GM Common Stock, $11.38 for the New GM Series A Warrants and $7.88 for the New GM Series B Warrants. Prior to the year ended March 31, 2013, such tax basis was used in the Company's U.S. federal income tax return to determine the taxable gain or loss on the disposition of New GM Securities since their transfer. As described in Note 9, "Income Tax Benefit (Provision)" to the financial statements, during the quarter ended September 30, 2013, the GUC Trust made a determination to file its U.S. federal income tax returns taking the position that beneficial ownership for a substantial majority of New GM Securities transferred from MLC to the GUC Trust on March 31, 2011, and that the tax basis of such New GM Securities should be determined with reference to the value of such securities on such date instead of December 15, 2011, when record ownership of the remaining New GM Securities still held by MLC was transferred from MLC to the GUC Trust. For the remaining substantial minority of New GM Securities transferred from MLC to the GUC Trust, the GUC Trust determined that transfer of beneficial ownership occurred on other dates for which the tax basis should be determined by reference to the value of such securities on such dates. This new tax position resulted in an increased tax basis of the New GM Securities from the prior tax position and, therefore, reduced taxable gains and increased taxable losses on distributions and sales of New GM Securities since March 31, 2011. As a result, a tax benefit was recognized because the GUC Trust believed, based on the available evidence and consultation with GUC Trust professionals, that it was more likely than not that the new tax position in the amounts to be reflected in the GUC Trust's income tax returns, will be sustained on examination by the Internal Revenue Service, based on the technical merits of the position. Subsequently, the GUC Trust filed its U.S. federal income tax returns for the year ended March 31, 2013 with the Internal Revenue Service using the new tax position. Although the GUC Trust's federal income tax returns for the years ended March 31, 2012 and 2013 are no longer subject to examination by the Internal Revenue Service as a result of the application of Section 505(b) of the Bankruptcy Code, this new tax position, as of the date hereof, has not been sustained on examination by the Internal Revenue Service. Accordingly, capital loss carryovers generated in the years ended March 31, 2012 and 2013, from the new tax position, could be subject to examination by the Internal Revenue Service in subsequent years when those losses are utilized.

The GUC Trust Administrator reevaluates, on a quarterly basis, the numbers of New GM Securities to be set aside from distribution to fund potential Taxes on Distribution. New GM Securities set aside from distribution are placed in reserve and, to the extent sold, the proceeds thereof constitute Other Administrative Cash. This determination is made on a basis different than that used to calculate deferred tax liabilities for financial statement purposes, as described above. The current methodology for calculating such set asides estimates potential Taxes on Distribution by applying the applicable U.S. federal income tax rate to estimates of potential capital gains, which are arrived at by comparing the highest closing price for the New GM Securities since December 15, 2011, against the tax basis of the New GM Securities on December 15, 2011 (as determined based on the date of transfer of record ownership of the New GM Securities). The set aside calculation methodology then converts the estimate of potential Taxes on Distribution into the numbers of New GM Securities to be set aside from distribution by dividing such estimate by the trailing twelve month average closing prices for the New GM Securities. By contrast, in calculating deferred tax liabilities for purposes of financial reporting, under applicable generally accepted accounting principles, the GUC Trust calculates estimated capital gains as the difference between (a) the tax basis of the New GM Securities for financial reporting purposes and (b) the closing price of such New GM Securities as of the last trading date of the most recent fiscal quarter. As described above, during the quarter ended September 30, 2013, the GUC Trust made a determination to file its U.S. federal income tax returns taking the tax position that beneficial ownership for a substantial majority of New GM Securities transferred from MLC to the GUC Trust on dates other than December 15, 2011. Because the new tax position has not yet been sustained on examination by the Internal Revenue Service, however, as a conservative measure, the GUC Trust Administrator has determined not to revise the "set aside" calculation methodology described above unless and until the new tax position has been sustained on examination by the Internal Revenue Service, or the liability of the GUC Trust for Taxes on Distribution has been finally determined in accordance with Section 505(b) of the Bankruptcy Code, for all applicable income tax returns, including the GUC Trust's U.S. federal income tax returns for the year ended March 31, 2014 and subsequent years.

The GUC Trust also reevaluates, on a quarterly basis, the number of New GM Securities to be set aside from distribution to fund projected Dividend Taxes, as part of its evaluation of the numbers of New GM Securities necessary to fund projected liquidation and administrative costs of the GUC Trust. This determination is made on a basis different than that used to calculate reserves for financial statement purposes. The current methodology for calculating such set asides converts estimates of projected Dividend Taxes into the number of New GM Securities to be set aside from distribution by dividing such estimates by the trailing twelve month average closing prices for the New GM Securities. Currently, the GUC Trust has only set aside New GM Securities in numbers sufficient to cover dividends actually received or declared by New GM. However, the GUC Trust Administrator reserves the right to increase or decrease the set aside for Wind-Down Costs in numbers sufficient to cover all estimated Dividend Taxes associated with all then anticipated potential future dividends, which could significantly impact the numbers of New GM Securities required to be set aside for such purposes.

For additional information, see "Net Assets in Liquidation—New GM Securities Set Aside from Distribution" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below.

Term Loan Avoidance Action

On July 31, 2009, the Committee commenced a legal action against certain prepetition lenders of the Debtors, styled as Official Committee of Unsecured Creditors of Motors Liquidation Co. v. JPMorgan Chase Bank, N.A. et al. (Adv. Pro. No. 09-00504 (Bankr. S.D.N.Y. July 31, 2009)), which is referred to as the Term Loan Avoidance Action. The Term Loan Avoidance Action seeks the return to a trust established for the purpose of holding and prosecuting the Term Loan Avoidance Action, or the Avoidance Action Trust, of approximately $1.5 billion that had been transferred to a consortium of prepetition lenders of the Debtors, pursuant to the court order approving the debtor-in-possession loans made by the DIP Lenders to MLC. On the Dissolution Date, the Term Loan Avoidance Action was transferred to the Avoidance Action Trust. The rights to substantially all of the recoveries on the Term Loan Avoidance Action through the Avoidance Action Trust, if any, are currently under dispute, with both the DIP Lenders and the Committee, on behalf of the holders of Allowed General Unsecured Claims, claiming to be the proper beneficiaries of such proceeds. If the DIP Lenders are deemed to be proper beneficiaries of the proceeds of the Term Loan Avoidance Action, then the bulk of any amounts reclaimed from prepetition lenders will be distributed to the DIP Lenders; and if the Committee, on behalf of the holders of Allowed General Unsecured Claims, are deemed to be proper beneficiaries of the proceeds of the Term Loan Avoidance Action, then the bulk of any amounts reclaimed from prepetition lenders will be distributed directly to the holders of Allowed General Unsecured Claims. Accordingly, regardless of the outcome of such proceedings, in no event will any amounts reclaimed from the prepetition lenders be transferred to the GUC Trust, and no such amounts will be distributed to holders of GUC Trust Units in respect of such GUC Trust Units.

If Wilmington Trust Company, not in its individual capacity but solely in its capacity as the trustee and trust administrator of the Avoidance Action Trust, which we refer to as the Avoidance Action Trust Administrator, is successful in its prosecution of the Term Loan Avoidance Action, any amounts recovered by the Avoidance Action Trust will, pursuant to the Plan, give rise to Allowed General Unsecured Claims on behalf of the prepetition lenders from which such amounts were recovered (as beneficiaries of the GUC Trust), which we also refer to as Term Loan Avoidance Action Claims. (As used in this Form 10-K, the amounts of "Disputed General Unsecured Claims" do not include any potential Term Loan Avoidance Action Claims.) Unless and until Term Loan Avoidance Action Claims arise, the potential holders of such claims will not be entitled to receive a distribution from the GUC Trust. However, if and to the extent that such Term Loan Avoidance Action Claims do arise, the holders of such claims will be entitled to receive a distribution from the GUC Trust. As noted above, in no event will any funds reclaimed from the prepetition lenders be transferred to the GUC Trust or be distributed to holders of GUC Trust Units in respect of such GUC Trust Units. Accordingly, in the event of the successful prosecution of the Term Loan Avoidance Action by the Avoidance Action Trust, a holder of a GUC Trust Unit that does not hold a corresponding Allowed General Unsecured Claim (because such holder received the GUC Trust Unit as a subsequent transferee and not in a direct distribution from the GUC Trust in satisfaction of an Allowed General Unsecured Claim) will potentially have its recovery diluted through the incurrence of Term Loan Avoidance Action Claims by the GUC Trust, without receiving the benefit of any cash recovered pursuant to the Term Loan Avoidance Action. Moreover, because the ownership of the beneficial interests in the Avoidance Action Trust is currently under dispute, even a holder of a GUC Trust Unit that also holds a corresponding Allowed General Unsecured Claim may not benefit from any funds recovered under the Term Loan Avoidance Action.

Pursuant to the Plan, the GUC Trust is obligated to satisfy certain Term Loan Avoidance Action litigation costs, as described under the heading "The GUC Trust Assets" above, subject to the right of the GUC Trust to seek disgorgement in accordance with the terms of the Plan, which litigation costs we refer to as Avoidance Action Defense Costs. As described under the heading "Functions and Responsibilities of the GUC Trust—Resolution and Satisfaction of Residual Wind-Down Claims" above, the amount of Avoidance Action Defense Costs incurred to date exceeds the amount of Residual Wind-Down Assets received from MLC which was designated for this purpose by approximately $0.7 million. As a result, new Residual Wind-Down Claims have arisen in the amount of such excess. The Term Loan Avoidance Action is currently pending before the U.S. Court of Appeals for the Second Circuit, and it is expected that additional Avoidance Action Defense Costs will be incurred for which additional Residual Wind-Down Claims will arise, to be paid from the other remaining Residual Wind-Down Assets and, following the depletion of such assets, Other Administrative Cash or the sale of New GM Securities.

For additional information about the Term Loan Avoidance Action, see "Term Loan Avoidance Action" in Item 3 ("Legal Proceedings") below.

Nova Scotia Settlement

On October 21, 2013, the Bankruptcy Court entered an order (the "Nova Scotia Order") approving a settlement agreement (the "Nova Scotia Settlement") relating to claims arising from the 8.375% guaranteed notes due December 7, 2015 and the 8.875% guaranteed notes due July 10, 2023, in each case issued in 2003 by General Motors Nova Scotia Finance Company (the "Nova Scotia Claims"). Pursuant to the Settlement Agreement, the Nova Scotia Claims were reduced and allowed in an aggregate amount of $1.55 billion. As a result, on or about December 2, 2013, in accordance with the Nova Scotia Settlement and the Nova Scotia Order, the GUC Trust made a distribution solely to holders of the allowed Nova Scotia Claims, consisting of, in the aggregate, 6,174,015 shares of New GM Common Stock, 5,612,741 New GM Series A Warrants, 5,612,741 New GM Series B Warrants, and 1,550,000 GUC Trust Units (the "Special Nova Scotia Distribution"). In addition, on or about December 23, 2013, in accordance with the Nova Scotia Settlement and the Nova Scotia Order, the GUC Trust made a special distribution of Excess GUC Trust Distributable Assets to all holders of GUC Trust Units, consisting of 6,735,070 shares of New GM Common Stock, 6,122,789 New GM Series A Warrants, and 6,122,789 New GM Series B Warrants (the "Special Excess Distribution").

Dissolution of the GUC Trust

The GUC Trust had an initial stated term of three years from the Effective Date (ending on March 31, 2014). On February 6, 2014, the Bankruptcy Court entered an order extending the duration of the GUC Trust to March 31, 2015. The GUC Trust Administrator can apply to the Bankruptcy Court for a shorter or longer term in order to resolve all Disputed General Unsecured Claims and Term Loan Avoidance Action Claims or to complete the resolution of the Residual Wind-Down Claims and the distribution of any remaining assets of the Debtors. It is currently anticipated that the GUC Trust will be required to seek approval to extend its term, because, although it is uncertain at this time, it is anticipated that the distribution of assets and wind-down will not be completed prior to March 31, 2015.

If, as of the final distribution date, any GUC Trust Units remain undistributed, such GUC Trust Units will be deemed cancelled and will cease to be outstanding. If, as of the final distribution date, any New GM Securities, proceeds therefrom, or distributions thereon (including any related Dividend Cash) remain undistributed, any such assets will be distributed pro rata to the beneficiaries of the GUC Trust Units then outstanding on the final distribution date to the extent permitted by law, and to the extent not so permitted, will otherwise be disposed of in accordance with applicable law.

Fiscal Year

The GUC Trust's fiscal year begins on April 1 and ends on the following March 31. Since the GUC Trust was created on March 30, 2011 and the Effective Date of the Plan was March 31, 2011, for financial reporting purposes, the GUC Trust was assumed to have been established as of April 1, 2011 and received its initial funding on or about April 1, 2011.

Availability of Information Relating to the GUC Trust and New GM

The GUC Trust files annual reports on Form 10-K, quarterly reports on Form 10-Q, and current reports on Form 8-K with the SEC. In addition, the GUC Trust files quarterly reports pursuant to the requirements of the GUC Trust Agreement, or GUC Trust Reports, with the Bankruptcy Court and also files these reports under cover of Form 8-K with the SEC. The GUC Trust Agreement, related documentation and all information filed with the Bankruptcy Court by the GUC Trust Administrator, including the GUC Trust Reports, can be accessed free of charge on the GUC Trust website at www.mlcguctrust.com, and the GUC Trust's filings with the SEC can be accessed free of charge at www.sec.gov. In addition, New GM's filings with the SEC can be accessed free of charge at http://investor.gm.com/sec-filings and www.sec.gov. See "Recent Trading Prices of New GM Securities" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below for certain information relating to the recent trading prices of the New GM Securities."

Description of the GUC Trust Units

The following summary of the GUC Trust Units is not intended to be complete and is subject to, and qualified in its entirety by reference to, the GUC Trust Agreement, as amended, and the Delaware Act. You should read the GUC Trust Agreement, as amended, which is filed as an exhibit to this annual report on Form 10-K, for additional information.

The GUC Trust Agreement provides for the distribution of GUC Trust Units for the benefit of creditors holding Allowed General Unsecured Claims, in an amount equal to one GUC Trust Unit per $1,000 in Allowed General Unsecured Claims, subject to rounding under the GUC Trust Agreement. Each GUC Trust Unit represents the contingent right to receive, on a pro rata basis, a share of the Excess GUC Trust Distributable Assets. If a Disputed General Unsecured Claim becomes an Allowed General Unsecured Claim, the holder of that claim will receive the New GM Securities (including the related Dividend Cash) and the GUC Trust Units corresponding to what the holder would have received had the claim been allowed as of the Effective Date. To the extent all or portion of a Disputed General Unsecured Claim is ultimately disallowed, the New GM Securities reserved for that claim or such disallowed portion of that claim will become excess assets of the GUC Trust available for distribution to beneficiaries of GUC Trust Units.

- Book-Entry Only Issuance – The Depository Trust Company

The GUC Trust Units are book-entry form only, represented by one or more global certificates registered in the name of DTC, as depository, or Cede & Co., its nominee, for so long as DTC is willing to act in that capacity. Wilmington Trust Company, or its designated affiliate, is currently acting as registrar and transfer agent for the GUC Trust Units, and facilitates the issuance of the GUC Trust Units through the DTC participant system (as necessary). Beneficiaries of GUC Trust Units do not receive physical certificates for their GUC Trust Units, and beneficial interests in the GUC Trust Units are not directly registered on the books and records of the GUC Trust Administrator. The aggregate number of GUC Trust Units issued thereunder may from time to time be increased by adjustments made on the records of the GUC Trust and a corresponding increase in the number of GUC Trust Units evidenced by such global certificate (as specified in the schedule included as part of the global certificate in respect of such additional GUC Trust Units).

- Transferability of the GUC Trust Units

The GUC Trust Units are currently transferable in accordance with the procedures of DTC and its direct and indirect participants. However, in the event that DTC is unwilling or unable to continue as a depositary for the GUC Trust Units, the GUC Trust Agreement provides that the GUC Trust Administrator shall exchange the transferable GUC Trust Units for definitive certificates.

- Designation of a DTC Participant and Other Required Actions

In order to receive a distribution from the GUC Trust of New GM Securities or GUC Trust Units, holders of Allowed General Unsecured Claims (other than holders of Note Claims and Eurobond Claims, each as defined in the GUC Trust Agreement) must designate a direct or indirect participant in DTC with whom such holder has an account and take such other ministerial actions (i) as specifically stated in Exhibit B to the GUC Trust Agreement and (ii) as the GUC Trust Administrator will from time to time reasonably require by written communication to the holders of such Allowed General Unsecured Claims. With respect to holders of Note Claims and Eurobond Claims, the GUC Trust has issued New GM Securities and GUC Trust Units to such holders in accordance with the procedures of DTC and its participants.

If and so long as a holder of an Allowed General Unsecured Claim (other than the holders of Note Claims and Eurobond Claims) does not designate a direct or indirect participant in DTC and take the required actions described above, the GUC Trust Administrator will hold the New GM Securities, including the related Dividend Cash, and GUC Trust Units such holder is otherwise entitled to receive, together with any Excess GUC Trust Distributable Assets distributed in respect of the GUC Trust Units, until such time as such holder complies with the requirements. At any time following the date on which a holder of an Allowed General Unsecured Claim complies in full with the requirements, but in any event, as soon as practicable following the beginning of the calendar quarter next following such date, the GUC Trust Administrator will distribute to such holder the New GM Securities (including the related Dividend Cash) and GUC Trust Units and any distributions thereon to which such holder is entitled. However, if a holder has not complied with the requirements prior to the final distribution date, then (i) such holder will be deemed to have forfeited any entitlement to such New GM Securities or other distributions, which will become Excess GUC Trust Distributable Assets of the GUC Trust, (ii) the GUC Trust Units otherwise distributable to such holder will be deemed cancelled and not outstanding, and (iii) New GM Securities otherwise distributable to such holder will be distributed as Excess GUC Trust Distributable Assets pro rata to all beneficiaries of GUC Trust Units then outstanding on the final distribution date.

- Voting Rights

A GUC Trust Unit beneficiary has no title or right to, or possession, management, or control of, the GUC Trust or the GUC Trust assets, or to any right to demand a partition or division of such assets or to require an accounting of the GUC Trust Administrator or the GUC Trust Monitor. The whole legal title to the GUC Trust assets is vested in the GUC Trust as a separate legal entity under the Delaware Act and the sole beneficial interest of the GUC Trust Unit beneficiaries are as set forth in the GUC Trust Agreement.

Beneficiaries of GUC Trust Units do not have the right to vote or participate in the administration of the GUC Trust. They have no right to appoint or remove the GUC Trust Monitor or the GUC Trust Administrator, although in certain circumstances they may petition the Bankruptcy Court for these purposes. Beneficiaries of a majority of GUC Trust Units may at any time petition the Bankruptcy Court for the removal of the GUC Trust Administrator or for the removal of the GUC Trust Monitor, but only for good cause shown. In determining whether the beneficiaries of a majority of the GUC Trust Units have concurred in any such petition, GUC Trust Units held by the GUC Trust Administrator or the GUC Trust Monitor or any of their respective affiliates will be disregarded.

- Potential Effects on the Rights of Beneficiaries of GUC Trust Units

If the GUC Trust Administrator determines that (i) the Administrative Fund is not sufficient to satisfy the current or projected Wind-Down Costs (including Dividend Taxes), (ii) the Reporting and Transfer Cash is not sufficient to satisfy the current or projected Reporting Costs, or (iii) that the GUC Trust is projected to fund current or potential Taxes on Distribution, the GUC Trust Administrator, with the approval of the GUC Trust Monitor, is authorized to reserve New GM Securities for these purposes. The GUC Trust Administrator may then liquidate such reserved New GM Securities to fund these costs and expenses, with the required approval of the Bankruptcy Court (other than with respect to sales of New GM Securities for the purposes of funding Taxes on Distribution, pursuant to which only GUC Trust Monitor approval is required), and the proceeds from such liquidations of New GM Securities (including the related Dividend Cash) will constitute part of the Other Administrative Cash. New GM Securities that are reserved or sold in this manner will not be available for distribution to the beneficiaries of GUC Trust Units. Therefore, any additional costs or Taxes on Distribution will reduce the assets available for distribution to beneficiaries of GUC Trust Units. After the GUC Trust has concluded its affairs, any remaining reserved New GM Securities, or funds that were obtained from the New GM Securities sold to fund costs and expenses of the GUC Trust, in each case including the related Dividend Cash will be distributed to the beneficiaries of the GUC Trust Units.

In addition, if the GUC Trust Administrator determines that the Residual Wind-Down Assets are not adequate to satisfy the Residual Wind-Down Claims and/or the Residual Wind-Down Costs (and there is no remaining Other Administrative Cash designated to satisfy such claims or expenses), the GUC Trust Administrator is authorized to, with GUC Trust Monitor approval, reserve and, with Bankruptcy Court approval, sell New GM Securities to cover the shortfall. The cash raised by any such sales will be added to the Other Administrative Cash, which will be used for the payment of the Residual Wind-Down Claims and Residual Wind-Down Costs. To the extent that New GM Securities are reserved and sold to obtain funding to complete the wind-down of the Debtors or satisfy Residual Wind-Down Claims, such New GM Securities will not be available for distribution to the beneficiaries of the GUC Trust. Therefore, the amount of Residual Wind-Down Claims and Residual Wind-Down Costs could reduce the assets of the GUC Trust available for distribution to beneficiaries of GUC Trust Units. After the GUC Trust has concluded its affairs, any remaining reserved New GM Securities, or funds that were obtained from New GM Securities sold to fund the resolution of Residual Wind-Down Claims or the distribution of Residual Wind-Down Assets, in each case including the related Dividend Cash will be distributed to the beneficiaries of the GUC Trust Units.

- Liquidation Distribution Upon Dissolution

The GUC Trust had an initial stated term of three years from the Effective Date, which has been extended by the Bankruptcy Court to March 31, 2015. The duration of the GUC Trust may be again extended upon application to and approval of the Bankruptcy Court as necessary to complete the claims resolution process and the wind-down of the Debtors. The GUC Trust will remain under the jurisdiction of the Bankruptcy Court throughout the term of its existence.

If, at the time of the Final Distribution Date (as defined in the GUC Trust Agreement), any Excess GUC Trust Distributable Assets or GUC Trust Units remain in the GUC Trust, then (i) any such GUC Trust Units will be deemed cancelled and will cease to be outstanding, and (ii) to the extent permitted by law, any such Excess GUC Trust Distributable Assets will be distributed pro rata to all beneficiaries of the GUC Trust Units then outstanding on the Final Distribution Date, and, to the extent not so permitted, will otherwise be disposed of in accordance with applicable law.

- Governing Law

The GUC Trust Agreement is governed by and construed in accordance with the laws of the State of Delaware without giving effect to rules governing conflicts of laws.

Glossary of Defined Terms

"363 Transaction" means the transaction in which NGMCO, Inc. (now New GM) acquired substantially all of the assets and assumed certain liabilities of the Debtors pursuant to and subject to the terms of the MSPA.

"ADR Proceedings" means alternative dispute resolution proceedings, including mediation and arbitration.

"Administrative Fund" means the cash contributed to the GUC Trust to be held and maintained by the GUC Trust Administrator for the purpose of paying the Wind-Down Costs.

"Allowed General Unsecured Claims" means the general unsecured claims against the Debtors that are allowed at any given time.

"Avoidance Action Defense Costs" means certain costs, fees and expenses which the GUC Trust is obligated to satisfy relating to defending the Term Loan Avoidance Action, subject to the right of the GUC Trust to seek disgorgement in accordance with the terms of the Plan.

"Avoidance Action Trust" means the trust established under the Plan for the purpose of holding and prosecuting the Term Loan Avoidance Action.

"Avoidance Action Trust Administrator" means Wilmington Trust Company, not in its individual capacity but solely in its capacity as the trustee and trust administrator of the Avoidance Action Trust.

"Bankruptcy Code" means title 11 of the United States Code.

"Bankruptcy Court" means the United States Bankruptcy Court for the Southern District of New York.

"Bar Date Order" means the order entered by the Bankruptcy Court on September 16, 2009, setting November 30, 2009, as the bar date for filing proofs of claims related to all general unsecured claims against Old GM and, following the passage of the effective date of the Plan, the GUC Trust.

"Closing Date" means July 10, 2009, the date on which the sale of substantially all of the assets of Old GM pursuant to the MSPA was completed.

"Committee" means the Official Committee of Unsecured Creditors of the Debtors appointed by the Office of the United States Trustee in the chapter 11 cases of the Debtors.

"Committee Summary Judgment Motion" means the Motion of Official Committee of Unsecured Creditors for Partial Summary Judgment (Docket No. 24) filed by the Committee on July 1, 2010, seeking a ruling in favor of the Committee with respect to the Term Loan Avoidance Action.

"Confirmation Date" means March 29, 2011, the date that the Bankruptcy Court entered the Confirmation Order.

"Confirmation Order" means the order entered by the Bankruptcy Court on March 29, 2011 confirming the Plan.

"Cross-Motions for Summary Judgment" means the Committee Summary Judgment Motion and the JPMorgan Summary Judgment Motion.

"Debtors" means MLC and its affiliated debtors and debtors-in-possession.

"Delaware Act" means the Delaware Statutory Trust Act, as amended.

"DIP Credit Agreement" means the Debtor-In-Possession Credit Agreement, dated as of July 10, 2009, by and among MLC, as borrower, the guarantors named therein, the U.S. Treasury, as lender, and the Governments of Canada and Ontario, through Export Development Canada, as lenders.

"DIP Lenders" means the United States Department of Treasury and the Governments of Canada and Ontario, through Export Development Canada.

"Disputed General Unsecured Claims" means the general unsecured claims against the Debtors that are disputed at a given time and does not include any potential Term Loan Avoidance Action Claims.

"Dissolution Date" means December 15, 2011, the date that MLC filed a Certificate of Dissolution with the Secretary of State of Delaware and was dissolved.

"Dividend Cash" means the amount of cash and cash equivalents held by the GUC Trust that relates to dividends received by the GUC Trust on New GM Common Stock held by the GUC Trust.

"Dividend Taxes" means federal income taxes incurred in respect of dividends received by the GUC Trust on New GM Common Stock held by the GUC Trust.

"DTC" means the Depository Trust Company.

"Effective Date" means March 31, 2011, the date that the Plan became effective.

"Excess GUC Trust Distributable Assets" means (i) New GM Securities and Dividend Cash associated with such New GM Securities (only if and to the extent such New GM Securities (a) are not required for the satisfaction of new Allowed General Unsecured Claims and (b) have not been set aside from distribution to fund projected liquidation and administrative costs, Dividend Taxes or Taxes on Distribution of the GUC Trust) and (ii) Other Administrative Cash available, if any, for distribution to the holders of GUC Trust Units.

"GUC Trust" means the Motors Liquidation Company GUC Trust.

"GUC Trust Administrator" means Wilmington Trust Company, not in its individual capacity but solely in its capacity as trust administrator and trustee of the GUC Trust.

"GUC Trust Agreement" means the Amended and Restated Motors Liquidation Company GUC Trust Agreement, dated as of June 11, 2012, as subsequently amended.

"GUC Trust Monitor" means FTI Consulting, Inc., solely in its capacity as trust monitor of the GUC Trust.

"GUC Trust Reports" means the quarterly reports filed by the GUC Trust with the Bankruptcy Court pursuant to the terms of the GUC Trust Agreement.

"GUC Trust Units" means the units of beneficial interests in the GUC Trust distributed to holders of Allowed General Unsecured Claims in proportion to the amount of their claims subject to certain rounding rules set forth in the Plan and the GUC Trust Agreement. Each GUC Trust Unit represents the contingent right to receive a pro rata share of the Excess GUC Trust Distributable Assets.

"Ignition Switch Class Actions" means the approximately 80 putative class actions filed by various plaintiffs against New GM seeking compensatory damages for economic losses allegedly resulting from Ignition Switch Issues.

"Ignition Switch Issues" means the ignition-switch-related recalls or the underlying condition of the vehicles covered by those recalls, which are the subject of the Ignition Switch Class Actions.

"Indenture Trustee / Fiscal and Paying Agent Costs" means certain costs, fees and expenses payable under the Plan to the indenture trustees and fiscal and paying agents for the previously outstanding debt of MLC.

"Initial Allowed General Unsecured Claims" means the approximately $29,771 million in Allowed General Unsecured Claims as of the Effective Date.

"JPMorgan Summary Judgment Motion" means the Motion for Summary Judgment of Defendant JPMorgan Chase Bank, N.A. (Docket No. 28) filed by JPMorgan Chase Bank, N.A., on July 1, 2010, seeking a ruling in favor of JPMorgan Chase Bank, N.A., with respect to the Term Loan Avoidance Action.

"Lock-Up Agreement" means the prior settlement agreement entered into by Old GM and certain holders of the Nova Scotia Notes.

"Minimum Threshold" means the threshold amount of Excess GUC Trust Distributable Assets that must be exceeded for the GUC Trust to make a distribution in respect of the GUC Trust Units, which amount is equal to: (i) with respect to New GM Common Stock, 1,000,000 shares of New GM Common Stock, (ii) with respect to the New GM Series A Warrants, warrants to acquire 909,091 shares of New GM Common Stock (subject to customary adjustment), (iii) with respect to the New GM Series B Warrants, warrants to acquire 909,091 shares of New GM Common Stock (subject to customary adjustment), and (iv) with respect to cash, $5 million.

"MLC" means Motors Liquidation Company, which dissolved on December 15, 2011.

"MSPA" means the Master Sale and Purchase Agreement dated as of July 10, 2009, by and among Old GM, certain of its debtor subsidiaries and NGMCO, Inc., as amended.

"New GM" means General Motors Company, together with its consolidated subsidiaries.

"New GM Common Stock" means the common stock of New GM, including with respect to New GM Common Stock that has been set aside from distribution, reserved or sold, any Dividend Cash related to such New GM Common Stock.

"New GM Securities" means the New GM Common Stock, including with respect to New GM Common Stock that has been set aside from distribution, reserved or sold, any Dividend Cash related to such New GM Common Stock) and the New GM Warrants.

"New GM Series A Warrants" means the warrants to acquire shares of New GM Common Stock at an exercise price of $10.00 per share, expiring July 10, 2016.

"New GM Series B Warrants" means the warrants to acquire shares of New GM Common Stock at an exercise price of $18.33 per share, expiring July 10, 2019.

"New GM Warrants" means the New GM Series A Warrants and the New GM Series B Warrants.

"No Action Letter" means the relief from certain registration and reporting requirements of the Securities Exchange Act of 1934, as amended, which was granted in the No Action letter from the Division of Corporation Finance of the SEC to the GUC Trust dated May 23, 2012.

"Nova Scotia Claims" means the claims arising from the 8.375% guaranteed notes due December 7, 2015 and the 8.875% guaranteed notes due July 10, 2023, in each case issued in 2003 by General Motors Nova Scotia Finance Company

"Nova Scotia Order" means the order entered by the Bankruptcy Court on October 21, 2013, approving the Nova Scotia Settlement.

"Nova Scotia Settlement" means the settlement agreement relating to the Nova Scotia Claims.

"NYSE" means the New York Stock Exchange.

"Old GM" means MLC, formerly known as General Motors Corporation.

"Other Administrative Cash" means the cash proceeds from the sale of any New GM Securities that have been set aside from distribution to fund the current or projected liquidation and other administrative costs or income tax liabilities of the GUC Trust, plus any Dividend Cash related to any New GM Common Stock so sold.

"Plan" means the Debtors' Second Amended Joint Chapter 11 Plan, filed with the Bankruptcy Court on March 18, 2011.

"QSF" means Qualified Settlement Fund under applicable regulations of the United States Department of Treasury.

"Reporting Costs" means fees, costs and expenses of the GUC Trust directly or indirectly relating to (i) reports to be prepared and filed by the GUC Trust pursuant to applicable rules, regulations and interpretations of the SEC, (ii) the transfer, registration for transfer and certification of GUC Trust Units, (iii) the application by the Committee to the Internal Revenue Service for a private letter ruling regarding the tax treatment of the GUC Trust and the holders of Allowed General Unsecured Claims in respect of the distribution of New GM Securities and (iv) certain legal proceedings relating to the Term Loan Avoidance Action.

"Residual Wind-Down Assets" means the funds remaining of the approximately $42.8 million in cash and prepaid expenses transferred by MLC to the GUC Trust on the Dissolution Date to satisfy the Residual Wind-Down Claims and Residual Wind-Down Costs (which amount consisted of approximately $40.0 million in cash, including approximately $1.4 million for Avoidance Action Defense Costs, and the transferred benefit of approximately $2.8 million in prepaid expenses).

"Residual Wind-Down Claims" means all disputed administrative expenses, priority tax claims, priority non-tax claims, and secured claims against the Debtors that were remaining as of the Dissolution Date.

"Residual Wind-Down Costs" means certain costs, fees and expenses relating to satisfying and resolving the Residual Wind-Down Claims.

"Resolved Allowed Claims" means the Term Loan Avoidance Action Claims and the Resolved Disputed Claims.

"Resolved Disputed Claims" means previously Disputed General Unsecured Claims that are subsequently allowed.

"Sale Order" means the Sale Order and Injunction entered by the Bankruptcy Court on July 5, 2009, approving the sale of substantially all of the assets of Old GM to New GM pursuant to Section 363(b) of the Bankruptcy Code.

"Scheduling Order" means the scheduling order entered by the Bankruptcy Court on May 16, 2014.

"SEC" means the Securities and Exchange Commission.

"Special Nova Scotia Distribution" means the distribution made by the GUC Trust on or about December 2, 2013, in accordance with the Nova Scotia Settlement and the Nova Scotia Order, solely to holders of the allowed Nova Scotia Claims, consisting of, in the aggregate, 6,174,015 shares of New GM Common Stock, 5,612,741 New GM Series A Warrants, 5,612,741 New GM Series B Warrants, and 1,550,000 GUC Trust Units.

"Special Excess Distribution" means the distribution made by the GUC Trust on or about December 23, 2013, in accordance with the Nova Scotia Settlement and the Nova Scotia Order, to all holders of GUC Trust Units, consisting of 6,735,070 shares of New GM Common Stock, 6,122,789 New GM Series A Warrants, and 6,122,789 New GM Series B Warrants.

"Taxes on Distribution" means income tax liabilities on any capital gains realized upon the disposition of New GM Securities to holders of Allowed General Unsecured Claims or GUC Trust Units.

"Term Loan Avoidance Action" means the legal action styled as Official Committee of Unsecured Creditors of Motors Liquidation Co. v. JPMorgan Chase Bank, N.A., et al., Adv. Pro. No. 09-00504 (Bankr. S.D.N.Y. July 31, 2009).

"Term Loan Avoidance Action Claims" means the Allowed General Unsecured Claims that arise in the amount of any recovery of proceeds if the Avoidance Action Trust Administrator is successful in its prosecution of the Term Loan Avoidance Action. For the avoidance of doubt, as used in this Form 10-Q, the amounts of "Disputed General Unsecured Claims" do not include any potential Term Loan Avoidance Action Claims.

"Wind-Down Costs" means certain fees and expenses incurred by the GUC Trust, including fees of the GUC Trust Administrator and the GUC Trust Monitor and the fees and expenses for other professionals retained by the GUC Trust, other than Reporting Costs.

Item 1A. Risk Factors.

You should carefully consider each of the following risks and all other information contained in this Form 10-K. The occurrence of any of the following risks could materially and adversely affect the value of the GUC Trust Units. The risks described below are not the only ones that beneficiaries of the GUC Trust Units face. Additional risks and uncertainties not presently known or deemed immaterial may also materially and adversely affect the value of the GUC Trust Units. In addition, you should also consider the "Risk Factors" section and other information in New GM's Annual Report on Form 10-K for the year ended December 31, 2013 and in New GM's subsequently filed Quarterly Reports on Form 10-Q for risks and uncertainties associated with New GM's business, operations and financial condition, which may affect the value of the New GM Securities and, in turn, the value of the GUC Trust Units.

Distributions with respect to the GUC Trust Units will be contingent on the extent to which Disputed General Unsecured Claims are disallowed, which in turn will depend on the claims resolution process, and the amount of Term Loan Avoidance Action Claims that arise, the results of which cannot be predicted in advance.

There is a limited number of New GM Securities held by the GUC Trust that may be distributed to the GUC Trust Unit beneficiaries, and the numbers of New GM Securities that are ultimately distributed to each GUC Trust Unit beneficiary will depend on (i) the amount of Disputed General Unsecured Claims that are disallowed, which is determined pursuant to the resolution process for Disputed General Unsecured Claims that is detailed in the GUC Trust Agreement and (ii) the amount of Term Loan Avoidance Action Claims that arise. It is not possible to predict the number or amount of Disputed General Unsecured Claims that will ultimately be allowed, or the number or amount of Term Loan Avoidance Action Claims that will arise. Thus, the aggregate numbers of New GM Securities that are ultimately available for distribution in respect of the GUC Trust Units is not presently determinable. For additional information about the Term Loan Avoidance Action, see "Term Loan Avoidance Action" in Item 3 ("Legal Proceedings") below.

The remaining liquidation period of the GUC Trust is uncertain, because the GUC Trust is required by the GUC Trust Agreement to continue its existence until the date on which all distributable assets of the GUC Trust have been distributed and the liquidation and wind-down of MLC and its debtor subsidiaries has been completed. If the remaining liquidation period exceeds current estimates, Wind-Down and Reporting and Transfer Costs are likely to exceed amounts accrued at March 31, 2014.

The remaining liquidation period of the GUC Trust is uncertain. The GUC Trust had an initial stated term of three years from the Effective Date (ending on March 31, 2014). On February 6, 2014, the Bankruptcy Court entered an order extending the duration of the GUC Trust to March 31, 2015. The GUC Trust is required by the GUC Trust Agreement to continue its existence until the date on which all distributable assets of the GUC Trust have been distributed and the liquidation and wind-down of MLC and its debtor subsidiaries has been completed. The term of the GUC Trust may be again extended upon application to and approval of the Bankruptcy Court as necessary to complete the claims resolution process and the wind-down of MLC. The GUC Trust will remain under the jurisdiction of the Bankruptcy Court throughout the term of its existence. It is currently anticipated that the GUC Trust will be required to again seek approval to extend its term, because, although it is uncertain at this time, it is anticipated that the distribution of assets and wind-down will not be completed prior to March 31, 2015. As of March 31, 2014, for purposes of recording reserves for Expected Costs of Liquidation, the GUC Trust has estimated on a probability-weighted basis that the remaining liquidation period will extend through December 2016.

If the GUC Trust is required to seek an another extension of the term and such request is approved by the Bankruptcy Court, and if the remaining liquidation period extends beyond December 2016, additional Wind-Down Costs and Reporting and Transfer Costs are likely to be incurred in continuing the operations of the GUC Trust beyond those accrued at March 31, 2014.

The GUC Trust may be required to sell New GM Securities to fund Wind-Down Costs of the GUC Trust if the Administrative Fund is insufficient, or to fund Reporting Costs if the Reporting and Transfer Cash is insufficient, or in the event that the GUC Trust is projected to fund current or potential Taxes on Distribution or Dividend Taxes, which would reduce the numbers of New GM Securities available for distribution to GUC Trust Unit beneficiaries.

In the event that the Administrative Fund is insufficient to satisfy the Wind-Down Costs of the GUC Trust, or that the Reporting and Transfer Cash is insufficient to satisfy the Reporting Costs of the GUC Trust, or that the GUC Trust is projected to fund current or potential Taxes on Distribution or Dividend Taxes, then under the GUC Trust Agreement, the GUC Trust Administrator is authorized, with the approval of the GUC Trust Monitor, to reserve, and, with the approval of the Bankruptcy Court (other than with respect to sales of New GM Securities for the purposes of funding Taxes on Distribution, pursuant to which only GUC Trust Monitor approval is required) to sell New GM Securities to cover any shortfall. The cash raised by any such sales will be added to the Other Administrative Cash, which is used for the payment of the GUC Trust's administrative and reporting expenses or for payment of Taxes on Distribution or Dividend Taxes. If any such sales occur, a lesser number of New GM Securities will be available for distribution to the GUC Trust Unit beneficiaries.

In March 2012, and again in December 2012, the Bankruptcy Court approved the sale of New GM Securities to fund certain accrued and projected Wind-Down Costs which were in excess of the amounts budgeted in the Administrative Fund for such costs, and certain projected Reporting Costs which were in excess of the Reporting and Transfer Cash. Through March 31, 2014, sales of New GM Securities to fund estimated and projected Reporting Costs, along with estimated and projected Wind-Down Costs aggregated approximately $50.2 million (which amount comprised part of the GUC Trust's Other GUC Trust Administrative Cash). As of March 31, 2014, New GM Securities with an aggregate fair market value of $51.6 million and related Dividend Cash of $0.2 million have been reserved, or set aside, for projected GUC Trust fees, costs and expenses to be incurred beyond 2014, including $3.5 million for Dividend Taxes. In addition, as of March 31, 2014, New GM Securities with an aggregate fair market value of $536.3 million and related Dividend Cash of $2.2 million have been reserved, or set aside, for Taxes on Distribution. Accordingly, such New GM Securities are not available for distribution to the beneficiaries of the GUC Trust Units.

There can be no assurance that the numbers of New GM Securities set aside will be sufficient to fund such costs and liabilities as they are actually incurred, in particular if the market price of the New GM Securities remains below the trailing twelve month average closing prices used to estimate the numbers of such New GM Securities needed to be set aside for such purposes. In addition, there can be no assurance that, as a result of future evaluations, additional numbers of New GM Securities will not need to be set aside or sold to fund additional costs and liabilities, beyond those that are currently included in the GUC Trust's estimates, in particular as a result of fluctuations in the market price of the New GM Securities and changes in the GUC Trust's estimates of projected costs and potential liabilities, including the possible increases in estimates of projected Dividend Taxes described under "New GM Securities Set Aside from Distribution—'Set Aside' Calculations Relating to Projected Liquidation and Administrative Costs, Including Dividend Taxes" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below. For a more detailed discussion of the calculation methodologies used to estimate such costs and the sensitivities in making such estimates, see "New GM Securities Set Aside from Distribution" in Item 7 ("Management's Discussion and Analysis of Financial Condition and Results of Operations") below.

After the GUC Trust has concluded its affairs, any funds remaining that were obtained from New GM Securities sold to fund Wind-Down Costs or Reporting Costs or Taxes on Distribution (including the related Dividend Cash) will be distributed to the beneficiaries of the GUC Trust Units.

The GUC Trust may be required to sell New GM Securities to fund Residual Wind-Down Claims and Residual Wind-Down Costs if the Residual Wind-Down Assets are insufficient, which would reduce the numbers of New GM Securities available for distribution to GUC Trust Unit beneficiaries.

In the event that the Residual Wind-Down Assets are insufficient to satisfy the Residual Wind-Down Claims and/or the Residual Wind-Down Costs (and there is no remaining Other Administrative Cash designated to satisfy such claims or expenses), then under the GUC Trust Agreement, the GUC Trust Administrator is authorized, with the approval of the GUC Trust Monitor, to reserve, and, with the approval of the Bankruptcy Court, to sell New GM Securities to cover any shortfall. The cash raised by any such sales will be added to the Other Administrative Cash, which is used in part for the payment of the Residual Wind-Down Claims and Residual Wind-Down Costs. If any such sales occur, lesser numbers of New GM Securities will be available for distribution to the GUC Trust Unit beneficiaries. After the GUC Trust has concluded its affairs, any funds remaining that were obtained from New GM Securities sold (including the related Dividend Cash) to fund the resolution of Residual Wind-Down Claims or the distribution of Residual Wind-Down Assets will be distributed to the beneficiaries of the GUC Trust Units.

The GUC Trust Units constitute contingent rights to receive the Excess GUC Trust Distributable Assets, including New GM Securities, the value of which will depend on the business, assets, operations and prospects of New GM, regarding which the GUC Trust, the GUC Trust Administrator and the GUC Trust Monitor have no independent knowledge or control.

By holding beneficial interests in GUC Trust Units, each GUC Trust Unit beneficiary has a contingent right to receive Excess GUC Trust Distributable Assets, which may include New GM Securities. The value of the New GM Securities depends on the business, assets, operations and prospects of New GM, and the GUC Trust, the GUC Trust Administrator and the GUC Trust Monitor have no independent knowledge or control over such matters. Fluctuations in the stock market, adverse developments regarding New GM's business, assets, operations or prospects and general economic and market conditions may adversely affect the value of the New GM Securities, and the value of the distributions that you receive as a beneficiary of the GUC Trust may thus decline. You should consider the "Risk Factors" section and other information in New GM's Annual Report on Form 10-K for the year ended December 31, 2013 and in New GM's subsequently filed Quarterly Reports on Form 10-Q.

There can be no assurance that an active trading market for the GUC Trust Units exists or will continue to exist, and the GUC Trust, the GUC Trust Administrator and the GUC Trust Monitor will take no actions to facilitate or promote such a trading market.

There can be no assurance that an active trading market for the GUC Trust Units exists or will continue to exist. Because the GUC Trust Units are not listed on any securities exchange, the liquidity of the GUC Trust Units is limited, and the value of the GUC Trust Units could be negatively impacted. Pursuant to the No Action Letter, the GUC Trust, the GUC Trust Administrator and the GUC Trust Monitor will not take any actions to facilitate or promote a trading market in the GUC Trust Units or any instrument or interest tied to the value of the GUC Trust Units.

The GUC Trust Unit beneficiaries have no management, control or voting rights beyond their limited ability to remove and replace the GUC Trust Administrator and the GUC Trust Monitor for good cause.

Beneficiaries of the GUC Trust Units have no title or right to, or possession, management, or control of, the GUC Trust or the GUC Trust assets, including with respect to the resolution of Disputed General Unsecured Claims, the outcome of which could adversely impact the value of the GUC Trust Units. In addition, under the GUC Trust Agreement, beneficiaries of the GUC Trust Units do not have the right to appoint or remove the GUC Trust Administrator or the GUC Trust Monitor, except with respect to the removal of the GUC Trust Administrator or GUC Trust Monitor for good cause.

In addition to providing services to the GUC Trust, certain agents of the GUC Trust also provide services to other trusts that have been established to administer claims against the Debtors, the beneficiaries of which may have differing interests from the beneficiaries of the GUC Trust.

In addition to providing services to the GUC Trust, certain agents of the GUC Trust also provide services to other trusts that have been established to administer claims against the Debtors, the beneficiaries of which may have differing interests from the beneficiaries of the GUC Trust. For example, as approved by the Bankruptcy Court at the time it confirmed the Plan, in addition to serving as the GUC Trust Administrator, Wilmington Trust Company also serves as the Avoidance Action Trust Administrator. Similarly, in addition to serving as the GUC Trust Monitor, FTI Consulting, Inc. also serves as monitor for the Avoidance Action Trust.

The GUC Trust also relies significantly upon certain advisory services provided by AlixPartners, LLP and Weil, Gotshal & Manges LLP, which provide similar advisory services to the Motors Liquidation Company DIP Lenders Trust and the Motors Liquidation Company Wind-Down Trust (until its dissolution on December 31, 2013), two other trusts established to administer recoveries from certain assets formerly owned by MLC for the benefit of the DIP Lenders. AP Services, LLC, an affiliate of AlixPartners, LLP, also serves as the trustee and trust administrator for each of such other trusts. While the GUC Trust believes that the foregoing arrangements do not currently present any material conflict of interest, circumstances could arise where potential conflicts of interest could exist. In such circumstances, the GUC Trust will make reasonable efforts to cause its agents to mitigate such conflicts of interest, including by disclosure of the conflict of interest to relevant parties.

Resolution of the Term Loan Avoidance Action could result in additional Term Loan Avoidance Action Claims, the holders of which would be entitled to share in distributions of New GM Securities and GUC Trust Units from the GUC Trust.

Term Loan Avoidance Action Claims could potentially arise in the event that the Avoidance Action Trust Administrator is successful in prosecuting the Term Loan Avoidance Action and recovering the proceeds of such legal action. To the extent that the Avoidance Action Trust Administrator is successful in obtaining a judgment against the defendant(s) in the Term Loan Avoidance Action, Term Loan Avoidance Action Claims will arise in the amount of any transfers actually avoided and disgorged pursuant to the Term Loan Avoidance Action. Once such Term Loan Avoidance Action Claims arise, the holders of such claims will be entitled to receive a distribution of New GM Securities and GUC Trust Units from the GUC Trust corresponding to the amounts of such claims. Such a distribution could reduce the numbers of New GM Securities available for distribution to the current beneficiaries of GUC Trust Units and the pro rata share of New GM Securities distributed in the future to which the current beneficiaries of GUC Trust Units are entitled.

As discussed above, the proper beneficiaries of the proceeds of the Term Loan Avoidance Action, if any, is a matter that is currently in dispute. As such, while the successful prosecution of, and recovery under, the Term Loan Avoidance Action will result in the incurrence of additional Term Loan Avoidance Action Claims, it is not known whether holders of Allowed General Unsecured Claims will benefit from any cash recovered under the Term Loan Avoidance Action. Moreover, following the change of the form of the GUC Trust Units into book-entry form only, represented by one or more global certificates registered in the name of DTC, as depositary, or Cede & Co., its nominee, for so long as DTC is willing to act in that capacity, as described above, beneficial interests in the Avoidance Action Trust remained with holders of Allowed General Unsecured Claims, rather than beneficiaries of GUC Trust Units. As such, a holder of a GUC Trust Unit that does not hold a corresponding Allowed General Unsecured Claim will potentially have its recovery diluted through the incurrence of Term Loan Avoidance Action Claims by the GUC Trust, without receiving the benefit of any cash recovered pursuant to the Term Loan Avoidance Action.

No assurance may be given that claims relating to accidents or other incidents involving General Motors vehicles manufactured or sold prior to July 10, 2009, and/or settlements previously reached with plaintiffs asserting such claims, will not adversely affect the GUC Trust, its assets or the Plan.

As further described under "General Motors Product Recalls" in Item 3 ("Legal Proceedings") below, in its quarterly report on Form 10-Q filed April 24, 2014, New GM disclosed that, since the beginning of 2014, New GM had recalled approximately 2.6 million vehicles to repair ignition switches or to fix ignition lock cylinders and an additional 4.4 million vehicles to address certain electrical and other safety concerns. In addition, as disclosed in its current reports on Form 8-K filed May 15, 2014, and May 20, 2014, New GM subsequently announced nine new safety recalls relating to additional defects, affecting approximately 5.1 million vehicles. Many of the vehicles affected by the foregoing recalls were manufactured or sold prior to July 10, 2009, the date on which the sale of substantially all of the assets of Old GM pursuant to the MSPA was completed (the "Closing Date").

In its quarterly report on Form 10-Q filed April 24, 2014, New GM also disclosed that 55 putative class actions had been filed by various plaintiffs against New GM seeking compensatory damages for economic losses allegedly resulting from the ignition-switch-related recalls or the underlying condition of the vehicles covered by those recalls ("Ignition Switch Issues"). Since the date of that quarterly report, approximately 25 additional putative class actions have been filed against New GM relating to Ignition Switch Issues (together with the above-described lawsuits, the "Ignition Switch Class Actions"). The claims of many of the putative Ignition Switch Class Actions may be overlapping, and to date, such actions have not been consolidated. The Judicial Panel on Multidistrict Litigation has scheduled a May 29, 2014 hearing to determine whether to consolidate and transfer the Ignition Switch Class Actions filed in federal courts for coordinated and consolidated pretrial proceedings.

On April 21, 2014, New GM filed a motion with the Bankruptcy Court seeking to enforce the Sale Order and Injunction, entered on July 5, 2009 (the "Sale Order"), approving the sale of substantially all of the assets of Old GM to New GM pursuant to Section 363(b) of the Bankruptcy Code, which incorporates the terms of the MSPA. Under the terms of the Sale Order and the MSPA, all product liability and property damage claims arising from accidents or incidents prior to the Closing Date are to remain with Old GM as general unsecured claims. The GUC Trust has appeared in the proceedings in the Bankruptcy Court as an interested party.

On May 16, 2014, the Bankruptcy Court entered a scheduling order (the "Scheduling Order") identifying a number of "threshold issues" for its resolution, including whether a fraud on the Bankruptcy Court was committed in connection with the Sale Order in respect of Ignition Switch Issues and whether any or all of the claims asserted in the Ignition Switch Class Actions are claims against Old GM and/or the GUC Trust. The GUC Trust intends to vigorously defend its position that none of the claims of the plaintiffs in the Ignition Switch Class Actions may be properly asserted against Old GM or the GUC Trust.

As previously disclosed, on September 16, 2009, the Bankruptcy Court entered an order (the "Bar Date Order") setting November 30, 2009, as the bar date for filing proofs of claims related to all general unsecured claims against Old GM and, following the passage of the effective date of the Plan, the GUC Trust. To date, no plaintiff in the Ignition Switch Class Actions has asserted a claim against the GUC Trust in connection with the Ignition Switch Class Actions. In any event, however, the Scheduling Order provides that the threshold issues do not include whether any claims in the Ignition Switch Class Actions are timely or meritorious as against the bankruptcy estate of Old GM or the GUC Trust (notwithstanding the Bar Date Order).

Nonetheless, no assurance may be given that personal injury, property damage and other claims relating to New GM's recalls involving General Motors vehicles manufactured or sold prior to the Closing Date and/or settlements previously reached with certain plaintiffs who asserted personal injury, property damage or other claims due to incidents or accidents that occurred prior to the Closing Date, will not adversely affect the GUC Trust, its assets or the Plan.

The GUC Trust's information systems may experience interruptions or breaches in security.

The GUC Trust relies heavily on communications and information and data storage systems to administer and direct the distribution of certain assets pursuant to the terms and conditions of the GUC Trust Agreement. Any failure, interruption or breach in security of these systems could result in disruptions to its accounting, claims processing and other systems, and could adversely affect the GUC Trust's relationship with the holders of the Allowed General Unsecured Claims if it adversely affected the claims processing functions of the GUC Trust. While the GUC Trust has policies and procedures designed to prevent or limit the effect of these possible events, there can be no assurance that any such failure, interruption or security breach will not occur or, if any does occur, that it can be sufficiently remediated.

There have been increasing efforts on the part of third parties to breach data security at financial institutions, trusts, or with respect to financial or claims processing transactions. In addition, because the techniques used to cause such security breaches change frequently, often are not recognized until launched against a target and may originate from less regulated and remote areas around the world, the GUC Trust may be unable to proactively address these techniques or to implement adequate preventative measures.

Third parties with which the GUC Trust does business may also be sources of cyber security or other technological risks. As disclosed elsewhere in this Annual Report on Form 10-K, the GUC Trust outsources many functions, including accounting, claims processing, data storage, and other related internal functions, to and with several third-parties. While the GUC Trust engages in certain actions to reduce the exposure resulting from outsourcing, such as performing onsite security control assessments, limiting third-party access to the least privileged level necessary to perform contracted functions, and ensuring that our third-party vendors comply with our security policies, ongoing threats may result in unauthorized access, loss or destruction of data or other cyber incidents with increased costs and consequences to the GUC Trust such as those discussed above.

Item 2. Properties.

Disclosure under this item is not required, pursuant to the No Action Letter.

Item 3. Legal Proceedings.

Term Loan Avoidance Action.

On July 31, 2009, the Committee, on behalf of the Debtors, commenced the Term Loan Avoidance Action (*Official Committee of Unsecured Creditors of Motors Liquidation Co. v. JPMorgan Chase Bank, N.A. et al.*, Adv. Pro. No. 09-00504 (Bankr. S.D.N.Y. July 31, 2009)). The Term Loan Avoidance Action seeks the return of approximately $1.5 billion that had been transferred to a consortium of prepetition lenders pursuant to the terms of the order approving the DIP Credit Agreement.

On July 1, 2010, the Committee filed a *Motion of Official Committee of Unsecured Creditors for Partial Summary Judgment* (Docket No. 24), or the Committee Summary Judgment Motion, seeking a ruling in favor of the Committee with respect to the Term Loan Avoidance Action. Also on July 1, 2010, JPMorgan Chase Bank, N.A. filed a *Motion for Summary Judgment of Defendant JPMorgan Chase Bank, N.A.* (Docket No. 28), or the JPMorgan Summary Judgment Motion (and, together with the Committee Summary Judgment Motion, the Cross-Motions for Summary Judgment), seeking a ruling in favor of JPMorgan Chase Bank, N.A., with respect to the Term Loan Avoidance Action. On the Dissolution Date, while the Cross-Motions for Summary Judgment were still pending, the right to prosecute the Term Loan Avoidance Action was transferred to the Avoidance Action Trust. To the extent that the Avoidance Action Trust Administrator is successful in obtaining and collecting a judgment against the defendant(s) therein, Term Loan Avoidance Action Claims will arise in the amount actually collected from the defendant(s), and in the name of such defendant(s).

The Avoidance Action Trust was established under the Plan and is independent of the GUC Trust. The proper beneficiaries of the proceeds of the Term Loan Avoidance Action, if any, is a matter that is currently in dispute, with both the DIP Lenders and the Committee, on behalf of the holders of Allowed General Unsecured Claims, claiming sole rights to such proceeds. On June 6, 2011, the Committee commenced an adversary proceeding seeking a declaratory judgment that (i) the DIP Lenders are not entitled to any proceeds of the Term Loan Avoidance Action and have no interests in the Avoidance Action Trust, and (ii) the holders of Allowed General Unsecured Claims have the exclusive right to receive any and all proceeds of the Term Loan Avoidance Action, and are the exclusive beneficiaries of the Avoidance Action Trust. On December 2, 2011, the Bankruptcy Court entered an order in favor of the Committee, denying the DIP Lenders' motions to dismiss and for summary judgment. On December 16, 2011, the DIP Lenders appealed this and other related rulings and decisions of the Bankruptcy Court. On July 3, 2012, the district court for the Southern District of New York vacated the Bankruptcy Court's judgment and remanded the case to the Bankruptcy Court, with instructions for the Bankruptcy Court judge to dismiss the Committee's complaint without prejudice for want of subject matter jurisdiction.

On March 1, 2013, the Bankruptcy Court rendered a *Decision on Cross-Motions for Summary Judgment* (Docket No. 71) and entered an *Order on Cross-Motions for Summary Judgment* (Docket No. 72), or the Order, and *Judgment* (Docket No. 73) or the Judgment, denying the Committee Summary Judgment Motion and granting the JPMorgan Summary Judgment Motion. In connection therewith, on March 1, 2013, the Bankruptcy Court entered an *Order, Pursuant to 28 U.S.C. § 158(d), and Fed.R.Bankr.P. 8001(f)(4), Certifying Judgment for Direct Appeal to Second Circuit* (Docket No. 74) certifying the Judgment and the Order for direct appeal to the United States Court of Appeals for the Second Circuit. On March 7, 2013, the plaintiff in the Term Loan Avoidance Action filed a notice of appeal pursuant to Fed.R.Bankr.P. 8001. On April 5, 2013, the Avoidance Action Trust filed a petition for permission to appeal directly to the Second Circuit (the "Petition"). The Petition was subsequently granted and the appeal was docketed as case number 13-2187-bk before the Second Circuit. Following briefing, the Second Circuit heard oral arguments from the parties on March 25, 2014. The appeal is still pending before the Second Circuit.

While the successful prosecution of, and recovery under, the Term Loan Avoidance Action would result in the incurrence of additional Term Loan Avoidance Action Claims, it is not known whether holders of Allowed General Unsecured Claims would benefit from any cash recovered under the Term Loan Avoidance Action. Moreover, beneficial interests in the Avoidance Action Trust (if any) remain with holders of Allowed General Unsecured Claims, rather than beneficiaries of GUC Trust Units. As such, a holder of a GUC Trust Unit that does not hold a corresponding Allowed General Unsecured Claim could potentially have its recovery diluted through the incurrence of Term Loan Avoidance Action Claims by the GUC Trust, without receiving the benefit of any cash recovered pursuant to the Term Loan Avoidance Action.

Unless and until Term Loan Avoidance Action Claims arise, the potential holders of such claims will not be entitled to receive a distribution from the GUC Trust. However, once such Term Loan Avoidance Action Claims arise (if at all), the holders of such claims will be entitled to receive a distribution of New GM Securities (including the related Dividend Cash) from the GUC Trust.

General Motors Product Recalls

On May 16, 2014, the Bankruptcy Court issued the Scheduling Order with respect to a number of issues relating to a motion filed by New GM in which the GUC Trust has appeared as a party in interest, as summarized below.

In its quarterly report on Form 10-Q filed April 24, 2014, New GM disclosed that, since the beginning of 2014, New GM had recalled approximately 2.6 million vehicles to repair ignition switches or to fix ignition lock cylinders and an additional 4.4 million vehicles to address certain electrical and other safety concerns. In addition, as disclosed in its current reports on Form 8-K filed May 15, 2014, and May 20, 2014, New GM subsequently announced nine new safety recalls relating to additional defects, affecting approximately 5.1 million vehicles. Many of the vehicles affected by the foregoing recalls were manufactured or sold prior to July 10, 2009, or the Closing Date, the date on which the sale of substantially all of the assets of Old GM pursuant to the MSPA was completed.

In its quarterly report on Form 10-Q filed April 24, 2014, New GM also disclosed that 55 putative class actions had been filed by various plaintiffs against New GM seeking compensatory damages for economic losses allegedly resulting from the ignition-switch-related recalls or the underlying condition of the vehicles covered by those recalls, which are referred to as the Ignition Switch Issues. Since the date of that quarterly report, approximately 25 additional putative class actions have been filed against New GM relating to Ignition Switch Issues, which are referred to together with the above-described lawsuits as the Ignition Switch Class Actions. The claims of many of the putative Ignition Switch Class Actions may be overlapping, and to date, such actions have not been consolidated. The Judicial Panel on Multidistrict Litigation has scheduled a May 29, 2014 hearing to determine whether to consolidate and transfer the Ignition Switch Class Actions filed in federal courts for coordinated and consolidated pretrial proceedings.

On April 21, 2014, New GM filed a motion with the Bankruptcy Court seeking to enforce the Sale Order, entered on July 5, 2009, approving the sale of substantially all of the assets of Old GM to New GM pursuant to Section 363(b) of the Bankruptcy Code, which incorporates the terms of the MSPA. Under the terms of the Sale Order and the MSPA, all product liability and property damage claims arising from accidents or incidents prior to the Closing Date are to remain with Old GM as general unsecured claims. The GUC Trust has appeared in the proceedings in the Bankruptcy Court as an interested party.

On May 16, 2014, the Bankruptcy Court entered the Scheduling Order identifying a number of "threshold issues" for its resolution, including whether a fraud on the Bankruptcy Court was committed in connection with the Sale Order in respect of Ignition Switch Issues and whether any or all of the claims asserted in the Ignition Switch Class Actions are claims against Old GM and/or the GUC Trust. The GUC Trust intends to vigorously defend its position that none of the claims of the plaintiffs in the Ignition Switch Class Actions may be properly asserted against Old GM or the GUC Trust.

As previously disclosed, on September 16, 2009, the Bankruptcy Court entered the Bar Date Order setting November 30, 2009, as the bar date for filing proofs of claims related to all general unsecured claims against Old GM and, following the passage of the effective date of the Plan, the GUC Trust. To date, no plaintiff in the Ignition Switch Class Actions has asserted a claim against the GUC Trust in connection with the Ignition Switch Class Actions. In any event, however, the Scheduling Order provides that the threshold issues do not include whether any claims in the Ignition Switch Class Actions are timely or meritorious as against the bankruptcy estate of Old GM or the GUC Trust (notwithstanding the Bar Date Order).

Please refer to the disclosure in Item 1A ("Risk Factors") above for certain risk factors relating to the foregoing legal proceedings.

Item 4. Mine Safety Disclosures.

Not applicable.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

Disclosure under this item is not required, pursuant to the No Action Letter.

Item 6. Selected Financial Data.

Disclosure under this item is not required, pursuant to the No Action Letter.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

The following addresses material changes in the net assets in liquidation of the Motors Liquidation Company GUC Trust, or the GUC Trust, for its fiscal year ended March 31, 2014. It is intended to be read in conjunction with the financial statements of the GUC Trust included in Item 8 below, which we refer to as the financial statements.

Recent Trading Prices of New GM Securities

As described above, the principal assets comprising the corpus of the GUC Trust are shares of the New GM Common Stock and the New GM Series A Warrants and New GM Series B Warrants to purchase such common stock. As a result, fluctuations in the market value of the New GM Common Stock (and related fluctuation in market value of the New GM Warrants) will increase or reduce the GUC Trust's net assets in liquidation accordingly. In addition, fluctuations in the market value of the New GM Securities in relation to the tax basis of such securities will affect the amount of net deferred tax liabilities, if any, that are recorded in the Statement of Net Assets in Liquidation. See "Income Tax Liabilities for Certain Capital Gains and Dividends on New GM Common Stock" in Item 1 ("Business") above.

The New GM Common Stock and New GM Warrants are listed on the New York Stock Exchange. As of March 31, 2014, the last trading day before the end of the current fiscal year, the closing trading price of shares of New GM Common Stock was $34.42 (as compared to $27.82 as of March 28, 2013, the last trading day before the end of the previous fiscal year); the closing trading price of New GM Series A Warrants was $24.84 (as compared to $18.5599 as of March 28, 2013); and the closing trading price of New GM Series B Warrants was $17.41 (as compared to $11.79 as of March 28, 2013), in each case as reported by Bloomberg Finance L.P. The GUC Trust Units are not listed on any securities exchange.

The following table shows the intraday high and low trading prices of the New GM Common Stock for each of the previous four fiscal quarters, as reported by Bloomberg Finance L.P.:

Fiscal Quarter	High	Low
Ended June 30, 2013	$35.49	$27.11
Ended September 30, 2013	$37.97	$33.41
Ended December 31, 2013	$41.85	$33.92
Ended March 31, 2014	$41.0599	$33.573

The following table shows the intraday high and low trading prices of the New GM Series A Warrants for each of the previous four fiscal quarters, as reported by Bloomberg Finance L.P.:

Fiscal Quarter	High	Low
Ended June 30, 2013	$25.87	$17.89
Ended September 30, 2013	$28.44	$24.07
Ended December 31, 2013	$32.0999	$24.64
Ended March 31, 2014	$31.31	$24.30

The following table shows the intraday high and low trading prices of the New GM Series B Warrants for each of the previous four fiscal quarters, as reported by Bloomberg Finance L.P.:

Fiscal Quarter	High	Low
Ended June 30, 2013	$18.11	$11.32
Ended September 30, 2013	$20.63	$16.62
Ended December 31, 2013	$24.09	$17.00
Ended March 31, 2014	$23.2916	$16.59

Critical Accounting Policies and Estimates

Liquidation Basis of Accounting

The GUC Trust was created for the purposes described in Note 1, "Purpose of Trust" to the financial statements and has a finite life. As a result, the GUC Trust has prepared its financial statements on the liquidation basis of accounting in accordance with accounting principles generally accepted in the United States of America. Under the liquidation basis of accounting as prescribed by the Financial Accounting Standards Board (FASB) Accounting Standards Codification, assets are stated at their estimated net realizable value, which is the non-discounted amount of cash into which an asset is expected to be converted during liquidation, while liabilities continue to be recognized at the amount required by other U.S. generally accepted accounting principles (GAAP), and are not remeasured to reflect any anticipation that an entity will be legally released from an obligation. Additionally, under the liquidation basis of accounting, a reserve is established for estimated costs expected to be incurred during liquidation. Such costs are accrued when there is a reasonable basis for estimation. These estimates are periodically reviewed and adjusted as appropriate. As described below under the heading "—Reserves for Expected Costs of Liquidation," it is reasonably possible that estimates for such expected costs of liquidation could change in the near term.

The valuation of assets at net realizable value, reserves for Residual Wind-Down Claims and reserves for expected liquidation costs represent estimates, based on present facts and circumstances known to the GUC Trust Administrator, and are subject to change.

As described in Note 1 to the financial statements, the GUC Trust beneficiaries are future and, to the extent their liquidating distributions have not yet been paid to them, current holders of Allowed General Unsecured Claims and future and current holders of GUC Trust Units. As Disputed General Unsecured Claims are resolved and allowed and thereby become Allowed General Unsecured Claims, the holders thereof become entitled to receive liquidating distributions of New GM Securities (including the related Dividend Cash) and GUC Trust Units pro rata by the amount of such Claims and, upon such occurrence, the GUC Trust incurs an obligation to distribute such securities. Accordingly, liquidating distributions payable are recorded (at the fair value of such New GM Securities) as of the end of the period in which the Disputed General Unsecured Claims are resolved as Allowed General Unsecured Claims. Similarly, to the extent potential Term Loan Avoidance Action Claims were to arise (and would become allowed) in the manner described in Note 2 to the financial statements, liquidating distributions payable would be recorded for the New GM Securities (at fair value), along with the related Dividend Cash, that would become distributable to holders of Term Loan Avoidance Action Claims upon such occurrence. Prior to the resolution and allowance of Disputed General Unsecured Claims (or potential Term Loan Avoidance Action Claims), liabilities are not recorded for the conditional obligations associated with Disputed General Unsecured Claims (or potential Term Loan Avoidance Action Claims). Rather, the beneficial interests of GUC Trust beneficiaries in the residual assets of the GUC Trust are reflected in Net Assets in Liquidation of the GUC Trust in the financial statements.

Under the liquidation basis of accounting, the GUC Trust presents two principal financial statements: a Statement of Net Assets in Liquidation and a Statement of Changes in Net Assets in Liquidation. In addition, although not required under the liquidation basis of accounting, the GUC Trust also presents a Statement of Cash Flows, in accordance with the requirements of the GUC Trust Agreement.

Holdings of New GM Securities and Dividends Received on New GM Common Stock

Holdings of New GM Securities represent the GUC Trust's holdings of New GM Securities held for future distribution in respect of Allowed General Unsecured Claims and the GUC Trust Units, and include numbers of New GM Securities set aside from distribution to fund projected administrative costs and potential income tax liabilities (including both Dividend Taxes and Taxes on Distribution) as described below under "Net Assets in Liquidation—New GM Securities Set Aside from Distribution." The securities held consist of shares of New GM Common Stock and New GM Warrants. The GUC Trust has valued its holdings in the securities at their fair value based on quoted closing market prices as of the last trading day of the fiscal period.

Dividends on holdings of New GM Common Stock are recorded as received (or accrued as of the record date for any declared but unpaid dividend). Such dividends and any future declared dividends on New GM Common Stock are required to be applied to the same purpose as the New GM Common Stock to which such dividends relate. If shares of New GM Common Stock are distributed to holders of subsequently Resolved Allowed Claims and GUC Trust Units, then the dividends relating to those shares will also be distributed to such holders. If, however, shares of New GM Common Stock are sold by the GUC Trust in accordance with the GUC Trust Agreement to fund the costs and liabilities of the GUC Trust, then, in that case, the dividends relating to those shares will be applied to such costs and liabilities of the GUC Trust and (just like the cash proceeds from the sale of the shares of New GM Common Stock) will be maintained in Other Administrative Cash. Because such dividends are applied to the same purpose as the New GM Common Stock, references to New GM Common Stock and New GM Securities that have been set aside from distribution, reserved or sold should be understood to include the dividends (if any) relating to such New GM Common Stock, unless expressly indicated otherwise. The amount of cash and cash equivalents held by the GUC Trust that relates to dividends received by the GUC Trust on New GM Common Stock held by the GUC Trust is referred to as Dividend Cash.

Marketable Securities

Marketable securities consist of short term investments in corporate commercial paper and municipal government commercial paper and variable demand notes. The GUC Trust has valued these securities at fair value based on carrying value for municipal and corporate commercial paper where carrying value approximates fair value and par value for variable demand notes where par value equals fair value.

Reserves for Residual Wind-Down Claims and Residual Wind-Down Costs

Upon the dissolution of MLC, which occurred on December 15, 2011, the GUC Trust became responsible for resolving and satisfying (to the extent allowed) all remaining Residual Wind-Down Claims. On the date of dissolution of the Debtors, the Debtors transferred to the GUC Trust Residual Wind-Down Assets in an amount necessary to satisfy the ultimate allowed amount of such Residual Wind-Down Claims, the Residual Wind-Down Costs and certain Avoidance Action Defense Costs, as estimated by the Debtors. Should the Residual Wind-Down Costs and the Residual Wind-Down Claims be less than the Residual Wind-Down Assets, any excess funds will be returned to the DIP Lenders. If, collectively, the actual amounts of Residual Wind-Down Claims allowed, the Residual Wind-Down Costs and the Avoidance Action Defense Costs exceed the Residual Wind-Down Assets, the GUC Trust Administrator may be required to set aside from distribution and sell additional New GM Securities to fund the shortfall. Any such sale of securities would reduce the numbers of New GM Securities (and related Dividend Cash) available for distribution to holders of GUC Trust Units.

Reserves for Expected Costs of Liquidation

Under the liquidation basis of accounting, the GUC Trust is required to estimate and accrue the costs associated with implementing the Plan and distributing the GUC Trust's distributable assets. These costs, described as Wind-Down Costs and Reporting Costs in Note 2, "Plan of Liquidation" to the financial statements, consist principally of professional fees, costs of governance, and other administrative expenses. These amounts may vary significantly due to, among other things, the time and effort required to complete all distributions under the Plan. The GUC Trust has recorded reserves for expected costs of liquidation that represent estimated costs to be incurred over the remaining liquidation period of the GUC Trust for which there is a reasonable basis for estimation. The amount of liquidation costs that will ultimately be incurred depends both on the period of time and on the extent of activities required for the GUC Trust to complete its functions and responsibilities under the Plan and the GUC Trust Agreement. Significant uncertainty remains both as to that time period and as to the extent of those activities. As of March 31, 2014, such remaining liquidation period has been estimated on a probability-weighted basis, which the GUC Trust believes is the most appropriate measurement basis under the circumstances, and is dependent predominantly on the estimate of the remaining period of time for resolution of the Term Loan Avoidance Action, as well as certain additional estimated time as necessary to wind down the GUC Trust. It is reasonably possible that the GUC Trust's estimates regarding the costs and remaining liquidation period could change in the near term.

As the GUC Trust incurs such costs, the reserves are released to offset the costs incurred and a liability to the service provider is recognized as an accounts payable or accrued expense until paid. In addition, because the GUC Trust only records reserves for expected costs for which there is a reasonable basis for estimation under applicable generally accepted accounting principles, additional costs may be identified from time to time for which additional reserves must be recorded. As such costs are identified, the GUC Trust records an increase to its reserves and charges such increase as an addition to such reserves in the Statement of Changes in Net Assets in Liquidation.

The process of recording reserves for expected costs of liquidation as a matter of financial reporting is separate and distinct from the process by which New GM Securities are set aside from distribution for the purposes of funding projected costs of liquidation. Such projected costs are generally estimated on a more conservative (i.e., more inclusive) basis and include contingencies that are not permitted to be accrued in reserves for expected costs of liquidation under applicable accounting standards. For a more complete description of the process of setting aside New GM Securities to fund projected costs and potential liabilities of the GUC Trust, see "The GUC Trust Assets" in Item 1 ("Business") above and "Net Assets in Liquidation—New GM Securities Set Aside from Distribution" below.

Income Taxes

The GUC Trust is considered to be a "Disputed Ownership Fund" pursuant to Treasury Regulation Section 1.468B-9. Because all of the assets that have been transferred to the GUC Trust are passive investments, the GUC Trust will be taxed as a Qualified Settlement Fund (or QSF) pursuant to Treasury Regulation Section 1.468B-9(c)(1)(ii). The QSF tax status of the GUC Trust has been approved by the Internal Revenue Service in a private letter ruling issued on March 2, 2011. In general, a QSF is considered to be a C Corporation but pays Federal income tax using trust income tax rates on its modified gross income. Modified gross income includes gross income pursuant to Internal Revenue Code Section 61 less administrative expenses, certain losses from the sale, exchange or worthlessness of property, and net operating losses. In general, a Disputed Ownership Fund taxed as a QSF does not recognize gross income on assets transferred to it; therefore, the GUC Trust has not recognized gross income on the transfer of assets from MLC.

The GUC Trust is currently expected to generate gross income in the form of interest and dividend income (including dividends received on its holdings of New GM Common Stock) and recognize gains and/or losses upon its disposition of shares of New GM Common Stock and New GM Warrants which it now holds, which will be reduced by administrative expenses and any accumulated net operating and capital losses, to compute modified gross income. As the GUC Trust is taxable for Federal income tax purposes, a current income tax liability or asset, if any, is recognized for estimated taxes payable or receivable for the year. Deferred tax liabilities and assets are recognized for the estimated future tax effects of temporary differences between financial reporting and tax accounting. Deferred tax assets are reviewed for recoverability and valuation allowances are provided as necessary.

The GUC Trust is not subject to state income taxes under current law. Accordingly, no current or deferred state income tax liabilities and assets are recorded.

The GUC Trust recognizes the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained on examination by the taxing authority, based on the technical merits of the position, review of available evidence and consultation with GUC Trust professionals. The GUC Trust's Federal income tax returns for the years ended March 31, 2012 and 2013 are no longer subject to examination as a result of the application of Section 505(b) of the Bankruptcy Code. However, net operating and capital loss carryovers generated in the years ended March 31, 2012 and 2013, could be subject to examination by the Internal Revenue Service in subsequent years when those losses are utilized. As of March 31, 2014, there are no known items which would result in a significant accrual for uncertain tax positions.

The income tax benefit (provision) for the years ended March 31, 2014 and 2013, was determined by computing the deferred tax provision using the enacted statutory rate of 39.6% that went into effect for the GUC Trust's fiscal year beginning on April 1, 2013. The deferred tax provision for the year ended March 31, 2012 was computed using the statutory rate then in effect of 35%. There was no current tax provision in any periods.

The process of recognizing deferred tax assets and liabilities and any current income taxes payable as a matter of financial reporting is separate and distinct from the process by which New GM Securities are set aside from distribution for the purposes of funding potential income tax liabilities. Such potential income tax liabilities are generally estimated on a more conservative (i.e., more inclusive) basis and include amounts of potential income tax liabilities beyond the amounts that are permitted to be recorded under applicable accounting standards. For a more complete description of the process of setting aside New GM Securities to fund projected costs and potential income tax liabilities of the GUC Trust, see "The GUC Trust Assets" in Item 1 ("Business") above and "Net Assets in Liquidation—New GM Securities Set Aside from Distribution" below.

Funding Obligation to the Avoidance Action Trust

Based on an analysis of the Avoidance Action Trust and its potential funding sources, the GUC Trust Administrator, in conjunction with the Avoidance Action Trust Administrator, determined that it would be in the best interest of the holders of Allowed General Unsecured Claims to fund certain fees, costs and expenses of the Avoidance Action Trust, subject to approval of the Bankruptcy Court. As described in Note 2, "Plan of Liquidation" to the financial statements, in March 2012, the Bankruptcy Court approved the sale of New GM Securities aggregating approximately $13.7 million and the transfer of the resulting proceeds to the Avoidance Action Trust for such funding. The sale occurred in March 2012 and the proceeds were transferred from the GUC Trust to the Avoidance Action Trust on May 14, 2012.

Use of Estimates

The preparation of financial statements on a liquidation basis in conformity with accounting principles generally accepted in the United States of America requires the use of estimates and assumptions that affect reported amounts of assets and liabilities. These estimates are subject to known and unknown risks, uncertainties and other factors that could materially impact the amounts reported and disclosed in the financial statements and related footnotes. Significant estimates include the anticipated amounts and timing of future cash flows for expected costs of liquidation, Residual Wind-Down Claims and Residual Wind-Down Costs, and fair value of marketable securities. Actual results could differ from those estimates.

New Accounting Standard

In April 2013, the FASB issued Accounting Standards Update No. 2013-07, Liquidation Basis of Accounting, which amended the FASB Accounting Standards Codification and provides guidance as to when an entity should apply the liquidation basis of accounting. In addition, the guidance establishes principles for the recognition and measurement of assets and liabilities and requirements for financial statements prepared using the liquidation basis of accounting. The provisions of this Accounting Standards Update are effective beginning April 1, 2014 for the GUC Trust. Such provisions require that income or cash expected to be received over the liquidation period be estimated and accrued to the extent that a reasonable basis for estimation exists. With respect to dividends on New GM Common Stock held by the GUC Trust, such dividends have been recorded as received (or accrued as of the record date for any declared but unpaid dividends) in the accompanying financial statements. The GUC Trust has not yet determined the impact the adoption of these provisions will have on its financial statements.

Statement of Changes in Net Assets in Liquidation

During the year ended March 31, 2014, net assets in liquidation decreased by approximately $325.7 million, from approximately $1,390.2 million to approximately $1,064.5 million, principally as a result of the impact of approximately $1,206 million of liquidating distributions of New GM Securities, partially offset by an increase in the fair value of holdings of New GM Securities since March 31, 2013 of approximately $702.7 million and the recording of an income tax benefit of $164.8 million as described below. As noted above in "Recent Trading Prices of New GM Securities," the closing trading price of New GM Common Stock, as well as the New GM Series A and New GM Series B Warrants, increased between the last trading day of the year ended March 31, 2013 and the last trading day of the year ended March 31, 2014.

The liquidating distributions of New GM Securities during the year ended March 31, 2014 were primarily comprised of the Special Nova Scotia Distribution of approximately $527.5 million and the Special Excess Distribution of approximately $614.8 million, each of which occurred pursuant to and following the effectiveness of the Nova Scotia Settlement on November 25, 2013. Additional distributions for the year ended March 31, 2014 consisted of distributions to holders of Allowed Disputed General Unsecured Claims (exclusive of the Special Nova Scotia Distribution), and distributions to holders of Allowed General Unsecured Claims who previously failed to fulfill informational requirements for distribution established in accordance with the GUC Trust Agreement, but subsequently successfully fulfilled such information requirements. For additional information regarding the Nova Scotia Matter and the related Nova Scotia Settlement, see the disclosure under the heading "Nova Scotia Settlement" in Item 1 ("Business") of this Form 10-K.

The income tax benefit of $164.8 million for the year ended March 31, 2014, resulted primarily from a decrease in the net deferred tax liability during the year. Such decrease in the net deferred tax liability primarily resulted from a decrease in the deferred tax liability for the excess of fair value over the tax basis of holdings of New GM Securities and an increase in the deferred tax asset for net operating and capital loss carryovers, offset in part by the establishment of a full valuation allowance against all net deferred tax assets. Both the decrease in the deferred tax liability for the excess of fair value over the tax basis of New GM Securities and the increase in the deferred tax asset for net operating and capital loss carryovers resulted primarily from a new tax position that was taken in the GUC Trust's U.S. federal income tax returns. As described in Note 9, "Income Tax Benefit (Provision)" to the financial statements, during the quarter ended September 30, 2013, the GUC Trust made a determination to file its U.S. federal income tax returns taking the tax position that beneficial ownership for a substantial majority of New GM Securities transferred from MLC to the GUC Trust on March 31, 2011, and that the tax basis of such New GM Securities should be determined with reference to the value of such securities on such date, instead of December 15, 2011, when record ownership of the remaining New GM Securities still held by MLC was transferred from MLC to the GUC Trust. For the remaining substantial minority of New GM Securities transferred from MLC to the GUC Trust, the GUC Trust determined that transfer of beneficial ownership occurred on other dates for which the tax basis should be determined by reference to the value of such securities on such dates. This new tax position resulted in an increased tax basis of the New GM Securities from the prior tax position and, therefore, reduced taxable gains and increased taxable losses on distributions and sales of New GM Securities since March 31, 2011.

As a result, a tax benefit of $411.6 million (net of establishment of a valuation allowance against deferred tax assets of $103.9 million) related to the new tax position was recognized in the financial statements during the three months ended September 30, 2013. The benefit was recognized because the GUC Trust believes, based on the available evidence and consultation with GUC Trust professionals, that it is more likely than not that the new tax position in the amounts to be reflected in the GUC Trust's income tax returns, will be sustained on examination by the Internal Revenue Service, based on the technical merits of the position. Subsequently, the GUC Trust filed its U.S. federal income tax returns for the year ended March 31, 2013 with the Internal Revenue Service using the new tax position. Although the GUC Trust's U.S. federal income tax returns for the years ended March 31, 2012 and 2013 are no longer subject to examination by the Internal Revenue Service as a result of the application of Section 505(b) of the Bankruptcy Code, such new tax position as of the date hereof, has not been sustained on examination by the Internal Revenue Service. Accordingly, capital loss carryovers generated in the years ended March 31, 2012 and 2013, from the new tax position, could be subject to examination by the Internal Revenue Service in subsequent years when those losses are utilized.

Such income tax benefit recognized during the three months ended September 30, 2013 was partly offset during the year ended March 31, 2014, primarily by an increase in the deferred tax liability associated with an increase in the fair value of holdings of New GM Securities since March 31, 2013. See "Functions and Responsibilities of the GUC Trust—Income Tax Liabilities for Certain Capital Gains and Dividends on New GM Common Stock" in Item 1 ("Business") above and Note 9, "Income Tax Benefit (Provision)" to the financial statements.

Net assets in liquidation in the year ended March 31, 2014 were increased as a result of reductions in reserves for expected costs of liquidation of $7.9 million. As described below in more detail in "Liquidation and Administrative Costs," such reductions in the reserves for expected costs of liquidation resulted primarily from decreases in both expected Wind-Down Costs and Reporting Costs under generally accepted accounting principles applicable to the GUC Trust. (The process of recognizing reserves as a matter of financial reporting is separate and distinct from the process by which New GM Securities are set aside from distribution for the purposes of funding projected administrative costs and potential income tax liabilities. See "Net Assets in Liquidation—New GM Securities Set Aside from Distribution" below.)

The changes in net assets in liquidation for the year ended March 31, 2014 also reflect approximately $4.7 million of interest income and dividends, consisting almost entirely of dividends received on holdings of New GM Common Stock. In March 2014, New GM paid a dividend of $0.30 per share on its Common Stock. As described in "The GUC Trust Assets" in Item 1 ("Business") above, such dividends on New GM Common Stock will be distributed to holders of subsequently Resolved Allowed Claims and GUC Trust Units in respect of the shares of New GM Common Stock that they receive, unless such dividends are in respect of shares of New GM Common Stock that are sold by the GUC Trust in accordance with the GUC Trust Agreement to fund the GUC Trust's costs of liquidation, tax liabilities or shortfalls in the Residual Wind-Down Assets. In such case, such dividends in respect of New GM Common Stock that are sold, will be maintained in Other Administrative Cash.

Liquidation and Administrative Costs

As discussed above under "Critical Accounting Policies and Estimates," under the liquidation basis of accounting, the GUC Trust was required upon its establishment to record reserves in respect of its expected costs associated with implementing the Plan and distributing the GUC Trust's distributable assets. These costs consist principally of professional fees, governance costs and other liquidation and administrative costs.

Under U.S. GAAP, these reserves may be established only to the extent there is a reasonable basis for their estimation. From time to time, as additional costs are identified and for which there is reasonable basis for estimation, the GUC Trust records an increase to its reserves for expected costs of liquidation and charges such increase as an addition to reserves for expected costs of liquidation in the Statement of Changes in Net Assets in Liquidation. As costs are actually incurred by the GUC Trust, such costs reduce the previously recorded reserves for expected costs of liquidation by the amount of such incurred costs, with no further effect on the Statement of Changes in Net Assets in Liquidation.

The GUC Trust's reserves for liquidation and administrative costs (recorded in conformity with U.S. GAAP) are allocable into the following categories:

- reserve for expected Wind-Down Costs, corresponding to expenditures to be made out of the Administrative Fund and, following the depletion of the Administrative Fund, Other Administrative Cash (see "The GUC Trust Assets" in Item 1 ("Business") above;
- reserve for expected Reporting Costs, corresponding to expenditures to be made out of Other Administrative Cash (see "The GUC Trust Assets" in Item 1 ("Business") above);
- reserve for Indenture Trustee / Fiscal and Paying Agent Costs, corresponding to expenditures to be made out of the cash received by the GUC Trust from MLC on the Dissolution Date (see "The GUC Trust Assets" in Item 1 ("Business") above);
- reserve for Avoidance Action Defense Costs, corresponding to expenditures to be made out of Residual Wind-Down Assets and, following the depletion of such assets, Other Administrative Cash (see "The GUC Trust Assets" and "Term Loan Avoidance Action in Item 1 ("Business") above); and
- reserve for Residual Wind-Down Costs, corresponding (in addition to expenditures to satisfy and resolve Residual Wind-Down Claims) to expenditures to be made out of Residual Wind-Down Assets and, following the depletion of the Residual Wind-Down Assets, Other Administrative Cash (see "The GUC Trust Assets" in Item 1 ("Business") above.

As described in greater detail under "The GUC Trust Assets" in Item 1 ("Business") above and "Liquidity and Capital Resources" below, unused portions of certain of the assets associated with the foregoing reserves are required to be returned to the DIP Lenders upon the winding up and dissolution of the GUC Trust. Therefore, such assets are not available to fund costs of liquidation and administration or income tax liabilities of the GUC Trust, and are also not available for distribution to the holders of Allowed General Unsecured Claims or GUC Trust Units. See "The GUC Trust Assets" in Item 1 ("Business") above.

As of March 31, 2014, the GUC Trust had approximately $36.5 million in reserves for liquidation and administrative costs that are estimated to be incurred through the winding up and conclusion of the GUC Trust, compared to approximately $61.5 million in reserves as of March 31, 2013. The following table summarizes in greater detail the changes in such reserves during the year ended March 31, 2014:

(in thousands)	Reserve for Expected Wind-Down Costs	Reserve for Expected Reporting Costs	Reserve for Indenture Trustee / Fiscal and Paying Agent Costs	Reserve for Avoidance Action Defense Costs	Reserve for Residual Wind-Down Costs	Total Reserves for Expected Costs of Liquidation
Balance, March 31, 2013	$ 38,043	$ 20,442	$ 499	$ 898	$ 1,631	$ 61,513
Less reductions in reserves	(3,843)	(4,067)	—	—	—	(7,910)
Less liquidation costs incurred:						
Trust Professionals	(7,736)	(2,013)	—	(898)	(373)	(11,020)
Trust Governance	(3,888)	(1,799)	(35)	—	—	(5,722)
Other Administrative Expenses	(47)	(328)	—	—	—	(375)
Balance, March 31, 2014	$ 22,529	$ 12,235	$ 464	$ —	$ 1,258	$ 36,486

Reserves were reduced approximately $7.9 million during the year ended March 31, 2014, in order to reflect a $3.8 million decrease in expected Wind-Down Costs and a $4.1 million decrease in expected Reporting Costs. The decrease in expected Wind-Down Costs during the year ended March 31, 2014, is primarily associated with the Nova Scotia Settlement resulting in reduced expected litigation costs, as well as a reduction in revised estimates of ongoing costs necessary to conduct the wind-down activities of the GUC Trust. The decrease in expected Reporting Costs during the year ended March 31, 2014, is primarily associated with a reduction in revised estimates of ongoing costs of services provided by GUC Trust professionals, as well as increased visibility into expected Reporting Costs primarily as a result of completing the first full year of SEC reporting requirements for the year ended March 31, 2013. In comparison, approximately $17.5 million in additional reserves were accrued during the year ended March 31, 2013 in order to reflect increases in expected Reporting Costs of $12.3 million and expected Wind-Down Costs of approximately $5.2 million. The increase in expected Reporting Costs was associated with (i) increases in the estimated length of the remaining liquidation period and (ii) increased visibility into expected Reporting Costs. The increase in expected Wind-Down Costs was associated with (i) increases in the estimated length of the liquidation period, (ii) revised estimates of the expected costs of the Nova Scotia Claims, (iii) additional Trust Professionals services required as a result of the adverse determination from the Internal Revenue Service with respect to the requested issuance of a private letter ruling, and (iv) increased visibility into the ongoing costs necessary to conduct the wind-down activities of the GUC Trust, offset in large part by reductions in expected Wind-Down Costs resulting from the execution of a letter agreement with the DIP Lenders dated July 24, 2012, which provided relief from certain restrictions on utilization of Wind-Down Assets.

Total reserves were reduced by the amount of liquidation and administrative costs incurred during the year ended March 31, 2014. Trust professional costs incurred during the year ended March 31, 2014 were approximately $11.0 million, as compared to $25.5 million for the year ended March 31, 2013. The decrease of $14.5 million from year to year was due to a $12.0 million decrease in Wind-Down Costs, a $1.0 million decrease in Reporting Costs, and a $2.0 million decrease in Residual Wind-Down Costs, partially offset by a $0.5 million increase in Avoidance Action Defense Costs. Trust Governance Costs incurred during the year ended March 31, 2014, were approximately $5.7 million, as compared to $6.2 million for the year ended March 31, 2013. The decrease of $0.5 million from year to year was due to decreased fees and reimbursable expenses for the GUC Trust Administrator and GUC Trust Monitor. Other administrative costs during each of the years ended March 31, 2014 and 2013 were approximately $0.4 million. Such costs represented miscellaneous fees and costs of the GUC Trust. For additional information regarding the components of each category of costs, see "The GUC Trust Assets" in Item 1 ("Business") above.

The foregoing reserves represent future costs of the GUC Trust for which there was a reasonable basis for estimation as of March 31, 2014 and, therefore, are recorded under the liquidation basis of accounting in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). It is reasonably possible, however, that additional costs will be incurred, for which there was not a reasonable basis for estimation as of March 31, 2014. In particular, as of March 31, 2014, the recorded reserves for expected costs of liquidation reflect estimated costs for a remaining liquidation period extending through December 2016, which date is predominantly the result of the estimate of the period of time required for resolution of the Term Loan Avoidance Action, as well as certain additional estimated time as necessary to wind down the GUC Trust, and assumes an extension of the current scheduled dissolution date of the GUC Trust. This end date of the remaining liquidation period has been estimated on a probability-weighted basis as permitted under U.S. GAAP and which the GUC Trust believes is the most appropriate measurement basis in the circumstances. In addition, certain liquidation costs that are expected to be prepaid by the GUC Trust upon its dissolution have also been estimated and accrued.

The amount of liquidation costs that will ultimately be incurred depends both on the length of the remaining liquidation period and on the extent of activities required for the GUC Trust to complete its functions and responsibilities under the Plan and the GUC Trust Agreement. Significant uncertainty remains both as to that time period and as to the extent of those activities. It is reasonably possible that the GUC Trust's estimates regarding the remaining liquidation period and the expected costs of liquidation will change in the near term.

If the funds available for each of the foregoing categories of costs are not sufficient to satisfy any of the costs in that category, the GUC Trust will be required to sell a portion of its holdings of New GM Securities in order to meet its additional obligations for those costs. Any such sales of New GM Securities will result in lesser numbers of New GM Securities available for distribution to holders of GUC Trust Units.

The process of recognizing reserves for expected costs of liquidation as a matter of financial reporting is separate and distinct from the process by which New GM Securities are set aside from distribution for the purposes of funding projected costs of liquidation, which are generally made on a more conservative (i.e., more inclusive) basis and include contingencies that are not permitted to be recognized under applicable accounting standards. As described in further detail below, certain New GM Securities (and related Dividend Cash) have already been set aside from distribution for the purposes of meeting such additional obligations. However, the amounts set aside from distribution are neither reflected in nor a part of the financial statements included elsewhere in this Form 10-K because the process of setting aside such assets is not related to the process of recording, as a matter of financial reporting in the Statement of Net Assets in Liquidation, reserves for expected costs of liquidation or current and deferred income tax liabilities. See "Critical Accounting Policies and Estimates—Income Taxes" and "Critical Accounting Policies and Estimates—Reserves for Expected Costs of Liquidation" above and "Net Assets in Liquidation—New GM Securities Set Aside from Distribution" below.

For additional information regarding the reserves described above, see Note 2, "Plan of Liquidation", and Note 8, "Reserves for Expected Costs of Liquidation and Residual Wind-Down Claims," to the financial statements.

Net Assets in Liquidation

Disputed Claims

During the year ended March 31, 2014, the GUC Trust Administrator resolved Disputed General Unsecured Claims with an aggregate maximum asserted dollar amount of approximately $3,525 million, approximately $1,626 million of which were allowed and approximately $1,899 million of which were disallowed.

The following table provides additional detail regarding claims resolution status for the year ended March 31, 2014:

(in thousands)	Allowed General Unsecured Claims	Disputed General Unsecured Claims	Term Loan Avoidance Action Claims	Maximum Amount of Unresolved Claims (1)	Total Claims Amount (2)
Total, March 31, 2013	$30,227,244	$ 3,604,871	$ 1,500,000	$ 5,104,871	$35,332,115
New Allowed General Unsecured Claims	1,626,386	—	—	—	1,626,386
Disputed General Unsecured Claims resolved or disallowed	—	(3,525,371))	—	(3,525,371)	(3,525,371)
Total, March 31, 2014	$31,853,630	$ 79,500	$ 1,500,000	$ 1,579,500	$33,433,130

(1) Maximum Amount of Unresolved Claims represents the sum of Disputed General Unsecured Claims and Term Loan Avoidance Action Claims.
(2) Total Claim Amount represents the sum of Allowed General Unsecured Claims and Maximum Amount of Unresolved Claims.

As previously disclosed, on September 26, 2013, the GUC Trust entered into the Nova Settlement to resolve the Nova Scotia Claims. The Nova Scotia Settlement became effective pursuant to its terms on November 25, 2013. As a result, Disputed General Unsecured Claims with an aggregate maximum asserted amount of $3,061 million were resolved, $1,550 million of which were allowed and approximately $1,511 million of which were disallowed. See Note 5, "Liquidating Distributions" to the financial statements for additional information regarding distributions of New GM Securities during the year ended March 31, 2014, pursuant to the terms of the Nova Scotia Settlement.

Distributable Assets

The table below summarizes the activity in the New GM Securities and Dividend Cash that comprise the GUC Trust's distributable assets, including the amounts of New GM Securities distributed through or distributable as of March 31, 2014, as well as the numbers of New GM Securities and amount of Dividend Cash available for distribution to holders of GUC Trust Units as of March 31, 2014:

	New GM Common Stock	New GM Series A Warrants	New GM Series B Warrants	Dividend Cash
Distributable Assets as of Effective Date (March 31, 2011)	150,000,000	136,363,635	136,363,635	$ —
Dividends Received on New GM Common Stock	—	—	—	4,576,169
Prior Distributions (1)	(133,531,043)	(121,392,110)	(121,392,110)	—
Prior Sales to Fund GUC Trust Costs and Avoidance Action Trust Funding Obligation	(1,171,650)	(1,065,134)	(1,065,134)	—
Holdings of New GM Securities as of March 31, 2014 (2)	15,297,307	13,906,391	13,906,391	4,576,169
Less: Distributions Payable at March 31, 2014 (1), (3)	(575,278)	(522,865)	(522,865)	(159,560)
Add: Distributions Payable to Holders of GUC Trust Units as of March 31, 2014	488,556	444,143	444,143	146,567
Less: Amounts Set Aside from Distribution to Fund Projected GUC Trust Costs	(661,157)	(601,027)	(601,027)	(198,347)
Less: Amounts Set Aside from Distribution to Fund Projected Dividend Taxes	(47,744)	(43,403)	(43,403)	(14,323)
Less: Amounts Set Aside from Distribution to Fund Potential Taxes on Distribution	(7,363,141)	(6,693,764)	(6,693,764)	(2,208,942)
Distributable Assets as of March 31, 2014 (4)	7,138,543	6,489,475	6,489,475	$ 2,141,564

(1) The numbers of New GM Securities shown as distributed or distributable include sales for (a) cash distributions to governmental entities to the extent such governmental entities have requested such sales and demonstrated to the satisfaction of the GUC Trust Administrator that such governmental entities are precluded by applicable law from receiving distributions of New GM Securities and (b) fractional amounts of New GM Securities, in lieu of which the GUC Trust is required pursuant to the GUC Trust Agreement to distribute cash, subject to certain minimum thresholds.

(2) Holdings of New GM Securities reflect the numbers of New GM Securities used to determine Holdings of New GM Securities in the Statement of Net Assets in Liquidation. See Note 6, "Holdings of New GM Securities" to the financial statements.

(3) Distributions Payable are in respect of Allowed General Unsecured Claims (including both (a) Allowed General Unsecured Claims that were newly allowed during the quarter ended March 31, 2014 and (b) Allowed General Unsecured Claims that were allowed in prior fiscal periods, but for which the holders of such claims had not yet supplied information required by the GUC Trust in order to effect the distribution to which they are entitled) and excess distributions payable to holders of GUC Trust units.

(4) Distributable Assets reflects the numbers of New GM Securities and Dividend Cash shown as "GUC Trust Distributable Assets" on the report included as Exhibit 99.1 to the Form 8-K filed by the GUC Trust with the SEC on April 23, 2014. Such New GM Securities and associated Dividend Cash have been set aside for potential distribution in respect of current Disputed General Unsecured Claims and Term Loan Avoidance Action Claims as of March 31, 2014. To the extent such claims are resolved in favor of the GUC Trust, those amounts of New GM Securities and associated Dividend Cash set aside may become available for distribution to holders of GUC Trust Units in future periods. The numbers of New GM Securities set out above as "Distributable Assets" do not, however, directly relate to Net Assets in Liquidation or any other number appearing in our financial statements prepared in accordance with U.S. GAAP.

As described above under the heading "Disputed Claims," as of March 31, 2014, there were approximately $31.9 billion in Allowed General Unsecured Claims. In respect of such claims, the GUC Trust had previously distributed, or was obligated to distribute as of March 31, 2014, in the aggregate, 134,106,321 shares of New GM Common Stock, 121,914,975 New GM Series A Warrants and 121,914,975 New GM Series B Warrants. These amounts reflect 43,310 shares of New GM Common Stock, 39,371 New GM Series A Warrants and 39,371 New GM Series B Warrants, which were set aside for distribution in respect of Allowed General Unsecured Claims that were newly allowed during the quarter ended March 31, 2014. These amounts also include 488,556 shares of New GM Common Stock, 444,143 New GM Series A Warrants and 444,143 New GM Series B Warrants that were distributable to holders of GUC Trust Units in respect of Excess GUC Trust Distributable Assets as of March 31, 2014.

During the year ended March 31, 2014, no New GM Securities were sold to fund liquidation and administrative costs of the GUC Trust.

New GM Securities Set Aside from Distribution

Overview of New GM Securities Set Aside From Distribution

In addition to distributions and liquidations of New GM Securities, which are reflected as reductions to the GUC Trust net assets in its financial statements, the GUC Trust also, from time to time, sets aside New GM Securities for potential future liquidation to fund projected liquidation and administrative costs, as well as potential income tax liabilities, including both Dividend Taxes and Taxes on Distribution. The New GM Securities that are set aside from distribution by the GUC Trust are not deducted from the net assets in liquidation of the GUC Trust in its financial statements unless and until such New GM Securities are liquidated. The New GM Securities set aside from distribution are segregated by the GUC Trust for such specific purposes and are not available for distribution to holders of GUC Trust Units or other claimants unless and to the extent that the GUC Trust later determines that the New GM Securities are no longer needed to fund those specific purposes.

This process is not related to, and is separate from, the process of recording current and deferred income tax liabilities and reserves for expected costs of liquidation in the Statement of Net Assets in Liquidation, as a matter of financial reporting. As a matter of financial reporting, income tax liabilities and reserves for expected costs of liquidation must be determined in accordance with generally accepted accounting principles applicable to the GUC Trust. By contrast, the estimates of projected costs and potential liabilities for which the GUC Trust may set aside New GM Securities are generally made on a more conservative (i.e., more inclusive) basis and include contingencies and amounts of potential income tax liabilities that are not permitted to be recognized under applicable accounting standards. See "Critical Accounting Policies—Income Taxes" and "Critical Accounting Policies and Estimates—Reserves for Expected Costs of Liquidation" above.

As of March 31, 2014, the distributable assets of the GUC Trust included 7,138,543 shares of New GM Common Stock, 6,489,475 New GM Series A Warrants and 6,489,475 New GM Series B Warrants, with an aggregate fair value of approximately $519.9 million, as well as Dividend Cash of $2.1 million, after deducting the numbers of New GM Securities and Dividend Cash (i) set aside from distribution to fund additional projected liquidation and administrative costs and potential income tax liabilities of the GUC Trust (as described below under the headings "—'Set Aside' Calculations Relating to Projected Liquidation and Administrative Costs, Including Dividend Taxes" and "—'Set Aside' Calculations Relating to Potential Taxes on Distribution") and (ii) set aside for distributions payable in respect of new Allowed General Unsecured Claims and Allowed General Unsecured Claims that were allowed in prior fiscal periods, but for which the holders of such claims had not yet supplied information required by the GUC Trust in order to effect the distributions to which they are entitled. Such New GM Securities and Dividend Cash have been set aside for potential distribution in respect of current Disputed General Unsecured Claims and Term Loan Avoidance Action Claims. To the extent such claims are resolved in favor of the GUC Trust, those amounts of New GM Securities and Dividend Cash set aside may become available for distribution to holders of GUC Trust Units in future periods.

"Set Aside" Calculations Relating to Projected Liquidation and Administrative Costs, Including Dividend Taxes

The GUC Trust Administrator reevaluates, on a quarterly basis, the numbers of New GM Securities needed to be set aside from distribution for purposes of funding projected liquidation and administrative costs. This determination is made on a basis different than that used to calculate reserves for financial statement purposes. The current methodology for calculating such set asides converts estimates of projected liquidation and administrative costs into the number of New GM Securities to be set aside from distribution by dividing such estimates by the trailing twelve month average closing prices for the New GM Securities. In addition, beginning in the quarter ended March 31, 2014, the numbers of New GM Securities to be set aside from distribution has been reduced for dividends on New GM Common Stock received by the GUC Trust during the quarter that are associated with the set-aside New GM Common Stock by dividing such dividends by the trailing twelve month average closing prices for the New GM Securities and subtracting such calculated numbers of New GM Securities from the numbers of set-aside New GM Securities. A corresponding amount of Dividend Cash associated with the set-aside New GM Securities has also been set aside from distribution.

For the quarter ended March 31, 2014, as a result of the standard quarterly reevaluations described above, the number of New GM Securities set aside from distribution to fund projected liquidation and administrative costs of the GUC Trust was reduced by 9,371 shares of New GM Common Stock, 8,519 New GM Series A Warrants and 8,519 New GM Series B Warrants from those previously set aside as of December 31, 2013. These overall reductions were primarily related to increases in the trailing twelve month average closing prices of the New GM Securities during the period, partially offset by increases in the set asides of 47,744 in New GM Common Stock, 43,403 New GM Series A Warrants and 43,403 New GM Series B Warrants for projected Dividend Taxes, relating to dividends on New GM Common Stock received in March 2014 and to be received in June 2014 (as declared by GM in

April 2014), which are required under the GUC Trust Agreement to be paid from the proceeds of sale of New GM Securities included in Excess GUC Trust Distributable Assets Accordingly, as of March 31, 2014, the GUC Trust had set aside from distribution, in the aggregate, 708,901 shares of New GM Common Stock, 644,430 New GM Series A Warrants, 644,430 New GM Series B Warrants and Dividend Cash of $0.2 million, with an aggregate fair value of $51.8 million, for the purposes of funding future projected liquidation and administrative costs of the GUC Trust, including Dividend Taxes of $3.5 million. Such amounts were sufficient to fully fund projected liquidation and administrative costs of the GUC Trust, as estimated by the GUC Trust Administrator at March 31, 2014.

With respect to projected Dividend Taxes, no additional set aside of New GM Securities has been made as of March 31, 2014, due to uncertainty associated with a number of variables, including but not limited to (a) the likelihood of the payment of, and timing of, any potential future dividends, (b) the amount per share of any potential future dividend, and (c) the numbers of shares on New GM Common Stock that will be held by the GUC Trust as of the record date of any potential future dividends. To the extent that the GUC Trust Administrator determines that the level of uncertainty associated with any of the aforementioned variables has sufficiently decreased, the GUC Trust Administrator reserves the right, at its discretion and without advance notice, to increase or decrease the set aside for Wind-Down Costs in an amount sufficient to cover all estimated Dividend Taxes associated with all then anticipated potential future dividends. In such event, and assuming that, for the remainder of the estimated life of the GUC Trust (as estimated for other set aside purposes), New GM continues to pay quarterly dividends at the current rate per share and the number of shares of New GM Common Stock held by the GUC Trust as at March 31, 2014 does not decrease, and based upon the GUC Trust's current applicable income tax rate and the market value of New GM Securities at March 31, 2014, there could be, as a conservative measure, up to a further $43.2 million of New GM Securities required to be set aside. The dollar value of New GM Securities comprising such additional set aside would vary if, for example, no dividend is paid by New GM for one or more future quarters, the rate per share of any dividend that is actually paid by New GM in future periods increases or decreases, the applicable income tax rate changes, the life of the GUC Trust is longer or shorter than that assumed, or if (as is likely) the number of shares of New GM Common Stock held by the GUC Trust declines over its remaining life and the market value of the New GM Securities increases or decreases.

"Set Aside" Calculations Relating to Potential Taxes on Distribution

In addition to reevaluating the numbers of New GM Securities to be set aside from distribution to fund projected liquidation and administrative costs, including Dividend Taxes, the GUC Trust Administrator also reevaluates, on a quarterly basis, the numbers of New GM Securities needed to be set aside from distribution to fund potential income tax liabilities on realized gains and future gains from the disposition of New GM Securities, which are referred to as Taxes on Distribution. The current methodology for calculating such set asides estimates potential Taxes on Distribution by applying the applicable U.S. federal income tax rate to estimates of potential capital gains, which are arrived at by comparing the highest closing price for the New GM Securities since December 15, 2011, against the tax basis of the New GM Securities on December 15, 2011 (based on the date of transfer of record ownership of the New GM Securities to the GUC Trust from MLC). The set aside calculation methodology then converts the estimate of potential Taxes on Distribution into the numbers of New GM Securities to be set aside from distribution by dividing such estimate by the trailing twelve month average closing prices of the New GM Securities. In addition, beginning in the quarter ended March 31, 2014, the number of New GM Securities to be set aside from distribution has been reduced for dividends on New GM Common Stock received by the GUC Trust during the quarter that are associated with the set-aside New GM Common Stock by dividing such dividends by the trailing twelve month average closing prices for the New GM Securities and subtracting such calculated numbers of New GM Securities from the numbers of set-aside New GM Securities. A corresponding amount of Dividend Cash associated with the set-aside New GM Securities has also been set aside from distribution.

The GUC Trust's calculations of the numbers of New GM Securities needed to be set aside from distribution to fund such potential Taxes on Distribution is made using a different methodology than that used to calculate deferred tax liabilities for financial statement purposes. In estimating potential Taxes on Distribution, the "set aside" calculation estimates potential capital gains as the difference between (a) the tax basis of the New GM Securities on December 15, 2011 and (b) the highest closing price of such New GM Securities since December 15, 2011. By contrast, in calculating deferred tax liabilities for purposes of financial reporting, under applicable generally accepted accounting principles, the GUC Trust calculates estimated capital gains as the difference between (a) the tax basis of the New GM Securities for financial reporting purposes and (b) the closing price of such New GM Securities as of the last trading date of the most recent fiscal quarter. During the quarter ended September 30, 2013, the GUC Trust made a determination to file its U.S. federal income tax returns taking the tax position that beneficial ownership for a substantial majority of New GM Securities transferred from MLC to the GUC Trust on March 31, 2011, and that the tax basis of such New GM Securities should be determined with reference to the value of such securities on such date, rather than December 15, 2011. For the remaining substantial minority of New GM Securities transferred from MLC to the GUC Trust, the GUC Trust determined that transfer of beneficial ownership occurred on other dates for which the tax basis should be determined by reference to the value of such securities on such dates. Accordingly, the GUC Trust filed its U.S. federal income tax returns for the year ended March 31, 2013 with the Internal Revenue Service using the new tax position. Because the new tax position has not yet been sustained on examination by the Internal Revenue Service, however, as a conservative measure, the GUC Trust Administrator has determined not to revise the "set aside" calculation methodology described above unless and until the new tax position has been sustained on examination by the Internal Revenue Service, or the liability of the GUC Trust for Taxes on Distribution otherwise have been finally determined in accordance with Section 505(b) of the Bankruptcy Code, for all applicable income tax returns, including the GUC Trust's U.S. federal income tax returns for the year ended March 31, 2014 and subsequent years.

For the quarter ended March 31, 2014, as a result of the standard quarterly reevaluations described above, the number of New GM Securities set aside from distribution to fund projected Taxes on Distribution of the GUC Trust was reduced by 332,492 shares of New GM Common Stock, 302,266 New GM Series A Warrants and 302,266 New GM Series B Warrants from those previously set aside at December 31, 2013. These overall reductions primarily resulted from the increase in the trailing twelve month average closing prices of the New GM Securities during the period. Accordingly, as of March 31, 2014, the GUC Trust had set aside from distribution, in the aggregate, 7,363,141 shares of New GM Common Stock, 6,693,764 New GM Series A Warrants, 6,693,764 New GM Series B Warrants and Dividend Cash of $2.2 million, with an aggregate fair value of $538.5 million, for the purposes of funding potential Taxes on Distribution of the GUC Trust. Such amounts were sufficient to fully fund potential Taxes on Distribution of the GUC Trust, as estimated by the GUC Trust Administrator at March 31, 2014.

The "set aside" calculation for potential Taxes on Distribution as of March 31, 2014 is set forth below:

	New GM Common Stock	New GM Series A Warrants	New GM Series B Warrants	Total	Calculation Reference
Holdings of New GM Securities as of March 31, 2014	15,297,307	13,906,391	13,906,391		
Tax basis of New GM Securities (1)	$ 19.87	$ 11.38	$ 7.88		
Highest closing price since December 15, 2011 (2)	$ 41.53	$ 31.97	$ 23.858		
Estimated potential taxable gain per New GM Security	$ 21.66	$ 20.59	$ 15.978		
Aggregate estimated potential taxable gain (in thousands)	$ 331,340	$ 286,333	$ 222,196	$ 839,869	
Net capital gains and operating losses through March 31, 2014 (in thousands) (3)				609,000	
Additional expected tax deductible costs of liquidation (in thousands)				(33,873)	
Estimated potential taxable income (in thousands)				$1,414,996	
Tax rate				39.6%	
Estimated potential tax liabilities (in thousands)				$ 560,338	A
Average closing price for trailing twelve months (4)	$ 35.50	$ 26.02	$ 18.32		B
Ratio to set aside (5)	100%	91%	91%		
Value per New GM Security, based on ratio to set aside	$ 35.50	$ 23.65	$ 16.65		C
Percentage allocable to each class of New GM Security	46.83%	31.20%	21.97%	100%	D = C/ (sum of C)
Amount to be set aside, as allocated to each class of New GM Security (in thousands)	$ 262,394	$ 174,847	$ 123,097	$ 560,338	E = D*A
Number of New GM Securities to be set aside	7,392,284	6,720,257	6,720,257		F = E/B
Reduction for Dividend Cash attributable to set aside New GM Securities	(29,143)	(26,493)	(26,493)		G = H*D/B
	7,363,141	6,693,764	6,693,764		
Closing price at March 31, 2014	$ 34.42	$ 24.84	$ 17.41		
Fair value of New GM Securities set aside at March 31, 2014, exclusive of Dividend Cash (in thousands)	$ 253,439	$ 166,273	$ 116,539	$ 536,251	
Add: Dividend Cash set aside at March 31, 2014 (in thousands) (6)	$ 2,209	$ —	$ —	$ 2,209	H
Fair value of New GM Securities and Dividend Cash set aside at March 31, 2014 (in thousands) (7)	$ 255,648	$ 166,273	$ 116,539	$ 538,460	

(1) Using the date of transfer of record ownership of the New GM Securities to the GUC Trust from MLC on December 15, 2011, for purposes of determining the tax basis thereof.

(2) The highest closing prices for the New GM Common Stock, the New GM Series A Warrants and the New GM Series B Warrants occurred on December 17, 2013.

(3) The net capital gains and operating losses through March 31, 2014 reflects taxable capital gains on distributions and sales of New GM Securities using the tax basis of the New GM Securities described in (1) above.

(4) The average closing prices for the New GM Common Stock, the New GM Series A Warrants and the New GM Series B Warrants for the period April 1, 2013, through March 31, 2014.

(5) The "ratio to set aside" is calculated by dividing the number of New GM Securities of each class authorized for distribution under the Plan (i.e., 150,000,000 shares of New GM Common Stock and 136,363,635 of each series of New GM Warrants) by the number of shares of New GM Common Stock authorized for distribution under the Plan.

(6) Represents dividends received on New GM Common Stock held by the GUC Trust associated with the number of set-aside shares of New GM Common Stock.

(7) As of March 31, 2014, the fair value of New GM Securities set aside to fund Taxes on Distribution was lower than estimates of potential Taxes on Distribution, because the fair value of such New GM Securities was based on current closing prices that were lower than the trailing twelve month average prices used to determine the numbers of New GM Securities to be set aside. Nevertheless, the GUC Trust Administrator believes that the New GM Securities currently set aside for such purposes will still be sufficient, upon liquidation, to satisfy such obligations, in large part because, as a conservative measure, the calculation methodology estimates potential taxable gains using the highest closing prices of the New GM Securities since December 15, 2011 (whereas actual taxable gains will be determined using the prices of such securities upon disposition by the GUC Trust) and a tax basis established as of December 15, 2011, the date of transfer of record ownership of the New GM Securities to the GUC Trust (as opposed to the date of transfer of beneficial ownership).

It is the view of the GUC Trust Administrator, after consultation with the GUC Trust Monitor and other professionals retained by the GUC Trust, that the calculation methodologies described above, on the basis of which New GM Securities are set aside from distribution, generally estimate the projected liquidation and administrative costs and potential tax liabilities of the GUC on a conservative basis. Accordingly, it is the view of the GUC Trust Administrator and the GUC Trust Monitor that the New GM Securities currently set aside from distribution to fund such costs and liabilities would be sufficient, upon liquidation, to satisfy such obligations of the GUC Trust as of the date of this Form 10-K. However, there can be no assurance that the numbers of New GM Securities set aside will be sufficient to fund such costs and liabilities as they are actually incurred, in particular if the market price of the New GM Securities remains below the trailing twelve month average closing prices used to convert the GUC Trust's estimates of such projected costs and potential liabilities into numbers of GUC Trust Securities to be set aside, as described above. In addition, there can be no assurance that, as a result of future evaluations, additional numbers of New GM Securities will not need to be set aside or sold to fund additional costs and liabilities, beyond those that are currently included in the GUC Trust's estimates, in particular as a result of fluctuations in the market price of the New GM Securities and changes in the GUC Trust's estimates of projected costs and potential liabilities, including the possible increase in estimates of projected Dividend Taxes described under "—'Set Aside' Calculations Relating to Projected Liquidation and Administrative Costs, Including Dividend Taxes" above. See "Liquidity and Capital Resources" below.

GUC Trust Units

The table below details the changes in the numbers of GUC Trust Units outstanding or issuable during the year ended March 31, 2014:

	Year Ended March 31, 2014
Outstanding or issuable at beginning of year	30,227,314
Issued during the year (1)	1,644,941
Less: Issuable at beginning of year (2)	(28,879)
Add: Issuable at end of year (2)	10,326
Outstanding or issuable at end of year (3)	31,853,702

(1) Of the GUC Trust Units issued during the year ended March 31, 2014, 1,550,000 related to the Special Nova Scotia Distribution applicable to the Nova Scotia Settlement.

(2) The number of GUC Trust Units issuable at any time represents GUC Trust Units issuable in respect of Allowed General Unsecured Claims that were newly allowed during the fiscal quarter.

(3) The number of GUC Trust Units outstanding at any time represents GUC Trust Units issued in respect of Allowed General Unsecured Claims that were allowed in prior periods, including GUC Trust Units held by the GUC Trust for the benefit of (a) holders of Allowed General Unsecured Claims who had not yet supplied information required by the GUC Trust in order to effect the initial distribution to which they are entitled and (b) governmental entities that are precluded by applicable law from receiving distributions of GUC Trust Units and New GM Securities.

Liquidity and Capital Resources

The GUC Trust's sources of liquidity are principally the funds it holds for the payment of liquidation and administrative costs, and to a significantly lesser degree, the earnings on such funds invested by it. The GUC Trust holds such funds as cash and cash equivalents and also invests such funds in marketable securities, primarily corporate commercial paper and municipal commercial paper and demand notes, as permitted by the Plan and the GUC Trust Agreement.

During the year ended March 31, 2014, the GUC Trust's holdings of cash and cash equivalents increased approximately $13.9 million from approximately $1.0 million to approximately $14.9 million. The increase was due primarily to proceeds from the maturity and sale of marketable securities in excess of reinvestments of $32.4 million and dividends received on holdings of New GM Common Stock of $4.6 million, offset in part by cash paid for liquidation and administrative costs of $20.9 million, cash paid for Residual Wind-Down Claims of $1.7 million, and cash paid for distributions of $0.7 million.

During the year ended March 31, 2014, the funds invested by the GUC Trust in marketable securities decreased approximately $32.4 million, from approximately $76.8 million to approximately $44.4 million. The decrease was due primarily to reduced re-investments of cash in marketable securities in order to fund cash needs during the period. The GUC Trust earned approximately $76,000 in interest and dividend income on such investments during the year.

As of March 31, 2014, the GUC Trust held approximately $59.3 million in cash and cash equivalents and marketable securities. Of that amount, approximately $41.5 million (comprising approximately $30.4 million of the remaining Residual Wind-Down Assets, approximately $10.6 million of the remaining Administrative Fund and approximately $0.5 million in remaining funds designated for the Indenture Trustee / Fiscal and Paying Agent Costs), is required by the GUC Trust Agreement to be returned, upon the winding-up of the GUC Trust, to the DIP Lenders to the extent such funds are not utilized to satisfy designated Wind-Down Costs, Residual Wind-Down Claims, Residual Wind-Down Costs, Avoidance Action Defense Costs and Indenture Trustee/Fiscal Paying Agent Costs. (Of the $10.6 million of cash and cash equivalents and marketable securities remaining in the Administrative Fund, approximately $8.0 million has been separately designated for the satisfaction of certain costs and liabilities of the GUC Trust (other than Reporting Costs) and $2.6 million is available for other Wind-Down Costs, which funds must be exhausted prior to the use of any Other Administrative Cash for such purposes.) Such amounts will not at any time be available for distribution to the holders of the GUC Trust Units. In addition, of the amount of cash and cash equivalents held by the GUC Trust at March 31, 2014, approximately $4.6 million relates to Dividend Cash. As described above, Dividend Cash will be distributed to holders of subsequently Resolved Allowed Claims and GUC Trust Units in respect of New GM Common Stock that they receive, unless such dividends are in respect of shares of New GM Common Stock that are sold by the GUC Trust in accordance with the GUC Trust Agreement to fund the GUC Trust's liquidation and administrative costs, income tax liabilities or shortfalls in Residual Wind-Down Assets. The balance of cash and cash equivalents and marketable securities of approximately $13.2 million is available for the payment of certain reporting and administrative costs of the GUC Trust, and would be available in the future for distribution to the holders of the GUC Trust units, if not otherwise used to satisfy those GUC Trust obligations. See "The GUC Trust Assets" in Item 1 ("Business") above.

In addition to funds held for payment of costs of liquidation and administration and Dividend Cash, the GUC Trust also holds New GM Securities, a portion of which the GUC Trust Administrator is permitted to set aside from distribution and to sell with the approval of the Bankruptcy Court or Trust Monitor, as applicable, in order to fund additional costs and income tax liabilities (including both Dividend Taxes and Taxes on Distribution) as they become due. As of March 31, 2014, the aggregate fair value of the New GM Securities held by the GUC Trust, excluding securities set aside for liquidating distributions payable as of that date, was approximately $1,072.2 million. As of March 31, 2014, the GUC Trust Administrator had further set aside from distribution New GM Securities with an aggregate fair market value of approximately $51.6 million and related Dividend Cash of $0.2 million to fund projected liquidation and administrative costs, including Dividend Taxes, and New GM Securities with an aggregate fair market value of approximately $536.3 million and related Dividend Cash of $2.2 million to fund potential Taxes on Distribution. See "Net Assets in Liquidation—Distributable Assets" above.

There is no assurance that additional numbers of New GM Securities will not be required to be set aside from distribution and sold to fund additional costs and income tax liabilities, beyond what the GUC Trust Administrator has already set aside. Any sales of New GM Securities that occur to fund such obligations will result in a lesser amount of New GM Securities available for distribution to holders of GUC Trust Units. In addition, as described above under the headings "The GUC Trust Assets" in Item 1 ("Business") above a portion of the GUC Trust's assets are currently segregated pursuant to the GUC Trust Agreement for the satisfaction of Residual Wind-Down Claims and certain other specified costs. If such assets are insufficient to satisfy the Residual Wind-Down Claims or fund such other specified costs for any reason, the GUC Trust Administrator will similarly be required to set aside from distribution and sell additional New GM Securities in order to fund such shortfall.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk.

Disclosure under this item is not required, pursuant to the No Action Letter.

Item 8. Financial Statements and Supplementary Data.

Report of Independent Registered Public Accounting Firm

To the Trust Administrator, Trust Monitor,
and Trust Beneficiaries
Motors Liquidation Company GUC Trust

We have audited the accompanying statements of net assets in liquidation of the Motors Liquidation Company GUC Trust as of March 31, 2014 and 2013 and the related statements of changes in net assets in liquidation and cash flows for the years ended March 31, 2014, 2013 and 2012. These financial statements are the responsibility of the Trust Administrator of the Motors Liquidation Company GUC Trust. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Motors Liquidation Company GUC Trust is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Motors Liquidation Company GUC Trust's internal control over financial reporting. Accordingly, we express no such opinion. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the net assets in liquidation of the Motors Liquidation Company GUC Trust as of March 31, 2014 and 2013 and the related statements of changes in net assets in liquidation and cash flows for the years ended March 31, 2014, 2013 and 2012, in conformity with accounting principles generally accepted in the United States of America.

Cash and cash equivalents, end of year	$ 14,932	$ 1,010	38,396

The GUC Trust has not presented a reconciliation from net income to cash flow from operations. As an entity in liquidation, the GUC Trust does not have continuing operations that result in the measurement of net income as that term is used by generally accepted accounting principles to measure results of operations.

See Accompanying Notes to Financial Statements.

Motors Liquidation Company GUC Trust
Notes to Financial Statements
March 31, 2014

1. Purpose of Trust

The Motors Liquidation Company GUC Trust ("GUC Trust") is a successor to Motors Liquidation Company (formerly known as General Motors Corp.) ("MLC") within the meaning of Section 1145 of the United States Bankruptcy Code ("Bankruptcy Code"). The GUC Trust holds, administers and directs the distribution of certain assets pursuant to the terms and conditions of the Amended and Restated Motors Liquidation Company GUC Trust Agreement (the "GUC Trust Agreement"), dated as of June 11, 2012 and as amended from time to time, and pursuant to the Second Amended Joint Chapter 11 Plan (the "Plan"), dated March 18, 2011, of MLC and its debtor affiliates (collectively, along with MLC, the "Debtors"), for the benefit of holders of allowed general unsecured claims against the Debtors ("Allowed General Unsecured Claims").

The GUC Trust was formed on March 30, 2011, as a statutory trust under the Delaware Statutory Trust Act, for the purposes of implementing the Plan and distributing the GUC Trust's distributable assets. The Plan generally provides for the distribution of certain shares of common stock ("New GM Common Stock") of the new General Motors Company ("New GM") and certain warrants for the purchase of shares of such stock (the "New GM Warrants," and, together with the New GM Common Stock, the "New GM Securities") to holders of Allowed General Unsecured Claims *pro rata* by the amount of such claims. In addition, the Plan provides that each holder of an Allowed General Unsecured Claim will obtain, in the form of GUC Trust Units (as defined below), a contingent right to receive, on a *pro rata* basis, additional shares of New GM Common Stock and New GM Warrants (if and to the extent such New GM Common Stock and New GM Warrants are not required for the satisfaction of previously Disputed General Unsecured Claims (as defined below) or liquidation for the payment of the expenses of the GUC Trust) and cash, if any, remaining at the dissolution of the GUC Trust.

The GUC Trust is administered by Wilmington Trust Company, solely in its capacity as the trust administrator and trustee (the "GUC Trust Administrator"). Among other rights and duties, subject to the terms, conditions and limitations set forth in the GUC Trust Agreement, the GUC Trust Administrator has the power and authority to hold, manage, sell, invest and distribute the assets comprising the GUC Trust corpus, consult with and retain professionals for the administration of the GUC Trust, prosecute and resolve objections to Disputed General Unsecured Claims, take all necessary actions to administer the wind-down of the affairs of the Debtors upon their dissolution, and upon such dissolution, resolve and satisfy, to the extent allowed, the Residual Wind-Down Claims (as defined below). The activities of the GUC Trust Administrator are overseen by FTI Consulting, Inc., solely in its capacity as monitor (the "GUC Trust Monitor").

2. Plan of Liquidation

On March 31, 2011, the date the Plan became effective (the "Effective Date"), there were approximately $29,771 million in Allowed General Unsecured Claims. In addition, as of the Effective Date, there were approximately $8,154 million in disputed general unsecured claims which reflects liquidated disputed claims and a Bankruptcy Court ordered distribution reserve for unliquidated disputed claims ("Disputed General Unsecured Claims"), but does not reflect potential Term Loan Avoidance Action Claims. The total aggregate amount of general unsecured claims, both allowed and disputed, asserted against the Debtors, inclusive of the potential Term Loan Avoidance Action Claims, was approximately $39,425 million as of the Effective Date.

Pursuant to the GUC Trust Agreement, holders of Disputed General Unsecured Claims become entitled to receive a distribution of New GM Securities from the GUC Trust if, and to the extent that, such Disputed General Unsecured Claims become Allowed General Unsecured Claims. Under the GUC Trust Agreement, the GUC Trust Administrator has the authority to file objections to such Disputed General Unsecured Claims and the Bankruptcy Court has extended the time by which the GUC Trust may object to Disputed General Unsecured Claims and Administrative Expenses as defined in the Plan to September 16, 2014 (which date may be further extended by application to the Bankruptcy Court). Such claims may be prosecuted through alternative dispute resolution proceedings, including mediation and arbitration ("ADR Proceedings"), if appropriate. As of March 31, 2014, there were approximately $79.5 million in Disputed General Unsecured Claims, which amount has been significantly reduced from approximately $8,154 million as of the Effective Date.

To the extent that all or a portion of a Disputed General Unsecured Claim is deemed invalid—or "disallowed"—by order of the Bankruptcy Court, by order of the tribunal presiding over the ADR Proceeding (if applicable), or by settlement with the GUC Trust, such portion of the Disputed General Unsecured Claim that is disallowed is not entitled to a distribution from the GUC Trust (subject to any appeal rights of the claimant). However, to the extent that a Disputed General Unsecured Claim is fully resolved, and such resolution results in all or a portion of the original Disputed General Unsecured Claim being deemed valid—or "allowed"—by order of the Bankruptcy Court, by order of the tribunal presiding over the ADR Proceeding (if applicable), or by settlement with the GUC Trust, such portion of the Disputed General Unsecured Claim that is allowed will be considered an Allowed General Unsecured Claim on the Effective Date (such claims, "Resolved Disputed Claims").

Only one Avoidance Action, captioned Official Committee of Unsecured Creditors of Motors Liquidation Co. v. JPMorgan Chase Bank, N.A. et al., Adv. Pro. No.09-00504 (Bankr. S.D.N.Y. July 31, 2009) (the "Term Loan Avoidance Action"), was commenced prior to the statutory deadline for commencing such actions. The Term Loan Avoidance Action was commenced by the Official Committee of Unsecured Creditors of Motors Liquidation Company (the "Committee"), and seeks the return of approximately $1.5 billion that had been transferred by the Debtors (with funds advanced after the commencement of the Debtors' chapter 11 cases by the United States Treasury and Export Development Canada (together, the "DIP Lenders")) to a consortium of prepetition lenders pursuant to the terms of the order of the Bankruptcy Court. On December 15, 2011, in accordance with the Plan, upon the dissolution of MLC, the Term Loan Avoidance Action was transferred to the Avoidance Action Trust (as defined below). To the extent that Wilmington Trust Company, not in its individual capacity but solely in its capacity as the trustee and trust administrator of the Avoidance Action Trust (the "Avoidance Action Trust Administrator") is successful in obtaining a judgment against the defendant(s) to the Term Loan Avoidance Action, Allowed General Unsecured Claims will arise in the amount of any transfers actually avoided (that is, disgorged) pursuant thereto (such general unsecured claims "Term Loan Avoidance Action Claims," and together with Resolved Disputed Claims, the "Resolved Allowed Claims").

It is still unclear whether any amounts actually avoided pursuant to the Term Loan Avoidance Action would be for the benefit of holders of Allowed General Unsecured Claims. The Committee has taken the position that (a) the DIP Lenders are not entitled to any proceeds of the Term Loan Avoidance Action and have no interests in the trust established for the action under the Plan (the "Avoidance Action Trust") and (b) the holders of Allowed General Unsecured Claims have the exclusive right to receive any and all proceeds of the Term Loan Avoidance Action, and are the exclusive beneficiaries of the Avoidance Action Trust with respect thereto.

Litigation with respect to these issues is ongoing (with the Term Loan Avoidance Action currently pending before the U.S. Court of Appeals for the Second Circuit), and the rights to any recoveries on the Term Loan Avoidance Action are still disputed. In no event, however, will any funds reclaimed from the pre-petition lenders be transferred to or otherwise benefit the GUC Trust or be distributed to holders of GUC Trust Units.

GUC Trust Distributable Assets

Pursuant to the terms of the Plan, the Bankruptcy Court authorized the distribution of 150 million shares of New GM Common Stock issued by New GM, warrants to acquire 136,363,635 newly issued shares of New GM Stock with an exercise price set at $10.00 per share ("New GM Series A Warrants"), and warrants to acquire 136,363,635 newly issued shares of New GM Stock with an exercise price set at $18.33 per share ("New GM Series B Warrants"), (such securities, "New GM Securities"). Record ownership of the New GM Securities was held by MLC for the benefit of the GUC Trust until the dissolution of MLC on December 15, 2011, at which time record ownership was transferred to the GUC Trust.

Funding for GUC Trust Costs of Liquidation

The GUC Trust has incurred and will continue to incur certain costs to liquidate the trust assets and implement the Plan. On or about the Effective Date, pursuant to the Plan, MLC contributed approximately $52.7 million to the GUC Trust to be held and maintained by the GUC Trust Administrator (as the "GUC Trust Administrative Fund") for the purpose of paying certain fees and expenses (including certain tax obligations) incurred by the GUC Trust (including fees of the GUC Trust Administrator and the GUC Trust Monitor and the fees and expenses for professionals retained by the GUC Trust), other than the Reporting Costs, as defined below ("Wind-Down Costs"). As of March 31, 2014, the remaining Administrative Fund aggregated $11.6 million (consisting of cash and cash equivalents and marketable securities aggregating $10.6 million and prepaid expenses of $1.0 million). Of that amount, approximately $8.0 million has been separately designated for the satisfaction of certain costs and liabilities of the GUC Trust (other than Reporting Costs (as defined below)) and $3.6 million is available for other Wind-Down Costs, which funds must be exhausted prior to the use of any Other Administrative Cash (as defined below) for such purposes. Cash or investments from the GUC Trust Administrative Fund, if any, which remain at the winding up and conclusion of the GUC Trust must be returned to the DIP Lenders.

The GUC Trust Agreement authorized the GUC Trust to liquidate approximately $5.7 million of New GM Securities (the "Initial Reporting Cash") shortly after the Effective Date for the purposes of funding certain fees and expenses of the GUC Trust (the "Reporting Costs"), including those directly or indirectly relating to (i) reports to be prepared and filed by the GUC Trust pursuant to applicable rules, regulations and interpretations of the Securities and Exchange Commission, (ii) the transfer, registration for transfer and certification of GUC Trust Units, and (iii) the application by the Committee (as defined below) to the Internal Revenue Service for a private letter ruling regarding the tax treatment of the GUC Trust and the holders of Allowed General Unsecured Claims in respect to the distribution of New GM Securities. The GUC Trust Agreement provides that the Administrative Fund may not be utilized to satisfy any Reporting Costs.

The GUC Trust Agreement provides that, if the GUC Trust Administrator determines that the Administrative Fund is not sufficient to satisfy the current or projected Wind-Down Costs or the Initial Reporting Cash is not sufficient to satisfy the current or projected Reporting Costs, the GUC Trust Administrator, with the approval of the GUC Trust Monitor, is authorized to set aside New GM

Securities from distribution for these purposes. The GUC Trust Administrator may then liquidate such "set aside" New GM Securities to fund the Wind-Down Costs and/or Reporting Costs with the required approval of the Bankruptcy Court. New GM Securities that are set aside and/or sold in this manner will not be available for distribution to the beneficiaries of GUC Trust Units, and the cash proceeds of any such sale (including related Dividend Cash) will be classified as "Other Administrative Cash" under the GUC Trust Agreement. Although any such liquidation of set aside New GM Securities will be reflected in the financial statements of the GUC Trust at the time of liquidation, the setting aside of New GM Securities, including Dividend Cash, itself is not reflected in the Statement of Net Assets in Liquidation or any of the other financial statements of the GUC Trust. Separate from this process of setting aside New GM Securities to satisfy unfunded projected costs and expenses of the GUC Trust, as a matter of financial reporting, the GUC Trust records a reserve in its Statement of Net Assets in Liquidation (the source of funding of which is not addressed therein) for all expected costs of liquidation for which there is a reasonable basis for estimation. For this reason, among others, there is not a direct relationship between the amount of such reserve reflected in the Statement of Net Assets in Liquidation and the value of any New GM Securities that are set aside for current or projected costs and expenses of the GUC Trust. Adjustments to the Reserve for Expected Costs of Liquidation as reported in the Statement of Net Assets in Liquidation are recorded only when there is a reasonable basis for estimation of the expected incurrence of additional costs or a reduction in expected costs. For more information regarding the Reserves for Expected Costs of Liquidation reflected in the Statement of Net Assets in Liquidation, see Note 8.

The Bankruptcy Court previously approved in March 2012, and December 2012, the sale of New GM Securities to fund the then current and projected costs and expenses of the GUC Trust. The March 2012, Bankruptcy Court order also authorized the sale of further New GM Securities for the purpose of funding certain fees, costs and expenses of the Avoidance Action Trust (as described below under the heading "—Funding for Avoidance Action Trust"). Through March 31, 2013, sales of New GM Securities to fund projected Reporting Costs and Wind-Down Costs through calendar year 2013 aggregated approximately $50.2 million, including the Initial Reporting Cash (which amounts comprised part of the GUC Trust's Other Administrative Cash). Such securities sold aggregated 902,228 shares of New GM Common Stock, 820,205 New GM Series A Warrants and 820,205 New GM Series B Warrants. There have been no subsequent sales of securities to fund Wind-Down Costs and Reporting Costs.

As of March 31, 2014, Other Administrative Cash aggregated $13.2 million. To the extent that any of the Other Administrative Cash is not ultimately required and is held by the GUC Trust at the time of its dissolution, such remaining Other Administrative Cash will be distributed by the GUC Trust to holders of the GUC Trust Units.

As of March 31, 2014, New GM Securities with an aggregate fair market value as of that date of $51.6 million and related Dividend Cash of $0.2 million have been set aside for projected GUC Trust fees, costs and expenses to be incurred beyond 2014, including $3.5 million set aside for projected income taxes on dividends received or declared on holdings of New GM common Stock as described below in "Funding for Potential Tax Liabilities on Dispositions of New GM Securities and Dividends on New GM Common Stock". Accordingly, such New GM Securities are currently not available for distribution to the beneficiaries of the GUC Trust Units.

Funding for Potential Tax Liabilities on Dispositions of New GM Securities and Dividends on New GM Common Stock

The GUC Trust is subject to U.S. federal income tax on realized net gains from the distribution and sale of shares of New GM Common Stock and New GM Warrants (such taxes, "Taxes on Distribution"). The GUC Trust is also subject to U.S. federal income tax on dividends received on New GM Common Stock held by the GUC Trust (such taxes, "Dividend Taxes"). The GUC Trust Agreement provides that the Administrative Fund may not be utilized to satisfy any Taxes on Distribution or Dividend Taxes. As such, the GUC Trust Administrator is authorized, with the approval of the GUC Trust Monitor, to set aside from distribution certain numbers of New GM Securities, the liquidated proceeds of which, along with the related Dividend Cash, would be sufficient to satisfy any potential Taxes on Distribution or Dividend Taxes. The New GM Securities that are set aside for Dividend Taxes are included in the set-aside for Wind-Down Costs described above in "Funding for GUC Trust Costs of Liquidation". The GUC Trust Administrator may then liquidate such "set aside" New GM Securities to fund the Taxes on Distribution or Dividend Taxes, with the approval of the GUC Trust Monitor, but, with respect to Taxes on Distributions, without the necessity of obtaining approval of the Bankruptcy Court. New GM Securities that are set aside and subsequently sold in this manner will not be available for distribution to the beneficiaries of GUC Trust Units, and the cash proceeds of any such sale, along with the related Dividend Cash, will be classified as "Other Administrative Cash" under the GUC Trust Agreement. New GM Securities that have been so set aside are included in Holdings of New GM Securities in the accompanying Statement of Net Assets in Liquidation. In the event such set-aside New GM Securities were sold to fund Taxes on Distribution or Dividend Taxes, the proceeds of such sale would be reflected in Cash and Cash Equivalents and/or Marketable Securities until expended to pay Taxes on Distribution or Dividend Taxes. While the set-aside New GM Securities and the related Dividend Cash are not available for distribution, there is no corresponding liability or reserve related to such set aside assets reflected in the Statement of Net Assets in Liquidation or any of the other financial statements of the GUC Trust.

During the year ended March 31, 2014, the GUC Trust Administrator reviewed the current and potential Taxes on Distribution. As a result of such review, the GUC Trust Administrator determined that New GM Securities with an aggregate fair market value (as of March 31, 2014) of $536.3 million and related Dividend Cash of $2.2 million should be set aside for potential Taxes on Distribution based on (1) the GUC Trust's method for calculating potential net gains on distributions or sales of New GM Securities (reduced by carryforward net operating and capital losses and future deductible expenses at March 31, 2014) and (2) the GUC Trust's method for converting the potential tax liability to the number of securities to be set aside. Such New GM Securities are not currently available for distribution to the beneficiaries of GUC Trust Units. The GUC Trust Administrator intends to continue to reevaluate the numbers of New GM Securities set aside on a quarterly basis.

As previously disclosed, during the quarter ended September 30, 2013, the GUC Trust made a determination to file its U.S. federal income tax returns taking the position that beneficial ownership for a substantial majority of New GM Securities was transferred from MLC to the GUC Trust on March 31, 2011, and that the tax basis of such New GM Securities should be determined with reference to the value of such securities on such date, instead of December 15, 2011, when record ownership of the remaining New GM Securities still held by MLC was transferred from MLC to the GUC Trust. For the remaining substantial minority of New GM Securities transferred from MLC to the GUC Trust, the GUC Trust determined that the transfer of beneficial ownership occurred on other dates for which the tax basis should be determined by reference to the value of such securities on such dates. Subsequently, the GUC Trust filed its U.S. federal income tax return for the year ended March 31, 2013 with the Internal Revenue Service using the new tax position described above. This new tax position resulted in an increased tax basis of the New GM Securities from the prior tax position and, therefore, reduced taxable gains and increased taxable losses on distributions and sales of New GM Securities since March 31, 2011. The new tax position has not been sustained on examination by the Internal Revenue Service as of the date hereof. However, the GUC Trust believes, based on the available evidence and consultation with GUC Trust professionals, that it is more likely than not that the new tax position will be sustained on examination by the Internal Revenue Service based on the technical merits of the position. Accordingly, this new tax position has been reflected in the amounts recognized in current and deferred income tax liabilities and the income tax benefit (provision) in the GUC Trust's financial statements since September 30, 2013. By contrast, as a conservative measure, the calculation of the "set aside" of New GM Securities for potential Taxes on Distribution utilizes the prior tax position rather than the new tax position. The calculation of the "set aside" of New GM Securities for potential Taxes on Distribution will not reflect the new tax position unless and until the new tax position has been sustained on examination by the Internal Revenue Service, or the liability of the GUC Trust for Taxes on Distribution otherwise has been finally determined in accordance with Section 505(b) of the Bankruptcy Code, for all applicable income tax returns, including the GUC Trust's U.S. federal income tax returns for the year ended March 31, 2014 and subsequent years.

Funding for Avoidance Action Trust

Based on an analysis of the Avoidance Action Trust and its potential funding sources, the GUC Trust Administrator, in conjunction with the Avoidance Action Trust Administrator, determined that it would be in the best interest of the holders of Allowed General Unsecured Claims to fund certain fees, costs and expenses of the Avoidance Action Trust, subject to approval of the Bankruptcy Court. In March 2012, the Bankruptcy Court approved the sale of New GM Securities aggregating approximately $13.7 million and the transfer of the sales proceeds to the Avoidance Action Trust for such funding. The sale occurred in March 2012, comprising 269,422 shares of New GM Common Stock, 244,929 New GM Series A Warrants and 244,929 New GM Series B Warrants. The sales proceeds were transferred to the Avoidance Action Trust in May 2012.

Residual Wind-Down Claims and Costs

Upon the dissolution of the Debtors, which occurred on December 15, 2011, the GUC Trust became responsible for resolving and satisfying (to the extent allowed) all remaining disputed administrative expenses, priority tax claims, priority non-tax claims and secured claims (the "Residual Wind-Down Claims"). On December 15, 2011, under the Plan, the Debtors transferred to the GUC Trust an amount of cash necessary (the "Residual Wind-Down Assets") to satisfy the ultimate allowed amount of such Residual Wind-Down Claims (including certain litigation defense costs related to the Term Loan Avoidance Action (the "Avoidance Action Defense Costs")), as estimated by the Debtors, and the costs, fees and expenses relating to satisfying and resolving the Residual Wind-Down Claims (the "Residual Wind-Down Costs"). The Residual Wind-Down Assets initially aggregated approximately $42.8 million (which amount consisted of approximately $40.0 million in cash, including approximately $1.4 million for the payment of Avoidance Action Defense Costs, and the transferred benefit of approximately $2.8 million in prepaid expenses). Should the Residual Wind-Down Costs and the Residual Wind-Down Claims be less than the Residual Wind-Down Assets, any excess funds will be returned to the DIP Lenders. If at any time the GUC Trust Administrator determines that the Residual Wind-Down Assets are not adequate to satisfy the Residual Wind-Down Claims (including the actual amount of Avoidance Action Defense Costs) and Residual Wind-Down Costs, such costs will be satisfied by Other Administrative Cash. If there is no remaining Other Administrative Cash, the GUC Trust Administrator is authorized to, with GUC Trust Monitor approval, set aside and, with Bankruptcy Court approval, sell New GM Securities to cover the shortfall. To the extent that New GM Securities are set aside and sold to obtain funding to complete the wind-down of the Debtors, such securities will not be available for distribution to the beneficiaries of the GUC Trust. Therefore, the amount of Residual Wind-Down Claims and Residual Wind-Down Costs could reduce the assets of the GUC Trust available for distribution. Although any such sale of set aside New GM Securities would be reflected in the financial statements of the GUC Trust in the period of sale, the setting aside of New GM Securities and related Dividend Cash itself would not be reflected in the Statement of Net Assets in Liquidation or any of the other financial statements of the GUC Trust. After the GUC Trust has concluded its affairs, any funds remaining that were obtained from the sale of New GM Securities to fund the wind-down process or the resolution and satisfaction of the Residual Wind-Down Claims will be distributed to the holders of the GUC Trust Units.

The amount of Avoidance Action Defense Costs incurred to date exceeds the corresponding cash of $1.4 million received by the GUC Trust from MLC on the Dissolution Date by approximately $0.7 million. As a result new Residual Wind-Down Claims have arisen in the amount of such excess. It is expected that additional Avoidance Action Defense Costs will be incurred for which additional Residual Wind-Down Claims will arise to be paid from the other remaining Residual Wind-Down Assets and, following the depletion of such assets, Other Administrative Cash or the sale of New GM Securities. As of March 31, 2014, $30.5 million in Residual Wind-Down Assets were held by the GUC Trust, which are recorded in cash and cash equivalents, marketable securities, and other assets and deposits in the accompanying Statement of Net Assets in Liquidation. By comparison, there were approximately $13.1 million in Residual Wind-Down Claims against such assets as of March 31, 2014, subject to increase for new Residual Wind-Down Claims that are expected to arise for Avoidance Action Defense Costs.

In addition to the Residual Wind-Down Assets, the GUC Trust also received on the Dissolution Date approximately $3.4 million in cash from MLC for the purposes of funding (1) $1.4 million in respect of certain costs, fees and expenses payable under the Plan to the indenture trustees and fiscal and paying agents for the previously outstanding debt of MLC, or the Indenture Trustee / Fiscal and Paying Agent Costs, and (2) $2.0 million in respect of Reporting Costs. The funds received were credited to the reserve for expected costs of liquidation. Any unused portion of the funds designated for the Indenture Trustee / Fiscal and Paying Agent Costs must be returned to the DIP Lenders and will not be available for distribution to the holders of GUC Trust Units at the winding up and conclusion of the GUC Trust. As of March 31, 2014, funds designated for the Indenture Trustee / Fiscal and Paying Agents Costs held by the GUC Trust approximated $0.5 million and are recorded in cash and cash equivalents in the accompanying Statement of Net Assets in Liquidation.

3. Basis of Presentation and Significant Accounting Policies

Liquidation Basis of Accounting

The GUC Trust exists solely for the purposes described above in Note 1 and has a finite life. Accordingly, the GUC Trust has prepared the accompanying financial statements on the liquidation basis of accounting in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). Under the liquidation basis of accounting as prescribed by the Financial Accounting Standards Board (FASB) Accounting Standards Codification, assets are stated at their estimated net realizable value, which is the non-discounted amount of cash into which an asset is expected to be converted during the liquidation period, while liabilities continue to be recognized at the amount required by other U.S. GAAP, and are not remeasured to reflect any anticipation that an entity will be legally released from an obligation. Additionally, under the liquidation basis of accounting, a reserve is established for estimated costs expected to be incurred during the liquidation period. Such costs are accrued when there is a reasonable basis for estimation. These estimates are periodically reviewed and adjusted as appropriate. The valuation of assets at net realizable value, reserves for residual wind-down claims and reserves for expected liquidation costs represent estimates, based on present facts and circumstances known to the GUC Trust Administrator, and are subject to change.

As described above, the beneficiaries of the GUC Trust are future and, to the extent their liquidating distributions have not yet been paid to them, current holders of Allowed General Unsecured Claims and future and current holders of GUC Trust Units ("Trust Beneficiaries"). As Disputed General Unsecured Claims are resolved and allowed and thereby become Allowed General Unsecured Claims, the holders thereof become entitled to receive liquidating distributions of New GM Securities (and the related Dividend Cash) and GUC Trust Units *pro rata* by the amount of such Claims and, upon such occurrence, the GUC Trust incurs an obligation to distribute such securities. Accordingly, liquidating distributions payable are recorded (at the fair value of such New GM Securities and the related Dividend Cash) as of the end of the period in which the Disputed General Unsecured Claims are resolved as Allowed General Unsecured Claims. Similarly, to the extent potential Term Loan Avoidance Action Claims (as defined below) were to arise (and would become allowed) in the manner described in Note 2, liquidating distributions payable would be recorded for the New GM Securities and the related Dividend Cash (at fair value) that would become distributable to holders of Term Loan Avoidance Action Claims upon such occurrence. Prior to the resolution and allowance of Disputed General Unsecured Claims (or potential Term Loan Avoidance Action Claims), liabilities are not recorded for the conditional obligations associated with Disputed General Unsecured Claims. Rather, the beneficial interests of Trust Beneficiaries in the residual assets of the GUC Trust are reflected in Net Assets in Liquidation of the GUC Trust in the accompanying financial statements.

Under the liquidation basis of accounting, the GUC Trust presents two principal financial statements: a Statement of Net Assets in Liquidation and a Statement of Changes in Net Assets in Liquidation. In addition, although not required under the liquidation basis of accounting, the GUC Trust also presents a Statement of Cash Flows, in accordance with the requirements of the GUC Trust Agreement.

Fiscal Year

The GUC Trust's fiscal year begins on April 1 and ends on the following March 31. As the GUC Trust was created on March 30, 2011 and the Effective Date of the Plan was March 31, 2011, for financial reporting purposes, the GUC Trust is assumed to have been established as of April 1, 2011 and received its initial funding on or about April 1, 2011.

Cash and Cash Equivalents

Cash and cash equivalents consist of amounts held in bank accounts or money market funds.

Marketable Securities

Marketable securities consist of short term investments in corporate commercial paper and municipal government commercial paper and variable demand notes. The GUC Trust has valued these securities at fair value based on carrying value for municipal and corporate commercial paper where carrying value approximates fair value and par value for variable demand notes where par value equals fair value.

Holdings of New GM Securities and Dividends Received on New GM Common Stock

Holdings of New GM Securities represent the GUC Trust's holdings of New GM Securities held for future distribution in respect of Allowed General Unsecured Claims and the GUC Trust Units, and include amounts set aside from distribution to fund estimated and projected Wind-Down and Reporting Costs (including projected Dividend Taxes) and potential Taxes on Distribution as described in Note 2. The securities held consist of shares of New GM Common Stock and New GM Warrants as further described in Notes 1 and 6. The GUC Trust has valued its holdings in the securities at their fair value based on quoted market prices as of the last trading day of the fiscal year.

Dividends on holdings of New GM Common Stock are recorded as received (or accrued as of the record date for any declared but unpaid dividends). Such dividends and any future declared dividends on New GM Common Stock are required to be applied to the same purpose as the New GM Common Stock to which such dividends relate. If shares of New GM Common Stock are distributed to holders of subsequently Resolved Allowed Claims and GUC Trust Units, then the dividends relating to those shares will also be distributed to such holders. If, however, shares of New GM Common Stock are sold by the GUC Trust in accordance with the GUC Trust Agreement to fund the costs and liabilities of the GUC Trust, then, in that case the dividends relating to those shares will be applied to such costs and liabilities of the GUC Trust and (just like the cash proceeds from the sale of the shares of New GM Common Stock) will be maintained in Other Administrative Cash. Because such dividends are applied to the same purpose as the New GM Common Stock, references to New GM Common Stock and New GM Securities that have been set aside from distribution, reserved or sold should be understood to include the dividends (if any) relating to such New GM Common Stock, unless expressly indicated otherwise. The amount of cash and cash equivalents held by the GUC Trust that relates to dividends received by the GUC Trust on New GM Common Stock held by the GUC Trust is referred to as Dividend Cash.

Other Assets and Deposits

Other assets and deposits consist principally of prepaid insurance, prepaid expenses and retainers for professionals.

Accounts Payable and Other Liabilities

Accounts payable and other liabilities represent amounts due to professionals, service providers, and vendors for services rendered or goods received through the end of the period.

Income Taxes

The GUC Trust is considered to be a "Disputed Ownership Fund" pursuant to Treasury Regulation Section 1.468B-9. Because all of the assets that have been transferred to the GUC Trust are passive investments, the GUC Trust is taxed as a Qualified Settlement Fund (or QSF) pursuant to Treasury Regulation Section 1.468B-9(c)(1)(ii). The QSF tax status of the GUC Trust has been approved by the Internal Revenue Service in a private letter ruling issued on March 2, 2011. In general, a QSF is considered to be a C Corporation but pays Federal income tax using trust income tax rates on its modified gross income. Modified gross income includes gross income pursuant to Internal Revenue Code Section 61 less administrative expenses, certain losses from the sale, exchange or worthlessness of property, and net operating losses. In general, a Disputed Ownership Fund taxed as a QSF does not recognize gross income on assets transferred to it; therefore, the GUC Trust has not recognized gross income on the transfer of assets from MLC.

The GUC Trust is currently expected to generate gross income in the form of interest income and dividends on New GM Common Stock and recognize gains and/or losses upon its disposition of shares of New GM Common Stock and New GM Warrants which it now holds, which will be reduced by administrative expenses and any accumulated net operating and capital losses, to compute modified gross income. During the year ended March 31, 2014, the GUC Trust made a determination to file its U.S. federal income tax returns taking the tax position that beneficial ownership for a substantial majority of New GM Securities was transferred from MLC to the GUC Trust on March 31, 2011, and that the tax basis of such New GM Securities should be determined with reference to the value of such securities on such date instead of December 15, 2011, when record ownership of the remaining New GM Securities still held by MLC was transferred from MLC to the GUC Trust. Accordingly, the GUC Trust filed its U.S. federal income tax returns for the year ended March 31, 2013 with the Internal Revenue Service using the new tax position. Such new tax position, however, as of the date hereof, has not been sustained on examination by the Internal Revenue Service.

As the GUC Trust is taxable for Federal income tax purposes, a current income tax liability or asset, if any, is recognized for estimated taxes payable or receivable for the year. Deferred tax liabilities and assets are recognized for the estimated future tax effects of temporary differences between financial reporting and tax accounting. Deferred tax assets are reviewed for recoverability and valuation allowances are provided as necessary.

The GUC Trust is not subject to state income taxes under current law. Accordingly, no current or deferred state income tax liabilities and assets are recorded.

The GUC Trust recognizes the tax benefit from an uncertain tax position only if it is more likely than not the tax position will be sustained on examination by the taxing authority, based on the technical merits of the position. The GUC Trust's Federal income tax returns for the years ended March 31, 2012 and 2013 are no longer subject to examination as a result of the application of Section 505(b) of the Bankruptcy Code. However, net operating and capital loss carryovers generated in the years ended March 31, 2012 and 2013, could be subject to examination by the Internal Revenue Service in subsequent years when the losses are utilized. As of March 31, 2014, there are no known items which would result in a significant accrual for uncertain tax positions.

Reserves for Residual Wind-Down Claims and Residual Wind-Down Costs

Upon the dissolution of MLC, which occurred on December 15, 2011, the GUC Trust became responsible for resolving and satisfying (to the extent allowed) all remaining Residual Wind-Down Claims. On the date of dissolution of the Debtors, the Debtors transferred to the GUC Trust cash in an amount necessary to satisfy the ultimate allowed amount of such Residual Wind-Down Claims and Residual Wind-Down Costs, as estimated by the Debtors. Should the Residual Wind-Down Claims and the Residual Wind-Down Costs be less than the cash amount transferred by the Debtors, any excess funds will be returned to the DIP Lenders.

Reserves for Expected Costs of Liquidation

Under the liquidation basis of accounting, the GUC Trust is required to estimate and accrue the costs associated with implementing the Plan and distributing the GUC Trust's distributable assets. These costs, described as Wind-Down Costs and Reporting Costs in Note 2, consist principally of professional fees, costs of governance, and other administrative expenses. These amounts may vary significantly due to, among other things, the time and effort required to complete all distributions under the Plan. The GUC Trust has recorded reserves for expected costs of liquidation that represent estimated costs to be incurred over the remaining liquidation period of the GUC Trust for which there is a reasonable basis for estimation. The amount of liquidation costs that will ultimately be incurred depends both on the period of time and on the extent of activities required for the GUC Trust to complete its functions and responsibilities under the Plan and the GUC Trust Agreement.

Significant uncertainty remains both as to that time period and as to the extent of those activities. As of March 31, 2014, such remaining liquidation period has been estimated on a probability-weighted basis, which the GUC Trust believes is the most appropriate measurement basis in the circumstances. It is reasonably possible that the GUC Trust's estimates regarding the costs and remaining liquidation period could change in the near term.

As the GUC Trust incurs such costs, the reserves are released to offset the costs incurred and a liability to the service provider is recognized as an accounts payable or accrued expense until paid.

The process of recording reserves as a matter of financial reporting is separate and distinct from the process by which New GM Securities (including related Dividend Cash) are set aside from distribution for the purposes of funding estimated and projected Wind-Down and Reporting Costs and potential Taxes on Distribution as described in Note 2.

Use of Estimates

The preparation of financial statements on a liquidation basis in conformity with U.S. GAAP requires the use of estimates and assumptions that affect reported amounts of assets and liabilities. These estimates are subject to known and unknown risks, uncertainties and other factors that could materially impact the amounts reported and disclosed in the financial statements and related footnotes. Significant estimates include the anticipated amounts and timing of future cash flows for expected liquidation costs, Residual Wind-Down Claims, fair value of marketable securities and the fair value of New GM Warrants held by MLC for the benefit of the GUC Trust on April 1, 2011. Actual results could differ from those estimates.

New Accounting Standard

In April 2013, the FASB issued Accounting Standards Update No. 2013-07, Liquidation Basis of Accounting, which amended the FASB Accounting Standards Codification and provides guidance as to when an entity should apply the liquidation basis of accounting. In addition, this guidance establishes principles for the recognition and measurement of assets and liabilities and requirements for financial statements prepared using the liquidation basis of accounting. The provisions of this Accounting Standards Update are effective beginning April 1, 2014 for the GUC Trust. Such provisions require that income or cash expected to be received over the liquidation period be estimated and accrued to the extent that a reasonable basis for estimation exists. With respect to dividends on New GM Common Stock held by the GUC Trust, such dividends have been recorded as received (or accrued as of the record date for any declared but unpaid dividends) in the accompanying financial statements. The GUC Trust has not yet determined the impact the adoption of these provisions will have on its financial statements.

4. Net Assets in Liquidation

Description

Under the GUC Trust Agreement and the Plan, as described more fully in Note 1, the beneficiaries of the GUC Trust are future and, to the extent their liquidating distributions have not yet been paid to them, current holders of Allowed General Unsecured Claims and future and current holders of GUC Trust Units ("Trust Beneficiaries"). Certain assets of the GUC Trust are reserved for funding the expected costs of liquidation and potential tax liabilities and are not available to the Trust Beneficiaries. Other assets of the GUC Trust, primarily Holdings of New GM Securities, as described in Notes 1 and 6, are available to be distributed to the Trust Beneficiaries ("GUC Trust Distributable Assets") in accordance with the Plan. The amounts of net assets in liquidation presented in the accompanying Statements of Net Assets in Liquidation at March 31, 2014 and 2013 correspond to the amounts of GUC Trust Distributable Assets as of March 31, 2014 and 2013.

Trust Units

As described in Note 1, each holder of an Allowed General Unsecured Claim will retain a contingent right to receive, on a *pro rata* basis, additional shares of New GM Common Stock and New GM Warrants (if and to the extent such shares of New GM Common Stock and New GM Warrants are not required for the satisfaction of previously Disputed General Unsecured Claims or liquidation for the payment of the expenses or tax liabilities of the GUC Trust) and certain cash, if any, remaining at the dissolution of the GUC Trust. The GUC Trust issues units representing such contingent rights ("GUC Trust Units") at the rate of one GUC Trust Unit per $1,000 of Allowed General Unsecured Claims to each holder of an Allowed General Unsecured Claim, subject to rounding pursuant to the GUC Trust Agreement, in connection with the initial recognition of each Allowed General Unsecured Claim.

The GUC Trust makes quarterly liquidating distributions to holders of GUC Trust Units to the extent that certain previously Disputed General Unsecured Claims asserted against the Debtors' estates are either disallowed or are otherwise resolved favorably to the GUC Trust (thereby reducing the amount of GUC Trust assets reserved for distribution in respect of such asserted claims) and the amount of Excess GUC Trust Distributable Assets (as defined in the GUC Trust Agreement) as of the end of the relevant quarter exceeds thresholds set forth in the GUC Trust Agreement.

The following presents the changes during the years ended March 31, 2014, 2013 and 2012 in the numbers of GUC Trust Units outstanding or for which the GUC Trust was obligated to issue:

	Year Ended March 31, 2014	Year Ended March 31, 2013	Year Ended March 31, 2012
Outstanding or issuable at beginning of year	30,227,314	30,036,945	—
Issued during the year (1)	1,644,941	274,604	29,923,831
Less: Issuable at beginning of year (2)	(28,879)	(113,114)	—
Add: Issuable at end of year (2)	10,326	28,879	113,114
Outstanding or issuable at end of year (3)	31,853,702	30,227,314	30,036,945

(1) Of the 1,644,941 GUC Trust Units issued during the year ended March 31, 2014, 1,550,000 related to the Special Nova Scotia Distribution applicable to the Nova Scotia Settlement described in Note 5.

(2) The number of GUC Trust Units issuable at any time represents GUC Trust Units issuable in respect of Allowed General Unsecured Claims that were newly allowed during the fiscal quarter.

(3) The number of GUC Trust Units outstanding at any time represents GUC Trust Units issued in respect of Allowed General Unsecured Claims that were allowed in prior periods, including GUC Trust Units held by the GUC Trust for the benefit of (a) holders of Allowed General Unsecured Claims who had not yet supplied information required by the GUC Trust in order to effect the initial distribution to which they are entitled and (b) governmental entities that are precluded by applicable law from receiving distributions of GUC Trust Units and New GM Securities.

Allowed and Disputed Claims

The total cumulative *pro rata* liquidating distributions ultimately received by Trust Beneficiaries is dependent upon the current amount of Allowed General Unsecured Claims and final resolution of outstanding Disputed General Unsecured Claims and potential Term Loan Avoidance Action Claims (as described in Note 2). Disputed General Unsecured Claims at March 31, 2014 and 2013 reflect claim amounts at their originally filed amounts, a court ordered distribution "set aside" for certain claims filed without a claim amount and other adjustments as ordered by the court or permitted by the Plan. The Disputed General Unsecured Claims may settle at amounts that differ significantly from these amounts and at amounts that differ significantly from the historical pattern at which claims have been settled and allowed in proportion to claims resolved and disallowed. As described in Note 3, prior to the resolution and allowance of Disputed General Unsecured Claims (or potential Term Loan Avoidance Action Claims), liabilities are not recorded for the conditional obligations associated with Disputed General Unsecured Claims. Liquidating distributions payable are recorded (at the fair value of New GM Securities to be distributed) as of the end of the period in which the Disputed General Unsecured Claims are resolved as Allowed General Unsecured Claims. Similarly, to the extent potential Term Loan Avoidance Action Claims were to arise (and would become allowed) in the manner described in Note 2, liquidating distributions payable would be recorded for the New GM Securities (at fair value) that would become distributable to holders of Term Loan Avoidance Action Claims upon such occurrence.

The following table presents a summary of the Allowed and Disputed General Unsecured Claims and Term Loan Avoidance Action Claims for the years ended March 31, 2014 and 2013:

(in thousands)	Allowed General Unsecured Claims	Disputed General Unsecured Claims	Term Loan Avoidance Action Claims	Maximum Amount of Unresolved Claims (1)	Total Claim Amount (2)
Total, March 31, 2012	$ 30,036,882	$ 5,205,267	$1,500,000	$ 6,705,267	$36,742,149
New Allowed General Unsecured Claims	190,362	—	—	—	190,362
Disputed General Unsecured Claims resolved or disallowed	—	(1,600,396)	—	(1,600,396)	(1,600,396)
Total, March 31, 2013	30,227,244	3,604,871	1,500,000	5,104,871	35,332,115
New Allowed General Unsecured Claims	1,626,386	—	—	—	1,626,386
Disputed General Unsecured Claims resolved or disallowed	—	(3,525,371)	—	(3,525,371)	(3,525,371)
Total, March 31, 2014	$ 31,853,630	$ 79,500	$1,500,000	$ 1,579,500	$33,433,130

(1) Maximum Amount of Unresolved Claims represents the sum of Disputed General Unsecured Claims and Term Loan Avoidance Action Claims.

(2) Total Claim Amount represents the sum of Allowed General Unsecured Claims and Maximum Amount of Unresolved Claims.

On October 21, 2013, the Bankruptcy Court entered an order (the "Nova Scotia Order") approving a settlement agreement (the "Nova Scotia Settlement") relating to claims arising from the 8.375% guaranteed notes due December 7, 2015 and the 8.875% guaranteed notes due July 10, 2023, in each case issued in 2003 by General Motors Nova Scotia Finance Company (the "Nova Scotia Claims"). Pursuant to the Nova Scotia Settlement, the Nova Scotia Claims were reduced and allowed in an aggregate amount of $1.55 billion. As a result, on or about December 2, 2013, in accordance with the Nova Scotia Settlement and the Nova Scotia Order, the GUC Trust made a distribution solely to holders of the allowed Nova Scotia Claims, consisting of, in the aggregate, 6,174,015 shares of New GM Common Stock, 5,612,741 New GM Series A Warrants, 5,612,741 New GM Series B Warrants, and 1,550,000 GUC Trust Units (the "Special Nova Scotia Distribution"). In addition, on or about December 23, 2013, in accordance with the Nova Scotia Settlement and the Nova Scotia Order, the GUC Trust made a special distribution of Excess GUC Trust Distributable Assets to all holders of GUC Trust Units, consisting of 6,735,070 shares of New GM Common Stock, 6,122,789 New GM Series A Warrants, and 6,122,789 New GM Series B Warrants (the "Special Excess Distribution").

5. Liquidating Distributions

Liquidating distributions in the years ended March 31, 2014, 2013 and 2012 consisted of the following:

(in thousands)	2014	2013	2012
Distributions during the year	$1,180,208	$ 44,554	7,851,746
Less: Liquidating distributions payable at beginning of year	(16,555)	(31,720)	—
Add: Liquidating distributions payable at end of year	42,111	16,555	31,720
Total	$1,205,764	$ 29,389	7,883,466

The distributions during the year ended March 31, 2014, consisted of (1) the Special Nova Scotia Distribution, (2) the Special Excess Distribution, (3) distributions to holders of Resolved Disputed Claims (exclusive of the Nova Scotia Distribution) and (4) distributions to holders of Allowed General Unsecured Claims who previously failed to fulfill informational requirements for distribution established in accordance with the GUC Trust Agreement, but subsequently successfully fulfilled such information requirements. See Note 4 for additional information regarding the Special Nova Scotia Distribution and the Special Excess Distribution

The distributions during the year ended March 31, 2013 consisted of distributions to (1) holders of Resolved Disputed Claims and (2) holders of Allowed General Unsecured Claims who previously failed to fulfill informational requirements for distribution established in accordance with the GUC Trust Agreement, but subsequently successfully fulfilled such information requirements. The distributions during the year ended March 31, 2012 included those distributions and two distributions in respect of all outstanding GUC Trust Units.

The GUC Trust was obligated at March 31, 2014 and 2013 to distribute 575,278 and 288,600 shares, respectively, of New GM Stock, 522,865 and 262,306, respectively, of New GM Series A Warrants, and 522,865 and 262,306, respectively, of New GM Series B Warrants in the aggregate to the following: (1) holders of Resolved Disputed Claims, (2) certain holders of Allowed General Unsecured Claims who had not then satisfied certain informational requirements necessary to receive these securities and (3) excess distributions to holders of GUC Trust Units (at March 31, 2014). In addition, as of March 31, 2014 and 2013, cash of $0.2 million and $0.6 million, respectively, was then distributable to governmental entities which are precluded by applicable law from receiving distributions of New GM Securities, for distributions in lieu of fractional shares and warrants and for Dividend Cash associated with the New GM Common Stock that the GUC Trust was obligated to distribute at March 31, 2014.

6. Holdings of New GM Securities

At March 31, 2014 and 2013, the Holdings of New GM Securities, at fair value, consisted of the following:

	2014		2013	
	Number	Fair Value (in thousands)	Number	Fair Value (in thousands)
New GM Common Stock	15,297,307	$ 526,533	28,714,897	$ 798,849
New GM Series A Warrants	13,906,391	345,435	26,104,257	484,492
New GM Series B Warrants	13,906,391	242,110	26,104,257	307,769
Total		$1,114,078		$1,591,110

As described in Note 5, as of March 31, 2014 and 2013, the GUC Trust had accrued liquidating distributions payable of $42.1 million and $16.6 million, respectively, in respect of New GM Securities and cash of $0.2 million and $0.6 million, respectively, then distributable. As a result, the numbers of New GM Securities reflected above include shares and warrants for which liquidating distributions were then pending. As of March 31, 2014 and 2013, these securities for which distributions were then pending aggregated 575,278 and 288,600 shares of New GM Common Stock, respectively, 522,865 and 262,306 Series A Warrants, respectively, and 522,865 and 262,306 Series B Warrants, respectively.

As of March 31, 2014, the number of common stock shares and warrants in the table above also includes New GM Securities aggregating $51.6 million (excluding related Dividend Cash) reserved, or set aside, for projected GUC Trust fees, costs and expenses to be incurred beyond 2014 (including $3.5 million for projected Dividend Taxes) and $536.3 million (excluding related Dividend Cash) of New GM Securities reserved, or set aside, for potential Taxes on Distribution. As of March 31, 2013, the number of common stock shares and warrants in the table above also includes New GM Securities aggregating $41.0 million reserved, or set aside, for projected GUC Trust fees, costs and expenses to be incurred beyond 2013 and $407.3 million of New GM Securities reserved, or set aside, for potential Taxes on Distribution. As a result, as of March 31, 2014 and 2013, the numbers of New GM Securities in the table above include an aggregate of 8,072,042 and 8,092,231 shares of New GM Common Stock, respectively, 7,338,194 and 7,356,545 New GM Series A Warrants, respectively, and 7,338,194 and 7,356,545 New GM Series B Warrants, respectively, which have been so set aside.

Set forth below are the aggregate number and fair value of all such shares and warrants which are pending distribution or are reserved, or set aside, and are not available for distribution at March 31, 2014 and 2013.

	2014		2013	
	Number	Fair Value (in thousands)	Number	Fair Value (in thousands)
New GM Common Stock	8,647,320	$ 297,641	8,380,831	$ 233,155
New GM Series A Warrants	7,861,059	195,269	7,618,851	141,405
New GM Series B Warrants	7,861,059	136,861	7,618,851	89,826
Total		$ 629,771		$ 464,386

7. Fair Value Measurements

Accounting standards require certain assets and liabilities be reported at fair value in the financial statements and provide a framework for establishing that fair value. The framework for determining fair value is based on a hierarchy that prioritizes the inputs and valuation techniques used to measure fair value. The Trust's Cash Equivalents, Marketable Securities, Holdings of New GM Securities and Liquidating Distributions Payable are presented as provided by this hierarchy.

Level 1—In general, fair values determined by Level 1 inputs use quoted prices in active markets for identical assets and liabilities that the GUC Trust has the ability to access.

Level 2—Fair values determined by Level 2 inputs use other inputs that are observable, either directly or indirectly. These Level 2 inputs include quoted prices for similar assets or liabilities in active markets, and other inputs such as interest rates and yield curves that are observable at commonly quoted intervals.

Level 3—Level 3 inputs are unobservable inputs, including inputs that are available in situations where there is little, if any, market activity for the related asset or liability. These Level 3 fair value measurements are based primarily on management's own estimates using pricing models, discounted cash flow methodologies, or similar techniques taking into account the characteristics of the asset or liability. The GUC Trust had no assets or liabilities that are measured with Level 3 inputs at March 31, 2014 and 2013.

In instances where inputs used to measure fair value fall into different levels in the above fair value hierarchy, fair value measurements in their entirety are categorized based on the lowest level input that is significant to the valuation. The GUC Trust's assessment of the significance of particular inputs to these fair value measurements requires judgment and considers factors specific to each asset or liability.

The GUC Trust also holds other financial instruments not measured at fair value on a recurring basis, including Accounts Payable and Other Liabilities. The fair value of these liabilities approximates the carrying amounts in the accompanying financial statements due to the short maturity of such instruments.

The following table presents information about the GUC Trust's assets and liabilities measured at fair value on a recurring basis at March 31, 2014 and 2013, and the valuation techniques used by the GUC Trust to determine those fair values.

	March 31, 2014			
(in thousands)	Level 1	Level 2	Level 3	Total
Assets:				
Cash equivalents:				
Money market funds	$ 8,953	$ —	$ —	$ 8,953
Marketable Securities:				
Municipal commercial paper and demand notes	—	18,005	—	18,005
Corporate commercial paper	—	26,377	—	26,377
Holdings of New GM Securities				
New GM Common Stock	526,533	—	—	526,533
New GM Warrants	587,545	—	—	587,545
Total Assets	$1,123,031	$44,382	$ —	$1,167,413
Liabilities:				
Liquidating distributions payable	$ 42,111	$ —	$ —	$ 42,111

(in thousands)	March 31, 2013 Level 1	Level 2	Level 3	Total
Assets:				
Cash equivalents:				
Money market funds	$ 354	$ —	$ —	$ 354
Marketable Securities:				
Municipal commercial paper and demand notes	—	61,006	—	61,006
Corporate commercial paper	—	15,790	—	15,790
Holdings of New GM Securities				
New GM Common Stock	798,848	—	—	798,848
New GM Warrants	792,262	—	—	792,262
Total Assets	$1,591,464	$76,796	$ —	$1,668,260
Liabilities:				
Liquidating distributions payable	$ 16,555	$ —	$ —	$ 16,555

The following are descriptions of the valuation methodologies used for assets and liabilities measured at fair value:

- Due to its short-term, liquid nature, the fair value of cash equivalents approximates its carrying value.
- Holdings of New GM Securities are valued at closing prices reported on the active market on which the securities are traded.
- Marketable securities include municipal commercial paper and variable demand notes and corporate commercial paper. Municipal variable demand notes trade daily at par value and, therefore, their fair value is equal to par value. Due to their short term maturities, the fair value of municipal and corporate commercial paper approximates their carrying value.
- Liquidating distributions payable are valued at closing prices of New GM Securities reported on the active market on which the securities are traded

The GUC Trust's policy is to recognize transfers between levels of the fair value hierarchy as of the actual date of the event of change in circumstances that caused the transfer. There were no such transfers during the years ended March 31, 2014 and 2013.

8. Reserves for Expected Costs of Liquidation and Residual Wind-Down Claims

The following is a summary of the activity in the reserves for expected costs of liquidation for the years ended March 31, 2014, 2013 and 2012:

(in thousands)	Reserve for Expected Wind-Down Costs	Reserve for Expected Reporting Costs	Reserve for Indenture Trustee/Fiscal and Paying Agent Costs	Reserve for Avoidance Action Defense Costs	Reserve for Residual Wind-Down Costs	Total Reserves for Expected Costs of Liquidation
Balance, April 1, 2011	$ —	$ —	$ —	$ —	$ —	$ —
Plus:						
Funding for expected costs from MLC	52,734	—	1,365	1,358	7,555	63,012
Additions to reserve	32,434	20,560	—	—	—	52,994
Less liquidation costs incurred:						
Trust Professionals	(25,320)	(6,975)	—	(78)	(3,506)	(35,879)
Trust Governance	(2,866)	—	(718)	—	—	(3,584)
Other Administrative Expenses	(167)	(265)	—	—	—	(432)
Balance, March 31, 2012	56,815	13,320	647	1,280	4,049	76,111
Plus additions to reserve	5,195	12,293	—	—	—	17,488
Less liquidation costs incurred:						
Trust Professionals	(19,712)	(2,985)	—	(382)	(2,408)	(25,487)
Trust Governance	(4,191)	(1,866)	(148)	—	—	(6,205)
Other Administrative Expenses	(64)	(320)	—	—	(10)	(394)
Balance, March 31, 2013	38,043	20,442	499	898	1,631	61,513
Less reductions in reserves	(3,843)	(4,067)	—	—	—	(7,910)
Less liquidation costs incurred:						
Trust Professionals	(7,736)	(2,013)	—	(898)	(373)	(11,020)
Trust Governance	(3,888)	(1,799)	(35)	—	—	(5,722)
Other Administrative Expenses	(47)	(328)	—	—	—	(375)
Balance, March 31, 2014	$ 22,529	$ 12,235	$ 464	$ —	$ 1,258	$ 36,486

During the year ended March 31, 2014, estimates of expected Wind-Down Costs and estimates of expected Reporting Costs decreased by $3.8 million and $4.1 million, respectively. During the year ended March 31, 2013, estimates of expected Wind-Down Costs and estimates of expected Reporting Costs increased by $5.2 million and $12.3 million, respectively. During the year ended March 31, 2012, estimates of expected Wind-Down Costs and estimates of expected Reporting Costs increased by $32.4 million and $20.6 million, respectively. Such revisions in the estimates were recorded as (reductions in) additions to the reserves for expected costs of liquidation in such years. The estimates of expected Wind-Down Costs for the year ended March 31, 2013 reflect the execution of a letter agreement with the DIP Lenders providing for relief from certain restrictions on utilization of Wind-Down Assets. The GUC Trust has recorded reserves for expected costs of liquidation that represent amounts expected to be incurred over the estimated remaining liquidation period of the GUC Trust for which there was a reasonable basis for estimation.

The amount of liquidation costs that will ultimately be incurred depends both on that time period and on the extent of activities required for the GUC Trust to complete its functions and responsibilities under the Plan and the GUC Trust Agreement. Significant uncertainty remains both as to that time period and as to the extent of those activities. As of March 31, 2014, the recorded reserves for expected costs of liquidation reflect estimated costs for a remaining liquidation period extending through December 31, 2016, which has been estimated on a probability-weighted basis as permitted under U.S. GAAP and which the GUC Trust believes is the most appropriate measurement basis in the circumstances. The remaining liquidation period is dependent predominantly on the estimate of the remaining period of time for resolution of the Term Loan Avoidance Action, as well as certain additional estimated time as necessary to wind down the GUC Trust. In addition, certain liquidation costs that are expected to be prepaid by the GUC Trust upon its dissolution have also been estimated and accrued. It is reasonably possible that the GUC Trust's estimates regarding the costs and remaining liquidation period could change in the near term.

The following is a summary of the activity in the reserves for Residual Wind-Down Claims for the years ended March 31, 2014, 2013 and 2012:

(in thousands)	2014	2013	2012
Balance, beginning of year	$30,855	$32,247	$ —
Plus reserves received during the year from MLC	—	—	33,807
Less claims allowed during the year	(2,157)	(1,392)	(1,560)
Balance, end of year	$28,698	$30,855	$32,247

9. Income Tax Benefit (Provision)

The income tax benefit (provision) in the Statements of Changes in Net Assets in Liquidation for years ended March 31, 2014 and 2013 was determined by computing the deferred tax provisions using the GUC Trust's statutory tax rate of 39.6% that became effective on April 1, 2013. For the year ended March 31, 2012, the GUC Trust's statutory tax rate of 35% was applied. There was no current tax benefit or provision in any of such years due to cumulative net operating and capital losses, and no income taxes have been paid by the GUC Trust.

The components of the income tax benefit (provision) in the Statements of Changes in Net Assets in Liquidation for years ended March 31, 2014, 2013 and 2012 are as follows:

(in thousands)	2014	2013	2012
Current	$ —	$ —	$ —
Deferred	164,845	(56,262)	(108,583)
Total	$164,845	$(56,262)	$(108,583)

Deferred taxes in the accompanying Statement of Net Assets in Liquidation at March 31, 2014 and 2013, are comprised of the following components:

(in thousands)	2014	2013
Deferred tax assets:		
Reserves for expected costs of liquidation	$ 13,414	$ 21,983
Net operating and capital loss carryovers	106,867	18,212
Gross deferred tax assets	120,281	40,195
Less: Valuation allowance	(71,197)	—
Deferred tax asset, net of valuation allowance	49,084	40,195
Deferred tax liabilities:		
Fair value in excess of tax basis of holdings of New GM Securities	(49,084)	(205,040)
Gross deferred tax liabilities	(49,084)	(205,040)
Net deferred tax liability	$ —	$(164,845)

The income tax benefit of $164.8 million for the year ended March 31, 2014, primarily resulted from a decrease in the net deferred tax liability during the year. Such decrease in the net deferred tax liability primarily resulted from a decrease in the deferred tax liability for the excess of fair value over the tax basis of holdings of New GM Securities and an increase in the deferred tax asset for net operating and capital loss carryovers, offset in part by the establishment of a valuation allowance against net deferred tax assets of $71.2 million. Both the decrease in the deferred tax liability for the excess of fair value over the tax basis of New GM Securities and the increase in the deferred tax asset for net operating and capital loss carryovers primarily resulted from a new tax position that was taken in the GUC Trust's U.S. federal income tax returns. As previously disclosed in the GUC Trust's Form 10-Q for the quarter ended September 30, 2013, the GUC Trust made a determination to file its U.S. federal income tax returns taking the tax position that beneficial ownership for a substantial majority of New GM Securities transferred from MLC to the GUC Trust on March 31, 2011, and that the tax basis of such New GM Securities should be determined with reference to the value of such securities on such date, instead of December 15, 2011, when record ownership of the remaining New GM Securities still held by MLC was transferred from MLC to the GUC Trust. For the remaining substantial minority of New GM Securities transferred from MLC to the GUC Trust, the GUC Trust determined that transfer of beneficial ownership occurred on other dates for which the tax basis should be determined by reference to the value of such securities on such dates. This new tax position resulted in an increased tax basis of the New GM Securities from the prior tax position and, therefore, reduced taxable gains and increased taxable losses on distributions and sales of New GM Securities since March 31, 2011.

As a result, a tax benefit of $411.6 million (net of establishment of a valuation allowance against deferred tax assets of $103.9 million) related to the new tax position was recognized in the financial statements during the three months ended September 30, 2013. The benefit was recognized because the GUC Trust believes, based on the available evidence and consultation with GUC Trust professionals, that it is more likely than not that the new tax position in the amounts to be reflected in the GUC Trust's income tax returns, will be sustained on examination by the Internal Revenue Service, based on the technical merits of the position. Subsequently, the GUC Trust filed its U.S. federal income tax returns for the year ended March 31, 2013 with the Internal Revenue Service using the new tax position. Although the GUC Trust's U.S. federal income tax returns for the years ended March 31, 2012 and 2013 are no longer subject to examination by the Internal Revenue Service as a result of the application of Section 505(b) of the Bankruptcy Code, such new tax position, as of the date hereof, has not been sustained on examination by the Internal Revenue Service. Accordingly, capital loss carryovers generated in the years ended March 31, 2012 and 2013, from the new tax position, could be subject to examination by the Internal Revenue Service in subsequent years when those losses are utilized.

Such income tax benefit recognized during the three months ended September 30, 2013 was partially offset during the year ended March 31, 2014, primarily by an increase in the deferred tax liability associated with an increase in the fair value of holdings of New GM Securities since March 31, 2013.

The valuation allowance against deferred tax assets referred to above of $103.9 million that was established in the quarter ended September 30, 2013, was reversed during the quarter ended December 31, 2013. Such reversal was due to anticipated taxable gains exceeding deductible items primarily as a result of utilization of capital loss carryovers in the quarter ended December 31, 2013. Such capital loss carryovers were utilized as a result of the generation of taxable gains from the distribution of New GM Securities during the quarter. During the quarter and year ended March 31, 2014, the GUC Trust recorded a full valuation allowance against its net deferred tax assets of $71.2 million as of March 31, 2014 due to uncertainty as to whether the deferred tax assets are realizable. Realization of the net deferred tax assets is dependent upon generation of taxable gains upon the distribution or sale of New GM Securities in the future, which is not determinable prior to occurrence, or the receipt of future dividends on New GM Common Stock held by the GUC Trust for which a reasonable basis for estimation does not exist at this time.

As of March 31, 2014, the GUC Trust has net operating loss carryforwards of $84.5 million that begin to expire in March 2032, and capital loss carryforwards of $185.4 million (after giving effect to the new tax position with respect to the tax basis of New GM Securities described above) that begin to expire in March 2017 resulting in a deferred tax asset of $106.9 million in the aggregate for both carryforwards.

10. Related Party Transactions

In addition to serving as GUC Trust Administrator, Wilmington Trust Company continues to serve as trustee pursuant to the indentures for certain series of previously outstanding debt of MLC. Wilmington Trust Company has received and will continue to receive certain customary fees in amounts consistent with Wilmington Trust Company's standard rates for such service. The Bankruptcy Court previously approved the creation of a segregated fund for the purposes of funding such fees for Wilmington Trust Company, as well as the other indenture trustees and fiscal and paying agents for previously outstanding debt of MLC. There were no such fees for Wilmington Trust Company in the years ended March 31, 2014 and 2013. Fees during the year ended March 31, 2012 were $480,000.

In addition, Wilmington Trust Company has also entered into certain arrangements with the GUC Trust pursuant to which it or its affiliates have previously received, and may in the future receive, reasonable and customary fees and commissions for services other than services in the capacity of GUC Trust Administrator. Such arrangements include the provision of custodial, investment advisory and brokerage services to the GUC Trust. The fees and commissions charged by Wilmington Trust Company and its affiliates pursuant to these arrangements are consistent with the standard fees and commissions charged by Wilmington Trust Company to unrelated third-parties in negotiated transactions. During the years ended March 31, 2014, 2013 and 2012, the total amount of such fees and commissions was approximately $53,000, $147,000, and $210,000, respectively.

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure.

None.

Item 9A. Controls and Procedures.

During the fiscal period covered by this report, the management of the GUC Trust, with the participation of the Vice President of the GUC Trust Administrator, completed an evaluation of the effectiveness of the design and operation of the GUC Trust's disclosure controls and procedures (as defined in Rule 13a-15(e) of the Securities and Exchange Act of 1934, as amended). Based on this evaluation, the GUC Trust's management, including that Vice President of the GUC Trust Administrator, has concluded that, as of the end of the fiscal period covered by this report, the GUC Trust's disclosure controls and procedures were effective.

The GUC Trust's management is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rule 13a-15(f) of the Securities and Exchange Act of 1934, as amended). During the fiscal period covered by this report, the management of the GUC Trust, with the participation of the Vice President of the GUC Trust Administrator, conducted an evaluation of the effectiveness of its internal control over financial reporting, based on the framework in "Internal Control– Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, the GUC Trust's management has concluded that, as of March 31, 2014, the GUC Trust's internal control over financial reporting was effective. This annual report does not include an auditor's attestation report regarding internal control over financial reporting, because the GUC Trust is a non-accelerated filer and is therefore not subject to such auditor attestation requirements under applicable rules of the Securities and Exchange Commission.

Aside from improvements made in connection with the documentation and testing of internal control over financial reporting as part of the foregoing evaluation, during the fiscal year ended March 31, 2014, no other change occurred that materially affected, or is reasonably likely to materially affect, the GUC Trust's internal control over financial reporting.

Item 9B. Other Information.

None.

PART III

Item 10. Directors, Executive Officers and Corporate Governance.

The GUC Trust has no officers, directors or employees. The GUC Trust is administered by the GUC Trust Administrator, Wilmington Trust Company, not in its individual capacity but solely in its capacity as the trust administrator and trustee of the GUC Trust. The activities of the GUC Trust Administrator are overseen by the GUC Trust Monitor, FTI Consulting, Inc., solely in its capacity as monitor of the GUC Trust. The GUC Trust Administrator is authorized by the GUC Trust Agreement to retain, pay, oversee, direct the services of and (subject to GUC Trust Monitor approval) terminate Trust Professionals to assist in the administration of the GUC Trust, particularly in connection with the claims resolution process, the preparation of financial statements and the GUC Trust's record keeping and reporting functions. The GUC Trust and GUC Trust Administrator rely solely on receiving accurate information, reports and other representations from (i) the Trust Professionals, (ii) the GUC Trust Monitor, and (iii) other service providers to the GUC Trust. In filing this Form 10-K and executing any related documentation on behalf of the GUC Trust, the GUC Trust Administrator has relied upon the accuracy of such reports, information and representations. Notwithstanding such reliance, the GUC Trust Administrator is ultimately responsible for the disclosure provided in this Form 10-K.

The GUC Trust Administrator's role is provided for under the GUC Trust Agreement, and such role includes without limitation the obligation to (i) hold, manage, sell, invest and distribute the assets comprising the corpus of the GUC Trust, (ii) prosecute and resolve objections to Disputed General Unsecured Claims, (iii) take all necessary actions to administer the wind-down of the affairs of the Debtors, and (iv) resolve and satisfy (to the extent allowed) any Residual Wind-Down Claims. The responsibilities of the GUC Trust Administrator in connection with the wind-down of MLC and its Debtor subsidiaries include monitoring and enforcing the implementation of the Plan as it relates to the wind-down, paying taxes and filing tax returns, making any other necessary tax filings related to the wind-down and in general taking any other actions necessary or appropriate to wind-down MLC and its debtor subsidiaries and obtain an order closing the Debtors' chapter 11 cases.

The GUC Trust Monitor was appointed for the purpose of overseeing the activities of the GUC Trust Administrator. The GUC Trust Administrator is required to obtain the approval of the GUC Trust Monitor for a variety of actions, including preparing budgets and making expenditures that deviate from the Budget by more than a specified amount (except to the extent such expenditures are approved by the Bankruptcy Court), settling or otherwise resolving disputed claims in excess of a specified amount, retaining or terminating Trust Professionals, reserving of GUC Trust assets intended for distribution to GUC Trust beneficiaries for the payment of administrative expenses or Taxes on Distribution and amending the GUC Trust Agreement.

Pursuant to the No Action Letter, in response to Item 401 of Regulation S-K, this Form 10-K includes disclosure relating to certain individuals who are employed by the GUC Trust Administrator and GUC Trust Monitor, respectively, in a leadership capacity with respect to the administration by the GUC Trust Administrator and the monitorship by the GUC Trust Monitor, respectively, with regard to the GUC Trust:

- *David Allen Vanaskey, Jr.* , 49, is a vice-president in the Capital Markets Division of Wilmington Trust Company. At Wilmington Trust Company, he has management and account responsibilities in asset financing, equipment financing and restructuring and default products. David Vanaskey has worked in the financial services industry for over 25 years. He has specialized in asset securitizations, equipment financings, corporate lending and project finance transactions. He has participated in Chapter 11 restructurings, creditor committee participation, liquidations, and disbursements. Most recently he was the Indenture Trustee in the General Motors unsecured public debt transactions and chaired the committee for unsecured creditors in the General Motors bankruptcy.
- *Conor P. Tully*, 42, is a senior managing director in the Corporate Finance/Restructuring practice of FTI Consulting, Inc. Mr. Tully has more than 19 years of experience in providing clients with strategic planning, merger and acquisition advisory and business advisory services in both distressed and healthy company situations. For the past 16 years, Mr. Tully has specialized in providing restructuring services to companies, financial institutions and creditors in the troubled company environment, including both formal Chapter 11 proceedings and out-of-court workout situations. Mr. Tully's industry experience includes the automotive, financial services, consumer products, telecom, metals, energy and manufacturing industries. Prior to joining FTI Consulting, Inc. in October, 2004, Mr. Tully was a director in the restructuring practice of Ernst & Young Corporate Finance LLC. Mr. Tully holds a B.A. in accountancy from Manhattan College. He is a certified public accountant, a certified insolvency and restructuring advisor, a certified turnaround professional, and is accredited in business valuation. Mr. Tully is also a member of the American Bankruptcy Institute, the American Institute of Certified Public Accountants, the Association of Insolvency and Restructuring Advisors, and the Turnaround Management Association.

Item 11. Executive Compensation.

Under the GUC Trust Agreement, the GUC Trust Administrator is entitled to receive fair and reasonable compensation for its services, to be paid out of the Administrative Fund in accordance with the Budget prior to the final distribution date. The GUC Trust Administrator is entitled, without the need for approval of the Bankruptcy Court, to reimburse itself from the Administrative Fund on a monthly basis for such compensation and all reasonable out-of-pocket expenses actually incurred in the performance of duties in accordance with the GUC Trust Agreement and the Budget. In addition, to the extent the Administrative Fund is not sufficient to provide the GUC Trust Administrator with fair and reasonable compensation for its services or for reasonable out-of-pocket expenses, the GUC Trust Administrator will be paid out of the Other Administrative Cash in accordance with Section 6.1 of the GUC Trust Agreement. During the fiscal year ended March 31, 2014, the GUC Trust Administrator received compensation of approximately $3.6 million under the GUC Trust Agreement and expense reimbursements of approximately $115 thousand.

Under the GUC Trust Agreement, the GUC Trust Monitor is entitled to receive fair and reasonable compensation for its services, to be paid out of the Administrative Fund, in accordance with the Budget. The GUC Trust Monitor is entitled, without the need for approval of the Bankruptcy Court, to direct the GUC Trust Administrator to reimburse the GUC Trust Monitor from the Administrative Fund on a monthly basis, for such compensation and all reasonable out-of-pocket expenses actually incurred in the performance of duties in accordance with the GUC Trust Agreement, consistent with the Budget prepared pursuant to Section 6.4 of the GUC Trust Agreement. In addition, to the extent the Administrative Fund is not sufficient to provide the GUC Trust Monitor with fair and reasonable compensation for its services or for reasonable out-of-pocket expenses, it will be paid out of the Other Administrative Cash in accordance with Section 6.1 of the GUC Trust Agreement. During the fiscal year ended March 31, 2014, the GUC Trust Monitor received compensation of approximately $2.0 million under the GUC Trust Agreement and expense reimbursements of approximately $17 thousand.

As noted above, the GUC Trust has no officers, directors or employees.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

Disclosure under this item is not required, pursuant to the No Action Letter.

Item 13. Certain Relationships and Related Transactions, and Director Independence.

In addition to serving as GUC Trust Administrator, Wilmington Trust Company continues to serve as trustee pursuant to the indentures for certain series of previously outstanding debt of MLC. Wilmington Trust Company has received and will continue to receive certain customary fees in amounts consistent with Wilmington Trust Company's standard rates for such service. The Bankruptcy Court previously approved the creation of a segregated fund for the purposes of funding such fees for Wilmington Trust Company as well as the other indenture trustees and fiscal and paying agents for previously outstanding debt of MLC. There were no such fees for Wilmington Trust Company in the year ended March 31, 2014.

In addition, Wilmington Trust Company has also entered into certain arrangements with the GUC Trust pursuant to which it or its affiliates have previously received, and may in the future receive, reasonable and customary fees and commissions for services other than services in the capacity of GUC Trust Administrator. Such arrangements include the provision of custodial, investment advisory and brokerage services to the GUC Trust. The fees and commissions charged by Wilmington Trust Company and its affiliates pursuant to these arrangements are consistent with the standard fees and commissions charged by Wilmington Trust Company to unrelated third-parties in negotiated transactions. During the fiscal year ended March 31, 2014, the total amount of such fees and commissions was approximately $53,000.

Item 14. Principal Accounting Fees and Services.

Fees for professional services provided by Plante & Moran, PLLC, the GUC Trust's independent auditors, in each of the years ended March 31, 2014 and 2013, in each of the following categories, including related expenses, are as follows:

	Year Ended March 31, 2014	Year Ended March 31, 2013
Audit Fees (1)	$268,211	$301,108
Audit-Related Fees (2)	—	5,506
Tax Fees (3)	19,709	128,504
All Other Fees	—	—
Total	$287,920	$435,118

(1) Consists of fees for the audit of the GUC Trust's annual financial statements, review of the GUC Trust's Form 10-K, review of quarterly financial statements included in the GUC Trust's Forms 10-Q, and review of Form 8-K filings.
(2) Consists of fees for consultation on accounting, financial reporting, and internal control matters.
(3) Includes fees for preparation of the GUC Trust's federal income tax return for the fiscal years ended March 31, 2013 and 2012, preparation of the MLC federal and state income tax returns for its final tax year ended December 15, 2012, and assistance with other MLC tax compliance matters.

PART IV

Item 15. Exhibits, Financial Statement Schedules.

Exhibit No.	Description
31	Section 302 Certification.
32	Section 906 Certification.
101	The following financial statements and notes thereto from the annual report on Form 10-K of Motors Liquidation Company GUC Trust, for the fiscal year ended March 31, 2014, formatted in XBRL (eXtensible Business Reporting Language): (i) Statements of Net Assets in Liquidation (Liquidation Basis) as of March 31, 2014 and 2013, (ii) Statements of Changes in Net Assets in Liquidation (Liquidation Basis) for the years ended March 31, 2014, 2013, and 2012, (iii) Statements of Cash Flows (Liquidation Basis) for the years ended March 31, 2014,2013, and 2012 and (iv) Notes to Financial Statements.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

Date: May 22, 2014

MOTORS LIQUIDATION COMPANY GUC TRUST

By: Wilmington Trust Company, not in its individual capacity, but solely in its capacity as trust administrator and trustee of the Motors Liquidation Company GUC Trust

By: /s/ David A. Vanaskey
Name: David A. Vanaskey
Title: Vice President of Wilmington Trust Company

EXHIBIT INDEX

Exhibit No.	Description
31	Section 302 Certification.
32	Section 906 Certification.
101	The following financial statements and notes thereto from the annual report on Form 10-K of Motors Liquidation Company GUC Trust, for the fiscal year ended March 31, 2014, formatted in XBRL (eXtensible Business Reporting Language): (i) Statements of Net Assets in Liquidation (Liquidation Basis) as of March 31, 2014 and 2013, (ii) Statements of Changes in Net Assets in Liquidation (Liquidation Basis) for the years ended March 31, 2014, 2013 and 2012, (iii) Statements of Cash Flows (Liquidation Basis) for the years ended March 31, 2014, 2013 and 2012, and (iv) Notes to Financial Statements.

Exhibit 31

Certification Pursuant to
Section 302 of the Sarbanes Oxley Act of 2002

I, David A. Vanaskey, in my capacity as Vice President of Wilmington Trust Company, in its capacity as trust administrator and trustee of Motors Liquidation Company GUC Trust (the "Trust"), certify that:

1. I have reviewed this annual report on Form 10-K of the Trust;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the net assets and changes in net assets under the liquidation basis of accounting of the Trust as of, and for, the periods presented in this report;

4. I am responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) for the Trust and have:

   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under my supervision, to ensure that material information relating to the Trust, including its consolidated subsidiaries, is made known to me by others within those entities, particularly during the period in which this report is being prepared;

   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under my supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   c. Evaluated the effectiveness of the Trust's disclosure controls and procedures and presented in this report my conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   d. Disclosed in this report any change in the Trust's internal control over financial reporting that occurred during the Trust's most recent fiscal quarter (the Trust's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the Trust's internal control over financial reporting; and

5. I have disclosed, based on my most recent evaluation, to the Trust's auditors:

   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Trust's ability to record, process, summarize and report financial information; and

   b. Any fraud, whether or not material, that involves management or other employees who have a significant role in the Trust's internal control over financial reporting.
